THE ENCYCLOPAEDIA OF ISLAM
EXECUTIVE COMMITTEE:

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through a grant from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government.

The articles in this volume were published in double fascicules of 128 pages, the dates of publication being:

1973: fascs. 61-64, pp. 1-256
1974: fascs. 65-68, pp. 257-512
1975: fascs. 69-70, pp. 513-640
1976: fascs. 71-74, pp. 641-896
1977: fascs. 75-76, pp. 897-1024
1978: fascs. 77-78, pp. 1025-1188

This volume first published 1978
2nd impression 1990

ISBN 90 04 05745 5

PRINTED IN THE NETHERLANDS
AUTHORS OF ARTICLES IN VOLUME IV

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

ADDENDA AND CORRIGENDA

VOLUME I

P. 212b, ADUD AL-DAWLA, l. 11, for al-Makdisi read al-Mukaddasi; l. 13, for al-Makdisi, 499 read al-Mukaddasi, 449; l. 21, for Makdisi read Mukaddasi.

VOLUME II

P. 523b, AL-'DJAZĀRĪ, l. 5, for at Wāṣif read outside Damascus Add to the Bibliography: Donald P. Little, Introduction to Mamlūk historiography, Wiesbaden 1970, 53-7; U. Haarmann, Quellenstudien zur frühnen Mamlukenzeit, Freiburg 1969, 92-116; the same, Édition de la chronique manuscrite syrienne de Sams ad-Dīn Muḥammad al-Ṣalāḥī, in BEO xxvii (1975); C. Cahen, Addenda sur al-'Djazārī, in Israel Oriental Studies ii (1972), 144-7; the same, Rectificatif, ibidem, iii (1973).

P. 537b, DJIDJELLI, l. 3, for west read east

P. 966b, FUTUWWA, l. 2 from bottom, after aḥdā, add xii,

VOLUME III
P. 70b, HĀRĀʾ, last l. but one before the Bibliography, for Ibn Kunfūdhd read Ibn Kunfūdh

P. 167, HANSALIYYA, read Hansaliyya throughout the article.

P. 390b, AL-HILLI, l. 20, for 638/1240-1, died 726/1326 read 602/1205, died 676/1277

P. 751b, IBN AL-'DJAWZĪ, l. 5, for 610/1216 read 511/1116

P. 812b, IBN IYĀS, l. 22 from bottom, for 1421-502 read 1421-1502

P. 825b, IBN KHALDŪN, l. 2, for 732-84/1332-82 read 732-808/1332-1406

P. 1068b, AL-IKHĀN, l. 10 from bottom, instead of Bihānī read Raybānī

P. 1170b, IMĀM, l. 16 from below, for Cairo n.d., i, 327 read Cairo n.d., i, 320-5

P. 1204b, INDIAN NATIONAL CONGRESS, l. 15 from bottom, for M. A. Djināb read M. A. Jheenā

VOLUME IV
P. 39b, IRAN, ll. 8-12, for the sentence Consequently . . . that city read Consequently, when Iranian troops on three separate occasions attempted to recapture Harāt, Britain either despatched armies to prevent them (1857; 1856), or exerted diplomatic pressure to secure their withdrawal (1852).

P. 174b, ISLAM, add to Bibliography: H. Rizziizano, Islam, Aslama and Muslim, Upsala 1949, and D. Z. M. Baneth, What did Muḥammad mean when he called his religion "Islam"; the original meaning of aslama and its derivatives, in Israel Oriental Studies, i (1971), 183-90.

I
CONTINUATION

IRAN

1. The geological background: The alignments of Iran's principal topographic features, represented by the Kūhā-yi Alburz and the Zagros Chain, are west to east and north-west to south-east, respectively. In broad context, the Alburz is a continuation of the European Alpine structures, while the Zagros chain has been linked through Cyprus with the Dinaric Alps (Fisher, 1956). The structure of the mountain rim of the country has been influenced strongly by tectonic movements which have not only caused considerable folding, giving rise to the mountain ridges, but have also resulted in overthrusting of the anticlines and complex step-faulting, particularly in the east and north-east. Lying between the two mountain systems of the north and south is the block of the central Iranian plateau, though even here large areas have been affected by the powerful movements which created the Alpine Himalayan orogenic systems.

Structural characteristics have an appreciable influence on the extreme regionalism of Iran. The Caspian basin may be regarded as a down-faulted area in sharp contrast to the adjacent main Alburz range, itself discerned as a main northern range, a southern range or Anti-Alburz (Rivière, 1934) with an internal tertiary basin between the two. The Zagros exhibits two structurally characteristic regions including the area of large-scale over-thrusting, as exemplified in the zone between 'Ali Gudarz and Shahr-i Kurd, and the area of lower altitude, where elongated anticlines and synclines are arranged in sub-parallel lines as for example around Do Gunbadān.

The main period of earth movements has been established for the Alburz and the north-east region as belonging to the pre-Cretaceous era, when the permo-carboniferous beds were widely affected. Further movement began in post-Eocene times and continued through to the end of the Miocene, when the close of the Cretaceous saw increased volcanic activity. The major period of folding is attributed to the Pliocene, especially the late Pliocene (Gansser, 1955). The Zagros was influenced considerably by epeirogenic movements dated to Paleozoic and early Mesozoic times with orogenic disturbances beginning in the Upper Cretaceous (Lees and Richardson, 1940). Prolonged folding in the late Miocene and Pliocene saw the emergence of elongated anticlines and synclines compressed against the resistant Arabian Shield.

2. Location and frontiers: Covering some 164 million hectares, Iran stretches from Bāzārgān (39° 20' N-44° 20' E) in the north-west to Sarakhs (36° 30' N-65° 10' E) in the north-east and from Abādān (30° 20' N-48° 15' E) in the south-west to Gvātar (25° 05' N-61° 30' E) in the extreme south-east. The land frontiers of Iran total approximately 4,400 kilometres much of which is aligned along natural features and the subject of established international agreements with the notable exception of the Sha’t al-‘Arab boundary with ‘Irāq. The 460-kilometre border with Turkey runs south from the Rūd-i Aras through the eastern foothills of the Büyük Ağrı Daği and thence roughly along the watershed between the Reštābāyen basin and the Van Golū basin. Of the 900-kilometre frontier with ‘Irāq, the northern section follows the watershed of the Zagros and then the low-lying foothills of Mesopotamia before cutting across on arbitrary alignments to the Sha’t al-‘Arab upstream of the confluence with the Rūd-i Kūrīn. Iran’s border with the U.S.S.R. in Ādār-bābāyān is coincident with the Rūd-i Aras over much of its length except for the eastern extremity, where from approximately 48° E it swings southwards through the Dāshīl Moḩān to the foothills of the Kūh-i Tālīsh, which it follows to the Rūd-i Astārā which forms the boundary to the Caspian Sea (Daryā-yi Māzandarān). The Trans-Caspian border with the U.S.S.R. follows the line of the Rūd-i Atrak upstream from the Caspian Sea to the confluence with the Rūd-i Sūmbār and then crosses the Kopet Dāgh to arc round to the Hari Rūd along the north facing slopes of the northern Alburz ridges including the Golū Dāgh and the Kūh-i Hazār Maσhjīl. Although the Irano-Afghan border runs south along the Hari Rūd over the first section of its 800 kilometres length, the rest of the boundary is more arbitrarily aligned, traversing the inland drainage sumps east of the Kāvin-Birdjānd highlands and the western rim of the Dāshīl-i Na Umīd before cutting east through the Daryāčeh Sīsīn to include much of the lowland around the Daryāčeh Hāmnī-i Şābārī before swinging south-west towards Zāhīdān. After following the watershed of the hill range east of Zāhīdān, the frontier with Pakistan is coincident with the Tahlīb Rūd south to the Hāmnī-i Maṣhīl. Thereafter the frontier trends more or less due south with an abutment eastwards to take in the valley of the Rūd-i Māshīl as far as Kūhak, from whence it swings south-west, in parts along tributaries of the Nehang Rūd, to the coast of the Gulf of Oman at the Khaḥli-dī-i Gvātar.

3. Physical geography: The heartland of Iran is regarded by geographers as a plateau defined in the north by the Alburz system and to the south-west and south by the Zagros Mountains, though continuing eastwards into Afghanistan without firm
delineation. This vast triangular plateau is far from homogeneous and includes not only the extensive desert lands of the Dasht-i Kavir and Lût but also large, though discontinuous, areas of well watered and fertile soils lying between the enclosing mountains and the desert basins which are the centres of theintroceptive drainage systems. Whereas the great deserts contain few, if famous, settlements, many of the country’s richest agricultural areas are located in the lands bordering the plateau, including among others the Dasht-i Kavir, Dasht-i Varâmín, the extended oases of Mağhāb, Sabzavār, Nīshābūr, Simmān, Tehran, Kūm, Yazd and Kirmān and the rich valleys of Ārāk and Hamādān.

The two principal mountain systems add further regional diversity. The Alburz Mountains dominate the topography of northern Iran even in their eastern extensions where many subsidiary ranges give rise to local micro-climates and permit specialised agricultural activities. No less important, the Zagros chain imposes its own regional influences throughout its length from Kurdistān to Bālūjestān, with altitudes sufficient in the west and for a considerable distance south-east to give rise to reliable orographic rainfall capable of supporting forest cover and, in places, a rich agriculture.

Outside the plateau and its surrounding rim lie limited but economically significant lowlands including the Caspian Plain, the Türkoman Šahrā, the inland sumps of the Hari Rūd and Rūd-i Hirmand and the great plain of Khūzistān.

In view of the very considerable regional diversity of the country, detailed review of the main geographical areas is necessary.

3. The Plateau:

(a) The Central deserts: The central deserts of Iran fall naturally into two groupings separated by the mountain range running from the south-east of the highland belt of Khūrāsān from Dastgerdān to Ardestān, the northern section known as Dasht-i Kavir and the southern as Dasht-i Lût. Both areas are themselves slit into a series of sub-basins separated by hill ridges, many rising to over 1,500 metres. Dasht-i Kavir is often presented as a series of ten basins (British Admiralty, 1944), the largest known as Kavir-i Buzurg, in which the main characteristics are clayey, salty soils and extremely brackish groundwater in parts giving rise to ooze flows (Fischer, 1968), namakzar and temporary salt lakes (Mostofi, 1970). Most settlements are located on higher ground about 1,000 metres in altitude and represent for the most part staging posts on the ancient caravan routes linking northern Khūrāsān and even the Caspian area via Simmān and Djiandjak (MacGregor, 1871) with Yazd and Isfahān. Agricultural life is primarily based on oasis cultivation in which the date palm, other fruits and grains and fodders play a major role. The supply of dyes for the carpet industry, formerly of some importance, is now in decline. Mining for lead and other non-ferrous metals retains an albeit smallscale industrial base in the Anārak-Nāpīn area.

Dasht-i Lût forms an elongated basin set between the Kirmān and the Kāyinn-Bīrdjān highlands and contains many complex geographical features, some only recently studied (Mostofi, 1970). The so-called high northern Lút lies between the Dastgerdān-Yazd axis and the Dehūk-Nayband-Rāvar col and is sometimes taken to include the highlands around Anārak. The southern Lüt or Lüt-i Zangi Abmad is defined in the south by the line of the Bam-Zāhīdān road and traditionally and economically excludes Narmānghīr, the Kirmān Desert and Rīgān, though physically this zone, extending up to the Kūh-i Taftān, is included within the Lût proper. Among the characteristic features of Dasht-i Lút is the extensive namakzar-i Shāhīdād occupying a long trough extending on a serpentine 170-kilometre alignment from north-west to south-east, though formerly of greater extent (Gabriel, 1938). In the shallow centre of the Lêt adjacent to the namakzar complex fluvial and later aeolian erosion has produced areas of spectacularly dissected country having much the appearance of ruined towns called Shahr-i Lût. In addition to a series of hill, valley and plain areas, of which six separate units have been recognised (Mostofi, 1970), the other dominating feature of the Lût is the dune mass of the east running from Dīh Salm on a NNESW axis almost to Kahrak on the Barn-Zāhīdān road and in parts exceeding 80 kilometres in width.

Production from the region of Dasht-i Lût is small and poor communications discourage active export of most goods. Agricultural output from the oases tends to be subsistence orientated, though oranges from Shāhīdād and dates from Shāhīdād and Dīh Salm do find their way to markets in Kirmān and Bīrdjān. Mining has more than local importance with lead at Nayband, Kūh-i Garmāb and Seh Čangi and copper at Rā'fa Šarī and Kollehā (Barand et al., 1965).

(b) The plains of the Zagros Slopes: A series of fertile plains and basins surround the central deserts lying along the north-eastern edge of the Zagros Mountains. The most extensive areas are those surrounding Isfahān, Yazd and Kirmān, though many other smaller centres exist with prosperous agricultural bases. Throughout the zone the principal means of water supply is the kandār (p. 29), with river water retaining local importance especially in the Isfahān region. Drainage within the basins is largely internal and a number of salt-lake basins altitudinally and physically accordant with the Dasht-i Kavir (Fischer, 1968) stretch from Sīrdān via Gāvīhūnī to Isfahān. Outside the namakzar soils are generally deep and fertile, supporting a varied agriculture mainly irrigated and with a significant area of dryland grains and a rich associated livestock economy. Among the particularly cottage craft industries are still important employers of labour in this region, with the hand-made carpets of Isfahān, Nāţān, Kāšān and Kirmān accounting for a major portion of Iran’s non-oil exports.

One of the factors permitting the early growth of sophisticated urban centres in this area of Iran has been the existence of readily accessible and varied mineral deposits, particularly the lead-zinc occurrences associated with the Jurassic and Cretaceous limestones around Isfahān, Kāšān and Yazd and orientated with the line of the Zagros overthrusting (Barand, 1965). It is an interesting fact that many of the modern mine enterprises in the area represent new workings on ancient sites. Copper mining also has ancient origins in this area, the deposits to the south of Kirmān at Kūh-i Bahār Asmān and Tal-i Ma'dān near Rāfesdanbān both having been exploited at an early date. More recently, the Sar Čashma copper deposit has been proved and developed. Although iron deposits were not valued so highly or subject to such early exploitation as copper, iron workings dating from Archemenian times have been recorded in this area. Among the largest known ironfields in Iran is the magnetite iron bearing area around Bafk occurring along the eastern lines of the granodioritic intrusions with the Upper Cretaceous sediments.
(c) North-West Iran: North-west Iran including East and West  Ādārbāyjān, Kurdistān and Hamadān with its geological continuation through the regions of Malāyer, Golpāyegan, Şahr-e  Raşā and Balūčistān is considered at the present time to be an integral part of central Iran. The area was intensely folded and faulted during the Alpine orogeny and intrusive processes, localised metamorphism and widespread volcanism are characteristic throughout the zone. Despite the underlying geological similarities, the north-west remains geographically distinct from the areas further east. Topographically, the area has been likened to a series of irregular tablelands (Fisher, 1968), where altitudes attain between 4,811 metres in the main peak of the Sapālpān Dâgh, 3,700 metres in Kūh-i Sahand and 3,506 metres in the Kūh-i Būz Gūdūh. Drainage of the north-western area is intricate in pattern. The Rūd-i Aras drains the north-flowing tributaries running from the Kureh Dâgh and the Bûyûk Aqârî Dağî as well as the Kūhî and Ardabil basins. Much of the south-west of the area is drained by the tributaries of the Rūd-i Zandjān-câyî, which eventually joins the Kizîl Uzûn and the Safîd Rūd system. Other radial drainage lines include those streams west of Mahābâd which link in the Ab-i Zāh, cross the Īrākî frontier, and link with the Zāb al-Asfāl. Draining the north-flowing stream on the western Ādārbāyjān centre on the Dâryācâh-i  Reţāliyeh fed by the Zarînî Rûd and Shîneh Rûd from the south and the Agâj Čây from the east.

Ādārbāyjān is among the better watered areas of Iran and average annual rainfall at Tabriz is 285.6 millimetres, though the surrounding highlands receive heavier rainfall, much of it in the form of winter snows. Dryland grain cultivation is possible over large areas and deciduous fruits are universally important together with the vine and almond. Irrigated culture is found throughout the region, with the most productive areas located in the major river valleys around the towns of Ārdabil, Kūhî, Mahābâd, Miyânâh, Reţâliyeh, Tabriz and Zandjān, where soils are rich and deep and where some shelter is available from harsh winds, frosts and prolonged sunshine.

Ādārbāyjān is extremely mineral rich in two main areas including the Ahar-Golān-Marand area, where large and medium scale deposits of lead-zinc, copper, gold, arsenic and molybdenite exist and the southern Ādārbāyjān region lying in the Angūrān-Takâb-Marâgîeh area, where large and medium-scale deposits of lead-zinc, copper, arsenic, gold, bismuth and other minerals have been located. Small-scale iron fields are worked at Ašfāhâbâd and Gołjûk, while lead-zinc and copper deposits are found between Zandjān and Fīrūzābâd.

The southern rim of the central Iranian plateau land running south-east from southern Ādārbāyjān through Kurdistān and Hamadān to Shahr-e Raşâ is geologically similar to Ādārbāyjān, as noted above, though here a larger element of Mesozoic and Tertiary metamorphism is apparent, especially in the Hamadān-Dârân belt. The rim takes the form of a broken mountain system beginning in the west with the Kūh-i Čehel Časme (3,163 metres) and continuing in the Kūh-i Alvand (3,548 metres) and in Ašfârân Kūh (4,176 metres). South-west of  Nadjaftâb the ridge is less distinct. The areas as far east as Nadjaftâb are agriculturally well-endowed with deep soils in the valleys and reliable rainfall (Hamadān 385.2 millimetres annual average). Both  kândî and river water irrigation supplies are utilised for sedentary agriculture, especially favoured centres for which are Malāyer, Arâk, Golpāyegan, ʿAllī Gūdarz and Nagjaftâb. Livestock is generally important, with a strong transhumant tradition affecting mainly the Kurdistān area. Sizeable mineral deposits occur in the area of Mesozoic and Tertiary metamorphism and lead-zinc is found at Lâḵān, Husaynābâd and Darreh Nokshir south-east of Arâk and at Anjârêh, Vîджîn,  Khānîe Sormeh and Shâh-kūh in the area west and south of  Īsfâhān.

(d) Balūčistān: This region, the easternmost part of Balūčistān, formerly regarded as continuations of the main Zagros system, are now recognised as a south-east limb of the central Iranian zone. To the north, the area is clearly defined by the Kūh-i Bazmān which, reaching its greatest elevation at 3,489 metres, effectively separates the depression of Dašt-i Lūf from the Dâjz Moriyan Ḥâmûn. The mountains of Kūh-i Bazmān are made up of extrusive material with a series of geologically youthful volcanic peaks dominating the range. A north-south syncline running from north of Irânsâhâr to the region of Nusrâtâbâd divides the Kūh-i Bazmān from the Kūh-i Taftān, a geologically mixed region, with extrusive igneous and metamorphic rock in the area of Kūh-i Taftān volcanic peak, a complex zone of ophiolite-radiolarite rocks with ultrabasic masses located west of Taftān and a surrounding mass of Paleogene sediments. Topography throughout the region is irregular and mainly above an altitude of 1,000 metres. In addition to the mountain ridges traversing the area, and noted above, two plateaux lie to the north and south of the Kūh-i Taftān centred on Zâhîdān and Khâsh, respectively, though the former is not endowed with sufficient soil or water resources to offer a base for a strong sedentary agriculture. The Khâsh plateau presents a contrast, with settled cultivation developed over large areas dependent upon adequate if not abundant subterranean water resources and rich and deep soils, where grains, fodder crops, vegetables and orchard fruits give generally reliable returns (Plan Organisa- tion 1960).

Although the Iranian Makrân shows geological similarities with western Baluchistan, intense over-thrusting along a roughly west-east alignment has given the northern Makrân distinctive topography, extremely broken in places and difficult of access and agricultural utilisation. Separating the Dâjz Moriyan Ḥâmûn from the Makrân is the Kūh-i Bašhâgerd, the main west-east ridge of which rises to over 1,500 metres, where the ophiolite-radiolarite areas form a more resistant mass than the surrounding sediments. Coastal Makrân, beginning from Râ’s al-Shîr in the west and continuing into Pakistan in the east, forms yet another distinctive zone of relatively regular anticlines and succeeding synclines aligned more or less parallel with the coastline. The area is pre-eminently one of sediments, geologically forming a depression zone of which the larger part lies below the Gulf of Oman, though the regular folding of the anticline structures gives coastal Makrân a character much different from other major depressions and internal basins in the country. Rapid and intensive erosion of the ridges near the coast by fast-running north-south streams has dissected the anticlines into small hill groups of low elevation except where the geologic outliers of the Cambrian-Paleogene series are exposed to stand out as resistant blocks occasionally attaining more than 1,000 metres in altitude. Despite the occurrence of monsoon rainfall in coastal districts and the existence of ancient  kândî systems, agricultural deve-
development has been inhibited by the unreliability of rainfall, the poor condition of the kanats and, not least of all, by the low levels of technical knowledge of the predominantly Baloch population in both water utilisation and cultivation skills (Spooner, 1968).

Lying between the mountain rims of Balochistan is the Dijaz Moriyân depression, structurally an internal basin and now filled with recent alluvial deposits brought from the hills by numerous streams seasonally flowing to the centre of the basin where kahns and swamp lands cover a considerable area. Away from the Hamun itself, the plains of Bampour and Dijurf, and particularly the latter, offer scope for settled agriculture, though geographic isolation and preoccupation with livestock herding have been constraints on effective use of available land and water resources. Nonetheless, the Bampour-Iranqahar area produces grains, including rice, fodder and tree crops utilising 'kanât' water supplies and temporary 'bands' or earth dams across the major drainage channels to trap water and silt for cultivation purposes. Dijurf has been developed in the very recent period as a major crop and livestock area under government auspices.

Large deposits of chromite have been located in Balochistan and the adjacent areas between Baf and Dijurf occurring in the region of ultrabasic rocks, where magmatic segregation has taken place. The most important deposits are established at Shahriyâr and Amir, north-east of Minab, though scattered sites as distant as Aţâbât and Kâshâr are known.

(c) The East Persian Highlands: The East Persian highland system runs from the Kûh-i Surkh south of Mashhad and links up with the Kûh-i Taftân in northern Balochistan. Kûh-i Surkh is separated from the hill area to the south by the Great Kavir Fault, which arcs across from west to east fading out near 'Alâm-dûr. The Kûh-i Surkh attains an altitude of 3,020 metres north-west of Turbat-i Haydari, though much of its continuation east in the Kûh-i Bizâk and Kûh-i Khvâr rises to over 2,000 metres. South of these highlands a large depression forms a west to east trough, through the foothills of the highlands between Kâshmar and 'Alâm-dûr including the Turbat-i Haydari region which act as an intermediate zone, where areas of good soils and fair underground water resources permit cultivation of grains, vegetables and mixed tree crops. In years of above average rainfall, dayin, or dryland, cultivation is important and some villagers augment their irrigated lands by damming small streams. South of the foothills, soils are poor and namakzar formations characterise the basin bottom from Kavir-i Namak to the Afghan borders, where marshes are also found. Drainage from the Kûh-i Bizâk, the northern Kâyîn-Birdjand highlands and the Dastgerdân flows to the namakzar formations.

West-east faulting in the north Kâyîn-Birdjand highlands separates the Kûh-i Kalat from Kâyînât proper by a high col. Gunabâd village group and its related yâlûtâd, Kâkhk, form a relatively prosperous agricultural area on the foothills and north-facing slopes of the Kûh-i Kalat reliant on kanat water supply. Crustal instability is marked both here and in the areas as far south as Birdjand and many settlements suffer periodic earthquakes of which the last occurred in 1968 affecting Kâkhk and Ferdaus particularly. The Kâyîn-Birdjand Mountains achieve their greatest height in the Kûh-i Ahangerân at 2,877 metres, while the north-west to south-east ridge east of Birdjand also runs for some 100 kilometres at altitudes above 2,000 metres. Drainage of the highlands is to the namakzar in the north and to the small western basins and the Dağh-i Lêt in the west. Southwards the situation is more complex and the line of the hill ranges and the major streams is strongly affected by faulting trending north-west to south-east in the south-east sector and north to south in the south-west sector, with drainage fed to the Daryââh-i Hâmûn-i Hirmand in the former and to the Dağh-i Lêt in the latter case. Agriculture in the Kâyînât and Birdjand is based on 'kanat', punca and earth dam systems with subterranean aquifers replenished by the irregular, though at times heavy, rainfall and snows on the mountain ridges. Some hill villages are famous for saffron and vegetable dyes. Cultivation on small artificial terraces, and there is a considerable export of these products from the region to other parts of the country. The southern col reaching from the main mountain area around Kûhûn to Nûratâbâd is faulted to both west and east and carries little settlement or cultivation with the exception of the lower east-facing slopes around Nêh which sustain minor pockets of cultivation where shelter from the 120-day wind (bâd-i sad-ubrist ûrû) is possible. Further west, oasis date palm culture is found on the fringes of Dağhî Lêt.

(f) The Sistan Depression: Centring on Zâbûl is a large depression clearly marked in the east by north-south faults and running east to the foothills of the Hindu Kush ranges. The principal features of the lowland within Iranian territory are the two permanent lakes of the Hâmûn-i Hirmand and Daryââh-i Hâmûn-i Šâbari, which seasonally link with the Hâmûn-i Pusak in Afghanistan to form a single sweet water lake. The lake is fed by the Rûd-i Hirmand, having its catchment in Afghanistan, while drainage is to the south via the Êlalak Rûd to Gûdî Zara on the Afghan-Pakistan frontier. Despite the ample supplies of water available for irrigation, settled agriculture is poorly developed, not least of all as a result of structural problems affecting ownership and tenancy of land in the area (Lambton, 1953 and 1965). Distance from urban markets and poor roads have also inhibited development, though severe constraints on summer cropping are imposed by the bâd-i sad-ubrist ûrû, which tends to have a scorching effect on crops. Main products of the area are grains and some vegetables and cotton.
basins, with streams mainly falling in torrents down the deep slopes. A more intricate pattern exists in the case of the Safid Rūd, where the north-south stream has captured the Kūzī Uzun and the Shahrūd which occupy an elevated trough in the central basin of the Alburz. Land communications across the Alburz are difficult and hazardous even at the present time. Except for the Kāżvin-Mandīl-Rašt route using the Safid Rūd gap, all other routes are subject to temporary closure in winter as a result of snow-blockage, flooding and landslips. The Tehran-Āmūl crossing using the Rūd-i Harāz valley is especially notorious in this respect.

Although the Alburz tend to be of lower altitude in the east, there is a large element of geological continuity between the main Alburz and the eastern ranges of Kūh-i Hazār Masjīdī and Kūh-i Binālūd than specialists formerly believed, the basic folded sedimentaries of the Cambrian to Paleogene of the Alburz system giving an underlying unity (Bariand, 1965). As noted, however, intensity of folding declines in the northern foothills and has given rise to a more regular series of hill ranges and intervening troughs with topography rather different, therefore, from the main Alburz. The main lines of drainage run along the central valley lying between the ranges, including the Kūh-i Goūl, Kūh-i Allāh Akbar and Kūh-i Hazār Masjīdī and the southern ridges of Kūh-i Alā Dāgh and Kūh-i Binālūd. From a watershed in the Kūčān-Kalātcheh area, the region is drained westwards by the Rūd-i Atrāk and its tributaries towards the Turkoman Saḥrā, while the Kāshāf Rūd drains to the south-east joining the Hari Rūd north of Garmāb ‘Alīya. Livestock herding is important in the hill areas of northern Khūrāsān, while the major areas of intensified agriculture occur both in the lower Atrāk region and the broad plain around Masgḥad and in the extended oases of Nīshābūr and Sabzavār. The vast but poorly watered and isolated Dūvayn plain supports a number of formerly prosperous but now depressed villages reliant on kandī and spring water supply for agriculture and on livestock herding.

The Alburz is poorly endowed with minerals compared to other areas of the country, though exploration is far from complete. In addition to lead-zinc deposits at Donā, Kālār Daštī, Sarbāshā, Rezāābād and Tūyeh, barite is found at Sirā, while small deposits of iron ore have been located at Sīmānān. Old-established coal workings are still actively exploited for both the lower Atrāk region and the coalfields around Masgḥad and in the oases of Nīshābūr and Sabzavār. The main Zagros is distinguished from the zone of overthrusting and its associated imbricated zone (Oberlander, 1965) by a discontinuous major line of overthrusting running from slightly south of Kirmān-kāshān in the north-west to Kūh-i Cāshma north of Mināb in the south-east and including a 200-kilometre wide zone taking in the whole of south-west and south Iran as far east as Ra’s al-Shir with the sole exception of the Plain of Khūzestān. In the main Zagros, conformably lain Cambrian to late Tertiary sedimentary rocks have been folded during Plio-Pleistocene times into extended parallel folds now much eroded and dissected by deep gorges through which the major rivers flow to the Persian Gulf in a complex longitudinal/transverse pattern. The major rivers, all of them perennial, include the Karkhā, Hendidjan, Helleh, Mond and Mīhrān systems, though several small streams make a direct but seasonal route to the Persian Gulf. Although few minerals other than hydrocarbons have been found in the main Zagros, oil and gas fields abound, especially in the dome formations of the Asmari and Cretaceous limestones, which have been the basis for the development of the Iranian oil industry since the early twentieth century, first in the northern fields of Masjīd-i Sułaymān and Lālī and later in the more prolific structures such as Aghā Iṣārī, Aḩwāz, Ga‘z Sārān and Mārīn further to the south. Overlying the Asmari limestone in the oilfield zone are the lower Fārs beds which contain plastic evaporite deposits acting as a seal for the oil-bearing structures (Harrison, 1968).

Despite a relatively heavy and reliable rainfall in the area of the western Zagros (Khurramābāb, 504.0 and Shīrāz 384.6 millimetres) sedentary agriculture is not well developed except around Shīrāz, most of the area falling under tribal group herding systems of land utilisation. Central government control in the area was tenuous until comparatively recent years since access was difficult and tribal control absolute outside the major towns. The main tribal groups occupying this vast area include Kurds, Lārs, Baḥḥītiyār, Kūhīglī, Boyer Ahmād and Kašḵāy, all of which are still concerned with transhumant herding, though growing government pressure on the tribes to settle through enforced security, the establishment of agricultural extension services and a road construction programme is having some effect towards increasing the area under sedentary cultivation. Protection of the extensive oak forests on the higher ridges and valleys of the Zagros is helping to conserve timber resources in tribal areas of the zone. The eastern Zagros is an area of poorer rainfall than the west but a prosperous sedentary agriculture is developing in the major river valleys and plains, particularly around Iṣṭahbānat, Fāsā and Nīrz, with grains, including millet, and sugar beet of importance. Livestock, often under a nomadic regime, remain the basis of the economy of the area, exploiting seasonal grasslands of the Garmīr and Sardīsīr.

The long coastline of the Persian Gulf permits of widespread smuggling activity of luxury goods from the trade entrepôts of the Gulf for the Iranian market. Fishing, on the other hand, is little developed and is of only local significance. Of the ports of the coast between Bandar Daylām and Bandar ‘Abbās, none has yet risen to national importance other than the oil terminals of Dīzārā-i Kharg, Bābregān and Dīzārā-i Lāvān. The agriculture of the coastal strip is extremely poor, limited to grazing and shifting cultivation with the exception of the oases around Bandar ‘Abbās and Mināb.
3.iii. The Iranian Lowlands:
(a) The Khuzistan Lowlands: The lowlands of Khuzistan have been described by Fisher (1968) as the largest single expanse of true lowland in Iranian territory and the area does present a sharp contrast to the rest of the country where mountains are rarely out of view. Structurally, the plain is regarded as part of the Arabian platform with a deep cover of Paleozoic-Mesozoic-Tertiary sedimentary rocks under more recent layers of alluvial material making up a continuation of the Mesopotamian region to the foothills of the Zagros (N.I.O.C., 1959). A high rate of deposition of alluvium still exists in the headwaters of the Persian Gulf dependent on the silt load brought down by the Tigris-Euphrates and Kârûn systems. De Morgan's (1905) classical theory on the infilling of the headwaters of the Persian Gulf and the gradual advance of the land surface there has been widely accepted though Lees and Falcon (1952) have offered an alternative hypothesis on the assumption that the lowlands represent a gradual downwarping of the land surface under the weight of accumulated sediments and that the coastline is therefore more or less in stable equilibrium.

Topographically, the plain is virtually unbroken with a slow rise in altitude from the coast to the abrupt slopes of the Zagros foothills. Not until Andimeshk is reached, 130-kilometres north of Ahvâz, do altitudes rise above 100 metres. The area is drained by the Rûd-i Kârûn in its north-west sector towards the Rûd-i Kûrûn, which is not reached before the Kârûn peters out in salt and mud flats. The north and north-east is served by the Rûd-i Kûrûn and its tributaries, while the east is drained by the Rûd-i Dharrâhi system. Although much of the water is fed to the Persian Gulf through the Shatt al-Arab, a number of narrow creeks known as khar also distribute the river waters of both systems. The largest of these creeks, the Kûhr Mûsâ, serves as a sea-way to the ports of Bandar Shâhpûr and Mâh Shahr, the former rising to importance as a major port and the latter acting as a terminal for oil product exports from the Abâdân refinery. Khuuramshâhâr lies at the junction of the Rûd-i Kûrûn and Shatt al-Arab (the latter officially referred to as the Arvand Rûd in Iran) and is the major commercial goods port for international trade. Abâdân lies downstream from Khurramshâhâr and is the former oil products port for the Abâdân refinery. The city retains its position as an oil processing centre but is no longer a port of any significance. Ahvâz, situated on the Rûd-i Kûrûn 125 kilometres from Abâdân, is the provincial capital and an expanding centre of the oil industry from which most administration and servicing of the field areas is carried on. Until the early 1950s, the agricultural state of the Khuzistân lowland was extremely poor, contrasting sharply with the former prosperity of Archaemenid and Sasanian times. Much of the plain was cultivated by tribal groups under shifting agriculture with only minor pockets of sedentary agriculture in the palm groves around Abâdân and Khurramshâhâr and the gatherings fed by the wadis of the Arvand Rûd in the north and Abâdân and Khurramshâh in the south. Control of the Abî Dîz following construction of the Muhammad Reîsh Shâh dam above Dezfûl has permitted rapid growth of newly reclaimed agricultural areas on the plain where Haft Tappeh sugar cane plantation is an important early example. In addition to the activities associated directly with oil production and export, a number of modern industries utilising natural gas have grown up in Abâdân and Bandar Shâhpûr, while new industries processing heavy and bulky imported raw materials, particularly steel, have developed near Ahvâz. The region is favoured by the existence of excellent rail links which run through the Dîz-Sezâr gap in the Zagros to Tehran and northern Iran.

(b) The Caspian Lowlands and Turkoman Şâhrâ: The Caspian Lowlands and the Turkoman Şâhrâ reach from the Irano-Soviet frontier at Âstârâ in a belt of radically varying width (from two to three kilometres to 50 kilometres) to the east of Gunbad-i Kâbûs. The lowlands are seen as the southern edge of the Asiatic foreland (Harrison, 1958) or as areas of young depressions (Barland, 1965). Much of the Caspian lowland represents the area left by the recession of the Caspian Sea and the characteristic soil cover is non-saline alluvial soils and, in the Bandar Pahlavi-Lâhîdjan region, peat and grey soils (Dewan, 1961). In the Gurgân-Gunbad-i Kâbûs area of the Caspian piedmont, soils are extremely fertile and include deep horizons of podzolic soils. Such fertility combines with heavy rainfall over much of the plains, with the Bandar Pahlavi-Lâhîdjan area receiving an annual average of no less than 1,800 millimetres, though precipitation amounts decline very steeply southwards and more gradually to the east, Bâbulsar receiving 817.9 millimetres and Gurgân 649.8 millimetres.

Drainage is highly variable in type. Many short streams run down to the Caspian Sea between Âstârâ and Rûşvândeh and between Rûdsar and Nûr. The plain is also traversed by the braided distributaries of the Safîd Rûd, some water of which is diverted artificially by tunnel to the Fûmenât district. Flooding of the Safîd Rûd delta was a usual occurrence until the construction of the Safîd Rûd (Şâhshânî Farâhî) dam and its associated re-regulation works and present-day river levels are only fractionally below those of the plain itself, thereby permitting direct off-take of irrigation water for the inundation of rice-paddies which form the major item of land use in this zone. Further east, the rivers tend to be more incised, making irrigation more difficult, though rice remains the dominating crop of the lowlands proper as far east as Gâlûgâh.

Although rice has become increasingly important in the modern period, often on land reclaimed from the sea, swamps and lower slopes of the Alburz, and tea plantations have taken over the undulating land above the Caspian plain, other crops have considerable national importance, including tobacco, citrus fruits (particularly in the Şâhsavâr-Câlûs region), and sunflower seeds. Mulberry trees are present in large numbers and a small-scale silk industry survives as a fractional legacy of the former traditional economic basis of the area. The Gurgân and Gunbad-i Kâbûs plains produce large quantities of cotton and grains on lands only recently reclaimed to arable use. Forestry activity on the higher slopes of the Alburz, where the Hyrcanian forest survives over a considerable acreage, is economically important, though the timber resource has been abused in the past by random cutting for construction and charcoal burning purposes. A flourishing fishing industry exists in the small Caspian ports and coastal villages and along the rivers of the region. The state-controlled caviar interest has had international significance for many years and is of continuing importance despite rigorous supervision of sturgeon fishing made necessary by fears of over-rapid depletion of the species. Local and Tehran markets are supplied with fresh-water fish caught in the rivers, particularly the Safîd Rûd. Although the Caspian
ports suffered eclipse following the end of World War II as a result of restrictions on trade with the U.S.S.R., the many problems posed by the silting up of the harbours and the recession of the coastline, the expansion of the Irano-Soviet trade since 1965 has led to the reinvigoration of trade and communications sectors in the area. Bandar Pahlavi handles both Irano-Soviet exchanges and an increasing volume of international transit trade.

Geography has thus also contributed to a diversity of peoples, a problem which the Achaemenians solved by creating the first empire, one in which minorities were allowed local autonomy in dress, religion, speech, and other aspects of culture within a single political framework. This diversity has continued until modern times. To the southwest, Iran touches Arab country, with many Arabs living on contiguous ‘Irāk soil, as well as on Bahrayn Island (which Iran once claimed). To the northwest the crest of the Zagros splits the Kurdish people, and the northwestern corner of Iran, bordering on Turkey and Soviet Ādharbāyjān, contains populations speaking Azari Turkish, while other Turks are found on Iranian territory east of the Caspian Sea as well as in the southern Zagros. To the east, Iran’s borders with Afgānistān and Pakistan are overlapped by Persian-speaking Čahār Lang Mongols, Balūč, and a few Brāhuis.

The distribution of population in Iran, and the pastoral lands, encloses the nucleus of a desert. Differing responses to these underlying variations in natural conditions and isolation of areas from the mainstream of the nation’s life caused by strong physical barriers to movement between the regions have accentuated Iran’s regional diversity.

ii.—**Demography and Ethnicity**

The distribution of population in Iran, and the ways in which its peoples make their livings, are to a considerable extent a function of its geography (see above). A horseshoe-shaped arc of varying width containing habitable mountains and other arable and pastoral lands, encloses the nucleus of a desert. Because this arc points northwestward, where it merges into the highlands of ‘Irāk and Turkey, the bulk of the Iranian population is concentrated near its borders. Since Achaemenian times this habitation pattern has posed an administrative problem to the successive Iranian governments.

Geography has thus also contributed to a diversity of peoples, a problem which the Achaemenians solved by creating the first empire, one in which minorities were allowed local autonomy in dress, religion, speech, and other aspects of culture within a single political framework. This diversity has continued until modern times. To the southwest, Iran touches Arab country, with many Arabs living on contiguous ‘Irāk soil, as well as on Bahrayn Island (which Iran once claimed). To the northwest the crest of the Zagros splits the Kurdish people, and the northwestern corner of Iran, bordering on Turkey and Soviet Ādharbāyjān, contains populations speaking Azari Turkish, while other Turks are found on Iranian territory east of the Caspian Sea as well as in the southern Zagros. Except for about 15,000 Zoroastrians remaining in and about Yazd and Kirmán, the ethnic Persians, including the tribal ones, are Sháhí, and so are most of the Arabs living in Iran. Over two million more of the Sháh's subjects are Sunnis, particularly the migratory Kurdish tribes of the northwest, the Turkomans, and the Balúchí. Ismá'ílís and Bahá'ís still persist in Iran, and the Lur tribesmen were, and may secretly still be, 'Allí Ikhís.

In 1960 there were still some 60,000 Jews in Iran, engaged mostly in the professions and trade, whereas many of the Kurdish Jews of Sanandaj and Sašãqíz had already migrated to Israel. Almost equally scattered were over 50,000 Armenians, although some had left Iran for Soviet Armenia. Armenian villages may still be seen in the northwest, and the entire suburb, or half-city of Džulfá-Isháhán is Armenian.

Armenians and Georgians, both used to cold weather, occupy throughout the year villages in the summer pastures of the Kashgháí. Like the Jews, the Armenians specialize in the professions, in trade, and also in truck-driving. A colony of Nestorian Christians who call themselves Assyrians and speak Syriac are concentrated in and about Režá'iyé. They number over 20,000. Many others have migrated to the United States. Both the Armenians and the Assyrians have undergone strong American and British missionary influence.

Except for the addition of a certain amount of modern industry, the cities of Iran are essentially commercial. In them handicrafts flourish and imported as well as local products are sold in modern shops and in covered bazaars. During the last thirty or forty years Tehran has replaced Tabriz as the largest city, and has drawn to itself persons from all over the nation, including gardeners from Zabol, Turkoman truckdrivers, an intellectual elite educated mostly abroad, the absentee owners of thousands of villages, and a host of public servants. In summer those who can afford it move to the mountain slopes north of the city or to resorts on the Caspian shore.

The usual Iranian village is an assemblage of mudbrick or pisé dwellings roofed with poplar poles covered with earth. The poles are cut from the closely packed rows of quick-growing poplars that line nearly every canal and stream. In regions lacking such watercourses a row of circular mounds, like hollow molehills, stretches from the hills across the sloping plain to the village. These mounds mark the course of a deep, manmade, underground stream called a kandí [q.v. & see M]. Sheltered from evaporation, it is the product of highly skilled labour. Kandí-diggers are specialists from the Gurgán region who go wherever their services are needed.

Apart from the aforementioned poplars and fruit trees, the typical landscape is almost bare of vegetation taller than short grass, for the goats and sheep keep it down and every day women and children go out to collect low bushes and twigs for fuel. There is usually one carpenter in the village, but most of the men are engaged in agriculture, while the boys tend the flocks.

In the absence of the landlord, whom many of the villagers may never have seen, the community is run by his agent, the kathkúhdí, who allocates the land, provides most of the tools, and collects the rent. This usually consists of four-fifths of the grain produced by each man, unless he is the lucky owner of an ox used in ploughing, in which case he may receive the share of five men and may not need to work.

In tribal territory the village may belong to the tribe as a whole, and in non-tribal territory there were, even twenty years ago, a few "free" villages owned by the villagers themselves, and ruled by their own headmen who paid taxes directly to the government. Under the current land reforms instituted by the present Sháh, the number of such villages has increased.

The principal respite from the dreary, impoverished routine of most villagers' lives comes from weddings and other rites of passage, from the celebration of the Nawruz. Beginning at the vernal equinox, this holiday lasts twelve days. In the balmy spring weather, families move out to the fields to picnic and to disport themselves. Each family collects seven trees, the typical landscape is almost bare of vegetation apart from the aforementioned poplars and fruit trees, the typical landscape is almost bare of vegetation taller than short grass, for the goats and sheep keep it down and every day women and children go out to collect low bushes and twigs for fuel. The northern Kurds live in villages ruled by their own chiefs during the winter, but in spring it was their habit, until forbidden by the government, to migrate each spring to high pastures across the Irākī border, and return before snowfall. They are Sunnis and prefer the type of marriage common among Arabs, in which a young man marries his paternal uncle's daughter. They have three cities, Mahābād, Sanandaj, and Saḵlīz, of which the third, until recently, included a considerable Kurdish-speaking Jewish population. Around Komānāshā the local Kurds have become detribalized tenant farmers and Shiʿī.

In the mountains south of the Kurds live the Lurs, who speak an aberrant form of archaic Persian. Although nominally Shiʿī, they were formerly openly ʿAllī Ḥāš. Like the Zoroastrians, they revere bread and fire. Being split up into numerous tribes and sections, they migrate to their summer pastures as separate bands without overall command. In 1936 Rezā Šāh's army conquered them, with much bloodshed and starvation, forcing many of the survivors to settle in villages under landlords.

Next to the south are the Bakhtiyārīs, who speak a dialect similar to that of the Lurs. They are a powerful confederation under the command of a paramount chief called the Muḥāfizī. In their annual migrations they move simultaneously over five routes from their winter to their summer pastures, crossing the Shustar River partly by fording and partly on inflated skins. Their winter pasture lies on the lowlands and foothills of the lower course of the Kūr in Khūzestān, their summer pasture in the long alpine valley of the Upper Kūr. In both places they have permanent villages, the summer ones occupied by Armenians and Georgians. In between, the Bakhtiyārī chiefs own many of the villages through which they pass. Their migrations require much organization, accurate planning, and exact timing, and armed horsemen police the migrants and their flocks on the way. Kinship ties are strong and succession to the chieftainship is by primogeniture.

Very little is known about the Kuh Galus, who live south and east of the Bakhtiyārīs, except that they are organized into some six tribes, some sections of which speak Turkish, the others Persian. They are under the control of four families which, unlike the ruling elite of the Bakhtiyārīs, include (or did so until recently) few if any men with modern education. The same generalizations may be made of the Mamassanis, about whom even less information is to be found in the pertinent literature.

Beyond the Mamassanis are the Kashghays, members of a powerful confederation divided into twelve tribes. Their Turkish-speaking ancestors moved out of the Central Asian grasslands about 700 years ago, crossing Iran to their present home, the southern Zagros. About half are still nomadic. Every year the latter make the longest biennial migration in Iran, some 350 miles in each direction. They winter between the Fahlian River on the north and the encircling Mand River on the northeast, east, and south; westward it reaches the coast. It is split into two sections by a tongue of Mamassani territory on the Upper Shāhpūr River. Their summer pastures lie in two adjoining regions. One is in the Nīrīz basin, the hills flanking the headwaters of the Upper Pulvar River and the great bend of the Upper Kūr River. The other is on the western side of the Zagros watershed on the plateau between Abūdāh and Shahrēfā. These summer pastures are verdant but treeless, ideal country for breeding horses, in which the Kashghāy specialize, importing stallions from Arabia.

Although they follow several routes on the lower and upper parts of their migration, all must converge at a place called Guyun some twenty miles north of Shirāz, and a vulnerable spot. In Shirāz is their tribal headquarters, a palace occupied by four brothers who rule the tribe, and who can reach Guyun in less than 24 hours. On the 25th of May, the Kashghāy ride both horses and camels along the valley bottoms, while along the ridges to either side mounted men drive their seven million or so sheep, mostly fat-tailed.

Although nominally Shiʿī, the Kashghāy rulers govern by the Turkish ʿadāt, or customary law, instead of by the sharīʿa. The four brothers hold their power in common because, in order to divorce, the confederation needs tight organization, run like clockwork. The brothers must constantly make the rounds of the followers, listen to complaints, administer ad hoc justice, officiate at ceremonies, and make their presences known and felt. Like that of the Bakhtiyārī, their ruling family includes men educated in Europe and America. As might be expected, from time to time their autonomy has been challenged by the central government.

The easternmost of the Zagros nomads are the Khamsehs, so-called because they consist of five units, brought together over 100 years ago under the leadership of the Kavām family of merchants in Shirāz. One unit, the Bāšīrī tribe, is Persian-speaking. A second, consisting of the Jebbara and Shaybānī and other Arab tribes, all speak Arabic, while the third is made up of the Turkish-speaking Aynalu, Bahārū, and Nafar. The first two are now settled while the third has joined the Bāšīrī. In winter the Khamseh nomads live on the coastal plain east of the Kashghāy. They move to and from their summer pastures, also located east of the Kashghāy's, via the Persepolis plain and over different routes. On both migrations, but not in winter or summer quarters, the Bāšīrī are accompanied by Gypsies who provide them with services in return for protection.

Returning to northwestern Iran, in the country bordering Soviet Ādāharbāyjān, we are next concerned with the Turkish-speaking Shāhshavans, or King's Guards. North of Menāb and near Khūy, they occupy about 100 villages with about 100,000 inhabitants, and an equal number of seasonal nomads are organized into four main tribes, living farther east. These tribesmen are seasonally nomadic, living during the summer in felt-covered yurt-like portable dwellings, with their roofs reaching a peak rather than being domed. They are first-rate horsemen, and long served the Shāhs as guardians of the Russian border.

The two northernmost tribes spend their summers on the Savallān Dāgh between Ahar and Ardabil, and winter on the Mughān Steppe, a lowland area shared by the Ādāharbāyjān SSR and Iranian Adharbāyjān. The other two summer in the hills north of Sāwa and Hamadān and move in winter to the inner side of the central plateau, on the northern edge of the Dast-i Kavir, which is snow-free at that season.

In the western Alburz mountains live a few other tribes, both Turkish and Kurdish speaking, who dwell in black tents in high pastures during the summer, and winter lower down, but not far enough down to avoid deep snow; in winter some of their sheep freeze and wolves devour them.

In the eastern Alburz, east of a line between
Gurgān and Dāmghān, the crest of the range divides, forming the walls of a valley whose waters flow into both the Atrak River and the canals of Mashhad. Both Kurds and Turks have lived in this valley ever since Shāh ‘Abbās moved them there from the Zagros in about 1031/1622. While the Turks have since become sedentary, the Kurds are still partly pastoral, and live in black tents.

A different type of pastoral nomadism is practised by the Yamut Turkomans who live in domed, felt-covered yurts north of Gurgān from the southeastern corner of the Caspian Sea to Gunbad-i Kābūs. Beyond the Russian border, more than 600,000 more Turkomans are found in the Turkmen SSR and in Afghanistan. The Turkomans are typical Central Asiatic nomads, who raise horses, cattle, sheep, and hardy one-humped camels. They drive four-wheeled wagons, as well as riding horseback, and many now drive cooperatively-owned trucks. Their women weave the famous rugs known to the trade as Bokharas.

On the outskirts of Gurgān city is a refugee camp of about 500 Kirghiz who fled from the Soviet Union in 1935 and 1936. They are mostly employed by the Highway Department in moving earth in their high, two-wheeled carts.

Moving to the Persian Gulf, we find Arabs scattered all the way from the ‘Irākī border to Pakistan, except for a stretch of shore held by the Kashghāy and the Persian port of Bushire, out of which Persian dhows sail as far afield as Aden and the African coast. Most of the Arab population of Iran is tribally organized, whether sedentary or nomadic, and Shīʿī, although one tribe, the Banū Tamīm, is Sunni. The two largest tribes are the Al Kāthir and the Banū Lam.

Most of the semi-settled tribes keep cattle, sheep, and camels, cultivate rice and other cereals, and either own or work in date groves. This mixed economy sets complicated time-tables for some of them. For example, the Muhaysīn leave their palm groves on the east bank of the Šaṭṭ al-ʿArab in November to sow their grain fields along the banks of the Kārūn River, return in February to pollinate their date-palms, and are off again in May to reap their grain, going back once more to harvest their dates in July and August. Like their brethren west of the Šaṭṭ al-ʿArab, they are in every sense un-acclimatized ethnic Arabs, although none are full-time camel nomads like the bedouin.

Farther east along the coast are maritime settlements of Arab seamen who ply their dhows and bāms to both sides of the Indian Ocean. Lingeh is their principal port. Nomadic, tent-dwelling Arabs also live in small groups scattered along the eastern edge of the Dašt-i Lūt and beyond Mashhad into Soviet territory.

Except for the coast, the southeastern corner of Iran is principally occupied by Balūcīs, whose territory also extends northward between the edge of the desert and the Afghan border to Lake Hamūn, fed by the Helmand River. Others live in Afghānīstān and Pakistan; in the latter country they are most numerous. Their economic adaptation is to desert country where grass grows in winter. In summer they camp near permanent water; along banāds serving dependent Persian villages and along the banks of the Helmand and Hari Rūd. Divided into more than a dozen tribes, the Balūcīs are Sunnis, but they also revere the graves of pīrs, or holy men.

Like the Kurds, they speak an Iranian language of their own. They breed horses, asses, mules, camels, and sheep. Considering themselves a warrior caste, the Balūcīs used to keep the caravan roads open for a fee, to draw rent from villages that they own, and to raid each other for slaves.

Scattered among the Balūcīs are Dravidian-speaking Brāhūls, whose home is in Kalat in Pakistan. They live in small groups of families all the way up the eastern side of Iran to Mashhad and Sārāqbīs. Many of the Brāhūl men serve in the police and the national gendarmerie.

Near Lake Hamūn in Sīstān live four tribes of nomadic Persians, the Sarbandīs, Shāreksīs, Khimars, and Herātīs, totalling about four thousand families. About them we have no detailed information. In the swamps and along the aquatic labyrinth of the mouths of the Helmand is a small population of fishermen and fowlers called Șayyāyād ("hunters"). They catch both fish and ducks in nets, and appear to be the residue of an earlier hunting people.

Viewing the demography and ethnography of Iran

Languages of Iran and Afghanistan
From Caravan, the Story of Middle East, by Carleton S. Coon, London 1952.
as a whole, it would be hard to find another Islamic country of its size as decentralized as Iran is geo-
graphically and containing as many different peoples and languages. Yet since Achaeenian times it has
remained, with a few interruptions, a nation, the world’s oldest empire,  and with the help of modern
transportation and communication, it seems so destined to remain.

iv.—PRE-ISLAMIC MYTHOLOGY

The chief sources for Iranian mythology are the Avesta and the deeds of kings and heroes collected by
the historians and poets of the early centuries of Islam. Their information doubtless came from the
“ancient annals” of Iran, the Khuday-námak. The longest of these works is the famous Shah-náma of
Firdawsi (350/641-411/1020 [q.v.]). The evidence of ancient Greek historians, rock inscriptions and some
Mazdaean books and literary works, rich in pre-Islamic materials but often compiled in Islamic
times, are also very valuable. Besides the Avesta attributed to Zoroaster, there may be mentioned the
Dnkhart (a vast commentary on the Avesta, completed in the 3rd/9th century), and the great
Bundahishn (Book of the Creation). Numerous Mazdaean works written in Pahlavi, the bearers of
the ancient tradition, have in large measure only been known for less than two centuries, and the
Islamic Iranian world was dependent on traditions recorded in Persian and Arabic by early Muslim
writers for its knowledge of a history that was partly only mythology. Ancient Iran continued for a long
time to elaborate its mythology from pre-Mazdaean and Mazdaean sources. In the course of centuries
chivalrous exploits and an exalted human dignity were grafted on to them. This elaboration in its
popular form, written down in Persian, came to an end in the 5th/11th century when the pre-Islamic
sources and the oral traditions gave birth to several “books of kings” and historical summaries culmina-
ting in the Shah-náma of Firdawsi.

Iranian mythology, rich as it is, has some common
features and some undeniable affinities with that of
India, but the power and preponderant role of some
Indian gods are relegated to a secondary level in Iran.
The analogies and differences between the myths
of Iran and those of the Indo-European world are
particularly worthy of interest and reveal some
relationship between their systems of thought. The
tripartite idea of society (priests, warriors and cattle-
breeders/agriculturists) which G. Dumézil remark-
ably demonstrated in the mythology of India and the
Indo-European peoples is at present held in great
favour. These three hierarchical functions which are
confirmed in the Avesta (Y. xi, 6, xiii, 5; Yt xiii,
58-9, xix, 8, xxi, 16; Vi iv, 28, 39, xii, 6, etc.) and to which the Yasna xix, 17, adds a fourth,
that of the artisans, continued with some slight mod-
ifications (priests, dabirán officials, warriors and
artisans-peasants) to make up the social order of
Iran until the end of the Sasanid period. There is
ever reason to believe that the tetraramous division
of society, whether it was due to the Yazna or to the
social reorganization of the Sasanid period, follows
this triad of hierarchical functions.

Certain memories preserved in the Gathas (the
oldest part of the Avesta) and several Yaghts of the
Avesta betoken a pre-Mazdaean mythology. The two
primordial spirits, Spanta mainyu (Holy Spirit) and
Ahra mainyu (Spirit of Evil) correspond to the two
anthithetical aspects of Vayu, at the same time the
good and the bad wind which is the breathing-spirit and
the motive force of the Universe. The Indian counter-
part of Vayu is Váyu who stands at the head of a
series of functional divinities. In the same manner,
but by a reversal of the Indian position, the Iranians
contrasted the nature of the ahura (Indian asura) with
that of the daeva (Indian d£va). These latter, whom
the Indians considered as good, take on a malignant
character in Iran, while the malignant asura make
way for the benignant Iranian ahura. The Indian god
Indra, who is assigned the function of a warrior, sees his role reversed in Iran where he becomes a
demon in the Videvdh (the part of the Avesta dealing
with canonical law and exorcism) x, 9 and xix, 43.

The series of the great Mazdaean divinities is
made up of Ahura Mazda, the supreme god, and six
cities called Amasha Spanta (Holy Immortals) who
surround him: 1) Vahu Manah (Good Spirit), an entity
protecting the conscience of just men and to whom the
ix is connected. Her auxiliaries are the Fravashi (pro-
Geush Urvan (the spirit of the primordial ox) and
Rām, a helping divinity which guides the soul after
death. 2) Āsha (Order-Justice), an entity guarantee-
inng cosmic and moral order. She is seconded by Atar
(the divinity of Fire), Vṛīraga (a god who embodies
the victorious attack) and Sraoša (a god of Vigilance
and Obedience). 3) Šāhāvēr (Kingdom), the entity
presiding over metals and thus over arms and the
army. She fills the role of warrior or rather of de-
defender of the poor, and she is helped by the Sun,
the Sky and Mitras whom a remarkable rise made
a rival of Ahura Mazda and who became the object
of a cult in the west, the cult of Mithraism. 4) Ar-
maiti (Moderation), the goddess of fecundity and
mercy, to whom the earth is linked. The secondary
divinities accompanying her are Ardivisura Anahita
(the waters) and in second place Daena (or Dēn in
Pahlavi), Religion. 5) Haurvatat (Integrity) whose
associated divinities are Tishtiyya (Sirius), Vāta
(the Wind), and the Fravashī (protective spirits).
6) Amaratat (Immortality), the guardian of plants,
and several Mazdaean works written in Pahlavi, the bearers of the ancient tradition, have in large measure only been known for less than two centuries, and the Islamic Iranian world was dependent on traditions recorded in Persian and Arabic by early Muslim writers for its knowledge of a history that was partly only mythology. Ancient Iran continued for a long time to elaborate its mythology from pre-Mazdaean and Mazdaean sources. In the course of centuries chivalrous exploits and an exalted human dignity were grafted on to them. This elaboration in its popular form, written down in Persian, came to an end in the 5th/11th century when the pre-Islamic sources and the oral traditions gave birth to several "books of kings" and historical summaries culminating in the Shah-náma of Firdawsi. Iranian mythology, rich as it is, has some common features and some undeniable affinities with that of India, but the power and preponderant role of some Indian gods are relegated to a secondary level in Iran. The analogies and differences between the myths
multitude of Yazata and Fravashi, who are considered as divinities with less well defined roles, fill out the Iranian pantheon, and hence the idea arises that the origin of angels might be linked to them and to the holy Immortals. A malignant spirit belonging to the train of Ahra Mainyu is opposed to each divinity in the cortege of Ahura Mazda.

If the tripartite division of G. Dumézil is borne in mind, the entities Vahu Manah and Agha correspond to the Indian gods Mitra and Varuna and they fulfill, along with Ahura Mazda, the first function of the Iranian pantheon. The function of the warrior is incumbent upon the Iranian Khsharita as it is upon the Indian Indra. Finally, the function of production and wealth is shared between Armaity (goddess of fertility, the Earth) and the Haurvatat and Amaratat who are related to the Indian divinities, the goddess Sarasvati, the twin Nasayas, and others.

The Mazdaean holy Immortals are at the same time abstract representations giving Ahura Mazda his fullness and beings who, although superior to creatures, remain inferior to Ahura Mazda. They are shown both as personal Agents and personified Powers. The antagonism which sets the Spirit of Good and the Spirit of Evil in opposition, the basis for Iranian dualism, is the metaphysic and the morality of this mythology. According to the great Bundahish (ch. i), the Upper World, spiritual and moral beings, have been the domain of Hormazd (Ahura Mazda) since the beginning of creation, while the nether region is the shadowy world of Ahriman (Ahra Mainyu). An intermediate space divides these two worlds, a mixed world in which good and evil do battle. In this continuous conflict the force of Ahriman faces the army of Hormazd and finally the Spirit of Good triumphs over the Spirit of Evil. Each being must take part in this struggle and it is thanks to his meritorious actions, his good thoughts and words, that Man participates in the final victory.

Ahura Mazda has gradually taken the place of Spanta Mainyu, his own emanation, so as to confront the Spirits of Evil himself. He has granted Ahra Mainyu a respite of 12,000 years and knows his plans in advance.

Alongside this divine mythology, there is a human mythology related to it. In large measure it is presented in the form of historical epics situated (with some exceptions such as the longevity of certain heroes) on the human plane. They tell of a succession of events which are linked together by their own chronology. The first man, Gayomart, directly succeeding the creation of the primordial ox, his source of food, gives birth to an androgynous plant which divides into two, Mashya and Mashyani, the ancestors of human beings. According to the Avesta the first sovereign is not Gayomart, as the Shiklah-nama of Firdawsi states, but Yima (or Djamshid in Persian). A latent force, described as a victorious light (Khvarnah), a witness of celestial favour, protects Iran and numerous sovereigns and ancient heroes. The Khvarnah abandons Yima who has committed a sin (falsehood or pride) and thus Ahzi Dahaka, a foreign tyrant, defeats Yima and steals his kingship. Ohratauna (= Faridun), an Iranian hero who has become king thanks to the protection of Khvarnah, triumphs over Ahzi Dahaka (Y. ix, 8; Vt xiv, 49, xix, 92; Vt i, 17) and puts him in chains on mount Damavand. He is at the beginning of the universal genealogy of races and human peoples since he shared out the world among his three sons: to Iradj went Iran and India; to Salm the countries to the west of Iran, i.e., the lands of the Semites and the blacks; and to Tur the countries to the east of Iran, the lands of the Turks (Central Asia) and the Chinese (the Far East). This division of the world is not without echoes of Noah's giving the country of the Turks to Japheth, the tropical countries to Ham, and the lands of the Semites to Shem.

Several kings of this Peshdadi dynasty, the descendants of Iradj, reign in succession in Iran and then make way for the second mythical dynasty, that of the Kayanids. Yaqt xix (Zamiad Yagh) and Yaqt xiii (Farvardin Yagh) of the Avesta mention a list of Peshdadi and Kayanid heroes and kings on the occasion of praises addressed to their Khvarnah and their Fravah (or Fravashi), i.e., their protective spirits. Among them may be mentioned the Kayanids Kavi Usan (Persian Kay Kavous), Kavi Haosravali (Kay Khosrow), and Kavi Vistasp (Kay Gostasp). It was under Vistasp that Zoroaster preached his doctrine. The Peshdadi and Kayanid kings are personal-types of Iranian mythology. Moreover, it is to be noted that, if the figures of the first dynasty are common with those of India, the Kayanids who make up the second dynasty are specifically Iranian heroes.

These historised myths recount the main facts which occurred in an era without archives. This human mythology mingles with the other divine one and, by a cyclical spiritual and temporal conception of time, the Pahlavi Mazdaean books explain the reappearance of certain ancient heroes and kings, Peshdiddis and Kayanids, who are to play their definitive role at the end of time. The three sons of Zoroaster are to succeed each other every three thousand years from the beginning of the fourth millennium. The last of these sons, Saoshyant, will, together with Kay Khosrow, put an end to the corruption and iniquity of the world. The champion Saoshyant will finally give way to Zoroaster, and the king Kay Khosrow to Gostasp. Thus there will be established eternal life and the return to cosmic origins.

An apocalyptic literature, enriched by elements of myth and folklore, flourished in the Mazdaean books and expressed the hopes of believers.

On the margin of Mazdaean orthodoxy was to be found the belief in a god of time, Zervun, who engendered two sons, Ohrmazd and Ahriman, whose struggle began even in the womb. Ahriman, conceived of doubt, struggled to come into the world before Ohrmazd, but Zervun made his plans miscarry. The cult of Mithras (propagated about the beginning of the Christian era) and Manichaeism (preached after the 3rd century A.D.) preserved the dualist nature of Iranian religious thought, and it was not until its encounter with Islam that the mythical antagonism of Mazdaism was directed towards an absolute monotheism by the accentuation of its moral and transcendental values.

When the prophet Muhammad was born the Sasanian empire, the conquest, which took place in Persia which followed was undertaken mainly from the garrison cities of Bāṣra and Kūfah. The area to the north of Nihavand, taken by the Kifans, was known as Māh Kūfah, while the territory further south round Dinavar was taken by their Bāṣran rivals and known as Māh Bāṣra. The occupation of Khorāsān (17/639—21/643) was organized by the governor of Bāṣra, Abū Mūsā al-Ashʿarī, who also took part in the conquest of Mesopotamia (18/639—20/641). Expeditions also set out towards Ṭabarïyāḏ from Mawsil. Ardashīl capitulated about 20/641. The final defeat of the Persian army took place at Nihavand in 21/642. Hamadān made peace and further conquests were made in the direction of Ṭabarānīyāḏ (variously recorded under the years 18/639—22/643). Expeditions were also sent against Kāzwin, Abhar, and Zanjandān, and efforts made to take Daylam and Gilān. Hamadān appears to have broken the terms of the peace, for it is recorded as being stormed in 24/645. Rayy and ʿArousīn fell also about 24/644-5. Although the battles of Kādisīyā, Dalalā and Nihavand were decisive in the overthrow of the Sasanian empire, the conquest, which took place piecemeal, was not completed for many years and the conversion of its people took much longer. The conquest was carried out mainly from the garrison cities by Muslim Arabs, who were by this time far removed from their nomadic background. There was some settlement of Arabs chiefly in the towns; and also of some nomadic groups mainly in southern Persia and ʿAhrār. Much of the former system of administration continued in operation. The tax records were kept in Pahlavi by local scribes until the time of Ḥadiṣādi [q.v.] and many of the daḵābīn continued to carry out on behalf of the Arabs the
IRAN
functions they had fulfilled under the Sasanians (see also M. Sprengling, From Persian to Arabic, in A. J. S. L., lvi-lvii (1939-40)). From the account of Tabari it appears that prior to Anūshīravān the land tax was assessed on a crop-sharing basis. This led to abuses, and Anūshīravān replaced crop-sharing by measurement as the basis for assessment. He also reformed the poll-tax, grading it according to the taxpayer's income. The seven great families (including the royal family), the leading officials, soldiers, priests, and officials in the service of the king were exempt. The payment of poll-tax was, therefore, regarded as degrading.

After the defeat of the Persian army at Djalūlā, ʿUmar was faced with the problem of the administration of the conquests in the Sawād. He could not conclude treaties as Khālid had done, because large areas had been abandoned by the ruling classes and had remained without a government. He therefore decided to immobilize the land and to levy land and poll taxes on the inhabitants, the revenue therefrom to be fajr for the profit of the Muslim warriors and those who came after them. In the name of the Muslim state, he assumed full ownership of the estates and villages which had formerly belonged to the Sasanian royal family and the nobility who had been killed or fled, leaving the peasants on the land, and of deserted and "dead" lands. This assumption of ownership carried with it the right to cultivate the lands for the state, give them away, sell them, or grant them as assignments, and to impose on the holders ḥārāḏī or ʿwahr. In the case of estates and villages still in the possession of their former owners, ʿUmar considered that the legal title belonged to the Muslim state, on the ground that the Persians who had resisted conquest, but he allowed them to remain in possession on condition that they paid to the Muslim state the taxes which had formerly been paid to Anūshīravān, and acted as the agents of the Muslim state in their collection. This category of land was probably the largest. Alterations were later made in the rates of taxation paid and the crops on which taxes were levied. This arrangement differed from the case of Ḥira and other towns which had treaties providing for the payment of a fixed sum. In such cases the population raised this sum by whatever means they wished, and after its payment were released from further interference by the Arab government.

In addition to land tax, the non-Muslims paid a graded poll-tax, except that in towns which had treaties they paid such tax only as their own officials assessed it. In 20/641 a dārāḏī on the Persian model was set up, and in it were recorded receipts, expenditure, and stipends. It was not, however, until the reign of Muʿawiyah that the foundations of the future bureaucratic system were really laid, when Ziyād, the governor of Basra (45/665—50/670) and of Ṭirāk (50/670—53/673), established dārāḏīs and appointed Arabs and maṣālī as secretaries. Several dahāḥīn became Muslims after the battle of Djalūlā and various groups in south Persia joined with the Arabs, but there is no evidence of widespread conversion after the early conquests. It also seems that some of those who were exempt from the payment of poll-tax in Sasanian times became Muslims rather than pay poll-tax to the Muslims, since to pay such was considered degrading.

The circumstances of conquest varied in different provinces and from this stemmed differences in the tax administration. Towns which did not capitulate before conquest, but asked for an armistice after resistance had seemed hopeless, were required to pay a poll-tax in money and a contribution in kind, which could be increased or decreased as the population changed. The land, having been taken by force, was placed at the disposal of the āḥādīn, but in contradiction to land which had capitulated before conquest (ʿāḥād land) the terms of the agreement (ṣulh) could be changed. Śulḥ and ʿāḥād lands had their own local administration, whereas ḥārāḏī lands were closely regulated by the Arab dārāḏīs. (For a discussion of these problems see D. C. Dennett, Conversion and the poll tax in early Islam, Harvard University Press and Oxford University Press, 1950.)

Although Yazdigird's supporters were still active in northern Fārs, organized resistance ceased after the defeats suffered by the royal army. Some local communities and marbānīs with their troops continued to resist. Others concluded treaties with the Arabs on their own account. Many of the Persian captives became maṣālī and some of Yazdigird's army joined the Arabs. About 23/643 ʿUghmān b. Abī ʿAṣṭa Thakafi made advances into southern Fārs from Bahrayn, supported by Abū Mūsā from Başra. Tawwādī fell and raids were made on towns in Fārs. Further advances were made during the caliphate of ʿUghmān and between 25/644 and 27/647-8 ʿAbd Allāh b. ʿAmir, who had been appointed governor of the Ṭirāk region, took Atrak, Šāhi, Shirīn, Dārāḏīrīd, and Fāsā. ʿIšaʾišīrī fell in 28/648-9 and Gūr (Firūzābād) shortly afterwards. In the following year ʿAbd Allāh set out for Khurāsān. Yazdigird, pursued by a Muslim force, had meanwhile fled via Kirmān to Marv. Sirdjān, Bam, and Diirūft were conquered, and Hurmuz fell in 30/650-1. Skirmishes with the inhabitants of the mountain districts of Kirmān continued for many years.

From Kirmān the Arabs under Rabīʿ b. Ziyād al-Hārithī pushed north-eastwards into Sistān. His successor was expelled from the country, but another expedition was sent by ʿAbd Allāh b. ʿAmir under ʿAbd al-Rahmān b. Samura, who penetrated to Zamin Dāwar, Bust, and Zābul. ʿAbd Allāh had meanwhile reached Tabasayn and sent Aḥnāf b. Kays to take Kūhštān, whence he pressed on to Marv, which surrendered; Yazdigird fled to Bīlkh and over the Oxus to Tirmiḥ. In 31/651-2 he was murdered in flight near Murgāb. The Muslims under Aḥnāf took Dīzdjān and Bālkh and advanced to Khūwārazm. ʿAbd Allāh had meanwhile set out for Nishāpūr, which surrendered; Bayḫaḵ, Nīsā, and Sarāhsī also fell. Another group went to Harāt (32/653). ʿAbd Allāh then returned, leaving Kays b. al-Hayḥam as governor of Khurāsān.

ʿUghmān died in 35/656. The conquests in Persia were not yet secure, and during the civil war the Arab advance was stayed in Khurāsān fighting broke out between Muḥājir and Rabiʿa. The disorders spread throughout the province and enabled the Transoxanian leaders to regain their independence which had been on the point of being extinguished. Bālkh for a brief period fell under Chinese control. Numerous outbreaks of resistance also occurred in other parts of Persia. In 42/662 Muʿawiyah reappointed ʿAbd Allāh b. ʿAmir governor of Basra and the east. He sent ʿAbd al-Rahmān b. Samura to restore Arab rule in Sistān and Khurāsān. Bālkh was reconquered in 43/663, Sistān reoccupied and Kābūl taken. The reconquest of Khurāsān, begun by Kays b. al-Hayḥam, was continued by Ziyād b. Abī Sulayf, who established a strong garrison in Bālkh shortly afterwards settled 50,000 Arab colonists in Khurāsān. Būhghāra was captured in 54/674 and Samarkand fell in 56/676.
In Khurasan the local leaders had mainly capitulated by treaties (‘ahd) which stipulated that a fixed sum should be paid annually to the Arabs. Local administration remained in the hands of the local leaders. The inhabitants, for the most part, continued to pay land, trade, and poll taxes as they had under the Sasanians; local officials kept the registers and collected the taxes, paying the stipulated amount to the Arabs and keeping the remainder. Conversion in Khurasan, partly because of the large number of Arabs who had migrated there, was probably higher than elsewhere. Large numbers of, mawāli were mentioned as accompanying the Arabs on their campaigns against the Turks of Central Asia. The local tax-collectors do not appear to have released all converts from poll-tax, or, if they did, they increased the converts’ other taxes to compensate for the loss to the revenue of their poll-taxes. This led to discontent and rebellion. (See further Dennett, op. cit.).

‘Irak meanwhile had been reduced to a state of turmoil by the activities of the Khāridjites and the Shi‘a. In 66/685 Mukhtar, launching a revolt in the name of Ibn al-Hanafiyya, seized Kūf. There were mawāli, many of whom were Persians, among his followers but his main support came from the dissatisfaction of Arabs of Kūf; they were not defeated until 67/682. (See M. A. Shaban, The Abbāsid Revolution, Cambridge 1970, 145-6.) In 65/684-5 the Azārīka branch of the Khāridjites withdrew from ‘Irak to Khūṣīstān, and created many disorders in the territory between Bāṣra and Ahwāz. After Muhallab b. Abī Ṣufra defeated them in 66/685 they retreated to Fārs. Regrouping themselves, they returned to ‘Irāk and sacked Mādā‘īn, and on the advance of an army from Kūf, they withdrew. They next attacked Iṣlahān, but were defeated and fled in disorder to Fārs and Kīrmān (68/687-8). Once more they reassembled, reoccupied Ahwāz and advanced on Bāṣra. ‘Abd al-Malik had meanwhile recovered control of ‘Irāk and appointed Ḥadidjādī governor of the province in 75/694. Al-Muhallab, whom Ḥadidjādī sent against the Azārīka, forced them to retreat to Kāẓimān and then to evacuate Fārs. Retiring to Džirūf, they maintained themselves there for some years, but finally split among themselves. One group took refuge in Tabaristan, where they were defeated in 78/698-9, while a second remained in Kīrmān, to be extirpated by Al-Muhallab. The last remnants of the Azārīka were finally rooted out near Kūmīs.

Civil war broke out in Khūṣīstān among the Arabs after the death of the caliph Yazīd in 64/683. In 78/697, after a renewed outbreak of disorder, ‘Abd al-Malik added Khūṣīstān and Sīstān to Ḥadidjādī’s government. ‘Abd al-Raḥmān b. Abī ‘Arāḥū (see Ibn al-Asnām ‘Athir), who was sent by Ḥadidjādī from Kīrmān to Sīstān, recovered part of the province. After Ḥadidjādī had reproached him for not pushing his advance with greater vigour, he returned to ‘Irāk, and attacked Ḥadidjādī in Bāṣra, but was defeated in 82/701. Khūṣīstān was then entrusted to Al-Muhallab, but it was not until Ḥadidjādī sent Kutayba b. Muslim to Khūṣīstān as governor in 83/705 or 86/705 that the Muslim advance was resumed. Lower Tukhārīstān was recovered in 86/705, Bukhāra between 87/706 and 90/709, and Arab authority consolidated in the Oxus valley and extended to Sughd between 91/709 and 93/712. Dissatisfied Arabs of Kūf. The next ten years or so were occupied by military operations of a somewhat confused nature (see Bartold, op. cit., 139 ff.). Arab dominion was not fully restored until the governorship of Naṣr b. Sayyār (121/738—131/748). He decreed that Muslims and non-Muslims must pay kharādi but only unbelievers poll-tax. To enforce this without damage to the revenue, he reduced kharādi and in the stipulated tribute according to the treaty of capitulation. (See further Dennett, op. cit.). Although Naṣr b. Sayyār brought a measure of prosperity to the province and corrected some of the abuses in the tax administration, he failed to restore order fully or to remove the grievances of the Arab settlers, while the resentments of the mawāli were also not entirely removed. It was among these two groups in Khūṣīstān that ‘Abbāsid propaganda achieved its success.

Umayyad rule, for different reasons, antagonized various groups of people. The hegemony of the Syrians was resented by the ‘Irākis and others, pious Muslims were alienated by the profanity and worldliness of the Umayyads, the Shi‘a, whose alleged wrongs culminated at Karbalā, were disaffected, as also were the Khāridjites and many of the mawāli because of their position of inferiority. Persians, however, were to be found mainly only amongst the last named group. Muḥammad b. ‘Ali, a grandson of al-‘Abbās, the prophet’s uncle, who had become the leader of the Ḥāshimiyīṡīya on the death of Abū Ḥāṣim in 98/716, sent missionaries from Kūf to the Persian provinces. The first to have any considerable success was Ḥādīš (first mentioned under the year 105/722-8). He obtained a following in Marv among Arabs, mawāli, Khurramiyā, and Rāwandiyya, uniting these disparate groups by the wish to overthrow the Umayyads. He was executed in 118/736 and disavowed for his extremist views by Muḥammad b. ‘Ali. The latter died in 125/743 and was succeeded by his son Ibrāhīm, who sent Abū Muslim, a mawāli from Kūf, to Khūṣīstān. His main appeal was to the Arab settlers in Khūṣīstān and his movement was primarily directed against Umayyad and Syrian rule. But he also won support from the Persian mawāli and some Zoroastrian and Buddhist dāhānīs. In the new society promised by the revolution all members were to be regarded only as Muslims with the same rights and responsibilities regardless of their racial origins and tribal connections. (Shaban, op. cit., 135 ff.). Revolt broke out in 130/747. The Arabs, preoccupied with their intertribal feuds, made little effort to check it. Marv was seized and the whole of Khūṣīstān fell. Advancing via Ravy and Nīḥāvand, ‘Abbāsid forces crossed the
Euphrates and defeated the Umayyads near Kufa (132/749). Abu 'l-Abbas al-Saffāb was proclaimed caliph shortly afterwards. Another 'Abbāsids army had meanwhile defeated an Umayyad force near Shahrizur in 134/750, and the fate of the Umayyads was sealed by a second engagement, the battle of the Greater Zab, in 132/750. 'Abbāsids troops advanced to Syria, occupied Damascus and pursued Marwān to Egypt, where he was killed (see further Shaban, op. cit.).

The 'Abbāsids victory was followed by the transfer of the centre of the caliphate from Syria to 'Irāk. With this the importance of Persia and the Persians in the development of Islamic civilization greatly increased. Syrian mauwâli in the entourage of the caliph were replaced by mauwâli from Persia and 'Irāk. Whereas the Umayyads had been first and foremost representatives of the Arabs, the 'Abbāsids succeeded to a much greater extent in creating an amalgam of the diverse ethnic and social elements included in their empire. The concept of the universal empire of the Sasanians had already its influence felt under the Umayyads. Under the 'Abbāsids, Sasanian traditions of government and administration were increasingly in evidence. (Cf. H. A. R. Gibb, Evolution of government in early Islam, in SI, iv, 5-17). As warriors, merchants, and 'ulāmā travelled along the great trunk roads which fanned out through Persia, there grew up, in due course, among their people a sense of sharing in a common heritage. This had two components, Islam and īrānīyyat, and was handed down on the one hand by the 'ulāmā and on the other by the udabā'. This reassertion of Persian consciousness first found expression in the Shu'ubiyah movement [q.v.], which was in Persia primarily a literature movement, and in due course the Persian language and Persian literature played an important role in keeping it alive.

'Abbāsids propaganda only temporarily united the heterogenous elements which were opposed to the Umayyads. Once victory had been achieved, the responsibilities of government prevented the 'Abbāsids leaders from satisfying the aspirations of all their followers (cf. Bartold, op. cit., 194). Rebels arose on every side. In Khurasan Abu Muslim sided with Sefid-dāmagān and in Khurramdīnīs under Khurramdīnīs, who had won support in Khurramdīnīs, but was defeated. The fifth, that of Al-Muhanna in 159/776, was the most serious. He declared that he had succeeded Abu Muslim under whom he had previously served, and that Abu Muslim had succeeded Jesus as the incarnate deity. The movement, which was inspired by extremist Shi'i ideology and also had 'social' aspects, won many followers in eastern Khurāsān and Transoxania. It was not put down until 163/778. This was not all. There was also a series of Kharājījī disturbances in Khurāsān, Sistan and Transoxania, notably that led by Yūsuf al-Barm in Bukhāra about 160/777. On the other hand, in Tabaristan the Arabs made considerable advances and from about 141/758 appointed governors over the province.

Meanwhile it was not only in Khurāsān that there was turmoil. In 'Irāk there was intellectual ferment and social unrest. This was expressed in a movement generally known by the term zandaka [q.v.]. Its general purpose appears to have been partly at least to curtail the range of Islam and to keep alive Persian cultural traditions. The zindākīs were thought to have retained, in spite of conversion, their former Manichean convictions and to wish to encompass the downfall of Islam (Cambridge History of Islam, Cambridge 1971, i, 114). The movement also spread among the lower classes as a revolutionary movement. By the time of the accession of Hārūn al-Rashīd (170/780), the Persian provinces were in a state of unrest, and 'Abbāsids authority was challenged in Khurāsān and the Caspian provinces. Harūn made his secretary and tutor, Yahyā b. Ḥakīm (whose father had served al-Saffāb and al-Maṣūr) his vizier. For some seventeen years until their fall in 187/803 Yahyā and his two sons played a prominent and crucial role in the affairs of the caliphate, and continued the work started under al-Mansūr of creating a balance between the two main elements in the empire, the Arab and the Persian.

In the east, the rapacity of the governor of Khurāsān, 'Ali b. ʾĪsā b. Māḥān, had meanwhile caused considerable discontent, and in 180/796-7 Hārūn set out himself to investigate affairs. 'Ali b. ʾĪsā came to meet him at Rayy and secured his position by gifts. Hārūn returned to Baghdād, leaving the causes of discontent unremedied. Rāfī' b. Layṭh, the grandson of Naṣr b. Sayyār, put himself at the head of the malcontents, made an agreement with the Turkish tribes and killed the son of 'Ali b. ʾĪsā (191/807). Hārūn then sent Harḫāma b. Aṣyān to seize 'Ali b. ʾĪsā and confiscate his possessions, and dispatched a free pardon to Rāfī' in the vain hope that he would submit. Rāfī', who had won support in Khwarazm, Bukhāra, Farghāna, and Ugrūsāna, and among the Ghuzz, remained to all intents and purposes master of Transoxania. In 192/808 a revolt also broke out in Aḏharbāyjān, to be followed later by widespread and prolonged disorders by the Khurramdīnīs under Bābak [q.v.].

Finally, Hārūn, having sent Maʿmūn in advance to Marv, set out against Rāfī', but died en route at Tūs in 193/809. Civil war broke out almost at once.
between al-Amin, Harun's son by an Arab wife, who had been declared wa'il 'ashid in 175/792, and al-Ma'mun, the son of a Persian slave-girl, who had been made the next heir to al-Amin in 183/799, and whose sovereignty over the eastern part of the empire had been recognized by al-Amin in 186/802 [see AL-AMIN]. Harun's vizier, Fa'jil b. Rabi', led the troops back to Baghda'd and read the khutba in the name of al-Amin first and then of al-Ma'mun. In the following year al-Amin introduced the name of his son Musa after that of al-Ma'mun. The latter, apparently on the advice of his vizier, Fa'jil b. Sahil, a convert to Islam from Zoroastrianism, refused to be inveigled by his brother into going to Baghda'd and remained in Marv. In 195/810 Fa'jil b. Rabi induced al-Amin to drop al-Ma'mun's name from the khutba and substitute for it that of Musa, and to send an army against al-Ma'mun. The latter made peace with Rabi' b. Layh, leaving him virtually master of Transoxania, struck coins in his own name, took the Shi'i title, imam al-hudha', and sent his general Tahir b. al-Husayn against al-Amin.

After defecting al-Amin's forces near Hamada'd, Tahir marched on Baghda'd and laid siege to the city. It fell in 196/813. Al-Amin was murdered; Ma'mun then appointed Tahir over the whole of Irak. Later Hasan b. Sahil, the brother of Fa'jil, was entrusted with the governorship of the Djibal, Fars, Khuzistan, and Irak, and Tahir was given the Djazira with the frontier regions, Syria and Egypt. Hasan b. Sahil had to contend with various revolts. One of the most serious was in 199-200/815 in Kufa led by Abu Sarayya, who raised the standard of revolt in the name of an 'Alid, Ibn Tabajab (whom he poisoned in due course). There were also teasingly frequent riots in the city of Baghda'd. In 201/817 al-Ma'mun, on the advice of Fa'jil b. Sahil, and probably in the hope of putting an end to 'Alid movements of revolt, declared 'Ali b. Musa al-Rid, the eighth imam, his wa'il 'ashid and married him to his daughter. In the following year, the people of Baghda'd, who had already supported an abortive movement in favour of Mansur b. al-Mahdi, read the khutba in the name of Ibrahim b. al-Mahdi. Rebellion meanwhile had broken out in Egypt, and the disturbances of the Khurramdins under Bubak in Ash'harbajjlan and Arran, which had begun in 201/816, were assuming threatening proportions.

It was now clear that al-Ma'mun, if he was to control his empire, must move from Marv to the centre. In 202/818 he set out for Baghda'd but did not enter the city until 204/819. Ibrahim b. al-Mahdi fled. Fa'jil b. Sahil had meanwhile been murdered at al-Ma'mun's instigation and 'Ali b. Musa poisoned near Tus (203/818). In 205/821, al-Ma'mun appointed Tahir governor of Khurasan and Sistan. He succeeded in making himself virtually independent in Khurasan and founded the first of the semi-independent dynasties in Persia after the Islamic conquest. Tahir's son 'Abd Allah was given Tahir's government in the Djazira and remained in the western provinces until about 213/828-9. Other members of the family also held office in Baghda'd until 270/883-4, which facilitated the rise of the family to semi-independence as governors of Khurasan. It was not only in Khurasan that al-Ma'mun's power was shrinking. Riots occurred in the Djibl in 210/824 and rebellion in Mesopotamia in 214/829 and in Kumm in 216/831. Repeated efforts to suppress the rebellion of Bubak also failed and his revolt had spread to the Djibl by the end of al-Ma'mun's reign.

A new period was now beginning in the history of Persia. By this time she had been fully incorporated into the Islamic world. The Arab settlers had been largely assimilated to the local population. Conversion had proceeded throughout the country, though Zoroastrianism was still, to some extent, tolerated. The former ruling classes, so far as they had survived, had been converted to Sunni Islam, as too had the mass of the people, though there were enclaves of Shi'ism from an early period in some districts, notably Kumm, Khurasan, Khurramdins, and Sava. As the central government in Baghda'd declined old political and social tendencies began to reassert themselves more strongly and new centres of power began to emerge.

In the field of political thought, there was a strong continuity. The Sabian concept of the universal empire was greatly strengthened under the 'Abbaisids. The caliph came to be regarded as the Shadow of God upon earth (though the strictly orthodox never accepted this view). In the course of time this concept was transferred to the temporal rulers, with consequences detrimental to the freedom and dignity of the subject. Similarly, the imam's rights in regard to the ownership of land passed tacitly to the temporal rulers, and his power to delegate authority. Other Sabian concepts, such as the identification of the imam with the social order, and the hierarchical nature of society, also came to be increasingly accepted. Din and dawa were two sides of one coin, with the result that non-conformity and political opposition were inseparable. Hostile movements against the government and the ruling classes thus tended to manifest themselves under the guise of Shi'ism.

Most of the dynasties which arose as the caliphate fragmented came to power within the general political framework of the Muslim world and accepted the prevailing administrative traditions and political concepts, or if they did not before their assumption of power, they rapidly conformed once they had seized power—as in the case of the 'Abbaisids, who quickly abandoned any messianic or extremist tendencies they may have entertained before their victory over the Umayyads. There was, it is true, alongside the "conservative" tendency of society and government a messianic tendency, but its manifestations were usually fleeting. Its most striking expression in 'Abbaisid times was the Isma'ilis, a political movement by Hulagu. Broadly speaking, however, the rise of new dynasties did not materially alter the structure of society, but merely the composition of the ruling class and, sometimes, the relative importance of the different classes. From S2idjuk times onwards the balance between the settled and semi-settled elements of the population was a delicate one. After the Mongol invasion there was a widespread expansion of nomadism accompanied by a dislocation of rural and urban life.

By the death of al-Ma'mun in 218/833 the balance between the civil and military arms of the administrative had been upset. In an attempt to increase the revenue, the tax-farm became increasingly common, but the money received from the farming of the taxes soon ceased to be sufficient to pay the army leaders and their troops. The practice then arose of assigning the taxes not to taxfarmers but to the military themselves, a practice which made it easy for the military, when the central government was weak, to establish their semi-independence. The result of this was, on the one hand, the ruin of the land, and
on the other the failure of the military to support or defend the central government. This militarization of the state and the growing tendency of the military to be occupied not only with the arts of war but also with administration became marked not only in ʿIrāk and the western provinces but also in the east under the Sāmānids and more especially the Ghaznavids. Under the Būyids the military did not normally live on their assignments or ʿiṣḥaʾ, but sent their agents to collect the revenue in return for his ʿiṣḥaʾ the soldier had to perform military service and was in theory subject to detailed regulations and inspection. A provincial governor could distribute the area under his jurisdiction as ʿiṣḥaʾ but he did this as an official of the state. Legally the possession of an ʿiṣḥaʾ did not give the holder rights of jurisdiction over the inhabitants, but in practice it contributed to the spread of patronage under the Būyids there were widespread acts of usurpation by the military. Further, the tendency for the function of the provincial governor, provincial military commander, tax collector, taxfarmer, and ʿuqūd to be combined in one person led to the emergence of large properties virtually independent of the central government. Under the Būyids the military ʿiṣḥaʾ was the dominant type. Under the Great Saldжуks there took place an assimilation of the military office of ʿiṣḥaʾ to the governorate or administrative ʿiṣḥaʾ and the tendency for the ʿiṣḥaʾ to be defined not by fiscal value but by service and to become by usurpation a hereditary domain over which the ʿuqūd had governmental prerogatives (see further, A. K. S. Lambton, Reflections on the ʿiṣḥaʾ, in Arabic and Islamic studies in honor of Hamilton A. R. Gibb, ed. G. Makdisi, Leiden 1965 and C. Cahen, L’évolution de l’ʿiṣḥaʾ du IXᵉ au XIIIᵉ siècle in Annales, E.S.C., 1953).

Throughout, though especially from Saldжуks times onwards, four strands were closely interwoven: administration, taxation, tenure, and military service (though society was not feudal in the technical sense). The main burden of supporting the government rested upon the peasantry. Agriculture, especially in the pre-Mongol period, showed an astonishing recuperative power. This is probably to be explained in part by the fact that the local village communities formed relatively stable and, to some extent, self-governing communities under their own kadkhudds, and in part to the fact that in the pre-Mongol period, although wars were frequent, the numbers engaged were, on the whole, small and the destruction which accompanied campaigns was, for the most part, localized and as such was incidental to the movement of armed bands through the countryside.

In spite of the succession of empires, Saldжуks, ʿIlkhān and Timurid, there was a persistence of administrative tradition from the ʿAbbāsids period and more especially from Saldжуks times onwards. This is not to say that there were no changes or new developments: of course, there were, but the element of continuity is more striking than that of change. The Mongol conquest caused a temporary break, but after the conversion of the ʿIlkhāns to Islam there was a reassertion of Islamic government, though the spread of administrative practices based on custom continued under the ʿIlkhāns and the Timurids, perhaps to a more marked extent than formerly.

One of the reasons for the persistence of administrative tradition is that the conquerors, whether Arab, Saldжуks Turk, Mongol, or for that matter Ṣafavid or ʿAlīdjar, lacked administrative experience; the original basis of their power was, in all cases, tribal, the officials of the bureaucracy had the “expertise” and so successive dynasties relied upon them. The great families of viziers, the Barmakids under the ʿAbbāsids, the Djayhānis, Bāfamis and ʿUtbi under the Sāḥibids, ʿAbbād under the Būyids, ʿAlīmān al-Mulk and his sons and grandsons under the Saldжуks, and the Djuwawis and ʿRaḥīd al-Dīn and his family under the ʿIlkhāns, played a significant role in the transmission of this tradition, as also did the families of mustafabs. The religious classes, at another level, also played an immensely important part in the maintenance of continuity. The ʿulamāʾ, as the guardians of tradition, enjoyed high status and prestige, and were a stabilizing force. In times of political upheaval they carried on as local administrators and often acted as peacemakers. This was particularly true of the ʿAlīdjar, among whom there was a strong hereditary tendency. Alongside this conservatism and continuity, there was also a marked provincial particularism, partly because difficult communications tended to foster isolation, and partly because ethnic differences made for a different ethos of society. The successive empires tended to fragment broadly along similar geo-political lines. ʿIlkhān, the Caspian provinces, Sīstān, Fārs, Kirmān, Kūrdistān, and Alḥarbābāydjān, all tended at one time or another to be virtually independent centres of local power, though it must not be supposed that within these different provinces there was necessarily uniformity. Some of these local movements had special and distinguishing characteristics. At the same time, the various movements arising in the different parts of Persia did not develop in isolation, but often reacted upon each other.

Under the Umayyads the Central Asian frontier was re-established broadly where it had been under the Sasanians. They handed on their function as wardens of the marches to the ʿAbbāsids. With the decline in the power of the caliphate, the local dynasties which governed ʿIlkhān, first the Tāhirids, then the Sāḥibids, and later the Ṣafavids, took over this task. The first two, broadly, represented the landowning classes and orthodoxy, although they established virtually independent local dynasties, they sought the authorization of the caliph, as did later dynasties, and there was no implication of revolution in their rise to power. Māḥmūd of Ṣafavān also ruled within the previously existing Muslim political framework. In the latter half of the 4th/10th century the ʿIkār Khūrāsān broke into Transoxania while the Ghuzz moved into Transcaspia, and finally into the ḍār al-ʿalām. The Saldжуks, who established themselves as the leaders of the Ghuzz, in due course found themselves in possession of an empire centred on Persia, and became themselves the wardens of the marches. Towards the end of the reign of ʿAlīdjar those Ghuzz who had remained in Central Asia overran Khūrāsān, The Kh“arazmghūān, who succeeded the Saldжуks in the east, failed to hold the marches against the Mongols in the 7th/13th century.

Although the maintenance of a stable border in the north-east was a condition for the stability of the interior of Persia, Khūrāsān was not itself a suitable centre from which to exercise domination over the whole area. Al-ʿAlīmān was forced to move from Marv back to Ṣāfāvān, and the Saldжуks transferred their capitals progressively westwards and southwards, from Nīshāpūr to Rayy and finally into ʿAlīdjar. Ṣafavān, the only one of the Great Saldươūns to attempt to rule permanently from Khūrāsān, was unable effectively to control ʿIrāk. In Ṣafavīd and ʿAlīdjar
times the maintenance of the north-east frontier against encroachments by the Uzbegs and Turkomans was a perennial problem. The frontier finally established in the reign of Nāšir al-Dīn Shāh was far to the south and west of the mediaeval frontier.

The Caspian provinces with their forests and mountain valleys and difficult communications proved hard to conquer. During the early Islamic period Kāzvin remained a frontier district. From the reign of ‘Umar to that of al-Ma‘mūn, seventeen expeditions are recorded against Daylam. From about 250/864 the mountain fastnesses of Daylam served as a refuge for the ‘Alids against the ‘Abbāsīds, where they formed a new centre of resistance hostile to both Bāghdād and Khurāsān, the governors of which sought to extend their dominion over the Caspian provinces. Conversion in the Caspian provinces had been slow. In 259/873 a large number of Zoroastrians were converted by Nāšir al-Haḵḵ Abū Muḥammad in Daylam, and in 299/912 Ḥasan b. ‘Alī is said to have converted the inhabitants of Ṭabaristān and Daylam, who were still partly idolators and partly Magians, to Islam (Mas‘ūdī, viii, 279). Many of the movements which originated in the Caspian provinces were characterized by Shi‘i tendencies. Here, as elsewhere, the Shi‘i movement tended to be associated with local movements and to draw into its ranks the discontented. It was not a clear-cut anti-Arab movement supported by Persians. Shi‘ism was rather a convenient banner under which to unite in hostility to the ruling class, whether this was Arab in the person of governors appointed by the caliphs, or local rulers who had retained their Zoroastrian faith and who, when they did not feel strong enough to throw off control, either out of fear of local rivals or of rebellion by their subjects, cooperated with the caliphs. The Būyids, who came from Daylam, professed Ithnā‘Ashari Shi‘ism, though the earlier ‘Alid movements in the province were Zaydi. The Caspian provinces were not only difficult to conquer: they were also difficult to unite. Numerous local dynasties flourished, often simultaneously, sometimes paying tribute to the central government, but more often holding it, and sometimes extending as far as Ḥarbārīyān (see also V. Minorsky, *La domination daulamite*, in *Soc. des études iraniennes*, iii (1933), and *Daвлад*).

The neighbouring province of Gurğān, of a rather different physical character, had been a frontier province in Sassanian times over against the nomads from the north. In the 3rd/9th century the ‘Alids of Ṭabaristān extended their influence over it, but in 316/928 Mardavīd b. Ziyār, by origin a Gilaki in the service of the Daylamite leader Asfār b. Shīrūya, whom he overthrew in 316/931, founded a kingdom, which lasted for about a hundred years, nominally dependent, first on the Sāmānids and then on the Ghaznavids. In Saldūq times Gurğān came more fully under the control of Khurāsān and one of the main concentrations of Ghuzz was to be found in its steppes with their plentiful grazing. In the late 18th century it became of importance as the province from which the Kāḏārs (q.v.) drew their main support. Sīstān (which included much of the modern Afghanistan), partly surrounded by a desert barrier, tended to be isolated from the developments in other parts of Persia, except for a brief period under Yaḵūb b. Layḥ and ‘Amr b. Layḥ. The special characteristic of political movements in Sīstān in the early centuries of Islam was their Ḥūrūfi tendency. Under the Ghūrīds (q.v.) Sīstān tended to look east. After the break-up of the Ilkhān empire, Harāt became the centre of the Kāḏārs, who had acted as governors on behalf of the Ilkhāns in the heyday of their power. Still later, after the death of Ṭimbūr, it became the centre of the eastern Timurid empire. (See also C. E. Bosworth, *Sīstān under the Arabs from the Islamic conquest to the rise of the Saffarids*, 30-250/651-304, Rome 1968).

Fārs, which had been the original seat of power of both the Achaemenids and the Sassanians, tended to be somewhat isolated from the rest of Persia in the early years of the Islamic period. This was partly due to the fact that much of it was difficult mountain country occupied by a tribal population, which formed an obstacle to its conquest and control [see IlAţ]. Conversion appears to have been slow. Iṣṭahārī, writing in the 4th/10th century, states that the maḏāfs were more numerous in Fārs than in any other province. Under the Būyid ʿAḍud al-Dawla (338/949—372/982), Fārs enjoyed prosperity and importance. After the break-up of the Great Saldūq empire Fārs was ruled by the Saldūqī dynasty (543/1148—686/1287). Later in the 8th/14th century Fārs became the centre of the Muṣaffarid dynasty, and in the 18th century of the short-lived Zand dynasty.

Kirmān was bounded on the north and east by the great desert. The mountain districts of the province, though sparsely inhabited, resisted the Arab advance and gave much trouble to later rulers also [see IlAţ]. Under the Saldūqīs of Kirmān it formed a prosperous and semi-independent kingdom but suffered in the disorders committed by the Ghuzz at the end of the Great Saldūq period. Kūrdīstān was ethnically separate from the rest of Persia. Both the physical configuration of the country and the tribal nature of society there militated against political unity. It looked to Mawsīl. Like the Caspian provinces, parts of Fārs and Kirmān, it was difficult campaigning country, and proved a “thorn in the flesh” of the caliphate and the subsequent empires. Few of their rulers succeeded fully in controlling it, and it tended to break away the moment there was a weakening of the central government. The Arab Dynasty of the Ḥamādnās in the 4th/10th century (see M. Canard, *Dynastie des Ḥamādnās des Jurastre et de Syrie*, i, Algiers—Paris, 1951), the Kurdish dynasty of the Marwānids who superseded them in Dīyār Bakr in the 5th/11th century, and the Ukaylīds, who held Mawsīl from 380/991 to 489/1096, attained some importance and exercised influence beyond the borders of Kūrdīstān. Under the Saldūqīs Mawsīl looked increasingly westwards. It became under the Zangīds one of the most important states of Western Asia, but with little influence on the history of Persia. With the rise of the Ottoman and Şafāvid empires, Kūrdīstān became disputed frontier territory.

The neighbouring province of Āḏharbāyjān was also partly inhabited by Kurds. It was the scene of the Khurramdīnī disorders in the first half of the 3rd/9th century. Subsequently a number of minor local ruling families held sway: first the Sādīgs (276/889—317/929), then the Kurd, Daysam, who was a Ḥūrūfi, followed by the Muṣaffīrīds, who had Bāṭinī leanings, and others. In 513/1126, towards the end of the Great Saldūq period, the atabeg Ilīdūz established himself and founded one of the succession states to the Saldūq empire. Under the Mongols, after the destruction of Bāḵtād, the political and economic centre of the empire shifted from Tīrāḵ and the Dījābāl, where it had been under the Buyids and Saldūqīs, to Āḏharbāyjān. Isfahān,
which had been the main city of Persia under the Great Saljuqs, although it became one of the centres of power of the Indjuids, one of the succession states to the Ilkhan empire, did not fully recover its importance until the reign of Sháh 'Abbás. Numbers of Ghuzz had settled in Adharbayjádn in Saljuq times, and from Mongol times onwards it was inhabited predominantly by Turkish tribes. On the break-up of the Ilkhan empire, the main centre of activity tended to move from Adharbayján to Fárs, Kírmán, and 'Irák-i 'Adíjam, perhaps partly because Adharbayján was becoming at this time subject to raids by the Kıpchaks. A succession state was established by the Djalá'îrîds, who ruled intermittently over Adharbayján and 'Iráq.

In the second half of the 9th/15th century Adharbayján became the centre of the rising Safavid power, and Tabriz became the capital in the early years of the 10th/16th century. Just as the Saljuqs moved their capitals westwards from Khurásán to the centre of Persia, so also the Safavids moved progressively eastwards, from Tabriz to Kízàn and 'Isfáhán. In the 19th century Adharbayján, with the advance of Russia through the Caucasus, succeeded Khurásán as the crucial frontier area. Here, too, the frontier eventually established after Persia's defeat by Russia in 1828 was considerably inside the modern border.

The period from the death of al-Ma'mún up to the Mongol invasion falls into three periods, those of the minor dynasties, the Great Saljuq empire (447/1055-552/1157), and the Khwarazmsháhís, ending with the sack of Baghdad by the Mongols in 656/1258. During the first of these, the western provinces dominated by Baghdad developed along rather different lines from Khurásán and the east, although there was a certain influence of the one on the other. This was partly because of the difference in society in the two areas and partly because of differences in political development. Baghdad and the neighbourhood had experienced all the vicissitudes of the political and economic decline of the caliphate after the death of al-Ma'mún. In Khurásán, on the other hand, the old structures were maintained to a greater extent: the local ruling families still retained a good deal of their former influence and there was a rich merchant class engaged in the caravan trade with China and other countries. On the other side of the frontier there were still a number of independent principalities, often at war with each other. Under the Tahirids, who came to power in the east, and their successors the Sámnáidis, there was a reassertion of old social tendencies, whereas under the Búyáids, society was in an advanced stage of disintegration. The Ghaznavids, the successors of the Sámnáidis, were in due course overthrown by the Saljúqúids, under whom the lands of the eastern caliphate were re-integrated and a new system of government worked out, combining features found in both the eastern and western provinces in a new symbiosis. The Tahirids during their fifty or sixty years' rule based their power on a community of interest of the dikbánns, though the influence and rights of this class were not so rigidly enforced as they had been in Sasanian times. Externally their main problem was to hold the frontier against the nomad Turks from Central Asia and prevent their intervention in the disorders which occurred in Transoxiana. Táhir, whose father and grandfather had been governors of Bushán, reached Khurásán as governor in 606/821-2. His rule, apart from some Kháridjite disturbances, was brief and uneventful. By 207/822 he had consolidated his power. In that year he omitted al-Ma'mún's name from the hajj, but providentially died the same night (or shortly afterwards) as al-Ma'mún. (See D. Sourdel, Les circonstances de la mort de Táhir, in Arabica, 1958). In spite of this act of overt rebellion, al-Ma'mún recognised Táhir b. Táhir as his successor. Kháridjite disturbances, especially in Sistán, continued during his governorate. On his death in 213/828-9 al-Ma'mún, perhaps with a view to regaining some of his lost authority in the eastern provinces, appointed his favourite, 'Abd Allah, who was at that time conducting operations against the Khurramdínis in Dinávar, to succeed Táhir. He advanced to Níshápúr and put down the Kháridjite disturbances which had become widespread. Al-Mu'tásim, who succeeded to the caliphate in 218/833, confirmed 'Abd Allah in his government.

Unrest meanwhile spread throughout the Abbásid empire. The Turks, whom al-Mu'tásim had enrolled in greater numbers in his bodyguard than had former caliphs, increased in power and violent quarrels between them and the people of Baghdad occurred repeatedly. In Adharbayján Bábak and the Khurramdínis were still in a state of rebellion. In 220/835 the Aflún (q.v.) was placed in charge of the campaign against them and eventually defeated them in 222/837. In Tabaristán Mázíyár b. Khárin, the last of the Kháriní dynasty, whose father and grandfather had been governors of his possessions by the Bánwand, the Isphabúd Shahríyár, had taken refuge with al-Ma'mún, embraced Islam and been sent back to Tabaristán as governor, apostasized and rebelled. The Aflún, who was sent against him, appears to have encouraged him to rebel. Al-Mu'tásim then sent 'Abd Allah b. Táhir from Khurásán against him; Mázíyár was captured and executed in 226/844, and 'Abd Allah made his uncle, Hasan b. Husayn, governor of Tabaristán. 'Abd Allah b. Táhir's rule in Khurásán and Transoxiana appears to have been enlightened. There are indications that he encouraged agriculture and fostered the spread of learning. He was succeeded in 230/844-5 by his son Táhir, who had become governor of Tabaristán in 218/842-3 in succession to his great uncle. Táhir II continued to rule Transoxiana from his capital in Khurám. He ruled until 248/862-3. Trouble from the Kháridjites in Sistán continued, and during his reign the 'ayyár under Ya'qúb b. Laytih, the Şaffárid, increased in power. Under Táhir's successor, Muhammad, Tabaristán was lost to the Táhiríds, when the Táhiríd governor, after being defeated in 250/864 by Hasan b. Zayd, the 'Alíd, abandoned the province in 252/866. Family quarrels also broke out among the Táhiríds, and one branch made common cause with the Şaffárids in Sistán.

Ya'qúb b. Laytih, the son of a peasant of Khárin, who became apprenticed to a coppersmith — hence the name of the dynasty he founded—subsequently, with his brothers, joined a band of mutásawwúsás led by the Táhiríd governor, Dirham b. Nájr b. Şallih, and took part in operations against the Kháridjites. He was then made amir of Bus, but in 247/861 drove out the Táhiríd governor and made himself master of Sistán. Ya'qúb's relations with the Kháridjites are not entirely clear. According to some accounts he was a Kháridjite at the beginning of his career. Later attributions of Şi'í sympathies to the Şaffárids would appear to be unfounded. He extended his rule to the Kábúl valley, Sind and the Mikrán, and in 253/867 he conquered Harat and Bushán from Táhir b. Husayn b. Táhir.

Meanwhile al-Mu'táziz, who had succeeded to the caliphate in 252/866, was unable to control his go-
IRAN

... the governor of Fars, 'Ali b. Husayn. Ya'qūb was the victor and took not only Kīrman but also Fars. In 257/872 al-Mu'tamid, following a somewhat similar policy, appointed Ya'qūb over the Tāhirid provinces of Tukhārīstān and Balkh. According to another group of sources, however, Ya'qūb had already taken Tukhārīstān and Balkh together with Gardīz, Gardīz, and Kūt in 257/870, when the caliph gave him a diploma for Tukhārīstān, Balkh, Fars, Kīrman, Sīstān, and Sīnd. Finally in 259/873 he marched on Kūrāsān, took Nīshāpūr, and made Muḥammad b. Tāhir prisoner.

Ya'qūb then turned his arms against Ḥasan b. Zayd, the 'Alīd, in Gurgan. The latter fled without giving battle. In 260/874-5 Ya'qūb went again to Fars, and in 262/876-7 he sent an envoy to the caliph al-Mu'tamid. Alarmed by Ya'qūb's growing power, al-Mu'tamid, or the regent al-Muwaffak, had given in that year a diploma for Transoxania to the Sāmānīd, Naṣr b. Ḥamd. Naṣr in doubt, in the hope that he would counter the spread of Ya'qūb's influence. Weakened by the rebellion of the Zandj, who by 264/877 were raiding within seventeen miles of Bāghdād, the caliph now gave Ya'qūb a diploma for Transoxania, Kūrāsān, Tabaristān, Gurgan, Fars, Kīrman, Sīnd and Hind, and made him military governor of Bāghdād, and titular governor of the holy cities. Ya'qūb, nevertheless, continued his advance on Bāghdād, but was worsted by the caliph in an engagement outside the city (268/879). Ya'qūb's defeat, however, was not decisive. By the terms of the peace the Saffārids were recognized as the rulers of the provinces mentioned in the diploma already given to Ya'qūb, and in return they were to pay an annual tribute of twenty million dirhams.

Ya'qūb died shortly after this. He was succeeded by his brother 'Amr, who made 'Ubayd Allāh b. 'Abd Allāh b. Tāhir his deputy in Bāghdād, perhaps in the hope of enlisting Tāhirīd support against the growing power of the Sāmānīds. 'Amr's succession was contested by his other brother 'Ali. He was defeated and held captive by 'Amr. The provincial governors also began to throw off their allegiance, while in the holy cities 'Amr's rights of precedence were challenged by the Tūnūnīd. 'Amr's life, like that of Ya'qūb, was largely spent in expeditions from one part of the empire to another, to deal with rebellious governors, and in particular in wars on the eastern frontier of Sīstān. With the defeat of the Zandj in 269/883 by al-Muwaffak, pressure on the caliphate began to lessen and intrigues against 'Amr at the caliph's court began. An envoy was sent to him to demand the tribute due and the despatch of his son to Bāghdād as a hostage. 'Amr retired from Fars to Kīrman, followed by al-Muwaffak. In 271/885 Muḥammad b. Tāhir was again declared governor of Kūrāsān and was represented by Rāfī b. Ḥarḥama, who had conquered Nīshāpūr in 268/882. Matters did not yet reach breaking-point. In 275/889-90 'Amr agreed to pay ten million dirhams tribute for Kūrāsān, Fars and Kūrāsān, sent presents to al-Muwaffak, and retired to Fars. About this time 'Ali b. Layḥ escaped from captivity and joined Rāfī b. Ḥarḥama in Kūrāsān against 'Amr. In 276/889-90 al-Muwaffak seized the occasion offered by this embarrassment to 'Amr to withhold from him the privileges of the military governor of Bāghdād, to which office he had ap- pointed him earlier that year. 'Amr in retaliation dropped al-Muwaffak's name from the Khwān in Sīrāz in 277/890-1 and advanced on Kūrāsān. Al-Muwaffak meanwhile died in 278/891. His son al-Mu'tahdīd, who became caliph on the death of al-Mu'tamid in 279/892, made peace with 'Amr, confirmed him in his governorships and ordered him to set out for Kūrāsān against Rāfī b. Ḥarḥama in 279/892-3. After a long-drawn-out campaign Rāfī was eventually put to flight, and 'Amr entered Nīshāpūr in 283/896-7. Rāfī, after briefly joining the 'Alīdīs in Tabaristān, fled to Khwārazm, where he was killed in the same year. With his death disturbances in Kūrāsān subsided.

No much is known of the civil administration of Ya'qūb and 'Amr, but their military organization is reputed to have been excellent. A distinction seems to have been made between public and private revenue. 'Amr apparently had three treasuries, one for revenue from land and other taxes, which was utilized for the upkeep of the army, a second for revenue from the personal property of the ruler, which was expended upon the upkeep of the court, and the third for revenues from occasional taxes (āḥādir), and confiscations, the proceeds of which were largely used to reward faithful servants, followers and envoys. The army was the object of special care, and paid every three months through the ṣarīd (see Bartold, op. cit., 190-22; and C. E. Bosworth, *Arms of the Saffārids*, in *BSOAS*, 1968).

In origin the Saffārid movement seems to have been a “popular” movement and to have been regarded by the landowners and merchants of Kūrāsān and Transoxania as a threat to the established order. Opposition was directed against Ya'qūb's alleged Khāridjite tendencies, but it may be that the real grounds for it was the “popular” nature of the movement. Once Ya'qūb and after him 'Amr, had extended their power beyond Sīstān it seems probable that the “popular” nature of their movement was to some extent lost. They retained their influence in Sīstān, however, and reappeared after the death of Māhmūd of Ghazna and still existed as a local ruling house when the Mongols invaded in the 13th century.

The Saffārids were faced not only with a revival of the power of the caliphate under al-Mu'tahdīd, but also by the rise of a new power in the east, the Sāmānīds, who were extending their influence in Transoxania. Their ancestor, Sāmān, appears to have been a small landowner from the neighbourhood of Bukhārā. During the caliphate of al-Ma'mūn, the sons of Asad b. Sāmān were ordered to help Harthama against the rebellious Rāfī. In return they received governorships in Kūrāsān. Under the Tāhirīdī Nūb b. Asad was in Samarkand and in 261/ 874-5 the caliph al-Mu'tamid gave Naṣr b. Ḥamd a diploma for Samarkand. When Bukhārā was sacked by Ḥusayn b. Tāhir al-Tārī from Khwārazm in 260/ 873-4, Naṣr b. Ḥamd, in response to an appeal from the people of the city, sent his brother Ismā'īl to their aid. In the same year the caliph gave Ismā'īl a diploma for Bukhārā. Having received this Ismā'īl hurried to Bukhārā. Ismā'īl turned his army against Naṣr. Ismā'īl is represented as the victor and as acting with great moderation in victory. This may or may not be true. What probably happened is that they arrived at a deadlock, neither able to defeat the other. In any case, Naṣr remained governor of Transoxania until his death in 279/892, when he was succeeded by Ismā'īl, who received a diploma from the caliph in 280/893.
In 285/898 ‘Amr demanded a diploma as governor of Transoxania, in return for which he offered to overthrow the ‘Alid ruler of Tabaristan. Al-Muqtadir, anxious for the decline of ‘Amr, probably saw in his demand an opportunity to weaken him by playing him off against Isma’il. Whether ‘Amr was overconfident of his ability to overthrow Isma’il, or whether he feared that Isma’il would, as his power grew, intervene in Khurasan, and thought it better to forestall him, is not clear. In 286/899 ‘Amr’s command was transferred to Bukhara, while Isma’il defeated the Samanid forces, and in the following year ‘Amr himself was captured and sent to Baghdad. His sons retired to Sistan. For some years they continued operations against the Samanids in Sistan and the local rulers in Fars, but were unable to restore Sha’f¯arid fortunes.

By 289/902, when al-Muktafi succeeded to the caliphate, the Samanids had gained the whole of Khurasan, and in the diploma which Isma’il received from al-Muktafi Rayy Kazwin, and Zandjan were added to Khurasan. The Samanids were, however, unable to establish effective control over the western regions and disputed them with the Sadjids, who had been more successful when power was overthrown at al-Muwaqqaf had appointed Muhammad Ala‘in Abu ‘Abd Allah Muhammad b. Abi’l-Sadj governor of Agharbaryaygan in 276/889-90. The rapid extension of Samanid territory put a certain strain on Samanid organization, although this was not immediately felt. Ahmad b. Isma’il, who succeeded in 295/907, established his claim by force of arms. He extended the Samanid domains still further by temporarily occupying Sistan in 298/910-11. Tabaristān, on the other hand, was lost to the ‘Alids when Ḩasan b. ‘Ali al-Utrush (al-Nāṣir al-Kabir) staged a successful revolt, making skilful use of the discord existing among the local rulers in the Caspian provinces.

The Samanids, like the Tahirids, had a certain affinity with the marzdans on the eastern frontiers of the Sasanian empire. Theirs was the last attempt to maintain the old social system against the general levelling tendencies of Turkish military government. The two centres of their kingdom were Samarqand and Bughara; on the periphery there were a number of states which acknowledged Samanid overlordship and in some cases paid a nominal tribute. Among them were Khwarazm, Ghurjistān, al-Shahr, Dūzdān, Isfāhān and Sughdniyān. The bureaucracy under the Samanids was well-developed and on a somewhat similar model to the bureaucratic administration of the caliphs at Baghdad. Nāshrākhūmi mentions nine government offices or diwan, those of the vizier, mu‘tawafī, sāḥib quṭrat, sāḥib mu‘ayyid, muqaddam, and muqaddabi, the diwan-i mamlaaka-i khāṣṣ, the diwan-i awkāf, and the diwan-i kadā (Ta‘rikh-i Bughār, ed. Riḍwān, p. 31). According to Bartold there was a tenth diwan, the diwan-i barid. The chief civil official was known as the khwādja-i buṣurg. Abū ‘Abd Allāh Muhammad b. Ahmad Dāwhānī, who held this office under Naṣr b. Ahmad, was, perhaps, a more important figure than his sovereign.

The army was composed of a nucleus of Turks, mainly purchased or captured on the frontiers and brought up as slaves, and levies supplied by the dikhāns. The leading military commander had the title sipakdār and from Nishāpūr administered Samanid territories south of the Amū Daryā. The chief military offices and provincial governments were held by members of local ruling families and by Turkish slaves. The court was elaborately organized with a hierarchy of officials. The main offices were held by the military classes. The domestic affairs of the court were under an official known as the wakīl. In the provincial governments many of the same offices and departments were found as at the centre, though there was no uniformity throughout the empire. In the early period of Samanid rule, the civil power held the upper hand: the army was subordinate and the troops were paid in cash, but were not barred from acquiring land. Ibn Hawākal states that taxes were lower in the Samanid empire than anywhere else and wages higher. The taxes, levied in two installments, totalled some 40 million dirhams. Officials were paid quarterly and their pay amounted to about half the revenue. This favourable position of income in relation to expenditure allowed considerable mildness to prevail in the tax administration. Trade and industry were highly developed. Mukaddasi gives an extensive list of exports from the various towns. Trade with the nomads of Central Asia was also important (ii, 468 ff.; see further, Bartold op. cit., 235 ff.).

Ahmad b. Isma’il, after a reign of nearly six years, was murdered by his Turkish guards in 301/913. His 8-year-old son Naṣr succeeded. During his reign the spirit of revolt entered the Samanid house itself and Naṣr spent much of his long reign, which lasted until 331/942, in purging the state of his cousins and brothers. About 318/930 three of his brothers, who were imprisoned in Bukhara, were liberated with the help of seditious elements in the city, including Shī‘is and Khārījītes, and one of them, Yābūy, proclaimed amir. The movement was abortive.

In the west the Sadjids had maintained themselves against further Samanid advance. In 305/917-18 Yūsuf b. Abī’l-Sadj defeated a force sent against him by the caliph al-Muqtadir, but was forced, in spite of this, to give up Rayy, and some two years later, although he defeated an army led by the caliph’s general Mūnis, retired to Zandjan. Mūnis followed him, defeated him near Ardabil and brought him to Baghdad. In 310/922, he was set free and given the government of Rayy and Agharbaryaygan. Later he was defeated and killed by the Carmathians (316). Agharbaryaygan was then disputed between the Khārījīte Kurd, Dāysam b. Ikhrāhim, and the Muṣafīrs, in the end prevailed.

More important than the attempts by provincial governors to seize the opportunity to establish their independence was the spread of the Carmathian movement, which was eventually captured by the Isma‘īlis, who founded the Fatimid anti-caliphate in 297/910. Between 321/930 and 328/940 Fatimid propaganda made great strides in Khurasan and Transoxania. Muhammad b. Ahmad al-Nasafi (al-Nakhshabi), a Fatimid missionary, won over a number of prominent officials and eventually Naṣr himself. The ‘ulamā‘ and the Sunni notables were unable to meet this challenge alone and were forced to turn for help to the Turkish nucleus of the army. Naṣr, following a plot to overthrow him, abdicated in favour of his son Nūḥ and was thrown into prison in 330/942. Al-Nasafi and his supporters were massacred. Henceforward the army decided the course of events. Joining in the struggles for supremacy between the rival claimants, they eventually brought the state to ruin.

Khwarazm revolted in 332/943-4 and in the following year Abū ‘Abd Allâh Muḥammad b. Khurāsān, rebelled. By this time also, the favourable financial position which had prevailed earlier had changed for
the worse. There were acute shortages of funds and the army's pay was often in arrears. There were desertions ... His reign was largely occupied by internal rebellions and a series of expeditions against the IJamdanids, the last of which ensued between the rival amirs and governors.

With the decline of the Sämanids and the failure of the caliphate to maintain its temporary revival under al-Mu'taḍid, the northern provinces of Persia became the scene of the exploits of a series of Daylamite leaders who were little more than robbing barons, the common characteristics of whose rule were love of money, extortion, and cruelty. In 308/920 Laylâ b. Nu'mân seized Nişâhpûr from the Sämanids on behalf of Hasan b. Kâsim, the 'Alid, who succeeded Hasan b. 'All al-Utrush in 304/917. He failed to hold it. Some years later Kâkî took Rayy, but, unable to establish his independence, entered Sämanid service. Meanwhile Asfâr b. Shîrûya had proclaimed himself in Sârî but was defeated by Mâkân b. Kâkî. He then took refuge with the Sämanid governor of Khorûsân, Abu Bakr b. Ilyâs. When the latter died, Asfâr received the allegiance of his troops and seized Rayy, Tabâristân, Kazvin, Kumm, Kâshân, and Luî Kûlîk. He was overthrown in 319/931 by one of his own generals, Mardâwdî. b. Zîyâr, the founder of the Zîyârî dynasty. Mardâwdî, who, according to Ibn Miskawâyh, appears to have had visions of restoring the old Persian empire (vii, 5, 489; cf. also Ibn al-Ăţhir, viii, 216), took Kazvin, Rayy, Hamadân, Kangavar, Ïnâvar, and Burûdijrî, and then turned back to invade Tabâristân and Gurgân, which had been seized by Mâkân. Among Mardâwdî's followers were the three sons of Bûya, 'All, Hasan, and Abûmad. They had originally been in the service of the Mäkân, but had deserted him for Mardâwdî. When the latter extended his conquests southwards, he appointed 'All b. Bûya governor of Khorûsân.

At first 'All appears to have considered entering the service of the caliph, who was by now a puppet in the hands of the amir al-umarâ'î, but his overtures were ignored. He then took Isfâhân, but retired to Arrâšjân when Mardâwdî sent his brother Wushmîrî against him, and seized Fârs in 321/933, while his brother Abûmad occupied Kîrman in 322/934. Mardâwdî, on receipt of this news, set out himself for Isfâhân and sent another army from Khûzistan to march on the Bûyids. 'All thereupon renewed his allegiance to Mardâwdî and sent his brother Hasan to him as a hostage. Mardâwdî meanwhile appears to have conceived the plan of conquering Baghdâd, but before he could put the plan into operation he was assassinated by his Turkish slaves in 323/935. He was succeeded in part of his domains by Wushmîrî, who spent his reign in a constant state of war with the Sämanîds, Bûyids, and others and eventually accepted Sämanîd overlordship.

Hasan b. Bûya rejoined 'All on the assassination of Mardâwdî and they occupied Isfâhân. Mâkân had meanwhile taken Kîrman and acknowledged Sämanîd overlordship. Later he left Kîrman in an attempt to regain Gurgân and Tabâristân. About 325/937-8 he threw off Sämanîd allegiance and when the Sämanîd governor of Kûrûsân sent an army against him he appealed to Wushmîrî for help. Hasan b. Bûya, prof-
which was in 353/964. The balance of these was in his favour, and from time to time he exacted tribute from the Buyids, but he failed to press his claims entirely. When finally the Hamdâns became increasingly engaged in Syria in a struggle with the Fâtîmids, pressure on the western flank of the Bûyids ceased. Mu'izz al-Dawla also undertook various operations against the Barâdis [q.v.] in Khuzistan, and finally extinguished them in 349/960-1. He was succeeded in 356/967 by his son Bakhtiyâr 'Izâ al-Dawla, who was an ineffectual ruler.

When Bakhtiyâr's Turkish mercenaries revolted and seized power, 'Adud al-Dawla, the son of Rukn al-Dawla, who had been ruling in Shirzâr since 338/949, set out for Baghâdâd in 346/954 to restore order. He forced Bakhtiyâr to abdicate, but because of the protests of Rukn al-Dawla he re-established Bakhtiyâr and returned to Shirzâr. In 346/956 Rukn al-Dawla died and was succeeded by his son Mu'ayyid al-Dawla in Rayy and by another son Fâghr al-Dawla in Hamadân. Bakhtiyâr took the opportunity to march on Shirzâr and provoke a conflict with 'Adud al-Dawla. He was defeated. 'Adud al-Dawla occupied Baghâdâd in 367/977 and seized Fâghr al-Dawla's territories also, but allowed Mu'ayyid al-Dawla to rule as his subordinate.

Under 'Adud al-Dawla, who ruled first in Fârs (338/949—356/967) and then in Fârs and Irâz (356/967—374/983), the Bûyids reached their height. Bûyid troops occupied Balûqistan and the Mikrân and even operated in 'Omân. On the Khurâsân border, where there had been constant conflicts with Sâmânid governors usually ending in a Sâmânid victory, there had been a sudden weakening of the Sâmânids, who were defeated towards the end of 371/982. 'Adud al-Dawla's death at the critical moment prevented any further Bûyid advance into Khurâsân. 'Adud al-Dawla, the only real figure of a ruler among the Bûyids, established an effective administration. He reorganized the postal system, put down brigandage, and fostered commerce. He followed a policy of religious toleration and suspended the public celebration of sectarian ceremonies which had been introduced by Mu'izz al-Dawla in Baghâdâd. He was a great builder and patronized men of learning and theologians. He did not, however, entirely lose the characteristics of his race: old taxes were increased and new ones introduced. (See further H. Busse, Chaisif und Grosskönig, Beirut 1969).

After the death of 'Adud al-Dawla the Bûyid dynasty declined rapidly. Until the reimposition of orderly government by the Saljûqs the western provinces were torn by interminable conflicts. The administration was completely broken up, agriculture ruined, and the old money economy destroyed beyond repair. A contributory factor in this decline was the change in the flow of trade connected with the rise of the Fâtîmids (see 'Abbâsids, and B. Lewis, Fâtîmids and the route to India, in Istanbul Ithâsat Fak. Mecn., 1950, 355-66).

In due course Khurâsân fell, not to the Bûyids, but to the new power rising in the east, the Ghaznavids. Two favourable circumstances attended their rise: first the absence of any strong power in western Persia able to fill the vacuum created by the decline of the Sâmânids, and secondly the existence on their frontier of the decaying empire of the Hindû Shâhâs, which offered to them a new field of operations. Alpâtkân, the commander of the Sâmânid forces in Khurâsân, after an abortive rising in favour of 'Abd al-Malik b. Nâb in 350/951, withdrew to the eastern frontiers and took Bust and Ghazna. After an interregnum following his death in 352/953, Sebuktegin, one of his gušâms, assumed power in 356/977. He regarded himself as governing on behalf of the Sâmânids but paid no tribute to them. In 356/977 a revolt by his general Nâb summoned him to Transoxania to aid him against rebels. After a successful campaign Sebuktegin was given the governorships of Balkh, Turkhâristân, Bâmiyân, Gûhîr, and Ghârdjâstân in 384/994, and his son Mahmûd was made commander of the army with his headquarters in Nîghâpur. When the Karâkhânids invaded Transoxania in 386/996, Nûb again appealed to Sebuktegin for help. By wise peace which was concluded with the Karâkhânids the frontier was established on the Katwân steppe. Sebuktegin died in 387/997. He left his domains to various members of his family, but by 388/998 Mahmûd, temporarily abandoning Khurâsân, had made himself master of the territory held by his father. In the following year he seized Khurâsân and took the Khâba in the name of al-Kâdir, whose succession the Sâmânids had not recognised, continuing to read the Khâba in the name of his deposed predecessor, al-Ṭââsî. In return Mahmûd was granted a diploma by al-Kâdir for Khurâsân (389/999). In 390/1000 Mahmûd made an expedition into India, capturing some fortresses near Lamghân. The following year he invaded India again, defeated Jaipal, and took a great quantity of booty. Subsequently he made several successful expeditions into India, the most famous of which was in 396/1006, when he destroyed the idol temple at Sumnath. The attempts made by the last of the Sâmânids, Abû 'Ibrâhîm Ismâ'îl (d. 395/1005) to recover Khurâsân were in vain. The former Sâmânid territories were now divided between the Ghaznavids and the Karâkhânids. In 398/1008 Mahmûd defeated Ilîg Nârî and Kâdir Khân Yusuf near Balkh. He then extended his authority over Ghârdjâstân, Khârāzam, Sîstân, Gûhîr, Tabaristân and Gurgân. The conquest of Khârâzam in 408/1017 gave him a preponderance over the Karâkhânids, and when civil war spread in the Karâkhânid kingdom, he invaded Transoxania in 415/1025, but does not appear to have made permanent gains. In 417/1026 Mahmûd received a diploma from the caliph al-Kâdir for the conquered provinces. The caliph made no attempt to enter into relations with the Karâkhânids except through Mahmûd.

Mahmûd was a strict Sunnî, and since at the time of his rise the Fâtîmids were pressing in through Syria towards Baghâdâd, where the caliph was a puppet in the hands of the Bûyids, considerable glamour attached to him as the first ruler who came to the rescue of the 'Abbâsîd caliphate, though in fact it was not until 'Uthîrî Beg arrived in Baghâdâd that it was relieved of tutelage to the Bûyids. So far as Mahmûd's administration is concerned there was outwardly little change, but the spirit of the imperial organization was changing. The state was no longer a civil power which maintained an army. The court was to a greater degree than had formerly been the case military and tribal. The army had become the state and its commander the sultan, and the only function and duty of the people was to pay taxes. Mahmûd did not, however, solve the problem of how to support the army: the new system was to be worked out, not by the Ghaznavids, but by the Saljûqs. In 420/1029 Mahmûd entered Rayy, which had been in the hands of the Bûyid, Majdî al-Dawla, and left his son Mas'ûd there with orders to complete the conquest of Bûyid territories. Hamadân and Isfâhân fell, but in 427/1030 Mahmûd died and
Mas'ūd hastened back to Khurasan to claim the throne. The early years of Mas'ūd's reign were occupied by struggles for power between rival factions. With his withdrawal from Rayy, the local branch of the Būyids, the Kātkūyids, threw off their allegiance. The real threat to the Ghaznavids, however, was to come from elsewhere. During the reign of Maḥmūd, groups of Ghuzz had passed into Khurasan and the interior of Persia. The first considerable movement was in 426/1033, when Maḥmūd ordered the tribes under Isrā'īl b. Saldjūk, to which he had seized, to migrate into Khurasan. In 425/1033-4, two brothers, Tughrīl Beg and Çağhi Beg Dāʾūd, the sons of Mīkāʾīl b. Saldjūk, and their uncle Yaḥbūh b. Saldjūk moved from Transoxania to the borders of Khwārazm, but were obliged to move again in 426/1034-5 on the death of Hārūn the Khwārazmshāh. A number of them crossed the Oxus into Khurasan and asked permission to live under Mas'ūd's protection. During the next few years they were constantly on the move in search of new pastures, harried by and harrying the Ghaznavids, until finally they met in battle at Dandanḵān in 431/1040. Mas'ūd was decisively defeated. Ghaznavid rule was brought to an end in Khurasan, though the Ghaznavids continued to rule in Ghazna until dispossessed by the Ghurids [q.v.] in 569/1173-4. Further weakened, they retired first to Kābul and then to Lahore.

The Saldjūk period in some ways represents a culmination of previous developments, in others a new departure. There had been from the 3rd/9th century onwards much recruitment of Turkish slaves in western and eastern Persia, and the Ghaznavids were, by origin, a slave dynasty. During their rule there was an increased militarization of the state, but no major change in its structure. The Ghuzz movement was different: it was a tribal migration, and the Saldjūks who emerged as its leaders became, almost by chance, the rulers of a vast empire. This, at its height, stretched from Transoxania to Syria and Anatolia, though the last two were never under the effective control of the Great Saldjūk sultan, and included Khurasan and the rest of Persia, Irāk-i Ṭurk, and the Dzhazira. The numbers involved in this migration were not large: those taking part were to be counted, perhaps, in tens of thousands. They seem to have caused remarkably little dislocation economically [see 111.2]. Small though their numbers were, they altered the balance of the population in two ways: henceforward the two main elements were Persian and Turkish—the dichotomy of the early centuries between 'Arab and ʿalām was replaced by that between ṭurk and šāğišt, and secondly there was an expansion of nomadism and a more strongly marked dichotomy between settled and semi-settled. This dichotomy, in the early period of Saldjūk rule, coincided, to some extent, with that between Turk and non-Turk, and this in turn corresponded, in large measure, with the dichotomy between the military and the rest of the population.

The Saldjūk leaders were not simply the leaders of a nomad tribal group. They were also familiar with urban life, and from the very beginning of their transformation into the rulers of an empire they had settled capitals. As heirs to an empire and to the civilization which had developed in the lands of the Eastern Caliphate, they became the defenders of Sunnī Islam and under them a great revival took place, which made possible the unification of the Sunnī world, against which the Crusaders were unable to achieve lasting success. As heirs to an empire it was not long before a conflict developed between them and the Turkoman nomads, whose main concern was for new pastures and who, in religion, had the attitude of the ghāzī. Since many of the Turkomans pushed on to the Georgian, Armeeno-Byzantine and Caucasian frontiers to undertake the activities of ghāsī, it was in Anatolia rather than Persia, however, that this Islam took root. Support for Sunnīsm was imposed upon the Saldjūks by political circumstances: opposition to the Būyids dictated a pro-Sunnī and an anti-Shīʿī policy. From the time of Malikshāh onwards, however, the Būyids had been deprived of their political power, the strict orthodoxy of the Saldjūk sultans was modified. A pro-Sunnī attitude was also imposed upon them by their need to win the support of the ūlām in order, in turn, to gain the support of the masses—though they failed to carry with them those who were discontented with the established order, and who were to be found among all classes.

Under the Saldjūks, al-Ghāzālī [q.v.] worked out a new relationship between caliph and sultan, from which stemmed a series of interconnected jurisdictions, whose stability depended upon orthodoxy or right religion, and the personal loyalty of the sultan to the caliph, and of subordinate officials to the sultan. The power of the Saldjūks was thus given a şarʿī basis and differed from that of the Būyids, which had been usurped. Since Islam still had relevance to the daily life of the people this reformulation was of more than theoretical importance: it made possible the preservation of the religious life of the community and enabled political life to run its course within the framework of Islam. That the sultan's rule was given a şarʿī basis did not, of course, stop the arbitrary use of power, but it tempered its use and, generally speaking, prevented it reaching lengths which were felt to be intolerable by the people.

The Saldjūk theory of state, as well as its primary Islamic basis, had another basis, which derived its inspiration from Sasanian theory and was expressed by Nīzām al-Mulk, the vizier of Alp Arslān and Malikshāh. According to this theory the sultan was directly appointed by God. His power was absolute and required no justification, and against it the population had no right to freedom. This theory, like the Islamic theory, also emphasized the independence of kingship and religion, and of stability and right religion. It rested, however, on justice rather than right religion. This was to be achieved by the maintenance of each in his rightful place. To these two bases the Saldjūks brought a third, which derived from the practice of the steppe: the practice of consultation. This was, perhaps, never very strong, and as the power of the central government was strengthened and the Saldjūks came to rely less on the Turkoman tribes and more on an army composed of slaves and freedmen, so the Islamic theory tended to be superseded by the conception put forward by Nīzām al-Mulk, while the element of consultation weakened and virtually disappeared.

The establishment of a strong central government provided order and discipline, secured the defence of the Muslim community and Muslim lands, and created conditions in which Muslim life could be lived and the various classes carry on their occupations in relative security. But it failed to remove the underlying dissatisfactions, and the Saldjūk period is also marked by the appearance of a new phase of the Ismāʿīlī movement, known to Arab historians as the new propaganda "al-daʿwa al- Giámīda" in contradistinction to the "old propaganda" "al-daʿwa al-ḥaddna" of the Fāṣīmīds, and its followers as the Bāṭinīyya.
In the field of administration there was a long continuity of practice stretching back beyond the Saljuqs, but, consequent upon the changed political, economic, and social circumstances which prevailed, certain developments which had begun before their arrival took definite shape and provided a pattern which was to persist in its essentials down to the 20th century. The two main aspects of the sultan's administration were the dargāh or court and the divan (p.n.), which was the chief department of the bureaucracy. The former was essentially military, composed of amirs, slaves, and freedmen, though it was also frequented by the chief officials of the bureaucracy, the religious classes and learned men. The relations between the dargāh and the divan were not clearly formulated. The vizier, the chief bureaucratic official, bridged the gap between the two. In the reigns of Alp Arslân (455/1063—465/1072) and Malikshāh (465/1072—485/1092), the vizirate reached its height under Nizām al-Mulk (q.v.), who supervised all aspects of the administration. Later the vizier declined in importance and there was an increased militarization of the state and a contraction in the area of its direct operation. (See further A. K. S. Lambton, *The internal structure of the Saljuq empire*, in *The Cambridge history of Iran*, ed. J. A. Boyle, 1968, v, 203-82).

This was accompanied by the emergence of what tended to become a "hereditary" domain or ištālī over which the mukta'ā had governmental prerogatives, which included the collection of taxes (in the details of the local arrangements for the assessment and collection of which there is a striking continuity), the holding of the masālim court, and the general supervision of security and religious affairs. This development coincided with and was partially the consequence of the change in the military forces of the state. As the army became composed not of Turkoman tribes but mainly of slaves and freedmen, the problem of providing their pay and of financing the administration in general became urgent. The ištālī was simply a device to solve the problem. Under a strong ruler it did not necessarily involve a relinquishment of the control of the central government or decentralization, but in the long run it made for a decline in the power of the sultan relative to that of the amirs and finally under the series of weak rulers who succeeded Muḥammad b. Malikşāh contributed to the political disintegration of the empire.

This tendency was further aggravated by the atabegate, an institution peculiar to the Saljuq period, which had a social and a political aspect. The atabeg (q.v.) was placed in charge of a prince's education and normally married to his mother. If the young malik was assigned a province, the atabeg attached to him was responsible for its administration. Politically the objects of the atabegate was to control the malik and prevent his rebellion, but as the power of the amirs increased relative to that of the sultans, the atabegate was used, not so much to prevent the rebellion of a Saljuq malik as to retain the nominal allegiance of a powerful or rebellious amir (see further *The internal structure of the Saljuq empire*, op. cit.). This was the origin of the various atabeg dynasties which arose on the decline of the Great Saljuq empire.

After the battle of Dandankān, as the Saljuqs consolidated their conquests in Khurāsān and moved westwards, the majority of the Ghuzz became associated with them, though full control was never established over the movement as a whole. Outlying groups, although acknowledging the nominal overlordship of the Saljuqs, continued to act independently. Many of them pushed on into Syria and Asia Minor. The geographical extent of the operations of the Ghuzz was thus wider than the area over which the central government exerted control. Politically the Great Saljuq empire was a loose confederation of semi-independent kingdoms. Of these, the Saljuq kingdoms of Rām and Syria broke away at an early date and developed along more or less independent lines, while the Saljuq kingdom of Kirmān, whose founder Kawūrdu b. Čaghri Beg was appointed governor of the province by Tughril Beg in 433/1041, also became virtually independent and exerted little influence on the general course of events. During the reign of Tughril Beg (429/1036—455/1063) the power the Saljuqs was based on the Turkoman tribes. Alp Arslân and Malikşāh, during whose reigns the Great Saljuqs were at the height of their power, relied increasingly on armies composed, not of Turkomans, but of Turkish slaves and freedmen. After the death of Malikşāh, these slaves and freedmen as mukta’ās and atabegs, became the dominant class, and eventually, as the power of the central government waned, set up virtually independent kingdoms.

Under Tughril Beg there was on the one hand an expansion north-westwards, which was facilitated by the weakness of the Byzantine empire, and on the other a consolidation of the gains made in Persia. Čaghri Beg remained in Khurāsān and ruled in the east until his death in 452/1060. In 440/1050 Ibrāhīm Ināl, Tughril’s half-brother, undertook a campaign into Armenia, and in 446/1054 Tughril captured Ardjish and besieged Manzikert. In the following year Tughril entered Baghādād. Already in 439/1059, when the Saljuqs had first entered Nishāpūr, al-Ḵātūn had sent an envoy to them, and in 439/1049 after Dandankān, when they had written to the caliph asking him to bestow upon them the sovereignty of the lands they had already conquered, the caliph in reply had invited Tughril to Baghādād. Other pre-occupations prevented his coming until 442/1053-6. Shortly after his entry, al-Ralīm, the Būyid general, was seized and the rule of the Būyids broached the end, although a branch of the family continued to rule in Yazd as Saljuq governors for several years. On this occasion, however, Tughril was not granted an audience by the caliph: this honour was reserved until his second visit to Baghādād in 449/1058. Meanwhile in 448/1056 Arslān Khāṭūn, Dā’ūd’s daughter, was betrothed to the caliph.

Al-Ḡasāšī, the Shī'ī Turkish general, to whom power had passed in Baghādād on the fall of the Būyids, fled on Tughril’s entry. He was joined by many of the Arab Shī’ī tribes on the Syrian border, and appealed to the Fātimids for help. Tughril followed him and operations took place between them in northern ʿIrāq in 430/1043-45. Ibrāhīm Ināl seized this opportunity to rebel a second time—the first had been in 441/1059-60, when he had refused to hand Hamadān over to Tughril. The latter was forced to leave Mesopotamia to deal with Ibrāhīm Ināl. Al-Ḡasāšī thereupon marched on Baghādād and proclaimed the Fātimid al-Mustāṣfirīan caliph. Al-Ḵātūn, who had sent an urgent message to Tughril to return to Baghādād, took refuge with Kuraysh, the Qūṣaylī, who entrusted him to Muhārīrī b. Bādārīn, Tughril, after he had overcome Ibrāhīm Ināl’s revolt with the help of Dā’ūd’s sons, Yākūṭ and Ḍawūr, retook ʿIrāq. Al-Ḡasāšī was killed and the ʿAbbāsīd caliph restored, but the administration of Baghādād was taken over by Tughril.
The caliph's function was henceforward to occupy himself with religious leadership: temporal affairs were delegated to the sultan, though in Baghdad itself there was, to some extent, a conflict of authority.

By 451/1060 Tughril was master of Mesopotamia up to Syria and the Byzantine frontier, though on his death there were outbreaks of disorder by the bedouin of ‘Irāk. His ambitions were meanwhile growing and in 453/1061 he demanded the hand of the caliph’s daughter in marriage. This caused the caliph great annoyance—even the Buyids had not demanded this of him—but after negotiations and threats the marriage contract was eventually ratified in 454/1062 outside Tabriz. When Tughril came to Baghdad in the following year the caliph’s daughter was taken to his residence, and when he left Baghdad in 456/1061 she accompanied him.

So far as the relations of the Saldjūqs with local ruling families were concerned, in the early period of their expansion, the local rulers probably looked upon them as a reserve of mercenaries to draw upon in their quarrels. The payments received by them were not tribute (as they are often represented in the sources) but payments to mercenaries for their services, and when the Ghuzz left the district these payments naturally ceased. As the Saldjūq conquests spread in some cases the local rulers were driven out, in many cases they were confirmed in all or part of their possessions in return for tribute. By the end of Tughril’s reign, however, administration by Saldjūq officials was becoming increasingly common. In due course the former ruling families were merged into the Saldjūq imperial structure. Marriage alliances were made with them and hostages were often taken to lessen the likelihood of rebellion.

The loose confederation over which Tughril had established some kind of central control was far from being firmly united at his death in 455/1063. In accordance with his will, Sulaymān b. Dā‘ūd was declared his successor by his vizier al-Kunduri. Seeing, however, that the amirs opposed his accession, al-Kunduri proclaimed Alp Arslān, another of Dā‘ūd’s sons, who had been his father’s chief lieutenant in the east. Yabhān b. Saldjūq, governor of Harat, and Kutulmish, a Saldjūq of northern Persia, both rebelled and were defeated in 456/1063-4. These events probably mark a turning point in the position of the sultan: if control of the empire was to be retained, it was clear that a standing army loyal to the sultan was necessary. As the conception of an autocratic ruler replaced that of the ruling khān, and the moral basis of Saldjūq authority weakened, some substitute had to be found for the former tribal loyalties. To some extent the central government supplied an element of unity, but this could be effective only as long as it was supported by a strong central army. This condition was fulfilled under Alp Arslān (455/1063—456/1072) and Malikshāh (456/1072—458/1074), and the latter in particular succeeded in imposing a measure of control throughout the empire.

Under Alp Arslān conquests in the northwest continued. Parly to co-ordinate and partly to control the various groups operating on the Byzantine frontier, Alp Arslān intervened himself and took Ani in 457/1065 and laid waste Cilicia and stormed Caesarea in 459/1067. Romanus IV Diogenes mounted a counter-offensive and had some success in campaigns in 456/1068 and 451/1069, but a third campaign ended in a crushing defeat at Manzikert and his capture in 463/1071 (see C. Cahen, La campagne de Manzikert d’après les sources musulmanes, in Byzantion, ix (1934), 613 ff.). In 465/1072 Alp Arslān was assassinated while on an expedition against the Karakhanids. He had appointed Malikshāh his wali ʿalad in 458/1066 and with a view to safeguarding his accession had allocated different parts of his kingdom in the form of ʿādād to various of his relatives. Nevertheless Malikshāh’s accession was disputed by Kāwurd, the Saldjūq ruler of Kirmān. He was defeated and killed, but his descendants continued to rule in Kirmān. In 466/1073-4 Malikshāh marched east and turned the Karakhanids out of Tirmidh and assigned Balkh and Tūghrāstān to his brother Tekish. The latter rebelled in 473/1080-1 and again in 477/1084-5. In 470/1077-8 Malikshāh assigned Syria to another brother, Tutush. Although Malikshāh’s nominal authority appears to have been recognized in Syria, he twice had to intervene in person (see H. A. R. Gibb, The Damascus chronicle of the Crusades, London 1932, 20-1), but in 484/1091 Tutush came to Baghdad to pay homage to him. In 482/1089-90 Malikshāh made an expedition to the east to deal with disturbances there. During this he received the submission of the Khān of Kāshāgar. Further consolidation took place inside Persia. The Shabānūkārā [q.v.] of Fārs were subdued, the states of northernmost Persia, except Shīrān, were annexed, and the Kurdish dynasty of the Marwanids, which had played an active role in the earlier struggles between Tughril, Ibrahim Ināl and the Buyids, was brought to an end in 478/1085-6, although the last Marwanid possession was not finally lost to the Artukids, Hūšān al-Dīn Taymūrtāsh b. Ḥilāl, until 532/1137-8. Various operations were undertaken against the Uqaylids, with whom earlier Tughril’s relations had been marked by a spirit of compromise. They had by this time begun to expand westwards, but with the death of Sharaf al-Dawla Muslim b. Kuraysh at Antioch in battle with Sulaymān b. Kutulmish in 478/1085 their power disappeared.

The decline of the Uqaylids facilitated the rise of another Arab dynasty, that of the Mazyadids in Hilla. They were Shīʿis, as were the majority of the Arab tribes in the region, and were, generally speaking, ready to submit to their next powerful figure in ‘Irāk, and became the leader of an Arab revolt against the Saldjūqs.

An attempt to exercise a stricter control over the caliph was made by Nizām al-Mulk, who sought to control him through the appointment of his own nominee to the caliph’s vizirate. Relations with the caliph became further strained when Malikshāh’s daughter, who was betrothed to al-Muktadi, nominee to the caliph’s vizirate. Relations with the caliph became further strained when Malikshāh’s daughter, who was betrothed to al-Muktadi, complained of his neglect after being taken to the caliph’s residence in 480/1087-8. In 484/1091 when Malikshāh came to Baghdad, he ignored the caliph’s presence and demanded that he should revoke the nomination of his eldest son in favour of his son by Malikshāh’s daughter and retire to Basra (or according to some accounts to Damascus or the Hijāz). The caliph demanded a delay and was relieved of Malikshāh’s demand by his assassination in 485/1093.

An important step towards strengthening and regimenting the religious institution—apart from the reaffirmation of the caliph’s position as the head of the Islamic community by the early sultans, and
the limitation of his functions to the religious sphere—was the development of the madrasas [q.v.]. The initiator of this movement was Niẓām al-Mulk, whose intentions were presumably to provide government officials trained in the tenets of orthodoxy to implement his political policies and to use the 'ulamd* educated in the madrasas to control the masses and combat the spread of the Ismā'īlīs. He did not found the madrasas, as is sometimes claimed, but he was responsible for their spread, which began for them in the reign of Malikshāh and caused the new madrasas to eclipse all other contemporary institutions of learning. Numerous madrasas were built by Sālđūq rulers, their ministers, and others, partly for the reasons mentioned above, but partly also to gain the support of the 'ulamd*, in order, through them, to gain the support of the masses (see further The internal structure of the Saljuq empire, op. cit.).

With the failure of al-Ḥasanī to establish Fāṭimid power in Baghdād, Shī'ī propaganda apparently ceased or was carried on in secret, and when the Sāl̇dūq invaders overthrew the Fāṭimids, they went on the defensive. In the reign of Malikshāh a revival of the Ismā'īlī movement took place, not, perhaps, unconnected with the vigorous steps taken to strengthen the orthodox institution. His reign had brought a measure of order but it had not removed all the old discontents, and by its stricter control and insistence on greater uniformity of thought had probably brought new ones. The "new propaganda" broke away from the old over a dynastic dispute (see further B. Lewis, The Assassins). Its founders regarded Niẓār as the successor of al-Muṣtamnīr instead of al-Mustāfī. A grandson of Niẓār, who with his son was murdered in prison in Egypt, was allegedly brought up at Amāmatūt by Ḥasan-i Sābḥū (see M. G. Hodgson, The order of the assassins, the Hague 1955, 66-7). The latter and his two successors, Kiyyū Buzurg Umid (518/1124—532/1138) and Muḥammad (532/1138—557/1162) claimed only to be emissaries of the imām, but the fourth grandmaster, al-Ḥasan al-Dīkhri hi ʿīlī-Salāmūn (557/1162—581/1166), proclaimed himself to be the son of the infant brought from Egypt and the first of a re-creɔlization of imāms. Politically the new institution was marked by extreme violence. The first assembly of the followers of the new propaganda took place, according to Ibn al-ʿAṭārī, in Sāva in the reign of Malikshāh. In 483/1090 they gained possession of Amāmatūt, in the neighbourhood of Khawzān, which became their headquarters. In the following year they established themselves in Kūhistān in east Persia. Malikshāh in 485/1092 sent expeditions against them in both districts. The one despatched against Amāmatūt was routed by a sally by the garrison. Niẓām al-Mulk was assassinated by a Bāṭinī shortly afterwards. When Malikshāh's death followed a few weeks later, the expedition withdrew. The other sent to Kūhistān also failed to make headway and on Malikshāh's death broke up.

Malikshāh and the sultans after him all left young, or fairly young, boys to succeed them, and the death of the sultan was almost always followed by struggles for supremacy among his surviving uncles, brothers, and cousins. The size of the sultan's standing army after the death of Malikshāh decreased, whereas those of the amirs increased. This change in their relative strength was an invitation to the amirs to assert their independence, and especially from the death of Māḥmūd b. Muḥammad (525/1131) onwards the internal political history of the Sāl̇dūq empire consists largely of a series of struggles by the amirs and atabegs to establish their supremacy over the sultan and set up virtually independent governments. Further, since the road to Asia Minor had become blocked by the Turkmans already there, and a stable Christian kingdom had been established in Georgia, the Turkmans had fewer outlets for their activities and were more ready to join in the struggles for the throne. The incorporation into the state of the Turkoman tribes, to whom the Sāl̇dūq family and its relations owed their origin, had proved an intractable problem. Some had been enrolled in the service of the sultan, but the majority continued to live a semi-nomadic existence, with a general tendency to move westwards. As the basis of the power of the Sāl̇dūq state shifted from the Turkmans to slaves and freedmen, the position of the Turkmans in relation to the rest of the population worsened. Apart from Syria and Anatolia, the main concentrations of Turkmans were to be found in Gurgān, the Dīyaṭra, ʿIrāk and ʿĀdharbāyjān, and to a lesser extent Khūzistān. The weakening of the Great Sāl̇dūq empire on the death of Malikshāh and the subsequent dissolution of the kingdom created by Tutuš in Syria to some extent restored the position of the Turkmans and several of them succeeded, within a few years, in founding independent principalities. The fact that some of them, such as Khānār b. Artūk [see Artūkīs], were the offspring of the sultan, helped them to transform themselves quickly into small territorial princes when the central authority declined.

On the death of Malikshāh, his wife Turkan Khāṭūn succeeded in putting her son Māḥmūd on the throne. He was nominally sultan for some two years (485/1092—487/1094), but Turkan Khāṭūn was ultimately unable to defeat the opposition which gathered round Barkyārūk. Ismā'īl b. Yākūtī, Barkyārūk's maternal uncle, in response to an appeal from Turkan Khāṭūn, marched against Barkyārūk with an army from ʿĀdharbāyjān and Arrān, of which provinces he had been governor under Malikshāh. He was defeated. Turkan Khāṭūn's death in 487/1094 was followed shortly afterwards by that of Māḥmūd. Tutuš also made a determined effort to obtain the sultanate but was finally defeated and killed by Barkyārūk in 488/1095. This was the last attempt to unite Syria with Persia and the eastern provinces. The Great Sāl̇dūq sultan continued for a time to be recognized nominally in Syria, but the control he exercised was negligible. By 490/1097 Barkyārūk had obtained possession of Kūharsān, of which his uncle, Arslān Arghū, had made himself master on the death of Malikshāh, and was recognized over the whole of Persia except Kirmān, and in ʿIrāk. In 492/1099-9 his brother Muḥammad rebelled. After many vicissitudes, in 497/1103-4, Barkyārūk established a slight superiority but at the cost of disorder throughout the country and a decline in the prestige of the sultanate. By the terms of the peace Muḥammad's status was virtually that of an independent ruler in Arrān, ʿĀdharbāyjān, Dīyaṭra, Mawṣīl and Syria. Sandjaric in Kūharsān was also to read the šahābah in his name.

The internecine strife between the Sāl̇dūq princes on the death of Malikshāh enabled the Bāṭīns to strengthen their position. In 489/1096 they obtained possession of Girdkūh, situated near Dāmghān on the main route from Kūharsān to western Persia. About the same time they also seized Šāhādīs just outside Ṣafāhān, whence they threatened the capital itself. About 493/1100 they infiltrated Barkyārūk's court and army. Eventually the sultan (who had him-
self been accused of Isma'ili sympathies) gave permission for measures to be taken against them. In 494/1101 he came to an agreement with Sandjar, who had been governor of Khurasan since 492/1098, for combined action against them, and an expedition was sent by Sandjar to Kuhistan, which achieved some success, as did another expedition three years later.

On the death of Barkyaruk in 498/1105, although he had nominated his son Malikshah as his successor, his brother Muhammad soon established himself as sultan. The Great Saldjuk sultanate once more extended over the whole of Persia with the exception of Kirmān, which continued under the Saldjuk of Kirmān. Muhammad's reign did something to restore the prestige of the sultanate, but the unity of the empire was never again effectively imposed. Fārs was pacified by Čawli Sakao, who was governor from 498/1104-500/1106 and 502/1109-505/1113. Sandjar nominally governor of Khurasan on behalf of Muhammad, was, in fact, all but independent, and engaged in consolidating his position, which was to enable him to make himself sultan after the death of Muhammad. Sa'da ḥ b. Dubays, who had encouraged the internal divisions of the Saldjuk empire in order to establish his own independence, rebelled in 501/1106 but was killed in battle. With his death the Arab revolt collapsed. That his son Dubays was appointed to succeed him, although in keeping with the Saldjuk policy of toleration and compromise, is, perhaps, also indicative of the inability of the Saldjuk to administer the Arab tribal districts except through their own leaders.

Operations against the Bāṭinis, which under Barkyaruk had not been seriously pressed, were prosecuted vigorously. In 500/1106-7 Muhammad undertook in person successful operations against them in the neighbourhood of Isfahān. Shāhūdīz was captured after a prolonged siege. Muhammad then sent an expedition to Alamūt. Operations continued for eight years and the castle was on the point of falling when it was saved by Muhammad's death. Isma'īlī forces near Ṭarāfīdīr in Fārs were also attacked.

On the death of Muhammad, although he had nominated his son Maḥmūd as his successor, Sandjar was generally regarded as the head of the family. Maḥmūd ruled in the west from 511/1118 to 522/1133, but his rule was disputed at different times and in different districts by his brothers, Maṣūd, Tughril, and Sulaymān Shāh and their atabegs, and in 513/1119 Sandjar intervened and defeated him at Sāva. Sandjar, however, returned to Khurasan and allowed Maḥmūd to rule in the west. Although he and his successors used the title sultan, their status was that of maḥlis. Various Saldjuk princes on their own initiative, or on the initiative of different amirs and atabegs, rebelled against Maḥmūd and his successors. Sandjar was forced to interfere on a number of occasions, but proved unable to restrain the increasing ambitions of the amirs and atabegs or to prevent the ultimate fragmentation of the empire, preoccupied as he was by the increasing pressure on the eastern frontier from the Karā Khītāy and the growing strength of the Khwārazmshāh. He suffered a heavy defeat at the hands of the former in 530/1134, and 'Alā' al-Dīn Atsiz, who had succeeded his father Muhammad b. Anūs Tālān as governor of Khwārazm in 521/1127, temporarily occupied parts of Khurasan after Sandjar's defeat.

The caliphs also took part in the family quarrels of the Saldjūks, and as the caliph emerged again as a military power the amirs began to join him as they joined the other temporal leaders. After the death of Muhammad b. Malikshah a triangular struggle took place for the possession of Ḥarak between the caliph and al-Bursukī against Dubays, who was later joined by the atabeg ʿImād al-Dīn Zangī, ruler of Mawṣil since 521/1127, with the sultan playing an uneasy part in the background. The first caliph to assemble an army and advance in person in Saldjuk times was al-Mustarshīd (512/1118-529/1135). Finally, on the death of Maṣūd b. Muḥammad in 547/1152, al-Muktafi established himself as the dominant power in Ḥarak, exercising both temporal and religious power.

During the disorders which followed the death of Muhammad, the Ismaʿīlīs were to some extent able to recover their position in Khūsistan and northern Persia, though Ḥasan-ʾi Sāḥib died in 518/1124. In 520/1126 Sandjar resumed operations against them in Khūsistan. These were only partially successful, and the Ismaʿīlīs, benefiting from the preoccupations of Sandjar on the eastern frontiers and with the Ghuzz in Khurasan, were able again to increase their power. The fact that the Ghuzz became increasingly restive and intractable towards the end of Sandjar's reign was due to the fact that their numbers brought about by a southward movement of the Ghuzz who had remained in Central Asia, which was occasioned by the expansion of the Karā Khītāy into Transoxania. The control of the frontier against the inroads of the Ghuzz became increasingly difficult, and in 548/1153 battle was joined with them. Sandjar was defeated and held captive for over two years, during which the central government in Khūsistan broke down and the province was overrun by the Ghuzz. Sandjar escaped in 551/1156 but died the following year.

With the death of Sandjar, the Khwārazmshāh Il Arslān, who succeeded his father Atsiz in 551/1156, emerged as the most powerful ruler in the eastern provinces. He was, however, unable to establish his undisputed rule against the Ghuzz who had defeated Sandjar, and was nominally a tributary of the Karā Khītāy. In the west the Saldjuk empire had split into warring principalities. In Mawsil the Atabegs looked west and were largely occupied in a struggle with the Crusaders. In Ḥarak the caliph was disputing supremacy with the Saldjūks of Ḥarak, while in Luristan and Aḥtarbāyjān atabeg dynasties were establishing themselves, and in Fārs the Salgharids came to power. The last named, whose rule in Fārs began about 547/1148, were descended from Salghar, a Turkoman chief who had been one of Tughril Beg's bādīs. They were a successful and popular local house under whom considerable prosperity prevailed.

Il Arslan's death in 567/1172 was followed by civil war. His son, Tekish, finally established himself as Khwārazmshāh and when the power of the Karā Khītāy weakened towards the end of the 12th century, he became independent. About 588/1192 the caliph al-Nāsir appealed to Tekish for help against Tughril, the last of the Saldjūk sultans of Ḥarak. They defeated him in 590/1194 near Rayy. Tekish proved a more formidable rival to the caliph than Tughril, and towards the end of his reign he demanded that the khuds should be read in Baghdad in his name. In 592/1196 fighting took place between the Khwārazmshāh's army and the caliph's to the disadvantage of the latter and skirmishes continued between them for the next few years until Tekish's death in 596/1200.
This conflict with the caliph played a part in alienating the religious classes and the population from the Khwārazmshāh. Muhammad b. Tekiş, who succeeded, came into collision with the Ghūrids, who invaded Khurāsān about 597/1200-1. They were eventually worsted and by 612/1215-16 their territories had been annexed by the Khwārazmshāhs. Some years earlier, about 607/1210-11, the Karā Khīṭāy were turned out of Transoxania, and in 612/1215-16 the Khwārazmshāhs undertook a campaign against the Kīpchaks. On this occasion Muhammad came into contact with the Mongol vanguard for the first time. Meanwhile Muhammad reiterated Tekiş’s demand that the khuṭba be read in Baghdād in the name of the Khwārazmshāh, but met with an uncompromising refusal. He then declared the caliph a usurper and marched on 'Irāq. In 614/1217 he defeated successively the Salghārīds of Fārs and the atabegs of Aḏghārbāyjān, but in the winter of that year an army sent from Hamadān to Baghdād was annihilated by the Kurds. The threat of trouble in Khwārazm, led by the religious classes, forced Muhammad to leave the west before he could make good his defeat. After his return to Khwārazm, hostility between him and his mother, Turḵān Khwātūn, who had placed herself at the head of the opposing faction, became open. The army, composed largely of Kīpchaks and Kāндī to Turks (who were not, as had been the slave troops of the Salḏīḫūs, thoroughly familiar with Islam), was also riddled with faction, and there was a standing opposition between them and the Persian element. In, or about 615/1218 Čingiz Khān sent a body of merchants to gather information about the empire of the Khwārazmshāhs. When they reached Uṯrār they were plundered and put to death by the local governor with the connivance of the Khwārazmshāh. Čingiz sent envoys to Muhammad’s court to protest, threatening war if satisfaction was not given. One of the envoys was murdered and the other two were sent back with their beards shaved off. This action precipitated the Mongol invasion. In the subsequent operations the Khwārazmshāhs retreated before the Mongols, and many of their troops deserted. Meanwhile the Mongols, Uṯrār, Buḫkhrā, Uṯzkand, Djamad, Baŋkāt, Khudjand, Samarkand, Balkh, and Mārve were sacked and their inhabitants massacred. Nīshāpūr fell in 618/1221. Muhammad had meanwhile retired to Kāzwīn, and thence to Ġīlān and Māzandārān. He eventually fled to the island of Ašghāb in the Caspian where he died in 617/1220-1.

Dissonance and faction prevailed in Khwārazm. Muhammad’s son, Djalāl al-Dīn Mengubīrdī, was unable to establish himself. Fighting a rearguard action, he eventually crossed the Indus (618/1221). The Mongols pushed on through northern Persia and left through the Caucasian Gate near Darband in 620/1223. Djalāl al-Dīn, having failed to deprive the slave kings of Delhi of their kingdom, returned some three years later from India to Kirmān, and thence to Fārs and the Dībāl. He clashed with the Seljuq and the atabeg of Aḏghārbāyjān, and having defeated the latter made a foray into Georgia, and embarked on a struggle with the Āyyūbidîs, who were split by internal dissensions. He seized Akhḵāt, but was defeated in 628/1230 near Erzindjān. With the accession of Ogedei in 626/1229 the respite given by the death of Čingiz in 624/1227 came to an end and a new Mongol attack was launched in 627/1229. Djalāl al-Dīn, unable to regroup his forces, fled to Dīvār Bakr, and was murdered by a Kurdish peasant in 628-9/1230.

By the death of Ogedei in 638/1241 the Mongols had overrun northern Persia and had made further conquests in northern Mesopotamia, Georgia, Armenia, and Azerbaijan. After his death, the Mongol advance was temporarily held up by dissensions. At the kurilīyat in 649/1251 Hūlagū (Ḫūlegū) was appointed to lead an expedition to occupy all the territories between the Oxus and the extreme limits of Egypt, and entrusted with hereditary rights of sovereignty as the representative of the Great Khan in the conquered lands. After lengthy preparations he set out and crossed the Oxus in 653/1256. He was joined at Kīgh in 654/1256 by Arḡān Āḵā, who had been appointed governor of Persia by Mūŋķe. One of the Hūlagū’s first steps to consolidate Mongol domination in Persia was to exterminate the Ismāʿīlīs, who had by this time become virtually territorial princes, and as such made and changed alliances with other local rulers. He overthrew their strongholds in Kūḥistān and in 654/1256 took Alḵāmāt and sent Ruṅk al-Dīn Khwāhūsh, the grandson, to Kārkūrm, where he was put to death. Then the Ismāʿīlīs survived in Persia only as a minor sect (see further B. Lewis, op. cit.).

From Hamadān Hūlagū called upon the caliph al-Muʿṭaṣīm to surrender to the Mongols. His reply was considered unsatisfactory, and Hūlagū marched on Baghdād. After a siege of some sixty days it fell and was sacked. The caliph and those of his family who could be found were put to death. Hūlagū then pushed on to Aḏghārbāyjān and made his headquarters at Marāḡā. In 657/1259 he set out for Syria and took Aleppo in 658/1260, and Damascus surrendered. On news of the death of Mūŋķe (657/1259), Hūlagū returned to Mongolia, leaving an army in Syria. Its defeat at ‘Arḡī by the Mamlūks in 658/1260 stayed the Mongol advance on Egypt. The Mongol empire now split up. Berke, who ruled in the Kīpchak steppes, sought to assert his supremacy over Hūlagū and invaded Persia via Darband and Shīrwān, but was defeated in 660/1262. In the following year Aḥbaḵ, Hūlagū’s son, invaded Berke’s territory but was defeated and retired to Dāḡistān. Hūlagū meanwhile marched northwards. The Hūlagūs of the Mongol invasion see Bartold, op. cit., and J. A. Boyle, Dynastic and Political History of the Il-Khans, in The Cambridge History of Iran, v.

The Mongol invasion was carried out by a horde organized for war with the deliberate intention of imposing political domination. Its immediate effect was the devastation and depopulation of the eastern provinces of the ʿAbbāsīd caliphate. ‘Irāq, once the metropolitan province of the ʿAbbāsīd empire, did not recover for centuries. (See further I. P. Petruševskiy, The socio-economic condition of Iran under the Il-Khāns, in The Cambridge History of Iran, v). Only Fārs partially escaped by the timely payment of tribute. The invasion also altered the balance of population by introducing new Turkish tribes, brought about a widespread extension of nomadism leading to the destruction of agriculture and urban life, and sharpened the dichotomy between turk and ṭāḏīḵ and between settled and semi-settled. In the early period of Mongol domination the conquerors lived apart from the local population in tents and encampments. The Mongol leaders and their ministers owned large flocks, which were placed under the care of officials called ḡāḏāns. Their depredations were a constant source of anxiety to the settled people. The practice of reserve pasturage for the Mongol army was also a burden on the local people. A new feature of society was the extent to
which the Mongol leaders personally indulged in trade (cf. Dastur al-Kdtib, 203 ff.). The Yasa of Cingiz Khan was followed by the early Ilkahn, as the son of the dynasty of Hulagü was called, and quoted by the later rulers. New practices and taxes, notably kudar, originally a cattle tax and later a fixed tax on peasants and nomads, kalān, a land tax, possibly levied partly in the form of labour service, and jamgūha, a tax on trade and urban crafts, possibly originally a poll-tax on urban dwellers and merchants, were introduced. The Mongol leaders, or some of them, and their relatives, and the religious leaders enjoyed certain immunities from taxation. The administration was largely in the hands of officials who had served preceding dynasties, and the new customs were in due course to a large extent assimilated to existing Islamic and customary usages. With the conversion of the Mongols to Islam there was a reassertion of the traditional theory and practices of government. The head of the bureaucratic administration was known as the shāhī diwān, whose duties were similar to those of the traditional vizier.

As Persian rulers, the Ilkhan were subject to the same limitations as other dynasties which ruled in Persia. They were faced with the problem of defence against the peoples of Central Asia and Turkestan in spite of the fact that there were now Mongols on both sides of the Oxus. They were also confronted with a second problem of defence, namely the maintenance of the Caucasus frontier. This region formed a bulwark in the defence of the region to the north and the south of it and was repeatedly fought over by the Ilkhan and the Golden Horde, and later from the 10th/16th century to the 12th/18th by the Safavids, and in the 19th century was disputed by Russia, the heir to the Golden Horde, and finally obtained by her (see further B. Spuler, Die Mongolen in Iran, 2nd ed., Berlin 1955). In the west the Ilkhan sought to expand by overthrowing the Mamluks in Syria and Palestine, but they were unable to establish their domination outside the western frontier of Mesopotamia, which became the geo-political boundary of Persia.

The reign of Abakā, who succeeded Hulagū, was spent in ceaseless campaigns against the Golden Horde, in repelling attacks from Transoxania, and operations against the Mamluks, which ended in a Mongol defeat at Marqal al-Safar in 680/1281. Abakā's successor, Tegider, the seventh son of Hulagū, announced his conversion to Islam after his accession and took the name Ahmad. It is possible that this was a political gesture to be seen against the failure of the Mongols to take Syria (see Spuler, op. cit., 78). Whether this is so or not, Tegider Ahmad's policy of favouring Islam caused unrest among the Mongol leaders to whose support he owed his accession. Civil war broke out and Arghūn seized the throne in 683/1284. During his reign, an abortive attempt was made to enlist support in Europe for a continental crusade against Islam. Internally there was a marked improvement in the position of the Christian and Jewish communities and an increase in their influence. Arghūn was succeeded by his brother Gaykhatū in 690/1291. His reign, which is marked by numerous rebellions and losses to the Mamluks, is chiefly remarkable for growing financial stringency, and the disastrous attempt to solve this by the introduction of paper money known as ʻāra. Baydu, grandson of Hulagū, governor of Irāk, seized power in 694/1295, but was eventually overthrown by Ghāzān, who was then governor of Khurāsān, in 694/1295. Ghāzān made a public profession of Islam after his victory.

Under Ghāzān (694/1295-704) the Ilkhans reached their height. The links between them and the Great Khan, which had already been greatly weakened though still borne witness to on the coinage and in documents, were finally broken. This was partly because of Ghāzān's conversion and partly because of the disintegration of the Mongol empire on the death of Kubilay in 694/1294. In 695/1295-6 the Caghatay Khan Duwa b. Baraız invaded Khurāsān from Transoxania, and the religious leaders attempted to give security of tenure to those in undisputed
possession of land by obtaining a fatwa giving validity to the provision in Cingiz Khan's ydsah, by which all land claims lapsed after thirty years, and by putting a stop on transactions in land the tenure of which was disputed. The pay of the army was also reorganized and in 703/1303 he reintroduced with modifications the old system of land assignments (iSfâds) to the soldiery (see further Landlord and peasant in Persia, and I. P. Petrushevsky, op. cit.).

With the death of Ghâzân in 703/1304 decline set in. There were no more expeditions to Syria. The Turkish rulers in Asia Minor began to throw off Mongol rule. Fârs and Kirmân became increasingly independent. Oljeytâl (703/1304—716/1316), who transferred his capital to Sulâniyya, failed to complete the reforms of Ghâzân. The empire was divided into rival factions, the most powerful of which were the Câpanâids [q.v.] and the Dîlalîrs [q.v.]. Ghâzân was succeeded by a child, Aâbâ Sa'id (716/1316-736/1336), after whose reign the Îlkân empire broke up, various amirs and provincial governors assuming their independence. (For details of the rule of the Îlkâns see further J. A. Boyle, op. cit.) A period of restless stirrings and repeated expeditions by the different leaders to extend their domains at the expense of their rivals ensued. In the east in Harât there were the Karts [q.v.] and in Luristan the Atabegs, also called the Hâzaraspîds [q.v., both of whom pre-dated the Îlkân khans and acted as their governors in the heyday of Îlkân power. In İrâk and Âdâbarbâyqân there were the Dîlalîrs, whose founder Hasan-i Buzurg first attempted to rule through a series of puppet khâns, and in Fârs and Îrâk-i 'Adîjam the Ingûids [q.v.], Muzzafarrîds [q.v.], who were perhaps the most successful of the succession states, although internecine strife eventually caused their destruction. Their main centres of power were Fârs, Yazd and Kirmân. In the last-named province they succeeded the Kutlugh Khâns (the Karâ Khîtâyîvân), whose founder, Barâk Hâdjîb, had established himself in Kirmân after the overthrow of the Khâtârzamgâh by the Mongols. He and his successors ruled as Mongol governors. The last of the Kutlugh Khâns, Kutb al-Dîn Shâh Dîshân, died in 793/1380-1. One of the most interesting of the succession states was that of Shâhâbdîrîd in Sabwâr. There, like the Sayyîdis of Marâq, who also established themselves as small local rulers, appear to have based their power partly on a "popular" movement (see further, I. P. Petrushevsky, Sabbâdâris, translated by Muhammad Karîm Khîhâvîr, in Fârskhang-i Irân Zamin, x, 1-4 (1962). All of these local rulers, except the Dîlalîrs, who survived in Lower Mesopotamia until 835/1429, were extinguished by Timûr, if they had not already disappeared.

The Câhtagât khânate, which bordered the Îlkân kingdom on the north-east, had been temporarily usurped by Kaydü, Ogedeî's grandson. It was recovered by Duwa b. Barâk on Kaydü's death in 700-1301. It consisted of two parts: the western part formed by the oases of the Oxus-Jaxartes basin, excluding the lower course of the Oxus in Khâtârzam which belonged to Djîsgâh, and the east of part, comprising the Zungarian steppes and known as Mughulûstân. In the former the Mongols ruled over a sedentary Muslim population, but in the latter the Câhtagât khân were the leaders of pagan nomads. In Mughulûstân the Mongol khâns retained their domination, but in Transoxania power passed into the hands of the local Turkish amirs, the most influential of whom in the 13th-14th century was Karâghân, who seized power in 747/1346-7 and ruled some twelve years. His death was followed by an uninterrupted period of war and strife between the Turkish and Mongol khâns of western Türkistan. About 761/1360 Tughluq Timûr, the newly converted Eastern Câhtagât khân, sought to assert his dominion over the western as well as the eastern part of the Câhtagât khânate.

Among the conflicting parties and interests, Timûr gradually established himself as the defender of the Islamic borderlands against these renewed attacks from Central Asia. At first, not strong enough to show uncompromising resistance to the invaders, he made terms with Tughluq Timûr, who gave him Kîch as a swâyârghâl. He then entered into an alliance with Amir Hûsûn, the ruler of Balkh. The next few years (763/1362—769/1367) were a period of great confusion, in which the struggle between the Mongol and Turkish leaders ebbed and flowed. In 766-7/1365 Timûr and Amir Hûsûn, after being defeated by Ilyâs Khwâdja Tughluq Timûr's successor, abandoned Samarkand, which was, however, successfully defended by the townspeople under the leadership of the "ulama". When they eventually returned to Samarkand, conflict broke out between them. Timûr was forced to retire to Kûhrâsân, but when a new Mongol attack threatened, Amir Hûsûn was reconciled to him. The Mongol threat proved to be only temporary, and Timûr now turned against his erstwhile ally and took Balkh in 771/1369. Although Timûr's military power was based on the nomads of western Türkistan, since they were closely linked to the settled population through commercial interests and the protection of the caravan routes, and their chiefs were beginning to acquire property in the towns and to be more fully islamicized, he served, at this period, the interests of both the nomads and the settled population: to the former, who had been rent by squabbles among themselves, he gave cohesion and unity and to the latter security to pursue their commercial activities and to continue their religious life.

Timûr's next step was to take the offensive against the nomads of eastern Türkistan, and in a series of campaigns between c. 771/1369—781/1378 he defeated both them and the Kipchaks in Khâtârzam. He then turned his arms against the interior of the Iltümûs. In 782/1380-1 he invaded Persia, subduing Kûhrâsân, Mâzandâran, and Sîstân. In 786/1384-5 he made a second expedition into Persia, invading Mâzandâran again and pushing on to Âdâbarbâyqân, 'Irâk-i 'Adîjam, and Georgia, coming back via Shîrâz and Ispâhân. In 790/1388, the Kipchaks under Tukatmîsh overran the oases of the Oxus-Jaxartes basin up to Samarkand, but withdrew when Timûr returned from Fârs. Two years later, he pursued them into the Kipchak steppe and defeated them at Urtapâ in 793/1391. He then went again to Fârs and thence to 'Irâk, Armenia, and Georgia, which he subjugated (793/1393 to 798/1396), before returning once more to Samarkand. From the spring of 800/1398 to the spring of 801/1399 he was occupied in his Indian campaign and the following autumn (802/1399) he set out for Asia Minor on his most famous campaign, which culminated in the defeat of the Ottomans at the battle of Ankara in 804/1402 and the capture of the Ottoman sultan, Bâyazîd. In the following year Timûr raided Georgia and in 806-7/1405 returned to Samarkand, whence he set out for China, but died en route at Utrâr in 807/1405 (see further H. Hookham, Tamburlaine the conqueror, London 1962, and R. Grousset, Les empires Mongoles).

Timûr's empire looked back to the Mongols, but although many of its institutions derive from
Mongol practice, his administration had an Islamic veneer and alongside the begs (or amirs), nd'ibs, yasafrlik (public guards), yasa'uls (officers charged with the keeping of the public peace), dārūghās, falconers, hunters, and so on, were the whole range of officials known in pre-Mongol times. Under Hasan Bāykar a sophisticated bureaucratic administration existed, at the head of which was the diwān-i dā', responsible for military and civil affairs. A special diwān, the diwān-i hūsaini, dealt with Turkish and military affairs (see further, 'Abd Allāh Marwārdi, Sharaf-nāma, ed. H. R. Roemer, Wiesbaden 1952). In military affairs Timūr carried on Mongol tradition but introduced certain innovations. Although he started his career as the defender of the sedentary Islamised population of western Turkistān against the nomads of eastern Turkistān these terms are relative: the basis of Timūr's military power was the nomadic tribes, who made regular summer and winter migrations in which the whole horde took part. Clavijo gives a vivid description of Timūr and his horde (Clavijo: Embassy to Tamerlaine, 1403-1406, ed. G. Le Strange, Broadway Travellers, 1928, 191 ff.). Their flocks were numbered for taxation. Tradesmen and craftsmen followed the armies, supplying their needs, and the booty obtained in caravans was bartered and sold in these bazaars. Colonies of workmen were transplanted to Tabriz and Samarkand from Syria, China, and other parts of Persia. Artisans were organised in guilds. Some of these were forced to give free labour for the ruler, and in time of war were requisitioned. Samarkand became under Timūr a great industrial and commercial centre. Silk, glass, ceramics, and paper were manufactured there. Trade, which had fallen off since the conversion of the Mongols to Islam, was encouraged with China, India, Persia and Syria. Tabriz became an important entrepôt.

Timūr's religious policy appears to have been dictated by political expediency. In Khorāsān he supported strict orthodoxy but in Syria he appeared to the defender of 'Alī and the imāms. Two important dar-wās orders, the Ni'matullāhī and the Nāqshbāndī, were founded during his reign. There was a trend towards a closer control of the religious institution which was continued under the Timurid dynasties of the Black Sheep and the White Sheep and reached its culmination under the Şafavīds. Şarafī officials were placed under the supervision of a new official known as the sadr, who was entrusted with their dismissal and appointment, the upkeep of mosques, madrasas, graveyards, and ḥākākhs, and whose duty, in general, was to further right religion (see especially document 9 in the Sharaf-nāma, op. cit.).

On Timūr's death internecine strife broke out, from which two main kingdoms emerged. Mirān Shāh, the third son of Timūr, and his sons Abū ʿAbd Allāh Bāyqara and Muḥammad ʿUmar, obtained western Persia, with their main centres at Tabriz and Baghdād, and ʿShāhrukh, Timūr's fourth son, Khorāsān, to which he subsequently added Transoxania. The Timūrid state in western Persia did not last long: the Djalā'īrs recovered Baghdād and the Turkomans of the Black Sheep, whom Timūr had driven out of Armenia, Adharbaydžān and Baghdad (see further below). ʿShāhrukh was faced by numerous revolts and on his death his kingdom rapidly disintegrated, to fall in part to the Black Sheep and in part to the Uzbeks, who invaded Transoxania at the turn of the 9th/15th century. In spite of the political decline, a brilliant cultural revival took place under the successors of Timūr and continued down to the end of the dynasty.

(b) Turkomans to Present Day

The devastating campaigns of Timūr in Iran between 820-821/1415-16 swept away the minor dynasties which had sprung up in various parts of the country after the Mongol invasions, and left a political and social vacuum from the Oxus to the Euphrates. In this vacuum various rival forces fought for supremacy for nearly a century. The establishment of the Şafawīd dynasty in 907/1501-2 led to the re-integration of Iran and ʿIrāk-i ʿArab under one stable administration, certainly for the first time since the break-up of the Tūrkmān empire, ca. 736-1335, and, if one takes into consideration the important city of Harāt, virtually for the first time since the invasions of Čingi Khan [p. 15].

At the time of the death of Timūr in 807/1405, his descendants found themselves in secure possession only of Khorāsān and ʿIrāk-i ʿAdīm, outside Transoxania itself. In the course of the next fifteen years, however, ʿShāhrukh b. Timūr successively annexed the provinces of Gurgān and Māzandarān (809/1406-7), Fārs (817/1414-15), and Kirmān (819/1416-17), and in 823/1420-1 felt strong enough to invade Adharbaydžān, which had passed into the hands of the Kara Köyunlu (Black Sheep) Turkomans.

The Kara Köyunlu group of nomadic Turkoman tribes, like their rivals the ʿAḵ Köyunlu (White Sheep) Turkomans, had settled in Saldijik times in Armenia, Upper Mesopotamia and Anatolia. In the second half of the 8th/14th century, the Kara Köyunlu moved eastwards into north-west Iran, and established themselves in the region of Lake Van as vassals of the Djalā'īrs [q.v.]. In about 792/1390 the Kara Köyunlu amīr Kara ʿYūṣuf seized Tabriz and declared his independence of the Djalā'īrī sultans. Both rulers were dispossessed by Timūr, but regained control of Adharbaydžān and ʿIrāk-i ʿArab respectively within a few years of the death of Timūr.

Kara ʿYūṣuf rapidly enlarged the area under Kara Köyunlu control. In 819/1419 he defeated Sultan Abūnā Djalā'īr and annexed the whole of ʿIrāk-i ʿArab except for a small area of southern ʿIrāk. He asserted his authority over various local rulers in Shirwān and Georgia. In 822/1420 he invaded ʿIrāk-i ʿAdīm and expelled the Timūrid officers from the cities of Sulṭānīyya, Tārum, Kāzwin and Śāwā. Kara ʿYūṣuf had made the Kara Köyunlu the dominant power in western Iran, ruling directly over Adharbaydžān, and Fārs from another, thus uniting eastern Persia under his rule. He subsequently attacked the Black Sheep, occupied Adharbaydžān, and penetrated Armenia, but was unable to defeat the Black Sheep decisively and was forced to leave them in effective possession of Armenia, Adharbaydžān, and Baghādād (see further below). ʿShāhrukh was faced by numerous revolts and on his death his kingdom rapidly disintegrated, to fall in part to the Black Sheep and in part to the Uzbeks, who invaded Transoxania at the turn of the 9th/15th century. In spite of the political decline, a brilliant cultural revival took place in Harāt under the successors of Timūr and continued down to the end of the dynasty.

Encyclopaedia of Islam, IV
IRAN

Kara Yūsuf's death in 823/1420 was followed by dissenion among his sons, and Shāhrukh was able to subjugate ʿĀḏarbāyjān. The Kara Koyunlu carried on a guerrilla war against the Timurids, and in 832/1429, and again in 839/1435, Shāhrukh was forced to return to ʿĀḏarbāyjān to stabilise the situation. The Timurid governor was replaced by a Kara Koyunlu prince subservient to Shāhrukh.

Shāhrukh [q.v.], whose reign had represented a measure of stability and reconstruction, died in 850/1447. The Kara Koyunlu leader Djiānghāsh immediately went over to the offensive and, taking advantage of divisions among the Timurids, extended the Kara Koyunlu empire to its greatest extent. He seized Sūltānīyya and Kāzwīn in 850/1447, overran the whole of ʿĪrāḵ-i ʿAdjam and Fārs within the space of a few months in 856/1452, and in 862/1458 occupied ʿHārāt, the capital of Timurid Khūrāsān. A revolt in ʿĀḏarbāyjān forced Djiānghāsh to cede Khūrāsān to the Timurid Ābd ʿAṣīd, who transferred his capital from Samarḵand to ʿHārāt, but Djiānghāsh continued to rule over ʿĀḏarbāyjān, the two ʿĪrāḵs, Fārs, the shores of the Sea of ʿUman, Kirmān, Sarīt, Armenia, and Georgia, until his death in 872/1468.

During the reign of Djiānghāsh a new contender for power in Iran appeared in the shape of the ʿSafawids. Under the leadership of Djiunayd [q.v.] (851/1447–864/1460), the now strongly ʿShīʿī ʿSafawid movement entered a new militant phase, and for the first time its leaders aspired to temporal power. Djiānghāsh considered the threat so real that he ordered Djiunayd to disperse his forces and depart from Ardabil, should he fail to comply, Ardabil would be destroyed. Djiunayd fled, and ultimately took refuge at the Aḵ Koyunlu court in ʿDīyār Bakr (861-3/1456-9). The political advantages of an alliance against their mutual enemy, the Kara Koyunlu, led the militantly ʿShīʿī Djiunayd and the zealously orthodox Aḵ Koyunlu ruler ʿUẓūn Ḥasan to sink their religious differences, and to cement their alliance by the marriage of Djiunayd to ʿUẓūn Ḥasan's sister. Djiunayd was killed in battle in ʿShīrāzn in 864/1460, but his successor Ḥāydar maintained the close alliance between the ʿSafawids and the Aḵ Koyunlu by marrying ʿUẓūn Ḥasan's daughter.

In 872/1468 the Kara Koyunlu ruler Djiānghāsh attacked ʿUẓūn Ḥasan. He was defeated, and the Kara Koyunlu empire was overthrown. The Timurid ruler ʿĀbd ʿAṣīd saw this as an opportunity to extend his authority westwards from Khūrāsān, but he too was defeated by ʿUẓūn Ḥasan, and put to death. The Aḵ Koyunlu thus succeeded to the Kara Koyunlu empire in Iran, ʿĪrāḵ-i ʿArab, ʿDīyār Bakr and Armenia, but an attempted Aḵ Koyunlu coup at ʿHārāt was frustrated by Sūltān ʿHusayn ʿMīrzā [q.v.], whose occupation of ʿHārāt in 875/1470 inaugurated a period of some thirty-five years of relatively stable and prosperous Timurid rule in Khūrāsān. ʿUẓūn Ḥasan also had aspirations to extend his empire westwards, but, after some initial success against the Ottomans, he was decisively defeated in 878/1473.

The death of ʿUẓūn Ḥasan in 882/1478 marked the beginning of Aḵ Koyunlu decline, as rival princes, supported by, and sometimes dominated by, ambitious imams, successively contested the throne. In the twenty-five years which remained before the last Aḵ Koyunlu ruler, Murād, was expelled from Iran in 908/1503 by Shāh ʿĪṣāmīl I [q.v.], the only thread of continuity is the inexorable progress of the ʿSafawid movement towards its goal of achieving power in Iran by revolutionary means. This progress was marked by the death in battle of two more ʿSafawid leaders (Ḥaydar [q.v.], in 893/1488, and ʿAll in 899/1494), and by the breakdown of the Aḵ Koyunlu-ʿSafawid alliance. Once the mutual enemy, the Kara Koyunlu, had disappeared from the scene, it was only a matter of time before the political and military ambitions of the ʿSafawids came into conflict with those of the Aḵ Koyunlu.

In 893/1488 Aḵ Koyunlu troops were the major factor in the defeat of Ḥāydar, and in 899/1494 the Aḵ Koyunlu sultan Rustam, having released ʿAll from imprisonment because he needed his help against a rival prince, then had to crush him when support for him developed on an alarming scale. ʿAll's brother, ʿĪsamīl, escaped, and for five years directed from his exile in ʿGīlān the final stages of the ʿSafawid revolution. His emissaries went to and fro between ʿGīlān and their bases in Anatolia, Syria and the Armenian highlands. It was from these areas that ʿĪsamīl derived the elite of his fighting men, his most fanatical adherents, men of the Rūmūl, ʿUstādīlū, Ṭakākūlū, Ḍhūlī-Ḵādār, ʿUrmān, ʿṢāmilū, ʿArūmān, ʿAḏār, ʿKāḏār, ʿUstādīlū, and other Turkoman tribes. These men considered ʿĪsamīl to be both their political and temporal ruler. They had acquired the celebrated sobriquet of ḵīšlī-bāšī ("red-heads", T. ḵīšlī-bāš). By virtue of the distinctive crimson hat, with the twelve folds denoting the Ḫīnā ʿasḥārī ʿismāʿīls, which had been devised for them by Ḥāydar. In 905/1499 ʿĪsamīl made his bid for power; by the autumn of 1500 he had been joined by 7,000 ḵīšlībāš at his rendezvous at Erzinjān. He turned aside to crush the Shīrānshāh, who had killed both his father and his grandfather, and then, at the battle of ʿṢhārūr, he routed Alwānd Aḵ Koyunlu. ʿĪsamīl entered Tawrīz (907/1501), had himself crowned as the first shāh of the ʿSafawid dynasty, and proclaimed the Djaʿāfārī rite of Ḫīnā ʿasḥārī Shīʿīsm to be the official religion of the new ʿSafawid state. He had two main reasons for taking this step: first, he wished clearly to differentiate the ʿSafawid state from the Ottoman Empire, into which it might otherwise have been absorbed; second, he aimed at creating by this means a sense of unity among his subjects, a sense of separate identity which would permit the evolution of a national state in the modern sense of the term. The change to Shīʿīsm seems to have been accepted by the people at large without any serious display of opposition. ʿSafawid propagandists had, of course, been active for a long period, but there are other factors which may have helped to produce a climate of religious opinion favourable to ʿSafawid Shīʿīsm, for example, the activities of heterodox and antinomian groups such as the Ṣurūfīs, and the activities of other Shiʿī Orders in Persia, some of which were unquestionably permeated by Shīʿī ideas. Many, but not all, of the ʿulāmāʾ resisted the change. Some who did were put to death, notably at Shīrūz; others fled first to the Timurid court at ʿHārāt, and later, after the conquest of Khūrāsān by the ʿSafawids, to the ʿUzbek capital at Buḫūrā. To impose doctrinal unity, the ʿSafawids appointed an official termed the ʿulāmāʾ, who was the head of the religious institution, but in practice derived his authority from the political institution.
The first ten years of Isma'il's reign were spent in conquering the rest of Iran and Mesopotamia. In 903/1500 a victory over the remaining Ak Koyunlu forces under Sultan Murad, near Hamadán, gave him control of central and southern Iran; Mäzandarán and Gurgän were subjugated in 909/1504; Diýar Bakr was annexed in 913/1507, Baghádád was captured in 914/1508, and Kurásán was annexed in 916/1510 after a crushing defeat of the Uzbeks at Marv. The victory at Marv, however, did not solve the problem of the defence of the eastern marches against the nomads, and, only two years later, a Safawid army was routed at Ghuḏujwán, just east of the Oxus, and the Uzbeks swept across Kurásán as far as Mašhad. Isma'il restored the situation, and an uneasy truce with the Uzbeks followed.

The Sunni Uzbeks in the east and the Sunni Ottomans in the west were the principal enemies of the Safawid state. The existence on the borders of Anatolia of a powerful Şí'i state, which claimed the allegiance of large numbers of Turkoman tribesmen living within the borders of the Ottoman Empire itself, was a threat which the Ottomans could not ignore, and in 920/1514 Selim I launched what proved to be the first of a long series of invasions of Iran by Ottoman forces. On 2 Radjab 920/23 August 1514 the Safawid capital, Tabriz, was sacked almost entirely by cavalry at Cáldírán [q.v.] by the fire-power of the Ottoman muskets and artillery. Selim had to withdraw from Tabriz after a short occupation, but the Ottomans annexed the province of Diyár Bakr, and the regions of Mārāş and Albístán.

The Safawid defeat at Cáldírán had important repercussions. Isma'il lost his faith in his own invincibility, and during the remaining ten years of his life never again led his men into battle. The kizilbāsh, who had revered their ruler as the Shadow of God upon earth and had worshipped him as the manifestation of God, were disillusioned. The actions of the kizilbāsh after Cáldírán, and particularly after the death of Isma'il, show clearly that, although they preserved the outward forms, they considered the concept of their leader as the Shadow of God upon earth, immortal and infallible, to be a polite fiction. From this time, too, the term Šuŷī, implying a relationship between murdh and murid which the kizilbāsh had in practice, though not in theory, repudiated, occurs less and less frequently in the sources. The status of Šuŷīs declined, and the term "Šuŷī" acquired a definitely pejorative significance under the later Safawids.

Shāh Isma'il died on 19 Radjab 930/23 May 1524, and was succeeded by his son Tahmásp, then ten and a half years of age. The extent to which the theocratic concept of the early Safawid state had broken down in practice was demonstrated by the ten years of civil war between rival kizilbash factions which marked the beginning of his reign. The authority of the shah was usurped by kizilbash chiefs, who were the de facto rulers of the state during this period. In 940/1533, however, Shāh Tahmásp made clear his intention to rule in fact and not in name only, and, for most of the remainder of his long reign of fifty-two years, he maintained a precarious ascendancy over the turbulent kizilbāsh.

Most Western and Oriental sources give us a totally unfavourable picture of Tahmásp [q.v.]. They portray him as a melancholy recluse who swung between extremes of abstinence and intemperance, as a man capable of great cruelty. Nobody has given Tahmásp credit for holding the Safawid state together for more than half a century, in the face of the most determined onslaughts by the Ottomans under their greatest conqueror, Süleymán the Magnificent, and by the Uzbeks under one of their most powerful leaders, ʻUbayd Alláh Khán. Between 930/1524 and 944/1538, the Uzbeks launched five major attacks on Kurásán. Between 940/1533 and 961/1553, the Ottomans made four full-scale assaults on ʻĀḏarbáýján. Baghádád was captured by the Ottomans in 921/1515, and thereafter ʻĪrāq, ʻArab remained in Ottoman hands, except for a brief interlude between 1032/1623—1048/1638. Tabriz was occupied on several occasions, and Tahmásp transferred the capital to Kažvín, which was not so close to the Ottoman frontier. Attacks by foreign enemies were not the only problem confronting Tahmásp. During the first decade of his reign, Iran was gravely weakened by kizilbash inter-tribal rivalries and by the defection of groups of kizilbash to the Ottomans; moreover in 941/1534, and again in 955/1548, Tahmásp had to deal with rebellious brothers. In 962/1555 Tahmásp negotiated the Treaty of Amasya, and Iran obtained a respite from Ottoman attack for thirty years.

The reigns of Isma'il I and Tahmásp I represent a period of change and adjustment. Under Isma'il, as August 1534, an attempt was made almost entirely to reconcile the Šuŷī organization inherited from the Šafawīyya Order with the administrative organization of the Safawid state. The failure of this attempt posed problems in regard to which Tahmásp temporized and to which ʻAbbás I provided solutions which were effective only as short-term measures. The failure precisely to define the scope and function of the principal offices of state during this period produced some degree of conflict between the holders of these offices, and meant that the boundary between the "political institution" and the "religious institution" was never clearly demarcated. The movement away from the theocratic form of government which obtained after the establishment of the Safawid state was noticeable even before the death of Isma'il, and this tendency was reflected in changes in the scope and function of the principal offices of state, and in their relative importance. In particular, the status of the wakīl-i nafīṣ-i nafīs-i humāyūn, the alter ego of the shah and his vicegerent both in his religious and his political capacity, declined until his position was little different from that of the vizier, the head of the bureaucracy; the power of the šāds, once their primary task of imposing doctrinal unity had been achieved, also declined; and the shah himself attempted to restrict the power of the ṣamī al-ʻumūr?.

In 982/1574, Shāh Tahmásp became seriously ill, and the Safawid state was once again involved in a crisis. At first, the dissensions which broke out among the kizilbash appeared to be merely a recrudescence of the factional struggles which had imperilled the Safawid state fifty years previously. But the new crisis was, in fact, of a very different nature. The question from 982/1574 onwards was not which of the kizilbash tribes should achieve a dominant position over its rivals, but rather, whether the kizilbash as a whole could maintain their privileged position as the military aristocracy in the Safawid state, in the face of the challenge from new ethnic elements in Safawid society, namely, the Georgians and Circassians. The majority of these people were the offspring of prisoners taken during the course of four campaigns waged in the Caucasus by Tahmásp between 947/1540—1 and 961/1553. In addition,
a certain number of Georgian noblemen voluntarily entered Safavid service during Tahmāsp's reign. By the time of the death of Tahmāsp in 984/1576, the power of the Georgian and Circassian women in the royal harem was such that they intervened in political affairs and engaged in active intrigue with a view to securing the throne for their own sons. In this way, they introduced into the Safavid state dynastic rivalries of a new kind.

The struggle for power between the kīzīl-bābā and the Georgians and Circassians, continued during the reigns of Ismā‘īl II (984/1576—985/1577) and Sultan Muḥammad Shāh (985/1578—996/1588), and was finally settled in favour of the latter by the measures taken by Shāh ʿAbbās I (q.v.) (996/1588—1038/1629) — measures which radically altered the social basis of the Safavid state.

The situation which ʿAbbās faced at his accession was critical in the extreme. The Ottomans had resumed operations in Aḏharbāyjān, and the citadel at Tabrīz had been in their hands since 993/1585. In the east, the Uzbeksstormed Harāt in 997/1589, and swept on across Khūrāsān as far as Maḥhad. To free his hands to deal with the Uzbeks, ʿAbbās was forced to negotiate a humiliating peace with the Ottomans which left more Persian territory in Ottoman hands than ever before (998/1589-90). The events of his youth had left him no place no faith in them. The position of the kīzīl-bābā, and the extent of their activity in creating a standing army which would be paid direct from the Royal Treasury and would be loyal only to himself. From the ranks of the Georgians and Circassians (thereafter termed khwālmān-i bābā-yi sharīf) he formed a cavalry regiment of some 10,000 men, and a personal bodyguard of 3,000 men. A regiment of musketeers, 12,000 strong, recruited from the Persian peasantry, and an artillery regiment, also of 12,000 men, completed the new standing army of 37,000 men. In order to pay these new troops, ʿAbbās resorted to the device of increasing the extent of the crown lands (bābāsā) at the expense of state lands (mamālık). The mamālık provinces were in general governed by kīzīl-bābā amirs, who consumed in the areas under their jurisdiction most of the taxes which they levied, to some extent militated against extortion. Once such provinces were converted to bābāsā lands, they were placed in the hands of a komptor or interment of the Crown, who had no interest in maintaining their prosperity but whose sole concern was to remit to the Royal Treasury the maximum amount of money possible, in order to gratiate himself with the shah. Under Shāh ʿAbbās I (997/1589—1038/1629) and Shāh ʿAbbās II (1052/1642—1077/1666), this process was accelerated to such an extent that even the frontier provinces were brought under the direct administration of the Crown, except in time of war, when kīzīl-bābā governors were reappointed. Ultimately, this policy impaired the economic health of the country and weakened it militarily. Every increase in the extent of crown lands at the expense of mamālık lands meant a corresponding decrease in the power of the kīzīl-bābā, and, in practice, the new ghuḍām regiments did not possess the fighting qualities of the old kīzīl-bābā tribal forces.

In the short term, however, the creation of the ghuḍām regiments enabled ʿAbbās gradually to reassert the authority of the ruling institution, and so to stabilize the internal situation in Iran. Even so, it was not until 1007/1600 that he dared to commit his forces to a pitched battle against the Uzbeks. In that year, ʿAbbās gained a great victory over the Uzbeks, and liberated Harāt after ten years of Uzbek rule. With the north-eastern frontier at least temporarily secure, ʿAbbās turned his attention to the Ottomans, and by 1016/1607 the last Ottoman soldier had been expelled from Safavid territory as defined by the Peace of Amasya in 1555.

Throughout his reign, ʿAbbās continued his policy of weakening the position of the kīzīl-bābā and strengthening that of the ghuḍām, on whom he principally relied for support. He sought to break up kīzīl-bābā tribal groupings, and he constantly replenished his ghuḍām forces by fresh drafts of Georgian, Circassian, and (from 1013/1604 onwards) Armenian prisoners. The revolution in the social structure of the Safavid state which he thus effected was reflected in changes in the highest levels of the political institution and the religious institution. The titles of wakīl and amīr al-umārāʾ, which were so closely associated with the organization of the early Safavid state and with the period of kīzīl-bābā supremacy, were no longer used. The kīzīl-bābā, as the commander-in-chief of the drastically reduced kīzīl-bābā forces was henceforth usually termed, was still one of the highest officers of state, but his power was balanced by that of the commanders of the new non-kīzīl-bābā regiments, the tufangšt-ābāsī and the kullār-ābāsī. The influence of the sādīr, who was a political appointee, decreased once doctrinal unity had been imposed throughout the Safavid dominions, and, with the increasing crystallization of Ithnā ʿashari theology, the mudāfiḥs became the most powerful members of the religious classes. Finally, with the increasing separation between temporal and religious powers, and the growing tendency towards centralization of the administration, the vizier, as head of the bureaucracy, became one of the most influential officials in the state, and frequently adopted, and with the grandiose titles of tīwād al-dawla and sādīr-i ʿaṣām.

The reign of ʿAbbās I in many ways marks the highest point of Safavid achievement. Commercial rivalry in the Persian Gulf and the Indian Ocean between the Dutch, the Portuguese, and the English, meant the development of diplomatic relations between Iran and the West. Spain, Portugal, and England sent ambassadors to ʿAbbās's court, and foreign monastic orders, such as the Carmelites, the Augustinians, and the Capuchin friars, were given permission to found convents in Iran. In 1007/1597 ʿAbbās transferred the capital from Kāzvin to ʿIsfahān; the more central location of the latter city made it a more satisfactory base for operations against either the Ottomans or the Uzbeks. ʿAbbās addressed himself with characteristic energy to the task of transforming ʿIsfahān into one of the most beautiful cities in the world. He embarked on a huge programme of public works, which included mosques, madrasas, caravansarais, and khammāms. The Masджd-i Shāh (begun in 1020/1611) and the Masджd-i Shaykh Lutf Allāh (begun in 1021/1603), situated in the famous māyīn of ʿIsfahān known as Nāṣir-i ʿAlā, are two masterpieces of Iranian architecture. The reign of ʿAbbās also marks the highest point in the renaissance of Iranian arts which had begun under the Timurids in the 9th/15th century and which continued throughout the Safavid period. Except perhaps in painting, in which the productions of the Tabriz school during the reign of Tahmāsp are superior, the artistic productions of the period of ʿAbbās are unsurpassed. In book painting and the illumination of manuscripts, in ceramics, textiles, and the manufacture of carpets and rugs, the Iranian genius achieved its finest expression.
The Safawid state, as rebuilt by Shah ʿAbbās, had an imposing facade, behind which the decay which spread with increasing rapidity during the second half of the 17th/18th century was not immediately apparent. Of the Safawid rulers who followed ʿAbbās, only his great-grandson, ʿAbbās II (1052/1642—1077/1666), was a ruler worthy of the name. The degeneration of the dynasty must be attributed to the pernicious practice, instituted by ʿAbbās I himself, of incarcerating the royal princes in the haram and never allowing them any contact with the outside world. Prior to ʿAbbās I, it had been the custom to place the royal princes, and in particular the heir-apparent, in the charge of one of the kizīlabāsh provincial governors. Such a governor, termed ḥala or ṣabāje ḥ, was responsible for the physical and moral welfare of his charge, and for training him for his future responsibilities. Occasionally, an ambitious or rebellious ḥala would use the young prince committed to his care as the focal point of a revolt against the ruler. But this possibility was infinitely to be preferred to the certainty that a prince, brought up by the court eunuchs, in the debilitating atmosphere of the haram, would be totally unfitted to rule when the time came to place him on the throne. The increasing control of political and administrative affairs exercised by the officers of the haram, in association with the vizier, and the dynastic struggles for the succession resulting from the intrigues of the women of the haram, are indeed two of the main features of the later Safawid period and two of the principal reasons for the decline of Safawid power. A third reason, the increase of ḥadsa lands at the expense of mamālik provinces, which reduced both the economic prosperity and the military strength of the country, has already been mentioned.

Under Shāh Sulaymān (1077/1666—1105/1694), who was an alcoholic, and under the pious but uxorius Shāh Sultān Husayn (1105/1694—1135/1722), neither of whom took any interest in state affairs, the progressive breakdown of the central administration was marked by increasing inefficiency and corruption at all levels of government. The military machine had been allowed to run down to such an extent that the Shāh had to turn to the Georgians for help in dealing with a band of Balūch marauders in 1110/1698-99. This warning went unheeded, and in 1121/1709 a group of Ghulzāi Afghans seized Kandahār, which had been in Safawid hands since 1058/1648. Further north, the Abdāl Afghans ravaged large areas of Khūzستان, and the whole eastern frontier was in jeopardy. In 1131/1719 the Ghulzāi chief, Maḥmūd, having subdued the Abdālīs, temporarily seized Kirmān. Emboldened by the lack of resistance, he returned to the attack two years later, and routed a pathetically weak Safawid force at the battle of Guhnābād, 18 miles east of Isfahān, on 20 Jamuʿādā I 1134/8 March 1722. Too weak to storm the city, Maḥmūd blocked it. Treachery within the city, and incompetence and irresolution on every side, delivered the Safawid capital to the Afghans in October 1722. Some 80,000 people are said to have perished during the siege from starvation and disease, and the population of Isfahān today is probably only one-third of what it was in Safawid times.

The Afghāns, though they never subjugated the north and west of the country and though their hold on the remainder was precarious, ruled Isfahān for seven years, 1134/1722—1142/1729. At Ḵawzīn, Tamāsp, a son of Shāh Sultān Husayn, proclaimed himself Shāh Tamāsp II. In 1138/1726 the Ottomans broke the long peace with Iran which had existed since 1048/1639, and the Afghān ruler Ashraf was forced to give de facto recognition to the Ottoman occupation of west and north-west Iran. About the same time the Afgār chief Nādir Khān emerged as the most powerful of the tribal chiefs lending their support to the Safawid house, and in 1142/1729 he drove the Afghans from Isfahān and re-established the Safawid monarchy in the person of Tamāsp II. It soon became clear, however, that Nādir Khān's support of the Safawids was only a device to enable him to use pro-Safawid sentiment for his own ends. In 1145/1732 he deposed Tamāsp II in favour of the infant ʿAbbās III, for whom he acted as regent. Four years later, he abandoned this fiction, and had himself crowned as Nādir Shāh. This marked the extinction of the Safawid dynasty, which had existed only in name since 1134/1722.

Nādir Shāh (1148/1736—1160/1747) consciously modelled himself on Timūr, and there are some points of similarity between his career and that of his exemplar. Like Timūr, Nādir was primarily, indeed solely, a soldier, and, like Timūr, he was totally unable to administer the territories overrun by his armies. As a result, just as the campaigns of Timūr had left a vacuum in west Asia, so Nādir disrupted the administrative system inherited from the Safawids, impoverished the state, and led to a general breakdown of law and order. The result was half a century of civil war as the Zands and the Kāḏjārs fought for supremacy in the vacuum created by Nādir. Nādir restored national dignity and prestige after the humiliation of the Afghan episode, and recovered Iranian territory which had been usurped by the Ottomans, the Russians, and the Afghans. After an ineffectual siege of Baghābd in 1145/1733 (the Iranian army still had no proper siege artillery), and an initial defeat at the hands of the Ottoman relief army, Nādir turned the tables on the Ottomans on 1 Diumādā II 1146/9 November 1733, and the Ottoman commander, Ṭopaʿl ʿOḡmān Pāsha, was killed. A provisional treaty between Nādir Shāh and Abāmād Pāsha, the Ottoman governor of Baghābd, provided for the return to Iran of all territory seized by the Ottomans in the previous ten years, but the treaty was never ratified by the Porte. In 1147/1735 Russia surrendered Bākū and Darbān, and Nādir struck further blows against the Ottomans. ʿAbd Allāh Pāsha Kūprūlū-zāde, governor of Kārs, was killed at the battle of Aḵ Tepe: ʿAll Pāsha surrendered at Gandja, and Isfahān Pāsha at Tīfīs; Erivan fell soon afterwards.

Had Nādir Shāh at this point devoted his efforts to reorganizing the administration of the country on a firm basis Iran might have entered the 19th century better equipped to deal with the internal and external problems of that period. Instead, his growing megalomania led him to invade India, as Timūr had done before him. A necessary preliminary was the capture of Kandahār, a frontier city which had been held alternately by the Safawids and the Mughals during the 10th/16th and 11th/17th centuries, and had been in Afghan hands since 1121/1709. To raise money for his Indian campaign, Nādir levied taxes with more than usual ruthlessness, and Kirmān suffered particularly severely. Kandahār surrendered to Nādir in Dhuʿl Kaʿda 1150/March 1738. Ghazāna was occupied in June, and Nādir, crossing the Khaybar Pass, entered Peshawar. Lahore paid a large indemnity, and thus escaped the sack. After an engagement with the Mughal
army at Karnal in Dhu‘l-Ka‘da 1151/February 1739, Nādir made his triumphal entry into Delhi on 9 Dhu‘l-Hijja 1151/20 March 1739, and let his troops loose to pillage the city. In this, too, he faithfully followed the actions of his model, Timūr, who had sacked Delhi in 801/1398. After levying the enormous sum of 20,000,000 rupees in tribute from the Mughal Empire, Nādir returned to Iran laden with his spoils, which included the famous Peacock Throne and the Kūh-i Nur diamond. The Mughal Emperor Muhammad Shāh ceded to Nādir Shāh all his territory west of the Indus. On their return from India, Nādir’s armies overran Turkistān, the ancient Transoxania and Khūzestān, and Nādir signalled this eastward expansion of his empire by transferring his capital from Iṣfahān to Maḥshhad. Maḥshhad had fewer associations with the Ṣafawīs—although of course the shrine of the imām ʿAlī of his own officers. His death was followed by a period of anarchy and civil war. In the south, the period of anarchy and civil war. In the south, the period of anarchy and civil war.

In 1153/1741 Nādir Shāh was at the height of his power, but signs of approaching insanity were already visible. His madness was characterized by an overweening lust for power and the most extreme avarice. He became subject to ever more violent fits of rage, associated with the inflicting of ever more terrible punishments. Instead of using his Indian treasure to replenish the exchequer, he which he had exhausted by his endless campaigns, hoarded it in a special treasure-house at Kāfšān [q.v.] in Khūrāsān, and imposed further crippling tax burdens on the people to finance expeditions which had no strategic justification, such as his disastrous campaign in Dākhīstān in 1154-55/1741-2. Revolts broke out in various parts of his empire, and his attempt to effect a reconciliation with the Sunnī ‘ulama‘ did not add to his popularity. On 1 Džumādā II 1160/20 July 1747 he was assassinated by a group of his own officers. His death was followed by a period of anarchy and civil war. In the south, the Zand dynasty gave that part of the country at least a brief respite in the form of orderly, and on the whole good government. After the death (1193/1779) of Karlīm Khān Zand, however, the Zands were weakened by dynastic feuds, and this gave the Kādžārs, who from their base at Astaraḑābād had gradually brought most of northern Persia under their control, their chance. ʿĀkā Muhammad Khān Kādẓār escaped from Zand captivity at Shīrāz and embarked on a sixteen-year struggle to assert his authority over that of rival Kādżār chiefs, and to overthrow the Zands. By 1209/1795 he had achieved both objectives.

The new rulers of Iran, the Kādžārs, were of Turkoman stock. Like the Afšārs, they had formed part of the group of Turkoman tribes which had brought the Ṣafawīs to power, and which had constituted the military aristocracy of the Ṣafawī state. The Kādžārs, however, like two other Trans-Caucasian Turkoman tribes, the Afšārs and the Bayāts, did not come into prominence until the middle of the 10th/16th century. The first ruler of the new dynasty, ʿĀkā Muhammad Shāh, possessed undoubted administrative ability. Making Tehran his capital, he restored security and public order, and reunited Iran under a strong and efficient central administration for the first time for more than a century. By the end of the 18th century, he became a byword for bloodthirstiness. His ruthless elimination of all possible rivals caused riots within the Kādžār ranks, and militated against the stability of the dynasty. The succession was disputed both in 1250/1834, and again in 1264/1848. Outwardly pious, he cared nothing for an oath, and did not hesitate to obtain his ends by treachery. On 21 Dhu‘l-Hijja 1211/17 June 1797, two years after his coronation, he was assassinated by two of his soldiers. He was succeeded by his nephew, Fath ʿAli Shāh.

Fath ʿAli Shāh [q.v.] had scarcely ascended the throne when he was forced to recognize that a major change had occurred in the relations between Iran and her neighbours in general, and between Iran and the Great Powers in particular. The advent of the 19th century saw the beginnings of Great Power rivalry in Persia which directly or indirectly affected the political, social and economic life of the country. Already ʿĀkā Muhammad Shāh, by his atrocities in Georgia, had caused that country to abandon its traditionally Persian orientation and turn to Russia. Russia had eagerly seized this opportunity to resume that southwards movement toward the Persian Gulf which had been a cardinal point in Russian policy since the time of Peter the Great. By 1806 Russia had demonstrated that, in the military sciences, Iran had fallen behind the West to an alarming extent during the 18th century. If Iran was to preserve its independence, it needed modern weapons and an army trained on modern lines. This point was emphasized when the Russians annexed Georgia in 1800. Fath ʿAli Shāh’s political naiveté and ignorance of world affairs led him to sign the Treaty of Finkenstein (4 May 1807) with Napoleon. Article 4 pledged France to work for the restitution of Georgia to Persia. In return, Fath ʿAli Shāh promised to declare war on Great Britain (art. 8), and to allow French troops the right-of-way across Iran as part of Napoleon’s Grand Design for the invasion of India. The Treaty of Finkenstein, however, was rendered a dead letter almost immediately by the Treaty of Tilsit (2 July 1807), which brought to an end hostilities between France and Russia, and gave Russia a free hand to resume her policy since the time of Peter the Great. Russia had demonstrated that, in the military sciences, Iran had fallen behind the West to an alarming extent during the 18th century. If Iran was to preserve its independence, it needed modern weapons and an army trained on modern lines. This point was emphasized when the Russians annexed Georgia in 1800. Fath ʿAli Shāh’s political naiveté and ignorance of world affairs led him to sign the Treaty of Finkenstein (4 May 1807) with Napoleon. Article 4 pledged France to work for the restitution of Georgia to Persia. In return, Fath ʿAli Shāh promised to declare war on Great Britain (art. 8), and to allow French troops the right-of-way across Iran as part of Napoleon’s Grand Design for the invasion of India. The Treaty of Finkenstein, however, was rendered a dead letter almost immediately by the Treaty of Tilsit (2 July 1807), which brought to an end hostilities between France and Russia, and gave Russia a free hand to resume her aggression against Iran. Russia lost no time in pressing her advantage. By the Treaty of Gulistān [q.v.] (12 October 1813), Iran lost all her rich Caucasia provinces, and only Russian naval vessels were allowed to operate on the Caspian Sea. A border dispute caused war to break out again in 1826, and the Treaty of Turkomanchai (22 February 1828) imposed even more severe terms on Iran. Iran ceded Erivan and Nakhchivan, and the Aras river was fixed as the Russo-Iranian border. Iran had to pay a heavy indemnity, but the most significant clause in the Treaty was that concerning “capitulations”, i.e., extra-territorial rights for Russian officials resident in Iran. The “capitulations” [see IMTIYAZAT] infringed the rights of Iran as a sovereign and independent nation, and marked a new phase in the relations between Iran and the Great Powers. Other countries, including Britain, hastened to follow the Russian example and to demand extra-territorial rights for their nationals in Iran, and the direct penetration of Iran by foreign influences may be said to date from this time.

Fath ʿAli Shāh’s position, Muhammad Shāh, who succeeded to the throne in 1834, attempted to recover territory which had been lost in the east.
to the Afghans, Britain went to the aid of the Afghans, and Muhammad Shah had to abandon the siege of Harat. Throughout the 19th century, British policy was dominated by one obsession, the defence of India. To achieve this, Afghanistan had to be maintained as a buffer-state, and Iran could not be allowed to regain the territory which had been taken from her by the Afghans. Consequently, British armies were dispatched from India in 1837, when Iranian troops threatened to recapture Harat, and in 1852 and 1856, when they succeeded in re-taking that city. Finally, by the Treaty of Paris in 1856, Iran was forced to recognize the independence of Afghanistan and to reconcile itself to the permanent loss of a city which in Timurid and Safavid times had been one of the great cities of Khurâsân.

During the reign of Muhammad Shâh, the first rumblings of social protest found expression in the politico-religious revolt which followed the manifestation of the Bâb (1844). The Bâb declared himself to be the Hidden Ímân (the Mahdi or sâhib al-samâd), and in 1848 the Bâbis declared their secession from Islam and the shârsâ. The revolt was harshly repressed by the government, and the Bâb himself was executed at Tabriz in 1850. An unsuccessful attempt on the life of Nâşîr al-Dîn Shâh in 1852 led to further persecution of the Bâbis. The movement split into two groups, termed Bahâ'îs and Azâllis, of which the former is the more important. Its leader, Bahâ'î Allâh, was banished from Iran, but Bahâ'ism was later widely disseminated in Europe and America [see BAB; BABIS; BAHA' ALLAH; BAHÁ'IS].

Nâşîr al-Dîn Shâh, who came to the throne in 1848, and whose long reign was ended only by his assassination in 1896, was a more able man than either of his two immediate predecessors. He appreciated the need for change, if Iran was to retain her independence and to break the political stranglehold which was being exerted by Britain and Russia. During his reign, however, the other half of the Russian pincer gripping Iran lengthened inexorably. In 1865 the Russians captured Tashkent, and extended the khânsate of Khiva. In 1866 they took Bukhârâ and, from their new base at Krasnovodsk on the eastern shore of the Caspian, pushed steadily forward into Central Asia. They put an end to the khânsate of Khiva in 1873, crushed for ever the Turkoman tribes of the steppe at the battle of Gök Tepe [q.v.] (1881), and completed the conquest of Trans-Caspia by occupying Marw in 1884. The Atrek river was established as the new Russo-Iranian frontier in the east.

Nâşîr al-Dîn Shâh instituted a policy of granting concessions to European powers, in the hope that this would improve the economic prosperity of the country. The net result, however, was that by the end of the 19th century, most of Iran's economic resources were exploited or directed by foreign concessionaires, who obtained sweeping concessions in return for paltry sums of money which satisfied the shah's immediate needs. In 1872, for example, a British subject, Baron Julius de Reuter, obtained the exclusive right to exploit all minerals in Iran (except gold and precious stones), to build factories, to construct railways, canals and irrigation works, to exploit the forests, to create a national bank and public utilities (such as a telegraph system), and to control the customs. Strong Russian pressure led the shah to rescind the concession, and, as compensation, the British received a concession to establish the Imperial Bank of Persia (1889). The Russians followed suit with their Banque des Prêts, or Loan and Discount Bank. In 1890, the celebrated Tobacco Concession was awarded to a British company. A letter written by Sayyid Djamâl al-Dîn al-Afghâni [q.v.] to the chief mudhâjah ad-Sâmârâ, caused the latter to issue a fatwâ prohibiting the use of tobacco by all believers until such time as the shah cancelled the concession. The mudlâs and mudhâjahâs organized demonstrations in Bâbâsî, Isfahân, and Tabriz, and the shah had to revoke the concession in December 1891. This was a significant occasion: for the first time popular opinion had openly opposed the shah, and the shah had had to give way. As usual, popular opinion had been voiced through the medium of the religious classes, who could, in certain circumstances, be counted on to take the lead in opposing the shah and the government.

Growing discontent with the incompetence and corruption of the government, and resentment at foreign political pressure and economic control, found expression during the last quarter of the 19th century in the form of a challenge to the traditional pattern of society. Secret societies (anjûmans) were formed whose members discussed the ideas of Western liberalism and problems of social reform [see DÂM'IVYVA]. Out of this social ferment grew the Constitutional or National movement, which began by demanding a measure of social and judicial reform, the dismissal of certain tyrannical officials, and the expulsion of certain foreign concessionaires, notably the much disliked Belgian Director of Customs, and ended by demanding the promulgation of a Constitution and the establishment of a National Consultative Assembly [see DUSTUR: IV.—Iran]. Although the Fundamental Law was signed by Muzaffar al-Dîn Shâh until 30 December 1906, the first National Assembly (Madjlis) was convened on 7th October 1906.

The victory over despotism, far from being won, had in fact barely begun, and the Nationalists, absorbed in their struggle with the shah, were unable to prevent Iran falling even further under foreign domination. Muhammad 'Ali shâh, who succeeded his brother in 1896, was unable to stem the tide of Russian intervention, and on 3 Mubarram 1330/24 December 1911 the Majlis was again forcibly closed. During World War I, although Iran was a neutral, her territory became a battlefield for Turkish, Russian and British forces, and Iran emerged from the war in a state of administrative and financial chaos. Lord Curzon's solution was an independent
Iran firmly under British tutelage, and the Anglo-Iranian Treaty of 1919 provided for the appointment of British advisers to the Iranian Government. The treaty was never ratified by Iran. The Bolsheviks, after the collapse of the short-lived Soviet Socialist Republic of Gīlān [see Djangal], concluded the Soviet-Iranian Treaty of 26 February 1921, by the terms of which they renounced the imperialist policies of the former Tsarist regime. Five days before the signature of this treaty, Rezā Khān seized power by coup d'etat. Rezā Khān was the commander of the Cossack Brigade, created in 1879 by Naṣir al-Dīn Shāh as a royal bodyguard and used by Muḥammad ʿAll Shāh to suppress the Nationalists in the period 1907-9. The atmosphere of the post-war period was favourable to Rezā Khān's attempt to re-establish national integrity and independence: the Constitution had been suspended; there had been a complete breakdown of government authority; the treasury was empty, and famine conditions prevailed. Rezā Khān first thought of abolishing the monarchy and establishing a republic, but, faced with strong opposition from the ulāmā and other traditional elements, he abandoned the idea. Ahmad Shāh was deposed in 1923, and Rezā Khān was proclaimed shah in December 1925 and crowned on 25 April 1926 as the first ruler of the new Pahlavi dynasty.

Rezā Shāh was determined to launch Iran into the 20th century. Prior to his accession, despite the fact that Iran had been officially converted from a mediaeval Islamic state to a modern constitutional monarchy by the granting of the Constitution in 1906, there were few signs of change in the traditional structure of society. The far-reaching programme of westernization, modernization, and centralization of the administration, on which Rezā Shāh embarked, involved a major upheaval of the traditional social order, and the abolition or modification of many traditional Islamic institutions. Without possessing an ideology, he succeeded in carrying out a revolution. He was impatient with the intellectuals, whom he blamed for Iran's weak and divided state. Unlike Atatürk, he made no long statements of policy, wrote no articles. His failure adequately to express his objectives and the people's needs, in fact, was a source of weakness. In so far as he succeeded in his objectives, his policies were beneficial to Iran. He completely reorganized the army and created the first unified standing national army in Iran. Between 1921 and 1941, on average one-third of the national budget was allocated to the armed forces. He reorganized the Civil Service on Western lines. In successive phases he laid the foundations of a modern judiciary system: the Penal Code was promulgated in 1926 and the Civil Code in 1928, the year which saw the abolition of the much hated capitulations. Each step necessarily meant a further blow at the position of the shariʿa and at the power of the religious classes in general. In the field of education, the maktabs, where pupils of all ages were taught in one room by an ʿālim, were swept away. Compulsory education for both sexes was introduced (it has not yet been fully implemented, particularly in rural areas), and the curricula were modernized. Teachers' Training Colleges were established, and the University of Tehran was founded in 1935. In 1940 all foreign missionary schools were taken over by the government. In the field of commerce, Rezā Shāh established a number of state monopolies, partly to strengthen the Iranian economy vis-à-vis Britain and Russia, and partly to provide additional revenue. The entire cost of the Trans-Iranian Railway, constructed from the Caspian Sea to the Persian Gulf between 1926-38, was defrayed by means of a tax on tea and sugar, which were state monopolies. Rezā Shāh did much to develop industry in Iran, and his efforts to develop an Iranian textile industry succeeded in making Iran to a large extent independent of Russian textiles. On the debit side, Rezā Shāh, as his reign progressed, showed increasingly despotic tendencies. He became impatient of all criticism, and skillfully suppressed political parties, trade unions, and the Press. The Madjīs was reduced to the status of a rubber-stamp. Two areas in which Rezā Shāh failed signally were agriculture and relations with the tribes. Not until 1937 did he make any attempt to improve the lot of the peasants or to introduce legislation to encourage landlords to improve methods of cultivation. Even then, because the implementation of the legislation was entrusted to the very landowners at whose interests it was aimed, nothing was achieved. In regard to the tribes, his policy of enforced resettlement, often in unsuitable regions, failed, and his severe treatment of many tribal leaders left a legacy of bitterness.

During Rezā Shāh's reign, German political and economic influence in Iran increased to a marked degree. Since the Anglo-Russian Convention of 1907, Iran had been psychologically prepared to accept the friendship of a third power which might act as a buffer against British and Russian pressure. Germany, which had no previous history of interference in Iran's affairs and which seemed to be at a safe distance, was welcomed by Rezā Shāh as the "third power". Germany's share of Iranian trade jumped from 8% in 1932 to 45% in 1940. Much of the machinery and heavy equipment needed for Rezā Shāh's programme of industrial expansion was supplied by German, and after Germany's annexation of Czechoslovakia, by Czech firms. German architects designed many of the new government and public buildings in Tehran. In 1936 the German Minister Dr. Schacht visited Iran, and expressly exempted Iranians, as being "pure Aryans", from the provisions of the Nuremburg race laws. On the heels of German technicians came German cultural officials and "tourists", who soon constituted an effective Fifth Column in Iran. In 1941 Britain and Russia presented an ultimatum to Rezā Shāh, calling on him to expel large numbers of these Germans from Iran. Rezā Shāh refused, and on 25 August British and Russian forces simultaneously invaded Iran. Rezā Shāh abdicated and went into exile; he died at Johannesburg in 1944. His son, Muḥammad Rezā Shāh, succeeded to the throne.

The position faced by the young shah was one of the utmost difficulty. There was a dearth of leaders—one consequence of Rezā Shāh's concentration of power in his own hands. Effective government was in any case virtually impossible while the country was occupied by foreign troops. The liberalizing of internal conditions released forces of an illiberal character—forces of the extreme right, such as the fīdāʾiyyān-i islām [q.v.], a terrorist organization which came into being about 1943 and which was later protected by the religious leader Ayāt Allāh Kāshānī, and forces of the extreme left, such as the Tudeh party, which was formed in 1942. Initially, the Tudeh party attracted many frustrated intellectuals of leftish sympathies who were not
necessarily Communists, but the party fell more and more under Communist influence and direction, and in 1945 the Tudeh, in close co-operation with the Russians, engineered the overthrow of the authority of the central government in Aḏarbāyjān and Kurdistan. By the terms of the Tripartite Treaty of Alliance (29 January 1942), the Allies had promised to withdraw their troops from Iran within six months from the termination of hostilities with Germany and its associates, but Russian troops did not leave until May 1946. Deprived of Russian support, the Autonomous Republic of Aḏarbāyjān and the Kurdish People's Republic collapsed before the advance of the Iranian army in October 1946.

German influence in Iran came to an abrupt end in 1941, and the United States now became the "third power" in Iran. American involvement rapidly increased after the formation in 1942 of the Persian Gulf Command, which developed the port facilities at Khurramshahr, Bandar ʿAbbās and Bandar Shāhpūr, and assisted in the supply of war material to the Soviet Union through Iranian territory. The United States also furnished Iran with military and financial advisers. Among the latter was Dr. Millsapgh, who had functioned in a similar capacity in Iran from 1922-27. Finally, in 1942, the United States extended "Truman doctrine" to include Iran as well as Turkey and Greece, and was thus definitely committed to the maintenance of Iran's independence.

The Tudeh Party rapidly recovered from its defeat in Aḏarbāyjān in 1946, and its increased militancy caused widespread insecurity and unrest. On 4 February 1949 a Tudeh Party member made an attempt on the life of the shah. This action was at once followed by the outlawing of the Party and by the reimposition of martial law. The second important event of 1949 was the inauguration of the First Seven-Year Plan for Economic Development. The third significant event of 1949, a year which in many respects marks a turning-point in the history of modern Persia, was the formation of the Iran National Front by Dr. Muṣād dik of the National Front. This was a coalition of groups of every political hue, from the neo-Fascist Sumka Party and the extreme right-wing fīdāʾīyīn-i islām led by Kāshānī, through the centre block of the Iran Party, composed of bourgeois nationalists and the intelligentsia, to left-wing intellectual groups such as Mākki's "Truman doctrine" to include Iran as well as Turkey and Greece, and was thus definitely committed to the maintenance of Iran's independence.

In 1950 the shah took the first positive steps in the direction of social and economic reform when he established the Imperial Organization for Social Welfare, and transferred to this organization, for distribution to the peasants, the crown lands. He further appointed to the office of Prime Minister General ʿAll Ṣafīdān, an honest, patriotic and energetic man. General Ṣafīdān immediately launched an anti-corruption drive which was so effective that more individuals arrayed themselves against him and the shah. On 7 March 1951 General Ṣafīdān was assassinated by a member of the fīdāʾīyīn-i islām, an act which put an end to orderly progress towards reform. Dr. Muṣād dik introduced into the Majlīs a bill calling for the nationalization of the oil industry. On 29 April, Dr. Muṣād dik became Prime Minister, and at once implemented the oil nationalization law and appropriated the Anglo-Iranian Oil Company's installations. Muṣād dik's National Front supporters, deprived of the principal target for the xenophobia which had held them together, soon showed signs of disunity. Muṣād dik himself tried to disassociate himself from oil revenue, and faced a financial crisis; furthermore, once he had achieved his "negative equilibrium", the poverty of his political thinking became apparent. Far from ushering in a social revolution, Muṣād dik found himself obliged to demand plenary powers and to resort to unconstitutional means in order to maintain his own position. The dissolution of the Senate (the upper house of the Iranian Parliament, provided for in the 1906 Constitution but not convened until 1950), in July 1952, was followed by that of the Supreme Court (November 1952) and of the Majlīs itself (August 1953). In addition, Dr. Muṣād dik imposed martial law and curbed the Press. After January 1953, when Muṣād dik insisted on an extension of his plenary powers, he found himself in a position of increasing isolation as National Front leaders such as Makki, Bākāi and Kāshānī successively broke away from him. On 13 August the shah issued a fārmān dismissing Muṣād dik and appointing General Zāhīdī Prime Minister. Muṣād dik refused to take cognisance of the fārmān, and the shah temporarily left the country. On 28 Murād 1332 s./19 August 1953 Zāhīdī suppressed the Tudeh mobs over which Muṣād dik no longer had any control, and succeeded in exiling his political rivals from the country. The shāh returned to Iran, and in November 1953 Muṣād dik was brought to trial on a charge of treason, on the grounds that he had defied an imperial fārmān and had abrogated the constitutional procedures and basic laws of the land. He was sentenced to three years' solitary confinement, from which he was released in August 1956.

After the fall of Muṣād dik, the oil dispute was settled (August 1955) by formation of a consortium of British, American, Dutch and French companies, which ran the industry on behalf of the National Iranian Oil Company. On 3 November 1955 Iran joined the Baghdad Pact, with Great Britain, Turkey, Pakistan and Iran; Iran withdrew in 1959, and the alliance was renamed the Central Treaty Organization (CENTO). The shah, advocating a policy of "positive nationalism", indicated that he intended to exercise greater personal control over the administration of the state than he had prior to the dictatorship of Muṣād dik. In 1957 the National Security Organisation (SAVAK) was formed. The shah attempted to check corruption. In 1958 the Imperial Investigation Organization was set up to receive and investigate complaints from the public against any official of the bureaucracy, judiciary, or army, and this was followed by several laws designed to discourage bribery and peculation by government officials. In 1958 the Pahlavi Foundation (Busūyāt-i Pahlavī) was set up to administer certain resources of the Crown and to expend the income accruing from these assets on social services. On 5 October 1961 the shah handed over to the Pahlavi Foundation property valued at more than £ 47,500,000, comprising farms, villages owned by the shah, hotels, the shah's holdings in the Iranian oil tanker fleet,
and all stocks and shares held by the shah. These funds and assets were constituted into a "waty," or trust, for charitable, social, educational and health services. In this way, the shah has virtually divested himself of the personal fortune which he had inherited from his father. The birth of a son and heir (Rezā) to the shah and the Empress Farah on 31 October 1960 was a stabilizing factor in Iranian affairs, in that it assured the continuance of the Pahlavi dynasty (succession is through the male line only). Nevertheless, the political outlook continued to be uncertain. The shah's policy of "repolitization" had resuscitated the National Front, which contained many of Musaddik's former supporters. The shah's experiment in "controlled democracy," in which two artificially-created parties known as "Milledam" and "Mardam" were to represent the government party and the "loyal opposition" respectively, predictably failed. The shah had to annul the elections of August 1960, and the new elections, begun in January 1961, were accompanied by such widespread disorders that on 9 May 1961 the shah, using powers which had been granted to him in 1949, dissolved the Madjlis and the Senate. He took this action not only "for the protection of the nation's rights and interests, and to safeguard the Constitution," but also in order that "no obstacles should hinder the strong Government which had been created to institute fundamental reforms."

As an earnest of his intentions, the shah promulgated the Agrarian Reform Bill (15 January 1962). Prior to this, all legislation designed to break up the large estates, and thus make land available for distribution to the peasants, had consistently been blocked in the Madjlis. The shah had completed his programme, begun in 1951, of distributing crown lands to the peasants, but his example had not been followed by the large landowners. Under the provisions of the Agrarian Reform Bill, no landowner was to be allowed to own more than one village, regardless of size; all villages in excess of this allowance were to be bought by the State and sold to the peasants. Considerable progress was made in 1962 in implementing the new regulations, and land reform was a major item in the shah's six-point programme which was approved by national referendum in January 1963; other radical reforms were the enfranchisement of women, and the creation of the "Literacy Corps" to combat illiteracy, particularly in rural areas. This six-point programme was opposed by the National Front, and opposition from the religious classes culminated in serious rioting in the capital and the major provincial cities in June 1963. In September 1963, after an interval of more than two years during which the shah ruled by decree, general elections were held, and the newly-formed National Union Party, a coalition pledged to give full support to the shah's reform programme, gained a strong majority in the Madjlis. The elections were boycotted by the National Front. The election of six women to the Madjlis no doubt reflected the fact that, in these elections, women for the first time were able to vote.

Since 1963, the shah has made steady progress with his "white revolution," or "revolution from above," despite further acts of violence by those opposed to his policies. On 21 January 1965, for instance, the Prime Minister Hasan 'Ali Mansūr, whose New Iran Party, formed in December 1963, commanded a large measure of support in the Madjlis, was shot and mortally wounded by a supporter of an extreme right-wing madžlahidī. In April 1965 yet another attempt was made to assassinate the shah. The greatest hope for the future, perhaps, lies in the achievements of the Third Economic Development Plan, inaugurated in 1962, which was designed to advance Iran's economic and social development. The Third Economic Development Plan, inaugurated in 1962, has been severely hampered by drastic cuts in the budget of the Plan Organization, but in October 1963 the shah pledged more money for this purpose. On 29 July 1963 Iran and the Soviet Union signed an Economic and Technical Co-operation Agreement for the construction of a barrage on the River Araxes which will irrigate 145,000 acres on both sides of the frontier. The oil industry, under the control of the National Iranian Oil Company, continues to expand, and production increases as new oil-fields are discovered.

There has been a gradual détente between Iran and the Great Powers as the latter have relaxed their political and economic pressure. Simultaneously, relations between Iran and its immediate neighbours have become closer as a result of the establishment in 1965 of the Regional Co-operation for Development Corporation (R.C.D.). The participants in this corporation are Pakistan, Iran and Turkey, and already joint schemes are in progress in such fields as communications, industry, education and health. The stability of the dynasty has been further assured by the birth of a second royal prince, 'Ali Rezā, on 28 April 1966, and particularly by an amendment to the Constitution effected on 7 September 1967. This amendment provides that, if the shah dies before Crown Prince Rezā comes of age, or if the shah is unable to carry out his duties, the Empress Farah will act as Regent until the crown prince reaches the age of twenty. In such a case, the Regent will be assisted by a Council of Seven, including the Prime Minister, the Presidents of the Madjlis and the Senate, and the President of the Supreme Court. On 26 October 1967, the shah, then in the twenty-seventh year of his reign, was officially crowned. This was a symbolic act, since the shah had repeatedly declared that he did not wish to be crowned as long as Iran was under foreign domination. There is no doubt that Iran today (1971) is more truly independent than at any time since 1800. The reforms introduced by the shah have already brought about radical changes in the struc-
ture of Persian society, and this trend is likely to become more marked in the years to come.
(R. M. Savory)

VI.—RELIGIONS

When the Arabs destroyed the Sasanian empire they also dealt a heavy blow to the national religion of ancient Iran, Zoroastrianism. As the official cult of the state, the Mazdean church had become dependent on the support of the political body and had identified itself to a large extent with the existing social order. As a result of this the clergy had lost touch with the broad masses of the population. Although our knowledge of the religious situation during the last days of the Sasanids is very limited, it seems certain that Zoroastrianism was no longer a very vital force, at least not in the orthodox form of the religion. Sectarian movements, the true nature of which is still rather difficult to ascertain, provided alternatives to the official doctrines and practices.

The most important of these was Zurvanism. In the Islamic theocracy, which during the first century of its existence was dominated by the Arabs, the Zoroastrians could only retain their identity as one of the tolerated religious minorities. In general, the Arab conquerors did not insist on an immediate conversion of their foreign subjects. In most cases, they were satisfied with the conclusion of a treaty which guaranteed freedom of cult to the non-Muslims in exchange for tribute. Originally the Zoroastrians (Magãs [q.v.]) were not included among the "people of the Book" (Ahl al-Kitãb [q.v.]), but very soon the doctrine was adapted in such a manner as to extend the contractual protection (dhimmã [q.v.]) to the Zoroastrian communities as well. Traditions containing decisions made by the Prophet in favour of the Zoroastrians in Bahrayn and Yaman were adduced in support of this new interpretation.

Thanks to the tolerant attitude of Islamic officialdom, the Mazdeans were able to consolidate their position by retreating into small close communities standing aside from the life of the Islamic commonwealth. In this way they were able to survive the coming of Islam for several centuries, especially in rural districts and in those provinces where the Arabs did not settle in great numbers. Fire-temples continued to function in many parts of the country.

The main centre of intellectual activity of the Zoroastrian theologians was Fãrs. The archaic Pahlavi literature has preserved numerous references to ancient Persian poetry. The Barmakids, the Iranian viziers of Harun al-Rashid, were descended from a small but interesting Judaeo-Persian literature [q.v.], consisting mainly of religious works, has been preserved.

Since the 2nd century B.C., Mahãyana Buddhism had penetrated those parts of Central Asia which were inhabited by Iranian peoples. Already in pre-Islamic times it had had to retreat before Zoroastrianism but it continued to be of some importance in the region of Gandhara and Balkh during the first few centuries of the Islamic era. The Buddhist convent of Naw Bahãr (from Sanskrit niãta niãhãra "new monastery") was very renowned and figures often in early Persian poetry. The Barmakids, the Iranian viziers of Hãrãn al-Rashíd, were descended from an abbott (pãrmaq) of the convent [cf. Al-Bãrãmiká].

The process of Islamization which eventually made Iran a thoroughly Islamic country took several centuries to be completed. The great historians of the Arab conquest (e.g., al-Balãkarî, al-Tabãrã), as well as a number of local historians (e.g., the Ta'rîh-i Sistãn, al-Nãrshãkhi on Transoxania and Ibn Isfandiyãr on the Caspian provinces), have transmitted a great variety of reports on the conversion of groups or individuals originating from different regions and scattered over a large period of time. It is hardly possible to form a coherent picture of the process as a whole out of incidents which not frequently seem to contradict each other. Undoubtedly, the chaotic character of the evidence corresponds with the nature of the actual historical development.

As there was no consistent policy on the part of the government, local conditions as well as social differences usually decided the course of events. The individual arbitrary decisions of local officials were often a very important factor.
The first report about the acceptance of Islam dates from as early as the battle of al-Kadisiyya when Daylam cavalry troops (asāwirā, also designated as Ḥamrā Daylam) deserted from the Imperial army and came to terms with the Arabs. This included conversion to the new religion as well as the settlement of these mercenaries in the recently founded miṣr of Kūfa (cf. L. Caetani, Annali, iii/2, p. 216-20). On some occasions Iranian notables were deported to the centre of the Caliphate to serve in the Umayyad administration and were remembered by later generations as the pride of their regions (cf. e.g. Tāʾrīkh-i Sīstān, ed. M. T. Bahār, t8 ff.).

Conversions of this kind required a complete assimilation to the way of life of the conquerors, including the adoption of Arabic names. Reports of forced conversions or the violation of the sanctuaries of the protected religions are rare, but this may be partially due to the predominantly Islamic bias of the sources.

The pattern of Arab settlement [cf. al-Afar, iii] largely determined the pace of the Islamization of the different regions. In the cities of Khurāsān and of northern al-Djībāl, later also in those of Transoxania, large Arab garrisons were stationed which had a great influence on the rate of conversion among the townspeople. It has been suggested by several scholars that the urban class of artisans and tradesmen adopted the new religion so easily because in Sasanian society they had been discriminated against on account of their low status in the Mazdean scale of social values. Of the other social classes, the peasants were least open to outside influences and accepted Islam only very slowly. This cannot be explained exclusively by their isolation and the conservative scholars who had survived the downfall of the Sasanian empire. Although the diḥkān (q.v.) and maršāns were sometimes invited to become Muslims, their symbiosis with the Islamic government was not dependent on a religious affiliation but was essentially a political and economic necessity.

Massive conversions could still take place in Iran as late as the 5th/11th century. The rise of šīʿism did much to bridge the gap between the broad masses and the bearers of the religious tradition who mainly belonged to the upper classes of society. Members of the pietist Karrāmīyya sect were also very active as missionaries. The šīʿī propaganda of the Zaydīyya is to be credited with the Islamization of the Caspian provinces.

Being a Muslim brought many social advantages to a non-Arab subject of the Islamic theocracy, but during the period of Arab hegemony which lasted till the downfall of the Umayyads in the middle of the 2nd/8th century, the convert could only aspire to the status of a second-class citizen. As a client or mawālī (pl. mawālī, q.v.), the non-Arab Muslim enjoyed the protection of an Arab tribe or family but was subject to certain disabilities.

Although the Iranian mawālī often participated with great enthusiasm in the wars against unbelievers (e.g., at the time of the conquest of Soghdia and afterwards in the struggle with the pagan Turks), the disadvantages of their status made them a potential ally to any politico-religious movement that came out in revolt against Umayyad rule.

The participation of Iranian mawālī in a sectarian movement is recorded for the first time in the accounts of the rebellion of al-Mukhtar (q.v.) who in 66-7/685-6 defended the claims to the imāmat of Muhammad ibn al-Hanafīyya (q.v.) and demanded revenge for the death of al-Ḥusayn. His personal guard was recruited from the Ḥamrā mawālī in Kūfa. They are described as kāfūrkāhī (q.v.) literally "believer clubs"), a designation which reappears in the sources when they mention the Iranians who took part in the 'Abbāsid revolt. [See also KAYSĀNIYĀT].

The Azārika (q.v.), a Khārījiite group which, after having been defeated in Ṭirāk, continued its opposition in various parts of Iran (685-9/698-9), was also supported by many Iranian clients. Another šīʿī pretender, 'Abd Allāh b. Muṣṭaʿwīya (q.v.), was equally forced to retreat into Iranian territory after the failure of his rising in Kūfa (127/744). Taking advantage of the general atmosphere of discontent prevailing in the later Umayyad period, he succeeded in uniting dissenters of quite different religious and political parties under his command. Among them were Yazdīūs, Khārījīs and even prominent members of the 'Abbāsid family. This sect, known as al-Djānābīyya (q.v.), displays doctrinal features that are common to many other early šīʿī heterodoxies (e.g., esoteric knowledge invested in the imām and the concealment (ghayba) and eventual return (raḍī'a) of the founder of the sect). None of these movements, however, originated in Iran. They were the products of the syncretistic religious culture of Ṭirāk where Iranian ideas formed only one of several constituent elements. [See further s.v. OXANIA].

From 116/734-4/327/746, the Soghdians were in open revolt over the poll-tax. This rebellion acquired a religious dimension through the collaboration of a group of pious Arabs like Abu 'l-Ṣaydā' Sāliḥ b. Ṭārif, who had been a successful missionary among the Soghdians, and al-Ḥārīb b. Sura'yā (q.v.). In the interests of Islam, they supported the claim of the mawālī to full rights as Muslims and they summoned the Umayyad government to return to the ordinances of the Kuṭān and the sunna. The secretary of al-Ḥārīb, Dājām b. Ṣawān (q.v.), was one of the earliest Islamic theologians working in Iran.

The non-Muslim subjects showed a remarkable restraint towards the strife among the different factions of the Muslim community. The orthodox Mazdeans, the most numerous group, made no attempts to take advantage of this confusion. The movement of Biḥṣ Mīr b. Farwārdīn (q.v.), who proclaimed himself a Prophet about 129/747 in Khorāsān (near Nishāpūr), originated in a sectarian environment. He claimed to be sent from heaven in order to reform the Mazdean religion. His message, which is said to have been laid down in a book written in Persian, was mainly concerned with religious practice. The prescriptions he gave were aimed at an adaption of Zoroastrianism to the material and ritual conditions of the time. The most outspoken opposition to his activities came from the orthodox Zoroastrian clergy.

In the last years of the first century A.H., the 'Abbāsid family, through the famous testament of Abū Ĥāṣīm (q.v.), had acquired the leadership of the most active section of the early šīʿī movement. From Kūfa, the traditional centre of politico-religious opposition against the Umayyad regime, an effective propaganda was organized, focused on the province of Khurāsān where conditions seemed especially favour-
able for stirring up a massive revolt. The activities of the ‘Abbāsid missionaries were directed to all the groups, whether Arab or Iranian, who had reason to be discontented with the present situation. To Iranian participants, the problem of equality within the Muslim community provided the main incentive. Another issue of a religious nature was the claim of revenge for the Zaydī pretender Yaḥyā b. Zayd [g.v.], who had been killed in battle with Umayyad troops in 125/743 when he was trying to win support in Khurāsān. The religious motivation of the ‘Abbāsids themselves is not quite clear [see AL-NĀṣIRIYYA], but it is certain that they did not desire any emphasis on extreme points of doctrine, as is apparent from their disavowal of one of the prominent agitators, Khidāsh, when he was tried and executed on the grounds of spreading “khurrami” heresies, as well as from the vehement action taken by Abū Muslim, the architect of ‘Abbāsid victory, against several heretical movements.

In retrospect, the founding of the ‘Abbāsid caliphate appears to be a turning point in the development of Islam in Iran. Iranian Muslims, whose numbers were rapidly increasing, could now partake on an equal footing in the affairs of the Islamic community. The theocracy itself, on the other hand, became to a certain extent "Iranized" as a result of the infiltration of a great number of Iranians into all the branches of its central administration. Many cultural traditions of ancient Iran were integrated into Islamic culture. There was also a large measure of participation by the Iranian Muslims in the elaboration of the great theological and juridical systems of Islam which took place in the early ‘Abbāsid period. The cities of Khurāsān and Transoxania developed into important centres of Islamic learning.

The immediate effects of the revolt which brought the ‘Abbāsids into power seemed at first to point to a quite different line of development. A wide-spread discontent with social conditions, as well as a receptiveness to heterodox religious ideas, notably among those sections of the population which had only been touched very slightly by Islam, the very elements on which the leaders of the revolt had built their success, continued to form an obstacle to political stability in the Iranian provinces. The severance by the ‘Abbāsids of their former relations with sectarian groups and, more specifically, the crude disposal of the popular leader of the movement in Khurāsān, Abū Muslim, provided the incentive for a long series of politico-religious risings. They were often headed by former collaborators of Abū Muslim, who made him the object of a messianic expectation similar to those current among the early Shi‘i ghulāt. It was believed that after a period of occultation (ghayba) he would return in the company of the pre-Islamic heretic Mazdak and of the Mahdi. A pronounced anti-Islamic tendency was expressed in the prophecy of a return of Zoroaster and the destruction of the Ka‘ba. The idea of metempsychosis (landsak) was also present: a divine element was thought to have been transmitted to Abū Muslim’s daughter Fāṭima and to his son Fīrūz Mahdi. Collectively these movements are designated as the Abū-Muslimiyā. Another general term used in reference to a variety of these sects is Khurramiyya or Khurramdiniyya [g.v.]. This appellation is used in particular to characterize a number of customs, among which community of goods and wives are cited as the most objectionable, deviating from the Islamic way of life. A historical connection of the movement of Mazdak in Sasanian times has often been suggested but cannot be substantiated by the available evidence.

Most of these movements manifested themselves in the rural districts of eastern Iran and Transoxania. The leaders of the revolts were Sinbād, Ṣaḥāk al-Turk, Ustādīsht and the “veiled Prophet”, al-Mukanna‘ [g.v.], whose followers were known as the Mubayyida or Ṣaḥīf-ṣūrāʾ on account of their white garments. The most dangerous rebellion was led by Bābak [g.v.], and took place in Aḥjarbāyjān. It was only subdued after a long campaign directed by the best general of the Abbasid army, the Rāwandiyya [g.v.], which projected spiritual leadership, based on a divine incarnation, in the person of the caliph al-Manṣūr [g.v.], also originated in Iran, but its main activity was in ‘Irāk. The geographers and historians of the 4th/10th century still make mention of remnants of these sects in isolated parts of the country (for historical details see IRAN, HISTORY and the references given there).

Among the early ‘Abbāsid caliphs who still had a direct control over all the Iranian provinces, al-Ma‘mūn [g.v.] showed a special interest in this part of his empire. His attempt to make an alliance with the Husayni branch of the ‘Alids by appointing the imām ‘Alī al-Riḍā as his heir to the caliphate was little more than an episode. Yet it left permanent traces in Iran in the form of the two most venerated shrines of the Iranian Shi‘is: the Āstān-e Mūsā-i Riḍāi, the grave of the imām ‘Alī al-Riḍā [g.v.], who died under suspicious circumstances in Tūs (the present-day Mashhad [g.v.]) in 203/818, and the tomb of his sister Fāṭima al-Ma‘ṣūma in Kumm. The religious disputes held at the court of this caliph in Marv, in which representatives of various Islamic and non-Islamic denominations took part, show the great differentiation of religious opinion prevailing at this time as well as the relatively tolerant attitude adopted by the government.

In the long run, however, Iran developed into a predominantly Sunni country, which it remained until the end of the Middle Ages. The rise of semi-indepen
dent dynasties in the eastern parts from the early 3rd/9th century onwards in no way checked this general trend. Both the Tahirids and the Sāmānids acted as guardians of Sunnism and the Caliphate appears to be a turning point in the development of Islam in Iran. Iranian Muslims, whose

The religious situation in Iran during the second half of the 4th/10th and the beginning of the next century can be reconstructed to some extent from scattered pieces of information which have been transmitted by the geographers and historians of this period. The Kūdāb Āhsan al-tahāsīm of al-Muḳaddasī, written in 375/985, is a particularly rich source as far as the geography of religion is concerned (cf. the compilation of these references in P. Astard, Iran, passim as well as B. Spuler, Iran, 145 ff. and the Karte III with Erläuterungen at the end of this work).
Together these data point to a confusing diversity, even within the community of the people of the Sunna. It is therefore difficult to trace the main lines of division between the various doctrinal and juridical schools. In general there was a preference for the Hanafi school of law in the eastern provinces, especially among the lower classes. The Shi'a had strongholds in Kirmān, Tabaristān and in several parts of Transoxania. The position of the mu'taḍzila in the western provinces is less clear. For some period of time smaller schools like the Zähiriyya [q.v.] founded by Dā'ūd al-ISFĀHĀNĪ [g.v.] and the Thawriyya of Sufyān al-Thawri [q.v.] had a fair number of followers in Iran. The doctrinal school of the Mu'taḍzila had, from the time of its efflorescence under the protection of the early 'Abbāsids onwards, penetrated the Iranian provinces with much success. It managed to hold its ground there for a very long time after the reaction of the Ḥanbali traditionalists had put an end to its dominant position in 'Irāk. The struggle with the emerging neo-orthodox schools founded by al-AṣGHĀRĪ and al-MĀṭURID continued at least till the time of the Saljūqs. The kalām of the Mu'taḍzila became of lasting significance to Iranian Islam on account of its influence on the doctrinal system of the ISFAHĀNĪ-'Ashrāfī branch of the Shi'a. The larger cities usually contained a number of different religious minorities who are an equal and strife. The antagonism of social groups designated as 'aṣābiyyāt [q.v.] merged with the controversies among the adherents of the various ritual or doctrual schools. Not unfrequently, this took the form of small-scale civil war within the cities (cf. Cl. Cohen, *Mouvements populaires et autonomisme urbain dans l'Asie musulmane du moyen âge*, in *Arabica*, vi (1959), 27 ff.).

The sect of the Karramīyya [g.v.] originated in Khurāsān out of the teachings of Abū ʿAbd Allāh Muhammad b. Karrām (d. 255/869). It found its following chiefly among the artisans. The most remarkable traits of the Karramīyya as far as practical religious life is concerned were the emphasis on traditionalist piety, the foundation of *mawālid* or private movements which have survived for later institutions of religious education, and the vehement missionary zeal of the sect, directed as much to the heterodox groups within Islam as to the non-Muslims. The height of its development was reached at the beginning of the 5th/11th century when they acquired a considerable influence on the Ghaznavid rulers as well as on the early Ghurids [q.v.].

Ṣūfism appears in Iran for the first time in the second half of the 4th/10th century. One of the earliest representatives was the great Ṣūfī Shaykh Abū Yazīd al-Bīṣṭāmī [g.v.]. The foundation of the school of the Malāmātīyya [q.v.] is attributed to Ḥamdūn al-Kassār [q.v.] of Niğdār. The emphasis on absolute sincerity and indifference to all outward appearances of piety, characteristic of the Malāmātīyya, became a distinctive mark of the mysticism of Khurāsān as compared with the Šūfism of 'Irāk. In the first half of the 5th/10th century pupils of the 'Irākī schools settled in eastern Iranian towns, e.g. Mūsā al-Anṣārī (d. ca. 320/932) in Marv and al-Ṭākhafī (d. 328/940) in Niğdār. The great extension of Šūfism in Khurāsān was recorded a century later by al-Hudhrirī [g.v.] in his *Kashf al-maḏāhib* [q.v.].

A second centre of early Šūfism was Fārs where the first important Shaykh was Ibn al-Khafī [g.v.] (d. 371/982). His teaching had a profound influence in this province which lasted for many centuries. It was continued by Shaykh Abū Iṣhāk Ibrāhīm b. Shahrīyār (d. 428/1035) [g.v.] of Kazarun, the eponym of the Ishāqīyya or Kazarūnīyya, one of the very first Šūfī orders not only in the area of Shia Islam in general.

Until the rise of the Shafīwīs about 1500 A.D., the Shi'a remained a religious minority in Iran. As a matter of fact, it did not constitute a homogeneous group but consisted of quite different parties which were opposed to each other as much as the Sunnīs were opposed to all of them together. The small but militant movements of the Ghulāt, which were particularly active during the Umayyad period, as a rule did not originate in Iran but emanated from southern 'Irāk. The great majority of the Shi'ites living in Iran adhered to the quietist attitude in the matter of the political leadership of the community which had been adopted by the Husayni branch of the 'Alīids after the tragic failure of al-Husayn's expedition to 'Irāk at Karbalā'. Apart from their views on the doctrine of the Imām [g.v.], they did not differ significantly, either in doctrinal or in ritual questions from the Sunnīs. This large moderate group of the Shi'a, originally referred to by the general name of al-Rāfdīyya [q.v.], was from an early date strongly represented in the northern cities of al-Dībāl or 'Irāk-i 'Adlāmi. Shi'ism was brought here by the Arabs who settled in this area when this part of the country was still a frontier with the not yet Islamized Caspian regions. Kuwaytī, in particular, is an area of continuous rivalry and strife. The celebration of the most holy day of the Shi'a, the day of 'Ashūrā, was continued by Shaykh Abu Isfrak Ibrahim b. al-Bistami [q.v.] in his *Kashf al-majidub*. The foundation of the school of Imam al-Muhammad b. Sayyid Hasan b. Zayd, entitled al-dī' al-kabīr (the great diwān) was recorded a century later by al-Iṣḥāqī (d. 328/940) in Marv and al-Thakafi (d. 328/940) in Niğdār. In the first half of the 4th/10th century pupils of the Shi'a were opposed to each other as much as the Sunnīs. This large moderate group of the Shi'a, originally referred to by the general name of al-Rāfdīyya [q.v.], was from an early date strongly represented in the northern cities of al-Dībāl or 'Irāk-i 'Adlāmi. Shi'ism was brought here by the Arabs who settled in this area when this part of the country was still a frontier with the not yet Islamized Caspian regions. Kuwaytī, in particular, is an area of continuous rivalry and strife. The celebration of the most holy day of the Shi'a, the day of 'Ashūrā, was continued by Shaykh Abu Isfrak Ibrahim b. al-Bistami [q.v.] in his *Kashf al-majidub*. The foundation of the school of Imam al-Muhammad b. Sayyid Hasan b. Zayd, entitled al-dī' al-kabīr (the great diwān) was recorded a century later by al-Iṣḥāqī (d. 328/940) in Marv and al-Thakafi (d. 328/940) in Niğdār. The great extension of Šūfism in Khurāsān was recorded a century later by al-Hudhrirī [g.v.] in his *Kashf al-maḏāhib* [q.v.].

Of the most important Shi'i festivals such as the remembrance of the investiture of 'Ali at Ghaḍir al-Khumm [g.v.] and the mourning (ruṣūya) of the martyrs of Karbalāh in the month of Muḥarrām [g.v.] is for the first time recorded in the Buyid period. The mission (da'wā) of the Ismā'īliyya [g.v.] in Iran had already started before the end of the 3rd/9th century. The initiative was taken by the Kara-
tians [q.v.] who, in addition to their centres in the Arabian territories bordering on the Persian Gulf, had a footing in Khustain as well. From here the missionary Khalaf was sent to the Shi'ites areas in al-Dhibal. From their base near Rayy, the Isma'iliils, who in this part of Iran were known for a long time as Khafairy, tried to extend their influence to the Caspian regions, and to Khurasan and Transoxiana. After the establishment of the Fatimid caliphate in Egypt propaganda was directed from Cairo. Missionary activity in Iran was on the whole not very fruitful, in spite of the frequently outstanding intellectual capacities of the da'is. The efforts were chiefly directed to the conversion of influential men of the ruling classes. Some spectacular but not very permanent achievements were made, e.g., the conversion of the Samanid amir Nasr II b. Ahmad by the da'is Muhammad b. Ahmad al-Nasafi, which led to the former's forced abdication in 331/943, and of one of the latest Buyid rulers, Abü Kaidjar, who was won over to the Fatimid cause by al-Mu'ayyad fi l-Din [q.v.]. The latter, by winning over a Turkish commander in the Buyid service, al-Basasiri [q.v.], almost succeeded in establishing Fatimid suzerainty in Baghdád. But this was frustrated by the intervention of the Saljuq chief Tughril Beg, who rescued the 'Afsharids from their foreign state. Some of them even reached the rank of vizier. The alterations between Sunnis and Shi'a continued, however, in disputes and literary polemics, as well as outbursts of physical violence. An invaluable source for our knowledge of these controversies is the Kitáb al-Nakd wa' l-Baq' L ma'adih al-nakd fi nakh fad'á'kh al-Rawdáy by Naṣr al-Din Abu 'l-Rashid 'Abd al-Djall il-Kazwini al-Razi, an apology for the Shi'a in reply to a Sunni literary attack. In the course of the 5th/11th century Shi'ism was well on its way towards becoming one of the dominant forms of Islam in Iran. Its greatest progress was made among the predominantly Sunni population of the eastern provinces while the Shi'ites, in general, took a critical stand towards mysticism. The numerous Şuffi shaikhis of this period still lived and worked within the small circles of their pupils, established usually in convents (ribáy, khánkháh) but without organizational ties. They taught by their words as well as by the example of their spiritual life, and did not pay much attention to the scholastic elaboration of Şüfi doctrine, to which, in the schools of 'Iráq Şifism, the name of al-Qumayd [q.v.] is especially connected. The ideas of the great Şufi shaikh of Khurasan living in this period are best known from the hagiographic works written by their followers (e.g., Abü Sa'id b. Abi 'l-Khayr [q.v.], Abü 'l-Hasan 'Ali b. Ahmad al-Kharakánl [q.v.], and Ahmad-i Djamí [q.v.]). One of the first theoreticians of mysticism in eastern Iran was 'Abd Allâh al-Ansárí [q.v.] of Harášt (d. 481/1089). The reconciliation of Şifism with the doctrines of Sunni orthodoxy which took place in this century was largely due to the efforts of eminent Khurasání mystics like al-Kusrayr [q.v.] and Muḥammad al-Ghàzâlî [q.v.]. On the whole, the Turkish rulers of Iran, as well as their Iranian bureaucrats, favoured the Şüfi shaikhis, chiefly out of respect for the miracles (karâ-mâl) attributed to these holy men. One of the most decisive influences of Iranian mysticism, spreading to the farthest corners of the Islamic world, was the activity of Şufi brotherhoods known as tarikas [q.v.]. Apart from the Kâzârúnyiya of Fars already mentioned, most of the early orders were formed in the 6th/12th century. Among them was the fraternity of the Khâdijân founded by
Towards the end of this century two great farıbas emerged almost simultaneously at opposite sides of Iran. In Irās and western Iran the Suhrwardiyah, which was based on the teachings of Abū Hāfs al-Suhrawardī [g.v. (d. 632/1234-5)], was raised for a short time to the position of an official Şuí organization by the caliph al-Nāṣir. A secondary branch of the Suhrwardiyah was established in Multān on the Indian subcontinent. The order of the Kubrawiyyah goes back to the Khwādju Yusuf al-Hamadhānī (d. 555/1160) in Khurasan, but better known through its Transoxanian branch, the Yasawiyya, named after the Turkish Şuí Shaykh Ahmad Yasawi [g.v. (d. 562/1166)]. With the expansion of the Turks to the West the Yasawi type of Şuísm was introduced in Anatolia where it was continued by the Bektashiyyah.

During the interval between the decline of Il-ğhanid power after the death of Abū Saʿīd in 736/1336 and the rise of Timūr, the discontent of the population with Mongol rule found an outlet in the revolt of the Sabrādīs [g.v.] in Khurāsān. A religious dimension was given to this movement by the collaboration of the Shaykhīyya-Behrūziyya, a Şuí order of Şūfis established in Sāzbāwr by Shaykh Khalīfa (d. 736/1335) and his pupil Hasan Behrūzī (d. ca. 739/1338). To a branch of this order belonged Mir Kiwām al-Dān al-Marāghshī, a sayyid who in the same period was a small Şuí state in Mazādarān. His dynasty, residing in Āmul, is known as the Sādāt-i Marāghshī.

The attempts of the caliph al-Nāṣir [g.v.] to assert the secular power of the ʿAbbāsids as well as their leading position in the religious matters of the Sunni community led to sharp conflict with the Khwāzārab-shaḥs, who were supported by Şuíls seeking revenge for the repression suffered under Sunni rule. As a part of this struggle Shah Muhammad tried to establish a rival caliphate for which he put forward, as his candidate, a member of the ʿAlīd family. This scheme was frustrated by the Mongol invasion.

The effects of the Mongol conquest decisively changed religious conditions in Iran. Retrospectively, these changes appear to form a prelude to the establishment of a Şuí state a few centuries later. The disappearance of the ʿAbbāsids caliphate had weakened the position of the Sunnis, who were deprived of this living symbol of the unity of the Islamic community, without having any theological expedient to account for the vacancy of its leadership such as the Şuílī possessed in the doctrine of the ḡayba. The secular power had, moreover, for the first time since the Arab conquest, passed into the hands of unbelievers. Up to the time of the conversion to Islam of Ghażān Khan and the Mongol aristocracy (694/1295) the Ilkhānīs, with the sole exception of the Muslim Ahmad Beg (681/1283-683/1285), were either Şamānists, Buddhists or Nestorian Christians. Temples and churches had been erected in various places and Buddhist bahāshis came to Iran from Central Asia and India. An interesting example of their spiritual influence is provided by the conversations with Buddhist ascetics recorded in the biography of the famous Kubrawi Şaykh ʿAlī al-Dawla [g.v.] al Simnānī. Other groups of non-Muslims were also able to acquire a greater political influence than had previously been possible. The rise to power of the Jewish vizier Saʿīd al-Dawla during the reign of Ṭabārīz Khan (683/1284-690/1291) and the prominent place he gave to many of his co-religionists provoked at the time of his downfall one of the rare instances of an anti-Jewish outburst in the history of Iranian Islam.

In so far as the early Ilkhānīs showed any interest in the religious affairs of their Muslim subjects, they not unfrequently favoured the cause of the Şuí Shā. Already under Hūlūgī the prominent Şuí scholar Naṣīr al-Dīn Tūsī [g.v.] reached a position of great influence at the Mongol court. Apart from his many other intellectual pursuits, he founded a school of Şuí theology which flourished throughout the Mongol period. Although Ḡazān officially adhered to the Hanafi madhkūb, on several occasions he showed his devotion towards the ʿAlīd family, e.g., by making the pilgrimage to the holy shrines in Irās and by founding "houses of the sayyids" (dar al-sayyids) in many of the larger towns providing shelter and support to indigent and wandering descendants of the ahl al-bayt. His successor Oldjaytū (703/1304-716/1316) even temporarily joined the Şuí after earlier having shifted his allegiance from the Hanafiyya to the Şuífiyya.
to the Sunni shari'a in spite of a considerable influence of Shi'i ideas.

The dynasties which dominated Western Iran during most of the 9th/10th century were based on federations of Turkoman tribes. Among these still only superficially Islamized nomads an intensive religious propaganda was spread in the course of this period. It radiated from Ardabîl in Ardârâyâlgân, which from the early 8th/14th century onwards was the centre of a Sunni mystical order founded by Shâyschuk Šâfî al-Dîn [q.v.]. (d. 735/1335). Under the leadership of his descendants, this tarîka won great support among the tribes living in the borderland between Anatolia and Iran. This expansion was accompanied by a shift in the religious orientation of the Şafawid family towards Shi'i concepts, which included the belief in a divine incarnation in the spiritual leader (mursûd) of the order. This change seems to have taken place when it was guided by Shâyschuk Ūnâyd [q.v.] (851/1447-864/1460), and became particularly clear at the time of his successor Shâyschuk Haydar [q.v.] (864/1460-893/1483). From this time onwards the Şafawids claimed descent from the line of Hûsâyni imâms. The politico-religious confederation of Turkoman tribes which they formed was known as the Kildâbâ [q.v.]. Similar traces of extreme Shi'i doctrines, though far less clear than in the case of the Kildâbâ, appear among the Kara Koyunlu [q.v.], especially during the reign of Sultan Dîhân Shâh (841/1438-872/1467) (cf. V. Minorsky, BSOAS, xvi/1 (1954), 271-97). The other Turkoman power in this area, the Aq Koyunlu [q.v.] was, however, unquestionably Sunni.

Two other Shi'i movements with ghâlât doctrines, focused on the concepts of incarnation and messianism, and not similarly to those of the 15th century Şafawiyya, were the sect of the Ahl-ı Hakî [q.v.], which spread from its place of origin in the area of Shâhrâzûr into western Iran, and the Muşâ'âša [q.v.], which spread from its place of origin in the area of the Arab tribes in Khuzistân and southern Irâk. The latter started with the appearance as Mahdí of Sayyid Muhammad b. Falâh in about 840/1436. He formed a small theocratic state which under the suzerainty of the Şafawid şâhs continued to exist for a considerable period as a buffer state between Iran and Ottoman Irâk.

The great expansion of Şofism is one of the main characteristics of spiritual life during the three centuries separating the Mongol invasion from the rise of the Şafawids as rulers of Iran. The most obvious signs of this in religious practice were the pious devotion offered by men of quite different social status to the mystical shaykhs and the growth of the Şofî brotherhoods. The orders which came to flower in the course of this period have maintained themselves in Iran up to the present day in spite of a dramatic reversal of their success in the subsequent period. The Kubrawiya [q.v.] produced a number of outstanding mystical philosophers like 'Alî al-Dâwla [q.v.] al-Sîmânî (d. 736/1335-6) and Sayyid 'Alî al-Hamâdânî [q.v.]. (d. 786/1385). A gradual convergence of the lines of thought of Sunni mysticism and Şofî imâmology is the most interesting feature of their works. The main theme is the identification of the doctrine of the shayba of the Imam-Mahdi with the concept of the permanent existence of a hidden Mirah [q.v.] at the top of a hierarchy of Şofî saints. (See further M. Molk, Les Kubrawiya entre sunnisme et shiisme et thèmes aux siècles de l'hégirique, in REI, xxix (1961), 61-142).

The second great organization of Iranian Şofism, the Ni'mat Allâhî Order, was founded by Shâh Ni'mat Allâh [q.v.] Waîlî (d. 835/1431). Although this tarîka has split into many independent branches in later times, its spiritual centre is still the shrine of the founder at Mâhân in Kirmân. The individual wandering darwîsh [q.v.], a well-known figure of Iranian social life until quite recently, had his prototype in the members of the kalândârî [q.v.] groups.

Among the Şofis, who in this period were still a minority, the tendency towards reconciliation with Sunnî Şofism can also be observed. Sayyid Haydar Âmüll (d. after 787/1385) in his main work, Djâmis Al-Asrâr, laid great emphasis on the fundamental unity of both strains of esoteric thought in Islam. They converge in the acknowledgement of a common source of religious inspiration: the teaching of the imâms, who appear at the beginning of nearly all the chains of tradition (silsilas [q.v.]) of the Şofis. (Cf. H. Corbin, in Mâlanges Henri Mâstî, Tehran 1963, 72-101; see also the edition of the Djâmis by H. Corbin and Osman Yahaya, La philosophie shî'îe, Tehran-Paris 1969).

As elsewhere in the Islamic world of that day, the pantheistic philosophy of Ibn al-'Arabi [q.v.] did not fail to have a profound influence on metaphysical thinking in Iran. It found a particularly fertile soil in Shi'i doctrines, though far less clear than in the case of the Kubrawiya. Among the earliest writers on mystical philosophy although they had not yet been synthesized into a coherent system of doctrine. This congeniality, which is notable especially with the great mystical poets of the 7th/13th century, made it very easy for the commentators of subsequent generations to interpret their works in terms of the scholastic patterns of the philosophy of al-Sâdî al-Wadîdî. Beginning with the poets of the early 7th/14th century like Shâh Ni'mat Allâh Waîlî and Mâhâmî-î Shâbstari [q.v.], these models were consciously applied in all Şofî poetry. The impact of Ibn al-'Arabi affected both Sunnis and Şofis. To the latter belonged the earliest writers on mystical philosophy who can be regarded as his adepts in Iran: Sa'dî al-Dîn Hamûya (d. 650/1252) and his pupil 'Azîz al-Dîn Nasâî.

The proclamation issued by Shâh Ismâyîl in 907/1501 on his ascent to the throne in Tabriz as the first Şafawid ruler marks the most decisive turning-point in the history of Iranian Islam. The population of the newly conquered empire was enjoined to adopt the Şofî form of the call to prayer and to practise the cursing of the first three patriarchal caliphs. The former kaleidoscopic pattern of religious allegiances, which up to that time had always shown a predominance of Sunnism, was now replaced by theocratic unity based on the claim of the exclusive sovereignty in matters spiritual and secular of the 'Alî Amyms. In its earliest stage the Şafawid state was dominated by the Turkoman tribal chiefs of the Kildâbâ who at the same time constituted the leading caste of the religious body. The shah, who was also the murshid of the Şafawî order, was according to contemporary reports of European observers worshipped as God. This is confirmed by allusions to a divine incarnation made by the shah himself in his Turkish poems (cf. V. Minorsky, in BSOAS, x (1942), 1007 ff.).

Apart from the belief in the mission of their religious guide, the intellectual content of the Kildâbâ movement seems to have been very limited. Before long the movement proved to be unequal to the task of converting the majority of the people of Iran, with its ancient Sunni traditions, into a homogeneous Şofî community. The initiative was taken over by the 'ulamâ' of the Ithnâ-Şasharîyya [q.v.]., the only
section of the Shi’a numerous and sophisticated enough to provide religious leadership on an adequate level. The indigenous tradition of Shi’i scholarship was considerably reinforced by the emigration of ‘ulamā’ from centres outside Iran like Djabal ‘Amīl in Syria and al-Bahrayn. A powerful clergy came into being which gradually extended its influence and endeavoured to eliminate the traces of the heterodox origins of the Šafawīs. At the same time, however, the emergence of this class posed the fundamental question of ultimate sovereignty within the theocracy. According to the Ighna-‘ashari doctrine of the imāma [q.v.], the Hidden Imām continues to govern the world during his ghayba and his sovereign rights cannot be shared by any secular power. In the 11th/17th century it had become a point of discussion whether the interpretation of the will of the imāma was entrusted to one of the living members of the ‘Alid house (which implicitly meant the Šafawī shāh) or whether it was the prerogative of the collective opinion of the community as interpreted by the doctors of the Shi’ā. About the same time shah ‘Abbas I was, for political reasons, forced to break the military power of the Khiẓbīš. For a short while the shah tried to find a new base for his position as a spiritual leader in the Nuktawīyya [q.v.], a sect of Khurāsān in which remnants of various earlier Shi’i movements seem to have reassembled. At the time of the last Šafawī ruler, Shīh Sultān Husain (1105/1694-1135/1722), the theologians virtually dominated the state.

The central religious official in the Šafawī state was the sadr [q.v.], whose function had existed already in the Timūrid period. He was charged with the supervision of religious affairs and institutions in general. At the local level he was represented by the ghaybah al-Īslām [q.v.], who was appointed in most of the larger cities and controlled more directly the jurisdiction of the shari’a courts. Towards the end of the 11th/17th century the office of the sadr declined and was replaced by that of a muallābāghi (Turkish: head mullah). The members of the clergy were mainly dependent on the revenue of wakfs, but some of them also acquired great personal wealth and enhanced their prestige among the populace and made them more or less independent of the support of the political power. The shahs, for their part, took a great interest in the maintenance of the pious foundations and the embellishment of the holy places of the Shī’a, both inside and outside Iran. Shīh ‘Abbas I, who transformed his own landed property into waqfī, assumed the title of administrator (muawalā) of the extensive possessions of the shrine of the imām al-Ridā, the actual duties of which were performed by a mu’tawallībāghi residing in Mashhad. The Shi‘i clergy was hierarchically divided into the higher group of the ‘ulamā’ and the lower one of the muallās [q.v.]. The duties of the latter were restricted to education and some functions deriving from the practical application of the shari’a. Among themselves the ‘ulamā’ constituted two opposing theological schools, the Aḥbārīs who rejected all speculative theology and demanded a strict adherence to the hadith of the Prophet and the imāms, and the Uṣūlīs [q.v.] who clamed a right of direct resort to the ultimate sources (usūl) of the faith for the fully qualified scholars of Islam. On the basis of this claim these scholars could call themselves muṣṭafākīd. From this emerged the later institution of the Mardqāt-i tablīk [q.v.].

The history of the conversion of the people of Iran to Shi‘ism is still largely unknown in its details. Apparently, it was not quite completed before the 12th/18th century. The victims of the first wave of actual persecution at the time of the conquest by Shīh Ismā‘īl and his Khiẓbīš were predominantly Sunni theologians. Among the Shī‘is, the order of the Kāzarūnīyya in Fārs suffered very great losses as a result of this persecution. Outbursts of violence against dissenters continued to take place throughout the Šafawī period. During the reign of Shīh Sultān Husayn the powerful muallābāghi Mūḥammad Bākīr al-Maqdīsī [q.v.] intensified the persecution of Shi‘ism in which the Khiẓbīš were not spared. Most of the Iranian jāzīs had virtually ceased to exist at the beginning of the 121/18th century.

Religious topics were very much in prominence in the intellectual life of Šafawī times. In Persian poetry the preoccupation with mysticism was replaced by the cultivation of Shi‘i themes such as the elegies on the holy martyrs. These products of classical literature also influenced the various forms of a rich religious folk-literature. Traces of this can, for instance, be found in the libretti used for the recitals of the rawākhabdīn [q.v.]. According to the autochthonous tradition, the passion plays (ta’āsiya [q.v.]), the occurrence of which is not documented before the late 12th/18th century, were instituted by Shīh Ismā‘īl as a means of propagating Shi‘i sentiment among the Iranians. Whatever the historical value of this assertion, it shows at least the important part played by religious literature in this respect. Through the efforts of the expanding religious class a large theological literature written in Arabic came into being, the magnum opus of which is the Bihār al-anwār [q.v.]. According to the autochthonous tradition, the passion plays (ta’āsiya [q.v.]), the occurrence of which is not documented before the late 12th/18th century, were instituted by Shīh Ismā‘īl as a means of propagating Shi‘i sentiment among the Iranians. Whatever the historical value of this assertion, it shows at least the important part played by religious literature in this respect. Through the efforts of the expanding religious class a large theological literature written in Arabic came into being, the magnum opus of which is the Bihār al-anwār [q.v.].

The most important contribution of Šafawī Iran to Islamic culture was the philosophical school of Isfahān which resuscitated the philosophy of ighrāk [q.v.], first elaborated by Shīhāb al-Dīn Suhrawardī [q.v.] al-Maṭkūrī in the 7th/12th century. Forerunners of this school were the eminent Shi‘i scholars, Shīyāh Bahā‘ al-Dīn al-‘Aǧmī and Mīr Muḥammad Bākīr al-Dāmād [q.v.], but the actual founder, as well as its foremost representative, was Mullā Śadr al-Dīn al-Shīrāzī [q.v.], usually known as Mullā Śadrā. Other notable members were Mullā Muḥsin-i Fayd-i Kāshānī, Mullā ‘Abd al-Razzāk-i Lāhījī and Mīr Abū l-Kāsim-i Fīndarīski. A late 13th/19th century follower of the Isfahān school was Ḥādījī Mullā Ḥādī-i Saḥwārā (1212/1792-8-1255/1838). The strong gnostic element in their philosophy made them suspicious in the eyes of the orthodox mujtahīdīs. They did in fact have an impact on the development of new religious tendencies deviating from the mainstream of the Ḥādījī-‘ashariyya such as the school of the Shīyāhīyya and the Bābī religion.

Since the establishment of the Shi‘i theocracy in Iran, the allegiance of the political power to this form of Islam has only been interrupted twice. The first occasion was the short reign of Ismā‘īl II (984/1576-985/1577), the second the period of Nādīr Shīh [q.v. (1148/1736-1160/1747)]. Notwithstanding the fact that his tribe, the Afshars, had taken part in the original Khiẓbīš confederation, he pledged himself at the time of his election as Shīh Ismā‘īl of Iran in 1148/1736 to an attempt at a reconciliation between the Ḥādījī-‘asharī Shī‘a and the Sunnism of the surrounding Islamic peoples. To this end he suggested a transformation of the Shī‘a into a fifth school of Islamic law, the Dījāfariyya, which would share in the state of
mutual recognition existing between the four Sunni madhābis. Although this proposal was favourably received by a council of Sunni and Shi'i scholars held at Naqšābād in 1256/1743, it was rejected by the leading Sunni power, the Ottoman sultan.

Under the rule of the Zand dynasty, the government returned to a strict observance of orthodox Shi'ism. One of the signs of this was the reinstatement of a Shāykh al-īslām in Shirāz. During this period a revival of Sufism came about as a result of the missionary activity of Maṣūm (Ali Shāhī, who was sent to Iran by the "pole" (kul) of the Indian branch of the Ni'mat Allāhī order. This provoked a fierce persecution end with the execution of Maṣūm (Ali Shāhī in 1212/1797-8. The drive force behind this was the dominating mudāji-khid of this time, Aḥmad Muhammad Bākīr-i Bihbīhānī (1127/1715-20/1803). Living in Karbala', as a leading scholar of the Uṣūlī school, he succeeded in bringing to an end the predominance of the Aḥbārīs at the holy shrines (ṣābābāt) in ʿIrāq, a predominance which had existed there since the end of the ʿAfsāwīd period. At the same time, the Shi'i theory of the uṣūl al-fishāh was being elaborated and greater emphasis was laid on the right of ʿīthākhādī. These developments were of great significance for the relationship between the dynasty of the Kāḏārīs and the clergy during the 13th/19th century. The latter came to hold the spiritual leadership whereas the shāhs could no longer point to an 'Alīd descent as a counterweight. The situation of the chief centres of Shi'i learning outside the boundaries of the Iranian state did very much to strengthen the position of the clergy whenever they opposed the policy of the Kāḏārīs. But even inside Iran they enjoyed a large measure of immunity, an important part of which was the traditional right of asylum (bast [q.v.] ) accorded to places of religious importance.

During the reigns of the early Kāḏārīs, the Shi'i clergy was able to exert a considerable influence on the affairs of the state. FathʿAllāh Shāh (1211/1797-1250/1834), who in all possible ways endeavoured to foster the growth of the religious body, showed himself especially indefatigable and indefatigable in this respect. On more than one occasion they actually interfered with his foreign policy. Under his successors relations between the state and the religious leaders became more strained. The latter's fierce opposition to the growing impact of western influences in Iran finally led to their active support of the popular protests against foreign monopolies like the tobacco concession of 1891-1892 and their involvement in the struggle against the authoritarian rule of the Kāḏār shāhs during the constitutional revolution at the beginning of this century. The Iranian government, on the other hand, as it more and more assumed the attitudes of a modern secular state, became less willing to respect the traditional privileges of the religious class.

Almost at the same time as the controversy between Aḥbārīs and Uṣūlīs was settled in favour of the latter, a new schism divided the Shi'i theologians. The doctrines of Shaykh Ahmad al-ʿAbsārī [q.v.], which were mainly concerned with the role of the Hidden Imam as a mediator in men's striving towards moral perfection and with problems of eschatology, were condemned as heretical by the mudāji-khādis. As a result of this the sect of the Shaykhīs [q.v.] was formed out of what had only been a school of Shi'i theology. After the death of al-ʿAbsārī in 1241/1826, his teaching was continued by Sayyid Kāẓim-i Rashī (d. 1259/1843) who, from his residence in Karbala', was able to exert his influence through the Iranian pilgrims. Afterwards the Shaykhī sect split into three branches: the Akāīšī, the Akāīshī, the Akāīshī, which, although the Akāīshī, is of any significance today. The centre of the present community is the madrasa of Kirmān. Larger groups of Shaykhīs are also to be found in Tehran, in Ḥāḏarbāyḡān and Fārs, as well as among the employees of the oil industry in Khūzistān. (Cf. G. Scarcia, Stato e dottrine attuali della setta scita degli shiākhi in Persia, in Studi e materiali di storia delle religioni, xxv (1954). In 1260/1844 Sayyid ʿAli Muḥammad of ʿIrāq revealed himself as the Bāb [q.v.] or "gateway" who had come to inaugurate a new prophetic cycle. This meant no less than a breach with the Islamic shari'a, as was explicitly confirmed by a conversion of the followers of the Bāb in 1264/1848 at Bādāghāt. The first stage of this new religion was a period of persecution to which the early believers often reacted with violence. The Bāb himself was executed in 1266/1850. After an attempt on the life of Nāṣir al-Dīn Shāh in 1266/1852, the persecution reached a climax and the movement was wiped out as far as public life in Iran was concerned. Although it continued to have its secret sympathizers, especially among merchants and other groups of the middle class of Iranian society, its further development as an organization could only take place during the 20th century. The succession to the Bāb was for some time a matter of contention between Mirzā Husayn-ʿAli Nūrī and his brother Mirzā Nūrī, who, among their following, were respectively known as Bahāʾ Allāh [q.v.] and Ṣubb-i Aṣal. The former, who was able to get the support of the large majority, initiated a reform of the Bābī religion, which, as the religion of the Bahā'is [q.v.], extended its aspirations and activities far beyond the limits of Iranian religious life.

The renaissance of Sūfism in Iran, which had started in the late 12th/18th century, had continued during the Kāḏārī period in spite of the often violent opposition of the mudāji-khādis. During the reign of Muhammad Shāh (1250/1834-1264/1848), it even received official backing as the shah had become an adept of Sūfism and had died from the mudāji-khādis. On more than one occasion they actually interfered with his foreign policy. Under his successors relations between the state and the religious leaders became more strained. The latter's fierce opposition to the growing impact of western influences in Iran finally led to their active support of the popular protests against foreign monopolies like the tobacco concession of 1891-1892 and their involvement in the struggle against the authoritarian rule of the Kāḏār shāhs during the constitutional revolution at the beginning of this century. The Iranian government, on the other hand, as it more and more assumed the attitudes of a modern secular state, became less willing to respect the traditional privileges of the religious class.

Lambton, Qiss custudiet Custodes: Some reflections on the Persian theory of government, in Stud. Isl., v (1956), 125-48; vi (1956), 125-46; eadem, A reconsideration of the position of the ‘ulama` against the ‘ulamā‘ under the Constitution was suspended. Regulations regarding the celebration of religious rituals, the emancipation of women and the use of European dress very much changed the outer appearance of the Islamic society of Iran. The introduction of the Djôlalî (q.v.) era, a solar hijri calendar based on pre-Islamic traditions, is only one example of the vivid interest in ancient Iranian civilization which constitutes an essential element of modern nationalism. Although the impact of these developments on the attitude towards Islam among the educated was very considerable, its effects on the broad masses were still only superficial. After the abdication of Reza Shah in 1941, many of the old religious sentiments and customs were revived. Political groups based on a reaction against secularization and foreign influence took part in the turbulent political life of the early post-war years. The most prominent of these organizations were the fiddîyyûn-i islām (q.v.), led by Navâbî Safawi, and the mujaddidîn-i islām of Ayat Allâh Abu ’l-Kásîm Kâshânî (q.v.). The publication of religious literature was also revived (cf. Y. Armajani, Islamic Literature in post-war Iran, in The World of Islam, Studies in honour of Philip K. Hitti, ed. by J. Kritzeck and R. Bayly Winder, London 1959, 271-52).

Bibliography: In addition to the references in the text of this article only a few works of general character can be mentioned here. For more detailed bibliographies see the individual

(vii).—Literature

As the literature of Iran in its widest sense can not be surveyed in this article, a preliminary definition of its contents is necessary. Essentially, the article is restricted to Persian literature, by which we will understand the poetry and belles-lettres prose works composed in the New Persian literary language in as far as they have been produced by the Muslim population of Iran from the 3rd/9th century onwards. After a treatment of the origins of this literary tradition and of some of its main characteristics, a historical survey will be given encompassing both the
literary works of the past and of the present. This
definition excludes the literatures of pre-Islamic
times, the writings of the non-Muslim communities
(e.g. Judaeo-Persian literature [q.v.]), the learned
prose works, the literatures of other New Iranian
languages and folk-literature. The cultivation of Per-
sian letters outside the boundaries of present-day
Iran is taken into consideration only as far as and as
long as it has been directly connected with the literary
life of Iran intérieur. Some references to general
works about most of these excluded branches of Iran-
ian literary activity have, however, been entered
into the Bibliography.
I. General Aspects.
a. The origins of Persian literature.
About the beginnings of Persian poetry, several
different traditions have been handed down. Accord-
ing to one of them, the first Persian poem was
composed by the Sasanian king Bahram V Gôr
(421-439 A.D.). This initiative remained fruitless, it
is said, on account of the opposition by the Zoro-
astrian clergy who regarded all forms of poetic speech
as being based on falsehood and as a dangerous tool
in the hands of heretics. Whatever the historical
value of this story might be, it is at any rate signifi-
cant in as far as it perfectly illustrates the literary
conditions in pre-Islamic Iran during the last few
centuries preceding the Arab conquest. The fact
that the same monarch is credited with Arabic
poems as well, moreover, points to the complex origin
of Persian literature: on the one hand, from patterns
of linguistic art as they are known to have existed
in pre-Islamic Iranian culture; on the other, from
Arabic literature as it had developed during the
first two centuries of Islam out of the Bedouin
poetry of the Dîjhiliyya. The traditional literary
critics of the Middle Ages, like ʿAwfi [q.v.] and
Shams-i ʿKayâs [q.v.], have denied this double ancestry.
To them, Persian poetry was entirely a product of
Islamic culture. Its formal and thematic conventions
were either taken over from Arabic poetry or newly
invented by the first Persian poets. An important
role as a creator of new forms in assigned to Rudaki
[q.v.]. The information concerning literary activity in
Sasanian times that was available to these mediaeval
critics was not accepted as evidence of the existence
of a pre-Islamic poetry in Iran but was interpreted
as referring only to a kind of rhymed prose set to
music, not to be confused with serious literature.
Modern scholarship has established beyond doubt
that Iran did have an independent literary tradition
from ancient times onwards. This included poetry
with a set of prosodic and metrical rules of its own,
the historical development of which can be traced up
to a certain extent. The oldest documents of Iranian
literature, the Gathas, have been found to be partly
poetical texts with an arrangement into stanzas of
different length and with a metrical system based on
the number of syllables. Within this system at least
five variants are known. This prodigy is quite similar
to that of the Vedic texts. Poetical fragments have also
been discovered in the younger parts of the Avesta.
A new metrical principle seems to be involved in
these last texts, viz. the fixed number of accents. Most
of the Middle Iranian languages were also used
for writing poetry. The Manichaean hymns in Parthi-
ian and Middle Persian that have been found among
the Turfan-manuscripts are partly translations from
Syrian models, partly original compositions. Many
of them are acrostic poems based on the order of the
Semantic alphabet. In some of these hymns there are
evocations of nature at the time of spring which are
very much reminiscent of later Persian lyrical poetry.
In the so-called Book-Pahlavi literature a number of
texts have been shown to be original poems dis-
guised by later Zoroastrian traditions as prose works.
They represent different strains of Middle Iranian
literary culture: the Ayyâhār (or Yâdgar-i Zarariant
belongs to the national epic (cf. E. Benveniste, JA,
cxiv (1932), 245-93), the allegorical tenzone Drâkh-i
Aşirîg to the literature of wisdom (cf. idem, JA
cxvii (1930), 193-225). In both cases, linguistic evi-
dence points to a Parthian origin. There are also
remnants of religious poetry like the hymns on Zurvân
discovered by H. S. Nyberg in the Bundahihïg (JA,
cxiv (1929), 214-5) and a number of other Zoroastrian
poems of a didactical or visionary nature (cf. E.
Benveniste, RHR, cv (1932), 337-80; J. C. Tavading,
Indo-Iranian Studies, i (1950), 86-95; idem, IRAS
(1955), 29-36; W. B. Henning, SBOAS, xii (1950),
641-8). The meters of Middle Persian verse presents
considerable difficulties as a result of the corrupted
state of the available material. According to W. B.
Henning (l.e.), the predominant principle is not syl-
labic but accentual; there are also unmistakable
traces of rhyme, although this was not used with great
consistency, while the dating of the known specimens
is still uncertain. Imitation of Persian models is,
therefore, not excluded. In addition to these speci-
mens of poetry, some examples of belles-lettres
have been preserved as well. Furthermore, a number
of Pahlavi works have survived in Arabic translations
or at least in the New Persian versions based on the
latter. Extremely popular were the collections
of Indian stories such as the Kallâ wa-Dîmna [q.v.],
Bilawhar wa-Yâddasf [q.v.] and the book of Sindibáb
[q.v.]. They had been introduced in Iran during the
later Sasanian period. Their preservation is due to
the translators of the 2nd/8th century among whom
Ibn al-Mûkaffâ [q.v. is the most prominent. Refer-
ences to a fairly extensive novelistic literature in
Middle Persian are to be found in Arabic sources of
which the Fîrist of Ibn al-Nadîm should be mentioned
in particular. Nearly all of this literature has dis-
appeared in Islamic times but not without leaving be-
hind numerous traces both in Arabic and Persian
literature. In this way, most of its subject-matter
has in fact been incorporated into Islamic literature.
This process of assimilation took place at such an
early date that this ancient Iranian lore could play
an important role in shaping the typical Islamic civili-
ation of the Middle Ages. Instances of this cultural
influence are: the legendary or semi-historical tales
about the Iranian kings which through the late
Sasanian codification in the Ksavîyî-nâmâh not only
reached its definite form in the Shâh-nâmâ of Firdawsi
[q.v.] but also became a part of Islamic world-history;
the gnomic literature of the andars surviving in
numerous didactical works in poetry and prose, more
specifically in collections of maxims like the one put
at the name of the vizier Buzurgmîr [q.v.]; finally, a
number of romantic themes both with and without
a historical background, a famous example of which is
the Parthian romance of Wîs u âdâmîn adapted from
a Pahlavi model by Fâqîr al-Dîn Gurgânî [see Gurgânî].
The Arabic sources also tell us something about
the activities of court minstrels and musicians
at the time of the last Sasanian kings. The names of
some of these artists like Barbîd, Sarkâsh and Nîfsa
remained famous far into Islamic times and we know
a few titles of their songs.
From this and similar materials it has been pos-
sible to reconstruct a long tradition of minstrel po-
eygoing back to Parthian times and perhaps even
earlier. As a form of oral literature closely connected with the art of music, it continued to flourish up to the time of the Arab conquest. Even after that event it did not vanish completely but left its influence on the popular poetry of Iran as well as on the practice of the Persian poets of the classical tradition. The minstrel tradition was clearly distinct from the written literature that was mainly cultivated by the class of professional scribes who monopolized the difficult writing system of Pahlavi. The Zoroastrian clergy, whose bias against poetry is exemplified by the anecdote about Bahram Gur cited above, adpered for a very long time to an oral tradition of the religious texts (see further Mary Boyce, *The Parthian gosdn and Iranian minstrel tradition*, JRAS (1959), 10-45).

Several modern scholars have tried to correct the traditional view of the origins of Persian poetry by making use of this new evidence for the existence of a pre-Islamic poetry in Iran. Special attention has been given to the possible connections between the quantitative metrics of classical poetry, described by the theoreticians of the Islamic period in terms of the Arabic system of al-Khalli [see *arznd*], and older indigenous metrical patterns. According to some, the later prosody is nothing but an adaptation of earlier syllabic or accentuated metres. Although this conclusion seems too rash in view of the limitations and uncertainties of our knowledge of Middle Persian prose works in epic tradition after the coming of Islam, together with the minstrel poetry dissolved as a self-conscious artisic tradition, it is a wellknown fact that several of the great poets of Baghdaa who created the new style of Arabic poetry during the 2nd/8th century were of Iranian descent. The oldest of these was Bashshar b. Burd [q.v.]. Abû Nuwas [q.v.] actually used Persian words and expressions in some of his poems (cf. M. Minowi, *Madgalla-i Dânishkada-i Adabiyyat, Dânishgdh-i Tihrdn*, i, 3 (1333 sh.), 132 f. with further references). On the evidence of two late Middle Persian or early New Persian poetical fragments Ch. Rempis has tried to establish an Iranian lineage for two forms of Persian poetry. In a hymn on the firetemple of Karbâyî, preserved in the local history Ta'rikh-i Sistdn, he recognized a stanza of a stream of poems comparable to the later Persian *mathnawi*- and *mukhamsi*-verses; in the ceremoidal address of the *mâbâdhn mûbadh* to the King of Kings at the New Year festival, transmitted in the *Nauruz-nâmâ*, a work ascribed to *Umâr-i Khâyâm, a specimen of the double rhymed *mathnawi* in Pahlavi (ZDMG, cl (1951), 233 ff.).

No matter how great a continuity can be reconstructed in Iranian literature, the fact remains that the minstrel poetry dissolved as a self-conscious artistic tradition after the coming of Islam, together with many other elements of ancient Iranian culture. Since the time of the Umayyad caliph 'Abd al-Malik [q.v.] Arabic had replaced Pahlavi and Greek in the chancelleries of the Muslim empire. The religious minorities continued to have literary languages of their own. In Iran the Zoroastrian clergy continued to cultivate the archaic Pahlavi whereas the Jews strove to preserve a vernacular form of Persian that was close to the actual speech of those days. Within the Muslim community, however, Arabic dominated all literary activity during the first few centuries of Islam. At a very early date the Iranian *mawdîl* appear to have taken an active part in Arabic poetry. A few names are even known from Umayyad times: Abû Ziyâd b. Salmâ (d. after 100/718) used Persian words in Arabic lines; Ismâ'il b. Yâsâr, of *Ahdârshâyândin* extraction, dared to singing the praise of the Persians in front of the caliph Hîghâm [cf. V. A. Eberman, *Persî srdî arabikhsî bâzât epikhî Omeyyaydn, in Zâgânk dadad khatâvand*, reprinted as *Shu'ûbiyya [q.v.],* for the struggle for equality of Arabs and non-Arabs—in particular the Iranian *maâilî*—that in the early 'Abbâsid period was fought out on the field of literary culture (adab). It should be pointed out that the question of the use of the vernacular in literature did not enter at all into this controversy. It is a wellknown fact that several of the great poets of Baghdaa who created the new style of Arabic poetry during the 2nd/8th century were of Iranian descent. The oldest of these was Bashshar b. Burd [q.v.]. Abû Nuwas [q.v.] actually used Persian words and expressions in some of his poems (cf. M. Minowi, *Madgalla-i Dânishkada-i Adabiyyat, Dânishgdh-i Tihrdn*, i, 3 (1333 sh.), 62-77). It is likely, though difficult to assess in detail, that the emergence of new trends in the poetry of the multiracial urban society of 'Irâd during this period owed much to Iranian influences. More evident is this impact in Arabic prose literature as well as in such a short-lived phenomenon as the adaptation of Middle Persian proverbs, epic, religious or *mawdâni-verses* as parodied by Abâs ibn *‘Abd al-Hamîd al-Lûbihîl [q.v.]. Arabic poetry was also cultivated with great intensity in the great cities of Khurâsân and Transoxania. A rich province of the early Islamic period, it was the theatre of many other elements of ancient Iranian culture. Since the time of the Umayyad caliph Abd al-Malik [q.v.] Arabic had replaced Pahlavi and Greek in the chancelleries of the Muslim empire. The religious minorities continued to have literary languages of their own. In Iran the Zoroastrian clergy continued to cultivate the archaic Pahlavi whereas the Jews strove to preserve a vernacular form of Persian that was close to the actual speech of those days. Within the Muslim community, however, Arabic dominated all literary activity during the first few centuries of Islam. At a very early date the Iranian *mawdîl* appear to have taken an active part in Arabic poetry. A few names are even known from Umayyad times: Abû Ziyâd b. Salmâ (d. after 100/718) used Persian words in Arabic lines; Ismâ'il b. Yâsâr, of *Ahdârshâyândin* extraction, dared to
mudhir Bakhtyari, n.p. 1342 sh.) | Ph. Safa, Ta'rikh, i, 147-51. The distich attributed to Abu Hafidh Sughdi might very well be a citation from his lexicon (cf. G. Lazard, Les premiers poètes persans, i, Tehran-Paris 1964, 10 f.). A more serious claim to precedence as the author of a Persian poem composed according to the rules of Arabic prosody can be held by 'Abbas or Abu 1-'Abbas al-Marwazi, who is named by 'Afwil (Lubab, i, 21) as the author of a kasida in honour of the caliph al-Mamun composed at the occasion of the latter's arrival in Marw in the year 193/809. This account is rejected by most modern scholars, mainly on stylistic grounds. The lines quoted by 'Afwil show a dexterity of poetical diction that suggests a much later time of origin (cf. G. Lazard, i.e., 12 and the references there; for contrary opinions see Chr. Rempis, i.e., 227 and J. Rypka, History, 135).

Whether this notice of 'Afwil is to be accepted as historical or not, the rise of Persian poetry appears to us essentially as one aspect of a larger development of political and cultural emancipation in the Iranian provinces of the caliphate. It has often been styled an "Iranian renaissance" though it should be understood that this may not be interpreted as a return to pre-Islamic culture. As the final outcome of that process of Iranization which was facilitated by the 'Abbasid revolution, it really meant the acceptance of the Islamic element as an integrated part of the Islamic commonwealth and its civilization. In politics, this found its expression in the short intermezzo of de facto independent rule of Iranian dynasties between the periods of Arab and Turkish domination; in the domain of culture, in the elevation of Persian to the rank of a literary language. In its oldest form it was known as dari [q.v.], originally a south-western dialect which since the 2nd/9th century had spread over the whole area where Iranian languages were spoken [see further IRAN LANGUAGES].

The eastern parts of Iran took the lead in the use of the vernacular in writing. In the west and the south, Arabic retained its supremacy even under the rule of the Daylamite Buyids.

From the time of the Tahirids, only a few names of Persian poets are known to us and next to nothing of their work has been preserved; although it is recorded that at least one of them, Hanzala of Badghis, had his poems collected into a divan. Thanks to the data transmitted by the Ta'rikh-i Istaswan we are somewhat better informed about the poetry at the court of the 'Afdardids. This source contains a detailed account of the birth of Persian poetry which presents a convincing picture of the way it actually happened, even if similar occurrences can easily be imagined to have taken place in the entourage of other local rulers as well. The notice has the form of an anecdote situated at the court of Ya'qub b. Layth when he was being hailed by the poets after the capture of Harat and the victory over the Khurdijsites. As the amir expressed his annoyance on account of the fact that he could not understand anything of these Arabic pamphlets, one of his secretaries, by the name of Muhammed-i Wa'il, started to compose poetry in Persian, "And he made the first Persian poetry addressed to Iranians. Before him, no one had done such a thing for, as long as they were pahls (i.e. before they became Muslims, both in a religious and in a cultural sense), lyrics used to be sung to them at the sound of the lute (rud) in the khusravand manner. When the Iranians were defeated and the Arabs came, poetry among them was in Arabic and they all had knowledge and understanding of it. No one amongst the Iranians rose to such a greatness that they would sing poems to him, before the time of Ya'qub. The only exception was Hamza b. 'Abd Allah al-Shari, but he was a learned man and knew Arabic." (ed. Mub. Ta'ki Bahar, Tehran 1314 sh., 210). The expression bar farah-i khusrawand in this passage corresponds to the terms surud or naur-i khusrawand as they occur in the descriptions of the minstrel and his art at the Sasanian court in other sources. Scattered pieces of a few other poets of the Saffarid period have also been preserved but the material is too limited to give us more than a vague idea of the poetry of this time. The poets made use of Arabic prosody though the lack of technical perfection they display characterizes them as first trials at handling a new linguistic medium of literary expression. The real history of Persian literature only began with the next period, the time of the Samanids of Transoxiana.

b. General traits of the Persian literary tradition.

Already from the earliest phase of its history Persian literature presents itself as a clearly defined tradition that guides as well as limits the artist in his creative work. Within this traditional pattern there are not only strict rules for prosody but also stringent prescriptions with regard to the choice of themes, images and metaphors. In spite of the dramatic developments that occurred in the course of time in Iranian society, its artistic traditions displayed a remarkable resistance to fundamental changes, at least until the overwhelming influence of Western civilization made itself felt with all its force in the present century. In the preceding section we have referred to some of the elements out of which this tradition has been built up. Ancient Iranian literature may have played a much greater role than has been thought before. Undoubtedly there have also been indirect influences from Indian and from Hellenistic culture. As a typical product of mediaeval Islamic culture Persian literature was syncretistic. It was able to absorb these heterogeneous elements and give them a place in a new harmonious unity. This adaptability can also be observed in other forms of Persian art. The mould in which this literary tradition was cast was, however, Arabic literature. In the 3rd/9th century the latter had already gone through some of the most dynamic stages of its history. It had developed a formal and conceptual idiosyncrasy that would determine the literary activity of the Arabs for many centuries to come [see further ARABIVYA. B. ARABIC LITERATURE, especially the sections i and ii]. This determined also to a large extent the Persian tradition. The work of the early Persian poets was in particular influenced by the "new poetry" of the early 'Abbasid period, although some Persian poets still tried their hands at imitations of the old Bedouin kashda and its repertoire (e.g. Manuchihr, Mu'izzil). The poets of the Hamdandi school equally should be mentioned in this respect. In particular al-Mutanabbi was very much admired in Iran. The nature poetry of al-Sanawari [q.v.] and the genre of the prison ballad of Abi Piras al-Hamdani [q.v.] also provided models for the Persian poets (cf. U. M. Daundota, The influence of Arabic poetry on the development of Persian poetry, Bombay 1934; Viktir al-Kik, Ta'hir-i furang-i 'Arab dar ag'dar-i Manuchihr-i Dughani, Beirut 1971).

The faithfulness of the artist to the established patterns was greatly favoured by the methods of training recommended to the beginner. He was advised to learn the craft by memorizing large quantities of verse from the works of the great masters of the
preceding generations. In addition to this he was urged to become a scholar since learning was considered to be a great asset in poetry. Finally he should study the different branches of literary theory and criticism. The censure of the critics, either the professionals in their learned works on nakhd-i ghāṣr or the educated public in its informal reactions, will have done its share to contain any attempt to go too far beyond the accepted bounds of tradition.

A similar restraint was put on the poet by his social status. Until the end of the 19th century most Persian poets were in some way or the other dependent on patronage. Literary life was mainly centred at the courts of greater or smaller monarchs. If the position of the poet as a craftsman was economically based on the favours of the princely maecenas, he was at the same time indispensable to the court. His task was not confined to entertaining but included also the advertising of the virtues and exploits of the ruler. From the eagerness with which poets were attracted to the courts it can be concluded that this form of political propaganda was regarded as effective. Apart from the sultans, the amirs and the atabegs, the poets sang the praise of lower members of the ruling class as well: viziers, generals or prominent jurists and theologians. From the 5th/12th century onwards the patronage was also assumed by the urban aristocracy. The persistence of this relation-ship between poet and maecenas (madāh) is illustrated by the continuous use of titles like amīr or maliḵ al-ghuṣrāt (poet laureate) from the times of Maḥmūd of Ghazna (ʿUnquri) to the last days of the Kājārs (Bahār). A counterpart to the panegyrical function of poetry was formed by satire [see ḥīkāt, ii]. If poetry had the power to enlarge the prestige of the patron, it could also be used to damage a reputation. This weapon might be used against the enemies of the patron or of the poet himself, but it could also be wielded against the former when he disappointed the poet's expectations. This social function of Persian court poetry certainly did not hinder its reaching at times a high degree of artistic perfection. Sometimes the symbolism of political power and literary talent may even have stimulated the endeavours to attract to it by means of patronage. The effectiveness of a literary work as a medium for social and political publicity depended on a large degree on its artistic value. (Several authors have left explicit statements of the opinions concerning the poet and the function of his profession in society prevailing in their times, e.g.: Nizāmī-i ʿArūḏ, Čāhār maḥālā, ed. M. Kazwinī-M. Muʿīn, Tehran 1955-7, text, 42 ff.; tr. by E. G. Browne, JRAS (1899), 661 ff.; Kay-Kān, Ḵābūnānī, ed. Ghulām-Husayn Yūṣufī, Tehran 1345/1967, 198-92; Shams-i Kays, al-Muṣṭafā fi maṣṣāfīr aḏhār al-ṣadājām, bāṭima, ed. M. Kazwinī, Leiden-London 1999, 415 ff.; ed. M. Radawī, Tehran 1338 sh., 445 ff.; see also Naṣr Allāh Fāsafī, Zindādānī-i ḥādīrān-i darbārī, in Čand maḥālā-i taʿrīkhī wa-دادī, Tehran 1342 sh., 327-51.)

Next to its other functions literature has in Iran always served as a medium for instruction and edification. Didactical works were among the first manifestations of Persian literature. Even the heroic epic, as we know it from the Šahnāmā of Firdawsi and the works of his imitators, is full of moralising asides. Religious themes also appear at a very early date. At first they consisted of ascetic warnings (maḏāfāt) which had their parallels already in Arabic literature in the subḥiyāt of poets like Aḥū Nuʿūmī and Abu l-ʿAtājī [qq.v.]. Gradually ecstatic mysticism found a way of expression in most forms of literature whether poetry or prose. This conquest by Ṣūfism is by far the most decisive development that took place in the history of Persian literature. Some poetical forms became almost completely absorbed by it. The line of development A. Bausani has sketched for the Persian ghasās [q.v.]—from the address to the mamduḥ through an identification with the maʿṣāḥ, the beloved as the object of an erotic poem, to the maʿṣūd, the transcendental Beloved—who very well serve to characterize this whole process of transformation. The attitude of absolute loyalty towards the maecenas which had to be expressed by the panegyrical poet was already in the early court poetry often associated with the total submission of the lover to his beloved as a metaphorical device. For a mystical application of this poetry with all its conventions this fundamental attitude did not need, therefore, to be changed. All that was necessary was a new interpretation of the symbols used. One of the results of this was a great amount of ambiguity in Persian poems. It is by no means always clear whether a poem is addressed to a venerated person in this world or in a transzendental sphere. This ambiguity constitutes one of the greatest problems of the interpretation of the work of a poet like Ḥāṯīz, who seems to fuse the panegyric, the erotic and the mystical into one. His case may not be as unique as it is sometimes presented. Although some of the Ṣūfī poets certainly did withdraw from all attachments to this world in actual life and projected their poetically phrased veneration exclusively to the mystical object, or perhaps to the person of their spiritual leader (pīr), it is undeniable that mystical ecstasy did turn out to be not always incompatible with that relationship to an earthly maecenas. In the course of time the flavour of Ṣūfism to such an extent permeated lyrical poetry that its absence was felt as an aesthetic defect (cf. the remark of Shibli Nuʾmānī, cited by J. Rypka, History, 233).

Another characteristic that made Persian verse a pliable medium for the expression of mystical ideas was its idealism. Quite often, and not least by modern Iranian critics, the early poetry in the so-called Ḵūrāsānī-style is qualified as realistic. This misunderstanding arises from the fact that the poet seems to speak about things in the outer world whereas in fact he evokes a poetical world in which the objects of his description possess an ideal and im-mutable form. His verbal garden is more akin to paradise than to any specific garden on earth, his idolized beauty is more like a ḥārī than like any particular human being. Even when he speaks about topical events such as a military campaign, a hunting-party or a festival he does not depict them as concrete events, but treats them on an abstract level. In the same way his often very detailed attention for natural phenomena does not concern the things themselves but rather the metaphorical possibilities they offer him as symbols. Together they form a fixed stock of images that tend to acquire stereotyped symbolic values. A great number of these have been accepted as tropic expressions in the ordinary use of the language, e.g. narcissus (nargis) for the eye, ruby (laʿlī) for lips, cypress (ṣarās) for slim stature.

The originality of an artist can only be evaluated within the framework of the artistic tradition which defines the boundaries of his work. In the case of Persian lyricism with its pronounced classicism this means that creative invention can only be applied on
the smallest elements of the poem, i.e. the individual lines (bayts) and the images and metaphors on which they are based. The poets vie with each other in formal perfection and refinement of expression, not in novelty of ideas. Sometimes this takes the form of citation (tadmin) which consists in incorporating a line of another poet into one's poem in order to be able to add an original line expressing the same idea in a still subtler way. This preoccupation with the single line of poetry has resulted in a remarkable loose structure, in particular in the ghalz. Recent research on the ghasals of Hafiz [q.v.] has for a great deal been concentrated on attempts to ascertain the structural principle of these poems which is thought to be of an associative character.

C. Forms and Themes.

The most obvious mark of its ties to Arabic literature is the prosodic system that governs classical Persian poetry. At least theoretically all poetical forms, whatever their origin, have been defined in terms of the flexible system of šarād [q.v.] as formulated by al-Khall. Both quantitative metres and, to a lesser extent, the use of rhyme were novelties to Iranian literature. Differences in linguistic structure between the two languages presented the first Persian poets with many difficulties as can be noticed in the technical deficiencies (from the point of view of scholastic theory) in the diwan of the oldest poets who has left an extensive collection of other respects as well, the kasida [q.v.] can be regarded as a different internal rhyme (aa, bb, cc, etc.). In other respects as well, the kasida [q.v.] can be regarded as a basic form. It is the most unquestionable piece of the Arabic legacy. True to its origin it is first and foremost a medium for panegyric poetry and the foremost connected with the social role of many Persian poets. The kasida usually consists of three parts: the prologue (nasib, taqdb), the actual panegyric (madīh) and the concluding appeal to the generosity of the patron (duʿāʿ). The literary convention required that the poet should give special attention to the embellishment of the opening (madīh) and concluding lines (maṭlaʿ) of the passage where he has to introduce the prologue to the panegyric (gurţāz, makhla, taḵālils). The most interesting part is undoubtedly the prologue. A great variety of topics can be used as themes. The choice is often decided by the topical occasion of the poem. Descriptions of nature in spring or in autumn were current in odes to be recited at the nawrūz or the mihrāsdin festivals. The fire festival (duʿās-ni-sada) at the end of winter called for descriptions of bonfires. Another famous theme was provided by wine and viniculture. The life of the court gave opportunities to chant the hunting parties or the campaigns of the patron or to describe the symbols of his royal status (e.g. the sword, the pen, the horse). A special branch of kasida poetry was formed by the elegy (marzīya). A more personal note seems also to be struck in complaints about old age or about imprisonment as well as of the passage where he has to introduce the prologue to the panegyric (gurţāz, makhla, taḵālils). All of these are conventional themes which can be traced back to the tradition of Arabic poetry. Very soon the kasida was equally used for the expression of secular moralism, religious topics and even mysticism. The most common form of the prologue was that of a description (wasf), but sometimes other devices were applied as well, such as semantic riddles (baq̲aʿ, ʿisaf), enigmas (mundzara) or plays of question and reply (šurūṭ wa-duʿaf). Until the time of the Mongol invasion the kasida was the most important lyrical form. It reached a height of rhetorical perfection in the hands of the poets of the Seldjük court (Muʿizz, Anwarī) and in the school of Aḍjarbāyjān (Khākānī). From the 7th/13th century till the classicist renaissance of the middle of the 12th/18th century it was relegated to the background, although the intervening period still produced outstanding poets of the kasida like Sādbārī and Sādāwī [q.v.] and Urṭīf [q.v.]. At the time of the Safawids the elegiac kasida was used for religious poetry mourning the holy martyrs of the Shiʿa. The decline of the kasida in the Mongol period coincided with the full development of the ghasal. It succeeded as the principal form of lyrical poetry. The prosodic characteristics of the ghasal are identical with those of the prologue of a kasida; it has approximately the same length and exactly the same pattern of rhyme. Although no specimens that can be attributed with certainty to Sāmānīd and early Ghaznavid times (4th/10th-middle of the 5th/11th century) have survived, the occurrence of ghasals in a romantic madīna, Warba u Gubākā by Ayyūbī, proves that it was known already as a separate form during the latter period. At a later stage of its development the use of the poet's nom de guerre (takhallu) in the maṭlaʿ became an inseparable element of the ghasal. Some researchers have tried to relate the origin of this usage to the origin of the Persian ghasal itself, in particular in its function as a mystical poem (cf. e.g. E. Bertel's, Istoriya, 519; A. Ateq, IA, s.v. ghasal). This view is incompatible with the evidence. Its use is from the earliest period onwards attested in the panegyric kasida. In the disān of Sanāʿī, one of the oldest poets who has left an extensive collection of
The Persian quatrains (rubā’ī [q.v.], also named du-hayti or tarānā) is not only defined by the number of lines but also by its pattern of rhyme (aaba, less commonly aaaa) and by its metre, to be described as a series of variants of the ideal metre ḥaṭadāj according to traditional theory. This is undoubtedly an artificial construction but the real origin of this form of short epigrammatic poems is still uncertain. Various themes can be chosen as a subject for the rubā’ī. At an early date they occupy the biographies of Sūfī ḥavīks and in mystical treatises. Best known to Western readers is the philosophical quatrains. Erotic and anacreontic themes were by no means incompatible with this form. It is also frequently used for topical poetry, for inscription on buildings, tombstones etc.

The possibilities offered by the much simpler rhythm of the mathnawī [q.v.] have been exploited to the full in Persian literature. A rich epic poetry has been based on it, comprising many works of great extent. The only rarely used musdawwadī [q.v.] of Arabic poetry can hardly be compared with it. Although the factual evidence pointing to an Iranian origin for the Persian mathnawī is very limited, the importance this form has had from the very beginning makes it at least likely that it continues some kind of older indigenous literary form. Three main groups can be distinguished in the Persian epic: (a) the heroic epic, based on ancient Iranian mythology, the legendary as well as the historical lives of the kings of Iran and other heroic cycles that became attached to this [see further hāmāsā, ii.], (b) the romantic epic, elaborating in most cases famous stories about a pair of lovers whose names provide the title of the poem. These stories come from quite different origins. Some of them are episodes taken from the heroic epic (e.g. Khusrāw u Shīrīn), others go back to Iranian (e.g. Wis u Rāmin), Hellenistic (e.g. Wāmīk u Adhrā) and Arabic sources (e.g. Laylā u Madīnān), or are derived from the Kūrˈān (Yūsuf u Zailikīhā). Nearly all of them developed into literary models which were imitated by successive generations of poets. The poetical language of the romantic mathnawī is more rhetorical than that of the heroic epic. Lyric intermezzi often interrupt the intrigue. There are always a few passages added with moralistic aphorisms. With the growing influence of mystical philosophy on literature, the romantic tales acquired an allegorical meaning. (c) The didactic mathnawī includes a diversity of works the main purpose of which is instruction of one kind or another. This can be the vulgarization of science, moral precepts of a secular nature or the exposition of philosophical, religious or mystical truth. The poems of this category belong to epic literature in as far as they make use of narratives to typify the theoretical subject-matter. Frame-stories are also used to wrap the contents in an attractive epic form (cf. e.g. Rūdākī’s Kālīla u Dimnā and several of the mystical mathnawīs of ʿAttār). In the great tradition of the so-called Sūfī mathnawī anecdotes became particularly important. In these last works stories can be found that were taken from the Kūrˈān, from ʿInādī, from the kīyāṣ al-anbāsījī and the hagiography of Sūfī saints as well as from a great number of other sources. (Of some of the most important among these works the narrative elements have been analysed and related to their sources; cf. on Sanāʾī: M. Rādawi, Taʿālīḵāt-i Ḥadīthāt al-khākīh, Tehran 1344 sh.; on ʿAttār: H. Ritter, Das Meer der Seele, Leiden 1955; on Dījāl al-Dīn Rūmī: R. H. Nicholson, The Mathnawī of Jalāludīn Rūmī, vols. vii and viii (Commentary), London 1937-40; Bādī al-Zāmān Fūrūzāndār, Maḏḥahīkh-u kīyāṣ wa tamkīlīkh-i Mathnawī, Tehran 1333 sh.: idem, Sharḥ-i Mathnawī-i sharif, 3 vols., Tehran 1346-9 sh., left unfinished). A favourite allegorical technique is the sabānī hāl, “the speech of state”. This means that animals, things, or even metaphysical and legendary beings are introduced as speakers illustrating through a description of their own mode of existence the abstract ideas put forward and the doctrine of the poets.

As metre and rhyme were, in the classical tradition, regarded as almost indispensable to a genuine literary composition, prose could only play a modest role in Persian literature. It had, moreover, to compete with the mathnawī in most narrative genres. Still, when considered from a more impartial point of view, a rich and varied literature of prose works of artistic value appears to exist. Anecdotes are also a favourite instrument of prose-writers even if their works are of an entirely utilitarian intent. It is, for that reason, not always possible to draw a clear line between artistic and non-artistic prose. A survey of different genres of story-telling in prose is given s.v. HIKAYA, ii.

Conspicuous traits of the stylistic development of Persian prose are their interlacement of prose with poetical fragments and the increasing abundance of rhymed prose for which full advantage was taken of the possibilities offered by the vocabulary of Arabic. From the Mongol conquest onwards the tendency towards formal embellishment went to such extremes that meaning became almost completely subordinated to form. A trend to simplify the language of literary compositions started early in the 13th/14th century. For a detailed history of Persian prose style see M. T. Bahār, Sahākhānāšt, 3a taṭrīkh-i tāsawwur-i nārī-i fārsī, 3 vols. Tehran 1321 sh.

In the course of this survey there has been occasion to refer to several of the genres current in Persian literature, in particular in as far as they were connected with one of the poetical forms. In addition to this, some reference should be made to the genre of the balandarīyāṭ, a type of wandering dārāngh who practises in its extreme form the antinomian way of life of malāmatīyya [q.v.] mysticism. Poems of this genre can be quatrains (Bāhā Tāhir, ʿAttār) or may have a form intermediate between the kāṣīda and the ghaṣal (cf. esp. Sanāʾī). It seems to have absorbed the literary tradition of provocative identification of the poet with forms and symbols of non-Islamic religions (kufrīyād) which is attached already in Arabic poetry of ʿAbhāsid times and in Persian poetry appears as early as Daḵīlī [q.v.]. The balandarīyāṭ later on
merged with the mystical ghazal (cf. H. Ritter, Das Meer der Zeile, 487 ff.; idem, Oriens, xii (1959), 14 ff.). Another genre worth mentioning here is the shahr-āshāb or shahr-angīs, short poetical witicisms on young artisans, usually quatrains but also occurring as kasidas. In the latter case, they have been worked out to a satire on a whole town. Although themes of this kind can be found at quite an early date they really became popular only from the 10th/16th century onwards. The importance of the shahr-āshāb poems as documents of social conditions has been overrated (cf. A. Mirzoev, Sayyūdī Naṣafī i ego mesto v istorii tadzhikskoy literaturi, Stalirabad 1955, 143 ff., cited by J. Ryplka, History 297, 302 ff. See also on this genre: M. Dż. Mahdīb, Sabk-i Khurāsānī, 677-99; A. Gulčīn-i maštān, Shahr-āshāb dar shīr-i fārsī, Tehran 1346 sh.). There are also genres that are strictly bound to prosodic forms, e.g. the Sāhāndā, a short mahmūr piece in the metre mutahābīn on themes belonging to the topic of wine-drinking. The oldest specimens date from the 8th/14th century (Salmān-i Sāwādī, Ḥāfīz). An anthology of works of this type was compiled by ʿAbd al-Nabī Faḵr al-Zamānl Kazzwīnī in 1028/1619. (Taghīkra-i Maykhānā, ed. by Gulčīn-i maštān, Tehran 1340 sh.).

The poetical language, its images and metaphors have only been explored to a limited extent so far. The nāmār poetry in the narrow sense has been inventiorized and analysed by C.-H. de Fouchécour, La description de la nature dans la poésie lyrique persane du XIe siècle. Inventaire et analyse des thèmes, Paris 1969. Special attention is given to the symbolism of the erotic-mystical ghara in the chapter on Ḥaṭi, motivs i forme della poesia persiana of A. Bausani, Storia, 239-95; cf. idem, Persia religiosa, Milan 1959, 250-54; Manšūrī Murtadāwī, Ḥāfīz yā muḥādāma dar Ḥāfīz-šinaštī, Tehran 1344 sh. The Zoroastrian background of many themes is examined by M. Muʿīn, Mondazaynā wa taʿlīkh-i ān dar adabīyyāt-i ārāri, Tehran 1326 sh., 1338 sh.1

II. Historical Survey.

a. Periodization of Persian literary history.

Most histories of Persian literature derive the arrangement of their subject-matter largely from the divisions of Persian literary history. This method is to a certain extent justified by the fact that royal courts have always been very important in the literary life of Iran. Schools of poetry can quite conveniently be identified and labelled by reference to the political centres on which they depended. Apart from the theoretical objections that can be brought forward against the exclusive use of a political frame of reference, one of the main practical disadvantages is that it cannot account for literary developments that intersect the boundary lines of political history. An arrangement based on a classification of forms and genres, as has been chosen for instance by E. Ḩethē and, more recently, by A. Bausani, can do more justice to the intrinsic history of literature as an autonomous artistic tradition. In the present survey, a broad historical scheme has been adopted which leaves sufficient room to trace out at least the most essential lines of the purely literary development. Within each historical section a secondary arrangement according to the main genres of literature (lyric poetry, epic poetry, prose) has been followed as far as possible.

Several attempts have been made to work out a more fundamental theory of periodization. A. Zarre has based his trifold division of Iranian literature as a whole on the principles of Marxist literary theory. The feudal period encompasses both the classical Persian literature and the literature of the Middle Iranian period (cf. Oṭark in Vostok, shornik, ii, 26). Suggestions for a much more refined scheme based on autonomous literary developments as well as on political and economic factors have recently been made by A. N. Boldirev and I. S. Braginskyy (cf. I. S. Braginskyy et al., Problemi periodizatsii istorii literatury narodov Vostoka, Moscow 1968, containing reprints of articles published earlier in Narodl Azii reprints of articles published earlier in Narodl Azii

A specimen of this is the poem designed by Ḥādīdīk al-šīrī fārsī. The most authoritative work dealing with the disciplines of prosody as well is al-Muḍjam fī maʿāṣir asḵār al-ʿadhām (ed. by Shams al-Dīn Muhammad b. ʿAlī al-ʿRāzī, Shams-i Kays for short (ed. by E. G. Browne and M. Kazzwīnī, London 1909; ed. by Mudarrīsī-Rādawī, Tehran 1314 sh., 1338 sh.).3
Clature but is essentially based on stylistic criteria. This theory distinguishes three different styles each of which is typified by the poetry of a specific region during a certain period of time. (a) The style of Khuršān or Turkistān (sabh-i Khurāsānī, sabh-i Tur- kistānī), i.e., the comparatively simple and balanced style of early Persian poetry up to the Sādījīk period. It is ruled by the principle of harmonious use of images and metaphors within the limits of one line (maward-nār). The language both of prose and verse is still the old dārī which has not yet been overloaded with Arabic loanwords and expressions. The main forms of poetry are the ḭasīda and the maʿlūmah, especially the heroic genre. (b) The style of Yrbā (sabh-i Yrbāšī) is characterized by a development towards a rhetorically more sophisticated type of poetry, the language of which is much more influenced by Arabic. There is also a tendency to use difficult learned allusions. In the course of the period of the Yrbāšī style, the ghasal and the romantic epic become the most prominent forms of poetry. It is equally the time of the rise of Sūfī literature in all its various forms. Most of these developments affect prose literature as well. There exists some uncertainty about the exact beginnings of this style. The shift of the main centre of literary life to the west during the second half of the 6th/12th century is reflected in its name, but unmistakable traces of similar stylistic trends can be found in the literature produced in the eastern parts of the country from the end of the preceding century onwards. (c) The Indian style (sabh-i Hindī [q.v.]) is in its origin as a clearly defined poetical style more narrowly associated with historical and geographical factors than the two others. These factors are the radical changes in Iranian society resulting from the victory of the Šafawīs in the 11th/16th century and the migration of many Persian poets to Indian courts, which took place simultaneously. The characteristic traits, as they have been described by A. Bausani, are: deviations from the rule of harmonious use of imagery, leading to a “baroque” extension of the stock of images and metaphors allowed in poetry, the predominance of mystical-philosophical themes, and an extreme tendency towards allegory. This style reached its full development in the time of the Tāhirīds and the Saffārīds. For the earlier period our knowledge entirely depends on the fragments transmitted by a number of sources of quite different nature. The most important categories are the anthologies (tadhkhīra [q.v.]), foremost the Luḥāb al-albāb by ʿAwfī [q.v.], lexicographical works, the oldest extant work being the Luḥāt al- Furs by Asadī [q.v.], and works on literary theory. Usually the fragments do not amount to more than one or two lines. Complete lyric poems of the 4th/10th century are very rare. Perhaps the most ancient specimen is a ḭasīda on the cultivation of wine by Rūdakī preserved in the Taʾrīkh-i Sīsān. The first attempt to reassemble these scattered pieces was made by H. Ethīn in a series of monographs published between 1872 and 1875. Several scholars both inside and outside Iran have continued this line of research (cf. G. Lazār, Les premiers poètes persans (ixe-xe siècles), Fragments rassemblés, édits et traduits, 2 vols., Tehran-Paris 1964, with further references).

The court of the Sāmānīd āmirs in Būḥārā in the 4th/10th century is the first great centre of literature about which some detailed information is available. Both the āmirs and the prominent men of their entourage, like the Balʿams [q.v.] and the members of the military clan Simghūr, encouraged men of learning and poets to use the vernacular as a literary language. There was much interest in Iranian lore but in the whole the literary tradiotional forms were expanded to fit new patterns of Islamic culture. A particularly splendid episode was the reign of Naṣr II (301/914-331/942), the patron of Rūdakī [q.v.] (d. 329/940-1), who was the most distinguished figure of the Sāmānī literature. More than 100 bayts from his works have been preserved, considerably more than of any of his contemporaries. He cultivated a great variety of forms but the traditional forms of the Safawīs in the invention of several forms of poetry are certainly unhistorical. There are indications that the literary activity of the Ismāʿīlīya [q.v.] exerted some influence on the intellectual circles at the Sāmānī court. The anonymous commentary on a didactical ḭasīda by Abu ʿl-Haṣam Gurgānī (ed. by H. Korbin and M. Muʿīn, Tehran-Paris 1953; cf. G. Lazār, op. cit., i, 24) contains references to the interest taken in the doctrines of this Ismāʿīlī philosopher by Rūdakī and two other poets: Shahīd of Balkh, who himself is also known as a philosopher, and Muḥṣīf, one of the viziers of Naṣr II. Another notable poet of the earlier Sāmānī period was Farsāwī. To a later generation belong Abu ʿl-ʿAbbas Rābinjānī, Abu ʿl-Saʿāb of Harāt, Muʿīf of Balkh and Daḵīḵī [q.v.]. This last, who is best known through his epic work, was also a great master of the early lyrical style. Much attention has been paid to his allusions to Zoroastrianism, which are best explained as early instances of the topic of the kufriyyāt and should not be taken at their face-value. From the increasing number of poems of the last decades of this century, special mention should be made of Kīshā (born 341/952), the first to write religious poems showing his ʿRīfīte sympathies. Other names are Abu ʿl-Ḥasan Lawkārī, Sīpīhī, Bāḏī Balkhī, Shūrawī, Abu ʿl-Mathāl, Shākir, Dūljābī, Ammārī Marwāzī, Amir Aḏkhīdī and Ismāʿīl Muntazīr, the last two mentioned being members of the Sāmānī house.

The local rulers of Cāghānīān, the Alī Muhāḏdī, were equally interested in Persian poetry. They patronized Daḵīḵī during a part of his career and later Mundūjī Tirmidūjī as well as some of the great poets of the Ghaznavīd period. To the west, Persian poetry penetrated to the court of the Šafawīs in Gurgān and even to the residence in Ravy of the Būyīd vizier.
"Şâhib" Ismâ'îl b. 'Abbâd al-Ťalâkâni [see ISMÂ'ÎL] (d. 409/1018-19), who is also renowned as a writer and a patron of Arabic letters. Among the first poets at these courts were Manṭûkî Râzî (d. between 367/977 and 380/991) and Ḥusrawî Sarâghslî (d. before 383/993). The popularity of poetry in dialects (Tabârî, Ġilâkî) in northern Iran during this period is worthy of note.

The Turkish Ghaznavids inherited the cultural traditions of their former colons, the Sâmânîs. Their remote capital, Ghazna, was, during the first half of the 5th/11th century, the most brilliant centre of intellectual and literary life in Iran. All this was the result of a conscious policy pursued by the early Ghaznavids to attract scholars—the most celebrated among them being al-Bīrûnî [q.v.]—and poetical talents to their court. It was inspired by a keen sense of the propagandist value of patronage. The writers and poets of this time put great emphasis on the glory of the dynasty and on its legitimacy. Poets accompanied the sultans on their campaigns, particularly on the raids into Indian territories, and celebrated their victories (e.g. the destruction of the temple of Shiva at Somnâgh in 416/1026). Sultan Mâmûd himself entered into literature on account of the stories about him and his favourite slave Ayâz [q.v.].

Thanks to a much fuller documentation of the literary production, we can now for the first time study the lyricism of the Khûrâsânî style in all its details in the works of the poets of the early Ghaznavid school. The period is dominated by three poets who exerted an influence on Persian poetical style that lasted throughout the centuries: ʿUnûsûr [q.v.] (d. 431/1040-41), Farrûghî [q.v.] (d. 429/1037-8) and Manûchîrî [q.v.] (d. about 432/1040-1). ʿUnûsûr, the poet laureate of the court of Sultan Mâmûd, is first of all a great panegyrict, which made his work a favourite source for the older writers on the rhetorical schemes. The descriptive art of the prologues is more fully developed in the poetry of Farrûghî, especially in the formalized descriptions of nature. His style is characterized by the use of parallelism in the structure of the two parts of the distich. Manûchîrî shows a great amount of individuality within the common tradition in the choice of his images. He is especially famous on account of the strophic poems.

The works of the other poets of the period have only been transmitted in a very imperfect way. We can have at least some idea about the poetry of Lâbbîl [q.v.] (d. after 429/1037-8) and ʿAbbâzî (d. ca. 432/1040-1). Râbîʿa Kûzdârî of Balkh is probably the earliest female poet of Iran, although the chronology of her life is uncertain. She became the heroine of a popular romance (cf. Fr. Meier, *Die schöne Mahsârî*, 27-42). The poet Bâhrâmî is known to have composed some treatises on prosody which were used as textbooks for a considerable time but have not been preserved. Abu ʿl-Fath Bustî (d. between 400/1009 and 405/1013) is said to have left two diwâns, one in Arabic and one in Persian.

A second centre of patronage was the residence of Amir Naṣr, a brother of Sultan Mâmûd and governor of Khūrâsân. In Rayy lived the poet Ǧaḫâdârî (d. 426/1034-5) who, in spite of his service to the Bûyûd court, was in close contact with the Ghaznavid sultan as well.

The defeat of Sultan Masʿûd I at the hands of the Saljuks in the battle of Dândânkân in 432/1040 divides the history of the Ghaznavids into two parts. After this event they lost control over the western parts of their empire and drew back upon the eastern half, i.e., the present-day Afghanistan and the conquered areas on the Indian subcontinent. They did not abandon their cultural interest, however. Poetry was now also patronized at the court of the Ghaznavid viceroy in Lahore. This can be regarded as the starting-point of Indo-Persian literature. Quite prominent names are to be found among the first poets at the court of the Panḍâb: Abu ʿl-Farâdhî Rûnî (d. after 492/1098-9) and Masʿûd-i Sâd-i Salâmân [see MASʿÛD-I SâD-I, d. 483/1094-7—515/1212-2). The latter brought many new elements into the style of panegyrical ǧâsidâ which anticipated later developments finally resulting in the style of ʿIrâk. His work is known to have influenced Anwâr. Masʿûd-i Sâd is especially famous because of his prison-poems, reflecting personal experiences, although as a genre the ḥâdîssîyâdâ were already a part of the Arabic-Persian tradition. The importance attached to poetry in the capital itself is demonstrated by the large friezes containing poetical inscriptions that has been unearthed in the ruins of the palace of the sultan (cf. A. Bombaci, *The kâfic inscription in Persian versas in the court of the Royal Palace of Masʿûd III at Ghazni*, Rome 1966). The reign of Sultan Bahramshâh (512/1118-552/1251) was very fruitful. Muḥtârî (d. probably 554/1159 [q.v.]) was a versatile writer of ǧâsidas. The fame of Sanâhî [q.v.] (d. about 555/1160-1) is particularly based on his religious and moralistic poetry. A great number of his panegyricts belong to the genres of the "ascetic poems" (szâdîyyâdâ) and the ǧâlândariyyâdâ. A similar preoccupation with religious and ethical themes is to be found in the diwân of the great Ismâʿîlî poet and philosopher Nâṣir-i Ḥusraw [q.v.] (d. about 465/1072-73). Sanâhî's extensive collection of ghâzals has been mentioned already on account of its significance for the history of this poetical form. Another notable poet of the ghâzal was Sayyid Ḥasan-i Ghaznavi Ashraf (d. 556/1160-1).

The foundation of the Saljuq sultanate in Iran unified the country both politically and in a religious sense. This new situation gave the cause of Persian letters a better chance to win the western provinces. Asâdî [q.v.] of Tûs compiled his dictionary *Lughât al-Furs* in order to make the writer's parts of Iran acquainted with the vocabulary of the eastern literary language. He himself emigrated to Ardârbâyân where he found a patron in Abû Dulaf, the ruler of Naḵchûwân. The first prominent poet born in the west was Kaṭrân [q.v.] (d. after 465/1072-3). He attended the local courts of Taḥrîz and Ghazna. Local centres of power emerged also in other parts of the country and offered the poets a greater variety of chances. Best known among the provincial panegyrists was Azrâkî [q.v.] (d. before 465/1071-3), who glorified the governor of Harât as well as the Saljuq Sultan of Kirmân. The central seat of power, the court of the Great Saljuqs, was during the 5th/11th century not very conspicuous for its interest in poetry. We know a few names such as Lâmi [d. ca. 455/1063] and Burhânî (d. 465/1072-3), but the one truly great poet was the latter's son Muʿizzî [q.v.] (d. between 515/1212 and 521/1218), who later on joined the group of poets at the court of Sandîar in Marw. Here the art of the ǧâsidâ was elaborated with great rhetorical refinement. A great master of this art was Anwâr [q.v.] (d. probably 585/1189-90). Other lyricists of great talent were Abîdî Shâbir (d. between 538/1143 and 544/1148) and Diâbî (d. 555/1160).

In Central Asia Turkish dynasties continued to favour Persian panegyrict. Under the Ilkhan, Buḫârâ had its own school of poets led by the rivals ʿAmâšk [d. ca. 543/1148-9] and Rashîdît of Samar-
The most interesting figure was the satirist Suzairi [q.v.] (d. 562/1166-7) who directed his ridicule against several of his colleagues. In the time of the Khwarezm-shahs the most influential man of letters was Rashid al-Din WasWat [q.v.] (d. 575/1177-8 or 578/1182-3). Besides being a poet, he was a prolific writer in Arabic and Persian prose.

The growing insecurity of life in Khurasan from the middle of the 6th/12th century onwards, mainly a result of fresh invasions of Turkish Ghuzz tribes, caused an increasing number of poets to emigrate to the west. This trend is exemplified in the career of Aghiri-i Aghsikal (d. ca. 570/1174-5) and Zahir-i Faryabi [q.v.] (d. 598/1201-2), who both travelled to the Saldjuk court in 'Irak and further to the Ildegizids atabegs in 'Ardharbavdgan. At the same time there emerged a short-lived but not insignificant school of poets in 'Isfahan dependent on the patronage of local aristocrats such as the 'Ali- Khwajgan and the 'Ali-Sa'id. To this group belonged Djamal al-Din Isfahani (d. 588/1192-3) and his son Kamal al-Din Isma'il [q.v.] (d. 635/1237-8) as well as the lesser known Shara'i al-Din Shufuwa. Closely related to the work of these poets was the school of 'Ardharbavdgan. It comprised the encomiasts of the many local rulers of north-western Iran, among whom the Ildegizids and the Shirvanshahs were the most prominent. The outstanding lyrical poet was Shara'i al-Din [q.v.] (d. 652/1254-5), the last great poet of the shaida of pre-Mongol times. Mention should also be made of Falaki Shirwani [q.v.] (d. about 550/1155-6), whose divan contains a number of remarkable habisyydd, and Mu'jir-i Baylakani (d. about 594/1197-8), one of Khakani's pupils.

The ghazal continued its development into one of the majors forms of lyricism throughout the 6th/12th century. The course of this process since late Ghaznavid times can be traced in the diwan of Adib-i 'Sahir, Anwari, Djalal al-Din I'sfahan, Zahir Faryabi and Khakani. The mystical application of the symbolism of the ghazal shows itself in an unequivocal form only at the very end of this century in the work of Farid al-Din 'Attar [q.v.].

Another form that became a favourite of Saldjuk times was the rubii. We find it in the 5th/11th century already used for religious thoughts. The poems are ascribed to famous Sufi shaikhams like Abu Sa'id b. Abi 'l-Khayr [q.v.], Ansari [q.v.] and Abu 'l-Hasan Khurasani [d. 425/1034-5]. The du-baytis of Baha Tahir 'Ursun [q.v.] (d. 401/1010) contain early examples of the kalandari themes. They show their affinity to popular poetry by the use of dialect forms. At the end of the period the mystical quatrains is again well represented in the Muhkamndama of 'Attar, a huge collection of rubii-yiiyt arranged according to topics by the poet himself (cf. H. Ritter, Philologika xvi, in Oriens, xiii-xiv (1961), 195-228). The philologicalagnosticism of the famous quatrains of Umar-i Khayyam [q.v.] (d. probably 515/1121-2) has some affinity to this mystical trend but cannot be identified with it. This short poem lent itself to the expression of quite profane topics as well. Anacreontic and erotic themes closely related to those of the ghazal are to be found in the poems of the female poet and singer Mahsati [q.v.]. Like Rabi'a, she is historically a rather vague personality and appears also as the heroine of a popular novel. It should be noted that most Persian poets have left collections of quatrains.

Among the fragments of Samandi poetry there is a remarkably large number of matnawii-lines, but it is very often impossible to define the exact nature of the poems from which they originate. It is clear, however, that in addition to the versions of the heroic epic in prose, already at the turn of the 3rd/9th and 4th/10th centuries an attempt was made to treat the same subject-matter in the form of a matnawi. The poor remnants of this work by Mas'udi of Marw just permit the conclusion that it comprehended the whole range of the royal epic as we know it in the classical form of the Shakhnama of Firdawsi [q.v.], which was completed about 400/1009-10. Through the latter work a fragment from the unfinished maqamlawi of Da'iki has been preserved. After Firdawsi the heroic epic continued in the form of monographic poems dealing with the adventures of individual heroes. Especially favourite were the members of the Sistanian dynasty of vassals to which Rustam belonged. The most important writer of this genre is Asadi [q.v.] (the theory of the two Asadis now has few defenders) with his Gargshahpurnama. The strong influence of the romance of Alexander shows itself in the emphasis on philosophical discussions and journeys to far and mysterious countries. The tales about Alexander [see ISKANDARNAMA] formed the only part of the epic of the kings that ultimately survived as a separate genre in the literature of the matnawi. The classical model of this branch was provided by the double Iskandarnama of Ni'ami [q.v.]. [See further HAMASA, ii].

The oldest subject of a romantic maqalawi that can be identified is the story of Yasuy u Aziiblik [q.v.], based on the 12th sura of the Qur'an. Of the several versions known to have been composed in pre-Mongol times only one has been preserved. This poem used to be ascribed to Firdawsi but recent research has rejected this and attributed it to a certain Amami who wrote it after 476/1083 for a Saldjuk prince (cf. J. Rypka, History, 157 f.). It contains references to two versions of the 4th/10th century by Abu 'l-Mu'ayyad and Bakhitiyar. The same story was later treated by 'Am'ak. From the romances written by 'Usurn [q.v.], Wamiik u 'Ahrdr, a story going back to Helenistic sources, has been partly recovered recently. Two others, Khang-but u surzh-but, inspired by the statues of Buddha at Bamiyan, and Shdbahr u 'Ayn al-Nayd have been lost. Another recent discovery is Warka u Gulya, a Persian version of the story of Sultan Mamlud. It is a love story, situated in Arabia in the lifetime of the Prophet, and not unlike the European romance of Floire and Blancheflor.

Towards the middle of the 5th/11th century Falghr al-Din Gurgani [q.v.] elaborated an ancient Parthian tale, transmitted up to his times by Pahlavi literature, in the maqalawi, Wis u Ramin. The significance of this work for the history of Persian literature lies not only in its origin, thoroughly investigated by V. Minorsky, but especially in the influence it exerted on the further course of courtly romance. Several stylistic conventions and topics were introduced by Gurgani and afterwards developed by a long line of imitators. A particularly close relationship appears to exist between this work and Keraww u Shrin of Ni'ami [q.v.] (d. 565/1459). While Gurgani's story itself was abandoned, Ni'ami set the pace for future generations both as far as the subject-matter and the formal conventions are concerned. The same can be said of his other romances: Haft Paykar, the romanticized lifestory of Bahram Gur, serving also as a frame-story for seven splendidly told fairy tales, and the celebrated Arabian story of Laylat u Madjin. Ni'ami treated these subjects with great psychological depth. On the other hand he enriched the romantic maqalawi by using the imagery of lyric poetry to the full, treating it with all the rhetorical
ingenuity characteristic of the ‘Irākī style. He is justly regarded as the real founder of the Persian romantic epic. The *Nasīrīndma* by ʿAttār [q.v.] also belongs to this category. The *maθnāwī* was from the earliest times onwards used for didactic purposes as well. Rūdākī composed versions of the Indian collections of fables and tales *Kalīla u Dimna* [q.v.] and *Sindibādnāma* [q.v.]. They were both repeatedly remodelled by later writers both in prose and in verse. To the same group of works belong the Bilawhar u Yaddāsaf (*Bīdāsī*) [q.v.], fragments of which have been recovered from the Turfan manuscripts. Although written with Manichaean characters, the language of this text shows unmistakable signs of a New Persian original which can be dated in the Sāmānīd period (cf. W. B. Henning, *Persian poetical manuscripts from the time of Rūdākī*, in *A Locust's Leg. Studies in honour of S. H. Taguidāshed*, London 1962, 89-104). Narratives of this kind were from pre-Islamic times onwards especially valued on account of the element of moral instruction they contained. They can therefore be classified as a branch of the didactic epic. Another type is represented by the *Aṣaṛinīndma* of Abī Shākūr of Bālkh completed in 336/947-8. Quite a number of fragments have been retrieved which can be ascribed to this work with some certainty. As far as we can judge from these remnants, it consisted of a series of aphorisms predominantly of a moralistic nature and illustrated by the use of inserted anecdotes. If this description is correct, it would mean that the *Aṣaṛinīndma* prefigured a structural type on which most later works of secular or mystical didacticism were based. The first and perhaps most important instance of this is the *Bīdāsī* of Sānāʾī [q.v.], usually regarded as the beginning of a long tradition of Sūfī maθnāwīs. The anecdotes in this work are very short and entirely subordinated to the theoretical contents they serve to exemplify. Although the poem has sometimes been described as an encyclopaedia of Sūfism, the *Bīdāsī* contains, in fact, besides mystical elements, a wide range of other themes such as philosophy, ethics, science and even panegyrics. It is not surprising, therefore, to find that diverging lines of development originate from this point in the history of the gevašt. On the one hand, the *Māḥzan al-asrār* of Nizāmī, dealing mainly with secular ethics, is notwithstanding its different metre and the far more rigid composition, according to the statement of the poet himself, written in competition with the work of Sānāʾī. On the other hand, ʿAttār’s *Aṣaṛinīndma*, built on the same principle, is entirely devoted to mysticism. In both works the narrative has become a fully elaborated element in its own right. Quite a different type of structure is revealed by the “frame-story” maθnāwīs of ʿAttār [q.v.], the most famous of which are the *lidāhānāma*, the *Maṇṭīk al-tayr* and the *Mūṣībādnāma*.

Some of the maθnāwīs produced in this period cannot be classified into any of the three categories outlined above. Still to the Sāmānīd period belongs the *Dīnghīndma* of Ḥakīm Mayṣārī composed between 357/967-8 and 370/981. It gives a popular exposition of medical theory and practice and therefore hardly belongs to literature proper (cf. G. Lazard, *Premiers poètes*, i, 36 ff.). Metaphysical doctrines combined with ethical maxims and some amount of gnostic speculation are to be found in the *Rawgānīndma* of Nāṣīr-i Khusrav, in which no anecdotes have been used. A number of short maθnāwīs has been ascribed to Sānāʾī, but only two of these can with certainty be regarded as authentic: *Karṇāma-i Balkh* containing both eulogy and satire, the latter directed against some of the Sūfis and poets of Ghazna, and *Sayr al-sabād ilā-š-Muʿād* depicting the gnostic’s journey through the cosmos followed by a panegyric. To a similar type belongs the *Hunārīndma* of Muhktārī. A very original work is the Tūḥfūt al-ʿIrākīyin of Khākānī. Conceived as the poetical journal of a pilgrimage, it contains a variety of other materials as well, out of which the repeated addresses to the sun deserve to be noted.

Among the many cultural achievements of the Sāmānīd period, the creation of a Persian prose literature takes a very prominent place. Nearly all the works of this early time that have been handed down are non-artistic writings and cannot concern us here. Still, some information is available which points to the existence of a number of works in prose that, at least on account of their subject-matter, are relevant to literary history. To this group belong the prose versions of the epic of the kings, three of which are known to have existed although no more than the introduction to one of them, composed in 346/957 by Abū Maṣūr al-Maʿmārī (or Muʿammarī), has been preserved. It is not quite certain whether the fragments dealing with the hero Gārshāsp, cited in the *Ṭāʾirīkh-i Siṣṭān* and attributed there to Abū ‘l-Muʿāyyad of Bālḵ, have been taken from the Sānāʾī version of this prolific writer or from a separate “Book of Garshāsp” that in the same genre produced during the 5th-6th/11th-12th centuries. In prose, heroic themes are further developed in an extensive literature of popular novels. To the 6th/12th century belong the works of Abū Tāhir Muhammad b. Ḥasan Ṭarūṣī (or Ṭarṭūṣī). His *Dārābīndma* elaborates the legends about the last of the ancient Iranian kings with many fantastic details. It ends with a treatment of the history of Alexander, one of the favourite subjects of this narrative literature. Another novel of Ṭarūṣī deals with a hero of Islamic times, Abū Muslim (cf. I. Mélkhoff, *Abū Muslim, le Porte-Hache du Khorassan*, *dans la tradition épique du moyen orient*, Paris 1962). The chivalrous romance *Sānakh-i ‘Ayyār*, which was originally written by Sādāka b. Abī ‘l-Kāsīm of Shīrāz, but has only been preserved in a later version dated 585/1189, is entirely a work of fiction.

An alternation between versions in prose and in verse is equally observable in the tradition of the Indian collections of fables and stories. For two of these there is evidence of Persian prose renderings in the Sāmānīd period (*Kalīla va Dimna, Sindibādnāma* [q.q.v.]). They have been replaced by later adaptations made with an intent to make these works more palatable to the literary taste of a later generation. The principle of the frame-story, so characteristic of these Indian books, was borrowed for a Persian imitation in the *Bakhṭīyārīndma* [q.v.], while the animal fable introduced by the *Kalīla va Dimna* was cultivated in the collection entitled *Marshīndma*, which was originally composed in the Tabari dialect. [See further Hikāya, ii.]

The fashion of embellishing prose by the application of rhymed and measured phrases was known already from the early 5th/11th century from the sayings attributed to the Sūlī Ṣayḥ Abū Saʿīd b. Abī ‘l-Khāyir [q.v.] and, more particularly, from a string of vīdāls usually ascribed to Anṣārī [q.v.] (cf. on the philological problems attached to these texts and their authenticity, G. Lazard, *La langue des plus*...
anciens monuments, 111 f.), of which the small collection of prayers called Mundždšt has become quite celebrated. The style of Arabic prose as it had developed in the time of the Bāyids in the hands of such masters of the risāla as Ibn ‘Abbād [q.v.] and al-Hamadānī [q.v.], very much affected the style of elegant Persian prose. A clear instance of this influence is the introduction of the genre of the maḥāma [q.v.] into Persian literature by the Ǧāḏil Ḥamīd al-Dīn of Bālḵ or Ḥamīdī [q.v.] (d. 559/1164). One of the best examples of the sophisticated style of pre-Mongol times, still very much appreciated in present-day Iran, is the version of Kašīl wa Dimna by Naṣr Allāh b. Mūhammad [q.v.], a secretary to the late Ghāznavīd Sultan Bahārāmshāh. Other specimens of the style current among secretaries, theologians and men of learning and letters include pieces of official or personal correspondence preserved by several prominent men (e.g. the Faḍāʾil al-Anām by Mūhammad al-Ghazālī, the correspondence between his brother ʿAlīmd al-Ghazālī and ʿAyn al-Kudāt al-Hamadānī, and further the letters handed down from poets such as Sanāʾi, Khandānī and Rashīd-dī Wāfī). The characteristic traits of artistic prose are not confined to those works that can be classified as belles lettres in the strict sense of the term but occur in many works of a more “utilitarian” purpose as well. The same can be said of the art of narrative, whether of pointed anecdotes or of short stories. They are especially abundant in works of history and biography. It need not surprise, therefore, if a work like the Taʾrīḥ of Bayhaḵī [q.v.] is reckoned among the masterpieces of early Persian prose. Even a listing of all the writings that in some way or the other are interesting from the aesthetic point of view would by far exceed the limits of this article. Only one group of prose works cannot be left unmentioned here. In spite of great individual differences, these works share a common feature in that, as a kind of Fürstenspiegel, they have been written for the instruction of those in power and they abundantly make use of anecdotes and tales functioning both as illustrative examples and as a means to enliven the theoretical exposition. To this group belong the Kāhsānāma by ʿUṣar al-Khāḏlī of Būyān [d. 470/1079-80], the Čahār Maḥāla by Niẓām ʿArūḍī [q.v.] (d. 560/1164-5), the Siyāsāt-nāma by Niẓām al-Mulk [q.v. (d. 485/1092) and the Naṣḥat al-Mālūk by al-Ghazālī [q.v.] (d. 505/1111). All these works were written in a comparatively sober style. Mainly on account of the relevance of its subject-matter to the study of certain themes of lyric poetry, mention should also be made of the Naurūz-nāma, a treatise on the origins and customs of the ancient Iranian New Year’s festival. It contains, among other things, a reference to the ceremonial use of poetry at the Sāsānian court and an account of the legendary origins of the cult of wine. The authorship of ʿUmar-i Khayyām [q.v.] is denied by most scholars. Apart from the wealth of narratives contained in such works as the commentaries on the Kūrān, the biographies of prophets and Sūfī saints, and mystical treatises, there is little information concerning the prose literature of the pre-Mongol period that needs to be mentioned on account of its great artistic value. An exception, however, should be made for the allegorical tales, describing the spiritual journey of the gnostic, by Ǧīhāḏ al-Dīn Yabāḏ Suhrawardī [q.v.] (d. 582/1181). Another famous mystic, ʿAlīmd al-Ghazālī [q.v.] (d. 520/1126), examined the psychology of love in a string of concise and subtle aphorisms entitled Sawānīḥ. As it is presented in this work, the theory of love can be applied both to the earthly and to the mystical beloved. c. From the Mongol period to the rise of the Ǧāḥīsid (7th/13th-9th/15th centuries). The successive invasions of the Mongols, resulting in the founding of the empire of the Ǧāḥīsid, did not fail to affect the course of literary history just as it affected all other sections of Iranian society. The destruction of the great cities of Transoxania and Ǧūrāshā, the enormous loss of life, the sharp decline of the economy, the disappearance of dynastic centres, all brought to an end the predominance of the north-eastern provinces in the Islamic civilization of Iran that had lasted for so many centuries. Not before the 9th/15th century could these areas for a short while regain some of their old cultural importance under the reign of the Timūrids. The shift of literary activity from the east to the western parts of the country, already in process from the middle of the 6th/12th century onwards, became definite as a result of these events, but it was no longer the north-western part that profited from this development. The Mongol Ǧāḥīsid, who established the centre of their rule in this area, assimilated far less easily to Persian culture than their Turkish predecessors. They were willing to accept and support those products of Islamic civilization that they regarded as useful, such as historiography and the natural sciences, but never developed any taste for the aesthetic achievements of its literature. The few instances of patronage to poetry known from the court of the Ǧāḥīsid did not emanate from the rulers themselves but from erudite high officials of Persian descent in their service, like the Dīwānī [q.v.]. While the vocabulary of the great historians of this period was very much influenced by Mongol and Turkish (cf. G. Doerter, Türkische und mongolische Elemente im Neupersischen, 4 vols., Wiesbaden 1963-71 and H. H. Zerinezade, Farsi dilinde Aserbaydzjan səsəlini, Baku 1962) the language or artistic literature shows hardly any trace of this. The bašda on an earthquake in Nīḥāpūr of Pūr-i Bāhāʾ Dījānī, a deliberate attempt to introduce loanwords from the language of the conquerors into the poetical idiom, is an isolated phenomenon (cf. V. M. Morgenstern, Persische Ornamentik ..., Ioannis Kyppa ... hoc volumen sacram, Prague 1956, 186-201; BSOAS, xvii/2 (1956), 262-78). In spite of all this, some of the greatest works of Persian literature were produced during these centuries. Favourable conditions for a continuation of the literary tradition were present in those parts of the country that had escaped from the devastations of Mongol warfare. For the first time, southern Iran, more specifically Ǧīrān, began to take part in the history of Persian poetry. A strong impulse was given by the arrival of many refugees, among whom the prominent theoretician of literature Shams-i Ǧāyṣ [q.v.] should be mentioned. New centres also arose outside the boundaries of Iran. The capital of the Sādūjūs of Rūm, Konya, became the seat of a major school of mystical literature established there by immigrants. The cultivation of Persian letters on the Indian subcontinent became more and more independent after the foundation of the Sultanate of Dīhī in 602/1206. In those days, however, poetry was no longer exclusively dependent on the economic and social support provided by patronage. From the 5th/11th century onwards, Ǧūfīlīsm penetrated Persian literature just as it gradually permeated Persian society as a whole. As a social phenomenon, this meant that a new
public and a new environment had come into being which created a wider range of functions for the poet and his art. Poetry could serve to express the ineffable experiences of the mystic through an ever more refined use of its symbolic language, or illuminate the subtleties of mystical doctrines from its vast resources of narrative material and techniques. It could also be used as a liturgical element in the "musical sessions" (samā', [q.v.]) of the Sūfī circles. The traditional place of the mawlid (d. 661/1262) was taken over by the spiritual leader (pir) or by a human manifestation of "witness" (shāhid) of the Eternal Beloved. For the poet who wanted to devote himself entirely to mysticism without any attachment to secular patronage, this new environment was provided by the communities of mystics, out of which the Sūfī fraternities (fartās) developed in the course of this period. The first notable example of this withdrawal of poetry from the world is Farid al-Din of Shiraz (d. 691/1292) cultivated the ghazal, of which no relation to any maecenas is known.

The most striking result of these developments to be noticed in literature is the sharp decline of the *bāsīda* as the main form of lyric poetry. To some extent this can be explained by the lack of interest in panegyric shown by the chief court of the times. But the same trend can be observed at those courts where the traditions of courtly lyricism were continued on similar lines as before. In many instances the *ghazal*, which had now become the favourite poetic form, seems to have taken over the panegyric functions of the *bāsīda*.

The ubiquity of the *ghazal* in Persian literature between the 7th/13th and 12th/18th centuries tends to obscure the fact that the *bāsīda* never quite disappeared from the scene. At the beginning of this period a "dīl" ([q.v.] of Ghazal(d. 691/1292) cultivated the ode, which he largely used for religious and moral admonition on the lines of Nāsr-i Khusraw and Sanā'ī. Apart from Salāmīn Sāwadī* ([q.v.] (d. 778/1376), who glorified the Djal'īrids of Baghdād, in the 9th/15th century Djāmī should also be mentioned in this connection as a prominent poet of the *bāsīda*. Most other poets also wrote at least some poetry in this form, although it is true that the poet's calligraphy during this period lags far behind that of the *ghazal*.

In the main line of the history of lyric poetry two strains, which seem to be distinguished by the different demands put upon the poets by their social environment, became visible. One of these strains is the purely mystical *ghazal* which leaves no room for any ambiguity concerning its fundamental meaning. Its model was provided by the *dīwān* of 'Aṭṭār (see, for an analysis of his *ghazals* in comparison to those of the earlier Sanā'ī and the later Hāfiz: H. Ritter, Oriens, xii (1959), 1-88). The foremost representative of this type of the *ghazal* after 'Aṭṭār is Djalāl al-Dīn ([q.v.] Rūmī (d. 672/1273), in Iran usually known as Mawlāwī. His life as a spiritual leader and a poet in the community of mystics at Konya is the best documented instance of the entourage in which an uncompromisingly mystical literature could flourish. His immense collection of ghāzals, the *Kulliyāt-i Shams*, is attributed by the poet himself to Shams al-Dīn al-Tabrīzī as an act of identification with the person regarded as the *shāhid*. These poems are either expressions of mystical love, formulated under emotional stress without much care for formal perfection, or they serve to illuminate essential topics of mystical doctrine by means of a rich and sometimes very original imagery. In spite of this idiosyncrasy of Mawlāwī's poetry, it became in its turn a model for the literary tradition of the fraternity of the Mawlawīyya ([q.v.]), which was formed out of the spiritual community of Konya after his death. This is especially noticeable in the lyrical poetry of his son Sultan Walad ([q.v.] (d. 712/1312) and his grand son Ulū 'Arīf Celebi (d. 719/1320). Another poet who cultivated this type of *ghazal*, though with a greater technical sophistication, was 'Irāqī ([q.v.] (d. 688/1289). In the course of his eventful life he practised the way of life of the *balandar darwishes*, the traces of which could be taken either by the spiritual leader (pir) or by a human manifestation of "witness" (shāhid) of the Eternal Beloved. For the poet who wanted to devote himself entirely to mysticism without any attachment to secular patronage, this new environment was provided by the communities of mystics, out of which the Sūfī fraternities (fartās) developed in the course of this period. The first notable example of this withdrawal of poetry from the world is Farid al-Din of Shiraz (d. 691/1292) cultivated the ghazal, of which no relation to any maecenas is known.

The second type of *ghazal* was cultivated by those poets who did not abstain from the established conventions of courtly poetry even if their works display the all-pervasive influence of Sufism. The double character of the *ghazal*-style, referred to above, is characteristic of this type. Although there are great differences in the intensity of mystical influence, some overtones of a transcendental connotation can be noticed in nearly all erotic poetry written in this period. The Shı'rażī school is particularly famous on account of the full development of this kind of *ghazal*. The oldest of the two great poets of the *ghazal* who flourished in this city was Sa'dī. His lifetime covered most of the 7th/13th century when Shı'raż was ruled by the Salghurid Atabeks. Nearly all his *ghazals* are contained in three large collections, the *Tabrīz*, the *Baddāv*, and the *Khawāṣim*. They show Sa'dī's perfect mastery of all the themes connected with the *ghazal* as a genre as well as of their associative interplay. Mystical notes can be observed, but they are harmoniously fused with secular themes. His graceful style, which also pervades the other literary works of this very versatile author, influenced the idiom of Persian more than the work of any other writer. Among his contemporaries, the name should be mentioned of İmām (d. 661/1262) or 676/1277-8) who attended the court of Kirmān, Maḏīl al-Dīn Hamgar (d. 686/1287), a citizen of Shirāz, and Humām al-Dīn ([q.v.] of Tabrīz (d. 714/1314), who glorified the members of the Djiwān family.

During the 8th/14th century, Shı'raż was in turn ruled by the Indgūs and by the Muẓafārīds. The names of these two dynasties are forever connected with that of Hāfīz ([q.v.] (d. 792/1390), often nicknamed Kh'nādja or Līsān al-Ghayb. He was much more a specialist of the *ghazal* than Sa'dī, as his very extensive *dīwān* contains only a few poems in other forms. Of these, the short *mathnawī* piece *Šāhīnā* has acquired some celebrity. According to A. J. Arberry, Hāfīz developed in the course of his career the refined art of the *ghazal*, as he inherited it from Sa'dī, by introducing the device of contrapuntal interaction of several themes within one single poem. Very often no more than a short allusion in one or two lines was applied to evoke, in the mind of the hearer who was familiar with the literary tradition, associations with a whole thematic complex. This technique was the essential novelty of Hāfīz's art (d. 699/1399), whose works were collected as he inherited it from Sa'dī, by introducing the device of contrapuntal interaction of several themes within one single poem. Very often no more than a short allusion in one or two lines was applied to evoke, in the mind of the hearer who was familiar with the literary tradition, associations with a whole thematic complex. This technique was the essential novelty of Hāfīz's art (d. 699/1399), whose works were collected as
dilection for mystical subjects, several of his ghazals have proved to be designed as panegyric poems.

There were several other prominent poets of the ghazal in the time of Hāfiz: 'Ubaydi Zākāni [q.v.] (d. 772/1371), more renowned as a satirist, left a small but exquisite collection of lyrics. He shows a preference for short poems usually of seven lines, a trait also observable with Kamāl-i Khudandī [q.v.] (d. probably 803/1400-1). The ghazals of Khwāja 'Isā-i Kirmānī [q.v.] (d. 753/1352 or 762/1361) and Salmān-i Sāwadghāzi are of particular importance on account of the influence they have exerted on Hāfiz, as acknowledged by the poet himself.

In the early 9th/15th century, the unambiguously mystical ghazal is cultivated again by Muḥammad Shīrīn Maghribī [q.v.] (d. 809/1406-7). By this time the poetical symbolism of the genre had been reduced to a system of fixed elements denoting the pantheistic philosophy of Ibn al-'Arabī [q.v.].

They lend themselves quite easily to a more or less mechanical interpretation, as often applied in commentaries or other essays on the allegorical language of ḥāfizī poetry. Of a quite similar nature is the poetry of Shāh Nīmat Allāh [q.v.] of Kirmān (d. 834/1421), the founder of one of the most important ḥāfizī orders of Iran, and of Shāh Kāsim al-Anwār [q.v.] (d. 837/1433), who also wrote some poetry in Turkish and in a quite similar Gilaki dialect.

One first sign of a revival of Persian letters in Khorāsān was the literary activity at the local courts that asserted themselves during the interval between the decline of the Ilkhānī empire and the rise of Timūr: the Shīrīte Sarbadārs of Sāzbāwār and the Kūrs of Harāt. This short period produced a notable poet in Ibn-i Yāmnī [q.v.] (d. 769/1368), who, together with Anwārī, is reckoned among the best writers of the fragmentary poem (ḥīrāt). The old traditions of courtly poetry were more completely restored in the times of the Timūrids of the 9th/15th century. This period, as well as the active interest shown by several princes of the Timūrid house, are very re-
imissive of the European renaissance. As far as literature is concerned, the flowering of all the visual arts connected with the production of manuscripts (calligraphy, miniature-painting, bookbinding) and philological projects such as the redaction of the Shakhāma, usually attributed to the prince Bāyson-
ghor [q.v.], should be mentioned in this connection. The main trait of literature itself is its classicist attitude. The Timūrid writers apply themselves to an ever more refined use of the transmitted forms and genres without adding much new to it. Some amount of novelty may, however, be granted to a genre of a rather bizarre kind introduced by Būshāhī [q.v.] (first half of the 9th/15th century) of Shīrāz, who wrote a number of literary parodies on famous poets using culinary themes in his Diwān-i Af'tima. On the same lines Kāri of Yazd (prob. 2nd. half of the 9th/15th century) composed a series of parodies based on the musical and scents of the Shakhāma, and topical verses such as the chronogram (ta'īrīk) enjoyed a great popular-

The most splendid centre of Timūrid culture was Harāt during the reign of Sultan Hūsain [q.v.] Baykara (873/1469-911/1506). Two great personalities dominated the literary scene of this court. 'All-Shīr Nawā'ī [q.v.] (d. 906/1501), counsellor of the sultan and himself a patron of literature, wrote some Persian poetry under the pen-name Fānsī but his main significance lies in the many works he composed in the eastern-Turkish literary language, known as Oghuz-
tay. In addition to a great number of non-artisan writings, they comprehended the complete range of literary forms current in Persian poetry. In this way Nawā'ī created a series of classical models for the Turkic literature of subsequent ages, both in Central Asia and in the Ottoman empire [see further Turks-
literature].

Closely associated with Nawā'ī was the Persian poet and Sufi şeyh Diwānī [q.v.] (d. 899/1492), whose productivity and versatility were even greater than those of his patron. He has often been called the last classical poet of Persian literature, a qualification based on the presumption that with the rise of the Safawids a period of decadence began, lasting for nearly three centuries. But it is true that the works of Diwānī can be regarded as a vast summary of all the known imitators of the

In the mathnawi-literature of the post-Mongol period, the five poems of Niẓāmī, joined by a later tradition into an artificial unity known as the Khamsa [q.v.], had become a conventional model that constituted an irresistible challenge to numerous poets both in Persian and in Turkish literature. The first of the long line of imitators was Amir Khusraw. He kept himself strictly to the scheme of Niẓāmī, reproducing most of its structural features, but showed his originality by laying special emphasis on certain elements of the stories or by choosing new subsidiary tales in Haft Bihisht, his imitation of Haft Paykar. The Khamsa of Khwāja Kirmānī deviates much further from the original pattern. It comprises two romantic epics with new stories (Humdu u Humdyun, Layla u Madjīn). Diwānī deviates much as well as three didactical poems of a mystical and ethical nature. Diwānī enlarged the scheme to seven poems in his Haft Avarang. Most celebrated of these is his version of Yūsfū u Zalīthā in which the Kūrānī story has been elaborated into an extensive allegory. Another of his new subjects is the philosophical novel Sālāmān u Abūdāl. Many poets readapted only single poems of the Niẓāmīan canon. The Layla u Madjīnān of Maktābī of Shīrāz, written in 859/1458-90, one of the most successful instances among the works of this kind. (A full list of the known imitators of the Khamsa has been compiled by H. Ethé, Gr. I. Ph., ii, 245-8; see also the following works on the tradition of the individual poems, usually dealing with the Turkish versions as well: (1) on Maškhan al-Asār—E. E. Bertel's, Ifa"3r miałi ve i Fawwāl, Moskow 204-14. (2) on Layla u Madīnān—H. Arasli, Türk Dili Araştırmaları Yılıtı, Belleten 1958, 17-39; A. S. Levend, Arab, Fars ve Türk Edebiyatlardında Leylā ve Mev纽n hikayesi, Ankara 1959; E. E. Bertel's, op. cit., 275-313. (3) on Khosrau u Shīrīn—H. W. Duda, Ferhad u Shirin. Die literarische Ge-
schichte eines persischen Sagenstoffes, Prague 1933; G. Y. Aliyev, Legenda o Khosrove i Shīrīn u litera-
tura También narodov Vostoka, Moscow 1960. (4) on Haft
Among these poems the Waladnāma is the most celebrated. In the *Ustād nāma of 'Iraqī, characterized by the insertion of mystical themes, the love story is elaborated. The topic of the *Mishāh al-arwād is the visionary journey of the mystic through the cosmos. The authorship of this interesting work is uncertain. Old manuscripts attribute it either to the well-known Shīfā shaykh, Awbād al-Dīn Kirmānī, or to a certain Shāns al-Dīn Muhammad Bādsīr Kirmānī (cf. the edition by Badī‘ al-Zamān Purūzānār, Tehran 1349 šī). A pupil of the former, Awbādī (q.v.) (d. 738/1337-8), wrote his own version, the *Dāmtūrī nāma, the last of the great *Dāmtūrī nāma: a love-story, Azhar u Ma$kār, the masterwork of the didactic *mathnawī, the Bustān of Sa‘dī. Written almost simultaneously with Rūmī's *Mathnawī, with all the brilliance and clarity of the style of Sa‘dī, the Bustān certainly surpassed the latter's celebrity, but nowhere does it even approach Rūmī's depth of thought. Although some of its chapters deal with mystical topics on the whole the work seems to be designed for little more than elegantly presented moral admonition. From the 8th/14th century three other writers of mystical *mathnawīs are worthy of note: Husaynī Sādāt (q.v.) (d. after 729/1328), ‘Imād al-Dīn Fa’ākhī, a contemporary of Ḥāfīz, (d. 773/1371), and Maḥmūdī *Ghabistāri (q.v.) (d. about 720/1320-1). The last mentioned wrote *Gulghānī i Rāz, which among other things contains an explanation of the symbolic language of Sūfī poetry.

An interesting personality, standing more or less aside from the trodden paths of Persian literature, is Nizārī (q.v.) (d. 720/1321). Being an Ismā‘īlī, he incurred the condemnation of orthodox critics which the vehement sarcasm often displayed in his works did nothing to prevent. He wrote three *mathnawīs: a love-story, Ā’hār u Ma$har, a short but highly original parody on the customary didacticism, *Dastārnāma, and a versified book of travel, *Safarnāma.

Among the prose-works produced in these centuries, again a work by Sa‘dī, *Gułstān, stands out as the most perfect example of classical Persian style for which it serves as a textbook up to the present day. It treats of much the same subjects as the Bustān even more real, but presents them in a more entertaining form. The anecdotes are told in a terse, rhythmic prose sometimes approaching the metrical patterns of poetry. The poet's moralising reflections upon the narratives are mostly put into the form of Persian or Arabic poetical fragments. Like so many other great works of Persian literature, it very soon became a model that was copied by a long row of imitators. One of these was Dāmtūrī, in whose Bahārīstān even more room is given to poetry than in Sa‘dī's work. The stylistic type of the Gułstān was the target of parody in some of the best works of ‘Ubayd-ī Zákānī, by far the greatest satirist Iran has ever produced (Akh-āt al-Āshrafī, *Khidimnāma); see also *Hidjā, ii).

The tendency towards an ever more prolix rhetorical embellishment of Persian prose came to its full strength in Mongol times and continued to dominate the style of prose-writing for several centuries to come. It gave most works on history, the sciences, ethics, religion and other scholarly subjects the appearance of artistic writings. The Ta‘riḥ of Wāṣṣāfī (q.v.) (d. 735/1334), the last of the great historians of the Ilkhānī, has become proverbial for this extremely florid style. Another work that set the pace in the use of a literary idiom inflated with Arabic words was the *Amad-i Subayī{{https://en.wikipedia.org/wiki/Hikmet_T._Ilay%
version of the *Kalila wa Dimna* written by Husayn Wâlî-i Kâshî [see Kâshî, Šah; KÂSHÎ] (d. 910/1504-5), a very prolific and versatile author attending the Timûrid court of Harat.

d. *From the rise of the Šafawids to the late Kâfûrī period (beginning 10th-10th to 13th/13th centuries).*

The establishment of the Šafawid state in Iran was not merely a political event. Through the introduction of Imâmi Shi‘ism [see ITHNA] [q.v.] (d. 910/1504-5), a kind of Shi‘ite literature both in poetry and prose emerged which was not very favourable to the flourishing of literature. Especially during the 10th/16th century neither the theological nor the powerful Shi‘ite clergy, which had acquired a great influence on official policy, were particularly interested in the traditional court literature. The cultivation of religious poetry was, on the other hand, greatly encouraged. The founder of the dynasty, Shâh Ismâ‘îl [q.v.], was himself a writer of Turkish poems, in which he expressed ideas related to the doctrines of extreme Shi‘ite sects. As soon as religious policy was firmly in the hands of the Imâmi *šâlam*, deviations of this kind were no longer possible. The themes of Šafawid religious poetry were mainly taken from the stories about the martyrdom of the *imâms*. Devotion to the Shi‘ite family is very often expressed in pre-Šafawid literature as well. It can even be found with authors whose Sunni persuasion is beyond doubt. At least from the Bûyid period onwards, the Shi‘ite communities in Iran tried to win more support by sending around the bazaars popular reciters of poems on the ‘virtues’ of ‘All (manâkibbikhwând, *manâkib biyâyân*) who made use of the works of Shi‘ite poets like Kiwâni of Rayy (6th/12th century). These texts were mainly *ḫâṣâdas* [cf. Dh. Sa‘a, *Ta‘rîh*, ii, 192 ff.]: A. Shi‘ite epic, modelled on the style of the *Shâhnamâh*, was introduced by Mu‘âammad b. Hûsân (d. 875/1470) with his *mâshwâr*, *khwârârân* (or *khwâwar*-nâmâ) [see further *hâmsa*, iil]. Another work of the Timûrid period, the collection of tales about the holy martyrs, *Râwâdat al-Shuhâhâd*, written in artistic prose by Mu‘âammad Wâlî-i Kâshî [q.v.], was used as a textbook for the Mu‘âhar-ram celebrations and even lent its name to the function of a reciter of religious poetry, the *râwâdâkhwâr*. The most important poet of this genre was Mu‘âšâsh [q.v.] of Kâshân (d. 996/1587-8). He is especially famous on account of a *mâshwâr* on the holy martyrs known as the *haft-band*, i.e., a poem consisting of twelve seven-line stanzas. The *ḫâṣâda* was also used for this kind of elegy. Mathnawâris on the *imâms* were composed by Hayratî (d. 961/ 1553-4; or 970/1562-3) and by Fârîgh of Gîlân who wrote his work in 1050/1543-4 to celebrate the conquest of Gîlân by Shâh ‘Abbâs I. There was, in fact, a subtle connexion between the praise of the *Altîd* family and the glorification of the dynasty, as the Šafawids regarded themselves as descendants of the *imâms*. Shi‘ite literature both in poetry and prose continued to be extremely popular till the present day. It has a solid base in religious sentiment as well as in the demand for liturgical texts to be used on various occasions.

The perpetuation of Shi‘ite traditions and doctrines among the population of Iran could not be achieved by means of poetry alone. While the learned theological works continued to be written in Arabic, there was a growing need for works of a more popular kind in Persian on the different branches of religious science. A number of theologians set themselves this task. The comparatively simple style they used favourably contrasts with the verbosity still current in the literary prose of this period. Notable among these writers were Mu‘âammad Bahâ‘ al-Dîn al-‘Amâlî or Shaykh-i Bahâ‘ [see AL-‘AMâLî] (d. 1031/1622), who should also be mentioned on account of his Persian poetry, and Mu‘âammad Bâkîr al-Madjlîsî [q.v.] (d. 1111/1699-1700).

*Šūfism* as a form of religious life was declining in Šafawid times as a result of the enmity of the religious leaders, which sometimes took the form of actual persecution. As mysticism and poetry had become very closely connected during the preceding centuries, this could not but unfavourably affect literary production. Yet the mystical strain could never be deleted entirely from Persian poetry. It is particularly evident in the poetical works of the members of the flourishing school of philosophy founded by Mullâ Şadrâ of Şîrâz, e.g., Mullûnî Fâyd of Kâshân (d. 1090/1679), Mir Abu ‘l-‘Âsâm Findarîski (d. ca. 1050/1640-1) and the teacher of Mullû Şadrâ, Mir Mu‘âammad Bâkîr-i Dâmâd [see AL-DAMÂN] (d. 1040/1630). The poet Saâdî of Astârâbâd (d. 1010/1601-2), who spent most of his life at the holy shrine of Nadîjâf, expressed pantheistic mysticism in a *diwan* which consisted almost entirely of quatrains.

Secular poetry suffered not only from the changes in the intellectual atmosphere but also from political changes. The disappearance of local courts reduced the market for the professional poet to one dynastic centre. Apart from the successive residences of the Šafawids, only Şîrâz remained as an important literary centre. Yet there was a great deal of continuity with the preceding Timûrid period. Just like the painters of the school of Bhâzîd [q.v.], the poets travelled to the west as soon as the new power had established itself there. That the royal family was not completely averse to court poetry is shown by Sâmî Mîrzâ (d. 974/1566-7), a son of Shâh Ismâ‘îl I, who described the history of poetry during the first half-century of Šafawid rule in his *taqâkıhira*, *Tûhfa-i Sâmî*. Even the court of Shâh Ismâ‘îl had its eunuch in Umîdî (d. 935/1529). The genre of ghârah-šâb poems on the young artisans of a particular city was revived by Lîsânî (d. 940/1533-4). It became a great fashion both with the Persian poets of his time and with the contemporary Ottoman poets (e.g. Medîhî[q.v.]). The historical connection between these two schools is still uncertain. Another favourite topic was short poems on a single dramatic incident, under the heading “*badâ‘ u kâdar*”. Some scholars have interpreted these genres as indications of a growing tendency towards realism in poetry (cf. J. Rypka, History, 296).

During the long reign of Ta‘hâshî I (930/1524-984/1576) courtly poetry gradually regained more ground. Wâshî[q.v.] of Bâlk (d. 991/1583) excelled in the didactic and romantic *mathnawî* as well as in strophe poems. Even Muţâshâsh did not shun panegyrism and Hayratî combined his religious art with satire. To the most ambitious young talents, however, Iran did not offer sufficient opportunities for a literary career. Far better prospects offered themselves on the Indian subcontinent where the Moghul emperors resumed the splendid cultural traditions of their Timûrid ancestors. From the second half of the 10th/16th century onwards, an increasing number of Persian poets went to India and gave there a new impulse to the tradition of Indo-Persian letters. The most decisive literary development of the Šafawid period is connected with this migration of poets: the emergence of a new poetical style which in modern criticism has received the name *Sâbâ-i Hindi* [q.v.].
This Indian style, the main characteristics of which have been sketched above in the section on the periodization of Persian literature, distinguishes itself markedly from the earlier poetic styles. The causes of this greater amount of independence from the established literary canons have been sought in changes in the social conditions (A. Mirzoeev) or in a relaxation of critical attention to the work of the poets especially in Safavid Iran (A. Bausani). Under the influence of the negative verdict given almost unanimously by neoclassicist literary critics since the pre-Mongol period. The ḩāṣīda was restored to its former prominence as a poetic form. This movement very soon dominated the literary scene and its aesthetic ideals have governed traditional poetry in Iran up to the present day. (See further M. T. Bahār, Bāsagāšt-i adabī, in Armaghān, xiii-xiv (1311-2 sh.), passim; idem, Sabkshīndast, iii, 318 f.; J. Rypka, History, 306-8).

To the first generation of neo-classicist poets belonged Muhammad Ṭāḥṣīk (d. 1181/1767-8), Ḥāṭīf (q.v.) (d. 1178/1573), Shāhāb of Turbāz (d. 1215/1800-1) and Lutf ‘All Beq Āḏār (d. 1195/1780-1), the author of the tadhkīr āl-ḥakākh, a first-hand source on the bāsagāšt-movement. After the founding of the Kāḏīr ār, Fāṭḥ ‘All Shāh (reigned 1218/1779-1250/1834) tried to revive the ancient traditions of the royal maecenate at his court in Tehran. The centre of the circle of poets gathered here, who all emulated the classics, was Sabā (q.v.) (d. 1238/1823-4). He was highly appreciated in his own days on account of his panegyrical ḩāṣīdas and of his mathnawīs, Shāhāns̲hāhn̲ūmān, picturing the contemporary wars with Russia in the style of the old heroic epic. Worth of note are also Saba’ī Bidpil (d. 1218/1803), Sāḥīb (d. 1222/1807-8), Miǧmār (d. 1225/1809-10) and Nashāt (d. 1243/1822-3). A peculiarity of this period was the formation of small literary societies (āndijumān). Under the rule of Nādir the cultivation of classicism reached its richest development in the work of Kānānī (q.v. 1270/1854), a virtuoso of the poetical language. He showed, however, his awareness of the reality of his time in satirical poems and in his prose-work, Kūdāb-i parshān. Kānānī was the first Persian poet who had some knowledge of European languages. The tradition of the mystical ḡaṣṣāl was resumed by Furuḡī (q.v. d. 1277/1858-9) of Bistām, who also used the pen-name Miškīn. A remarkable personality was Yaḥyāmī (q.v.) (d. 1276/1859) of Djangak. He lived both as a darwīš and as a panegyrist of the Kāḏīr ār court while he was at the same time a redoubted satirist. His independent frame of mind showed itself in the invention of a new type of religious elegance in a style related to popular songs, known as naḥa-ka Ṯūnān. An interesting trait of his use of the language is the puristic effort to replace Arabic words by Iranian equivalents. Several poets of this century founded literary dynasties as their sons continued to work on the same lines as their fathers. Besides Sabā and Yaḥyāmī, a famous instance of this is the family of Wījāl (q.v.) (d. 1262/1846), a learned poet living in Shirāz.

During the last period of the unchallenged rule of classical poetry, the long reign of Nāṣīr al-Din Shāh
The ancient structure of Persian literature was at-
did not leave its solid literary tradition untouched. The
ancient structure of Persian literature was attacked by
the forces of change from several sides. Political
developments put an end to the system of
court poetry and caused a fundamental change in
the attitude of the poet towards his art. The modern
poet, whether he continued to work on traditional
ing a much more progressive attitude could be observed
towards poetry. He had become, in a certain sense, an amateur
who composed his poems on his own account. This
led, on the one hand, to a much greater involvement of
literature in the political and social vicissitudes
of the nation, on the other, to a more individual form
of poetical expression, the models of which were
provided by European literature. New concepts like
nationalism, democracy and social justice demanded
the attention of the modern intellectual. The earliest
poets of the modern period who, during the struggle
for the Iranian constitution [see IRAN, HISTORY,]
had to express these ideas with some urgency, could
only make use of the classical forms of poetry, which
proved to possess a remarkable adaptability. Eventu-
ally, however, the formal system could not remain
unchallenged. Especially in poetry a long battle was
waged on the question whether it was permissible to
evolve a new type of poetry, which would be
perceived with novelty, or even to use entirely free
verse (šahr-i āddā), or not. In this struggle the
classical style of poetry was shown to have deep roots
in Iranian culture. Perhaps the most important
formal innovation was the emergence of a genuine
prose literature based on the forms of the novel and
the short story, which were borrowed from modern
European literature.

While the actual birth of the modern literature of Iran took place during the turbulent years between
1890 and the beginning of the First World War, the process leading up to fundamental changes started early in the Kādjār period. Simultaneously with the classicist renaissance at the court of Fath Ṣāliḥ Shah, a much more progressive attitude could be observed in the entourage of Abbās Mirzā [q.v.], the heir-ap-
parent and governor of the Kādjār court. Confronted with the necessity of military reform on account of
successive defeats in the wars with Russia, several
measures were taken which proved to be of great consequence to the future course of cultural life in Iran. For the first time students were sent to Russia and Western Europe. One of their tasks was to study
typographical techniques. A printing-press was found-
ed in Tabriz in 1816-7. Very soon typography (Đāpi-
surūḥ) was replaced by lithography (Đāpi-i sangī),
which remained the principal form of printing during most of the 19th century. In 1834 the first Iranian
newspaper was published in Tehran, the Rānāmā-i
ākhbār-i awādiyāt, which had only a limited circulation.
A more direct influence on literature was exerted by
the efforts to simplify the style of official correspon-
dence, a good example of which was given by Abu
Ṣāliḥ Kāsīm Farahānī (1799-1835), better known by his
title Kāsīm-makām [q.v.], i.e., deputy-minister of
Abbās Mirzā. A second episode of cultural modernization was the short term of office of Mirzā Taki Khān [q.v.],
also known as Amir-i Kabīr or Amir-i Nizām, as
prime-minister of the young Nāṣir al-Dīn Shāh. It
ended abruptly with the execution of the Amir-i
Kabīr in 1852. The publishing of a newspaper was
resumed in 1851 (Rānāmā-i awādiyāt-i ittifākīyā, in
1860 renamed Rānāmā-i dawlat-i ittifākīyā-i Iran). In
the following decades the number of periodicals
rapidly increased. Although they were all more or
less mouthpieces of the government, they helped to
spread new ideas through the information they provi-
dated about the world outside Iran. During the last few
decades of the century political emigrants spread
pan-Islamic or liberal ideas in a number of papers
published in Istanbul, Cairo, Calcutta and London.
[See MAHMUD N. I., with further references].

Another initiative of the Amir-i Kabīr was the
founding of a polytechnic school (Dār al-Funūn) in
Tehran (1852), which provided a modern education in
technical and natural sciences with some attention to
the humanities as well. The staff of the school, di-
rected by Rīdā Kull Kān, consisted mostly of Eu-
ropean teachers. The Dār al-Funūn formed the
beginning of modern academic education in Iran [see
dār al-funūn]. An immediate effect was an increased
demand for the translation of books from European
languages, among which French was by far the best
known in Iran. The list of the earliest translations
contains, besides textbooks and scientific works, also
belles lettres, e.g. works by Al. Dumas, Daniel Defoe and
Bernardin de Saint-Pierre (cf. E. G. Browne,
The press and poetry of modern Persia, Cambridge
1914, 134-66). Many translations are attributed to
Muhammad Ḥasan Khān [q.v.], who used the titles
Sānī al-Dawla and Iʿtimād al-Saltana, but they were chiefly made by a corps of
translators working under his direction in the govern-
ment's printing office (Dār al-Tibāʿa) and the bureau
of translators (Dār al-Tārjama).

Among the preliminaries to the modern period men-
tion should also be made of the religious move-
ment of the Bābīs. Among the earliest Bābīs
were Muhammad Bākīr Bawānī (d. 1854) who
published a book attacking the imperialist polici-
es of Britain and Russia, and Akā Khān Kirmānī
(d. 1869), a prominent political exile in Istanbul and
a follower of Djamāl al-Dīn al-Afghānī [q.v.]. The
latter contrasted the decadence of Iran in the late
Kādjār period with its ancient splendour in his histori-
ical maṭbāwir, Sālārnāma or Nāma-i bāstān. An
interesting feature of this work was the attack launched
on classical literature (with the single exception of Firdawsi whose Shāhnāma stood as a model for the poem), which was considered as a principal source of degeneration in the Islamic history of Iran. The political movement against the despotism and misrule of the Kādjar and the foreign forces that supported it brought quite different groups of the population together. Several eminent erudites of the old cultural tradition contributed to the creation of a patriotic poetry: e.g. Sayyid Ahmad Adib-i Pishawari (ca. 1845-1930), A. Ab' al-Jawwad Adib-i Nishapuri (1864-5—1935) and especially, Mirzā Sādik Khusm, better known by his pen-name Amīrl or his honorific Adib-al-Mamālīk (1860-1917), who abandoned a successful career as a court-poet in 1898 to become a journalist. In the first decade of the 20th century the proliferating press became the chief medium for the publication of poetry. One of the best periodicals was the Nasīm al-Shāhlī edited in Rasht by ʿAṣḥāf-i Gilānil (1871-about 1930), a writer of satirical poems (fukhl-i kiyādī) criticizing in particular the conservative Shiʿite ʿulamā in a simple language full of colloquial expressions. ʿAlī Akbar Dīḥāḥwūd (about 1880-1936) published his poems under the name Dakhaw in the Sār-i Isfāhil. Besides his great merits in other fields of literature and scholarship, he was the first to try some formal experiments. Muhammad Takī Bahār (q.v.) (1886-1951), a master of the classical forms who already in his early years had earned the title mālīk al-ghawrānī as a panegyrist, put his great talents entirely at the service of the constitutional movement, successfully applying the old forms to the expression of new contents. Throughout the first half of this century Bahār was the leading modern poet of Iran. Forms of popular poetry like the folk-song (surād) and the ballad (lāsmī), usually recited to the accompaniment of music, became favourites with the political poets. A famous composer, as well as an impressive performer of insafsī, was Abū ʿl-Kāsim ʿArif of Kāznīn (about 1880-1934).

The core of the new nationalist ideology was Iranism, i.e., the glorification of the pre-Islamic past of Iran, of which the Iranian intelligentsia had become conscious mainly through the results of western philological, historical and archaeological research. Zoroastrianism very often appeared as the enlightened counterpart of the old religion that was felt to be fostered by traditional Islam. Those works of the classical literature that seemed to express a similar feeling of nostalgia for the glorious past, like the Shāhnāma and the kashīda on the ruins of al-Madā’in (Ctesiphon) by ʿRabīḥ, enjoyed a great popularity. The foremost philo-Iranian poet was Ibrāhīm Pūr-i Dāwūd (1886-1968), who later in his life became a distinguished student and translator of the Avesta.

To Abū ʿl-Kāsim Lāḥūfī (1887-8—1957) a revolutionary change of social conditions was the main goal of the political struggle in which he took a most active part until he was forced to flee to the Soviet Union in 1922. There he wrote the long poem (manṣūma), Kirimī, as a tribute to communism. After his return, he became the leading poet of the Soviet Republic of Tadžikistan (q.v.). Farūkhī Yazdī (1889-1939) continued to fight for his socialist ideals in Iran. His best poetry is to be found among his ghasals, written in a conventional style in spite of their quite modern contents.

Although his short life was filled with radical political action, Muhammad Rīdā `Īṣākhtī (q.v.) (1894-5—1924) is more significant in the history of literature on account of his formal and thematic innovations. He has been styled the first romantic poet of Iran, because of the strong influence of French romantic and symbolist poetry on his work. This is particularly noticeable in his greater poems, Kafan-i šīyāh, ʿĪsāil and ʿĪsākkīz. His experiments with prosody were chiefly concerned with the strophe-poem (musaṣṣaṭ). Many other poets endeavoured to extend the possibilities of the šīrād system, but, until the period after the Second World War, few dared to follow the example of a complete rupture from traditional forms given by Muhammad Isfandiyārī, better known as Nīmah Yūshīdī (q.v.) (1897-1960). His Afṣānā (1921) marks his attempt to create a type of free verse that was no longer bound by the old rules of metre and rhyme but was based directly on the rhythm and music of the language.

During the period between the wars contemporary politics almost completely disappeared as a theme of literature. All the same, many poets displayed a concern with individual social problems, most prominent among which was the position of women in Iranian society. This was the main topic of Tāджī Mirzā (1874-5—1925), a prince of the Kādjar house, whose simple yet graceful style made him one of the most beloved poets of modern times. The talented female poet Parwīn-i Tājahī (1906-7 or 1910-1941) showed a deep concern with the miseries of the poor. Satirical verse was still very popular but had to respect the bounds set by official censorship. Especially renowned for their satirical poems were Kulzūm (b. 1897), Rūhānī (b. 1896) and Muhammad ʿAlī Nashīf (b. 1898).

The mainstream of Persian poetry still consisted of the poets who applied in varying degrees modern elements in their works but remained essentially faithful to tradition. A point of focus of literary life was the andijumān-i adabī-ī Irān founded by Wahīd-i Dastgārī (1880-1942), who, since 1919, edited the authoritative literary periodical of this period, Armagān (cf. F. Machalski, Wahīd Dastgardī and his "Armagān", in Folia Orientalia, iv (1963), 81-103). M. T. Bahār established a circle of poets of his own as well as the journal Naw-Bahār (1921-51). Wāfāt (1923-5) was edited by the popular poet Nizām-i Wafāt (b. 1887-8). The progressive writers expressed themselves in Ayandā (1925-40). The most brilliant poet among the many who first appeared on the literary stage between 1920 and 1945 was Muhammad ʿAbd-Allāh Shahrīvār (b. 1906-7). In his ghasals inspired by Ḥāfīz he displays a remarkable ability to blend the old poetical idiom with a modern sentiment.

From 1941 till about 1950 there was a great increase in political and literary activities. In 1946 the first congress of Iranian writers was held in Tehran (cf. Nāḥaṣūn Khāngī-ī nawīsandāngī-ī Irān, Tehran 1951). Several new periodicals were started, e.g. Sukẖān (1943), the organ of the progressive poets and prose writers, edited by Parviz Nāṭīl Khānālī (b. 1913), and Yaghmā (1948), edited by the poet Ḥabīb-i Yaghmā (b. 1901). Among the scholarly journals which pay much attention to the study of literature mention should be made of Yāḏeḏar (1944-9), Farhang-i Irān-samīn (since 1953), and of the periodicals of the Faculties of Arts of the Iranian universities e.g. Magdāla-i Dānimakāh-ī Tabrīz (since 1948), Magdāla-i Dānimakāh-ī adabiyyāt-ī Tabrīz (since 1948), Magdāla-i Dānimakāh-ī adabiyyāt-ī, Isfahān (since 1964), and Magdāla-i Dānimakāh-ī adabiyyāt-ī, Māshhād (since 1965).

The most conspicuous feature of the poetry of the post-war period is the acceptance by an expanding groups of poets and literary critics of the ideas on free verse as they had been put forward by Nīmah
The debate between modernists and the defenders of the classical tradition was resumed with great intensity in the literary journals. The leading advocates of a modernized prosody were Faridun Tawalli, who published a manifesto as an introduction to his volume of verse Rahid (1951), P. N. Khanlari and Nadir-i Nadirpur. They also belong to the most prominent poets of the new style. The critics of the classicists are not only directed against deviations from the traditional forms but equally against the unusual metaphors applied by these poets. See further on the latest developments of Persian fiction and poetry: V. B. Klyaghtorina, Sovremennaya persids-kaya poeziya, Ocherki, Moscow 1962; B. Alawi, Geschichte und Entwicklung, 225-35; Fr. Machalski, New Poetry in Iran, in, New Orient, iv (1965/4), 33-6; Mansour Shaki, Modern Persian Poetry, in Yaddname-ye Fan Rypka, Prague-The Hague 1907, 187-94; Daruysh Shahn, Khiyami-i shari'-i imrau. Zungu az naawarad-i shari'-i imrau, Tehran 1349 sh.({2})

The first genre of fictional prose to become fully developed and achieve a great popularity was the historical novel. The earliest was Shams u Tughra of Muhammad Bakiir Khurawri, the first part of a trilogy situated at the time of the Mongol rulers of Iran, published in 1390. It was followed in 1391 by 'Tagh u Salmanai of Shakhay Mosâ Naqri, an original novel about Cyrus the Great. The same period was treated by Hasan Badi in Dastan-i bastan (1391-2). The ruin of the Sâsâns and the Arab conquest provided the background to Dâmâgustanayân i-ndikâm khâsh-i Mazâd, which in 1391 opened a long series of novels by 'Abd al-Husayn San'atâzâda. The best writers of this genre took pains to base their works on historical research. Sometimes they even supplied notes with references to their sources. The choice of the subjects, taken either from pre-Islamic or Islamic history, was dictated by nationalistic sentiments. Occasionally, contemporary history provided the material, e.g. in Dâlîrân-i Tangishtân of Husayn Ruknzâda Adamiyat, which is situated in southern Iran during the First World War. Quite often, these works show the influence of European novels of the romantic period. (See further on the latest developments of Persian fiction and poetry: E. E. Bertell's Persidskiy istori'etskiy roman XX veka, in Problemi literaturVostoka, Trudl Moskovskogo Instituta vostokovedeniya, i (1932), 111-26; B. Nikitine, Le roman historique dans la littérature persane moderne, in JA, ccii (1933), 297-313; Fr. Machalski, Historyczna powieść perska, Krakow 1952 (in Polish with a French summary); H. Kamshad, op. cit., 41-53.)

From 1392 onwards the range of fictional prose became considerably wider. Many novelists began to pay attention to the social problems which were either caused or brought to the moral consciousness by the accelerated process of westernization. Themes like the inferior position of women in Iranian society, the disorientation and immorality of modern youth, prostitution and forbidden love were taken as subjects for a long series of novels most of which had very little artistic value. Among the best works of this kind is Tihrân-i makâhî (1922) of Murtadâ Meshik Kâzimî, giving a gloomy picture of modern life in the capital. Worthy of note are also Man ham girya harda-am (1931) of Dâhângir Dâlîî (1909-38) and Tafrikât-i shab (1932) of Muhammad Mas'tîd (1947), whose pen-name was Dîhânt. The latter was much criticized on account of his nationalism. In
1942 he started to publish a series of autobiographical novels of great interest, beginning with Gulhā-i khitab (1952). Dar jamālzāda mardāyad, which was left unfinished. The most popular writer of the period between the wars was Muḥammad Hidāyat (b. 1899). His novel Zīdā (1933) is distinguished by the clever description of a corrupt bureaucracy. He also published many short stories and essays with a strong element of didacticism. Muḥammad ʿAll Ḍaghī opened his career as a writer with Ayyāmāt ādab (1921), a collection of sketches and essays written in prison, which was later on enlarged with recollections of his life as a politician during the reign of Rezā Shāh Pahlavī. In recent years Ḍaghī has become a successful novelist as well as an important critic of the classical poets (e.g., Nakši as Ḩafīz, 1957).

The most significant contemporary writers have shown a distinct preference for the short story and the novelette. These forms were developed to a much higher level of artistic perfection than the longer novel. An event of major importance in the history of modern Persian prose was the appearance in 1921 of Yākī bād yakī nabād, a volume of satirical stories by Sayyid Muḥammad ʿAll Jamālzāda (b. 1891-2). It was the first completely successful attempt to apply the narrative technique of European literature. The first edition was accompanied by a manifesto advocating the right of existence of a realistic literature, the value of which as a means of public education is particularly stressed. In order to be able to reach the broad masses of the people, the literary language should not only be simplified but also made more democratic by the assimilation of elements from living speech which were not regarded as correct forms according to the prevailing standards of literary culture. In spite of the fact that he has lived in Europe during most of his life, Jamālzdā is never lost his interest in the exploration of the resources of colloquial Persian, which eventually resulted in the compilation of a special dictionary of colloquial words (Farhang-i lugāt-i ʿamālīyā, edited by M. Ḍl. Maḥdī, Tehran 1341 sh.). His later novels and short stories were not published before 1941. The autobiographical work Sār u takā yak khrāb (1956) is of popular interest. The principles laid down by Jamālzdā were applied with great talent by Šādīk Hidāyat (q.v.) (1903-51) in his early stories collected in the volumes Zinda bi-gār (1930), Sī bātra khān (1932) and Sayā-ruṣegan (1933), as well as in the novelette ʿAlavīyyā Kānum (1957). This can be observed especially in the stories which portray the life of the middle and lower classes of Iranian society. The most celebrated aspect of his work is the analysis of mental suffering for which Hidāyat made use of the literary technique of surrealism. The novelette Bāṭ-i kār (1937) received international attention when a French translation was published in 1953. The short novel Hādījī ʿĀk (which was published in 1945), is his best satirical work.

To the same school of writers belongs Buzurg Ṭahmāb (b. 1907). He is, however, much more involved in politics than the preceding authors, which the collection Camadān (1934) earned him an early recognition as an important writer. His Čahākhāvān (1952) is one of the best modern Persian novels. Among the writers who made their debut after the Second World War the outstanding writer of the short story is Šādīk Ḍarbak (b. 1916) whose first collection Khayma gīhātāt was published in 1945. His latest works are the novels Tangīr (1963) and Sang-i sabūr (1966). Other notable writers of the last few decades are Muhammad ʿImāmzāda (Bībāhdin), who is especially known on account of his novel Dastār khwāna (1952), Dastār Āḥ-ī Ahmad (1923-60) and Taḵī Ṣadr. The extensive novel ʿAšār-i Ṣāḥīb (1961) of ʿAlī-Muḥammad Afgānī (b. 1925) was received with great enthusiasm both by the public and the critics in spite of its technical defects. (See on the latest development of modern prose: B. Alawi, in Yādnam-ye Jan Rypha, Prague-The Hague 1967, 167-72; M. Zavarzadeh, in MW, lviii (1968), 308-16.)

Drama (numāyīḵ) has never been a part of the classical tradition but has existed on the level of folk literature for a long time in many different forms (cf. J. Cejpek, Dramatic Folk-literature in Iran, in J. Rypha et al., History, 682-93). Much attention has been given to the Iranian passion plays (laʿīniya [q.v.]), the development of which culminated in the Kāḏār period. Modern playwriting in Iran is entirely derived from European literature. The oldest specimens are translations of some of the most famous comedies of Molière. Of greater importance were the modern comedies of Aḵhūndzāda [q.v.], written in Azeri Turkish and adequately translated into Persian by Muḥammad ʿAbbār Kārākādāghī. They were published for the first time in 1874 (reprinted Tehran 1349 sh.). The plays of Aḵhūndzāda inspired the first original dramatic works; a series of comedies said to have been written by Muḥammad Khān [q.v.], although his authorship of at least some of these has been denied recently (cf. Central Asian Review, xv (1969), 21-6). Interesting features of these early comedies are the element of social criticism they contain and the use of colloquial expressions in the dialogues. From the First World War onwards playwriting became a great fashion in Iran. From the vast production of plays only the historical dramas Farawī ʿalāẓīrār-i Ṣāʿān (1930) and Māzīyar (1933) of Šādīk Hidāyat are named here because of their importance for the history of literature (See further masrahvāyā).

Bibliography: in addition to the references in the text, only works of a general character can be mentioned here. For monographs, editions of texts and translations see especially the bibliographies in H. Ettehādi's contribution to Gr. I. Pt. 3, passim and, for works published after 1900, in J. Rypha, History, 757-808. The articles in Iranian periodicals have been recorded in İrādī Afḡār, Fīrōrī-i makhātāt-i Ṣafī, 1: 1328 k.-1338 sh., Tehran 1340 sh., II: 1339-1345 sh., Tehran 1348 sh., Tehran 1348 sh., Tehran 1337-42 sh., supplemented by Karāmat Raʿān Husaynī, Fīrōz-i khābātā tākht-i Fārsī, Dhwā-yi Fīrōz-i Māzār, Tehran 1349, sh.; cf. also I. Afḡār and H. Band-ʿĀdam, Khābāshīnāt-i dahšāa-i (1333-1342) khābātā-i Irān, Tehran 1346 sh. The current production of books can be followed in the periodical Rāhmūd-i khābā (since 1337 sh.), as well as in the annual surveys Khābāh-i Irān, edited by J. Afḡār, and Khābāshīnāt-i mīūn-i inšāqātāt-i Irān, a publication of the Wizarat Farang wa hūsnār wa inšāqātāt. A di-bibliographical survey of the classical literature exists, reference to the catalogues of Persian manuscripts is still indispensable. A bibliography of catalogues has been compiled by I. Afḡār in Khābāshīnāt-i fīrōzī-khābāhā-ḵhāfī-i Fārsī, Tehran 1337 sh., which has been supplemented by O. Afḡar, Khābāshīnāt-i fīrōzī-khāhāhā-khāfī-i Fārsī, Tehran 1337 sh., and by O. Afḡar, Khābāshīnāt-i fīrōzī-khāhāhā-khāfī-i Fārsī, Tehran 1337 sh.

viii.—ART AND ARCHITECTURE, [see Supplement].

IRÂN [see Mughals].

IRATEN (Ayt > Aït Yiratn; Ar. Banû Ratan), a Berber tribal group of Great Kabylia, whose territory is bounded on the north by the Sebaw, in the west by the Wâdî Alissi (Wâdî Aysîl), which separates them from the Ayt Yenni, in the south by the Ayt Vâyâ and in the east by the Ayt Fravsen. It is a hilly country from 3000 to 3500 feet in height, producing olives and figs and some cereals. The inhabitants are settled in several villages, of which the most important are Adni, Tawrirt Amekhân, Usammer and Aqemmân. The Iraten numbered some ten thousand, belonging to the commune mixte of Forth-National.

We know little about the history of the Iraten. Ibn Kâhidûn (Bâthbès, tr. de Slane, i, 256) mentions them as inhabitants of “the mountain between Bigîjya [Bougie] and Tedelys [Dellys]”. They were nominally under the governor of Bougie and were on the list of tribes liable to hândâ, while being in fact independent. At the time when the Iraten undertook his campaign in Ifrikiya, they were subject to a woman called Shamsî, of the family of the ʿAbd al-Šamad, from whom their chiefs came.

Throughout the Turkish period, the Iraten main-
tained their independence, secure behind their mountains. They formed one of the most powerful federations in Kabylia, which comprised five ʿârîf: Ayt Yiratn, Akerma, Usammer, Aqweghên and Umalu, and could put in the field a force of 2800 men.

They kept their independence until in 1854 the French, under Marshal Randon, for the first time penetrated into the Kabylian mountains. To prevent an invasion of their territory the Iraten agreed to give hostages and to pay tribute. Nevertheless, their land remained a hotbed of intrigues against French rule, so that Randon in 1857 decided to subdue them completely. The French troops, leaving Tizi-Ouzou on 24 May, conquered all the Kabyl villages in succession and on 20 May defeated the army of the Iraten and their allies on the plateau of Sûk al-রবã. To keep them in check Random at once began to build Fort-Napoléon (later Fort-

National) in the heart of their country and thus placed “a thorn in the eye of Kabylia”. The Iraten were then quiet for 14 years, but in 1871 they again took to arms and participated in the siege of Fort-

National, which however the rebels did not succeed in capturing. (For subsequent events, see ALGERIA).

fa, Le K'ânodu d'Ad'ni, in Recueil de mémoires et de textes publié en l'honneur du XIVe Congrès inter-

IRIBD, the name of two places: I: (Irbid/Arbad), the centre of the hadâ of ʿAdlûn [q.v.] in Transjordania (32° 33' N., 35° E.). According to al-Tabari, the Umayyad caliph Yazîd II died at Irbid which, the chronicler states, at that time formed part of the region of the Balkã [q.v.].
Severe traditions place the residence of Yazid II at Bayt Ras [a.g.], situated about 3 km. to the north of Irbil. In the middle period, Irbil was a halting-place of the barid [a.g.]. Today it is a small town of about 3000 inhabitants with basalt houses.

II: (Khurbat Irbid, Arbad, Erbed), vestiges of the ancient Arbea, west of Lake Tiberias, in the ravine formed by the Wadi 'l-Hamam. The most noteworthy of the ruins is a synagogue which dominates the ravine. On the sides of the ravine some caves are situated, connected by steps cut from the rock. It is in one of these caves that tradition places the tomb of the mother of Moses (Masah b. 'Imran), and also those of four sons of Jacob (Ya'qubb)—Dân, Isäkhâr, Zabdûn and Gâd.

IRBIL, a town in Upper Mesopotamia, situated about 80 km. east-south-east of al-Mawsil (36° 1' N., 42° 2' E.), in the centre of a region known as Adiabene, bounded by the north by the course of the Great Zâb and on the south by that of the little Zâb. Irbil is a site which has been inhabited since very early times, being referred to in cuneiform inscriptions under the name Arballu; the religious centre of the kingdom of Assyria with a sanctuary of the goddess Ishtar, it was also a centre of communications and a point of intersection of caravan routes. It was near to this spot, later known as Arbeles, that in 331 B.C. Darius III was defeated by Alexander. In dispute between the Parthians and the Romans, the town, then known as Arbira, became Christian at an early date, though it is not possible to determine to what extent Christianity penetrated the region. The seat of a governor in the Sasanid period, Irbil was the scene of persecutions of the Christians, who by an edict of 340 were subjected to a capitulation tax and various other tribulations; the rest of the Christians of the region left the town, and some years later, in 358, the governor Karâdî suffered martyrdom when he became a convert to Christianity.

The conquest of the town by the Muslims, apparently achieved without serious resistance, did not prevent its remaining an active Christian centre, the seat of a bishopric which was held by several outstanding figures. However, for reasons that elude the historian, Irbil was successively eclipsed by al-Mawsil, to which the metropolitan moved in the 3rd/9th century. At that time, Irbil was referred to by the Arab geographers merely as a leading town of the district of Hulwân. Irbil again became a town of some importance when, in 563/1167, it was the capital of the Khurjân amir Zayn al-Dîn 'All Külli Bektîn, the former lord of Siddîrî, Harrân and Takrit, who was soon replaced by his son. The most famous sovereign of this dynasty was MuSaafar al-Dîn Kökbîrî, who became amir-in-law of Salâh al-Dîn, who ruled Irbil from 586/1190 until 630/1232 and made his capital a place of some importance, in particular by the creation of new districts at the foot of the upper town. This lower town was embellished with various public buildings, hospitals, a madrasa known as al-Mu'asjarriyya, and a ribât for the use of the Şîfs. It was there, every year, that Kökbîrî had the masjid celebrated with particular solemnity, in commemoration of the Prophet's birth. On the death of Kökbîrî, the seat of Irbil passed into the hands of the caliph al-Mustansîr, to whom Kökbîrî had bequeathed it, but he was compelled to lay siege to the town to gain possession of it.

In 633/1235, the town was attacked and partly pillaged by the Mongols, who succeeded in capturing the citadel only in 656/1258, after the fall of Baghdad, and with the help of Kökbîrî's old rival, Bâdr al-Dîn Lu'lu', upon whom the town was conferred. For some years, despite a massacre which took place on the occasion of the unsuccessful revolt of al-Malik al-Sâlîb Ismaîl, son of Lu'lu', in 659/1261, the Christian community of Irbil experienced a period of relative prosperity, and was strengthened by the arrival of new elements. In fact, the town was given a Christian governor, Tâḏî al-Dîn Muştâs, who encouraged some Jacobite country-people to move to Irbil and, with the agreement of the Nestorian metropolitan Denha, allowed them to build a church there. The new Jacobite community succeeded, some years later, in being granted their own bishop.

Denha, for his part, was appointed catholics in Baghdad in 663/1265, but he had to leave that town in 666/1266 and take refuge in Irbil, from which he also fled in 669/1271, this time settling in As nú-bâdîn, as a result of a dispute with the governor. In 687/1289 the recall and torture of Tâḏî al-Dîn marked the beginning of a period of persecution and harassment for the Christians of Irbil. In 693/1295, three churches were destroyed on the orders of the Mongols and, in 708/1310, following some incidents provoked by Christian mercenaries, the Christian population of the lower town, and later that of the upper town also, were in part exterminated and several churches sacked. From that time the Christian community of Irbil lost all its importance and the few survivors gradually emigrated. Under Ottoman rule Irbil, which belonged to the paghâlî of Baghdad, had to endure the campaign of Nâdîr Shâh into Turkey in 1156/1743. In 1892 the town possessed only 3,200 inhabitants, of whom 457 were Jews, but this estimate was considered too low by some years later, in the 19th century it was a commercial centre, and still dominated by its upper town. A little way outside the lower town there still stands a minaret with a cylindrical shaft and octagonal base which may be attributed to the end of the 6th/12th century and which probably belonged to the Musafarriyya madrasa.

(D. Sourdrel)

1'ird (pl. a'rāḏ), Arabic term corresponding approximately to the idea of 'āraḍ of the nomads; as such it is ambiguous and imprecise, as the terminologies of the lexicographers testify. It does not appear in the 'āraḍo, and the context, in which it figures in hadīth, does nothing to clarify its precise meaning. Al-İḍībī does not seem to have attempted to analyse the idea of 'īrd, while Ibn Kutayba sees it in a reference sometimes to the soul, sometimes to the body, an interpretation attacked by al-Kullī, Amāli, Cairo 1323, i, 118. In fact, apart from such material meanings as "strong army", "valley covered with palm trees", etc., (see TA, s.v., LA, s.v.), 'īrd seems to imply also, in hadīth and in poetry, the body of a man, or even of men; the parts of the body which have been laid across (ta'arratfa, īmaratja, *-ard) are synonyms of *-ārda, and a 'īrd is a cloud which obstructs the horizon. Since the Arabs used the expression hatāb al-īrd "to tear the 'īrd" as one tears a veil, and since hatība, from the same root, meant "dishonour", it is legitimate to consider 'īrd as a sort of partition or curtain separating the individual from the rest of mankind; behind this veil were concealed personal nobility (hasāb, s.v.); good character (khālaṣ maḥmūda) or soul (nafs). Now the expressions, very common in Arabic, relating to the protection (ṣāna and its synonyms) or the insulting (shatama and its synonyms) of 'īrd obviously cannot apply either to the soul, considered as a metaphysical entity, or to good character, which can claim only praise; hence, whereas the identification of 'īrd with hasāb is correct in itself, yet the first implies more than the second, which is merely one of its manifestations.

From the semantic point of view, the radical letters of 'īrd can give useful guidance. Several derivates from this root imply the notion of something "laid across" (ta'arrada, īmarada), and a 'īrd is a cloud which obstructs the horizon. Since the Arabs used the expression hatāb al-īrd "to tear the 'īrd" as one tears a veil, and since hatība, from the same root, meant "dishonour", it is legitimate to consider 'īrd as a sort of partition or curtain separating the individual from the rest of mankind; behind this veil were concealed personal nobility (hasāb, s.v.); good character (khālaṣ maḥmūda) or soul (nafs). Now the expressions, very common in Arabic, relating to the protection (ṣāna and its synonyms) or the insulting (shatama and its synonyms) of 'īrd obviously cannot apply either to the soul, considered as a metaphysical entity, or to good character, which can claim only praise; hence, whereas the identification of 'īrd with hasāb is correct in itself, yet the first implies more than the second, which is merely one of its manifestations.

The elements of 'īrd may be classed under three headings: the tribal group, the family and the individual. Under the heading of the group come the number of its members, the qualities of the poet and the orator, victories and independence; under the head of the family: the sons; of the individual: the group. Other elements like rebellion, courage, liberty, vendetta, chastity of the wife, liberality, faithfulness to one's word, hasāb, protection of the weak, hospitality, invulnerability of the abode, belong sometimes to the group and the individual, sometimes to the family and the individual, sometimes to the group, family and individual.

We find the explanation of the various elements of 'īrd in the warlike life led by the ancient Arabs. Indeed any sign of failure in fighting or of loss of independence humiliated the Arab and dishonoured him. Now humiliation (dhilla) is the opposite of power (ṣīrah) simply because it implies weakness; hence weakness is the condition of dishonour, while power is the foundation of honour or 'īrd. In other words, everything that contributes to power is an element of honour, while all that causes weakness is an element of dishonour. It is evident then that 'īrd was in its origin associated with power. 'Īrd moreover had an important social function; it was the guiding motive in the acts and deeds of all the Arabs except those of the Yaman, and so took the place of religion at the gatherings held for contests of honour called muĎāfara and muNDāfara (s.v.), and 'īrd, on account of its sacred nature, was entitled thus to take the place of religion, since the Arab put it in the highest place and defended it arms in hand.

The consequences to be drawn from the above are the following: being subjected in their everyday life to the controlling influence of an ethical principle, namely honour (ʿīrd), the Arabs were not an anarchic or truly individualist, nor primitive people, nor one at heart materialist; on the contrary, 'īrd, regarded as an ethical principle, was found to be at the root of various aspects of the moral life, of manners and even of ʿīraḍ institutions. It was the basis of the social hierarchy or of the non-egalitarian social structure; the poet, the orator, and, in a certain sense, the sayyid, enjoyed a special respect. In the abstract, the lexicographers accept the following notions: distinction of one's ancestors or personal nobility (hasāb, s.v.), good character (khālaṣ maḥmūda) or soul (nafs). Now the expressions, very common in Arabic, relating to the protection (ṣāna and its synonyms) or the insulting (shatama and its synonyms) of ʿīrd obviously cannot apply either to the soul, considered as a metaphysical entity, or to good character, which can claim only praise; hence, whereas the identification of ʿīrd with hasāb is correct in itself, yet the first implies more than the second, which is merely one of its manifestations.

From the semantic point of view, the radical letters of ʿīrd can give useful guidance. Several derivates from this root imply the notion of something "laid across" (ta'arrada, īmarada), and a ʿīrd is a cloud which obstructs the horizon. Since the Arabs used the expression hatāb al-ʿīrd "to tear the ʿīrd" as one tears a veil, and since hatība, from the same root, meant "dishonour", it is legitimate to consider ʿīrd as a sort of partition or curtain separating the individual from the rest of mankind; behind this veil were concealed personal nobility (hasāb, s.v.); good character (khālaṣ maḥmūda) or soul (nafs). Now the expressions, very common in Arabic, relating to the protection (ṣāna and its synonyms) or the insulting (shatama and its synonyms) of ʿīrd obviously cannot apply either to the soul, considered as a metaphysical entity, or to good character, which can claim only praise; hence, whereas the identification of ʿīrd with hasāb is correct in itself, yet the first implies more than the second, which is merely one of its manifestations.

The 'īrd which we have analysed refers to the ʿāraḍiyya. Yet Muḥammad still regarded ʿāraḍ as sacred; it even ranks as equal to religion. Islam maintained many of its elements, which found a place in it in the form of obligations: protection, largesse, courage, etc., form part of Muslim practice. These elements lost their original character: they are no longer capable of being the cause of boastfulness (Islam opposing ṭakwa to ḥamīyya); they are rather connected with religion or with a moral principle emanating from religion. Other elements have been rejected by Islam (like hasāb and ʿāraḍ) because they were incompatible with its spirit. Some of them, on the other hand, still survive and sometimes are intensified. Among the modern Bedouins we still find ʿīrd with almost all its pre-Islamic force (the ḥubāb of the Arabs of Transjordania and Moab).

At a later date these elements underwent more than one transformation, or even became extinct, especially in the cities, and sometimes the characteristic of use of the term ʿīrd in its traditional sense, though less rich in meaning, continued, especially in the Umayyad period, keeping its sacred character and its relation with insult (cf. Ibn Durayd, Ḫamhara, Būlāk ed., 166; Aḥāḏi, xi, 49; Ibn Kutayba, ʿUyūn al- ʿaḥbār, i, 293; al-Thaʿlabīl, Mīrāḏ al-murawwda, Cairo 1898, 22, 31; Abū Tamām, Djund, Cairo 1875, 93; al-Bubṭuri, Djund, Beirut 1921, 443, 444, 449, 623; al-Mutanabbi, Djund, ed. Dieterici, 416; Muḥyār al-Dāylamī, Djund, Cairo 1929, ii, 4). Its place has been partly taken by the term ʿāraḍ, which has received the simple meaning of honour, without the complicated shades of the ʿāraḍiyya attached to this idea (Yaʿkūbī, Historiae, ii, 314; Ibn Kutayba, ʿUyūn al-ʿaḥbār, i, 246; al-Mutanabbi, Djund, 342; Ibn Khālidn, Mubadda, Beirut ed. 1900, 396; cf. al-Ḥusayn, Zakr, ed. Zaki Mubārak, i, 435 and the lexicon).

At the present day, the meaning of the word ʿīrd has become restricted, relating particularly to women: in Transjordania it is associated with the virtue of a woman or even with her beauty. In Egypt the ʿīrd of a man depends in general on his wife's reputation and that of all his female relatives. In Syria the reputation of every member of a tribe reflects on a man's ʿīrd.
Chambers: B. Fares, L'honneur chez les Ardbes avant l'Islam, Paris 1932, where the subject is fully treated; see also B. Fares, Djabal, in RO, XXVII (1962), 99-101; Shammakh, Kiab al-Siyar, Cairo 1301.

'IRK, an Arabic word which, etymologically, has the basic meaning of "root", but other acceptations have been grafted on to this original meaning so that it eventually approximates to the idea of race. It is clear, as far as can be judged from the rare documents which can be collected, that such a concept is nowhere clearly attested, and it would be more correct, in this respect, to speak of a stock: "I trace my origins ('urak) to the ('irk) of the land" said Imru'l-Kays (LA s.v. 'irk). But the idea of a group which seems to be present in outline behind this substantive which also designates blood, understood as a factor of heredity.

'irk is nowhere used in the Kur'ân. In hadîth it is not unknown but is only used sporadically. There, first of all, the general sense of root is to be noted: "whoever brings back to life uncultivated land becomes the owner of it; but a root which unjustly grows there does not give any right to this land" (al-Buhkârî, K. al-Wahabî, Cairo 1376, iii, 93). Besides the idea of a nerve which strikes man in his head, there is also to be found in hadîth the indiscriminate sense of artery and vein: "When he finished massacring them, his "artery" burst and he died" (see Wensinck, Concordance). It also designates the blood: "his soul left with the 'urak" (see Wensinck), alluding to the liquid soul, al-nafs al-sâ'îla; regarding a woman whose period is unusually long, it is said: "it is not a question of menstruation, but of blood ('irk')" (Buhkârî, vii, 46). Finally, and it is this acceptation which especially interests us here, an 'irk, the function of which is imprecise, seems to be at the origin of certain anomalies of birth. A man came to the Prophet and said to him "Oh Messenger of God, I have had a black child".—"Do you have any dromedaries?", Muhammed asked him. "Yes."—"What colour are they?"—"Red."—"Are there no grey ones among them?"—"Indeed yes."—"How did that happen?"—"Perhaps an 'irk attracted it towards him."—"Then for your son too, perhaps an 'irk attracted him." (Buhkârî, vii, 46). Thus the concept is made to relate to descent and birth. The hadîth in question ('irk) could not avoid becoming involved, that, in 310/922-3, there occurred the invasion of the Djabal Nafusa by Fâtimid troops. According to Ibn 'Idhârî, these troops were under the command of the general 'All b. Salmân al-Dâ'î, and, according to the Ibâdî chronicles, they consisted of Kutâma warriors, the bravest and most loyal supporters of the Fâtimid dynasty. The Fâtimid troops attacked al-Dajâla, the main stronghold of the Djabal Nafusa, but they were defeated by the Ibâdîs. In the course of a second battle between the Nafusa and the troops of 'All b. Salmân, which took place near Tirakât (apparently on the territory which is now al-Rudjebân in the east of the Djabal Nafusa), Abû Yahyâ was killed by an Ibâdî soldier in vengeance for some act of injustice.

In Ibn 'Idhârî, the chief of the Nafusa who fought against 'All b. Salmân al-Dâ'î is called Abû Baṭṭa. There is no doubt that this was one of the by-names of Abû Yahyâ Zakariyyâ al-Irdjânî.

Muhammad struck a blow at the old preoccupations concerning race. But, nevertheless, these survived among the bedouins. The same concern is shown among the sharifs and the sayyids, both because of the nobility of their stock and the baraba which they have received from their illustrious ancestor Muhammad.

While the dispatch of the Remittance, whether by caravan through Syria or by sea, was always the occasion for a lavish ceremony, only a small part of the irdâliyye was actually sent to Istanbul. The remainder was kept in Egypt and used as a permanent deposit, applied to meet special obligations of the sultans, such as provisioning Ottoman naval units at Alexandria, Damietta and in the Red Sea, supplying Ottoman pilgrims and troops passing through Egypt on their way to southern Arabia, and paying for the purchase of Egyptian commodities and supplies used in the Sultan's palace kitchen in Istanbul and in the Holy Cities of Mecca and Medina. Starting in the late 17th century, the Mamlûk factions in Egypt assumed control of the Ottoman administrative structure in the country, including the Treasury, and managed to divert an ever-increasing proportion of the irdâliyye sums to their own accounts in addition to collecting much of the Treasury's tax revenues, thus further lowering the amount left for the irdâliyye. Periodic efforts were made to correct this situation and restore the irdâliyye, with the administrative reforms introduced in 1081/1670, 1106/1695, 1127/1716, 1150/1734, and 1180/1769, and 1200/1786 being most important, but their effects were short-lived due to the continued Mamlûk power. During most of the 12th/18th century, however, the Ottoman governors were largely able to replace the lost irdâliyye funds by using Mamlûk revenues, supporting those parties which agreed to allow the Treasury to confiscate and sell the properties of their defeated rivals and to use the resulting revenue, called mâl-i hulûlin, to pay for the expenditures formerly provided by the irdâliyye.

Irdâliyye payments were completely suspended during the reign of the Mamlûk rebel 'Ali Bey al-Kabîr [q.v.], 1170/1769-1785, 1180/1770-1786 and 1193/1780-1797, and the French Expedition to Egypt (1798-1801), but they were resumed, on a reduced scale, upon the restoration of the Ottoman power and were retained by Muḥammad Ṭall, not only for Egypt but also for his Syrian possessions, except during the time of his two wars with the Porte.

Irtidjâl [see ra'dîyya].

Irtidjâl, improvising, extemporizing a poem or a speech. Ibn Rashîq ("Umda, i, 131), followed by Azdî (Bâda'î, p. 5 of the Bûlûk ed.) connects the term with the meaning "to be easy", "to flow down" implied in the expression šârî ra'dîjâl, "lank hair", or with irtidjal al-bîr, "descending into a well on one's feet", i.e., without the help of a rope, and the synonym of bâdâ, "to begin", substituting hâ for hama. According to these two authors, the difference between irdâlîjâl and bâdâha is that whereas in the case of irtidjâl the poet does not prepare his poem in advance, in the case of bâdîha he allows himself a few moments of thought. Of the other synonyms of irtidjâl mentioned in the dictionaries only the term irdâlîdâ is used occasionally. For an explanation of the etymology of this last term see Abû Ḥâfiz al-Askari, K. al-Sinâ'ayn, 39-40 (cf. also the expression kalâm bâdîh, "unprepared, unpolished speech", as used by the poet Bahî' and in a famous saying by the Khârijî leader 'Abd Allâh b. Wahh al-Râsibî in Djihib, Baydîn, ed. 'Abd al-Salâm Mub. Hârûn, Cairo 1367/1948, 204-5).

According to R. Blachère (Litt., 87-8, 364, 369-73), the metre used for improvisations in pre-Islamic and early Islamic times was mostly, though not exclusively, the radâjâs. In addition to songs by camel drivers (hidâl), cradle songs, etc. which in the nature of things are often improvised, there were improvisations on solemn occasions: curses or satires directed against the enemy, war songs, and dirges (see also the catalogue of radâjâs themes in M. Ullmann, Untersuchungen zur Radajsepoesie, Wiesbaden 1966, 18-24). The corresponding verbs radâjaza and irâdâjaza are therefore often used in the sense of "to improvise in radâjâs" (often also with the secondary meaning "to deride"), "to sneer", see I. Goldziher, Abhand. zur arabischen Philologie, Leiden 1896, i, 79-81). For an explanation of the etymology of this word see E. van der Donk, "radiazi" see I. Goldziher, Abhand. zur arabischen Philologie, Leiden 1896, i, 79-81. For a detailed discussion of various types of the idâzâ [q.v.] which, since metre and rhyme are suggested by someone else, is the only form of improvisation which does not allow the poet to compose any part of his poem in advance. Some of these anecdotes may well be authentic (e.g., the anecdote on pp. 90-2 of the Bûlûk ed.) as is shown by the fact that individuals capable of improvising compositions of some length are found in the Arab countries to this day.

For improvisation in Persian and Turkish, [see Supplement].

IRTISH [see FALAK, 'ILM AL-HAYA‘A].

IRTISH [see Supplement].

'ISÂ, Kur‘anic name for Jesus; the Kur‘an refers to him in 15 suras and devotes to him 93 verses which are the foundation for Muslim Christology. Various traditions, containing additions drawn from the apocryphal gospels of the childhood of Jesus, or from mystic Christian literature, have enriched this Christology and, in certain respects, brought it nearer to the Christian Christology. Islamo-Christian polemic has tended through the years to harden the positions; most of these positions have become classic and are to be found unchanged in present day Muslim writers.

I. Etymology of the word 'ISÂ: Certain western writers (Marracci, ii, 39; cf. Landauer and Nöldke in ZDMG, xlvi, 720) consider that the Jews induced Muhammad to use the form 'Isa and he did so in good faith. In fact the Jews, in hatred, referred to Jesus as Esau (Isa) maintaining that the spirit of Esau passed into him (cf. Lammens, in Machriq, xviii, 126; Frankel, in REJ, xviii, 352; Nestle, in ZDMG, xlvi, 720) state that Yâsoû‘ derives, by a phonetic change, from the Syriac Yeshu‘ (Yshu‘), itself coming from the Hebrew Yeshu‘a, with harmonization with Mûsâ. But it should be pointed out that it is used only five times with Mûsâ, while it is mentioned 25 times altogether (cf. Parminter, Jesus in the Qur‘an, London 1965, 16-7; Henninger, Spuren christlicher Glaubenszweisamkeiten im Koran, Freiburg 1951, 32-3). Finally some modern scholars have seen it as a reference to an 'Isa mentioned in the pre-Islamic inscriptions, yâ‘: a dialectical variant of hys, a theory which has been strongly rejected by G. Ryckmans who disputes the reading in Analecta Bollandiana, lvii (1949), 62 and in Les religions arabes présislamiques, 1951, 48. For the Muslim writers, see al-Baydawi on III, 45 (ed. Fleischer, i, 156, l. 2).

II. The various names of Jesus in the Kur‘an (see below for a study of the terms):—a) al-Masîlî (eleven times).—b) Na‘îf, prophet (XXIX, 30).—c) Rasûl, "envoy, messenger" (IV, 157, 171, V, 75).—d) Ibn Maryam, "son of Mary" (33 times): 16 times 'Isa Ibn Maryam, 17 times Ibn Maryam alone or with another title, while in the Gospels the expression appears only once; cf. E. F. F. Bishop, The Son of Mary, in Moslem World, 1934, who considers that the name came from the Church of Ethiopia after the return of the second group of emigrants. The expression appears five times in the Arabic Gospel of the Childhood, and fifteen times in the Syriac version of this Gospel. —g) Min al-mubârabîn, "among those who are close to God" (III, 45), later explained by the fact of his "ascension" (su‘âd, raf).—e) Wâqîth, "worthy of esteem in this world and the next" (IV, 45); al-Baydawi explains this: on earth as a prophet and in Heaven as an intercessor.—g) Mubâra, "blessed" (XIX, 31): "a source of benefit for others" (al-Baydawi), probably the "bringer of baraka" (Kâmil al-Hakîm, Kawl al-tiafîk, 30), "sure word", an obscure expression which is perhaps not a title but refers to the preceding statement; cf. al-Baydawi, i, 580, l. 25.—i) 'Abd Allâh, "Servant of God" (see below).

III. The annunciation, conception and birth of Jesus. There are in the Kur‘an certain features which, more or less directly, reflect the Gospels. Some writers, for example P. Hayek (Le Christ de l’Islam, Paris 1959, 65) go so far as to state that apart from the dogma that Mary is the mother of God, rejected by the Muslims since they formally deny the divinity of Jesus, "all the other dogmas defined by the Church or transmitted by its traditions of worship, find a support in the Kur‘an, rather weak it is true, but certainly real: the Immaculate Conception, the Presentation in the Temple, the Annunciation, the Virgin Birth, Christmas and even the Assumption" (cf. Maryam).

The Annunciation made to Mary is related with a touching freshness and recalls the scene in the Gospels. Mary, withdrawn into the Temple, receives the visit from the "Spirit of God" (see Rûh Allâh), "then We sent unto her Our Spirit that presented himself to her a man without fault" (XIX, 17), which tradition identifies with the Archangel Gabriel. He announces to her the miraculous birth of Jesus; miraculous because Mary has vowed her virginity to God and intends to retain it (LXVI, 22; XXI, 91). The Angel reassures her: this is easy for the Lord, who wishes to make of her a sign (dya) for men and a mercy (rahma) from Him (XIX, 21). "So she conceived him, and withdrew with him to a distant place".

It seems that in the Kur‘an the distinction between the Annunciation and the Conception is not precisely made. According to Luke i, 26-38, the angel of the Lord who appears to Mary is distinct from the Holy Spirit who performs the miracle. The Kur‘an seems to unite these two ideas. In fact, while in XIX, 17, there is mentioned an angel who appears to Mary in the form of an actual mortal, in two other texts (LXVI, 12 and XXI, 9) where God mentions the Spirit ("Our Spirit"), there is no reference to the angel. The confusion between the annunciation and the conception led to the Angel Gabriel’s being considered as the father of Jesus, a thesis supported by Gereck, Versuch einer Darstellung der Christologie des Koran,amburg-Gotha 1839, 36-46; cf. Michaud, Jésus selon le Coran, Neuchatel 1960, 26, a thesis based on the interpretation of certain Muslim exegists stating that the angel breathed into a slit in Mary’s cloak which she had taken off; when she put it on again, she conceived Jesus (cf. al-Thâlâbî, Kişas, 381).

In fact, the conception of Jesus was the result of a creative decree made by God: the creation of Jesus by God was after the example of that of Adam. The creation of Adam was at least as marvellous as that of Jesus, conceived by a virgin (cf. III, 52). Mary was overtaken by the pangs of childbirth be-
side the trunk of the palm tree. To reassure Mary's fears of a scandal, the child addressed her from the cradle. She shows the child to her family. In order to silence their reproaches he declares: "Lo, I am God's servant; God has given me the Book, and made me a Prophet. Blessed he has made me, wherever I may be; and He has enjoined me to pray, and to give alms, so long as I live, and likewise to cherish my mother" (XIX, 16-35).

It is known that Islam does not admit the idea of an "original sin" transmitted to the descendants of Adam (cf. G. Anawati, Islam and the Immaculate Conception, in The dogma of the Immaculate Conception, ed. E. D. O'Connor, University of Notre Dame Press, 1958, 447-61). Concerning Mary and her son however, there is a tradition, accepted by al-Buhkharî and Muslim, which states that they were granted an extraordinary privilege: that of both having been preserved from any contact with the devil at the instant of their birth. "Every son of Adam when newly born", says the hadith, "is touched (or probably squeezed) by Satan, except for the Son of Mary and her mother; it is at this contact that the child utters his first cry".

IV. The mission of Jesus: Jesus is a Prophet (nabi; XIX, 31) and the Envoy (rasûl; IV, 156, 169, LXI, 6). Like all prophets, he has a mission to fulfill, for to each separate people God has sent a special prophet. Of the son of Mary and of his mother He has made a sign, "and He has given them refuge on a quiet and dewy hill" which the commentators have identified with Jerusalem or Damascus. On the different interpretations concerning this topography (the influence of Byzantine iconography [Ledit], reference to the Assumption of Mary [Rudolph, Ahrens, Henninger], Srinagar [Ahmadiyya]), cf. Michaud, 29, n. 3.

The "miraculous sign" shown by Jesus and his mother is apparently his miraculous birth. But he himself was to perform "signs", proving through miracles his prophetic mission. Among these "proofs" (bāyyindāt; cf. II, 254 and 81, III, 43, V, 110, XLIII, 63, LXI, 6), should be mentioned the following:—1. Jesus spoke even in the cradle (XIX, 30) and already with the authority of a grown man (III, 47).—2. He made small clay models of birds, breathed life into them and they "it will be a bird" (III, 43). The modelling of birds is found in the apocryphal gospels: the Gospel of Thomas, ch. 2, the Gospel of the Childhood in Arabic, ch. 36, 46, i; the Armenian book of the childhood, 18, 2. The Abmadiyâya give a symbolic interpretation to this miracle: it signifies the spiritual flight of the Galilean peasants under the influence of Jesus (cf. Parrinder, Jesus in the Qur'an, 6).—3. Jesus cured the man blind from birth and the leper (V, 110).—4. He raised the dead, always "with God's permission" (III, 43; V, 110).—5. At the request of the Apostles (ka wdîsirîyyân, [g.v.]), he made to come down from the sky a "Table prepared" (mâdiâ); for them it was a feast (îdî), a meal and a proof (âyâ) of his mission (V, 111-14); cf. Baydâwî, i, 260; Hayek, 220-2; Gerock (46), followed by Rudolph, thought that this was either a reminiscence of the Last Supper or of the vision of Peter related in the Acts of the Apostles, X, 9). According to the traditional material collected by al-Tabârî, 86 (Hayek, 220-2) this is an echo of the miracle of the loaves and fishes (Matthew, XIV, 17 f.; XV, 32 f.). Michaud (56-7), following Masson (328-9), produces texts from the Old and the New Testament in favour of interpreting it as referring to the Last Supper. On the sources of the commentaries on this passage cf. Sidersky, 328-9. It is possible that the Kur'anic passage was influenced by some apocryphal tradition of which nothing has survived. (cf. G. Rosch, Die Jesuverselben, 447).

Jesus comes to declare the truth of what has already been given before him in the Torah (III, 44). The Scripture which belongs to Jesus is the Gospel (cf. nîkat), which is judged favourably because it fills the hearts of those who follow it with meekness and pity (V, 82). Jesus covers with his prophetic authority not only the Gospel and the Torah but also the earlier writings, all of them taught by God to the Son of Mary (III, 43, V, 110).

V. Jesus the Messiah: We must here define certain terms applied to Jesus which, in Christianity, have a fundamental value: the terms Messiah and Servant of God. Concerning the first, in the structure of the New Testament the revelation was gradual and Jesus did not reveal himself to the disciples as the promised Messiah until after a long psychological preparation. This historical perspective is not found in the Kur'ân: the term Messiah is given to Jesus from the time of his birth, though in a narrow sense which in no way corresponds to the Christian concept. Jesus the Messiah in the Kur'ân is only one in a series of prophets which ends with Muhammad. Like all the prophets he is only an ordinary man; the Kur'ân is entirely opposed to any doctrine of Jesus the Messiah the Son of God (IX, 30-1). It reproaches Christians for having taken "their scholars and their monks as lords apart from God, and the Messiah, Mary's son" (IX, 31). The uncompromising dogma of the unity of God removes any Christian overtones from the word Messiah.

The word Masîb is used eleven times in the Kur'ân, in passages all of which are Medinan (III, 40, IV, 156, 159, 170, V, 19 (twice), 76 (twice), 79, IX, 30, 31). The word is of Jewish origin, transmitted through Syriac. It seems to have been known in the north and the south of Arabia in the pre-Islamic period. The Hebrew maqâiz was used of the kings and the patriarchs and especially for the awaited Saviour. The Septuagint translates it by Christos. Al-Zamaqshari and al-Baydawî admit that the word is foreign and al-Firuzabadî states that there are fifty explanations for this word [see Maâfî]. In the Kur'ân the word is used only to the prophets, and Jesus.

The Arabic writers found two roots for it: 1. the verb masâha, to rub with the hand, to anoint; in the passive sense Jesus is Messiah, a) because he was anointed by means of blessings and honours (XIX, 32), b) because he was covered, from birth, by the wing of Gabriel to shield him from the bite of Satan, c) because he was anointed in Adam, like all men, but in a particularly way in order to be implanted in Mary. In the active sense, Jesus is Messiah, a) because he anointed the eyes of those born blind in order to cure them (III, 43), b) because he rubbed sick people with his hand, c) because he anointed with a holy oil. 2. The second root is the verb sâka, to travel, go on a pilgrimage, to wander. Jesus became for the Muslim mystic writers "the model of the pilgrims", "the imâm of the wanderers", the example of the mystics. Cf. Abd El-Jalil, Marie et l'Islam, 59, based on the Commentary of al-Âlîsî, iii, 142.

VI. Jesus the Servant of God: 'Abîd, literally "slave", means in theological terms, "the creature". Man is not only the "servant" of God but also his "property". Cf. 'ebedâ in the Old Testament (Isaiah, XLII, 1, LII, 13-LIII, 12, the fourth song of the Servant of Yahweh) and 8ô̄sâqî in the New Testament (Phil., II, 7). In the Kur'ân IV, 170, the angels
are also called 'abd. The basic meaning of adoration is found, with various nuances, in all the derived meanings (cf. Jeffery, Foreign vocabulary of the Qur’ān, 209). What must be remembered is that the Qur’ān insists on the status of Jesus as no more than that of a created being (XLIII, 59); it reacts against any belief in the divinity of Jesus. “Thus the first word he uttered was to recognize his character as a servant, to make more decisive the argument against any who might claim that he was God” (Hayek, 84; cf. Ibn al-ʿAlighi, i, 220; al-Tabarî, i/3, 73-4; al-Thabrâ, Riṣāl, 386). Thus it would be wrong to exaggerate the meaning of this term (as does Ledit, Makomet, Israel et le Christ, 145) and to interpret it in the Judeo-Christian sense: everywhere in the Qur’ān the word means a being created by God and subject to Him (cf. III, 52, 73).

VII. Jesus and Muḥammad: According to the Muslim commentators, who base themselves on LXI, 6, Jesus announced the coming of one who would come after him. According to the recension of Ubayy, this was “the seal of the Prophets” and of the messengers; in the Vulgate, it is “a Messenger” named Ahmad. On the meaning of the variant of Ubayy, cf. Blachère, tr. 909. Islam recognizes Muḥammad in Ahmad, both names deriving from the root h.m.d. In St. John’s Gospel Jesus announces the sending of the Paraclete (XIV, 16; XIV, 26; XVI, 7). The main early versions of the Gospels have merely transcribed the term without translating it: paraoklētos has given fārābīli.

Sale, in his Preliminary Discourse, 1877, iv, 53 (quoted by H. A. Walter, The Ahmadiyya Movement, 30), following up a suggestion of Marracci, suggests that the Gospel text on which these are based had something like ṣerākūṭōs, meaning famed, illustrious, and rendered in Arabic by Ahmad. The same explanation is found in C. F. Gerock, 109 and Zwemer, The Moslem Christ, 139, n. 1: the Muslim commentators accuse the Christians of having substituted ṣerākūṭūtōs for ṣerākūṭōs which stood in the original. Cf. Michaud, 36-7; Henninger, 313; Par- rinder, 96-100; L. Bevan-Jones in Muslim World, x, 112 ff.; A. Guthrie and E. F. F. Bishop, ibid., xii, 251 ff.; M. Watt, His Name is Ahmad, ibid., xiii, 118 ff.; M. Schacht, ibid., 1, 171, Ahmad.

As to the Muslim exegesis of the Kurʾānic texts referring to the “Word” coming from God to Jesus, four possible exegeses may be distinguished (cf. Abd El-Jalil, 39, using al-ʿAlisi, iii, 141):—1. Jesus is the fulfillment of the creating word of God, uttered at the moment of his conception (IV, 169, XIX, 30, III, 42);—2. Jesus is the word of God, received and preached by the earlier messengers.—3. Jesus is the word of God because he speaks on behalf of God and thus leads men in the right way.—4. Jesus is a word of God because Jesus is, in his own person, “good tidings”.

IX. Jesus and the Spirit of God: In order to accomplish his mission, Jesus was fortified by the Holy Spirit (Rūh al-kudus) (V, 199, XIX, 30-3), first at his birth, and then during his adult ministry among the Jews (II, 81, 254). The complete formula: “we have . . . confirmed him with the Holy Spirit” is used in the Kurʾān only for Jesus. However the Kurʾān uses an almost identical formula in connection with the believers whom God confirms “with a Spirit from Himself” (LVIII, 22). On the Holy Spirit in the Kurʾān, cf. Henninger, 4-6, which is based, among others, on the article by Macdonald in Moslem World, xxii (1932).

X. Jesus and the Trinity: In the passage III, 40, Jesus is mentioned as being among those “close” to the Lord (min al-mukarrabin). Jesus will be glorious, honoured both in the present world and in the world to come. This privilege of being close to God is shared by Jesus with the angels (IV, 170). But, however sublime they may be, both they and he remain created beings. The unity of God is stated in III, 52-5 in a passage dealing with the person of Jesus. The reference is probably to the reply made to the Christian delegates of Najdrān in 631 (cf. Blachère, 865). In spite of his great veneration for the Son of Mary, Muhammad is quite clear that he is in no sense divine. The Christians who insist on this divinity are “Liars”.

From the same period is the passage V, 19-21, in which Muḥammad once again insists on the entirely human condition of Jesus: “They are unbelievers who say, ‘God is the Messiah, Mary’s son’”. And the Christians are no more the sons of God than is Jesus himself.

It will be clear that with such a perspective, the Kurʾān formally rejects any doctrine of the Trinity. It should however be pointed out that the Trinity as understood and rejected is not the same as that which is taught by Christian dogma, and defined by the councils which were held before the revelation of the Kurʾān. The Kurʾānic Trinity seems to be a triad composed of Allāh, of Mary his consort and of Jesus their child (cf. V, 116); a concept which is reminiscent on the one hand of the stellar triads of the pre-Islamic Pantheon (cf. T. Fahd, Le panthéon de l’Arabe centrale à la veille de l’Hégire, Paris 1968), and on the other hand of the cult of Mary verging on idolatry practised by certain Christian sects of Arabia, the Mariamites and the Collyridians.

It is important to note that the formal denials of the Kurʾān are directed towards these views, which are “heretical” from the point of view of Christian orthodoxy itself. Certain modern Muslim writers, taking note of the explanations provided by their Christian informants, are inclined to recognize the basic monotheism of the Christian religion, without however admitting its revealed nature, (cf. J. Joumier, Le commentaire coranique du Manâr, 308). For all this section, cf. Michaud, 77-83.

XI. Jesus and the problem of the crucifixion. On the subject of the death of Jesus, two questions require to be answered: (1) was Jesus really crucified and did he therefore die on the cross? (2) supposing that this was not the case, did he die a natural death?

Concerning the first question, the Kurʾān states its position categorically: against the Jews who claimed “we slew the Messiah, Jesus son of Mary, the Messenger of God”, it states “yet they did not slay him, neither crucified him, only a likeness of that was shown to them (waalikin ḥubbība lāhum). Those who are at variance concerning him surely are in doubt regarding him; they have no knowledge of him except the following of surmise; and they slew him not of a certainty (yaakhīn)—no indeed; God raised him up to Him” (IV, 156-7). Muslim tradition com-
pletes the statements of the Kur'ân. According to some, Christ was replaced by a double, according to others it was Simon of Cyrene or one of the Apostles (Judas).

On the different modern explanations of the wa'lâkîn shubbîha lahum, cf. Michaud, 64-5, who mentions them and himself agrees with Hayek (41) in understanding "it seemed thus to them", which this writer considers to be the most plausible interpretation. Certain wa'lâkîs and some Ismâ'îlî commentators have interpreted this passage thus: the Jews intended to destroy the person of Jesus completely; in fact, they crucified only his násâ', his láhâ' remained alive; cf. L. Massignon, Le Christ dans les Évangiles selon Ghasâlî, in REI, 1932, 523-36, who cites texts of the Rasâ'il Ikhshid al-Safâ'î (ed. Bombay, iv, 115), a passage of Abû Hâtim al-Râzl (about 934), and another of the Ismâ'îlî Mu'ayyad Shîrâzi (1077). But this interpretation was not generally accepted and it may be said that there is unanimous agreement in denying the crucifixion. The denial, furthermore, is in perfect agreement with the logic of the Kur'ân. The Biblical stories reproduced in it (e.g., Job, Moses, Joseph etc.) and the episodes relating to the history of the beginning of Islam demonstrate that it is "God's practice" (sunnat Allâh) to make faith triumph finally over the forces of evil and adversity. "So truly with hardship comes ease", (XCIV, 5, 6). For Jesus to die on the cross would have meant the triumph of his enemies; but the Kur'ân assures that they undoubtedly failed: "Assuredly God will defend those who believe"; (XXII, 49). He confounds the plots of the enemies of Christ (III, 54).

On the origins of the Kur'ânic concept of the crucifixion (gnostic and docetic Christianity, as maintained by H. Gregoire, seeing here a concession to certain docetic Monophysites, in Mlanges Charles Diehl, Paris 1930, i, 107-19; a rejection of Ledit's view in Mahomet, Isrâ' et le Christ, 151-6, where he attempts to find texts of the Kur'ân which refer symbolically to the mystery of the redemption) cf. Michaud, 68-71.

Concerning the second question (the death of Jesus and his ascension to God), an examination of the Kur'ânic texts XIX, 34, III, 48, XXXIX, 43, and in particular the key text IV, 155-7 (which rests in part on the preceding ones and reveals the true Islamic attitude to the death of Jesus), shows (1) that the resurrection referred to in XIX, 84 is the general resurrection which the Kur'ân proclaims for the end of the world; there was a special resurrection for Jesus, since Jesus did not die on the cross. Later tradition (cf. Hayek, 263-8) stated that it would be at the time when Jesus returned again, that he would die the natural death announced in XIX, 34-2. The word tawâuffâ usually means a death which is blessed, a return to God for the final judgement, but it is also used in VI, 60 for God's recalling the souls of those who sleep while they are asleep and returning them when they awake (cf. Fränkel, in ZDMG, lvi, 77). The verb is twice used of Jesus, in III, 48 and V, 119. The first passage could imply an elevation of the living Jesus to God. The second is ambiguous. The question is settled by the passage IV, 155-7, in which it is stated that Jesus was not killed by the Jews but was raised up to heaven. In other words, we have the following succession of events: apparent death, ascension, second coming, natural death, general resurrection. For all this section, cf. Michaud, 60-4.

XII. The return of Jesus: The only authority is the passage XLIII, 61, which contains some variant readings: the first reading, that of the Vulgate: wa-innahu la-'ilmân, "He (Jesus) is truly a knowledge of the Hour"; i.e., he by whose descent the approach of the Hour is known; the second reading, the canonical variant: wa-innahu la-'alamân, "And he (Jesus) is truly a sign for the Hour"; the third reading, in the recension of Ubayy: wa-innahu la-ghâbirân, "And he (Jesus) is truly a warning of the Hour"; fourth reading: wa-innahu: the âu refers to the Kur'ân.

If the second coming of Christ is taken as established, his death is placed after the Hour, as mentioned above, and the verses in LXIX, 159 and XIX, 33 are easily explained. Similarly, the expression kahlân in III, 46 becomes clear, because when he was "raised" he was still âshâb, young, and had not attained kuhûla; cf. al-Baydawî, in loco. On the positions of various commentators, cf. Hayek, 244-51.

On these few facts tradition has succeeded in accumulating a mass of detail (cf. al-Baydawî on XLIII, 61, ed. Fleischer, ii, 241) and in producing books devoted specifically to this subject, among them: at-Tasrîh bi-mâ tawâlara fi musîl al-Masîh, of Muh. Anwar Shâh al-Kashmîrî al-Hindi (published in 1965 in Aleppo by Abu 'l-Fattâb Abû Ghudda). Some of these details are as follows: Jesus, on returning to the earth, will descend on to the white arcade of the eastern gate at Damascus, or, according to another tradition, on to a hill in the Holy Land which is called 'Alik; he will be clothed in two musârrâs; his head will be anointed. He will have in his hand a spear with which he will kill the Antichrist (al-Daddîjâl). Then he will go to Jerusalem at the time when the dawn prayer is being said, led by the imâm. The latter will try to give up his place to him, but Jesus will put him in front of him and will pray behind the imâm following the prescription of Muhammad. Then he will kill all the pigs, will break the cross, destroy the synagogues and the churches, and will kill all the Christians except those who believe in him (following IV, 159). Once he has killed the false Messiah (al-Masîh al-Daddîjâl), all the Peoples of the Book will believe in him, and there will be only one community—that of Islam. Jesus will make justice to reign. Peace will be so complete that it will extend also to the animals among themselves and to man's relationships with the animals. Jesus will live forty years and then will die. The Muslims will arrange his funeral and will bury him at Medina, beside Muhammad in a place left vacant between Abû Bakr and 'Umar.

There has come to be grafted on to the belief in the second coming of Christ, sometimes merging which it, the doctrine of the Mahdi. This term, which at first had a mainly honorific meaning, gradually came to indicate the very person of him who, at the end of time, is to restore the lost faith. On this doctrine, [see MAHDI].

Finally, it may be mentioned that the Ahmadiyya sect holds that Jesus, after his apparent death on the cross and resurrection, emigrated to India, to Kâshmîr, to preach the Gospel there. He lived there until the age of 120. His tomb is at Srinagar. They believe that the Mahdi is an incarnation simultaneously of Jesus, Muhammad and an avatar of Krishna [see AHMADIYYA].

XIII. Jesus and the Last Judgement: At the time of his nocturnal ascension (XVII, 1), Mushuffle met Abraham, Moses and Jesus. Questioned concerning the Final Hour, Jesus announced: "To me has been confided the knowledge of what will precede its occurrence. As to the occurrence itself, only God can determine this". This verse enables us to
understand the passages where Jesus is called "Knowledge of the hour": he knows of its existence, but not the exact time, this being reserved to God alone.

In spite of his ascension to God's side and his purification (III, 48), Jesus will not assist God in the Judgement which will follow the Hour: it is God alone who decides, He is the only Judge. On the day of the universal Resurrection, Jesus will be a witness against the Christians, accusing them of having regarded him and his mother as equal with God, but he will not be their judge (cf. infra, the different position of Ibn 'Arabi).

XIV. Jesus in tradition and in the mystical writers: The Christological elements contained in the Kitāb al-hayawdn, listed systematically above, have been the subject of meditation by ascetics and mystics. There has gradually grown up around the figure of Jesus an abundant hagiographical literature stressing the poverty of the Son of Mary, his detachment from the world, his teaching, his power of performing miracles, his devotion to prayer. These elements, with anecdotes, sermons and advice attributed to Jesus, are found in the classical works of the mystics such as the Hilyat al-auliya of Abū Nuʿaym, the Rawd al-rayāḥīn of al-Yaḥyī, the Kūt al-ulūbī of al-Makki, the Naṣīrīd of al-Tirmidhi, and especially in the works of al-Ghazālī: Iḥyāʾ ilāl il-Dīn, al-Durr al-Ākhbār, Makākhat al-Makākhatī. Furthermore, the "secular" writers like al-Damiri in his Haydkat al-kawādın and Ibn ʿAbd Rabbīn in his Ḥīd, there may be found interesting details on Christological literature. Fifty years ago, Asn Palacios had collected and translated the texts concerning Jesus in the works of al-Ghazālī and had published them under the title of Logia et agrapha Domini Jesu, in Patrologia orientalis (xiii (1919), 335-431; xix (1926), 532-624). In his turn, Father Michel Hayek collected and translated texts about Jesus and classified them systematically in a complete Christology (Le Christ de l'Islam, Paris 1959; Arabic text: Al-Masīḥ fi ʾl-Iṣlām, Beirut 1961). A large part of the work is occupied with Jesus's teaching; it includes logia on poverty, on detachment from the life of the world, denunciation of false wisdom and of the specious sureties of this world, dialogues, pilgrimages, the resurrection and witness against the vanity of the world against which Jesus constantly warned his Companions, his Apostles, the Children of Israel and his listeners in general. His description is based on that of the Christian ascetics and monks: wearing a woollen habit, detachment, a life of solitude, the power of the initiate to perform cures.

When, later, the Sufis came into direct contact with the Gospels, they took from them the elements which corresponded to their ascetic ideas, which they themselves attributed to Jesus: "this explains the gospel background of certain logia and accounts which are here almost always taken out of their original context" (Hayek, 136). Ibn ʿArabi (d. 638/1240) went even further: he stated that it is Jesus who merits "the Seal of universal Holiness" because he possesses the quality of faithfulness in the faith (amān), because he holds in his hands the keys of living breath and because he is at present in a state of deprivation and journeying" (cf. Hayek, 262-3). "And", he adds, "know that without doubt Jesus will descend and will be our judge, according to the law of Muhammad" (ibid.).

XV. Islamo-Christian polemic concerning Jesus: The central place in the Christian religion of the dogma of the Incarnation and the Redemption made inevitable doctrinal conflict between Christian and Muslim theologians. The latter worked out fairly rapidly a system of apologetics which became accepted as classic and the features of which have been repeated without variation until the present time; cf. infra where a substantial bibliography is given. On the most recent Muslim books on Christ see the article by J. Jomier in MIDEO, v (1958), Quatre ouvrages en arabe sur le Christ, 367-86, and G. C. Anawati, Polémique, apologie et dialogue islam-chrétiens, Positions classiques médievales et positions contemporaines, in Encyclopaedia Islamica, Rome 1969.

Two works published in Cairo show a new tendency in the Muslim approach to the problem of Christ. The first (1952) is by the Egyptian essayist ʿAbdāb Mabmūd al-ʿAkkād and is entitled the spirit of the Messiah ('Abhariyyat al-Massih). This work, which enjoyed wide success, may be described thus: the writer approaches Christ with great respect—the Christ of the actual Gospels and not only the ʾĪsā of the Kurʾān; he defends vigorously the historicity of Jesus and the authenticity of the Gospels, the only sources for our knowledge of Christ; he rejects nationalist prejudice against the miracles but, following a method which he has worked out for himself, he does not make use of them in his exposition. Finally, al-ʿAkkād has a clear grasp of certain aspects of Christ's teaching: the insistence on love, the complementary role of the Gospel of St. John, the primarily spiritual character of Christianity: this is essentially a demand for perfection made of the conscience and not a religious law bristling with texts. From the Christian side he has been criticized for announcing arbitrarily when he approaches the account of the Passion and death of Jesus: "This is where history ends and belief begins", whereas the remainder of the book rests on the authenticity of the Gospels, which he defends vigorously. Furthermore, the dogmatic teaching of Christ is left in the background.

The second book (1954), An iniquitous city (Qarya šālima) is by a doctor, Dr. Kāmil Husayn, former rector of the University of ʿAyn Ṣḥams (Cairo). It is presented rather as a work of imagination than a historical biography, being a personal meditation on the trial and condemnation of Christ, a trial considered as the greatest crime in history. The whole thread of the story unwinds on Good Friday, the day on which the movement is conceived in the form of a triptych describing successively, in a style both sober and elegant, the attitudes of the Jews, the Apostles and disciples, and finally of the Romans. Concentrating on this or that scene (Calvary, the meeting of the Apostles), on this or that person (Calaphas, Lazarus, Pilate, Mary Magdalene) the author is able to stress profound psychological details and to discuss great metaphysical or moral problems: liberty, authority, the existence of God, the relations between religion and the state, conscience etc. Without being described anywhere, the face of Christ is present everywhere. The essential part of his mission is to remind men that conscience, which is a participation in the divine light, must be above everything, above even religion if need be. Very skilfully, in order to distress neither Christians nor Muslims, the author leaves the problem of the Crucifixion in the background. Although to a certain extent the whole book converges on this main event (all the characters speak of it, all the movement of the book leads to it, nature herself is covered with darkness on the afternoon of Good Friday), the author does not actually state that Christ was crucified. Nor however does he deny it. He merely repeats a Ḫurṣīnī saying: "God has raised Jesus to Himself", a saying which in the context can receive
an acceptable interpretation from Christian readers. Finally, in one of the last chapters, "Return to the Sermon on the Mount!", the author movingly develops the words of Christ. He summarizes them for the modern world into the three following points: one should reject with all one's might all the false gods of money, the state, religion or the common good; one should truly live according to the precept of brotherly love; finally one should free oneself of any passion which might stiff the voice of conscience.

The book has been translated into English by Kenneth G. Anawati under the title City of Wrong, A Friday in Jerusalem, Djambatan-Amsterdam 1959; and into Spanish by José María Fernández; the Spanish translation has as an introduction the long article on the book by G. C. Anawati in MIDEO, ii (1959), 71-134, entitled Jésus et ses juges d'après "La Cité inique" du Dr. Kamel Hussein.

On a portrait of Jesus by a contemporary Persian writer, Shin Parto, in a short book entitled Haji (hurê (Sept visages), ed. and tr. by P. de Beau-recreuil in MIDEO, ii (1959), 303-2.

Bibliography: A large part of the bibliography has already been given in the article itself and in the article 1959i, where are listed the works of Ahrens, Blachère (tr. of the Kur'ân, Fritsch, Goldziher, Henninger, Horovitz, Jomier, Masson, Steinschneider, Tor Andrae, etc. We give here only the books and articles devoted more especially to Kur'ânic Christology (in chronological order):

For Muslim works in Arabic, see the articles by J. Jomier and G. C. Anawati mentioned in paragraphs XV above.

G. C. Anawati

'Tsâ, NAHR, in full NAHR 'Tsâ, was in the Middle Ages one of the four major canals leading to the general vicinity of Baghdad, the others being Nahr al-Malik, Nahr Şarşar and Nahr al-Şarāt (Mukaddasî, 124). Watering the district of Firuz Abad (Mukaddasî, vi, 111-2; Le Strange, Baghdad, Map III). A tributary of the Euphrates, it was deep enough to allow large boats coming from al-Rakka to deliver foodstuffs from Egypt and Syria (Ya‘qûbî, Buldân, 250). Since the canal emptied into the Tigris, below Kašr 'Tsâ, it connected both these major waterways (Iṣṭakhrî, 84-5; Ibn Hawkal, 164-5). As a result the city was strategically situated amidst the major inland water routes of the empire, as well as on the great highways leading to the East and the Arabian Peninsula. When the construction of dams along the Şarāt made it impossible for large boats to reach the Tigris, the 'Tsâ alone remained open to heavy traffic. The course of Nahr 'Tsâ is reported by al-Khatib al-Baghdâdi (d. 463/1071), whose account is identical with that of Šubrá (Iṣṭakhrî, 123) and is the same as the course published as Baghdad, Description of Mesopotamia and Baghdad, London 1805, 13. The text of Šubrá can be dated on internal evidence to ca. 925 A.D. He lists nine locations along the canal, all of which are apparently identified by masonry bridges (kantara) spanning the water. The course of the canal is also described by Ya‘qûbî (d. 1020/622), whose account is based on that of Dâr al-‘Alâ, writing in the 12th/13th century, reports that Kanatarat Bani Zurayk collapsed into Nahr 'Tsâ in 433/1042. There is no indication that the bridge was repaired then (Muntasam, viii, 108). Furthermore, a century earlier (323/935) Kanatarat al-Usfahân and its environs were reported to have been ravaged by fire. According to al-Šūluq it was not rebuilt in his time (Abhâr, 68). To what extent the destruction of individual bridges...
reflects the decline of the surrounding area bearing the same name is not clear. Nahr Ḵafran in the Middle Ages formed the southern boundary of the suburb of al-Karkh and thus marked the southern limits of Baghdād. No real trace remains of it in modern times.

**ĪṢĀ b. ‘ĀLI [see ʿĀLI b. Ẓaṣa].**

**ĪṢĀ b. DĪNĀR b. WĀFĪD AL-GHĀFRĪ, one of the three major founders of Islamic jurisprudence and theology in Spain, the other two being Yahyā b. Yahyā (d. 234/848) and ʿAbd al-Malik b. Habīb (d. 238/852). Īṣā is considered the most learned and important of the three, and is described as ʿalīm al-Andalus. He was born in Toledo, most probably around 155/771, because when he arrived at Medina to study with Mālik b. Anas he found he had been “recently” died (in 179/795). He went back to Fustāṭ and made all his studies under ʿAbd al-Raḥmān b. al-Ḵāsim (d. 191/806) who was considered the most eminent disciple of Mālik. He attended also the lectures of the other two distinguished Mālikī scholars of Fustāṭ: ʿAbd Allāh b. Wahb (d. 197/812) and Aḥḥāb b. ʿAbd al-ʿAzīz (d. 204/819). While Yahyā b. Yahyā boasted that he had made some of his studies with Mālik and completed them afterwards at Fustāṭ, and while the flamboyant ʿAbd al-Malik b. Habīb was always keen to show that he had obtained his knowledge from the four Medinan disciples of Mālik—namely al-Mughira b. ʿAbd al-Raḥmān al-Maghārūl (d. 188/804), Abu ʿl-Muṣṭafā b. al-Zubārī (d. 224/835) and al-Mālikī (d. 212/827) and al-Muṭarrīf b. ʿAbd Allāh (d. 220/835)—Īṣā b. Dīnār proved that better results could be achieved by studying with one good professor if the student possessed superior talent and character. Īṣā b. Dīnār was nominated, a short time after his return from Egypt, the Mufti however, was obliged to appoint him Amir al-ʿAdlīn because when he arrived at Medina in 675/1277; and, together with Nur al-Dīn Calī, ndʿib of Aleppo, prevented the sultan however, was obliged to appoint him Amir al-ʿAdlīn because when he arrived at Medina in 675/1277; and, together with Nur al-Dīn Calī, ndʿib of Aleppo, prevented the khādirdīs and the Muʿtazīlīs from being sentenced to death without mercy, īṣā insisted that they should first be given the opportunity to disavow their doctrines and rejoin the mainstream. Here Īṣā b. Dīnār thus was more consistent than Mālik himself, because this last had said in the treatise called Būb al-nakī ʿan al-k̄adar that the Muʿtazīlīs should be accorded the opportunity to disavow ʿīṣālī before any punishment was inflicted on them; but when he was asked about them in the mosque he shouted: “Heretics, infidels, kill them!”

**ĪṢĀ b. MUḤANṆĀ, d. 683/1248, appointed Amir al-ʿArab by the Mamlūk sultan, was the chief of the Āl Fāḍl, a Bedouin clan of Bādīyat al-ʿArab. His genealogy is usually given as Īṣā b. Muḥānā b. Māniʿ b. Ḥadīthā b. ʿAbasa (var. ʿUkba) b. Fadl b. Raḥīfa; his tahāb was Ṣharaf al-Dīn al-Tālī. The Āl Fāḍl, connected to the Raḥīfa and hence to the Tayy (for their early history see Ibn Khalīlūn, al-Tābīn, Cairo 1284, v. 436 f.; al-Kākulshandī, ʿṢūḥb, Cairo 1914, iv, 203 f., 260), were very wealthy (see al-Umarī, al-Taʿrīf, Cairo 1912, 79) and ranged from the Ḥijāz to the Maghrib and Mauritania (see al-Tābīn, Cairo 1914, iv, 204 f.; al-Bāhi, al-Muṣīd, al-raʾfī, Paris, Bibl. Nat., MS. 4439, 155). Īṣā himself, with his immediate followers (ʿĀl Īṣā) dwelt in Bādīyat al-ʿArab, occasionally crossing the Euphrates at Raḥība into Irāq.

Īṣā played an important role in the battles between the Mamlūks and the Mongols in the second half of the 7th/13th century. With the other Bedouin, he fought beside Kutuṣ (g. n.) at the battle of Ayn Dālīlah (g. n.) in 658/1260, and he (or his father) was rewarded with the grant of the iθfāt (g. n.) of Salāmīyya (g. n.). Although in general he enjoyed good relations with the neighbouring amirs, especially Dījalī al-Dīn al-Kāllālī of ḫīlī (see Kādī Muḥī al-Dīn b. ʿAbd al-Ṣāḥir, al-Rawd al-sāhir, ed. S. F. Sadeqū, 1936, 112), he was on bad terms with Baybars (g. n.); the sultan however, was obliged to appoint Īṣā as Amir al-ʿArab over all the Bedouin in 665/1264, in succession to his cousin ʿAll b. Ḥudḥāyfa b. Māniʿ, whose bloodthirsty tyranny had reduced the region to chaos (al-Rawd, 123). Contemporary sources report that he did much to restore order, by his good administration and justice (e.g., Ibn al-Furāt, Taʿrīh, Beirut 1939, vii, 12 f.). Īṣā led the way in Baybars’s invasion of Asia Minor in 675/1277; and, together with Nūr al-Dīn ʿĀlī, nābāb of Aleppo, prevented the
Iṣā b. Muḥanna — ʿIṣā b. al-Shaykh

Mongols from infiltrating into Syria (see Baybars lurs, T. tr. S. Yaltkaya, Istanbul 1942). Under Kašwân, however, he allied himself with Sunqûr al-ʿAghkâr, who had rebelled at Damascus taking the title al-Malik al-Kâmil, and entered into contact with ʿAlî al-Dîn ʿAṭâʾ Malik al-Ṭuwaynî, who was governing Baghdad for the Ilkhânî ruler: in 679/1280 he and Sunqûr began a correspondence with Abâkât, to whom, through the intermediary of al-Ṭuwaynî, he sent his son. Abâkât presented the son with a maqâla, and secured the surrender of a like himself, which became the property of the descendants of the Alids Muhammed b. al-Shaykh. It does not appear to be true that Iṣā b. Muḥanna was governor of Damascus in 247/861, as is suggested by Zummany (Manuel de chronologic des Hâmîdî, 1969, 97; cf. M. Canard, Histoire des Hâmîdî en Algérie, i, Oxford 1940, 134 ff., 141). We do not know the exact name of his father, who was called al-Shaykh or Shaykh, and elsewhere Ahmad (Ibn Tâhirî, ii, 46 note, and Defrémery, Recherches . . .) or ʿAbd al-Razzâk (al-Masudi, Murûdî, viii, 134). Iṣā's early history is shrouded in obscurity. He seems to have made his first appearance in 234/848 during the reign of al-Mutanawwîl, in the following circumstances. There was a member of a Rabi'î tribe of ʿAḍârâbâyjân, Muslim b. al-Bâ'îlî (or Bu'ayth), whose father and grandfather had set up for themselves a fief in Marand and around the lake of Urmîya, and who, at certain times as the ally of Bahâk and at other times as his adversary, had been imprisoned in Sâmarra; he had taken flight, and had then returned to Marand and fortified himself there. An army was sent against him, under the command of Bughâ al-Shârâbî. Iṣā b. al-Shaykh was a member of this force. Bughâ used him to negotiate with the besieged, and since these were for the most part of Rabi'â like himself, Iṣā secured the surrender of a certain number of the companions of Ibn al-Bâ'îlî. The latter escaped, but was captured and taken to Marand (see Marand). It does not appear to be true that Iṣâ b. Muhammad b. ʿAlî b. ʿAbd Allâh b. al-ʿAbbâs b. Muhammad b. ʿAlî b. ʿAbd Allâh b. al-ʿAbbâs b. ʿAbd Allâh b. ʿAbd Allâh b. al-ʿAbbâs, ʿAbbâsîd prince, nephew of the first two caliphs of the dynasty. Governor of al-ʿKufa in the reign of al-Saffâh [q.v.], he was then designated as the second heir after Abû ʿAbd Allâh, and it was he who, at al-Anbâr, administered the oath of allegiance on behalf of al-Maṣûrî, who was in Mecca at the time when al-Saffâh died.
the second, Isā b. al-Shaykh requested the caliph al-Musta'in to send him arms and equipment, in order to consolidate his power in the country and to allow him to conduct a campaign against the Byzantines (al-ghārār); furthermore, he asked the caliph to give orders to the commandant of the garrison at Tyre (Ṣūr) to place four armed vessels at his disposal, in addition to those to which he could already count on. This would suggest that Isā at that time held a command in the Syrian frontier region. 

If al-Ya'qūbī is to be believed, when al-Mu'tazz ascended the throne on 7 Muharram 252/29 January 866 and asked the various governors to recognize him, certain of them did so immediately, but others, among them Isā b. al-Shaykh in Palestine, bided their time. This Isā would have been governor of Palestine as early as 251. It was perhaps as a result of this incident that al-Nawshārī, governor of Damascus, marched against Isā b. al-Shaykh, joined battle with him by the Jordan and compelled him to flee, first to Palestine, later to Egypt, while al-Nawshārī entered Ramla. An envoy from al-Mu'tazz came to Egypt and received the oath of loyalty from the governor and his entourage, and also from Isā b. al-Shaykh. It appears that al-Mu'tazz had not given his consent to the occupation of Ramla by al-Nawshārī, since he sent against him into Palestine the 'Abd al-Mu'mann b. al-Muwallad who drove out al-Nawshārī. Isā b. al-Shaykh left Egypt, and then established himself in a āsār between Ramla and Ludd. Muhammad b. al-Muwallad could do nothing against him, and finally both of them returned to 'Irāk, according to al-Ya'qūbī.

According to al-Tabāri, at the end of 253/December 866, Isā b. al-Shaykh was nominated by al-Mu'tazz as governor of Ramla in Palestine. He was said to have obtained this appointment by paying, or guaranteeing, a sum of 40,000 dinars to Bugha al-Sharābī who, in 252, still possessed considerable influence, since it was not until 254/868 that he was imprisoned and put to death. According to al-Masūdī, he was said to have been appointed by al-Mu'tazz as governor of Palestine because he had come from Egypt to Sāmarrā bearing huge sums of money (perhaps the proceeds of taxes) and bringing with him a group of seventy 'Alīds who had fled from the Hīdājū as a result of disturbances there.

The occasion of this nomination marks the appearance of a figure who is later to be found at the side of Isā b. al-Shaykh: this is Abu 'l-Maghra ibn Mūsā b. Zurārā, a family which held an important office in the region of Arzānene. It was this man whom Isā sent to represent him as his deputy in Ramla.

From this time onwards, the career of Isā b. al-Shaykh is described in greater detail. The anarchy then prevailing in 'Irāk allowed him to extend his area of authority by seizing Damascus. The caliph al-Muhtadī, who succeeded at the end of Radjab 255/July 869, granted an amnesty to all those who had taken part in disturbances or had usurped power, and he wrote in this sense to Isā b. al-Shaykh, ordering him to hand over the money which he was keeping in Egypt and other countries. Isā refused, and kept the proceeds from the taxes for himself, thus making himself financially independent. According to al-Kindī (The Governors and Judges of Egypt, ed. Guest, 214), he embezzled a sum of 750,000 dinārūs. No doubt it is to this episode that Ibn al-Mu'tazz was alluding in his hādīqa (uṣūl) in praise of al-Mu'taṣid, when he states (verse 41 ff.) that Isā and his son (that is to say Ahmad, see below) are robbers, that they never give a single coin to the caliph and extort money from their subjects. The caliph al-Mu'tamīd in 256/870 sent emissaries to him, to demand this money. Isā replied that he had used it to pay his troops. He was then offered the governorship of Armenia on condition that he recognised al-Mu'tamīd, which he had not hitherto done. Isā consented, thinking that he would be able to retain Syria while at the same time becoming governor of Armenia. In fact, Isā al-Mu'tamīd did not keep to the new ruler of Egypt, Ahmad b. Tābūn (from September 868), to expel Isā b. al-Shaykh from Syria, he himself sent an army commanded by the Turk Amādūr, who was appointed governor of Damascus. In the battle which he fought outside Damascus, Isā b. al-Shaykh lost his son al-Manṣūr who was killed, and he himself was defeated and fled to Armenia by the coast road (256/870, or, according to al-Ya'qūbī, 257/871).

The governorship of Armenia no doubt also included Diyar Bakr in Džāzira and Aḥdarbāyjān. In Armenia, Isā b. al-Shaykh responded to an appeal from the Arab colonies established in the Lake Van region, the 'Uṯmānīdīs (Uṯmānīkī) and the Kaysīs (Kaisīkīkī), who were threatened by Aḥsūt Argrūnī, prince of Vaspurakan, who was about to besiege Amīwīk, a fortress of the 'Uṯmānīdīs on the shore of the lake. Thanks to his armed intervention, the siege was raised. An agreement was reached, and Isā b. al-Shaykh went to Aḥdarbāyjān where he established one of his officers, Muhammad b. 'Abd al-Wāḥīd al-Tamīmī al-Yamālī (cf. Yākūt, ii, 58, 740), whom the Armenian historians call Yamānik or Ermēnik. In Armenia, which was partitioned between the Bagratūnīs and the Argrūnīs and which was in fact independent, the authority of Isā b. al-Shaykh diminished constantly, and all the more when his deputy in Aḥdarbāyjān revolted against him, thus involving him in a fruitless struggle for a whole year, probably in 877-8; afterwards, he had to return to "Syria" (according to the Armenian historians), that is to say to Āmid in Diyar Bakr. In fact, in 266/879-80 there is no record of his presence anywhere save in that province. Although the Armenian historians consider that he remained governor of Armenia until his death in 266/882-3.

In 266, he was involved in hostilities with Isāk b. Kūndādžīk (Kūndādžīk: see Markwart, Südarmenien, . . ., 315, n. 4), who was claiming the governorship of the Džāzira and some neighbouring territories and who was established in Mosul. Ibn Kūndādžīk was in conflict with a powerful Kūndādžī movement, one of whose leaders was Isāk b. Ayūbūt of Nasītnī, supported by the Taghībīs Hamdān b. Hamdūn (for incidents see M. Canard, H'amādnīses, 294 ff.). Ibn Kūndādžīk won a victory over them, but Isāk b. Ayūbūt sought the help of Isā b. al-Shaykh of Āmid and of Abu 'l-Maghra ibn Mūsā b. Zurāra of Arzān; defeated by this new coalition, Ibn Kūndādžīk returned to Mosul. There, he received from the caliph the governorship of Mosul, Diyar Rabi'a and Armenia. In view of this strengthening of their adversary's forces, Isā b. al-Shaykh and Abu 'l-Maghra determined to seek peace by offering Ibn Kūndādžīk a tribute of 200,000 dinārūs, on the condition that they retained their possessions. After refusing at first, Ibn Kūndādžīk later accepted, when threatened with a renewal of hostilities. Nevertheless in the following year, 267, a coalition of his various enemies, Kūndādžīs and others, was once again formed.
A battle took place in Ramadan 267; April-May 881: Ibn Kundadjik was the victor and pursued his foes as far as Amid, then returned, leaving a contingent outside Amid to lay siege to Isâ b. al-Shaykh. Some indecisive battles were fought. Isâ b. al-Shaykh died in 268/882-3, and Ibn al-Athir, in placing his death at this date, still described him as governor of Armenia and Diyar Bakr, but we do not know what part he played in Armenia between 267 and 269. It is possible that he may have received some measure of influence, for Ibn Kundajdik seems to have had there and in 269 he is described by al-Tabarî (ii, 2037) merely as governor of Mosul and Diyarza. Moreover, following the attempted flight of al-Mu'tamid which was foiled by Ibn Kundadjik, the latter went to receive the regent, al-Muwaffak, the governorship of Syria which was foiled by Ibn Kundadjik, the latter went to receive the regent, al-Muwaffak, the governorship of Syria and the Tulunid lands, and from then onwards all his efforts were aimed at gaining control of the Syrian possessions of the Tûlûnids. Ahmad b. Isâ b. al-Shaykh succeeded his father as ruler of Diyar Bakr where, like him, he was almost independent and was regarded by the historians, like many other princelings of the time, as exercising power ʿalâ sabîl al-taghallub (through usurpation). Ahmad was never officially governor of Armenia, but nevertheless he played a part in the affairs of the country. His ambition, incidentally, was to extend his possessions to the furthest possible limits and even to make himself master of the whole of Armenia. To this end, he seized the fortress of Mardin, which dominates the plain of Diyarza, from Muhammad b. Ishâk b. Kundadjik, the successor to Isâ b. al-Shaykh (d. 278/891-2) as ruler of Mosul and Diyar Bakr. In about 890, after taking Abu ʿl-Maghraʿ Ibn Mâsâ b. Zurâž prisoner, he occupied Arzanene in Armenia in 895 or 896. The king of Armenia, Sembat Bagratuni (verses 177-80). But it seems doubtful whether, to escape death, he contemplated crossing the Curopalatine the son of David, Ahmad b. Isâ took possession of the whole territory of Taron, in 895 or early in 896. The king of Armenia, Sembat Bagratuni (890-914), requested Ahmad b. Isâ to restore Taron to its lawful possessor, promising Ahmad that he would secure for him his own position as governor of Armenia. When Ahmad refused, Sembat gathered an army, but he was defeated in a battle to the south-west of Lake Van in which Gagik Arzruni, prince of Vaspurakan, who was in league with Ahmad b. Isâ, betrayed Sembat. Thus Ahmad b. Isâ remained in possession of Arzanene and Taron, which were added to Diyar Bakr. Moreover he endeavoured to win the trust of the caliph. When al-Mu'tadid had demonstrated the full extent of his power to the Khâridjîs and rebels, by his expedition in 280/893-4 against the Banû Shaybân and Mosul, Ahmad b. Isâ complied readily with the request made to him by the caliph, on his return to Baghdad, that he should send him all the money he had taken from Ibn Kundadjik, and indeed he included numerous presents, in addition to the money. At the same time he appointed a Khâridjî who had fled to Amid and whom he had taken prisoner. This submissiveness on the part of Ahmad is noted in the kasida of Ibn al-Mu'tazz in praise of Al-Mu'tadid (verses 177-80). But it seems doubtful whether, to escape death, he contemplated crossing into Byzantine territory and becoming a Christian, as Ibn al-Mu'tazz claims in the same passage.

Although he was not a governor of Armenia, it was Ahmad b. Isâ, who, in the time of al-Mu'tamid, was entrusted in 887 with the task of carrying the royal crown to the new king of Armenia, Ashot I, for it was certainly not his father Isâ (d. 882) who was charged with this mission, as might be inferred from the account of the Armenian historian John Catholicos who confused the son with the father (see Vasmer, Chronologie..., 99-100 and Thodpschian, Die inneren Zustände..., 123).

Ahmad b. Isâ b. al-Shaykh died in 285/898. His history formed the subject of a detailed account by Al-Mas'âdî in his lost work Aḫḫâr al-ʾamān (see Muradî, viii, 112).

His successor as ruler of Amid and the other territories he held, still ʿalâ sabîl al-taghallub, was his son Muhammad who built the minaret of the principal mosque of Mayyâfârîkîn. With him was to end this minor Shaybânî dynasty of Diyarza. In 286/899, al-Mu'tadid decided to have Ahmad brought back under his own authority, and for this purpose set out with a large expeditionary force, accompanied by his son the future al-Muktafi. Muhammad shut himself up in the town which was besieged from April-May until June 899. Siege engines were used on both sides. Finally Muhammad surrendered, begging for clemency for himself and his men as well as for the inhabitants of Amid, which was granted. He was treated with consideration by the caliph, who made him a ceremonial gift of clothing, but he was taken away to Baghdad, where he was imprisoned. This imprisonment was not a long sentence and it was for the purpose of sending him as a messenger to his son Al-Muktafi. Muhammad was given the Tāhridîs' palace as his residence in Baghâd. In Muharram 287/January 900, the vizier Ubayd Allâb b. Sulaymân discovered that he was planning to escape. He informed the caliph, who ordered the vizier to have Muhammad arrested. The historians do not record what became of him after his arrest.

In the 4th/10th century a figure appears named Ahmad b. ʿAbbâs b. Isâ b. al-Shaykh, a worthy if somewhat dull-witted fellow who, during the vizirate of Ibn al-Furat, was the victim of a practical joke which had been granted him as something entirely natural. The vizier let the matter rest, and it went no further. It seems that the man in question was a person whom al-Mu'tadid sent to Muhammad to ask him to surrender; in this passage, an aunt of the rebel, a talented poetess, advises her nephew to obey the caliph. She herself wrote a letter to al-Muʿtadid, in verse. The caliph admired her talent, and this influenced his decision to treat his prisoners generously. Muḥammad b. al-Şâbî was given the Tāhridîs' palace as his residence in Baghād. In Muharram 287/January 900, the vizier Ubayd Allâb b. Sulaymân discovered that he was planning to escape. He informed the caliph, who ordered the vizier to have Muhammad arrested. The historians do not record what became of him after his arrest.

ISA B. AL-SHAYKH — ISAF WA-NA'ILA

Mecca before Islam. Several orientalists of the last century, such as Rudolph Krell and Francois Lenormant, saw in them, not unreasonably, replicas of Ba'alam and Ba'al. Indeed Isaf and Nallia do display the essential characteristics distinguishing this pair of gods from the many avatars known in the various Semitic religions: physical representation by two sacred stones erected close to each other, or by two parallel hills; symbolic representation of the fertility of living beings and of the earth; and the euhemeristic expression of the myth of divine lovers such as those of Hippomenes and Atlanta in Greek mythology who dared to embrace in the temple of Demeter and were changed by her into a pair of lions harnessed to her chariot. Certain details of the legend of Isaf and Nallia recall the myth of the loves of Adonis and Astarte, avatars of Ba'alam and Ba'al.

These characteristics stand out from the material from which the stories about these idols are composed, although these stories are clearly conceived with an edifying aim. Thanks to this laudable aim this pagan legend had come down to us through the early Islamic sources.

Hishām al-Kalbī (d. 204/819 or 206/821), to whom we owe the preservation of numerous traces of pagan Arabia, reporting a saying attributed to Ibn 'Abbas, transmits this legend to us in its most basic form (K. Al-Asndm, ed. and tr. W. Atallah, Paris 1969, 6; cf. Klinke-Rosenberger, Das Göttentuch, Leipzig 1941, 6 and 18): Isaf b. Ya'ālā and Nallīa bint Zayd, both of Djurhum (cf. other genealogies in Aghānī, xiii, 109), originally from the Yemen, were passionately in love. They came on pilgrimage to Mecca and, finding themselves alone for a moment in the Ka'ba hidden from view, committed fornication there (fadjarā bihā); according to another opinion reported in Aghānī, loc. cit., they only embraced (khabalakā). They were immediately changed into stones (fa-musitha—a verb usually meaning metamorphosis of a man into an animal, as in the myth of Hippomenes and Atlanta, but the context requires, and the same author goes further on and other sources add, hadjarayn), and were erected there on the spot. They were worshipped by Khūzā'a, Kuraysh, and all the pilgrims.

It seems that originally these two sacred stones were separated: one adjoined (bi-līsh) the Ka'ba, the other on the site (fi mawdī) of the well of Zamzam. Kuraysh reunited them close to Zamzam and they slaughtered the sacrificial victims nearby. But al-Azraqī (Akbhār Makkā, ed. Wistenfeld, 49) places them at the foot of al-Safā and al-Mārwa, the two parallel hills separated from the Ka'ba by the depression of Mecca.

According to the same author (78), 'Amr b. Lubayy, the Khūzā'a reformer of idol worship in Arabia, also set up two idols on these two hills: Nahik Mudjawīd al-Rib on al-Safā and Mudīm al-Tayr on al-Marwa. These two divine epithegs could have referred to Isaf and Nallīa and to the Ba'alam and Ba'al which they stood for, according to their significance, the first for the winds and the rain, the second to a godess of fertility assuring the birds of the valley of their subsistence (cf. details in Panthōn, 107). If this hypothesis is correct, the agricultural character of this pair of gods, already suggested by their Yemeni origin, will be confirmed. Their relationship with Zamzam and the meanings suggested for their names would reinforce this confirmation. Indeed the Hebrew 'āsf (to store up, to gather) and the Aramaic mawgly (to receive gifts) suggest that Isaf and Nallīa,
positioned at Zamzam where the treasure of the sanctuary was stored, received the offerings and kept guard over them (detail in Pamukkon, 108).

ISAMİİ, the Isagoge of Porphyry (see FURFURIYÜS). According to Şâ'îd al-Andalusî (Tabâbât al-umân, ed. Cheikh, Beirut 1912, 49, tr. Blachère, Paris, 1935, 101), it seems that Ibn al-Mukaffa' [q.v.] was the first person to translate this text: an introduction to logic into Arabic. The Fihrist (i, 244), on the other hand, maintains that it was Ayyûb b. al-Rakkî, who based himself on a Syriac translation. Among the Arabic adaptations of the Isagoge we possess that of Abu 'l-Hasan Ibrâhîm b. 'Umar al-Bikâtî al-Shafi'i (see Brockemühl, S II, 177). With a commentary by al-Sânûsî (ms. Algiers no. 1362) and that of al-Abbarî, which is the best known and most commented upon; al-Abbarî's adaptation of the Isagôgê was put into verse by al-Akhkhari [q.v.]. On the translation by Dimasâkî and the commentary by Ibn al-Taîyyîb, see FURFURIYÜS. (ED.)

ISAIAH [see SHA'YA].

ISAKCA, a place in modern Rumania, the origins of which go back to antiquity, known in the Middle Ages as Obluţica. In the time of the Turks it was a fortress of great strategic importance, serving them as a base from which to attack Moldavia and later, for their campaigns against Poland. As early as 889/1484 Bayezid II with his troops had crossed the Danube by a bridge near Isâkçâ and conquered Kilia (Kili) and Cetatea Alba (Ak Kermân). The Ottoman government gave particular attention to the upkeep of the fortress and the provision of supplies for the garrison. Isâkçâ constituted an important transit centre for cereals and livestock sent from Wallachia and Moldavia to Istanbul, and for merchandise going in the opposite direction.

The centre of a hâlat in the 11th/12th century, Isâkçâ was not very large, with a population, according to Ewliya Celebi, composed of Wallachians, Moldavians, Greeks, Armenians and Bulgars. The port was the centre of a very active river traffic. The local traders and the State Treasury received considerable revenues from the taxes and port dues. There was also some trading in Isâkçâ; the shops were fairly numerous, but there was no bezîstân. The whole market, together with the fortress, the inn, the mosque, the 'îmâret and the baths was the uâ'd of the kaşâvân Hasan Paşa. In the 11th/12th century it was his heirs who were receiving the revenues.

In the course of the Russo-Turkish wars of the 18th and 19th centuries Isâkçâ was occupied more than once by Russian troops advancing, by way of Dobrudja, towards the Ottoman territories in the Balkans.

**ISAR-DĀS** (or IṢḤAWA-DĀS), one of the two Hindu historians of the reign of Awrangzib (q.v.), was a Nāagascar Brahman of Pa tán (Nahrawāl or Ahnala-wa fa (q.v.) of Muslim historians. Born in 1066/1655 he seems to have received a good education in Persian language and belles lettres at his native town. Up to 1068/1658 he was employed, most probably, as letter writer and scribe, with the Ḫādi Sālāshī al-Islām b. Ḫādi ʿAbd al-Wahhāb, who was Ḫādi al-ʿaṣbār from 1086/1675 to 1068/1658. On account of certain differences with the Emperor Awrangzib, Sālāshī al-Islām resigned his post and went on the Pilgrimage to Mecca in Mubarram 1065/December 1658. Isar-Dās having thus been thrown out of employment sought service with Shādīʿat Ḵān, the governor of Gūdarzāt from 1068/1658 to 1113/1701, who employed him as an amin (revenue collector) of certain mahals in the *pargana* of Dīḍōhpūr (q.v.). It was here that he came to develop friendly relations with the Rāthors, who presented some features of the religious and state policies of the emperor, and ultimately procured the submission of Dūrgādās Rāthor, the rebel chieftain of Dīḍōhpūr. He successfully performed the diplomatic mission, with which he was entrusted by Shādīʿat Ḵān, of recovering the young princess ʿṢafyāt al-Nīsa, a daughter of Awrangzib’s son, Muhammad Akbar, from the custody of the Rāthors, with whom her father had left her when he fled to Persia in 1099/1687 following his unsuccessful rebellion in 1092/1681. For this service to the imperial household the emperor raised his rank from 200 to 250 horsemen and also awarded him a robe of honour (ḡīrā). His immediate master Shādīʿat Ḵān, too, conferred upon him the ḡīrā (q.v.) in addition. Some historians (not Meerut, near Delhi, as stated by Storey, i, 587) thereafter nothing is known about him, except that he lived at least to the age of 75.

His only claim to fame rests on his Persian work *Futūḥāt-i Ḵalangar* (still in Ms., Rieu, *CPM*, i, 269 a. (A. S. Bazmi Ansari))

**ISAWA, ʿISA WIIYA, collective name (sing. ʿISAWI) denoting the confraternity or “path” (tarīka) founded at the beginning of the 10th/16th century by Shaykh Muhammad b. Ḥūṣain al-Sufyānī al-Muhītarī (other ethnics—al-Miknāsī, al-Fāhri or al-Fahdī), named “the Perfect Master” (al-shāfiʿī al-Mukhtārī) 1565-7, 1574-9 (A. S. Bazmi Ansari)

The founder.—Stripped of the very abundant growth of hagiographic legend, the biography of Sidi Ibn ʿĪsā consists merely of a number of well-established facts. Born in 842/1447-8 in Sūs or Ḫarb, probably of a family of Idrīsid ḡarīfs (though this connection is disputed by some historians, including al-Salāwī), he applied himself to Qur’ānic studies from a very early age and travelled with his father, a man of great piety and modest circumstances, through the north of Morocco among the Banū Sūfīyan, the Banū Mūkhtār (where he married) and the Banū Ḥasan; he stayed in Fās and then in Miknās where he attached himself to an eminent teacher of mysticism, Shaykh Ahmad al-Hārīthī al-Sufyānī, a šīfī of Shāhīyya (q.v.). *Dīsūlīyya* obedience. After the death of this teacher, to complete his education he went to two other contemporaries of al-Dīzūlī (q.v.), Sidi ʿAbd al-ʿAzīz Tabbā of Marrāḵush, and Muhammad al-Saḡīr al-Shīʿī, of Ḵandāḵ al-Zaytūn (a suburb of Fās), who taught him the Dālāʿīl al-khayrāt in detail. Having finally settled at Miknās, he taught in the chief mosque of the town and then, since a constant stream of disciples came to him, attracted by his saintliness, he bought a property which he set up as a ʿakfī for use as a cemetery and where he had the ʿawwāya built which still exists. It was there that he was buried after his death, which took place in 939, 932 or 933/1538-9.

Sidi Ibn ʿĪsā was an accomplished mystic “whose asceticism and devotion were unassailable” (R. Bruneel) and whose love of God was combined with constant practice of the virtues and a charity that communicated itself to others. Gifted with an aptitude for penetrating men’s thoughts, he also possessed remarkable powers of persuasion andutherland, west of Aḏīmā, and modest circumstances, through the north of Morocco among the Banū Sūfīyan, the Banū Mūkhtār (where he married) and the Banū Ḥasan; he stayed in Fās and then in Miknās where he attached himself to an eminent teacher of mysticism, Shaykh Ahmad al-Hārīthī al-Sufyānī, a šīfī of Shāhīyya (q.v.). *Dīsūlīyya* obedient. After the death of this teacher, to complete his education he went to two other contemporaries of al-Dīzūlī (q.v.), Sidi ʿAbd al-ʿAzīz Tabbā of Marrāḵush, and Mohammad al-Saḡīr al-Shīʿī, of Ḵandāḵ al-Zaytūn (a suburb of Fās), who taught him the Dālāʿīl al-khayrāt in detail. Having finally settled at Miknās, he taught in the chief mosque of the town and then, since a constant stream of disciples came to him, attracted by his saintliness, he bought a property which he set up as a ʿakfī for use as a cemetery and where he had the ʿawwāya built which still exists. It was there that he was buried after his death, which took place in 939, 932 or 933/1538-9.

Sidi Ibn ʿĪsā was an accomplished mystic “whose asceticism and devotion were unassailable” (R. Bruneel) and whose love of God was combined with constant practice of the virtues and a charity that communicated itself to others. Gifted with an aptitude for penetrating men’s thoughts, he also possessed remarkable powers of persuasion and  }
Dissemination and organization of the *tariqa*. Ibn Ḥusayn īsā had great numbers of disciples, six hundred of whom were said to have achieved the state of perfection; particularly prominent among them is the figure of his immediate successor, Abu ʿl-Rawāʿīn. This man belonged to the class of Sūfis known as “the reprehensibles” (*malāmāt*īyā [q.v.]), who conceal their wisdom beneath an extravagant exterior. He never married and, even today, women avoid approaching his tomb, which is situated alongside that of his master, for fear of a curse. He was given the name al-Muhadhdhib (the Contest) on account of his anti-Sufi; he was a hot-headed and violent man; he used to contrive to sell to some rich or powerful man a town or a whole territory to which he had no claim whatsoever; anyone who refused to pay him this strange tribute found himself struck down with some misfortune; if on the other hand he completed the transaction, God granted him the advantages promised by the Saint, who, indeed himself distributed as alms the sums of money thus acquired. Abu ʿl-Rawāʿīn played an important part in supporting the first Saʿdīs in their struggle against the Portuguese, in preparing the way for their proclamation as sultans in Marrākush (951/1544), and later in stirring up the people of Fās against the Wāṭṣāsids. After his death (963/1556), control of the *tariqa* reverted to the descendants of Ibn Ḥusayn and remained with them by hereditary succession. Thereafter the Īsāwī hardly appeared on the political scene.

During the actual lifetime of the founder, several *zawiyas* were founded outside Miknās, one of them at Figuig (south-eastern Morocco), from which the confraternity spread out towards Algeria and Tunisia. According to various censuses and estimates, the *Tariqa* Īsāwīyya at the present day is said to include about 50,000 active members divided as follows:

Morocco: according to Drague (1939), 21, 592 affiliated members, 3,181 of these being in the region of Miknās; but, in the opinion of Brunel (1926), Miknās alone included "more than ten thousand affiliated members of both sexes"; numerous *zawiyas* in the whole country, particularly in Fās, Tiṭwān, Tangier, in all the towns on the Atlantic seaboard, in Tāzā, in the Rif, the Tafillāt, etc.—Algeria: approximately 4,000 members and about a dozen *zawiyas*, including those at Blida and Uzara (Dépt. of Algiers), Remjal and Tiemcen (Dépt. of Oran), Bōne, Bougie and Constantine.—Tunisia: according to H. R. Idris (Initiation à la Tunisie, Paris 1950), 11,290 members and 87 *zawiyas*—Other *zawiyas*, in Libya, Syria, Cairo and Mecca.

The *Tariqa* Īsāwīyya possesses a fairly homogeneous though decentralised structure. A superintendant (*mazār*), chosen from the founder’s descendants and confirmed by the makkānīs, administers the mother-*zawīya* of Miknās and divides the income from it between the *dāyāk*’s descendants living in Miknās and Fās, but it is in fact the *mukaddam* of the mother-*zawīya* who exercises the spiritual authority and the principal temporal functions in Miknās, while the *awādī al-dāyāk* perform the same functions in their respective *zawiyas*. There is consequently a division of authority, and also very pronounced individual differences in the practices of the order. Every year, however, a meeting is held in Miknās when the Īsāwī of all lands come together at the tomb of their patron saint at the time of the *mawlid*, the anniversary of the Prophet’s birth. It is then that, for three days, one can witness the processions, the ecstatic dances, the blood-stained feasts (*frisā* and *fakīr*-like performances which have fascinated and often shocked observers. (A detailed study of the *mawlid* ceremonies has been made by Brunel; a literary but fairly accurate description appears in the novel of H. Ard, Colette Breyer au Maroc, Paris 1937, 91–101).
The dances often end in displays of fakirism in which the disciples, apparently anaesthetized, walk on glowing coals, take burning brands in their hands and between their lips, swallow fragments of broken bottles or strike themselves with swords.

Particular practices.—The explicitly devotional character of the teaching of Ibn 'Isâ and the dynamics of the ṣâdqa ḳâsîyya (the sessions for invocation and dancing) favoured the spread of the jârîka among the common people—artisans in the towns, Berbers in the country, negro slaves brought back from the Sudan by Sultan Ahmad al-Ḏâhabi at the time of the Timbukto expedition (1591) and grouped together at Miknâs by Mawliy Ismâ'llî after 1672. In the course of this expansion, the confraternity absorbed a certain number of local customs (in particular, borrowings from Berber carnivals) and survivals of ancient pagan or animistic worship which gave it a highly individual aspect. The most characteristic elements of this magico-religious complex are as follows:—a) the horror of black, which is revealed only during festivities and which sometimes incites affiliates to throw themselves on persons wearing clothing of this colour, strip off their garments and tear up the material;—b) the wearing of the gâtîyya, a kind of mat of plaited hair, which is worn very long and grown only from the top of the cranium, the remainder of the head being shaved;—c) the practice of healing by the recitation of formulae, by trampling the sick man under foot, or by placing the patient in contact with snakes;—d) the association with snakes which are regarded as a friendly race, with whom al-Ṣâykh al-Kâmil is said to have concluded a pact; this allows a special category of affiliates, the ḫânâyshâ, to charm these creatures, to heal the bites they inflict and even to grant to others immunity from their venom;—e) the practices of conjuration and exorcism, for which the jâlîyyâ uses a flat basket, the māḏīmâ al-asâydd or "assembly of the Great Masters", on which are placed pebbles, shells, and various other objects representing protective saints and familiar djinns; according to the relative position in which these objects are found, the magician foretells the future or makes a diagnosis; to cure a patient who is nervous or possessed, he can order him to drink the blood of a newly sacrificed animal;—f) representations of animals. In each jâlîyyâ, a certain number of fukârâ' embody some animal species whose behaviour they mimic in a very realistic manner, particularly during feasts and a kind of repentances. The animals thus represented are: lions and lionsesses which, with jackals and panthers, have a part in some ritual feasts (frisâ), during which they lacerate an animal, a sheep or goat, sacrificed earlier, tear it to pieces, smear themselves with the blood of this and eat the raw flesh; wild boars (halâfî) and dogs which come face to face in ferocious fights; cats, which perform thefts and acrobatic feats; camels, which carry enormous burdens and do not hesitate to devour cactuses, thistles and barley; lastly, hyenas, gloomy carnivorous creatures which appear more rarely. If the existence of these animal clans seems to derive from agro totemism (Van Genep, Religion, Mœurs et Légendes, Paris 1908), the elements of communal sacrifice have nonetheless been profoundly changed, particularly in a moderating sense, by Islamic influence. It has also been noted (Brunel) that, for the idea of filiation stemming from an animal ancestor, there has been substituted that of a covenant (fâkîd), on account of the baraka of Sidi Ibn 'Isâ: thanks to his domination (baṣārūf) over created beings, this man succeeded in achieving in his jârîka a kind of fraternity between men, animals and djînn.—g) Finally, many ḳâsîyya meetings have their own, the ʿašâr or mock pharmacist, who amuses everyone with his ridiculous stories and behaviour.

The unusual aspects of the Ṭârîka ḳâsîyya have not failed to arouse the indignation of the anti-mystical 'ulamâ' and to stir up lively criticism. An expression of such views is to be found, for instance, in an order which the 'Alawid sultan Mawliy Sulaymân caused to be read in all mosques in Morocco in 1815 and which stated in particular: "Cast far from you the moussem... and these innovations... Times have been fixed for these practices and considerable sums are thus spent for love of Satan. The people devoted to these innovations, the Alissaoua, the Ħilâla and other confraternities attracted to novelty and error, folly and ignorance, hasten to them."

(quoted by Drague, 89-91). As for the attitude of an elite among the Šâfîis, of a gnostic contemplative tendency, this is well illustrated by the case of the Algerian shâykh Ibn 'Aliwa [q.v.] who was himself an 'Isâwi before becoming an affiliate of the Đârâkâwâ [q.v.]: while recognising the authenticity of the 'Isâwi mystical teaching and the excellence of the masters in the Ṭârîka, Ibn 'Aliwa regrets that affiliates should attach so much importance to the search for prodigies and to the practices of fakirism (cf. M. Ling, A Moslem saint of the twentieth century, London 1961, 50-1). This opinion is corroborated by the works of rientalists who have made a close study of the ḳâsîyyâ. Bibliography: The fundamental work still remains the monograph of R. Brunel, Essai sur la Confrérie religieuse des ḳâsîyya au Maroc, Paris 1926, which takes into account not only all the earlier works, in particular those of Cat, Delphin, de Neveu, Depont and Coppolani, Doutté and above all L. Rinn (whose Maraboutes et Kouhans, Algiers 1884, chap. XXI contains translations of texts not reproduced by Brunel), etc., but also some printed Arabic sources (the Istikîlsa of Salâwi, the Salâwa al-anfâs of Dja'far al-Kittâni, among others) and several unpublished manuscripts. It is only possible here to refer the reader to the bibliography contained in this work (p. vii-x).

Among the more recent studies, that of E. Dermenghem in Le Culte des Saints dans l'islâm maghrébin, Paris 1954, 303-18, is of special interest in that it allows some of Brunel's overzealous criticisms of the Ṭârîka of Algeria to be rectified. The text contains abundant extracts from the liturgical formulæ used at meetings and includes interesting musical notations (from Léo-Louis Barbiès in R. Afr., 1951). Consult also the following works:—P. J. André, Contribution à l'étude des Confréries religieuses musulmanes, Algiers 1956; A. Bernard, La religion musulmane en Berbérie, Paris 1938; G. Drague, Esquisse d'histoire religieuse du Maroc, Paris 1951, passim.

(J. L. Michon)
'ISAWI [see NAŚARA].

AL-'ISAWIYYA, a Jewish sect, the followers of Abū 'Isā al-Isfāhānī (q.v., also known as 'Obḥadya and 'Obḥedel. The sect is also referred to as the 'Iṣḥābiyya.

Abū 'Isā was the leader of a Jewish uprising, which occurred either in the reign of the Caliph 'Abd al-Malik b. Marwān, as is reported by the Karaites, or in the reign of the last Umayyad caliph as is stated by al-Shahrastānī (followed on grounds of general probability by I. Friedlaender). On the available evidence no definitive solution can be given to this chronological problem.

Abū 'Isā claimed to be a prophet (nabi: al-Kirḵānī) and, as al-Shahrastānī puts it, one of the five messengers (rusul) of the expected Messiah (al-masīḥ al-munīqār), charged by God with the deliverance of the Children of Israel. Al-Birūnī too refers to his describing himself as a messenger of the Messiah (al-ʿAḏaḥ al-Bāḥiy[a], ed. E. Sachau, 15). Al-Shahrastānī also mentions that Abū 'Isā considered that "the missionary" (al-dāʿi; it may be legitimate to consider that he referred to himself) could be regarded as, in a sense, identical to the Messiah, a conception reminiscent of the doctrines of certain extremist Shiʿī sects. There can be hardly any doubt, however, that Hadadī's statement that he put forward the claim to be the Messiah is due to a misapprehension. In proof of his prophethood, his partisans adduced the fact, that, in spite of being illiterate (ummi, a word used by Muhammad), he produced books and scriptural scrolls (mushaf). At the head of his followers he joined battle with soldiers of the Caliphate and was killed (or as his followers reported, vanished in the cleft of a rock). The number of his followers (who were few to begin with) dwindled constantly. In Kirḵānī's time (4th/10th century) there were approximately twenty in Damascus and possibly also a few in 'Isfahān. Those who were personally known to Ibn Ḥazm were probably not members of the sect in the strict sense of the word.

According to Kirḵānī, Yūḏghān, who was regarded by his followers the Yūḏghāniyya) as the Messiah, was reported to have been a disciple of Abū 'Isā.

Abū 'Isā taught (in common with other Jewish sects, for instance, the Mosŏkhāniyya, said to stem from the Yūḏghāniyya) that Jesus and Muhammad were true prophets, each of whom was delegated to bring a distinctive law to a community of his own—in the case of Muhammad to the Arabs. But in spite of their prophethood, the observance of the Mosaic law continued to be incumbent upon the Jews. In consequence of this thesis Muslim theologians such as al-Bākīllānī and 'Abd al-Kāhir al-Baghdādī discussed the question whether the 'Isawīyya, who believed in the prophethood of Muhammad and whose beliefs authorized them, according to al-Baghdādī, to profess the shahāda, could be regarded as Muslims; their answer was negative. Al-Kirḵānī mentions that Abū 'Isā promulgated a prohibition against drinking wine and eating meat and al-Shahrastānī speaks of his forbidding the eating of any animal's liver. He also prohibited divorce.

Friedlaender finds points of similarity between the 'Isawīyya and Shiʿī sects and to some extent his remarks may be valid (see also above), but they do not account for the strange fact that on the one hand Abū 'Isā showed great regard for the rabbinical interpretation and observance of the law (and in consequence the Rabbanites allowed the members of their community to intermarry with the 'Isawīyya; al-Kirḵānī, i, 52) and that, on the other hand, Abū 'Isā acknowledged the prophethood of Jesus and Muhammad. A possible explanation might be that the 'Isawīyya stemmed from Jewish Christians, i.e., from a community which believed in the validity of Mosaic law and considered Jesus as a prophet. For some members of such a community the acknowledgement of the prophethood of Muhammad after the advent of Islam need not have presented insuperable theological difficulties. The existence of Jewish Christians in Jerusalem at the time of Muḥāmmed is attested by contemporary evidence. In al-Hazm's statement, contradicted by other sources, that the 'Isawīyya believed that Jesus was a prophet sent to the Children of Israel, would, if accepted as correct, reinforce this hypothesis. This hypothesis could account for Abū 'Isā's prohibition of divorce (which is compared by al-Kirḵānī with the similar Christian ordinance) and for the fact that the Yūḏghāniyya, the followers of Yūḏghān, who is reported to have been a disciple of Abū 'Isā, appears to be classified by Muḥšahar al-Maḏdisī as a Christian sect (al-Baghdādī wa 'l-ta'rikh, ed. C. Huart, reprinted Tehran 1942, iv, 42, 46; the reading Yūḏghāniyya necessitates a very slight emendation). Abū 'Isā's description of himself as a rasīl of the masīḥ may be a transposition of the Christian nomenclature referring to Christ and the apostles.

'ISBA' (a.), also 'IṢBA', "finger", as a measurement of length the breadth of the middle joint of the middle finger, conventionally one twenty-fourth of the cubit, dihrāʾ. See dihrāʾ, penultimate paragraph and bibliography. (Eo.)

In Arab navigational texts 'isba' is unit of measurement of star altitude (fīlm al-kiyās). Latitude on the Ocean was indicated by the altitude of certain stars, usually the Pole Star or one of the Bears, above the horizon at certain times. Complete tables of Pole Star, Little Bear and Great Bear altitudes of ports in the Indian Ocean are given by Arab navigational texts and partial tables of altitudes of the Southern Cross and several other stars. The 'isba' was considered to be the angle subtended by the width of a finger held at arm's length against the horizon. Four fingers, i.e., the measurement of one hand (the thumb could not be used) were one qaṣāh, a word of unknown origin. The qaṣāh was the width of the standard measuring instrument, the ḥawqabat al-arabāʾ and a universal standard could be obtained by comparing the stars α and β Aurigae which were 4 'isba' apart. The 'isba' was divided by the navigators into eighths known as zam, which was a "watch" of 3 hours. It is explained in the navigational texts of Ibn Maḏjd and Sulaymān al-Mahrī that a ship sailing one zam due north raised the Pole Star 4 'isba', therefore assuming that the average ship sailed one
isba due north in 24 hours. A tirsfa was the distance sailed on any rhumb to raise the Pole Star's altitude one isba and varied according to the rhumb. A tirsfa due north or south was 1 isba.

The actual value of the isba in terms of European measurements varied somewhat. Originally it varied with the finger of the navigator, but by the time of the surviving Arab navigational texts (1450-1513) the isba had become standardized. There were however variations, which may have been national or regional, and other variations in the stellar altitude of a particular port may have been due to inaccurate observation. The standard measurement used by the Arabs was 224 isba in 360° (i.e., 1 isba = 1°36') but this was a figure of convenience, for it made 7 between each rhumb of the compass rose and 8 to each lunar mansion. Sulaymān al-Mahrī used the fact that the diameter of the circle made by the Pole Star round the Pole was 4 isba (the navigator's usual figure) and showed by astronomical means that this was 69°, degrees. Therefore 1 isba was 1°7/3 degrees (1°43') or 210 in 360°. However for practical purposes he used the figure of 224 in 360°.

European scholars have followed up the equation given that the Pole Star's polar distance is 2 isba and produced values. Prinsep, allowing for precession, gave values for the year 1394 of 1°36' and for 1500 of 1°35'. Ferrand working for 1500 produced the figure of 1°45'. The Arabs however never gave an epoch to their figures—most of their figures were probably inherited from previous centuries and not all from the same time, so that it seems fruitless to speculate too much on actual values of the measurement.

As. Soc. Bengal (1834-39). G. R. Tibbetts, Arab navigation in the Indian Ocean before the coming of the Portuguese (forthcoming).

IṣFĀHĀN (in Arabic Isbahan), a town and province in Persia, whose name, according to Hamza al-Iṣfahanī, means "the armies" (Māfarrukhi, Kiāb Maḥāsin Iṣfahan, ed. Sayyid Djalāl al-Dīn Tīhrānī, Tehran n.d., 56).

I. HISTORY

The province, whose precise boundaries have varied at different times, is bounded on the north-east and east by the central desert. In the south-east by Yazd and Fārs, in the south and south-west by the Bakhtrīyār mountains, with peaks rising to over 12,000 ft., in the north-west by Luristan, Kazzāz, Kama, and Mahallāt, and in the north by the districts of Dīwāshakān and Natanz, which have an elevation of 5,000 ft., with peaks rising considerably higher. Under the Sassanians it was an important province, holding a central position (Chr. Christensen, L'Iran sous les Sassanides, Copenhagen 1944, 506). Hurnuza, when consulted by 'Umar b. al-Khāṭṭāb on his plans for further conquest, advised him to march on Iṣfahan, which he compared to the head whose fall would be followed by that of the two wings, Aḏharbāyядān and Fārs (Balashūrī, Fīṣāh, Cairo 1957, ii, 371-2; Abū Nuʿaym, Geschicke Iṣbahans, ed. S. Dereden, Leiden 1931, i, 21; Māfarrukhi, 6). Balʿamī likened Fārs and Kūr to the two hands of Iṣfahan and Aḏharbāyядān and Ravy to its two feet (Taṛg̣uṃa-i taʿrīkh-i Taḥbār, ed. Mubammad Djalāl Maḥkūrī, Tehran 1959-60, 326).

After the Arab conquest Iṣfahan formed part of the province of the Dībāl, which corresponded to the earlier Media, and which became known in the 6th/12th century as ʿīrāk-i ʿAqlam (G. Le Strange, The lands of the Eastern Caliphate, 5, 185). According to Hammāz, Iṣfahan extended from Hamadan to Nīḥawān from Ravy and Kūmīs to Fārs and Kuṭahān, and consisted, in pre-Islamic times, of three uštāds, 120 tasājī, 5,000 villages, and 7 cities. Four of these became ruined, the province then comprising two hūras, 27 rustāks, and 3,313 villages. When the Arabs came, two more cities were ruined, leaving only Dijāy (Abū Nuʿaym, 14). In 189/804-5 Hārūn al-Raḍīd separated the hūra of Kūm from Iṣfahan, which consisted of four rustāks, from Iṣfahan together with what he added to it from the rustāks of Hamaḏān and Nīḥawān, after which Iṣfahan consisted of 23 rustāks (Abū Nuʿaym, 14; Hasan b. Muhammad b. Ḥasan Kūmī, Taʿrīkh-i Kūm, translated by Hasan b. Ṭabī b. Ḥasan b. Abū al-Malik Kūmī, ed. Sayyid Djalāl al-Dīn Tīhrānī, Tehran 1935, 24-5, 28 ff., 57, 101). Al-Muʿtaṣim made further changes, constituting Karaj into a kūra, taking four rustāks from Iṣfahan and some estates from Nīḥawān and Hamadan, after which Iṣfahan consisted of 19 rustāks, 1 kūra, and 2,500 villages (Abū Nuʿaym, 14).

Under the Mongols the province of Iṣfahan contained three main cities, Iṣfahan, Fīrānān in the bulūk of Līngān, and Fālīfān in Rūdāsh, and consisted of 8 bulūks, and 400 villages, together with many cultivated lands belonging to these villages. The bulūks were Dijāy (which included the town of Iṣfahan and its environs), with 75 villages, Karajīrī with 23 villages, Kūhāb with 40, both to the south of the town, Barān with 80 villages and Rūdāsh with 60 to the east, Burkhār with 32 to the north, and Mārīn with 58 and Līngān with 20 to the west (Hamd Allāh Mustawfī, Nistung-i Ḥakīm, ed. G. Le Strange, The Eastern Persian Irak, London 1919, 48, 50-1). In the 12th century Iṣfahan formed an extensive province divided into 9 bulūks, the ninth being Karāvan, north of Līngān, 8 makhālī, namely Rār, Kiyār, Mizadār, and Gandūmān (which together formed Cāhār Māhīl), Šīlmīrūm, Dājrāyā, Ardīstān, and Kūhābā (south of Ardīstān, and east of Iṣfahan, on both sides of the Zāyanda-rūd river), two makhām, Nadīṣfābād and Kūmīshā (the modern Shahrīdārī), and 5 makhās, Čądāgūn, Varzak, Tīh-bīḵārī, Gūrūdī, and Gīnūrūdī, which together formed Fīrānān (Muhammad Mīhīd b. Muhammad Riḍā al-Iṣfahanī, Nisf-i ighān fi taʿrīf al-Iṣfahan, ed. Manūcir Sūṭūdā, Tehran 1962-3, 21-2, 296-336; A. Houtum-Schindler, Eastern Persian Irak, London 1898, 125-9). The number of villages in all the bulūks except Karajīrī and Barānān, which had declined, and Rūdāsh, which was unaltered, had increased by the 19th century (Hasan b. Ḥasan b. Ḥasan an Nāṣīrī, Taʿrīkh-i nisf-i ighān va hamān-i īṣbān, lith., n.d., 168 ff.). Under Riḍā Shāh Iṣfahan was reduced to a district or sub-province (ṣahrīsān) and formed part of the Tenth Ustān, which also included, as separate ṣahrīsānāt, Shahr-i Kurd, Shahrīdārī, Fīrānān, Yazd, Ardīstān, and Nān (Hasan b. Ablīdī, Iṣfahan az ighāz-i īṣfrān-i ja va iberīsān, Iṣfahan 1956-7, 6). Its population according to the census of 1319 (A.H.S./1941-2 was 240, 598. By 1956-7 the
population of the shahristān, which comprised the town of Isfahan, Sīdēh, Fālāvarqīān, Nagātalabad, and Kūhpayān (Kūhpāya), was 850,027 (ibid., 53).

Physically and climatically Isfahan is a varied province ranging from the mountain districts of Fīrāydūn and Čahār Mabaill, with their extensive pastures where transhumance is practised, the plateau in the north and north-west where oasit-farming prevails, the immensely fertile riverain plain of Isfahan, and districts in the east and north-east bordering the Kūhān. Rainfall is heaviest in the mountain districts of Fīrāydūn and Čahār Mabaill, where it is c. 10 inches with heavy snowfalls in winter. In the town of Isfahan the annual rainfall is c. 5 inches and falls mainly from November to April. The prevailing winds are north-west in winter and south-east in summer. Temperature varies with altitude. Extremes of heat and cold occur in August and January. In the mountain districts the cold is intense in winter, but the heat is not very great in summer. In the neighbourhood of the town of Isfahan the seasons are extremely regular. The mean monthly maximum temperature in the town in August is 36.1° C. and the mean monthly minimum temperature in January is -2.2° C. Humidity is low. Outbreaks of plague are recorded in 3247 and 810/1407-8 (Ibn al-Athīr, ix, 290), and 423/1031-2, when 4,000 people died (Ibn al-Athīr, ix, 290), and 810/1407-8 (Ibn al-Athīr, ix, 290), and 810/1407-8 (Ibn al-Athīr, ix, 290), and 810/1407-8 (Ibn al-Athīr, ix, 290).

Except in Fīrāydūn and Čahār Mabaill, where dry farming is practised, all cultivation is irrigated by river water, kāndī, or wells. Water in the Isfahan plain is found at a depth of 12-15 ft. (Muhammad Mihdī, 85). In recent years a large number of machine-operated wells have been sunk, which has been a contributory factor in the lowering of the water-table which has taken place. The Zayanda-rūd River, or Zanda-rūd (also called by Ibn Rusta, Māfarrūghī and others the Zārin-rūd), which rises on the eastern slopes of the Zardān Kūh, receives various tributaries from Fīrāydūn and Čahār Mabaill and then flows south-east through the town of Isfahan and finally disappears in the Gāvkhūn marsh (Gāvkhōnī) to the east of the town. Between Linjān, where the Zayanda-rūd enters the Isfahan plain and the Gāvkhūnī, it waters the bukhārī of Linjān, Mārbin Dījar, Kārānjī, Barānī, and Kūhān, by means of 105 canals, known locally as madīrī. The original distribution of the water was attributed by Ibn Rusta to Ardāshīr b. Bābak (155). The modern division of the water goes back, according to tradition, to Shāh ‘Abbās. Between Linjān and the Gāvkhūnī the river was crossed by twelve permanent and two temporary bridges. Below the last of these at Varzana there are three dykes or dams for the purpose of raising the water to irrigate the land on either side. One, the Band-i Marvān, was built in Umayyad times (Ibn Hawkal, ii, 366-7; Muhammad Mihdī, 76-7; 94-104; Hutūm-Schindler, 17-18; Husayn Khān Tabwīstdīr-i Isfahan, Dwergbrājīya-ye Isfahān, ed. Manzīlīr Shuṭūh, Tehran 1964-5, 37 ff.; A. K. S. Lambton, The Regulation of the waters of the Zayanda Rūd in BSOAS, 1(3) (1937-9), 663-73). In 1954 a tunnel connecting the Zayanda-rūd with the Rūdān was opened at Kūhrang, which materially increased the flow of water in the Zayanda-rūd. This plan was first conceived by Shāh Tahmāsp. His successor, Shāh ‘Abbās, began to cut through the mountains near Kūhrang, but the work was abandoned before completion. New plans were made during the reign of Rūdān-Shāh to tunnel through Kūhrang in order to join the two rivers (‘Abbīdī, 74). In 1970 the Shāh ‘Abbās the Great dam was opened in the Kavand district. This dam enables the flow of water to be regulated throughout the year so that surplus water no longer flows into the Gāvkhūn marsh, which was reported to be drying up.

Many of the early Islamic geographers, Māfarrūghī, his Persian translator, Husayn b. Muhammad b. ‘Abī ‘l-Riḍā ‘Āvī (Tājūnīma-i Mahānān-i Isfahan, ed. ‘Abbās Ikbāl, Tehran 1949-50), and numerous other writers speak of the excellent climate, fertility and abundant crops of Isfahan. These included wheat, barley, millet, opium, which became an important export in the 19th century (Curzon, Persia and the Persian question, London 1892, ii, 42; Muhammad Mihdī, 125), rice (in Linjān and Alīnīān), cotton, tobacco, various oils, pulses and legumes, beet, madder, saffron, many kinds of vegetables and herbs, melons, grapes, fruits of various kinds, almonds and nuts (Ibn Hawkal, i, 363-7; Mukaddasī, 386-9; Iskākhī, 198-200; Husayn Khān Tabwīstdīr, 43 ff.; Shaykh Dībarī Ansārī, 168 ff.; Muhammad Mihdī, 19-20, 113-25). The Isfahanī peasant is known for his thrift and good farming (A. K. S. Lambton, The Persian Land Reform, London 1950, 145). Animal manure, sewage and pigeon manure collected in pigeon-towers, a characteristic feature of the landscape of the Isfahan plain, noted by many travellers (see Curzon, ii, 19-20), have traditionally been used in agriculture round Isfahan. Hām Allāh Mustawfī mentions excellent pastures in the neighbourhood of Isfahan (Nuzhat, 49). In many parts of the province flocks are a supplementary source of livelihood, and in Fīrāydūn and Čahār Mabaill the main source. From these two districts abundant meat supplies also were available to Isfahan. Formerly horse-breeding and mule-breeding were important in Čahār Mabaill (Shaykh Dībarī Ansārī, 182-3), and camels were kept in the Ardistan district (ibid., p. 191). Rugs and carpets are woven in different parts of the province. Isfahan was also noted for its textiles (cf. Olearius, The voyages and travels of the ambassadors of the emperor of the Romans, translated from the Latin by E. H. Cubitt and F. A. Jones, Oxford London 1669, 225), armour and brass-work. Small mineral deposits were formerly worked in Kūhistan and Taymara (Abū Nu‘aym, i, 32; Māfarrūghī, 18, 39), but had fallen out of use by the second half of the 19th century (Muhammad Mihdī, 20).

The city of Isfahan, situated on longitude 31°35 east and latitude 32°40 north at an altitude of some 5,200 ft. above sea-level, is an old foundation, originally on the village of Dījar, otherwise called Shahrīstān or Shahrīstānā, two miles to the west of which was Yahudīyya, where Jews are supposed to have been settled by Nebuchadnezzar (Schreiber, Rev. des Études Juives, xii, 259; Ibn al-Fakhrī, 261), and under Yazdīgīr 1 at the request of his Jewish wife Shōshandūkht (E. Blochet, Liste des villes, para. 54 in Recueil des travaux, xvii, 1895; J. Marquet, Érafān, 29). Ancient legends, transmitted by Ibn Rusta, attribute the building of the citadel to Kay Kānūs [q.v.]. Yahudīyya later became the centre of the city while Shahrīstān became a suburb.

The province of Isfahan, in view of its central position, has experienced most of the vicissitudes undergone by Persia since the Arabic conquest. The population is nevertheless remarkably homogeneous, apart from certain well-marked geographical areas, notably Fīrāydūn and Čahār Mabaill, which are inhabited chiefly by Bahāḥīyyāt tribes [q.v.], and small Jewish
and Christian minorities mainly in the town of Isfahan. For the rest the various settlers brought in by different dynasties which successively ruled the province have been absorbed into the local population (cf. Husayn Khan Taluvidar, 91-2). Jews, as stated above, have been settled in Isfahan from ancient times. Benjamin of Tudela, writing in the 6th/12th century, states that there were 15,000 Jews in the town (Elkan Adler, Jewish Travellers, London 1930, 33). By the 9th century their numbers had fallen. Curzon puts them at only some 2,000 Armenians in Djulfa (Curzon, ii, 120). W. J. Fischel, Isfahan, the story of a Jewish community in Persia, in The Joshua Starr Memorial Volume, New York 1953, 111 ff.). Under Shah 'ABBâS Armenians were brought from Djulfa and settled south of Isfahan in a suburb which came to be known as New Djufla. Towards the end of the 11th/17th century their numbers reached 30,000. After the fall of the Safawids, because of oppression and persecution, their numbers were greatly reduced. In 1889 there were only some 2,000 Armenians in Djulfa (Curzon, ii, 51-3). L. Lockhart, The fall of the Safavid dynasty and the Afghan occupation of Persia, Cambridge 1938, 484-5). Small settlements of Armenians and Georgians in Firaydan and Cahar Maâzâb are also said to go back to the time of Shah 'ABBâS (Curzon, ii, 284).

Isfâhâni Jews are noted for their vigour, quickness of intellect and good craftsmanship. Mâfarrukhi states that the best Isfâhânîs were very good but the bad very bad (21). Husayn b. Muhammed b. Abi 'l-Ri<la AvI also mentions their intelligence and skill as craftsmen (78; cf. also Muhammed Mihdi, 126). Al-Kawzânî similarly praises their craftsmanship and learning in fiqh, adaâb, astronomy and medicine (Athdr al-bildd wa-lakhbdr al-'idâb, Beirut 1960, 297). Mâfarrukhi relates that the best Isfâhânî troops, especially those of Firaydan, over all others (42).

The city has produced many scholars, divines, and literary men (for accounts of these see Abu Nuaym; c. 320). They performed their religious duties very exactly (Nuzhat, iii, 108). Curzon, writing in the late 19th century, gives an unflavourable account of the Isfâhânîs. He alleges that they enjoyed an unenviable reputation for cowardice and morals, and were niggardly and close in business matters, and that the lâjfs of Isfâhân were regarded as the biggest blackguards in Persia (ii, 43).

Isfahan in the early Islamic centuries. There are two versions of the capture of Isfahan by the Muslims. According to the Kufan school, it took place in 160/676. On the other hand, 'AbbâS b. 'Ibân marched on Dayr, which was commanded by one of the pâdhâgosân of the Persian empire (see Noldeke, Gesch. der Perser und Araber, etc., 151, no. 2; cf. Christensen, L'empire des Sassanides, 57), who, after several battles, capitulated on condition that âyiya was replaced by an annual tribute. Tâbari gives the date as 21/641-2 (ed. Leiden, i, 2637 ff.). The Baqrân school state that in 23/644 Abî Mûsâ al-Ashârî [q.v.], after Nakhâwand, took Isfahan, or that his lieutenant 'AbbâS b. Bu'ayl received the capitulation of the town on the usual conditions of the establishment of khârîâdi and âyiya (Balaghuri, Futûk al-bulûd, Cairo 1957, ii, 383-4; on these varying versions see Caetani, Annali, v, yr. 23, para. 4-23). Mâfarrukhi states that the âyiya and khârîâdi of Isfahan in the first year of the conquest amounted to 40,000 dirhams. Under the Patriarchi Caliphs and the Umayyads, Isfahan came under the jurisdiction of the governors of Basra and 'Irâk, who usually appointed the governors of Isfahan. It did not entirely escape the disturbances committed by the Khârîjîs. In 68/687-8 the town was besieged by the Azârizka branch, who were defeated by 'Ibâb b. Wârqa and fled to Pârs and Kirman. From 75/694 Khâhâlî b. Yûsuf [q.v.], who had become governor of 'Irâk, appointed governors over Isfahan. During his governorship there appears to have been some settlement by Banû Tanmîn in accounts of these, Banû Kayes in the rustâk of Anâr and Taymara, Banû Ana in Djapalak and Barkûd, and Ashâris in Kumidân, the rustâk bordering Ravy and Kumûs (Ta'rîkh-i Kumûs, 264). Arab settlement in Ardistan also traditionally goes back to early Islamic times, and in the late 9th century the Ardânis still traced back their genealogy to some Arab ancestors (Shâykh 'Abdâr Anâfî, 191).

In 127/744-5 'AbbâS b. Mu'allîyya, the 'Alîid rebel, seized Isfahan and held it for some two years until he was put to flight by 'Amir b. Dâbrû, who recovered Isfahan for the Umayyads. After the 'Abbâsîd revolt broke out in 130/747, Kâfîtaba, Abû Muslim's general, defeated an Umayyad force in the neighbourhood of Isfahan and in 131/748-9 a second and larger force under 'Amir b. Dâbrû was defeated near the town. From 132/749-50 'Abbâsîd governors were appointed over Isfahan. On the whole, the history of Isfahan under the early 'Abbâsâs appears to have been uneventful, apart from its abortive seizure in 138/755-6 by Djumhûr b. al-'Idîlî, who rebelled against al-Manşûr. Under Hârûn al-Râshîd, as stated above, Kumûm was separated from Isfahan in 189/805-6. Its khârîâdi after 90 was amounted to some 12,000,000 dirhams (Ta'rîkh-i Kumûs, 31). After the civil war, Isfahan became part of the government of Hasan b. Sahîl. In 201/816-7 and 202/817-8 there was a severe famine. Whether this had anything to do with an apparent decrease in the revenue or not, it had fallen to 10,500,000 dirhams in the year 204/817 according to Kudâma (von Kremer, Culturgeeschichte, ii, 337). In 221-2/836-7 it was still lower, being only 7,000,000 dirhams according to Ibn Khurra'di'bîb
ISFAHAN

This may, perhaps, have been due in part to the fact that about 218/833 the Khurramid movement, which had caused dislocation in Ghur-
bāyđān for many years, spread to Isfahan. An army sent by al-Mu'tašīm put the disturbances down. According to Ya'qūbī, the revenue had again risen towards the end of the century to 10,000,000 dirhams (ibid., 377) while Ibn Rusta puts it at over 30,000,000 dirhams (154).

In 253/867 'Abd al-'Azīz b. Abī Dulāf was appointed vizier of the government of Isfahan, which remained in the hands of the Banū Dulāf until 288/895-6 when al-Mu'taḍīd seized Ibn Abī Dulāf's property (Ibn al-Athīr, vii, 327). In 260/873-4 Yahyā b. Harthama appears to have reassessed Isfahan (Ta'rīkh-i Kūmul, 183). In the following year, Isfahan passed briefly under the control of the Șaffārīd, Ya'qūb b. Layyūm. The Banū Dūlaṭ, who had been reinstated, continued, however, to hold the government of the province, as they did also under 'Amr b. Layyūm, who succeeded in 265/879. In due course, when al-Muwaṭṭāfīk felt strong enough to move against 'Amr, he ordered Abūmād b. 'Abd al-'Azīz b. Abī Dulāf in 271/884-5 to attack 'Amr. The latter was defeated and Isfahan once more came under the control of the caliphate. In 284/897-8 'Abī b. Șīsā was sent to the Qīblābīl and ordered to reassess Isfahan and abrogate the assessment (darāyir) of the previous year. Hārīm of Qīrrāt (Ibn Rusta, 184-5) Ibn Rusta, who lived in Isfahan and probably wrote his account of the town about 290/903, described Diyār as measuring half a league across and covering an area of 2,000 șarībs (ca. 600 acres). It had four gates and 100 towers (152).

'Abū Allāh b. Ibrāhīm al-Mīsmārī, who had been appointed governor in 290/902-3, rebelled in 293/905-7 with the support of Kurds from the mountain regions to the south-west. He was subdued by a force sent by al-Muṭṭadīd under Bādr al-Hammāmī, who became governor of Isfahan (Ibn al-Athīr, viii, 9). The latter was succeeded by 'Abī b. Waḥṣūdān, the Daylāmī, who, when he was appointed governor of Fars in 309/922-3, also became governor of Isfahan. In 301/913, Isfahan passed for a brief period under the nominal rule of the Șāmānīs, but in 304/916-7 it was taken under Abūmād al-Șālīk, during whose tenure of office Hamīd, the vizier of al-Muṭṭadīd in 307/919-20, farmed the bahrājīs of Isfahan on a mukāta'ī contract. In 311/923-4 Abūmād rebelled but was defeated and killed.

The Būyīds. A troubled period now began for Isfahan. In 315/927 Mardwāji b. Șīrāzī took the city and appointed Abūmād b. Kayghulūgh governor. In 316/928 the Daylāmī Lashkārī took Isfahan from Abūmād, who subsequently recovered the city and killed Lashkārī (The eclipse of the Abbāsīd Caliphate, ed., tr. and elucidated by H. F. Amedroz, Oxford 1921, iv, 239-40). Muṭṭaffār b. Yaḳūbī, whom al-Muṭṭadīd had appointed governor of Isfahan in the same year, does not appear to have gone there (ibid., 236). Mardwāji also repeatedly returned to the city where he billeted large numbers of troops. Some two years later in 321/933 'Abī b. Būya Ṭimād al-Dūlaṭ, who had been Mardwāji over Kārāj, took Isfahan, but retired when Mardwāji sent his brother Wūṣhmīr against him. In the same year al-Khārīr appointed Muḥammad b. Yaḳūb governor of Isfahan after he had written to Mardwāji bidding him to evacuate the city in return for recognition as ruler of Rayy and the Qīblābīl, and to Wūṣhmīr to retire from Isfahan. Al-Khārīr was deposed shortly afterwards (ibid., 307). Mardwāji retained Isfahan and in the following year, after 'Abī b. Būya had seized Fārs and his brother Abūmād had occupied Kīrman, set out again for Isfahan, where he was assassinated by his Turkish troops. 'Abī b. Būya and his brother Hasān Rūkn al-Dawla then occupied Isfahan, turning out Wūṣhmīr. The latter recovered Isfahan in 327/938-9, but in the following year Ṣanūn retook it and continued to rule it until his death in 366/976, though a Șūrūsī force under Mānṣūr b. Karāṭeqīn temporarily took the city in 359/ 950-1. In 343/954 Isfahan again suffered a Șūrūsī incursion, and was plundered by Bāb al-Caghān.

On the death of Rūkn al-Dawla Isfahan went to his son Muṣfīyīd al-Dawla, who, from 367/977, ruled as 'Abūd al-Dawla's subordinate. He was followed in 372/982-3 by his brother Fakhr al-Dawla. The latter died in 387/997, and was succeeded by his four-year-old son Maḥdī al-Dawla, whose mother became the effective ruler of the kingdom. Maḥdī al-Dawla, resenting her mother's interference, made an abortive attempt in 397/1006 to throw off her control. In the following year ʿAlī al-Dawla Abū ʿDjafar Muḥammad b. Dushānīnīzīr, the maternal uncle of Fakhr al-Dawla's wife, became governor of Isfahan, which he ruled intermittently until his death in 433/1041-2. He was turned out by the Būyīd, Ibn Fūlād, in 407/1016-17 but regained the city in 411/1020-1. In 418/1027-8 he was besieged for four months by 'Abī b. Vakīrīn, the vizier of Fakhr al-Dawla, who, from 416/1025, ruled al-Dawla. In 420/1029 he lost Isfahan to Mas'ūd b. Māḥmūd the Șajnadīst. Having appointed a governor over the city, Mas'ūd went away, but when the Isfahanīs rose and killed the Șajnadīst governor, he returned and massacred a large number of the inhabitants. In the following year ʿAlī al-Dawla recovered the city, but Anṣhārīvān b. Kābūs, with the help of Șajnadīst troops, put him to flight. In 423/1032 he returned to Isfahan and in 424/1032-3 Mas'ūd gave him the government of Isfahan in return for a sum of money. In the following year ʿAlī al-Dawla was again defeated by a Șajnadīst force. He retired to Fīraydān and Khānsār. After collecting reinforcements he retook Isfahan in 427/1035-6.

In spite of repeated disorders in Būyīd times, Isfahan became a flourishing and extensive city, especially during the vizirate of Ismāʿīl b. Muṣfīyīd al-Dawla and Fakhr al-Dawla (Māfarrukhī, 40). The Tabārā or Tabarak quarter was added by the Būyīds, its fortress being built according to tradition by Rūkn al-Dawla or Muṣfīyīd al-Dawla. In 429/1037-8 ʿAlī al-Dawla built a wall round the city, for which purpose he laid heavy impositions on the people (Māfarrukhī, 81, 113). The city under the Būyīds contained splendid private and official residences, stables, baths, gardens, and fine well-stocked bazaars (Māfarrukhī, 83 ff.). Ibn Ḥawkāl mentions the wealth and trade of Isfahan and its export of silks and textiles to other provinces. No other city between ʿIrāk and Șūrūsī except Ṣayyāf had more trade. There was a Friday mosque in Shahristan and Yahūdīyya, which was more than twice the size of the former and bigger than Hamādān (ii, 362-3; Ṣayyāfī, 298-9; Le Strange, 203-4; Șulād al-'Ālam, translated and explained by V. Māfarrukhī, London 1937, 131). Māfarrukhī records that formerly nearly 2,000 sheep and goats and 100 head of cattle were slaughtered daily in Isfahan (86-9). If these figures are at all accurate, even allowing, in view of the high prosperity, for a much heavier meat consumption than in later times, the population, on a conservative estimate, would have been over 100,000.

The Sālidūks. During the reign of Maḥmūd, the Ghuzzīs had begun to move into Persia. They
were active to the north and north-west of Isfahan but do not appear to have penetrated to Isfahan itself, though in 430/1039-8 'Ali b. al-Dawla marched from Isfahan against bodies of Ghuzz who had been operating in the neighbourhood of Dinawar and defeated them (Ibn al-Athir, ix, 217). It was not until some years after the battle of Dindinkan (431/1040) that the Saljuqs took Isfahan. In 434/1042-3 Tughril Beg advanced on the city. Farāmurz, who had succeeded 'Ali b. al-Dawla in the previous year, bought him off and agreed to read the khutba in his name (Ibn al-Athir, ix, 349). Farāmurz later allied himself with the Böyid Abū Kâlîdî and omitted Tughril's name from the khutba. In 438/1046-7 Tughril once more advanced on Isfahan and on this occasion laid siege to the city. Farāmurz submitted, agreeing to pay an annual tribute and to read the khutba in Tughril's name, but once Tughril left the district he again withdrew his allegiance.

In 442/1050 Tughril besieged the city for the second time. It fell after nearly a year, in Muharram 443/1051 (Ibn al-Athir, ix, 385). Tughril appointed a young Nishapûri over the city and ordered that no taxes should be demanded for three years. His conciliatory policy was successful. The city rapidly recovered its prosperity and those who had been scattered abroad during the years of disorders and famine returned to Kâšî-î Khushn, the site of the old wall of Khân Lindjân in 444/1052, wrote that there were secure and at peace and went about their own business. Speaking of Isfahan, he states that it was the most populous and flourishing city that he had seen in Persian-speaking lands. Describing the thriving condition of the town, he states that it had a large Friday mosque and many bazaars, including one occupied by 100000 farsaks of a city in which many merchants were to be found. The town had a strong wall with battlements, said to be 3½ farsaks in circumference; the quarters of the town were divided from each other by gates (Safarînâma, ed. C. Schefer, Paris 1881, Persian text, q2-3).

Tughril Beg is alleged to have been much attached to the city. He moved his capital there from Rayy and made it his chief residence for the last twelve years of his reign. He spent over 500,000 dinârs on public buildings and improvements in the city and its environs (Mâfarûkî, 101). It continued throughout the Great Saljuq period to be one of the main centres of the empire and to be directly administered (whereas much of the empire was alienated from the control of the central government as iqtâ’s). Alp Arslân also treated the people of Isfahan with favour (Mâfarûkî, 101-2). Malikshâh received the caliph's investiture as wâli al-'âdâ there in 454/1061-2 (Ibn al-Athir, x, 48). On the death of Alp Arslân, Kâwurd b. Çâgûrî Beg, in an abortive attempt to assert his claim to the throne, briefly occupied Isfahan. During the reign of Malikshâh, Isfahan reached great heights and became an important Sunni centre (see A. Bausani, Religion in the Saljuq period, in The Cambridge History of Iran, Cambridge 1968, v, 283-302). Both he and his vizier Nizâm al-Mulk exerted themselves in its development. Mâfarûkî relates that it was exempted during the reign of Malikshâh from jizma and takhsîf and extra-ordinary dues. Announcements to this effect were made in the mosques and tablets put up at the gates and on the walls of the bazaars (103-4). The Gulbâr quarter, in which is situated the square now known as the MayẢdârî Kuhna, with government offices and residences was added. New mosques were built and additions made to old ones, notably the old Friday mosque (see A. Godard, Historique du Masjid-i-Jam'â d’Isfahan, in Âjâb-i Irãn, i, ii, and iii, 1936-8; A. Gabriel, Le Masjid-i Djoum’a d’Isfahan, in Ars Islamica, ii, 1933). A fortress was made in Diz Kûh (Shâhûdiz) where Malikshâh kept his armoury and treasury. Nizâm al-Mulk built a Nizâmîyya in the Darâshî quarter. The annual revenue of the property which he constituted into waqf for it was over 10,000 dinârs (Mâfarûkî, 104-5). According to Hûsânî b. Muhammad b. 'Ali, 'Abd al-'Âdâd the madrasa was still in existence in 729/1328-9, but its endowments had been usurped (p. 142).

With the death of Malikshâh in 485/1092, Isfahan ceased to prosper, though as the capital of the empire its possession was of importance to those who contended for power. The townspeople were probably not closely engaged in these struggles, but it is likely that the prevailing insecurity and the coming and going of troops dislocated their lives to some extent and engendered discontent. The balance between order and disorder in the city was always delicate, as the following incident which happened about this time shows. A report was spread that a certain blind man, alleged to be a Bântî, had lured unsuspecting people to their death. The populace rioted and seized and burnt all who were accused of being Bântîs (Ibn al-Athir, x, 214-5). This did not, however, end the activities of the Bântîs. Ala'î b. Nâgî-î Attâsh, the dâ'î, had laid the foundations of the movement carefully during the reign of Malikshâh, and in the disorders following his death the movement spread.

Tâdî al-Mulk and Turkân Kâtûn, Malikshâh's wife, read the khutba in Baghdâd, where Malikshâh had died, in the name of her four-year-old son Mûammad and hastened to Isfahan. Barkyarûk, the son of Zubaydâ Kâtûn, who had been seized by the supporters of Turkân Kâtûn, but later freed by the Nizâm mamlâks, left the city on the approach of Turkân Kâtûn, but subsequently returned and besieged her there (ibid., x, 146-7). In 497/1094, on the sudden death of Turkân Kâtûn, who had meanwhile distributed to her followers all the treasure and stores which had been accumulated in Isfahan, Barkyarûk re-entered the city. He remained in possession for some years, although not always in it, his absent from it for about 500,000 dinârs on rebellions in other parts of his empire. From about 490/1097, however, when the struggle with his half-brother Mûammad began, his position in the city was no longer secure. In 492/1098-9, after numbers of his army had deserted to Mûammad, he was refused entry and forced to retire to Khûzûtân (ibid., x, 153). The struggle between the brothers continued for the next five years or so, during which time the Bâtîns greatly increased their power in Isfahan and the neighbourhood. Ahmad b. 'Abd al-Malik 'Attâsh, who had succeeded his father as dâ'î at Isfahan, obtained entry to the fortress of Shâhûdiz (according to one account as schoolmaster to the garrison), won them over and seized the fortress. By 494/1100 the Bâtîns were collecting taxes in their neighbourhood and had also gained possession of the fortress of Khân Lindjân. Barkyarûk, who had remained loyal, accused of Bâtînî sympathies, now decided to move against the Bâtîns. The Shâhî'î bâdî, Abu 'l-Kâsim Khudjandî, roused the populace, and a large number of persons accused of being Bâtîns were rounded up and burnt (ibid., x, 214-5). The Bâtînîs, however, remained in possession of Shâhûdiz.

In 495/1102, Mûammad, having been defeated near Rayy by Barkyarûk fled to Isfahan, where he was besieged by his brother for some nine months. During this period he was forced twice to ask loans of...
the prominent people of the city to satisfy the demands of his troops (ibid., x, 228). When the city finally became short of food, Muhammad escaped and fled to Adharbaydjan, where he was pursued by Borkyaruk (ibid., x, 227-8). The struggle continued until 497/1103-4 when peace was made and Borkyaruk returned to Isfahan (ibid., x, 253-4). On Borkyaruk’s death in the following year Muhammad re-entered the city (ibid., x, 273). One of his first tasks was to reduce the Batinis in Shiahdiz and the neighbourhood. For some time Ahmad b. A’ta’i negotiated successfully to be chief of the garrison, and it was not until 500/1107 that a capitulation was agreed to. Some of the garrison accepted a safe conduct, but the remainder fought to the end. Abbad was finally captured, paraded through the town and skinned alive (see further M. G. S. Hodgson, The order of the Assassins, The Hague 1955, and idem, The Isma’ili state, in The Cambridge History of Iran, v, 422-82). There does not appear to have been any renewal of Batin activities after this apart from isolated incidents, such as the burning of the Friday mosque and its library in 515/1122-2, which was attributed to them (Ibn al-Athir, x, 420).

From 500/1106-7 until Muhammad’s death in 512/1121-2 Isfahan remained the main centre of the Great Saljuk empire. Thereafter power moved to Khurassan, where Sandjar ruled as the Great Saljuk sultan, while Isfahan and the western provinces were disputed by the Saltjukis of Trak and their atabegs. There were renewals of sectarian strife, notably an outbreak in 560/1164-5 between the Khudis and their atabegs. Isfahan changed hands several times in the subsequent campaigns between the caliph and the Khwarazmshah. In 623/1226 the Mongol armies under Djurmaghun reached the city and countryside (BanakatT, ed. J. Aubin, Tehran 1957, 183 ff.). When, during Timur’s second expedition to Persia in 786-7/1384-5, the Muzaffarid Zayn al-Abidin b. Shah Shudjuk refused a summons to join him, Timur marched on Isfahan, which he reached in 789/1387. The ‘ulama’ sued for peace. Timur sent mukhassils into the town to collect the money which they had promised. A riot ensued in which the mukhassils were killed, together with many soldiers who had entered the town on their own affairs. Timur in retaliation massacred 70,000 of the inhabitants (Nizam al-Din Shamil, Zaflarnima, ed. F. Tauer, Prague 1937, i, 104-5). Although he was unable to sustain his victory, Isfahan remained one of the main centres, however, in Fars and Kirman, and their rule did not restore Isfahan to its central position. The city was besieged several times and frequently changed hands (Mu’in al-Din Natanz, Muntakhab al-tawdrtkh, ed. J. Aubin, Tehran 1957, 183 ff.). When, during Timur’s second expedition to Persia in 786-7/1384-5, the Muzaffarid Zayn al-Abidin b. Shah Shudjuk refused a summons to join him, Timur marched on Isfahan, which he reached in 789/1387. The ‘ulama’ sued for peace. Timur sent mukhassils into the town to collect the money which they had promised. A riot ensued in which the mukhassils were killed, together with many soldiers who had entered the town on their own affairs. Timur in retaliation massacred 70,000 of the inhabitants (Nizam al-Din Shamil, Zaflarnima, ed. F. Tauer, Prague 1937, i, 104-5). Although he was unable to sustain his victory, Isfahan remained one of the main centres, however, in Fars and Kirman, and their rule did not restore Isfahan to its central position. The city was besieged several times and frequently changed hands (Mu’in al-Din Natanz, Muntakhab al-tawdrtkh, ed. J. Aubin, Tehran 1957, 183 ff.). A riot ensued in which the mukhassils were killed, together with many soldiers who had entered the town on their own affairs. Timur in retaliation massacred 70,000 of the inhabitants (Nizam al-Din Shamil, Zaflarnima, ed. F. Tauer, Prague 1937, i, 104-5).
In addition to land and property taxes, dues and tolls, the people were subject to ad hoc levies, while many local officials, such as the mirāb (ibid., xvi, 4, 432), collected dues and fees as the whole or part of their emoluments. Drafts on the revenue were common practice and certain sums, especially for the payment of officials of the central government, were made a charge on different groups of taxpayers.

For example, a large sum was levied on the Armenians of Diawilha (in Djufla) on account of the inšān-i kamaṣā of the amir shirābdshī (ibid., xvi, 1-2, 89). These practices were known under different governments, but were less widespread than under the Safawids.

The craft guilds were assessed by the nakib al-āghrāf (q.v.) in lump sum, which was subsequently allocated among the individual members of the guilds by the wakf dar Ḥasan, subject to the acceptance of the assessment by two-thirds of the members. The nakib al-āghrāf also appointed the elders (ruḥāṣfādān) of the dervishes and certain other guilds (ibid., xvi, 4, 418). Some of the guilds performed corvées for the court and some from time to time were granted exemptions from taxation (Tavernier, 239; Chardin, iv, 95, vi, 119-20; A. K. S. Lambton, The late medieval period, an inaugural lecture, School of Oriental and African Studies, London 1954, 22 ff.; Gandjina, 434-6, for a firman of Shāh ‘Abbās dated 1038/1629 inscribed in the Shāh mosque in Isfahān forbidding the writing of drafts on the barbers for any kind of due). Public order within the city was under the dārāqā (q.v.), who carried out summary punishment for disorders (ibid., ibid., xvi, 5-6, 549). Prices were under the control of the muḥtaṣib al-maḥālāt (ibid., xvi, 4, 418).

Some of the guilds performed corvées for the court and some from time to time were granted exemptions from taxation (Tavernier, 239; Chardin, iv, 95, vi, 119-20; A. K. S. Lambton, The late medieval period, an inaugural lecture, School of Oriental and African Studies, London 1954, 22 ff.; Gandjina, 434-6, for a firman of Shāh ‘Abbās dated 1038/1629 inscribed in the Shāh mosque in Isfahān forbidding the writing of drafts on the barbers for any kind of due). Public order within the city was under the dārāqā (q.v.), who carried out summary punishment for disorders (ibid., ibid., xvi, 5-6, 549). Prices were under the control of the muḥtaṣib al-maḥālāt (ibid., xvi, 4, 418).

The kalāntār (q.v.) was the main link between the population and the government, corresponding in part to the earlier raʾīs. It was his duty to reconcile the interests of the two parties. He was usually recruited from among the notables of the town. He had general oversight of the kadḵūdas of the districts and the craft guilds. Together with the wakf dar Ḥasan, he was appointed the kalāntār (ibid., xvi, 4, 421-2; see also A. K. S. Lambton, The office of kalāntār under the Safavids and Afshars, in Mélanges Massé, Tehran 1963).

Under Shāh ‘Abbās Isfahān again became an important religious centre, with this difference that orthodoxy was now Iskandar Beg (q.v.). Shī‘a divines were brought to Isfahān and taught and disputed there, but there is unfortunately little information on the course of the conversion of its inhabitants. By the middle of the 17th century religious festivals such as the ḍi‘id-i kurān (see Thevenot, ii, 107-8 bis) and the Mubarram ceremonies were performed with passion and vigour. Under Shāh ‘Abbās there was strong supervision of religious affairs as there was over other aspects of the life of the city. The religious classes were organised into corporations under the general oversight of the sadr (Musicandar al-mulūk, xvi, 1-2, 64). Under Shāh ‘Abbās
Sultan Husayn a new office, that of mulld-bdshl was created, and its holder made head of all the religious classes (ibid.). The decision of shar'i cases was in the hands of the shaykh al-islam and the badi (ibid., xv, 1-2, 69). Shih Abbas and his immediate successors treated other religions with toleration, but persecution began under Shih Sulaymnn and in the time of Shih Sultan Husayn was directed, not only against other faiths, but also against Sunnis and ShSfs (see further Lockhart, op. cit., 32-5, 70-9).

The wellbeing of Isfahan, as the capital of the empire, was closely bound up with the fortunes of the Safawid dynasty, as it had been earlier with those of the Saldjuk dynasty, whose capital it had also been. The fall of the Safawids, however, proved far more disastrous for Isfahan than that of the Saldjucks. By the reign of Shih Sultan Husayn, a marked decay in standards of public and private life and administrative competence had taken place (Muhammad Hashim Asif Rustam al-Hukama?, Rustam al-tawdrikh, ed. Muhammad Mushiri, Tehran 1969, 82-3, 90 ff., 98-9, 102 ff; L. Lockhart, op. cit.). Security in the town was also at a low ebb. Rustam al-Hukama? gives a list of bloodthirsty "toughs" (pahla?ndn va zabardstn va gurddn shabraw va 'ayydr), and alleges that the shih was unable to punish them because the "pillars of the state protected and aided them" (tayydr). The 12th/18th and 13th/19th centuries. Eventually the Afghans rebelled and invaded central Persia. In 1134/1722 after the Safawid army had been decisively beaten at Gu?nd?d near Isfahan, the city was besieged (see Lockhart, op. cit., 144 ff. for a detailed account of the siege; and also Rustam al-tawdrikh, 133 ff. on the intrigues and disunity prevailing in Isfahan during the siege). It was reduced to appalling straits and fell after six months. Some 20,000 persons were killed by enemy action and it is estimated that four times as many died from starvation and pestilence. The city was declared to have been conquered by force (sawstead) and orders given for all land to be declared khulisa. Many of those who had escaped in the siege fled to India and the Ottoman empire (Shaykh Djabir Anfsr, 32-3, 113-14) or lived once more, for a brief period, became the official religion.

The Safawid restoration which began when Nndir entered Isfahan in 1141/1729 with Tahms?p after defeating the Afghans near Murcahkart was shortlived. Isfahan was only a shadow of its former self. Many of the inhabitants who had survived the siege perished in the subsequent massacres. Heavy impositions were laid upon those who survived to pay the soldiery, by whom they were treated with great cruelty (Lockhart, Nadir Shih, London 1938, 39 ff.). When Nndir finally assumed the crown in 1148/1736, he moved the capital to Mashhad. Isfahan, like other parts of Nndir's empire, suffered heavy exactions. More land was confiscated for the state, and orders were given for the resumption of awakh. ?Adil Shih on his accession in 1160/1749-8 revived Nndir's land decrees, but some of them continued to exist because there had been many cases of falsification of title deeds, destruction of land registers and usurpation (Shaykh Djabir Anfsr, 35 ff., 122 ff., A. K. S. Lambton, Landlord and peasant in Persia, 131-2).

On Nndir's death, the people rose against the government, who took refuge in the fortress of Tabarak, where he was besieged. He was eventually killed by one of his own guards. Ibrahim Shih then sent a new begarbarst to the city in the person of Abu '1-Fath Kdn Bakhtrvst, who on Ibrahim Shih's death shortly afterwards ruled in the name of Abu Turab Mizr?z, the eight-year-old grandson (through the female line) of Shih Sultan Husayn. An abortive attack on the city was made shortly afterwards by ?All Mardan Kdn Bakhtrvst, who retired to Luristan. After collecting reinforcements and allying himself to the Zands, he marched a second time on Isfahan in 1164/1750. Abu '1-Fath Kdn, having failed to raise any money from the townspeople, was unable to muster an army to oppose him. ?All Mardan Kdn entered the city, which was thereupon looted by his troops, (Rustam al-tawdrikh, 244 ff.) For a brief period ?All Mardan Kdn, Karim Kdn Zand and Abu '1-Fath Kdn ruled the city and its neighbourhood jointly. The latter was then killed by ?All Mardan Kdn who was, in turn, dispossessed in 1165/1751-2 by Karim Kdn, who then appointed his brother Sdik Kdn as governor. For the next few years Isfahan was fought over by marauding bands of Zands, Afghans and Kdjar. Its miseries were added to by famine in 1170/1756-7, which carried off 40,000 persons. Finally, in 1172/1758-9 Karim Kdn took the city. A period of peace now began and under the government of Muhammad Rn?n, a local man whom Karim Kdn appointed governor in 1173/1759, the city recovered somewhat from the ravages of the previous years (Shaykh Djabir Anfsr, 127 ff.; Muhammad Mihd?, 270). Isfahan, however, did not regain its former preeminence; Shtrzl became the capital in 1180/1766-7.

On the death of Karim Kdn, anarchy broke out once more. In 1199/1774-5 Isfahan was looted for three days when Bnk Kdn, the kdhndud of Khurjskn, who had made himself governor, lost control on the advance of Mndn Kdn (Rustam al-tawdrikh, 59; Ibn 'Abd al-Karim, Tarb-thi Zandiyya, ed. E. Beer, Leiden 1888, 30). In the following year Ak? Muhammad Kdn Kdjjr appointed his brother Dsflr Kull Kdn governor of Isfahan (Shaykh Djabir Anfsr, 126 ff.). Under the Kdjars the capital was moved to Tehran. Isfahan for a time remained the chief commercial city of the empire (J. Macdonald Kinneir, A geographical memoir of the Persian Empire, 2 vols. London 1813, 113), but gave way to Tabriz in the second half of the 19th century (Curzon, ii, 41). The events of the 18th century had taken a heavy toll on Isfahan. Olivier, who visited the city in 1796, describes its ruined condition and states that its population did not exceed 50,000 (Voyage dans VEmpire Othoman, l'4gypte et la Perse, Paris 1807, iii, 101). Morier in 1811, revising his own earlier estimate, which had been much higher, put the population at probably about 60,000, on the basis of a daily slaughter of 300 sheep (A second journey through Persia, Armenia and Asia Minor, London 1818, 141-2).

After the death of Ak? Muhammad Kdn, an abortive attempt was made in 1212/1797-8 by Muhammad Kdn Zand to seize the city. This was followed by the rebellion of Husayn Kull Kdn Kdjjr, who, however, fled the city in 1213/1800-1 and in the spring of 1804-5 there was a further setback to the wellbeing of the city in the shape of a severe famine caused by the ravages of locusts. About this time (or possible earlier) Muhammad Husayn Kdn N?zm al-Dawla was made governor. He was a native of Isfahan, a self-made man who acquired great riches, largely in land, some of which he constituted into awakh. Under him and his son, Amin al-Dawla, who succeeded him when he became sadr-i a'mam, Isfahan began once more to prosper (Shaykh
2. MONUMENTS

The Islamic monuments of Isfahan today constitute one of the most significant and complete architectural complexes preserved at the heart of a modern city which owes them much of its prestige. Carefully restored, the most important amongst them dominate the developing urban landscape in the midst of which they stand, while the old quarters, both in the built-up area of Isfahan itself and in the many surrounding villages, still harbour numerous modest structures, often partially ruined, which remain insufficiently studied. Some idea of the richness of this complex may be gathered from the fact that more than fifty caravanserais, and 273 baths were enumerated at the end of the 19th century by that trustworthy traveller and observer, Chardin. Some years later Houtum-Schindler considered it had risen, by natural increase and immigration, to close on 100,000 (190-20; Muhammad Mihdi and Shaykh Djabir Ansari, however, give higher estimates). In 1888 when Zill al-Sultan was appointed governor in 1874, and by 1881 had become the virtual ruler of most of southern Persia. His government was severe and authoritarian. Discontent with the government and its policies was meanwhile spreading, and when the Constitutional Revolution came, Isfahan played a prominent part in the revolution of Persia taken from the memoirs of Father Krusinski . . ., London 1729; J. Otter, Voyage en Turquie et en Perse, Paris 1748; A. Arnold, Through Persia by caravan, London 1877, i; R. B. M. Binning, A journal of two years travel in Persia, Ceylon, etc., London 1857; E. L. Bishop, Journeys in Persia and Kurdistan, London 1891, 2 vols., the Hague 1890; H. de Bode, Travels in Luristan and Arabistan, London 1845; Mme. J. Dieulafoy, La Perse, Paris 1887; A. V. Williams Jackson, Persia Past and present, New York 1906; Ker Porter, Travels, London 1821, i; J. Morier, A journey through Persia, Armenia and Asia Minor to Constantinople, in the years 1808 and 1809, London 1812; F. Stack, Six months in Persia, London 1882, ii; Gazetteer of Persia, Simla 1938, ii, 239-49. (A. K. S. LAMBERT)

11th/12th century, which saw the installation at Isfahan of the Safavid Shah 'Abbās I, and with the oldest parts not going back beyond that 5th/11th (Saldjuk) century in which the imperial vocation of the city was established by Malikshāh and his ministers, they are insufficient to allow us to retrace on the ground with any degree of certainty the stages of the city's development, which began soon after the Arab conquest and for which the literary sources provide most of the evidence. The general outline both of the plan of the twin cities of Džay and al-Yahidiyya, between which from the beginning of the 'Abbāsīd period the population of an already prosperous trading centre was divided, and of the locality used as a residence by the Buwayhid princes, can be seen only in such indications as the permanence of the site of the great mosque and a mud-walled citadel, itself completely rebuilt several times, and recent discoveries of a doorway which probably belonged to the mosque of al-Sāhib ibn 'Abbās. The evidence is almost as vague regarding the organisation of a Saldjuk capital, in which we can locate with difficulty, apart from the great mosque and citadel already mentioned, the situation of a few sanctuaries still marked by minarets, and the probable site of the great maydān, by which, in earlier times, the royal palace and the Nišāmiyya madrasa stood. The situation, so unsatisfactory to any methodical approach to the architectural school of Isfahan, is in fact attributed to the very conditions in which the town has survived, partially ruined more than once, and then rebuilt according to the unchanged techniques of an impermanent method of building in mud- or baked brick, or even in puddled clay, which was traditional in that area, and dictated by geography. Thus either side by side or the one above the other, urban nuclei replaced each other, comparable in their evolution to the large villages also situated in the oasis, which were themselves from time to time the object of intense architectural activity. And similar difficulties of identification, due both to the paucity and the frailty of archaeological landmarks, hinder the study of the older districts of present-dav Isfahan, as well as that of the settlements, thriving or in ruins, around the city, such as ashja, Bar- sylan, Gār, Sin, Ziyār, Lindijan/Pir-i Baken— or Ashťardān, to mention but a few among the best known, where significant remains dating from the Saldjuk and Ilkhanid periods survived until recently and in some cases are still preserved.

In the centre as a whole, we must give particular attention to the Great Mosque, which by its antiquity and extent provides us with an archaeological document of exceptional value: the Masdjid-i Djum’a where authentic traces of the period of Malikshāh between 465/1072 and 485/1092 have survived in the midst of later constructions or modifications no less worthy of interest. Here are abundant inscriptions from the 5th/11th century onwards, and noteworthy decorative elements such as the brick ornamentation in the interior of two Saldjuk domed halls, or the stucco relief of the Mongol ruler Öljeytu, are preserved behind the İnderen and façades entirely covered in fāgele which give the courtyard its Safavid appearance. But the very variety of the pieces of evidence found together in this venerable yet disparate building, where the necessary sondages and investigations have never been carried out, prevents us from reconstructing its history with any degree of certainty. For this history contradictory hypotheses suggest widely differing interpretations, and there have even been produced more general theories, such as that of the "kiosk-mosque," resting on assumptions as impossible to prove as to refute.

In effect then it is the Safavid achievements, either in isolation or taken in conjunction with earlier buildings of secondary importance reworked in the Safavid period (numerous small more or less disguised Saldjuk or Ilkhan sanctuaries are in this position), which make up the architectural landscape of the monuments in Isfahan today. This landscape, whose uniformity so well conceals the achievements of earlier periods, gives but an inadequate impression of the totality of the grandiose design for an imperial city once conceived by Şah 'Abbās I. However, it retains enough of the earlier features to enable one still to distinguish the overall plan which made the Maydan-i Şah—the royal square in front of the ruler's palace—into the majestic centre of the city; this centre led on one side to the older thoroughfare linking the Great Mosque both with the Citadel and the Pūl-i Khādży, or at least with the bridge which had preceded the present bridge-barrage built by Şah 'Abbās II; it was completed on the other side of the royal palace and gardens by the new Čahār Bāgh avenue which led from these gardens to the Allāhwārdī Şah bridge, which like the Čahār Bāgh itself dates from the monarch's first series of architectural undertakings in 106/1656.

The Maydan-i Şah itself is, still at 510 metres long by 165 metres wide, framed by a wall of blind arcades concealing a trading street full of shops, was a monumental work of art, splendidly complemented by the imposing perspective of the tree-lined Čahār Bāgh bordered with canals of running water over more than one and a half kilometres. But the buildings which surrounded this square towards the end of the reign of Şah 'Abbās I, to the south the most majestic royal mosque of Masdjid-i Şah (probably begun in 1021/1612-13), to the east the Masdjid-i Shaykh Lutf Allāh (begun 1012/1603), to the north of the royal bazaar with its monumental gateway (built in 1029/1620), could be seen above all as worthy companions to the Čahār Bāgh palace which had been constructed by Şah 'Abbās I on the basis of a Timūrid pavilion, and which gave the name to the Bahana, Bar- sylan, Gār, Sin, Ziyār, Lindijan/Pir-i Baken—or Ashťardān, to mention but a few among the best known, where significant remains dating from the Saldjuk and Ilkhanid periods survived until recently and in some cases are still preserved.

Moreover, the importance of this "royal city" situated between the Maydan-i Şah and the Čahār Bāgh continued to be strengthened under succeeding monarchs by the building of other sumptuous pavilions. But one last Safavid building for religious purposes from the 12th/18th century remains to be noted with the construction between 1118/1706 and 1120/1714 of the Mader-i Şah madrasa and the adjoining caravanserai, which has also survived until today. Mention must be made too of those Armenian churches of the New Djiufa district, in which can still be seen the fundamental characteristics of the imperial style dominant at the time when they were founded by an emigre colony.

The various buildings briefly listed here in order to recreate a panorama of Safavid Isfahan all possess as their prime quality the ability to serve as living testimony to a refined art form which caused the city to be described, as the expression of Gobineau's admiring critical appreciation, as "a triumph of
ISFAHAN — AL-ISFARAYN

ISFAHAN

AL-ISFARAYN

ISFARAYN, a district, and in earlier Islamic times a town, in northwestern Khurāsān. It lies on the northern edge of the long plain which extends from Bistām and Shahrūd in the west almost to Nishāpur in the east and whose central section is drained by the Kīlū Shīr river before it turns southwards into the Dāsh-e Kavir. In mediaeval Islamic times, the route from Nishāpur to Gurgān ran across this plain, and the geographers place Isfārāyin at roughly the midpoint, five stages from Nishāpur and five from Gurgān.

Though allegedly founded by Isfandiyār, little is known of Isfārāyin's pre-Islamic past except that it was under a dākān (Tha'ālibī, Ghurār al-siyar, ed. Zotenberg, 591). A popular etymology, given e.g. by Yākūt, derives its name from isfā-rāyin "shield-like", and this may have influenced the Ḥudūd al-Šām's spelling as Siyārīyin. It is also said that it used earlier to be called Mihrān, a name surviving in later times as a village in the rustāk of Isfārāyin.

The 4th/10th century geographers describe Isfārāyin as being administratively one of the rustāks of Nishāpur, its town being, according to Mukaddasī, the most prominent of the towns of these rustāks. It had fīrās, markets and a well-citified called "the golden castle", ḫala'ī-yī sar. The inhabitants were Shī'īs; Isfārāyin was one of the remaining pockets in Khurāsān of Shī'ism, which was then

receiving under the advance of the Ḥanafī madh'īkhan. The surrounding district contained 40 or 50 villages, and cereals, rice, grapes and other fruit were grown there. Samānī and Yākūt name a large number of scholars from Isfārāyin, of whom the most notable were the theologian and jurist dealt with in the next article and Abu 'l-Muẓaffar Tāhir b. Muḥammad al-Isfārāyinī (d. 471/1078-9), a protégé of Nīzām al-Mulk and author of a Kur'ān commentary in Persian, the Tādī al-taṣāqīm. The Taj jāyi tā'ārīf, the description of the Persian adaptation of Tābārī's commentary, cf. G. Lazard, La langue des plus anciens monuments de la prose persane, Paris 1963, 94-6. Another famous son of Isfārāyin was Māmūd of Ghazna's vizier Abu 'l-'Abbās Faḍl b. Ahmad al-Isfārāyinī (d. 404/1013-14), to whose excursions in Khorāsān the historian Ṭūṭī attributes much economic distress (cf. Barthold, Turkestan, 287).

During the Mongol invasions of Persia, the commander Sibetey came from Nishāpur in 617/1220 and sacked Isfārāyin; but the northwestern region of Khorāsān, including Diwāwān, Diwājām and Arghīyān, seems to have suffered less than the province in general, and was in 630/1233 placed under the rule of a local mālib subordinate to the Mongol governor of Khorāsān, Cn-Temur (Diwāwān-Boyle, i, 146, ii, 497). In Mustawfī's time a century later, there was still a flourishing town and agricultural hinterland at Isfārāyin, with the town itself getting water from an adjacent river and the villages dependent on Ḥanābād; we hear, too, of coins being minted there under the Ilkhānids, as later under the Safavids.

In Safavid times, Isfārāyin was only just within the northern frontier of the province of Maghād, and suffered repeatedly from raids incursions, with a particularly severe devastation just before 1066/1557; during the 12th/18th century there was a further destruction by the Afghans. The site of the mediaeval town is probably now represented by the ruins called Shahr-i Bilkīs (cf. Yate, Khorasan and Sistan, 378-9). Today, the region of Isfārāyin is prosperous and fertile, being famed for its fruit; since 1958 it has formed a separate district or shāhristān in the province of Khorāsān. The main town of the district is Miyānābād.

of Ghazna. From 411/1020 he also held sessions teaching hadith in the congregational mosque of Nishāpūr. After his death in Muharram 418/February 1027, his body was brought to Isfara'īnī. His tomb continued to attract pious visitors in the 6th/12th century.

None of his works on Shāfi'i law, principles of law (usūl al-fiqh), and theology is extant, but the numerous references to his doctrine in later works attest their popularity for several generations after his death. He played a leading role in the elaboration of Ash'arī doctrine in his generation, which, in several areas covered new ground not touched by the founder of the school. In the struggle against the anthropomorphism of the Karrāmiyya he, like Ibn Fūrāk, supported a more abstract view of God closer to Mu'tazillī doctrine as compared with al-Ash'arī doctrine. On this genealogy cf. that of Isma'īl Bey, in the Huluwiyyītd-i Sulṭānī Rieu, Catal. of Turkish MSS.

The name is taken from that of the best known ruler of this dynasty, Isfendiyār Bey; in the 10th/16th century we find the name Kızl Ahmedlu, from Kızıl Ahmed. The Byzantines called the Isfendiyar Oğlu "the sons of Amurias" or of Omur. The founder of the dynasty appears to have been Şams al-Dīn b. Tāmān (Timur?) Dī ān-dār, who held a grant of the district of Affānī; he went to war with Mas'ūd II (682/1282-697/1298), captured the town of Kastamonu and in 690/1291 (Munēdjihmābğī) was appointed governor of the districts seized by him by the Ilkhan prince Gāykhātū. He seems to be identical with Sunqur Bey Şams Pasha, who conquered Bōlu according to Ewliya, ii, 173. His son, Şuhādā al-Dīn Sulaymān Pasha (200/1301-740/1340), at first acknowledged the suzerainty of the Ilkhanī, but afterwards made himself independent and conquered Sinope, which was still in possession of a daughter of Mas'ūd II. He is mentioned in Ibn Battūta (li, 343 ff.), Şihāb al-Dīn (Not. et Extr., xii, 340 and 361 f.) and Abūl-Fīdā‘ī (Geographie, ed. Reinaud, ii, 1, p. 35; 2, p. 142, 145); Pachymeres, ii, p. 364, and Kal)v al-Dīn b. Ṣuhādā by the name Şolāmā'zānī. His successors were: his son ʿĪbrāhīm Pasha; ʿĀdil Bey, son of the Emir Yaḥyāb and grandson of Şams al-Dīn (about 746/1345); ʿĪlāl al-Dīn Bāyázīd, son of ʿĀdil Bey, called Kötürüm by the Ottomans, died 787/1385; Sulaymān Bāyá, son of Bāyázīd, from 787/1385-793/1393; Sultan Bāyázīd I killed him and seized the land (according to Rev. Hist., iii, 369; the Ottoman chronicles make no mention of Sulaymān Bāyā and make Bāyázīd Kötürüm reign till 795/1393). ʿMūbāriz al-Dīn Isfendiyār, son of Bāyázīd, was restored by Timūr in 805/1402-3. He died on 22 Ramaḍān 843/26 Feb. 1440. About 820/1417 he had to cede the towns of Tosya, Çankırı and Kafedik and the district of Djamk to Mehemmed III; Shemṣi Pasha in particular had great personal influence as the confidant of Murad III. He fabricated a genealogy of the "Kızıl Ahmedlu" family, which was allotted to him as a residence by the sultan. He wrote a widely circulated book, Ḥulawwiyyītd-i Sulṭānī, on the ritual precepts of Islam. His brother Kızıl Ahmed married to Ulu Hasan after the confiscation of Kastamonu, returned to Constantinople after the death of Mehmed II, and was honourably received by Bāyázīd II; his son Mīrzā Meḥemmēd was married to a daughter of the sultan and his grandsons Şams and Muṣṭafā Pasha filled high offices under Selīm II and Murād III; Şems Pasha in particular had great personal influence as the confidant (muṣḥih) of Murād III. He fabricated a genealogy of the "Kızıl Ahmedlu Isfendiyar Oğlu" which went back to Kālid b. al-Wālid, and invented the name Kızıl Ahmedlu for the dynasty of Isfendiyar-Oğlu. Descendants of this family still exist and, when at the beginning of the 11th/17th century it was feared that the Ottoman ruling house might become extinct, the Kızıl Ahmedlu were considered amongst others as possible claimants to the throne on account of their frequent marriages with relatives of the sultans.

On this genealogy cf. that of Isma'il Bey, in the Hulawwīyyītd-i Sulṭānī in Rieu, Catal. of Turkish MSS,

ISFID DIZ [see KALÂ’I YI SARÎN].
ISFIDJÂB [see Supplement].
‘ISHA [see ŞAÎT].
ISHÂK, the Biblical Isaac, mentioned in fifteen passages of the Qur’ân. God gives Abraham “good tidings of Isaac, a prophet, of the righteous”, and blesses them both (XXXVII 112 f.). In a fuller description, when messengers concerning Lot come to Abraham; his wife “laughed, and we gave her good tidings of Isaac, and after Isaac of Jacob” (XI, 71/74); and it is explained that this will happen despite their age. Several verses speak of Isaac and Jacob being given to Abraham (VI, 8; XIX, 49/50; XXI 72), and XXIX, 27/26 adds that God “made prophethood and the Book to be among his offspring” (cf. XXXVIII, 45 f.). Ishmael is joined to Isaac in XIV, 39/41, where Abraham prays God for giving him the two although he was old. Elsewhere the name only occurs in lists: Joseph follows the creed of his fathers Abraham, Isaac and Jacob (XXI, 38), and speaks of God’s favour to them (XXII, 6); Jacob’s sons serve the God of his fathers, Abraham, Ishmael and Isaac (II, 133/127); and revelations are given Abraham, Ishmael, Isaac, Jacob and the Patriarchs (II, 136/130, 140/134; III, 84/78; IV, 163/161). In the account of Abraham’s would-be sacrifice of his son (XXXVII, 102/100-107), the name of the son is not mentioned; and there was a fierce controversy among Muslim scholars over the identity of the son. At first most Muslims probably considered the “sacrifice” (dhabâh) was Isaac (cf. Goldziher, Koranauslegung, 79-81). This is explicitly stated of ‘Umar and ‘Ali by Kutb al-Dîn (Wustenfeld, Chron. Mekka, ii, 37). A story is told of how a convert told ‘Umar b. ‘Abd al-‘Azîz that the Jews had substituted Isaac (their ancestor) for Ishmael (the Arabs). Actually the controversy came to be more concerned with Persian than with
ISHAK — ISHAK B. IBRAHIM AL-MAWSLI

Jewish rivalry for the Arabs (Goldziher, Mhkh. St., i, 144 f., tr., i, 135, since the Persians claimed descent from Isaac; Al- Mas'udi (Maraghi, ii, 146 f.) quotes a Persian poet in 290/902 who boasted that his descent from Isaac the ḫudbīḥ is superior to that of the Arabs. Later representatives of the Isac-party were Ibn Kūtayba (Ma'arif, 18 f. ed. Ukhāṭa, Cairo 1969, 30 f) and al-Ṭabarānī (Ta'rif on XII, 6 and XXXVII, 107; vol. xii, 86; xxiii, 40-9); they argued that God's perfecting his mercy on Abraham and his making Abraham his friend and saving him from the burning bush and to his rescuing Isaac. The other party held that the promise to Sarah of Isaac followed by Jacob (XI, 71/74) excluded the possibility of a sacrifice of Isaac. Although Ibn Kūtayba, for example, had seen Isaac mentioned in the Old Testament, Muslim opinion eventually gave full endorsement to the view that the son in question was Iaḥmael, the ancestor of the Arabs (cf. al-Bayḍawī on XXXVII, 102/101). In the works entitled Kitāb al-anbīyaʿ by al-Ṭabarānī (Cairo 1231, 48-50) and al-Kisāʿī (Leiden 1922, 150-3) the story of Isaac is elaborated along lines reflecting extra-Biblical Jewish tradition. Bibliography: there are a number of further references in the works of I. Goldziher cited, and also in ZDMG, xxxii, 359, n. 5 (Schriften, ii, 101) cf. also commentaries on the verse quoted: C. H. Becker, Islamstudien, i, 437 (= ZA, xxvi, 182). (W. Montgomery Watt)

ISHAK b. HUNAYN b. ISHAK AL-ṬIBĀDI, ABU YAKŪB, like his father Hunayn b. Isḥak [q.v.] an eminent translator of ancient science and philosophy, well versed in the Greek, Syriac, Arabic, and Persian languages. Some authors, such as Ibn al-Nadīm and Ibn al-Maṭrān, assert that his Arabic style is superior to that of his father, and like other well educated persons of his surroundings he even indulged in writing poetry. He followed the medical profession of his father, who dedicated to him some of his translations of Galen. It is interesting to note that these were made into Syriac and not into Arabic. A talk between Hunayn and Isḥak about pre-Socratic philosophy was included in Abū Sulaymān's Siwdn al-frīkma (Orientalia, xiii/i; L. Cheikho, Introduction to the beginnings of medicine in connexion with the history of philosophy and religion).

Bibliography: Ibn Isḥak was familiar with the notions of several translators of Galen. It is interesting to note that these were made into Syriac and not into Arabic. A talk between Hunayn and Isḥak about pre-Socratic philosophy was included in Abū Sulaymān's Siwdn al-frīkma (Orientalia, xiii/i; L. Cheikho, Introduction to the beginnings of medicine in connexion with the history of philosophy and religion).

[see AL-ISKANDAR AL-APRUDĪSĪ], Porphyry [see FURQĪYĪS], Themistius, Nemesis of Eumes (see F. Soarth, Bibliothèque de mathématiques, i, 146 f.). Moreover he translated many standard works on mathematics and astronomy, e.g., those of Euclid (cf. G. P. Matviievskaia, Učenie o čisle na srednevekovom blizšem i srednem vostoke, Tashkent 1967, 100 f.), Autolycus of Pitane, Archimedes, Theodosius of Bithynia, Menelaus of Alexandria (cf. Max Krause, Abb. G. W. Günther, al-Kiṣāʾī, K. S., Dritte Folge, no. 17, 1936, 21, 23) and Ptolemy (see BATLAMIYUS). Some of these translations were revised by Thābit b. Qurra. Curra [q.v.] (cf. M. Bouyges, in Mélanges de l'Université Saint-Joseph, ix (1923-4), 77-81); there exists also another fragment of a letter on astronomical matters sent to him by Thābit (see F. J. Carmody, The astronomical works of Thābit b. Qurra, Berkeley, Los Angeles 1960, 20, 45 f., 229).

Isḥak's own writings were mainly on medical and pharmacological subjects. In 290/903 he composed at the request of al-Kāsim (see above) his Taʾrk̲h̲ al-ʿaṭibb̲āʾ (ed. F. Rosenthal, in Oriens, vii (1954), 55-80; cf. JAOS, lxxxi (1961), 10 f). This book is the first known attempt to write about the beginnings of medicine in connexion with the history of philosophy and religion. (Bibliography: see references in the verse quoted.)

ISHAK b. IBRAHIM AL-MAWSLI, the son of IBRAHIM AL-MAWSLI [q.v.], and like him the greatest musician of his time, was born in 150/767 in Rasy and died in Ramdān 233/850 in Baghdad. He received an excellent musical education under Hushaym b. Bāṣar, al-Kisāʾī.
ISHAK B. IBRAHIM AL-MAWSILI — ISHAK, ADIB

He was a very learned man and took many books with him when travelling; he paid the philologist Ibn al-Afrabā an annual stipend. Many of his own works deal with music and musicians. Already his father, together with Ibn Djāmī and Fulayh b. Abī 'l-Āwārī had selected for Hārūn al-Rashīd 100 songs (cf. Agh. 3, i, 4–5, 7). Later on Ishābī, by order of al-Wāḥiqī, made a new edition of the one hundred selected melodies, keeping the finest of them and replacing those of minor quality by better ones (Aghānī, i, 8 ff.). This is the Ikhtiyār min al-Aghānī li-l-Wāḥiqī (Fihrīst, 141, 4; Yākūt, Udabāri, ii, 223, 9). He also composed books on the biographies and compositions either of a single musician or a group of them, e.g., akhbār 'Azza (Fihrīst, 141), akhbār al-Hudhayfīyya (see Aghānī, iv, 132 ff.), al-Mahbikīyyīn (see Yākūt, l.c. ii, 223, 7), al-Kīyān. These monographs are directly or indirectly source for the corresponding sections in the Aghānī. There existed also a book of songs containing Ishābī’s own compositions; but it had been compiled without Ishābī’s permission by one of his copyists. Most of our information about Ishābī goes back to his son Hāmām, who also published the genuine book of Ishābī’s songs. A book about Ishābī was written by his pupil ‘All b. Yaḥyā Ibn al-Munaqaddīm (Fihrīst, 143, 22), while the latter’s son Yaḥyā b. ‘All devoted to Ishābī a chapter in his anthology al-Bāhir (Fihrīst, 143, 27). His death was mourned in many elegies (Aghānī, v, 256 and 431-4). Ishābī had many pupils and his fame has lasted up to this day. He is mentioned in the “Assemblies” of al-Harīfī and in the Arabian Nights.

ISHAK B. MURĀD, Turkish physician who lived in Gerede in Anatolia in the time of Sultan Bayezid I. Little is known of his life: he practised medicine and also wrote on the subject. His chief work is Kitāb Edwiye-i müfriđe, “The book of simple remedies”, which he completed in 752/1350. In the first section he deals with the medicinal plants of his native land (giving the Arabic and Persian names of each beside the Turkish name) and, at the end, gives prescriptions for various illnesses. The second section describes the illnesses in detail. The work, surviving in various manuscripts in Turkey, is also of linguistic interest, in that it presents many early features of orthography, grammar and vocabulary.

ISHAK B. SULAYMĀN AL-ISRĀ‘ILLI, Ani Yā’kūb (ca. 243/855 - ca. 343/955), physician, medical writer and philosopher, was born in Egypt and appointed court physician by Ubayd Allah al-Mahdi after his emigration to Kāyrawān at about the age of fifty. His high reputation among his fellow-Jews is attested by Sa‘īd (Se‘ada) al-Fayyūmī’s letters consulting him on philosophical and scientific matters. His medical works were translated into Latin by Constantine the African (1087) and enjoyed great esteem in the Middle Ages (printed in Omnia opera Ysac, Lyons 1575). Of his philosophical writings the Kitāb al-Hudūd wa-l-rusūm was popular among the Latin schoolmen, who know it in two versions (edited by J. T. Mucke in Archives d’histoire doctrinale et litteraire du moyen age, xi-xiii (1961), 58-120). The most extensive treatise is the Kitāb al-Uṣūkūs (Fihrist, 143, 27), extant in a Latin version (contained in Omnia opera Ysac) and in two Hebrew ones by Abraham ibn Hasdāy (ed. by S. Fried, 1900) and by Moses ibn Tibbon (9) respectively. The “Chapter on the Elements” preserved in a Hebrew Ms (Sha’ar ha-yesodot) has been shown by A. Altmann, following a suggestion by Gershom G. Scholem, to be another work of al-Iṣrā‘illī’s (Journal of Jewish Studies, vii (1956), 31-57). Al-Iṣrā‘illī, the father of Jewish Neoplatonism, is largely influenced by al-Kindī and by a pseudo-Aristotelian neoplatonic source which Altmann discovered in the “Chapter on the Elements” and which Stern has identified as underlying also such works as the Long Version of the Theology of Aristotle (discovered by Borisov) and Ibn Hasdāy’s Prince and Ascetic (see Oriens, xiii-xiv (1961), 58-120).

was taking place at that time. They were impressed by his lively mind and his remarkable knowledge of classical Arabic, which contributed to his appointment as editor of the periodical al-Tabaddum. From this time on, Adlb Isbak devoted himself entirely to his work as a writer, poet and essayist; in this field mention should be made of his Nuzhat al-صادخ fi masā'ī al-عذابkh and of several articles in ʿĀthār al-صادخ, edited by Salim Ḏubrāʾī al-Khūrī and Salim Mīkhāl al-Shāli. In 1876, during the reign of the Khaḍīv al-Istānbalī[q.v.], he settled in Alexandria at the suggestion of Salma al-Nakākhī[q.v.] from Beirut, the creator of the modern Arabic theatre, who was anxious to escape from the pressure of the Ottoman authorities in the countries of the Middle East, and had come to Egypt in order to pursue his theatrical activity in a more sympathetic political and literary climate. The two contemporaries collaborated in the work of the development of Arabic drama, which was then beginning, and to which Adlb Isbak had already contributed with his Arabic adaptation of Racine's Andromaque, which he had written at the suggestion of the French consul in Beirut, and with the translation from French of an historical play called Charlemagne.

But the event which marked the beginning of a new phase in Adlb Isbak's Egyptian career was his contact with the famous Afghānī, Djamāl al-Dīn al-Afghānī[q.v.], whose lectures at al-ʿAzhar he attended and who proposed the foundation, in 1877, of the political weekly Miṣr, which Adlb Isbak published at first in Cairo and later in Alexandria. Around this periodical there very soon gathered the best writers and the most able politicians of the time; among them should be mentioned al-Afghānī himself and Muḥammad ʿAbd al-Razzāq, his most famous pupil. But this publication, and also the daily paper al-Tīdārīa, to which Adlb Isbak had given a financial and commercial, and later a political character, were suppressed in 1880, and their editor was banished from Egypt because of his extremist revolutionary ideas and his opposition to the government.

Adlb Isbak then went to Paris, where, in order to continue his patriotic action on behalf of his adopted country and its companions, he founded the periodical Miṣr al-Khārija (known also as Miṣr or al-Khāria), formed contacts with the literary and political circles, and published a series of articles in the Paris press. Nine months later, he returned to Beirut for a year, during which he agreed to resume the editorship of al-Tabaddum, and at the end of 1881, encouraged by the improvement in the political situation, he returned to Egypt, where he was appointed suṭūr (“supervisor”) in the Editorial and Translation section of the Ministry of Education; he was later made second secretary of the Chamber of Deputies, and at the same time obtained permission to resume the publication of his journal Miṣr, which he entrusted to his brother. But, as a result of the revolution of “Urūbi Paṣa[q.v.] in 1881, he fled to Beirut and did not return to Egypt until after the British occupation in 1882; but being unable to resume his government post, he went back to Beirut, where he accepted for the third time the editorship of al-Tabaddum and published in 1884 the translation of La belle parisiennne, al-Bārisiyya al-basna2 by Comtesse Dash, of which he had produced an Arabic version in his youth. Adlb Isbak died at al-Hadāṣh (Lebanon), after a last stay of some weeks in Cairo and Alexandria, in 1885.

It is stated in al-Durar (extracts from his poems, articles, lectures, tracts, Arabic adaptations of plays, etc., Beirut 1909, collected by his brother, ‘Awn Isbak) that he is also the author of the play entitled Ghārid al-ṣadīq (which was several times performed in Alexandria), and of the collection of biographies made during his stay in Paris, Tārāzīm Miṣr fi hādhā l-ṭarīq, but the first of the two manuscripts was stolen from him and the other is lost.

KHODJA ISBAK EFENDI, Anatolian mathematician and engineer in Mahmūd II's reign.

He was born at Arta in the province of Janina (Yanya) in 1774 (?), the son of a Jew converted to Islam (Faik Reşit Unat's thesis in Başçoca Isbak Efendi (Bell., xxviii (1964), 89-115) that Khodja Isbak Efendi and Şültan-zade Isbak Bey, the favourite of Selim III, were the same person is far from convincing). After the death of his father he came to Istanbul, where he studied mathematics privately and learned various Oriental and Western languages. Appointed instructor (khodja) of mathematics at the Military School of Engineering (Mühendîshîhâne-i Berri-i Humâyûn) in 1816, he became interpreter of the Divân-i Humâyûn[q.v.] in Dhu'l-Ka'da 1239/ July 1824, in addition to his position at the Mühendîshîhâne. He was dismissed from his post at the Divân in 1245/1828-9 and sent to the Balkans to supervise the construction of fortresses there. It seems that his dismissal was due to Pertev Efendi (later Paşa)[q.v.], the reis al-kütâb of the time, who saw in him a potential rival. Isbak Efendi continued his teaching at the Mühendîshîhâne, where he became Chief Instructor (Bahş-koşşı) in Ragjab 1246/ December 1830-January 1831. He succeeded in re-forming the curriculum and improving the teaching staff at the Mühendîshîhâne; but his predecessor, Seyyid 'All Efendi (later Paşa), was influential enough to have him removed and sent to Medina to supervise the restoration of various sacred buildings. While on his way back to Istanbul, he died at Suez in 1251/1835 and was buried there.

Isbak Efendi's main work, entitled Maǧmûʿa-i ʿālam-i riyyâyiye (4 vols., Istanbul 1247-50/1829-34), consists largely of translations from French books on mathematics, physics, chemistry, geology and their applications. Although a school manual of no great scientific value, it is the first work in Turkish on the modern physical and natural sciences (see Tansimat I, Istanbul 1940, 479 f., 492 f., 554 f.). Furthermore the scientific terminology, based on Arabic, which was used in Turkey up to the 1930s and in some Arab countries still later, was mainly Isbak Efendi's creation. Through his teaching and publications, he contributed much to the introduction of Western sciences to Turkey and the Arab countries.

(Ed.)

ISHA'K PAŞA [see Supplement].

ISHA'K SÜKÜT, a Young Turk leader, was born in 1868, probably of Kurdish extraction. As a student at the Military Medical School in Istanbul, he was in May 1889 one of the original group of founders of the Secret Committee, which eventually developed into the Committee of Union and Progress [see İTİBAŞ WE-TERAKİ ŞEYH NİLAN]. Later, in 1895, he was exiled to Rhodes but managed to escape and went to Paris, where he associated with the Young Turk émigrés. In 1897, with others, he founded the anti-government journal Osmanlı (‘Uthmânî), which was published in Geneva. In 1899, under combined pressure and blandishments from the Sultan, the journal ceased publication and several of its sponsors received official appointments.

İşlık Sükütt became medical officer to the Ottoman Embassy in Rome. He did not, however, sever his connection with the Young Turks and when a group of them moved to London to continue the publication of Osmanlı there, he underwrote the expenses of publication and continued to do so until his death in San Remo in 1903. In 1909, after the revolution in Turkey, his friend Dr. Rûdâ Nûr [q.v.] brought his remains to Istanbul and had them buried in the garden adjoining the tomb of Sultan Mahmûd.

ISHAKIYYA [see KAZA'RNI].

ISHAKOVICH [see OSKUB].

ISHAN. 3rd pers. plur. of the Persian personal pronoun. The word, which has always had an honorific significance, was formerly used in Central Asia (i.e., what is now Soviet Central Asia and the Sinkiang-Uyghur Autonomous Region of China) in the sense of ışan or mürkût (teacher or guide) in contrast to mürdî (disciple or pupil). It has still to be established when the term first appeared in this sense. It certainly existed in the middle ages; the celebrated Kha'dja Abûrár (died 855/1450 in Samarqand) is always referred to as ışan in his biography. The rank of ışan was frequently hereditary. An ışan lived with his followers in a dervish monastery (Mûmînî), and sometimes at the tomb of a saint. Most ışanın made journeys from time to time into the Kazakh steppe where they had more adherents and received richer presents than in the settled districts. Greater attention was drawn to the ışanın by a revolt started at Andizhan in 1858 by a certain Dukchi ışanın. Literature on the subject is scanty and, since the very existence of ışanın is strongly disapproved of by the Soviet and Chinese authorities, the term is now obsolete, if not obsolete.

(Edward B. Barthold—[G. E. Wheeler])

ISHARA (A.), "gesture, sign, indication", has acquired in rhetoric [see BADI] the technical meaning of "allusion" but, in its early connotation, a gesture of the hand, a sign of the head, of the elbow, the eyes, the eyebrows etc., is considered by al-Dâbîqî (Bayân, i, 80; Hüyâyânî, i, 33), together with speech, writing, nûsba and computation on the fingers [see HİSAB AL-‘ÂKÐ where other gestures to indicate numbers are also dealt with], as one of the five methods by which a man may express his thoughts [see BAYÂN]. Whether combined with words or not, a gesture (ışhara and also imâ?) allows a man to make his meaning clear without revealing his thoughts entirely (Bayân, i, 77 ff.) and may even be necessary in order to explain the meaning of a concrete idea which is unknown to the listener; it is sometimes more expressive than words, and carries further than the voice; a gracious movement of the hand or the head (hûn al-ışhara) elegantly emphasises the expression of one’s thought; the eye may express [see HİSAB] that absolute immobility is necessary for dignity (khîm [q.v.]). Love poetry often refers to the language of the eyes, which express intimate feelings better, and less dangerously than words; lovers have a code, the scope of which is summarised by Ibn Hazm (Tawq, ch. ix, bâb al-ışhara bi-l’ayn) thus: [a sign made with the eye] “cuts off and brings together, it promises, it threatens, refuses harshly, fills with contentment, commands, and forbids, strikes the servants, warns against the watcher, makes laugh and causes grief, asks and answers, holds back and grants generously” (tr. A. R. Nykl, 44); he describes some of these signs and gives their meaning ("to close the eyelid in a wink signifies consent", etc.), but admits that the majority of them cannot be described, though he implies that everyone should be able to grasp their meaning.

In fact the Arabs considered anyone who did not understand the language of gestures and obliged his interlocutor to express his thoughts in words to be a fool (cf. the proverb: inna man lâ ya’rif al-wakhtî ahmak, waâyîhuwuqi also meaning sign; see al-Maydânî, i, 15; Lâ, s.v. WHY). They had a collection of signs with their own meaning: agreement, refusal, indifference, etc., which were used in everyday life, and according to contemporary witnesses, the Prophet used to accompany his words with gestures whose meaning was not always clear. There existed also ritual or symbolic gestures made when a contract or an alliance was concluded, when an oath of allegiance was sworn or act of allegiance made, etc., [see BAYÂ’; HILF AL-FUDÜL; SÂFAŠA; YAMÎN, etc.]. With the question of the gesture with the uncovered hand is connected that with a staff, the symbol of undertakers [see ‘ANAZA] held by orators and preachers; al-Dâbîqî devoted in his Bayân a long section to the manifold ways of using the baton, which also served, together with the whip or the sword, to express threats.

More research needs to be done on the ritual or symbolic gestures, which with the Arabs go back to remote antiquity, to complete and amplify the observations of I. Goldzher and to verify the opinions he has advanced in a number of publications: Orient. St. ... Th. Noëlsche, Giessen 1908, 1, 203 ff.; ZDMG, 1, 495 ff.; Abhand. zur arab. philologie, i, 55, 7, ii, p. cv

The magic value of certain gestures can be detected behind some *kadibah*, in particular the prohibition of using the hand to indicate a flash of lightning (Ibn al-Anbīy, *Usd al-ghaba*, v, 266) or of greeting a person with one finger only (al-Dabhā, Mīdān, ii, 162), in the same way that it survives for example in the gestures to protect against the evil eye [see *a'īn*].

As for *fuhāh* [q.v.], I. Goldziher points out the importance of preserving the meaning of the index finger pointing at an enemy, and the importance of this finger in Islamic ritual [see *tasahhud*] where it has acquired the characteristic names of *sudābā, musabībā, muhallilā*, *da'da*...; it was thus that the Prophet's habit of extending the index finger during prayer, after having been interpreted as a magic survival, became the symbol of the unity of God [see *shahādah*]; in *al-ñah* [q.v.] the act of raising the hands with the palms turned towards the face was the subject of long discussions by the *fukhah* whereas, in invocation (*dus* [q.v.]), the palm turned towards the sky may have had originally a magic force [on the North African *fāba*, of a different type, see *fatihah*].

Many other gestures have still to be studied, but it is enough to mention here those given above plus a brief reference to the game of "mora" (see G. Le Morant, *Les anciens précédes de calcul sur les doigts* in *REJ*, 1931, 4-8); in this game the partners, facing each other, at a given signal open the fist (or fists), raising whatever number of fingers they choose and speaking at the same time the number indicated by the total number of fingers raised (or else saying simply "odd" or "even"), the winner is the one who has guessed correctly. This process can be used to arrange different types of sharing out, which are known by various names: *mušir*, *muḥārida*, *muḥāra*...; *muḥāhara*, *muḥāhama* [see *muḥāradda*]. For *ism al-iskhara* "demonstrative", [see *ism*].

*Bibliography*: in the text. (Ed.)

The Sufis frequently use the word *iskhara* in a very technical sense, but when one attempts to define its meaning exactly, one finds that they give few satisfactory definitions or explanations. "Allusion" or "allusive language" would be a literal translation. But whereas these English words refer to a symbolical language which brings the object to mind by suggestion rather than by direct reference (Mallarmé), the Arabic word does not necessarily have this meaning which the Sufis prefer to render by the term *ramāz* [pl. *rumāz*] (see *Luma* of al-Tūsî, 338). When the Sufis call themselves the *ahl al-iskhara* (the allusionist school) or when they say that their science consists of *ilm al-iskhara*, they are attempting to define not only the way in which they express themselves, but also the content of an experience which can only be evoked by this method. *Iskhara* is in this sense the opposite of *ibāra*, not in the way that symbolical language is opposed to "realistic" language or in the way that a parable cannot be translated into abstract language, but in the way that something incomunicable is opposed to something communicable. All knowledge acquired by natural means falls within the domain of the *'ibāra* in that it can be "expressed" and communicated to others in their language. In mystical experience, however, the bonds of natural knowledge are burst, and man reaches a new world to which his concepts and words cannot be applied. He can only talk about it by "allusion" (*iskhara*), that is to say not symbolically, but by approximation, always aware that his language can only really be understood by those who have experienced that of which he talks (al-Kalbādî, *Ta'āruf*, Cairo ed., 87-9). And thus it is, that by the very nature of the experience, the language of the *iskhara* tends, on the one hand, to become an esoteric language not understood by the uninitiated or deliberately made incomprehensive to them, and on the other hand, tends to destroy itself as inadequate and as a veil between the *Sufi* and the object of his experience: God. The novice, remarked Djiunay, must find God at the same time as his allusion, but he who has attained the highest of mystical states (ahwāl) must find God in the abolition of the allusion (*Luma*, 224). And al-Hallādī: "As long as you attempt an *iskhara*, you are not yet a *muwahhid*,—not until the moment when God takes over your allusion by annihilating your self-consciousness. Then He leaves neither the subject of the allusion (mughir) nor the allusion itself" (*Essai*, 361, no. 11).

*Iskhara*, which we have just described as the esoteric language of the inexpressible mystical experience, acquired this full and complex meaning about the 3rd/9th century, in the Baghdad and Khurāsān schools. Previous texts use it differently, in a way related to Kur'ānic exegesis. Thus when the *Tafsīr* attributed to Dīnār al-Ṣādiq (died 148/765) says that the Kurān is at once expression (*'ibāra*) and allusion (*iskhara*), that the first is for the vulgar believers and the second for the practical men (khawāṣis), *iskhara* and *'ibāra* refer to the *zāhir* and the *bātin* of the Book: the vulgar believer stops at the external beauty of the text, while the privileged goes beyond it towards the interiority of the text, towards the allusion which the heart discovers (see P. Nwyia, *Exégèse coranique*, 167). The definition of *iskhara* given by Ibn 'Arabī should also be noted. Replying to Mākīm Tirmīthī's question: "What is revelation (wahy)?", he writes: "It is that in which is born the allusion which replaces the expression (*'ibāra*) without expression. In the *'ibāra*, one "passes" from it to the sense which it aims at; and this is why it is called *'ibāra*, passage, while the allusion which is revelation is the very essence of that which is alluded to" (*dhāt al-mushār* ilayhi; *Khaīm al-awliyā*, ed. O. Yahya, 220). The *iskhara* is thus the language which affects the maximum reduction of the saying and what is said. This is why al-Shībīl could declare that the true allusion to God is God Himself, and this allusion eludes the mystic (see *Luma*, 223).

**ISHBILIA**: the name used by the Arabo-Muslim authors to denote Seville, the ancient Romano-Visigothic Hispalis, situated 97 km. from the coast on the Guadalquivir.

1. — HISTORY

The Muslim geographers locate Ishbiliya at a distance of 60 miles from the sea, and describe it as a *madīna* and capital of the kūra which bore the same name or was sometimes known as Hims, from the Syrian *gund* established there in 1257/742-3. The boundaries of the kūra are fixed fairly precisely by al-'Aqīb, who said that the dependencies (ahunds) of Ishbiliya were contiguous 30 miles to the west with the kūra of Niebla, 25 miles to the south and southeast with that of Shadhūnā, 40 miles to the east with the territories of Córdoba, the capital of which was 90 miles away, and that they extended for 50 miles to the north as far as the kūra of Mérida. The richness of its lands was particularly noted by al-'Aqīb, Ibn Ghālib, al-Idrisī and al-Himyarī, who called attention to the excellence and fertility of the soil, both for plantations and orchards and also for irrigated land
and pasturages. The name Aljarafe (al-Sharaf) applies to the natural region, both the district and the mountain (iskim and qibal al-Sharaf), and it recurs constantly in descriptions of Ishbiliya; bordering on the iskim of Shadhūnā, it extends in all for 40 miles, according to al-Idrīsī, starting about three miles to the north of Ishbiliya and including the prosperous, densely inhabited territories situated between Ishbiliya, Niebla and the sea. The economy of Ishbiliya was based essentially on vast plantations of olive and fig trees, mainly in Aljarāfa, and in particular on the production of oil of high quality, used throughout al-Andalus and also exported to the East. Of similar importance economically was the cultivation of cotton, here again of excellent quality, which was sent to other parts of al-Andalus and to Ifrījīya. Safflower (Carthamus tinctorius) was a product that was exported and also widely distributed within the country. Coresals, an abundance of fruit of varied kinds, herds of cattle and horses, game and fish of high quality, sugar cane, honey, medicinal plants and other vegetable produce, especially the kirmis (Quercus cocifera), constituted other natural riches of the kūra of Ishbiliya, which included 12 ṣikīms or agricultural districts; the names of these are enumerated by al-ʿUḏrī and al-Bakri, who record that the total figure of the ḡībāna at the time of the amir al-Ḥakam b. Ḥājīm amounted to 33,100 dinārs.

In the spring of 94/713, after occupying Medina Sidonia, Alcalá de Guadaira and Carmona, Mūsā b. Nuṣayr (q.v.) annexed Ishbiliya to the other possessions of Islam, entrusting it to the protection and supervision of the Jews and of an Arab detachment. Shortly afterwards, the populace rebelled and had to be put down with severity by ʿAbd al-ʿAzīz b. Mūsā, who established his residence there as udhir; the town was the seat of the Arabo-Muslim government of al-Andalus until the time when the sādi al-Hurr transferred it to Córdoba in 99/717-8. During the period preceding the establishment of the Umayyad dynasty, Ishbiliya witnessed a modification of its social structure as a result of Arabo-Berber ethnic and religious influence, particularly after the Syrian ḡīrād of Ḥimṣ had been installed there. The original Visigothic nobility was replaced by an Arab nobility or military caste, mainly Yemeni, which began to dominate the town and countryside to and exploit the indigenous population and the agricultural wealth of the province. In his Diāmara, Ibn Ḥazm has left a very clear eye-witness account of the Arab families established in Ishbiliya and the region (Elías Terés, Linajes árabes en al-Andalus, in al-And., xii (1957), index, 276).

The history of Ishbiliya under the amirate is characterized by constant rebellions. The chronicles, and above all the account of al-ʿUḏrī, make particular reference to all those, whether Arab or mulādī, who revolted in the kūra of Ishbiliya. Under the administration of governors nominated by Córdoba, Ishbiliya had to endure revolts by members of the ḡīrād and of the “noble” families, which were oppressed with severity by the amir’s troops. One revolt, which broke out in 149/766 under the leadership of Saʿd al-Yaḥūṣī al-MAṣārī in the Niebla district and then spread to Ishbiliya, is noteworthy, as is also the rebellion of the former governor of the town, Abu ʿl-Sabbāḥ ibn Yabyā al-Yaḥūṣī, who had been disgraced. In 154/771 according to al-ʿUḏrī, or in 156/773 according to Ibn ʿIṯlāḥī and others, Ḥaywa or Ḥaybī b. Mūlāmīs al-Ḥaḍrāni, aided by the Yemenis of Ishbiliya and acting in concert or at least simultaneously with ʿAbd al-Qasīf al-Qaṭmī (who started his activities to the north-west of Ishbiliya and in the neighbourhood of Córdoba), with other rebels overran the south-western districts of al-Andalus, claiming to enjoy complete autonomy in Ishbiliya and the adjacent territories. It seems that, until the amirate of ʿAbd Allāh, no other serious subversive movement occurred in Ishbiliya. After the revolts just referred to and those recorded by al-ʿUḏrī, Ishbiliya was to experience several decades of peaceful existence, disturbed only in 230/844 by the invasions of the Vikings (Madcūs [q.v.], concerning which new information is provided by the manuscript of the Muḥtabis of Ibn Ḥayyān utilized by E. Lévi-Provençal (Hist. Esp. Mus., i, 218-25), and also by al-ʿUḏrī, whose statements have been collected by A. A. El-Hajji in his article The Andalusian diplomatic relations with the Vikings during the Umayyad Period, in Hesperis-Tamuda, viii (1967), 67-105. During the amirate of ʿAbd Allāh, from the start rebellion proved to be the keynote of the time, both in Ishbiliya and throughout al-Andalus. Apart from the early rebellions at the time of the nomination of Muhammad, son of ʿAbd Allāh, as governor of Ishbiliya, the disturbances which most gravely threatened the peace of this kūra were those provoked by the ambitions of two powerful Arab families, the Banū Ḥadīdā and the Banū ʿAbd Allāh, who owned vast estates between Carmona and Ishbiliya in and Aljarāfa and who were the instigators of the conflict between Arabs and mulādī, which for several years brought bloodshed to the south-western territories of al-Andalus. From 276 to 301/891-913, the dynasty of the Banū Ḥadīdā set up a small independent state in Seville and Carmona, nominally subject to the amir of Córdoba. It is probable that complementary information on Muhammad b. ʿĪbrāhīm b. Ḥadīdā is to be found in volume v of the Muḥtabis of Ibn Ḥayyān, relating to ʿAbd al-Rahmān III (cf. on the contents of this vol. M. A. ʿInān in RIEI, xiii (1965-6), 127-38).

Under the caliphate, Ishbiliya, which had been conquered by ʿAbd al-Rahmān III in 301/913, enjoyed some years of peace and prosperity, broken only in 363/974 by the revolt of a group in which some members of the provengal and the Hispanic ṣindī were involved and during its course the prison was attacked. Then, at the time of the fitna, the nomination of the son of al-Kāsim b. ʿHammūd, Muḥammad, as the personal delegate of the caliph to the government of Ishbiliya, led the townsfolk, on hearing of the rising of the people of Córdoba against the Ḥammūdīd caliph, to revolt in their turn against Muḥammad and besiege him in the Alcázar.

But the period of greatest prosperity for Ishbiliya, in the political, economic and cultural spheres alike, was that of the dynasty of the Banū ʿAbbād [see ʿABBĀDDĪS] after the rising of the Ḫādī ʿAbū l-Kāsim Muḥammad b. ʿAbbād in the middle of Shaʿbān 414/early November 1023 (al-ʿUḏrī gives some particulars regarding his activities which Lévi-Provençal was unable to utilize in his article on the ʿAbbādīd). After the death of Muḥammad b. Ṣibāḥ in Din mādī I 431/January or February 1042, his son ʿAbbād al-Muʿtadīd undertook a vigorous policy of expansion which resulted in the annexation of Niebla, Huelva-Saltés, Carmona, Arcos, Ronda and other adjacent territories and in the considerable enlargement of his kingdom. On the death of al-Muʿtadīd (461/1068-9), his son Muḥammad al-Muʿtammīd, in face of the mounting military and economic pressure exerted by King Alfonso VI of...
Castile, with the onerous system of parias, decided to seek the aid and intervention of the Almoravid amir Yusuf b. Tashfin; the latter finally dispossessed al-Mutamid of his kingdom, as a result of the military action of Sir b. Abi Bakr, who captured Ishbiliya by storm on 20 or 22 Rajab 484/9 September 1091, and remained there as governor until his death in Dhu'l-Ka'ba 507/April-May 1114. Under Almoravid rule for 55 years and four months, Ishbiliya became crowded with new inhabitants who wore the veil—a foreign element in the social context—and the town developed a special atmosphere which is vividly described by Ibn 'Abdun in his treatise on hisba. Seville had fourteen governors, perhaps more, who were related to the Tashfin family, one of whom, Abû Hašf 'Umar b. al-Hādhī, tried to halt the invading force which, in the time of Alfonso VII, sacked the whole Ishbiliya region and killed the Almoravid governor in Rajab 526/May-June 1132. Ishbiliya was a place of assembly for troops arriving from the Maghrib and for Andalusian soldiers recruited by the jahāba and 'ulama' of Córdoba and Seville, until the time when Barrāz b. Muḥammad al-Masūfī, acting in the name of 'Abd al-Mu'min, annexed the town to the Almohad empire (13 Ša'ba 541/18 January 1143). The Sevillians sent a delegation headed by the ḥāfi Ibn al-'Arabi to express their gratitude to 'Abd al-Mu'min. Abû Ya'qūb Yusuf, who was governor of Ishbiliya from 551 to 556/1156-57, from the time when he became caliph and above all from 566/1171-2, made the town the second capital of his empire and the administrative centre of al-Andalus. He strengthened the city's fortifications and completed many other important undertakings; the population increased considerably, prosperity was enjoyed for several years, and the town took on a new appearance. However, Ishbiliya was destined to suffer various attacks, particularly in 575/1180, by forces from Avila under Ibn Mardanish [q.v.] and Ibn Hamushk. These were a source of anxiety for the Almohad governor of Ishbiliya for two or three years. In the last quarter of the 6th/12th century, the town was subjected to raids by Alfonso Enriquez and the Infante Sancho of Portugal, and also by Alfonso VIII of Castile, which caused considerable damage to Aljarafe and the Vega. At the beginning of the 7th/13th century there were serious floods, an endemic danger from which Ishbiliya suffered frequently, as a result of the Guadalquivir overflowing its banks (Diumādā II 597/February-March 1200), and a great number of houses was destroyed by the inundations. This catastrophe, the pressure from the Christians and the political crisis in the Almohad empire brought about the start of a decline from which Abû 'l-'Ula' Idrīs, the son of Yusuf I, succeeded in temporarily rescuing Ishbiliya in 617/1220-1. The last years of Muslim life in Ishbiliya are full of sad incidents, in particular the attack by forces from Léon in 622/1225, when heavy losses were inflicted on the Sevillians, the siege of the town by al-Bayyāsf, who held the castles of Tajada and Azañacazar, and the rising of al-Ma'amūn, son of Ya'qūb al-Manṣūr. All these happenings coincided with the increasing military and economic pressure exerted by Ferdinand III, which compelled al-Ma'amūn to conclude honourable truces, and with the insurrection of Ibn Hūd against the Almohads. On 11 Dhu'l-Hijja 626/31 October 1229 the people of Seville renounced their obedience to the Almohad empire and accepted the authority of Ibn Hūd. Ferdinand III harassed Ishbiliya increasingly and kept the town under siege for 17 months, from Diumādā I 643/September 1247, according to the Almohad Bayān, until the moment when it fell into his hands on 1 Sha'ba 649/19 November 1248 or more probably, according to the Crónica general, on 25 November 1248 (for all these events, see J. González, Las conquistas de Fernando III en Andalucía, in Hispania, xxv (1946), 98-121). The attempts made by the Marīnid sultans to restore Ishbiliya to Islam failed, though their devastations in the region caused much damage, especially in 674/ 1275, the year of the siege of the town by al-Jārafi, when Aljarafe was pillaged. After this unhappy chapter, Seville remained in Christian hands, never again to be placed in danger or even threatened. It had been in the possession of the Muslims for 535 years.

2.—Historic Buildings

From its long Muslim history, Seville has retained only a few historic buildings; nevertheless, it was one of the greatest art cities in al-Andalus. But the prosperity it has enjoyed during the modern period when, from the 16th century, it came to be the great port and commercial centre safeguarding the links between Spain and her empire in the New World, has endowed Seville with new buildings which have replaced those which adorned the city at the time of the Christian reconquest.

1). Fortifications.—a) The town wall. For Seville, situated in a plain on the banks of a large navigable river, a fortified enceinte was indispensable. The Arabic texts refer to this at a very early date: after the Norman invasion of 230/844, the wall had to be repaired, at the command of ʿAbd al-Rahmân II who appointed one of his Syrian mawāfīl, ʿAbd Allâh b. Sinān, to direct the works. On several occasions the waters of the Guadalquivir damaged the south face of this wall, at the edge of the river. Moreover, after the deposition of ʿAbd Allâh, the Zirid amir of Granada, al-Muʾtāmîd had the ramparts strengthened, in view of the imminence of an Almoravid attack. But this enceinte seems to have been repaired or completely reconstructed under the second Almohad sultan ʿAll b. Yūsuf. The geographer al-Idrīsī, who was writing between 541 and 548/1147-54 and who had seen Andalusia before the Almohad conquest, said that the town wall of Seville was very strong. It survived the Christian reconquest. After having surrounded the city for seven centuries, it was demolished between 1861 and 1869. It measured six kilometres in circumference and was flanked by 116 towers. One small section of the wall still survives, between Córdoba and the Macarena gates. The lofty curtain wall of solid concrete is constructed in courses 83 cm. high. Seven towers have been preserved, one of which is polygonal, the Torre Blanca, the other six being rectangular. All of them are decorated on their outer faces with bands of brickwork in one of which is polygonal, the Torre Blanca, the other six being rectangular. All of them are decorated on their outer faces with bands of brickwork in another handsome facade of cut stone. The Almohads must have contented themselves with restoring the whole structure and repairing the upper part of the towers.

b). The Alcazar. Like all large towns in al-Andalus, Seville had its citadel, the Alcazar, the residence of the sovereign or governor. Its rectangular towers, ornamented with a double band in relief at the top, led to the belief that this fortification was the work of the Almohads. But recent restoration work of the south face has revealed that, beneath their outer covering, the curtain wall and towers were built of cut stone, following the characteristic technique of the 3rd/9th century. In its oldest form, the Alcazar thus dates back to the construction works ordered by ʿAbd al-Rahmân II. In the 4th/10th century, an alteration was made with a gate in this rampart, with a handsome facade of cut stone. The Almohads must have contented themselves with restoring the whole structure and repairing the upper part of the towers.

c). Palaces.—Of the Muslim palaces contained in the Alcazar, and particularly the one adorned by the ʿAbbādīds, nothing remains from before the 6th/12th century. From the Almohads’ buildings there only survive one section of the arches and interlaced lattice-work panels which surrounded the Patio de Yeso, and a ribbed vault in the Patio de Banderas. All the rest of the Alcazar was rebuilt and altered in the Christian period: today, as a whole, it represents a great monument of mudéjar art. However, in the Hall of the Ambassadors, the triple semicircular horseshoe-shaped archway, under a large arch of the same form, may represent an architectural arrangement dating from the caliphal period.

2). Mosques.—a) The first chief mosque. Although all that survives is a section of the minaret, which now forms the base of the clock-tower in the old collegiate church of S. Salvador, we are fairly well informed regarding the first chief mosque in Seville. The foundation inscription which was carved on a pillar has been discovered; the mosque was built in 244/859 under the direction of the kādī of the town, Ibn ʿAdabbi, with a width of 48.5 metres, it contained eleven aisles, at right angles to the wall of the kibār. Arches of brick-work rested on stone pillars. In 472/1079, the upper part of the minaret was repaired by al-Muṭāmīd.

Despite its handsome size, the mosque has become too small. In another quarter of the town, near the Alcazar, the second Almohad caliph, Abū Yaḥyā Yūsuf, had a new sanctuary built. Nevertheless, in 592/1195 his son Abū Yūsuf Yaḥyā ordered the renovation of the former chief mosque which, at the reconquest, was transferred into a church. In 797/1395, an earthquake undermined the top of the tower. Shortly afterwards, a bell-tower of cut stone
was erected, and this still forms the second section of the present bell-tower. The mosque underwent various alterations and was demolished in 1671.

The base of the minaret—the oldest Muslim building in Spain, after the mosque of 'Abd al-Rahmān I at Córdoba—measures 5.8 m. in width. It is built of rough stone, of large size. In the interior, a spiral staircase mounts round a cylindrical central shaft. This arrangement, unknown in the Muslim East, occurs again in two ancient minarets in Córdoba. This peculiarly Andalusian feature is perhaps of Roman origin.

b). The Almohad chief mosque. The Almohad caliph Abū Yusuf Ya'qūb wished to endow his favourite town with an immense and beautiful chief mosque. The oratory and the sahn would appear to have been built during this sovereign's long visit to Andalusia, from 556 to 571/1156-6. It was a large building, measuring approximately 150 m. by 100 m. The prayer court had 17 aisles, in the shape of a T, and probably there were 5 domes in the bay along the wall of the kibla. In length, there were 14 bays. In its plan, it conformed with the earliest Almohad mosques, though the dimensions were increased.

The sahn, which extended for a distance of eight bays, has been preserved in part. It was surrounded by lofty arcades of brick-work. Rectangular buttresses occurred at intervals along the outside walls, their summits crowned with toothed merlons, as in the great mosque of Córdoba. Two of the doorways of this sahn have survived, the Puerta del Perdón, in the main axis of the building, and the Puerta de Oriente, on one side of the courtyard.

Although nothing now survives from one of the most immense prayer courts built by the Muslim West, the minaret of this Almohad chief mosque, now known as the Giralda, still dominates the town. This minaret was started in 551/1156 by the overseer B. Basso, who built the foundations and the base of the tower with cut stone which had been used before. The death of the caliph for a time suspended the work, which was resumed on the orders of Abu Yusuf Ya'qub al-Mansur by the architect al-'Afi of Gomara. The qa'on, the work of Abu Layth al-Sikili, was erected in 569/1178. This great Almohad minaret, second only to the Kutubiyya of Marrakush, measures 16.1 m. in width, while the height of the tower is 50.85 m. It was built of brick; around a central block, occupied by seven rooms placed one above the other, the ramp—not a staircase—mounted at a gentle angle, giving access to the upper part of the tower. The lantern was remodelled and surrounded by a gallery for the bells, between 1520 and 1568. Each of the faces of the tower is divided vertically into three sections. In the centre, panels of blind arcades with floral spandrels frame the twin apertures which give light to the ramp. On each side, the wall, which is left plain at its base, is decorated for two storeys with a mesh design in brickwork. All this ornamentation is of great richness and rare subtlety of design.

Reminders of Marrakush, more distant echoes of Córdoba, the natural richness and the light colour of Seville—these were the features that were noted in the Almohad chief mosque. Today, the minaret still bears witness to Seville as a great centre of art, second only to Córdoba.

4. Mudéjar art in Seville. Further testimony, indirect but convincing, is provided by mudéjar art in Seville. The churches erected in the town until the end of the 15th century largely employed Muslim forms and techniques. They were almost always built of brick; the doorways are in the form of large projecting blocks, often decorated with Muslim motifs, and the naves are roofed with artesonados. In design and form, their bell-towers are so close to minarets that it has sometimes been thought that they dated back to the Muslim period. Their panels of blind arcades and their floral decoration reproduce, in a simpler style, the motifs of the Giralda.

The palaces of the Alcazar are almost mudéjar: but with the local traditions is mingled the influence of the art of Granada. It is in the mudéjar churches and in the Giralda that the richness of the tradition of Seville is best appreciated.

ISHIK-ĀKASI, Safavid administrative term = "usher". The tālık-ākāšīs were minor court officials who operated in two different branches of the administrative system, namely, the diwân [q.v.] and the haram [q.v.]. The officers in charge of the two sections were known as tālık-ākāś-ī bāghi-yi diwân-i a’lā and tālık-ākāś-ī bāghi-yi haram respectively. Both officers had categories of officials other than tālık-ākāšīs under their command. There was a great difference between the status and power of these two officers:

(1) tālık-ākāś-ī bāghi-yi diwân-i a’lā. This officer, called by Kaempfer supremus aulae Mareschallus, is not listed among the officers of the early Safavid state. The office is first recorded (985/1577-8) during the reign of Isma’īl II (Iskandar Beg Munshi, Tadhkirat al-muluk (p. 47), written ca. 1138/1726, among the high-ranking (‘ulūl-dīkāh) amirs.

Under Ismā‘īl II (1052/1642—1077/1666), he was a powerful official indeed, and, although his position declined thereafter and his duties became largely ceremonial, he is still listed by the Tadhkirat al-mulâk (p. 47), and passim. (R. M. Savory)

(2) tālık-ākāś-ī bāghi-yi haram. An officer of lesser rank, who was in charge of that category of officials known as muḥarrab al-hadrat, that is to say, those officials whose duties lay at the entrance to, or outside the haram.

Bibliography: Tadhkirat al-mulâk, translated and explained by V. Minorsky, London 1943, index, s.t., and passim. (R. M. Savory)

ISHK (A.), love—passion. Although non-kur'ānic, this word attained a considerable importance in Arabic literature in the broad sense. In analysing it, we come to recognize the conditions in which Arabic-Islamic sensibility and thought evolved. As al-Daylamī says (‘Aff, §§ 5, 87 ff.), all kinds of minds have their opinions (maḥālāt) on love (maḥba-
ISHK — ISHRĀK

ba] and on ʿishk, which is its most dynamic form. Desert Arabs, men of letters, great intellectuals (al-fudūl), theologians, sages, mystics, etc., have all made statements on the causes, the manifestations, the degrees and the aims of love. One of the earliest attempts to define ʿishk is the Risāla fi l-ʿishk of al-Dībātī (11 Rūd, 1619; Rasāʿlīl, ed. Sandūbī, 266-75), and the question so preoccupied men's minds that a discussion on this theme had already been held in the presence of Yābūb b. Ḥalāl, the Barmakī; thirteen representatives of various religious tendencies, of whom al-Masʿūdī, who produces their definitions in the Murūdj (vi, 368-86), giving in addition quotations from Galen, Hippocrates and others; al-Daylamī repeats some of them.

In its most general acceptance, ʿishk describes the irresistible desire (gauk, ṣaḥāwawān) to obtain possession of a loved object or being (mawāšik). It betrays, therefore, in one who experiences it (the ʿishkī), a deficiency, a want, which he must supply at any cost in order to reach perfection (hamālī). That is why it admits of hierarchical degrees (marātib), like the perfections aspiring to by the soul and the body. Its apparently multiple motivations, however, all come down to one ideality, or consistency of meaning (maʿnā), which haunts all beings more or less distinctly and clearly. Greek in the aspiration (lawākān) towards the Beauty (al-kawn) for the intellect freed from the (al-sadd) illusions of knowledge transmitted through the whole of the universe, is the universal love. (ʿakliyya) which are secured through the (ladhdha al-mutlaka), the more the wise man advances in his passionate quest for the One True One (al-wāḥid al-ḥakīm), the more he feels growing within him the ineffable joy (iḥbādī), the absolute pleasure (al-ḥadhā al-mulāka), which are secured through the contemplation (muṣhāhada) of the perfection and beauty of the necessary Being (wadābī al-wudūjīd).

With the Śūfīs the amorous ardour of ʿishk, in spite of some resistance, becomes a part of the life as a natural development of the mysterious perfection (mahabba) mentioned in the Qurʿān (III, 31, XX, 39, etc.). The substitution of ʿishk for mahabba to describe the “essential Desire” for God and the love of God as an essential attribute, which fills the heart of the mystic, seems to have been due to al-Ḥallājī al-Daylamī, ʿAṣf, §§ 163-5). Love is no longer merely an expression of gratitude for the blessings of God; it is no longer content with rigorous asceticism and meticulous ritual observance. It becomes an absolute necessity, entailing neither enjoyment nor alleviation, but intensifying as the reciprocity of perspectives between the lover and the Loved comes into effect. This evolution of the pair ʿishk/mahabba is not without echoes of that ʿerṣ/ṣagḥ, but in Islam the relationship between the two ideas is complicated by the concurrent development of the “courtly” and mystical tenets with Greek texts. When it came to an end, there was a return to a legalistic conception of love in the works of, for example, al-Ghazālī or Ibn Taymiyya, or to the exaltation of a perfect and pure Idea in, for example, al-Suhrawardī or even Ibn ʿArabī. Whatever the differences of opinion about its content, ʿishk is one of the characteristics of mediaeval self awareness, obsessed with the quest for the eternal, the transcendent and the sacred.

ISHKĀ SHIM [see BADAKHSHĀN]...

ISHKODRA [see Supplement]...

ISHRĀK, the name given to illuminative Wisdom, advocated by Šīhāb al-Dīn Suhrawardī (d. 592/1191) who himself indicated its sources (cf. table). By “sources” should be understood not so much the historical circles of influence as the springing forth of a Wisdom which, in the field of mysticism, has inspired lines of initiates comparable with the initiatory insāds of the Śūfīs, though without the explicit granting of any “delegation” by the Masters to the disciples. However that may be, one can discern Western, Greek elements, as well as Eastern elements deriving from the traditions of classical Persia and ancient Egypt. As a result of this observation, H. Corbin has been enabled to resolve a
problem: we know that Ibn Sīnā had conceived the project of an “Eastern” philosophy, a very incomplete testimony to which has survived in his book on the “Logic of the Easterners” (Manāḥ al-Maṣṭoniyyīn), and that Fāṭḥī al-Dīn al-Rāzī had written the Mabhāḥ al-Maṣṭoniyya. Some read this as muṣḥ̱rīk and thought that it was concerned with an illuminating philosophy. Nallino has criticised this reading and shown that it was necessary to make a distinction between a Western philosophy and an Eastern philosophy. Nostoratism was already charged with Eastern ideas, in contrast with pure Aristotelianism which was far more attached to rationalism. H. Corbin admits this criticism, but gives it a quite different interpretation. If this philosophy is “Eastern”, this is so not merely because it is that of the peoples of the East, but primarily because it regards Being and Knowledge as irradiations of the Pure Light which rises in the East. “One may say that it is a question of a Knowledge which is Eastern because it is to the East of thought”. There is thus a close link between illumination (iṣhār) and Eastern Wisdom (Ḥikmat al-iṣhāri). Here is a clear indication of the value of iṣhār: it is not reduced to the general notion of illumination which confers upon the spirit a Truth inaccessible to the abstract concepts of reason; it is, more fundamentally, a delight in the source of all light, whence proceed all being and all authentic knowledge.

It is through Plato that one can best approach this philosophy which, by its nature, eludes any didactic exposition. In the Republic, the Good is presented under the symbol of the Sun, without which nothing which is would exist. This source of all being and all thought is ἐπιλέγεται ἐκτός ἀπὸ τούτου beyond the essence, beyond the Ideas themselves. To it, man should turn ἐν τῷ ἐκτός ὑπὲρ ἑαυτοῦ with his entire soul. It seems that the Wisdom of iṣhār is a meditation upon these two propositions. Being, in the sense of existence, is there presented in effect as the source of all reality. If it is not conceptuallisable, and if it is not reduced to a purely equivocal denomination, as Aristotle saw clearly, it does not thereby follow that the solution necessarily lies in an analogical theory which would make substance the first analogue of being. To recognise the rational experience of existence, that one cannot define it as a concept, is not to imply that it can be grasped only when it is engaged in relations with the different categories of beings (in an analogy of proportionality), and that it is devoid of a for-self and an in-self. This is to recognise that there is a knowledge superior to reason, set apart from all the activities of definition and reasoning. It is here that the symbol of light comes into the question. On the physical plane, what is more universally present than light? But what is more indefinite, since in light all is clarity, and effulgence, without any shadow to trace recognisable contours upon it? Thus one is led to think of existence as a spiritual light, the Light of Light from which, by irradiation, emanate the Amād al-khidrā, the “victorious” or “archangelical” lights. This rendering is by H. Corbin, who writes: “By this epiphany, the whole hierarchy of the ṣūrat al-khidrā (from degree to degree, illumines the presence of each lower degree”) Authentic Knowledge too renders its object present while irradiating it, after being itself revealed, when every material veil has fallen away, as a Light-being. There is here an “illumination of presence” (iṣhār ḫudār) which makes a clear distinction between knowledge by representation of the object (ʿilm ṣawār) and unitive knowledge (ʿulliṣāʿ) of intuitive experiences vision (gūhāsī), that is to say ʿilm ḫudārī. In this connection, one thinks of the part played by Existenterhellung in the philosophy of Karl Jaspers, and of the very current ideal of knowledge through engagement experienced not merely by dry reason alone, but by “the entire soul”. It is the Spirit (rāḥ), the Angel Gabriel, which illuminates—while dissipating the insoluble antinomies of reason which Suhrawardi, in his Ḥikmat al-iṣhār, is pleased to develop while criticising the Peripatetics, in a condensed style which recalls the opening of the Parmenides. Thus rational knowledge is not a preparation for illuminative knowledge, although negatively it can convey through teaching that the insoluble difficulties which it contains within itself melt away in iṣhār: the problems raised by conceptual thought remain ceaselessly and indefinitely (tasāwī) without ever finding a solution, or fall hopelessly into a vicious circle (dauru). But man cannot by himself emerge from this inextricable situation: he must have a revelation, a call, for “the Spirit proceeds from the Command of my Lord” (Kūrān, XVII, 85).

Such seems to be the fundamental intuition of iṣhār. An exposition of the details of this Wisdom would be tantamount to an exposition of the details of Suhrawardi’s thinking. The play of Light and shadow, the conception of baraṣṣā (screen, separation, which is utter darkness), the modes of proceeding of the production of the world, all these together form a whole which can be expounded, as by Suhrawardi himself, in the terminology of the Plotinian or Avicennian philosophy of emanation, Intellects and spheres. But in that there is merely a barren, discursive expression which remains divorced from Reality and which only becomes valid if it is gathered up into a higher unitive vision which makes it “cohere”, when the ūḥl is assumed by the Spirit, in which it receives the sakīna, “the placing in the direct presence on the threshold of the transcendental Being” (H. Corbin). (R. Arnaldes)

Iṣhārīyyūn, adepts of illuminative Wisdom. The question arises whether this term can be applied to the representatives of the spiritual family to which Suhrawardī belonged, who preceded him in time. If that family can indeed claim the “Sethists” who, from the 4th century in Egypt, saw in Seth (Ṣīth) the first ūriyā (from the Hebrew or - light), the sages of Persia, disciples of Zaraḥustra, and the Manichaean would already be iṣhārīyyūn. H. Corbin has recorded a text of Ibn Wābšihiyya, relating to Hermes-Thoth of ancient Egypt, in which the word figures. The discovery is interesting, but it must be seen in the context of the author’s preoccupation with alchemy. Here is a summary of the whole of this text:—the successors of Hermes form four groups; the first two, direct descendants of Hermes and his brother, have not mixed with any strangers and have preserved the pure secret doctrine so well that no one apart from themselves knows it. The third is that of the sons of the sister of Hermes; they have had contacts with strangers, and certain men are familiar with their ṣūrat al-khidrā and can interpret their symbols (ṭawṣīya). Finally, the fourth group is composed of strangers who have mingled with the Harāmīs. To these last two groups, Ibn Wābšihiyya gives respectively the names iṣhārīyyūn (and ʿīṣārīyyūn) and maṣāḥaṭyya (Peripatetics). These are the only ones to have come down to us. It seems that all that can be deduced from this text is that, in alchemical circles in the 4th/10th century, emphasis was placed upon a hermetic

**ISHRAKIYYUN — ISHTIB**

Tradition whose holders, while not claiming to have a perfect knowledge of the Great Work, had received some illumination which had placed their works above those of the Peripatetics, "worshippers of the astral forms", says the text. It therefore seems doubtful if Suhrawardi can be placed among the ihšākīyyūn of Ibn Wahshiyya. Moreover, the ḥālāsīfā for their part had spoken of the irradiation of light and illumination. But in its technical sense, the term ihšākī can be applied with exactness only to the Master of ihšāk and his spiritual posterity. However numerous the sources upon which he has drawn materially, his conception of ihšāk is so personal that it seems it was first illustrated in him by the fact that he received it directly from that being of light which, for each man, constitutes his "Perfect Nature".

In addition, some thinkers may have undergone Suhrawardian influences, although one cannot properly speaking rank them as ihšākīyyūn. Thus, in Ibn 'Arabi, illumination seems to be reduced, as in Plotinus, to the symbol of the mode of procession of the beings forming the ḥālāk, while the theory itself of Being is markedly dialectical. Ṭūsī was able to take inspiration from Suhrawardi to interpret Ibn Sinā, though without thereby being ihšākī. To sum up, H. Corbin writes very justly: "It remains to discover the influence which the theories of ihšāk exerted for example on Naṣīr al-Dīn Ṭūsī, Ibn 'Arabi and the Iranian Shi'i commentators on the last-named writer".

On the other hand, the term ihšākīyyūn will be applied without hesitation to all Suhrawardi's Iranian followers, whose numbers were very great until the 18th century and who still exist in Iran today. Two great names are outstanding, Shams al-Dīn al-Shahrūzī (d. 1243) who, in his History of the Philosophers, gave the biography of his Master, commented on two of his treatises and wrote a personal work, and Mollā Sadrā Shirāzī (d. 1840) who stated: "I have followed the doctrine of ihšāk of Suhrawardi, until God made me see its foundations clearly". It will be understood from these words that his fidelity to ibshak can be applied with exactness only to the Master of ibshak, until the original work.

(ISHTIB) (Ṣtip), a town situated to the south-east of Skopje, in Macedonia, Yugoslavia. In antiquity, it was an important town in Paeonia, on the Roman road from Serdica to the Danube, known as Astibo; by the Byzantines it was called Stipion, by the southern Slavs Stip and by the Turks Ish tip. In the 14th century it was a fortress and district in the principality of Constantine Dejanovitch (Dragaš), in northern Macedonia (between the Vardar and the Strouma). After the battle of Ćirmen (1371), the principality became tributary to the Ottomans. On the death of Constantine in 1394, at the side of the Turks at the battle of Rovine, the principality became a sandjak (Kostand-ili = Küstendil). In the 15th/16th century it was the centre of a vilâyêt, in the 10th/16th the centre of a kazâ, attached to the ḥās of the sanjakbey and administered by his voivoda. In Ştip and its environs, Turkish colonization was not very extensive. Some yurâs of the "ovče pole" group were established there—81 oğlaqs in the kazâ of Ştip in 1566. The population was principally Christian. In 1489-91 the non-Muslim families in the kazâ of Ştip and Novkerić numbered 8,434. In the 11th/17th century there were 24 Muslim mahalles in the town. Traces of Islamization were insignificant.

A centre of commerce and craft-work, the town was famous for the manufacture of penknives and knives. Sheep-rearing was highly developed in the region, while in the town artisans devoted themselves to the preparation of the wool and to dairy and meat products. In the market there were local traders, as well as Jewish merchants and others from Dubrovnik. According to Evliya Celebi, there were 450 shops in the Carah. The town's trading and craftwork activity was also served by a bazaar, caravanserais and seven inns (khammān).

The town had acquired a Muslim appearance owing to the public buildings—the numerous mosques, among them that of Sultan Murâd (Fethiyye), the former Christian church of the Archangel Michael, transformed into a mosque, as was the case with the church of St. Elias; two public baths, and, in the 11th/17th century, a palace belonging to a local Turkish dignitary. There were also some Christian churches; Ştip formed part of the diocese of the bishopric of Kolassia. In the 19th century the town was attached to the Bulgarian eparchy of Küstendil.

During the war of 1863-99, Austrian troops reached Ştip. In the 19th century, Amy Boud found Ştip to be a flourishing centre of commerce and craft-work, with 15,20,000 Turks and Bulgarians and a Jewish community. In about 1894 the population of Ştip included 10,900 Bulgarians, 8,700 Turks, 800 Jews and 500 gypsies—in all, 29,900.
ISHTIB — ISHTIKAK

(Bistra Cvetkova)

ISHTIKAK, a technical term in Arabic grammar, translated approximately as "etymology"; ishtakka l'išghy "he split the thing", ishtakka l'išghyy "he took the šيخ, half of the [split] thing" (Lane, Lex., 1572a): ishtikak, inf. of ishtakka, in the general sense, in fact, signifies: ishtafcka. In ishtikak, the object of these examples is to show how a form is taken or formed, the first example, is not more than "taking one word from another", under certain defined conditions (al-Djurđji, Ta'rifâ, 17).

Many ancient authors wrote special studies of ishtikak; al-Suyûti (Mushtarih, i, 351, l. 4-6) lists twelve: al-Muład al-Dablî (d. 170/786), Kutrub (d. 206/821), al-Asma (d. 215/830), Abu Nasr al-Bahill (d. 231/846), al-Munšîf (d. 384/994), Ibn al-Nahhas (d. 338/949), Ibn Khalawayh (d. 370/980), al-Ru'mam (d. 384/994), Ibn Durayd (d. 325/937), Ibn al-Nahhas (d. 338/949), Ibn Khalawayh (d. 370/980), al-Rummani (d. 384/994). Since all these examples are lost, it is certain that Ibn Durayd (who but which contains examples of ishtikak), we are obliged to have recourse to the data that are given in passing in various works: a chapter of the Mushtarih of al-Suyûti (i, 345-54), quoting Ibn Dihya (d. 637/1240), the presentation of Ibn al-Munšîf (al-Muład al-Tasrîf, lit. Mâzini, i, 3-4), the Khâtima of the editors (Cairo 1373/1954, iii, 278-9): also the definitions of al-Djurđjian (Ta'rifâ, 17) and in the account of the Diet. of Technical Terms (i, 766-70).

In ishtikak, "etymology"; it must, however, be understood how the Arab grammarians practised this etymology. According to Ibn Djinîn, tasrîf occupies a position intermediate between lugha and nahw (yaladâh, al-šârîf). There is considerable affinity (nasab harîb) and connexion (itiṣâl qaḍîdî) between ishtikak and tasrîf, but ishtikak has more to do with lugha (abâd fi l-lugha min al-tasrîf, Munṣîf, i, 3, line 17-4, line 10). Lugha is concerned with vocabulary itself; nahw deals with šurâb: it studies the variations of the šurâb at the end of the words of the lugha and the morphological formations of the tasrîf (as inacc. of the verb), in its turn it is concerned with the troponym, troponym (tafnaša; see below). Taṣrîf analyses the great number of forms (called wâm, pl. wa'amîn, or bâmîn, pl. abnîya, or šîga, pl. šiyâg) found in the words of the lugha and in the morphological formations mentioned above. Ishtikak deals with the same material as tasrîf, but considers it from the point of view of its origin: wâmîn min ... "it is taken from ..." is the information that it gives.

To understand the great affinity and connexion that Ibn Djinîn saw between ishtikak and tasrîf, it is necessary first to be introduced to tasrîf. Tasrîf was practised in two ways. The first, the Sulaymani and the ancients, was concerned only with masâ'il al-tamrin "training questions", and its object was al-riyda wa'l-tadarrub "practice and habituation". An imaginary word was formed on the pattern of an existing Arabic word, and the peculiarities of the form (bind) of the existing word were exactly reproduced in the imaginary word; see Sibawayhi, title of ch. 51 (li, 436-42). In order to carry out this operation it was necessary to know the morphological data, set out, interspersed with nasb, in the Kitdb. The exercises in question were a means of remembering these and making oneself familiar with them.

The second method thought of tasrîf as a discipline to be studied in its own right and made an independent science of it; this is done in the K. al-Tasrîf of al-Mânîn (d. 247/861). This tasrîf takes as its object existing Arabic words and studies their forms. It regroups the necessary data in this way; Ibn Djinîn, in the Muhhadsar al-tasrîf al-mulâkî (ed. G. Hoberg, 8, l. 9-10), systematizes them according to the following divisions: šiyâda, badal, hadaf, tashrih bi-harakat ai-su$m, idâhîm [see TASRIF].

The affinity and connexion of ishtikak with tasrîf. We have seen above that Ibn Djinîn asserts that there is a great affinity and connexion between ishtikak and tasrîf. The method that he adopts to demonstrate the functioning of ishtikak with respect to tasrîf is instructive here; Ibn Djinîn considers then tasrîf as did Sibawayhi and the ancients, working with imaginary words, and he uses for this conception of ishtikak exactly the same examples as for the account of tasrîf (see Munṣîf, editors, iii, 278, l. 15-379). In tasrîf, the object of these examples is to demonstrate the accidents that occur to hurarf al-wâsîl (the radical consonants) in order to constitute the forms: šiyâda, badal, etc. In ishtikak, the object of these examples is to show how a form is taken from another and they presuppose a knowledge (and a use) of the accidents referred to and the processes of tasrîf. In these circumstances, Ibn Djinîn takes as his subject what he bases his treatment on: the origin of the verb, darb, and he lists all that can be taken and formed from this masdar: madda (daraba), muḍârî (yadrabu), active participle (darîb), etc. This is a good illustration of the affinity and the connexion that Ibn Djinîn sees between ishtikak and tasrîf. Ishtikak, however, is less general than tasrîf (see below).

Ishtikak and lugha. Ibn Djinîn says, besides, that ishtikak is based more than tasrîf on lugha. A chapter of the Muḥtasab of al-Mubarrad (Cairo 1386, iii, 185) helps us to understand this; al-Mubarrad distinguishes first of all the nouns (asma') that are ghayr (non-) mushâhk, such as hadar "stone", ġḏâb al-mountain". Ishtikak is silent concerning these, for no original form is found from which their form can be taken; they are simply common nouns (asma') al-aqīnâs. As far as the Tasrîf is concerned, it places them in the form našî (qualifying); these are adjectives that are connected with a verb where their meaning is found again: saqāš "small" with saqārah, ġiḏiš "ignorant" with ḍiḏîla, amāka "stupid, foolish" with ġiba; thus the mushâhk nouns that are not used as našî (qualifying); the examples given are proper names:
hanifa, mudar, 'ayldn. Their ishtikâk varies according to the semantic links to be found between these nouns and others from the same root; hanifa is said simply to come from 'anf (the word is explained), mudar from madara 'l-laban "the milk became sour" and 'ayldn from 'ayla, the inf. of 'ala "to be poor," form fa'lân. Thus ishtikâk deals with vocabulary, seeking for the point of departure, the mukhabbat minhâ dru, while remaining, according to the rule, within one single root and its infinities of meaning, whereas isrrif does not go beyond the word whose wâzin it has to determine.—Other examples of ishtikâk are to be found in the indices to the Mu'kadab, iv, 149-50, in the discussion on the ishtikâk of the ism and the verb taken from the msdâr (Ibn al-Anbâri K. al-Insâf, ed. Well, disputed questions 1 and 28). Ibn Durayd devoted his K. al-ishtikâk (ed. Wüstenfeld, Göttingen 1854) to the names of the Arab tribes (but without any preliminaries about methodology).

The Arab grammarians practised ishtikâk only for Arabic words; see Ibn al-Sarrâdî's warning as reported by al-Djawalikl (K. al-Mu'arrab, ed. Sachau, 3, l. 10-4, l. 3) and al-Suyûtî (Muzhirî, i, 351, l. 7-9). This Arabic ishtikâk introduces no historical perspective into the study of the language. The relations or origins that are detected form merely part of the revealed language and are given with it (cf. Dîct. of Technical Terms, i, 766, l. 15-6). The explicative value of this ishtikâk is meagre; first, depending exclusively as it does on the Arabic grammatical system, it suffers from the deficiencies of this (e.g., the two disputed Questions mentioned above); then, the derivation of one term from another is stated merely when the conditions are satisfied. Thus al-Djurjâni gives the definition of ishtikâk: nasîf 'laaf min akbar bi-âwâlî, and in Girshî's (Wâzirî, 17) "talking one word from another, on condition that they are related in sense and in composition [of the radical consonants] and that they differ in form." There is no concern to demonstrate the linguistic processes that legitimate this derivation; al-Mubarrad says that saqhir comes from the verb saqhura (see above). Why does he do this? The mind must be continuously alert to notice the cases in which this ishtikâk gives acceptable information. It is particularly useful, too, by reason of the studies on vocabulary that it has involved, as in the K. al-ishtikâk of Ibn Durayd.

Ishikâk is called: a) al-sâghir "the small," when, for the tarkih of al-Djurjâni's for-going definition, the order of succession of the same radical consonants remains identical in the two terms; this is the normal ishtikâk. b) al-kabîr "the large," when the wâzin, the actual sense of the root, is preserved, but not the order of succession for the tarkih, e.g.: dijâbâka [metathesis of dijakbâa], taken from the msdâr: dijakbâ. c) al-akbar "the largest," when neither the actual sense of the root nor the order of succession are preserved. This ishtikâk was invented by Ibn Djinnî and set out in the Khâsî'a (Cairo 1372/1955, i, 5-17 and Cairo 1374/1955, ii, 133-9); he considered all the relative positions of the three consonants of a root, e.g., for bu:w: bâw, w bâ, b w, b, bâw, w, bâw, combinations existing in the language, with their special meanings, and he extracted from them a sense common to all: al-khufûf wa-l-harakah "haste and movement." The Arab world admired his force and ingenuity of mind but did not follow him in normal studies of the language (see Ibn Dîhyâ, Mushîrî, i, 347, l. 3-348, l. 2).

Remarks: a) al-Djurjâni sees al-ishtikâk al-akbar in the case in which the identity of the radical consonants in the two terms is reduced to that of their mâyârad, as with na'sa, derived from the msdâr: naâd (cf. Dîct. of Tecun, i, 767, l. 6-8). b) For the difference between al-ishtikâk al-sâghir and al-adi, see ibid. 767, l. 2 ff.

Bibliography: in the text. 'Abd Allâh Amlîn, al-İshîkâk, Cairo 1376/1956, a personal study, in order to regroup under one concept of ishtikâk the three divisions just mentioned, whereas isrrif does not go beyond the word whose wâzin it has to determine. Other examples of ishtikâk are to be found in the indices to the Mu'kadab, iv, 149-50, in the discussion on the ishtikâk of the ism and the verb taken from the msdâr (Ibn al-Anbâri K. al-Insâf, ed. Well, disputed questions 1 and 28). Ibn Durayd devoted his K. al-ishtikâk (ed. Wüstenfeld, Göttingen 1854) to the names of the Arab tribes (but without any preliminaries about methodology).

The Arab grammarians practised ishtikâk only for Arabic words; see Ibn al-Sarrâdî's warning as reported by al-Djawalikl (K. al-Mu'arrab, ed. Sachau, 3, l. 10-4, l. 3) and al-Suyûtî (Muzhirî, i, 351, l. 7-9). This Arabic ishtikâk introduces no historical perspective into the study of the language. The relations or origins that are detected form merely part of the revealed language and are given with it (cf. Dîct. of Technical Terms, i, 766, l. 15-6). The explicative value of this ishtikâk is meagre; first, depending exclusively as it does on the Arabic grammatical system, it suffers from the deficiencies of this (e.g., the two disputed Questions mentioned above); then, the derivation of one term from another is stated merely when the conditions are satisfied. Thus al-Djurjâni gives the definition of ishtikâk: nasîf 'laaf min akbar bi-âwâlî, and in Girshî's (Wâzirî, 17) "talking one word from another, on condition that they are related in sense and in composition [of the radical consonants] and that they differ in form." There is no concern to demonstrate the linguistic processes that legitimate this derivation; al-Mubarrad says that saqhir comes from the verb saqhura (see above). Why does he do this? The mind must be continuously alert to notice the cases in which this ishtikâk gives acceptable information. It is particularly useful, too, by reason of the studies on vocabulary that it has involved, as in the K. al-ishtikâk of Ibn Durayd.

Ishikâk is called: a) al-sâghir "the small," when, for the tarkih of al-Djurjâni's for-going definition, the order of succession of the same radical consonants remains identical in the two terms; this is the normal ishtikâk. b) al-kabîr "the large," when, the wâzin, the actual sense of the root, is preserved, but not the order of succession for the tarkih, e.g.: dijâbâka [metathesis of dijakbâa], taken from the msdâr: dijakbâ. c) al-akbar "the largest," when neither the actual sense of the root nor the order of succession are preserved. This ishtikâk was invented by Ibn Djinnî and set out in the Khâsî'a (Cairo 1372/1955, i, 5-17 and Cairo 1374/1955, ii, 133-9); he considered all the relative positions of the three consonants of a root, e.g., for bu:w: bâw, w bâ, b w, b, bâw, w, bâw, combinations existing in the language, with their special meanings, and he extracted from them a sense common to all: al-khufûf wa-l-harakah "haste and movement." The Arab world admired his force and ingenuity of mind but did not follow him in normal studies of the language (see Ibn Dîhyâ, Mushîrî, i, 347, l. 3-348, l. 2).

Remarks: a) al-Djurjâni sees al-ishtikâk al-akbar
Flrkası set up in September 1919 as the continuation of a similarly named organization formed by Turkish students in Germany. Initially this party had far more in common with French radical socialism than with Bolshevism, and it drew much of its inspiration from Henri Barbusse's Clarté movement. But with the end of the Allied occupation of Istanbul in 1923, it fell under the direct influence of Moscow. The party published a monthly theoretical journal (until March 1922, Flrkası) and, from 1923, Aylınlık, which soon became the rallying point for elements who were later to play a major role in Turkey's ideological development. Dr. Sheffk Hüsnü [Deymer], a founding member of the Istanbul organization, was the acknowledged leader of the Turkish communist movement until his death in 1959. In 1923 the Turkish Worker and Peasant Socialist Party leaders were tried on charges of treason, but were soon acquitted. After the Law for the Maintenance of Order (Tabirî-i Sukuân) was enacted in 1925, Atatürk closed Aylınlık and prosecuted a number of the party's leaders for carrying on subversive activity.

The Turkish Communist Party (Türkiye Komunist Partisi) proper emerged from several diverse sources: the communists clustered around the Turkish Worker and Peasant Socialist Party, the émigré movement of Mustafâ Subhi, and the Ankara communists from the first came into conflict with Atatürk, who had formed his own "Official" Communist Party in October 1920 in an effort to bring the burgeoning communist movement under his control. In February 1921 the People's Communist Party suspended its activity, though as a result of Soviet pressure it was permitted to revive. From March until October 1922 this party published the weekly Yeni Hayat, a periodical that became increasingly critical of the government. But with victory over the Greeks, Atatürk no longer felt the need to tolerate this opposition, and in October 1922 he suppressed the Ankara party. The remnants of this organization followed Subhi's supporters in joining the Turkish Communist Party, that was apparently organized clandestinely in Istanbul in the fall of 1920 by Deymer and Şadreddin Dhelâl [Antel]. This party was in contact with communists among the non-Turkish communities in Istanbul and sent representatives to gatherings of the Third International in Moscow. It attempted to organize youth groups and trade unions, but without much success. Since its leaders were arrested or forced to flee abroad in 1925, it carried on only underground activity inside Turkey. Deymer convened a party congress in Vienna in 1926; another seems to have been held in 1933 somewhere outside Turkey. The party's main overt activities consist of publishing pronouncements in Soviet and other communist publications, and since the mid-1950s in broadcasting its views over "Bismir Radyo" located in Eastern Europe. From 1932 to 1935 a group of former communists made important contributions to Kemalist ideology through debate in the monthly Kadro, which sought to adapt Marxist ideas to serve Turkish nationalism. Even though the government closed Kadro in 1935 at the urging of more conservative Turkish nationalists, the ideas espoused by Kadro undergirded the famous "Six Arrows" of the Republican People's Party ([Qiumbâriyyet Khâlîk Flrkasl [q.v.]), which were enshrined in the constitution in 1937.

With the relaxation of political restrictions after the Second World War came new efforts to form socialist and communist-oriented parties. The Turkish Socialist Worker and Peasant Party ( Türkiye Sosyalist Emekçi ve Köylü Partisi) that Deymer set up in 1946 and the Turkish Socialist Party ( Türkiye Sosyalist Partisi) of Esat Adî Mustacaploğu were closed within the year by the government, however, on charges of promoting communism. In this atmosphere of suspicion, even moderate socialists met a chilly reception; until the end of the Demokrat Parti [q.v.] regime in 1960 socialism was generally regarded as virtually illegal by the Turkish elite.

The military revolt in 1960 stimulated ferment that gave socialism and communism new relevance in party formation. In the new constitution of 1961 a more favourable climate toward socialism was apparent. Also, for example, central planning by the government was ordained as the remedy for the excesses of the Demokrat Parti era; labour unions received the right to strike. Under these circumstances, the periodical Yön, which began in December 1961, attracted much attention in intellectual circles with its increasingly anti-(Western)imperialist pronouncements in favour of state-directed development. Books and pamphlets on socialism flooded the market and were read especially by students, who were attracted by the emphasis on social justice. A Socialist Cultural Association (Sosyalist Kültûr Dernêcî) was formed in Ankara in 1963 to propagate these views.

This activity saw the emergence on the political scene in February 1961 of the Turkish Labour Party (Türkiye İşçi Partisi) as the culmination of efforts in train even before the government closed Kadro in 1935. When the small group of labour officials who dominated this organization were unable to arouse enough popular support to qualify to take part in the 1961 elections, they sought the co-operation of some prominent leftist intellectuals. In 1962 Mehmet Ali Aybar became President General of the party. By 1965 the Turkish Labour Party was able to run candidates in 51 provinces and received some 275,000 votes in electing 15 deputies to the lower house that year. While the party increased somewhat its percentage of the vote cast in the senatorial elections in 24 provinces in June 1968, it failed to elect a single senator.

The Turkish Labour Party promotes an essentially Marxist line, but seeks to come to power by exclusively parliamentary means. From the first it has been rent by factionalism. At its congress in February 1964 there was dispute over the balance between workers and intellectuals in the ruling organs of the party. This problem was intensified when the party leaders selected a preponderance of intellectuals as deputies in the 1965 elections. Differences within the party led to a revolt against Aybar's leadership at the party congress in November 1968, necessitating an extraordinary conclave at the end of December of the same year. This did not completely heal the rift. Moreover, the party is challenged on the left by individuals advocating a more revolutionary line.

Arab Socialism as expounded by the Ba'th Party or other so-called Arab revolutionary leaders and regimes has little in common with European or Marxist Socialism. Its principles are rather linked to those of pre-nationalist and radical nationalist ideologies, and particularly an interpretation of the ethical and moral teachings of Islam. Its emphasis is on social justice in a traditional Islamic sense, and on economic and social reform. It rejects both the materialist philosophy and historical determinism of Marxist Socialism. It is opposed to the class struggle and the dictatorship of the working class or the proletariat. Instead it proclaims the eradication of class divisions with a view to achieving a harmonious “democratic, cooperative society”, in which classes cooperate with, not oppose or antagonise, one another. It does not share socialism’s opposition to private property, even though it accepts and, in certain cases, practices state ownership of the major means of production and state control of the economy. Because the economies of many of these countries are mainly agricultural their socialists pay greater lip service to the impoverished masses of peasants and less to the urban working classes or proletariat. The latter group on the whole is still a small one in these countries, where industrial development is in its early stages. Finally, Arab Socialism rejects Marxist Socialism because the latter is theoretically opposed to nationalism.

It can be argued that Arab Socialism as articulated by the regime of 'Abd al-Nasir and that of his successor in Egypt, or by the Ba'th in the Fertile Crescent, is a primitive socialism: it is for the confiscation of wealth by its expropriation from the small wealthy landed and old official or governing classes, but not for its abolition. It wishes to eradicate poverty by the nationalisation of capital and other productive wealth and by its redistribution in order to level society; but so far it has only managed to further generalise poverty. Basically it claims that it wishes to share out property, not to abolish it. And as property in most Arab countries implies the ownership of land, there have been several, not very successful, agrarian reform measures in Egypt, 'Irk, Syria and Algeria.

If one examines the utterances and policies of President 'Abd al-Nasir of Egypt (the nationalisation decrees of July-November 1961, his National Charter of 1962, and the Expropriation measures of 1963-4), or those of the Ba'th (for example, 'Aflak's writings, and the proceedings and resolutions of the Party Congresses, especially those of the Sixth Congress), one observes that Arab Socialism is the “radical” expression of Arab nationalism. It is also the justification of radical state economic policies, characterised by central planning and greater centralised state control over all aspects of national economic activity and life. Any structural social changes introduced by the so-called socialist measures of Arab rulers have not so far also envisaged changes in the power structure. Nor does the Arab Socialism of these states envisage any uniform regulation of the consumption of material goods on the basis of strict equality.

Arab Socialism is useful when one wishes to indicate and identify the domestic, regional or international policies of individual Arab states. In Egypt, for example, Arab Socialism became a term applied to President 'Abd al-Nasir's domestic economic, Arab and international policies after 1955, and more so after 1961. By 1962, Arab Socialism in Egypt, as well as in other Arab states
which identified or associated their regimes with it, came to be an amalgam of nationalism, of involvement in inter-Arab state conflict, state political control by the military, state ownership and control of the economy, and an orientation in international politics towards the Soviet Union. Beginning as a protest movement against the concentration of political and economic power in the hands of a small governing class in ancien régime Egypt, 'Irk and Syria for instance, Arab Socialism under military regimes and in the conditions of inter-Arab and international events moved towards an association with the new influential superpower in the Middle East, the Soviet Union. At home, and in practice, it became a bureaucratic, police socialism in the service of the regimes in power, without a firm basis either in a working class proletariat, or its more populist aspiration for a base among the agrarian peasant masses. Socialist parties were proscribed, and local, or native, socialists were persecuted and politically neutralised. Single parties, such as the Arab Socialist Unions in Egypt and 'Irk or the Ba'th parties in Syria and 'Irk, and the FLN in Algeria were also at variance with socialism properly defined and understood. These single parties never controlled government; rather government controlled the parties which served the security and other purposes of the state.

It is difficult for example to adduce anything about the meaning of Arab Socialism from the voluminous writings of 'Allaq or the proceedings and resolutions of the Ba'th Party Congresses beyond the suggestion that the Party considered economics important and relevant to politics; or that one of the Party's goals is the expansion of the economic opportunities for the lower classes of society and the enhancement of their social status.

Domestically then Arab Socialism has meant the opposition by military regimes and those who aspire to overthrow regimes in their respective countries to the dynastic or other governing and official classes, which are often identified as "feudalist". Arab Socialists link the interests of these classes to those of outside powers (mainly those they refer to as Imperialist, i.e., the Western powers), so that their overthrow and dispossession are justified on the grounds that they are the agents of Imperialism. In the context of inter-Arab politics Arab Socialism also serves as the slogan of so-called radical rulers and regimes in their conflicts with so-called conservative and reactionary rulers and regimes for influence, primacy, prestige or domination in the Arab Middle East. Generally, therefore, on the level of international politics, Arab Socialism has been associated with the opposition of Arab states to what remained of Western influence in their area and with radical Arab nationalism and its manifestation in heightened inter-Arab struggle. This coincided with the entry of the Soviet Union into the Middle East in 1955 and its offers of massive economic and military assistance to several Arab states. Inevitably, the orientation of Arab Socialist regimes towards the Soviet bloc followed, gradually at first (1955-62), and rapidly after 1962.

The story is generally agreed both by Muslim commentators and modern occidental scholars that Dhu 'l-Karnayn, "the two-horned", in Sura XVIII, 83/82-98 is to be identified with Alexander the Great. The text is told in reply to questioners, often said to be Jews. Dhu 'l-Karnayn was given power on earth, and made his way to the furthest west and furthest east; and in response to an appeal from oppressed peoples, a wall or rampart of iron and brass against the incursions of Yajjiid and Mardi (q.v.). The origin and precise significance here of the name Dhu 'l-Karnayn has been much discussed (cf. al-Baydawi, ad loc.; Nödelke-Schwally, i, 140, note 5). The name had been previously applied to the Lakhmid al-Mundhir al-Akbar (III) ibn Mā' al-Samā' (cf. Imru' al-Kays, 60.3; Ibn Ḥabīb, Munaḥmah, 340; J. Horovitz, Koranische Untersuchungen, 111-3, with further references). Dhu 'l-Karnayn was accepted as a believer or Muslim since he spoke to the people of the west about God's punishment of wrongdoers and his reward for the upright; but it was disputed whether he was a prophet. Al-Wāṣihk is said to have sent a man to explore the wall (BGA, vi.627; quoted by G. von Grunebaum, Mas'ūlī Islām, 26, note 63). Bibliography: (in addition to works cited): commentaries on Kur'ān, XVIII, 83/82 ff.; Ibn Bahb, Muhābb, 359, 365, 391; Ibn Kutayba, Māṣāfīr, 26; al-Masūdi, Murūdī, al-Thalāfī, Kīsās al-Anbīyā', (Cairo, 1310), 226; (Singapore, 1932) 483-99. ISKANDAR NAMA, the Alexander Romance. i. Arabic. Sura XVIII (59 ff.) shows that the Arabs have known of the Alexander Romance (pseudo-Callisthenes) from early times, since what is said about Mūsā in this Kur'ānic passage is in fact derived from this romance. On the earlier history of the Romance, see Nödelke, Beiträge zur Geschichte des Alexanderromans, in Denkschriften der Kais. Akad. d. Wiss., Vienna, xxxii. According to this scholar, the source of the Syriac and Arabic stories is to be found in a primitive Pahlavi version, the author of which, according to Fraenkel (ZDMG, xlv, 319), may have been a Syriac Christian who wrote in Pahlavi. The oldest Arabic versions, provided by the hadith, have been collected by Friedländer in Die Chadhrlegende und der Alexanderroman, 67 ff. (see AL-KHĀDIR). On more recent versions in Arabic, see Friedländer's article and also E. García Gómez, Un texto arabe occidental de la leyenda de Alejandro, Madrid 1929.

(Ed.)
model ruler who through the constancy of his meditation deserves to be invested with a true prophetic mission. (For the Arab tradition, Iskandar—Dhu 'l-Karnayn already combines [see above] the characteristics of the warlike hero with those of the prophet of universality).

For Iranian tradition, he is essentially "the wretched Mar, inspired by the Druj (the spirit of discord)", guilty of the destruction of the good religion, its altars and its books (M. M. L. M., ibid.), and it is the religion the Copt and her authentic conception of speculative ethics which was to be that of the Iskandar

The Iskandar Nama is a hymn to wisdom—that of the Greeks, that which Iskandar would have derived from the old Iran—to that also which the hero, dedicated to Prophecy, was to elaborate, before his death in the company of the wise, and in regard to which Niẓāmī, after reviewing the final solutions of the old sages, was to recall the primordial role of celestial reason, Khrāt, already sung by Firdawsī before him.

The encyclopaedic character of the Iskandar Nama, far more than the treatment of the legendary subject, is perhaps what most strikes the reader: the passion for and justification of asceticism, for which on several occasions Iskandar emphasises his respect; the geographical and historical recollections relating particularly to the Byzantines; the pronounced taste for the mysterious sciences, where the episode of Mary the Copt and her authentic conception of speculative alchemy administers a corrective to the episodes where the hero creates a magic mirror or takes pleasure in conversations with the semi-legendary Bānlān (Apollonius).

Study of the Iskandar Nama is not yet wholly complete, and it holds in store rich and important discoveries, not only for historians of literature but also for those engaged in comparative studies, for historians of the history of religious ethics in Iran, and for students of the religious and political consciousness of their destiny that the poet makes evident in his hero. As a learned Iranian poet, Niẓāmī, who demonstrates his eclecticism in the information he gives (he says, "I have taken from everything just what suited me and I have borrowed from recent histories, Christian, Pahlavi and Jewish ... and of them I have made a whole"), locates the story of his hero principally in Iran. He makes him the image of the Iranian "knight", peaceful and moderate, courtier for any noble action. Like all Niẓāmī's heroes, he conquers the passions of the flesh, and devotes his attention to his undertakings and his friendships. These features appear in the account, which follows ancient tradition, of his conduct towards the women of the family of Darius, in his brotherly attitude on the death of that ruler, in his behaviour towards queen Nushāba (the Kayd of Firdawsī, the Kandake of the pseudo-Callisthenes) whom he defends against the Russians. And if he subdues the king of China, the Khākan, and the Indian king Kayd (Porus), it is to establish a deep and lasting friendship with them.

In the Sharaf Nama particularly, the itineraries of his expeditions are Iranian and Muslim. It is in Egypt that he introduces the rule of justice, after delivering the country from the threat of the Zand, and it is the religion of the One God of Abraham that, in the Sharaf Nama, he makes it his mission to spread, and for which he was to eliminate from Mecca the family of Khuţā'ā, who had distorted the religious tradition of the Ka'ba. And it is through Armenia that he starts his march to the East, on the way founding Tiflis and Barda in, occupying the legendary castle of Dar Band, and finding in the castle of Saklr, occupying the legendary house of Kay Khusraw. He traverses Rayy, Khorāsān and central Asia, to reach India and then China. He was to return to Barda in, in the same Adharbāyjān, the homeland of Niẓāmī, to rescue Queen Nushāba when she was attacked by the Russians (there was in fact an invasion in 946-7).

Niẓāmī did not fail, afterwards, to crown the Sharaf Nama with the theme of the vain quest for the source of life, in which may be seen a foreshadowing of the nihilist philosophy which was to be that of the Iskandar Nama.

Abel, Dī'āt Qarnayn, prophète de l'Universalité, Brussels, Annales de l'Institut de Philologie et d'Histoire Or. et Slaves, xi (1951), 6-18; idem, Le Roman d'Alexandre, légendaire médiéval, Brussels 1955, 82-9; ibid., La figure d'Alexandre en Iran, Accademia Nazionale dei Lincei, Convegno sul tema La Persia e il mondo greco-romano, Rome 1966, 120-34.

ii. In classical Ottoman literature the Alexander legend was used relatively rarely, perhaps (as E. J. W. Gibb suggested, HOP, i, 284) because its subject-matter gave little scope for the allegorical treatment of the theme of love. The one famous and very popular poem on the subject is the Iskendername of Abmad [q.v.] (d. 815/1412-3) (the story as related by Abmad is summarized by Gibb, HOP, i, 270-84; for its character, as a kind of encyclopaedia, see Fr. Taeschner, in Hb. der Orientalistik, 1. Abt, v/i, 1963, 276; for the most up-to-date list of Mss., see B. Flemming, Verzeichnis der or. Handschriften in Deutschland, xi1/1, Wiesbaden 1968, p. 36). Some Mss. are half in verse, half in prose (see, e.g., Nihad Sami Banarch, in TM, vi (1936-9), 110). There are also prose versions, some anonymous, some attributed to Abmad's "brother" Hamzevī (HOP, i, 255; cf. Iskandername, ii, 1327; see also F. E. Karatay, Topkapsı Sarayi: Türkçe yazarlar hattı, nos. 2744-69, some or all of which are presumably Hamzevī's prose version); their connection, if any,
SKANDAR NAMA — AL-ISKANDAR AL-AFRODISI

with Abu'l-Fazl's poem remains to be investigated. A certain Fighani of Karaman (flor. ca. 906/1900) is reported to have composed a verse Iskenderdeme (Latifi, 266-7), but it does not seem to have survived. An Iskenderdeme composed by Ahmed Ridwan (Sehl, p. 36; Latifi, p. 88), i.e., the defterdar "Tutunusz" Ahmed Beg (flor. under Bayezid II) and closely following Abu'l-Fazl, survives in a single Ms. in Ankara (see Agah Sarr Levend, Ahmed Rıdvan'ın Iskenderdeme, in Türk Dili, no. 3 (Dec., 1951), 23-31, where (p. 24) the author mentions another verse Iskenderdeme in his private library, by a certain Hayati). His contemporary Bihisi (q.v.) completed an Iskenderdeme in 909/1503-4 (Ushaw College MX). In Çağhatay Turkish literature the Alexander-legend provided the theme for the fifth poem in the Rhamas (q.v.) of Nava (q.v.), on which see J. Löckmann, in Philologicae Turcicae Fundamenta, ii, 346-8 and (bibliography) 355-7.

AL-ISKANDAR AL-AFRODISI, Alexander of Aphrodisias (about 200 A.D.), Peripatetic philosopher. In mediaeval Europe and at the time of the Renaissance he was regarded as the most authoritative of the ancient commentators of Aristotle. He had the same influence in Islamic countries. A certain illuminism, his concept of the active intellect coming from outside to the human soul, fitted in with the Neoplatonic trend prevailing in Arabic philosophy. On the other hand his materialistic arguments against the immortality of the human soul gave rise to wide discussions which spread from Islam to Christian circles; the difference between Aristotle and Alexander over this question is a major theme in the correspondence between Emperor Frederick II Hohenstaufen and the Şfi Ibn Sab'in (q.v.) (see JA, 7th série, xiv (1879), 404-49). Little being known about Alexander's life, the Arabic biographical tradition considerably exceeds what can be derived from the Greek sources. It calls him al-Iskandar al-Afrodisî al-Dimashki, thus identifying him with a certain Alexander of Damascus, who quarrelled in Rome with Galen (see PIRALNOS5) and was afterwards appointed professor of Peripatetic philosophy at Athens (see Galen xiv, 627-9 and ii, 218, ed. Kuhn). Just the same honour was awarded to Alexander of Aphrodisias, and we do not know whether the identification is due to some erroneous remaining or is based on better information than we nowadays possess. Chronological considerations are of no value here: Alexander of Aphrodisias was called to Athens in or after 180 A. D., and though Galen wrote the chapter of De anatomieis administra- tionibus where the relevant remark on Alexander of Damascus is found before 180 A. D., he may have inserted this statement later, at the end of his life, for he often used to complete his earlier works with new references (cf. K. Bardong, in Nachrichten von der Akad. d. Wissensch. in Göttingen, phil.-hist. Kl., 1942, 604, 631, 653). Besides Galen's account of his quarrel with Alexander of Damascus, the Greek sources reveal nothing about any such strife with Alexander of Aphrodisias; the Arab authors, however, even now the nickname "inule's head", which their Iskandar al-Afrodisî al-Dimashki bestowed on the philosophizing physician (for some literary refutations of Galen as extant in Arabic see below). In this context it is interesting that the Arabic tradition gives Galen the same teacher of Peripatetic philosophy as Alexander of Aphrodisias, viz. Hermenus, and this statement can certainly be accepted as correct (cf. Heinrich Schmidt, De Hermino Peripatetico, Phil. Diss. Marburg 1907, 6; F. Rosenthal, in Oriens, vii (1954), 69, 79; S. Pines, in Isis, lii (1961), 23).

The works of Alexander were made accessible to the Arabs by various translators, such as Hunayn b. Isâk (q.v.), Isâk b. Hunayn (q.v.), Abû 'Uqäm Sa'id al-Dimashkî, Abû Bishr Mattâ b. Yûnus, Yâhû b. 'Adl, and others. The Arab bibliographers refer to most of his expanded commentaries on the writings of Aristotle, but only some quotations of them are still extant in Arabic translation (cf., e.g., A. Dietrich, Medicinalia Arabica, Abhandlungen der Akad. d. Wissensch. in Göttingen, phil.-hist. Kl., Dritte Folge, no. 66, 1966, 181 f.), the most voluminous being those preserved by Ibn Rusâd (q.v.) (see J. Freudenthal, in Abh. Pr. Ak. W., 1884, iv, 185; M. Bougyes, in Recherches, iv (1948), 280). On the other hand over 35 small treatises on various subjects are found in Arabic manuscripts the edition and study of which has begun only in the last decades. About 15 can be identified with the Greek text of the so-called quaestiones (ed. Bruns, ii/2) or parts of them (see Dietrich, Differentia specifica, 94-9; van Ess, 153; Gattje, Überlieferung, 161-74, 274-8). Three other tracts are found in the collection De Anima Libri Montisca (Fi 'l-sâ'î Salâ râ'î Ariysûflis, ed. Finnegan; Fi kâyafa yakûnu 'l-îbîrâr 'alî madâghab Ariysûflis, see Gattje, Überlieferung, 267-70, 272 f.; Fi 'r-radd 'alâ man yakûtu inna 'l-îbîrâr yakûnu bi-'l-ghu'î 'dâlî al-khârjîda min al-basâr, Ms. Tashkent 2385, lxxxv = Bruns ii/1, 127, 28-130, 12). The titles of these Arabic treatises are certainly not original; they also differ sometimes in the lists of the bibliographers and in the various manuscripts, where they may even be left out, the result being a confusion with the preceding tracts (see Gattje, Überlieferung, 261 f.—the same coherent text in Ms. Tashkent 2385, lxxxiv). A number of these secondary headings indicate a polemic against Galen (cf. J. Ch. Bürgel, in Nachrichten der Akad. d. Wissensch. in Göttingen, I. phil.-hist. Kl., 1967, 282 f., 387), but it remains for further investigation to decide whether these refutations are really directed against him in each case.

Sometimes the Arabic version appears to be merely a shortened paraphrase of the Greek with occasional additions. In one case two Arabic tracts on the differentia specifica (ed. Dietrich) are so similar, that one of them seems to be the paraphrase of the other (cf. van Ess, 154-9). It is difficult if not impossible to get an idea what all these alterations were introduced, whether by Alexander himself or in which stage of the Greek-(Syriac-) Arabic tradition. A similarly puzzling problem is posed by the second part of the commentary to Aristotle's Metaphysics, as extant in Greek and commonly regarded as a forgery, and its relation to the quotations made by Ibn Rusâd (cf. Moraux, Alexandre d'Aphrodisie, 14-9). It should further be noted, that in the Arabic tradition passages of Aristotle's Elements of theology (see BURUKLUS) appear among Alexander's genuine writings and under his name

Encyclopaedia of Islam, IV

9
Iskandar Beg AL-AFRUDISI — ISKANDAR BEG

(see van Ess, 159-68). The bibliographers give also the titles of two medical tracts ascribed to Alexander (Fi 'l-mádiháliyya and Fi 'l-íyála mi'ílah tábáhú fí fám al-mídá) [q.v.] in his al-ládi (cf. Th. Puschmann, Alexander von Tralles, i, Vienna 1878, 94 f.).

ISKANDAR BEG — AL-ISKANDARIYYA

retariat, and rose rapidly to the rank of munshi-yi cāʿīm. From 1001/1592-3 onwards, ... by the poor description
given by Yakut, “a small town between Aleppo
(R. M. Savory)

ISKANDAR BEG [see iskender beg].

ISKANDAR KHĀN [see Supplement].

- Al-iskandariyya: a. the title of a great number of towns of which Alexander (al-iskandar) was the founder, real or legendary, or for which he was chosen as eponymous protector when they were
built after his death. The relevant ancient texts are
listed in the Real-Encyclopädie of Pauly-Wissowa
(i, 1377-98 and Suppl., i, 54) and, in less detail,
by M. Besnier, Lexique de géographie ancienne,
Paris 1914, 32-4. These towns are:

1. Alexandria in Egypt [see following article].
3. Alexandria in Margiana, in the region of Mraw.
4. Alexandria Eschate: Khodijand; in this region, the permanence of the legendary memory of
Alexander finds expression also in the name of the
town of Iskandar, 50 km. north-east of Tashkent
43. - 5. Alexandria of the Paropamisades: Chera en, or, more probably, Begrâm, to the north of Kābul. - 6. Alexandria Opiane, on the east bank of the Indus (Besnier appears to confuse this with the last-named locality).
7. Alexandria apud Oritas, on the coast of
Gedrosia, near Cocala: Sonmiani, at the mouth
of the Pourali. - 8. Alexandria in Macarene, in the
region of Gedrosia, near Cocala: Sonmiani, at the mouth
of the Pourali. - 9. Alexandria in Carmania:
known to the Arab geographers as Ḥalāb al-ʿālam which was founded “almost everywhere” and to which
he gave his name, a name “which was later to be
changed”. In fact, Yaḵūt’s text enumerates
twelve towns mentioned by Ibn al-Fakhl, to which he adds
three others. The whole of this information is re-
peted by Muhammad Murtaḍā (Ṭāqū al-ṣarās, iii, 276).

These Alexandrias are: - A. An Alexandria “on the bank of the great river” (TA defines this—“name-
ly, the Dījābūn”) = 29. - B. An Alexandria “in the country of Babylon (Bābīl)”: this is Iskandariyya, a
township 68 km. South of Baghdād, according to
popular tradition founded by Alexander; the same
name is also borne, in the same region, by a canal
(cf. Guide bleu, 626; 1930, 294). - C. An Alexandria “in the region of Sogdiana (Sughd): this is Samarkand”
(TA: “in the Sughd of Samarkand”) = 4. - D. An
Alexandria which “is called Marghabulus: this is
Marw” (TA: “at Marw”). No doubt, in the name
Marghabulus we may detect the association of two
traces, referring respectively to Margus (the river of
Margus: Marghab and polis = 3. E. An Alexan-
dria “called Kūsh, and which is Bactra (Balḵ)”
(TA: “this is the name borne by Balkh, for it was
Alexander who founded it”) = 28. - F. An Alexan-
dria “in the basin of the rivers, in India” (TA adds:
“which are five in number and known by the name
Pundjāb”) = 6, 23 or 24. - G. An Alexandria (TA
gives the name al-Iskandara and adds: “large”)
“in the country of India”, with no further details =
6 or 23-27. This onomastic tradition has remained
strong in India (see the many occurrences of the name
Sikandara in northern India: Times Atlas of the
world, s.v. and map 30). - H. Alexandria in Egypt,
known as “the Great”. - I. Alexandria, if this is
deed the town denoted by the poor description
given by Yaḵūt, “a small town between Aleppo
and Ḥamāt”. TA, on the other hand, leaves no
doubt on the subject. - J. An Alexandria, "which is a small town on the Tigris, opposite al-Djamida, 15 parasangs from Wasi', the home of the Sha'ir' Abu 'Abd al-Iskandari al-Mufcassana (for whom see Kahbâla, Mu'gham al-mu'allifin, ii, 98) = 11. - K. An Alexandria which is a small town between Mecca and Medina, mentioned by the ḥabīf Abu 'Abd Allâh b. al-Nadîjâr in his dictionary" (Kahbâla, op. cit., xi, 317).

The Tâdji al-arus adds, without further details, that five other Alexandrias also exist, to make up the total figure mentioned at the beginning of the passage, of sixteen towns "commemorating the name of Alexander". In fact, this figure takes into account the mistake made by Yâkût over the number of cities given by Ibn al-Fâfîh (twelve, not thirteen); the true total is therefore fifteen, the same as that of Yâkût.

The four towns which figure in Yâkût, and whose names disappear in Ta'î, for the evident reason that they are not difficult to locate, are: - A. A town which Alexander founded fi Bâeinâdâ; at first sight indecipherable, this name may be read as Bârânâdâs, a possible corruption of Paro(p)anisos, the land of the Paropanisades = 5. - B. A town called the Fortified (al-Mu'âṣṣana): cf. 26, where Diodorus says: ekiste polis Alexandriam (Latin, oppidum condidit Alexandriam). - C. An Alexandria fi Dasthâk; the epithet Gallicus may here refer (cf. Propertius, ii, 15, 46) to the Gallus, a river of Phrygia or Galatia, or to the Glauclus, a small river in the North of Armenia or the gulf between Lycia and Caria (Strabo, xiv, 1, 2), to the Gallus, a river of Phrygia or Galatia, or to the Glauclus, a small river in the North of Armenia or the gulf between Lycia and Caria (Strabo, xiv, 2, 2) = 10 or 16. - D. An Alexandria "in the country of al-Sâ'iyâlîs"; in this name it is possible to detect a corruption of Sutuolos (Satnios, Saphnios: Strabo, vii, 2, xiii, 1, 50 and 3, 1), a river which flows to the South of Alexandria of Troas = 12.

Bibliography: In the text. (A. Miquel) al-Iskandariyya (also al-Askandariyya), the principal seaport of Egypt, in Ptolemaic times the second city of the world. One of the few important seaports on the African shore of the Mediterranean, Alexandria enjoys a particularly important position. With a population of about 1,576,234 (in 1960), the city lies at the Western angle of the Delta in latitude 30°11'N. and longitude 29°51'E. It was founded in 332 B.C. by Alexander /20 or 16. - Amr b. al-As met with resolute resistance to his siege of the city, after the invasion of Manuel in 1264, he swore to destroy the city's walls after its reconquest. The authenticity of such reports, however, may well be doubted despite their widespread repetition. A soldier with the circumspection of 'Amr b. al-As could scarcely, seriously, have wished to leave a frontier city as important strategically as Alexandria without the protection of a wall. We learn, moreover, that the 'Abbasid Caliph al-Mutawakkil (254/868-270/884), Saladin (557/1152-589/1193), al-Zâhir Baybars (659/1260-674/1277), al-Ashraf Sha'bân (764/1363-776/1376) and others after them. Hence we may well question the assertion that 'Amr b. al-As had the city walls razed and assume that al-Mutawakkil, Ibn Tûlûn and the other rulers gradually added improvements to them. At the same time, the view that the walls were built in pre-Islamic times gains credence. It is particularly important for the history of the city that the new walls, supposedly erected by al-Mutawakkil, included about half the area of those which dated from the Hellenistic-Roman period. About a hundred towers were built along the walls in the Middle Ages and fitted out with suitable equipment including cannon. In addition, the city was protected by a moat in front of the walls.

The medieval seaport of Alexandria consisted of an eastern and a western harbour. The original island of Pharos was flanked by these harbours and joined to the mainland by a causeway seven stadia in length, and hence known as the Heptastadium, which separated the harbours. On the north-eastern point of the island stood the Pharos, the great lighthouse begun in the time of Ptolemy Soter. This famous building, the prototype of all our lighthouses and one of the wonders of the ancient world, survived the Arab conquests by several centuries. The Arab writers call it the manâra, manâr or fanâr and we are indebted to al-Balâwî for a precise
That the imperial anchorage on the eastern side of the eastern harbour, previously renowned in ancient times, was not used in the Middle Ages. For closer supervision of the eastern harbour, a second lighthouse was built. Construction began in the time of Sultan Kalâwûn or in that of his son, al-Nâṣîr Muḥammad b. Kalâwûn, and was completed in 767/1365.

The eastern harbour was strengthened by this addition. The western harbour, on the other hand, was protected by an iron chain. On grounds of security, the eastern harbour was reserved for Christian shipping and that from the dâr al-harb, while the western harbour was for Muslim vessels. Entering the eastern harbour required particularly careful navigation. To reach the anchorage protected from wind and rough sea, ships had to sail close by the Pharos and hold hard to the western bank of the eastern harbour lest they plunge into the danger zone. It was impossible to avoid these rocks by sailing around the eastern side because of the shallow water. The harbour authorities had pilots and launches to accompany the great Frankish ships to their anchorage. A wooden landing-station connected the anchorage to the shore, by means of which the vessels could be loaded and unloaded. Anchoring in the western harbour raised no technical difficulties.

Apart from al-Abdâr's book of travel (7th/13th century), none of the known oriental sources provides a detailed description of the city gates of Alexandria. Impressed by the achievement of the pre-Islamic period, al-Abdâr describes them as follows: "Their uprights and lintels, despite the extraordinary size of the gates, are made of hewn stone of wonderful beauty and solidity. Every door-post is formed of a single stone as is every lintel and step. There is nothing more astonishing than the collection of these stones in view of their immense size. The passage of time has not affected them or left any trace on them; they remain still in all their freshness and beauty. As for the panels of the gates, they are tremendously strong, clad inside and out with iron of the most delicate, most beautiful and most solid workmanship possible."

The city had four main gates: Bâb al-Bahr led to the Heptastadium and the eastern harbour while Bâb Rashîd (the Rosetta gate) was the eastern gate with the road leading to Rosetta and Fuwwa. The southern gate was called Bâb Sidrâ (also called Ṣâdîr in the late Middle Ages), known to the western sources as Port du Midi or Meridionale, also as the Gate of Spices, Bâb al-Bahar, or Gate of St. Mark. The caravans from the Maghrib and the Egyptian hinterland came and went through this gate. The fourth, Bâb al-Aḫdâr or Bâb al-Khidr, in the northern section of the wall led to one of the city's three large cemeteries and was opened only once a week for visitors, on Fridays. There were to be found innumerable places of pilgrimage (mazdrdt) and the graves of scholars and pious men. In the western area of the city lay the royal buildings like the Dâr al-Sultan (a magnificent complex going back to antiquity), Dâr al-ʿAdl, Dâr al-Imâra, Kašr al-Silâh and Dâr al-Ṭîrâz. Near the Dâr al-Ṭîrâz and opposite Bâb al-Bahr lay the famous Arsenal of Alexandria which, however, in the later Middle Ages, no longer played any important part in the history of warfare. By this time it was used simply as a customs house.

Alexandria was at some distance from the Rosetta branch of the Nile and governments were faced with the difficult problem of linking the city with the river, of securing the supply of Nile water, and of maintaining traffic with the Nile valley. In 331 B.C. a canal was dug between Alexandria and Schidia (present day al-Nâṣîr al-Bahrî) and, indeed, by using the Kanope branch of the Nile, joined Alexandria to the next branch of the Nile at the same time. Since the Kanope branch dried up, as a result, and could no longer supply the canal of Alexandria with water, the bolbitine branch took over this function. This means that this development was complete some time before the Arab conquest of Egypt. The mouth of the canal which opened into the Nile became silted up from time to time. The duty of the Muslim administration to keep the canal in good order was fulfilled only to a limited extent, and at times the people of Alexandria had to rely on their cisterns for their water supply as they had done in ancient times. In the 3rd/9th century, the canal was only twice wide enough for ships to go through, information about the canal of Alexandria during the Fatimid period is very scarce. We are rather better informed about the canal in the period of Ayyûbid rule. In this period too, however, no decisive steps were taken for the utilization of the canal throughout the year for irrigation and transport. The Sultan al-Zâhir Baybars, and, to a greater extent, Sultan al-Nâṣîr Muḥammad b. Kalâwûn, gave special consideration to the significance of the canal for Alexandria and for state trade as well as for the fertility of the surrounding area. In the reign of al-Nâṣîr Muḥammad, from 710/1310 until 770/1368, the waters of the Nile flowed to Alexandria all the year round. Sultan al-ʾAšraf Barsbay, too, took care to keep the canal in good condition and make it navigable throughout the year, partly with an eye to his own policy of trade monopolies. In the second half of the 9th/15th century, however, once again less attention was paid to the upkeep of the canal.

The journey by Nile from Cairo to Alexandria usually took seven days. During the flood season, the Nile boats plied between Alexandria and the other towns of the Nile valley, especially Cairo and Kūf the assembly points for goods from the Orient. It is difficult to give an estimate of the population of Alexandria. When the Arabs invaded the city some 40,000, or, according to other reports, 70,000, Jews were living there. Ibn ʾAbd al-Hakam puts the number of Greeks living there, after the conquest, at some 600,000 men (women and children not included), although he gave the total number of Greeks, without counting women and children, as 200,000, at the time of the conquest. Both these figures are unreliable. Bishop Arculf, who visited the city some 25 years after the beginning of Arab rule, wrote of the numerous people living within the city, without giving any estimate as to its size. More reliable figures have come down to us from later times. The Jewish travellers, particularly, show a keen interest in establishing the number of their co-religionists in Alexandria. Benjamin of Tudela (5th/12th century) puts the number of Jewish residents, at this time, at 3,000, while E. Ashor notes that this figure includes only those
from whom taxes were levied and assumes that the total number of Jews may be estimated at about 5,000. According to the writings of another traveller, dating from 886/1481, their number seems to have diminished to some sixty families. A few years later, another Jewish traveller put the number of the Jewish community at about 25 families (cf. E. Ashtor, The number of Jews in mediaeval Egypt, in Journal of Jewish Studies, xix (1968) 8-12).

In the 13th century, the total population of the city was estimated at 65,000, which, however, decreased sharply in the middle of the 8th/14th century. In the years between 748/1347 and 751/1350, on several days people died at the rate of one to two hundred a day and the number rose to seven hundred at the height of the plague. The Dār al-Tirāz and Dār al-Wikālā were closed because of the city was estimated at 65,000, which, however, diminished to some sixty families. A few years later, another Jewish traveller put the number of the Jewish community at about 25 families (cf. E. Ashtor, The number of Jews in mediaeval Egypt, in Journal of Jewish Studies, xix (1968) 8-12).

In the 13th century, the total population of the city was estimated at 65,000, which, however, decreased sharply in the middle of the 8th/14th century. In the years between 748/1347 and 751/1350, on several days people died at the rate of one to two hundred a day and the number rose to seven hundred at the height of the plague. The Dār al-Tirāz and Dār al-Wikālā were closed because of the lack of manpower and the absence of commercial traffic. The markets and customs houses, too, ceased to function. The city, however, was able to survive this catastrophe and the population, once more, rapidly increased. Frescobaldi put its number at 60,000 (786/1384), while in the same year Simon Sigoll estimated the population at about 50,000. These figures, despite their variations show that the population was again on the increase. It is important to remember that the growth of the population of Alexandria was dependent, in the first place, on the development of the city's trade and was greater than that of any other city or region of Egypt, with the exception of Cairo where most of the army was stationed. As early as 788/1386, then, Alexandria was returning to prosperity after the plague.

In the medieval city, the central government, whose powers had accumulated in the course of time, was the source of authority. In the earlier Middle Ages, Alexandria had enjoyed a special position, as it had in former times before the Arab invasion. Henceforward, however, its governors were appointed by the central administration. Nevertheless, in these circumstances, the city remained either a polis, a self-contained administrative area, or was included in the western Egyptian coastal area (to which Libya also sometimes belonged). The governor of Egypt soon came to reside, for some of the time at least, in Alexandria. As a polis or provincial centre Alexandria had only in 737/1337 been administered by a Muslim. Not infrequently at this time, however, the financial and civil administration was given over to Copts. From the documents which date from the first century of Arab rule, it is apparent that Copts were also nominated as governors of Alexandria; thus, for example, the Christian Theodosius was appointed to this office by the Caliph Yazid b. Muʿawiya.

During the governorship of Ahmad b. Tūlūn (from 256/870), Alexandria was "independent". The special position of Alexandria lasted from that time until the 3rd/10th century and Grohmann rightly recognizes in this some reflection of the position in Roman law whereby Alexandria, as a polis, lay outside the kārā of Egypt. It is in this light that we must understand the division of the ʿAbbāsid budget for Egypt in 337/958 into Mīr and Alexandria, as reported by K. Reckendorf.

Under the Fāṭimids, the governor of Alexandria went even further towards taking on the role of the erstwhile Augustals by extending his authority over the province of Bubayya. On this point, Grohmann's observations are at one with the historical development of the city. His view that the Crusades served to diminish the importance of the city that an appointment as governor there should be understood as an indication of royal disfavour, is not, on the other hand, consonant with the facts. Certainly the city continued to lose its independent position after the fall of the Fāṭimids but from the commercial and strategic point of view it regained its earlier importance. Through the international transit trade the city became a market for East and West.

Some demonstration of all this is provided by the fact that up to about the 3rd/10th century a kind of public meeting was occasionally held in Alexandria concerning the acceptance by the government prelates or to choose a Coptic Patriarch. In the first half of the 4th/11th century the Coptic Patriarch had to transfer his seat from Alexandria to Cairo. In the later medieval period it was not unusual for the city to be given as an ḫādiʿ (q.v.).

The governor was a military official while the ḫādiʿ was both a civil official and a judge in the religious sphere. He is sometimes referred to in the chronicles as raʾīs al-madīna (town chief) and in times of crisis sometimes appointed for the city and established an amīr maʿā there; i.e., the governor of Alexandria had the same rank as those of Tripoli, Safad and Hamāt in Syria.

In Alexandria, the Mālikī school was prevalent. This resulted from the proximity to North Africa and the activity of the Maghribis and Spanish Muslims who settled in Alexandria in the later Middle Ages, driven before the Reconquista in Spain and the upheavals in North Africa. In the later Middle Ages, the ḫādiʿ 'l-ḥādiʿī was almost always a Mālikī. In a few instances the government choice fell on a Shāfiʿī. Nevertheless, the three schools, Mālikī, Shāfiʿī and Hanafī were all represented in the administration of justice. Several sultans saw to it, in addition, that foreign as well as native merchants had legal protection as far as their persons and goods were concerned. Thus, for example, it was said of the Sultan al-Nāṣir Muhammad b. Kalāwūn, with regard to the judge of Alexandria, Ibn Miskīn, that he supported a bạnūna in 757/1354 in opposition to his own official. Sometimes the diplomas of appointment for ḥādsīs give prominence to these responsibilities in respect of the merchants as well as the usual stipulations about the just treatment of citizens. The muḥtasib was ranged alongside the governor and ḫādiʿ with responsibility for the supervision of the market and those concerned in it, producers as well as retailers, though his powers were, de facto, restricted to the sphere of smaller transactions.

Alexandria was an important source of revenue for the state or rather for those in power. Besides the high duties paid by the Kārimīs and the foreign merchants, the state authorities made money from almost every transaction and every shop in the city. The state profited too from the mint, Dār al-Darb, where native and foreigner alike had their metal coined. Particular groups of participants in trade, such as money-changers, sailors, brokers, interpreters, auctioneers and donkey-drivers made good profits in this city and paid high taxes. Camel-drivers, or rather the leaders of caravans, had to pay their tax, the so-called Maks al-Manāḥī, outside the city where their camels were halted. As we have no statistics regarding this tax, we must be content
with a single example. According to the Kādī al-Fādil, the annual revenue of the city from duties came to 28,613 dinārs, not an exaggerated claim in view of other reports from the 14th and 15th centuries. The sultan’s divān levied some 50,000 dinārs in tolls, duties, etc. from ships entering Alexandria in 721/1321 and this, according to the text, did not even include all the ships that arrived. Fidenzo of Padua’s observation (dating from the 8th/14th century) in fact was given by a governor of Alexandria in the 9th/15th, that Alexandria was worth 1,000 frinti or dinārs a day to the sultan in the 8th/14th century. This, of course, was during the trading season. Al-Maqrīzī writes of a Frankish vessel which paid 40,000 dinārs duty on its cargo, in Alexandria, in 703/1303, an incredible sum when one thinks of the total naval fleet of a single Frankish merchant republic. It seems no exaggeration to estimate the total duties brought to Alexandria, for the state, by the foreign trade, at about 100,000 dinārs a year.

Alexandria was always an important centre for cloth manufacture. Its products reached as far as India. It is believed that much of the fabric donated by the popes to Italian churches in the 8th and 9th centuries was produced by workers in Alexandria. Besides the looms (for linen, silk, wool and cotton), buyūṭ al-ṣalt, there were also workshops for raw silk, buyūṭ al-kantsāzīn. The city housed a large public workshop for brocade, Dār al-Tirāz, which produced primarily for the luxury requirements of Friendly nations, which stood under Egyptian protection. Venice, as the leading commercial power, gained a second fundūk in the course of the 13th century. In addition, the merchants were able to rent a fundūk of their own, whenever a particular fundūk was assigned to them; otherwise, he might find accommodation in a private fundūk or khān. The western merchant was restricted to the fundūk designated for his country and to which he could bring his merchandise. After the establishment of these fundūks for foreign states, the trade of Alexandria was no longer simply a commerce of the coast. The foreign merchants enjoyed extraterritorial privileges [see Paris 1427]. As a result, these fundūks were administered by officials or consuls of the friendly nations which stood under Egyptian protection. Alexandria Muslims from Spain, North Africa, Mesopotamia, Syria and the neighbourhood of Egypt. Al-Nuwayrī, who lived in Alexandria in the 7th/14th century, has left us the longest account of the city that has yet come to light. But he was not as concerned with the trade of this cosmopolitan city as was al-Maqrīzī with that of Cairo. The short accounts which have come down to us, however, give us a clear and detailed picture of the markets of...
the city. First of all, it must be noted that the customs house with its 30 storerooms was not simply concerned with the imposition of duties and with harbour control but was also used for public auctions. The Dār al-Wikāla, too, served business in a special capacity. Notices of this Dār in Alexandria can be traced back as far as the 4th/10th century. It is the Dār Wikālat Bayt al-Māl which is meant, a public administration which ensured the imposition and collection of taxes for the head of state, supported state trade and took a decisive role as an intermediary, selling only, in principle, merchandise to the Muslim entrepreneurs. As in every major Islamic city, in Alexandria each essential trade had its own market. Among the most important markets in the city were the Sūk al-ʿAṭṭārīn and al-Bahār, the pepper and spice market, probably the centre of the Kārimī merchants in Alexandria. The Sūk al-Murdjāniya, the market of the coral-workers and of the dealers in coral, was one of the most important coral markets in the whole of the Mediterranean area. The coral was worked in Alexandria: in its home port, a pound of coral cost 3 silver dirhams; after being worked in Alexandria its price rose to three or four times this amount. The chief outlets in the south were Aden and Kallūt. The coral brought from Alexandria found good markets in the Ḥijāz, in Yemen, in India, and, particularly, in the Far East.

The linen trade had its own special sūk, the Wikālat al-Kittān, where dealers handled large transactions. The slave market of Alexandria was no less important than that of Cairo. The money-changers, fruit-merchants, druggists (perfumers), sellers of sugared almonds or nuts, confectionary, dried fruits etc. always found a ready market. Alexandria had, in addition, like Cairo, a Sūk al-Kashshāshīn (flea-market = bric à brac bazaar), like the so-called Funduq al-Djawkandar and Funduq al-Damāmni, which were private funduq undertakings. The city’s requirements of grain were met by imports supplementing home-grown supplies, as can now be shown from the documents. The bazaars of the candle and wax-dealers, like those of the dealers in wood, were especially important. Individual markets and bazaars were designated according to the race or nationality of the merchants. Thus, for example, the Sūk al-Aʿādīm was that of the Iranian merchants concerned, notably, with the import of silk fabrics and costly goods to Alexandria. Alongside these important and specialized markets and funduqs, Alexandria was provided with a number of lesser, more general markets where peddlers with their tables and stalls, tea-cooking vessels and saucepans sold their comestibles to the passers-by. Some dealers had old-established businesses on the Pharos peninsula and along the canal of Alexandria, where the ships entered, as well as in the town.

We should not overlook the fact that big business in the city was not completely monopolized by the state, nor confined to men; women too participated in commerce. We know of a woman of such standing among the merchants of Alexandria that she was known, as a result, by the nickname of Sitt al-Tudjādīr (lady of the merchants). She died of plague in 749/1348.

In Islamic history, political office and participation in business were by no means mutually exclusive. Leading members and high officials of the governments of Egypt were closely involved in big business. The organization of the Madījar al-Sulāṃī (state trade), supposed to have been founded in the time of the famine which occurred under the reign of the Fātimid Caliph al-Mustansīr, had in fact already existed and played a particularly important part during the Ayyūbid and Mamlūk periods. Besides slaves and wood, the Madījar imported iron and sheet metal, tin, silver and copper (later gold as well), and offered in return monopoly goods such as alum, natron, corn, flax, and later spices, sugar and soap. Egyptian mummies, too, found a ready market in Alexandria. Still, the principal line of business was the pepper trade. Frederick C. Lane has established that, before the rounding of the Cape of Good Hope, Venetian vessels loaded, on average, about 1,500,000 pounds of pepper a year.

The merchant always made a good living. No less a person than the renowned faṣīḥ and ascetic, al-ʿUrtūṣī, came to Alexandria to protest against the money-lenders. It was not just by chance that the Alexandrian moneychangers were in a position to lend the Sultan al-Nāṣir Muhammad b. Kalāwīn the sum of 10,000 dinār in the year 737/1337; sufficient proof, in itself, of the profitable nature of the business conducted by these brokers whose operations were not restricted to the changing of money.

Lively trade and flourishing crafts allowed the city to amass wealth. The “guilds”, or, more exactly, the social groups involved in trade, did not function as independent entities with certain rights, which would have permitted them to defend their rights against the aggression of the city governor or the central authority. In fact, it was the central government which kept the power of decision and solved their problems while promulgating the laws and the regulations according to the juridical principles of Islam. Although the form of government and religious ideology hemmed in the dynamic development of Alexandria, it was commerce, with its traditions, its methods and its “code of honour”, which determined the rhythm of city life. It is possible to construct a picture of attitudes prevalent among foreigner and native in the city and in regard to the city, not simply from the chronicles and treaties but from references in the most belligerent forms of literature like, for example, The Thousand and One Nights and Boccaccio’s Decameron, and hence to draw inferences as to forms of government, methods of taxation, and the sort of risks involved in business.

In Alexandria the state was the primary ruler and rule was exercised in the interest of the state rather than that of the community. There is no clearer demonstration of this than the revolt of 727/1326 and the events leading up to it. Heavy tax burdens led to a rebellion which was put down with the utmost severity. It is worth noting the penalties which the government inflicted on the Kārimī merchants (among them the sons of al-Kuwaik or al-Kawbak, a respected Kārimī merchant), as well as on the silk dealers and producers. In addition to the fines and confiscations which were exacted, totalling about 260,000 dinārs, the leaders of the revolt were crucified.

The diminishing power of the ruler and the weakness of the army in the city, nevertheless, came to be felt to the disadvantage of business and the execution of trade for, in troubled times, soldiers and mercenaries had extended their protection, ḍīmū, to those involved in business, for large sums of money. Alexandria came to concentrate primarily on long-distance trade. Those who conducted this trade, the government officials, the long-distance dealers or big businessmen, were far removed from the retail dealer with his shop in the bazaar supervised by the muḥāṣṣīb.
The early and later Middle Ages formed two clearly distinct periods in the religious and scholarly life of Alexandria. In the early Middle Ages, the Christian and Jewish elements were supreme. When the Arab conquest the Greek Patriarch was forced to leave the city, the Coptic Patriarch entered and the Copts supported the Arabs in their later struggle with the Byzantine Empire and fell in with their plans for expansion. This period prepared the ground for a new beginning, for the development of Islamic science —here a centre was established for the translation of the cultural works of antiquity which were of immense value, providing a basis for Islamic culture and its spiritual achievements. In respect of purely Islamic science, which, as al-Sakhawi maintained, began first with al-Silafl, Alexandria was dependent on Fustat and Cairo. At that time, men journeyed to the capital of Egypt to study the Koran and hadith. The waizir Rildän b. al-Walakhshī founded a Sunna madrasa in Alexandria in 531/1137 (before the end of the Fatimid period) in which the fakih Abū Tahir b. ʿAwi taught hadith. Scarcely fifteen years later al-ʿAdil b. al-Sallār founded a second Sunna madrasa in Alexandria for the famous al-Haftī al-Sakārī. As is well known, Saladin himself, after his assumption of power, had a school, a hospital and a hostel built for the Maghrībīs, where they could find free lodging, teachers of various subjects, medical care and financial support.

The sources refer repeatedly to the names of various rūbāt in the city, while the fadāʾil literature on Alexandria expounds the strategic importance for Islam of this border harbour. It was not only statesmen and warriors, however, who contributed to Islamic culture, the merchant too played a part. Several wealthy merchants of Alexandria were famous by virtue of their generosity and donations. They built mosques, schools and other religious foundations and encouraged Muslim learning. From the circle of famous Muslim Kārim merchants of Alexandria we may take as an example Abū al-Hāfiẓ al-Rudfī on the bank of the coast Dār al-Hadith al-Takritiyya, a place of learning for hadith and Shāfiʿī fikhr (the school is known today as the Masjidī Abī ʿAlī). The contemporary sources write with delight of the Kārim merchant family of Kuwayk who could provide the cost of building a mosque or school with the profits of a single day's business.

Of the famous mosques of Alexandria, mention should be made of the Masjidī al-ʿUmār or Dīlamī al-Gharbī (the former Theonas Church) and the Masjidī al-Djuyyūsī or al-ʿAṭṭārin (formerly the Church of St. Athanasius). Various details are known too about the rūbāt of the city such as the Rūbat al-Wāṣifī (d. 672/1274), to the east of the mosque of Abu Ḥāgitī. Abu ʿAbd Allāh al-Hakkārī (d. 683/1284), built a rūbāt which was called after him. He was also buried nearby. Towards the end of the 7th/13th century the Khānsāk, Blīf al-Muḥsinī, was built by the dāruṣšāf of the city.

Bibliography: The materials for a history of medieval Alexandria are widely scattered. Contributions are to be found in almost every one of the principal Arabic histories of Egypt: see the article مساجد. To be noticed particularly are Ibn ʿAbd al-Hakam (c. 835/1430) ed. Courier, New Haven 1922; al-Masʿūdi, Murūdī; BGA, i-vii; al-Iddrīsī, ed. Dozy and De Goeje, Leiden 1866; Ibn Dūbayr (GMS, v); Yāḥūt; Abū al-Latif, Kitāb al-Jāmā wa ʾl-ʿibār, Oxford 1800, Cairo 1232, tr. de Sacy, Paris 1810; al-Maṭrifī, Ḥikāt; Ibn Ṭālik, Badāʾ ʿal-fudārī fī waḥādī ʿal-dahūr; al-Balawi, Kitāb ʿAlī Fīl, 2 vols., Cairo 1287; al-ʿAbbārī, Al-Rība al-maṣhamīyya, ed. Mub. al-Fāṣīl, Rabāt 1968 (see also W. Hoenerbach, Das nordafrikanische Itinerar des ʿAbdari, in Abhandlungen für die Kunde des Morgenlandes, xxv/4 (1940)). The Christian writers Severus Ibn al-Makaffa and al-Malik (qq.v.) supply a few facts not to be found elsewhere. Benjamin of Tudela (many editions) has a brief but important notice. European travellers and accounts in European languages include: Pococke (1737), Volney (1785) and others.

Modern works: Description des mosquées et des monuments archéologiques d'Alexandrie, M. Blomberg, Bulletin de la Société Archéologique d'Alexandrie (BSA), viii (1905); ʿAll Pāghā Mubārak, al-Khīāt al-djīdātīa, section vii; M. Asin, News, ii (2nd part); 270 ff., contains a full description of Alexandria in 1800, and, Planches 84–91, map 1:10,000, views and plans, also Antiquités, tome ii (2nd part) 270 ff., contains a full description of Alexandria in 1800, and, Planches 84–91, map 1:10,000, views and plans.

ISKANDARON, ALEXANDRETTA, a port in the eastern Mediterranean, the ancient 'Ἀλεξανδρεία κατὰ Ἰσσόν, the Ἀλεξάνδρεια ἢ μικρὰ in Malalas (ed. Bonn, 297), known to the Arabs as al-Iskandariyya or Iskandaruna (diminutive Aramaic form); from this last form came the Ἀλεξανδρεία of Skylitzes (ii, 679) which in its turn gave rise to Ἀλεξάνδρεια (Michael Attali, 120; Zonaras, iii, 691; Georgius Cyprius and the list of bishops in Byz. Zeitschr., i, 248). The diminutive Romanised form Alexandretta was already in use among western pilgrims during the Middle Ages. Iskandaruna (which must not be confused with another place of the same name, situated between Tyre and Saint-John of Acre) formed part of the diwān of Kinnasrin; the castle is said to have been built under the caliph al-Wāhid (Abu `l-Fā'id, ed. Reinaud, ii, 233). During the wars between the Byzantines and the Arabs, the town was captured by the former on several occasions (Muralt, Chronogr. Byz., a. 1068; Ibn Hawkal, index) and in the time of Abu `l-Fā'id it was deserted. Later it regained some importance as a port for the then flourishing city of Aleppo, though it was unable to develop on a very large scale. It was the centre of a bādā' and at the beginning of the 20th century it contained from 10 to 15,000 inhabitants. The population of Alexandretta (descendants of the Turks of Antioch) passed under the exclusive domination of Syria. Negotiations between France and Turkey were then started, and the matter was brought before the Council of the League of Nations; a status for the Sandjak was laid down in the Geneva Agreement of 29 May 1939 and brought into force on 20 November, although the Syrian Chamber had rejected it, and the Turkish flag was hoisted in Alexandretta. After some disturbances, a Turkish notable was elected president of the Sandjak, which from then on took the name Hatay, and new Franco-Turkish negotiations finally led, on 23 June 1939, to the cession of the Hatay to Turkey.

ISKENDER BEG, Ottoman name for GEORGE (Gjergj) KASTROTI (b. 808/1405, d. 872/1468), in Western sources Scanderbeg, etc., hero of the Albanian "resistance" to the Turks in the mid-15th century.

By the first half of the 15th century the Kastroti family, with their centre at Matia, had supplemented the Bashas as the most influential power of Northern Albania. They had acknowledged Ottoman suzerainty since 787/1385; Iskender's father John/Ivan (in Ottoman sources Yovan) had been a buffer between the Venetians installed in Scutari (Hochodra [q.v.]) and the Ottomans, ready to flee to Venetian protection in the event of an Ottoman attack and
dependent upon Venetian goodwill for the crucial import of salt. A document in the archives of Topkapı Sarayi (E 6665) shows that he had attempted to seize Kruje/Croia (T. Akçahisar) to the south of his territories, which, for a time under Bâyêzîd I and continuously since 818/1415, had been the centre of an Ottoman subaşılık.

The statement of Barletius that his son George Karriota had been sent to the Ottoman palace as a hostage at the age of nine is confirmed by Ottoman historians (Tursun Bey, Idrîsî). During the war with Venice of 826/1423-833/1430 Ottoman pressure was increasingly put upon his father John (N. Iorga, Notes et extraits...), who, in Radjab 831/April 1428, informed Venice of his growing anxiety that his Muslim son would be ordered by the sultan to occupy his territory. The son, raised in the palace as an iç-çânhâ was, by the normal procedure of ilhama [see Glülâm], granted a timâr near to his father's territories of "Yuvan-êli" (Topkapı Sarayi Archives, E 6665), and in 824/1423 he was appointed Subaşı of Akçahisar (H. Inalcîk, ed., Suret-i defter-i sancah-i Arvanid, timâr no. 314). In the same year nine villages of his in Yuvan-êli were made over to Andre Karlo (ibid., no. 335). His father's centre of Mus (Mysia) was made a zîmât, and Iskender asked for it to be granted to (Topkapı Sarayi Archives, E 6655, undated), but a sanджâb-begi (? of Okhri) objected to the granting of this important district, adjacent to the sea, to John's son. This refusal may have been one of the reasons for Iskender's throwing off his allegiance to the sultan. The extension to areas of Albania of the Ottoman timâr-system had induced various prominent seigneurs in the south—Ghin Thopia and, especially, George Araniti—to revolt (from 833/1431), and Iskender joined them in Shâwwâl 847/December 1444. After Ottoman authority was weakened by the battle of Izdâlî (Zlatîca) (3 Ramadan 847/25 December 1443), members of the former ruling families were encouraged to attempt to recover their lost lands and independence (Chalcocondyles, ed. Lorga, ii, 145). The story that Iskender, fleeing Buni, with a beglerbegi (? of Rûmî) who had been defeated near Niš, seized Akçahisar (Gegaj, 45-6) is probably true (cf. Ghasavînîname-i Sultan Murâd); he certainly threw off İslâm and reembraced Christianity (see especially the contemporary historian Tursun Bey, ed. in TOEM p. 136), to be known henceforth to the Ottomans as "İskender" (treacherous) Iskender". On 11 Dhî l-Ka'da 847/1 March 1444, under the patronage of Venice, he summoned the Albanian leaders to a meeting at Alessio (a typical Kuvend in accordance with Albanian tribal custom, see M. Hasluck, The unwritten law in Albania, Cambridge 1954, 148), and was there recognized as the leader of the struggle against the Ottomans. The pope later recognized him as a crusading hero; in the 19th century Albanian nationalists depicted him as a national hero working for the unification and independence of his homeland; and Venice regarded him as a valuable condottiero. In reality, he was a combination of Albanian tribal chief and medieval feudal lord, the other Albanian leaders being bound to him primarily by links of kinship. The importance which he attached to his own family is revealed in the terms of the alliance with the King of Aragon, made with "Georgio Caristiotti, Sd dela dita citate de Croya e de soi parenti, baruni in Albania" (Radonić, no. 38). Hence it is not surprising to find other Albanian lords frequently allied with Venice or with the Ottomans against him. Since 818/1415 the introduction of the Ottoman timâr-system and tax-structure had caused widespread discontent among both the feudal families and the mountain tribesfolk; Iskender was merely taking over, in Northern Albania, the leadership of this movement of revolt, favoured, however, unlike his predecessors, by the support of the pope, the King of Naples, and Venice. He was able to muster a following of perhaps 8-10,000 men. His own numbering no more than 2,000 (Gegaj, p. 125); he owed his success to guerrilla tactics, based on a few fortresses in remote mountain regions (Stelush, Letterella, and especially Kruje, his capital), these fortresses being held for him by troops, trained in the use of firearms, who were provided by his foreign allies, although he could rely on some revenue from his flocks of sheep and the trade in salt.

His long struggle with the Ottomans—maintained over a quarter of a century—falls into several phases.

Until 852/1448, the Ottomans were content to ignore him. In this period he fought against Venice over the possession of Dagno (851/1447), and indeed there are indications that he co-operated with local Ottoman forces (the sultan also claiming this territory) (Iorga, op. cit., ii, 277; Venice, it should be noted, still regarded him as a vassal of the sultan: op. cit., ii, 226). He abandoned his claim to Dagno by the treaty signed on 4 October 1448. In the summer of 852/1448 Murâd II's army took Svetigrad (Kodiadil Hisâr) ('Aşkîpaspazhâzâde 119 and the chroniclers dependent on him erroneously relate these events to Akçahisar), and so opened the way into northern Albania. Murâd then laid siege to Kruje, but was obliged to withdraw to Sofya by Hunyadî's invasion of Ottoman territory.

In 853/1449 an attempt by Iskender and Môs Dibra to re-take Kodiadîk was repulsed, and in the following summer Murâd again besieged Kruje. The fortess held out, and Iskender, retreating to the mountains, harried the besieging troops. The abandon-ment of the 4th month siege made Iskender the hero of all Christendom, and Pope Nicholas V called to the Christian camp at Kâsim, the son of Iskender and other Albanian leaders were also receiving money subsidies from Alfonso, Iskender's share being 1500 ducats). This arrangement weakened Iskender's authority in Albania, and Alfonso's rival Venice and the Ottomans were able to induce some of the Albanian chieftains to come over to them; thus Pavlo Dukagin, who in 853/1449 had been proclaimed a rebel and deprived of his timâr, recovered it in Safar 855/March 1451 (see Sâret... Arvanid, no. 154), and other members of this family threw in their lot with Venice. Môs Dibra, Gjergj Balsha and Iskender's nephew Hamza went over to the Ottoman side. In 857/1453 Iskender visited Alfonso in Italy. In the summer of 859/1455, assisted by about 2000 Neapolitan troops, Iskender besieged Berat (Belgrade), but a relieving force under Evrenos-oglu İsa Beg defeated them,
the Neapolitans being killed almost to a man (to Sha'bān 859/26 July 1455). Although Iskender's biographers speak of a great victory in the next year (the Ottomans losing 10,000? men), Mois Dibra and Hamza once more went over to the Ottomans and the fortress of Modrīć (in the Dibra region) was sold to the Ottomans. This defection probably arose from Iskender's attempts to win control of the territory of the eastern Albanian chieftains and to extend his authority over them. When in 865/1465 a certain Jâz Beg (probably the son of Ibars Beg of Ūsküp) marched against Kruja, Iskender attacked his camp at Albule-
na near Mount Tumenish and took Hamza prisoner; this success was celebrated in Italy as a great vic-
tory: the pope proclaimed him the "Captain-General of the Holy See" (Radinčić, no. 163) and presented
him with 500 ducats.

The death of Alfonso in 862/1458, however, de-
prived Iskender for a time of foreign support (the new king Ferdinand wanted him to come to Italy to aid him against rebels), so that in 864/1460 he and the other Albanian leaders were obliged to recognize Ottoman suzerainty. By his treaty with the sultan (which he called "treuga per tre anni", see V. Ma-
kul, Monumenta Hist. Slav. Merid., ii, Warsaw 1874, p. 123) he agreed to send troops to join Otta-
man campaigns, to pay an annual tribute (in sheep) and to supply lads for the Janissaries (Critoboulos, Eng. tr. by C. T. Riggs, Princeton 1954, p. 147, where the date given is 1459; cf. Neghrli, ed. Tae-
schner, i, 201). In 865/1461 Iskender, as the loyal vassal of Ferdinand, went to aid him against the rebels, returning to Albania on 11 February 1462. His truce with the sultan was renewed on 7 Sha'bān 867/8 April 1463 (see Gegaš, p. 174), but that sum-
mer, with the outbreak of the Ottoman- Venetian war, Iskender found a new patron and ally (for the text of his pact with Venice, of 20 August 1463, see Radinčić, no. 248). The Ottoman sources (Tursun, p. 123; cf. Critoboulos, 147) emphasize Iskender's "breaking of faith" as the reason for the Ottoman operations against him from 868/1464 onwards. By permitting Venetian troops to garrison Kruje he had created a real threat to the Ottoman forces in Albania. In 868/1464 and 869/1465 the neighbouring sandjak-
begiš, and especially the governor of Gjiroka, Balaban, launched swift attacks; Iskender seems to have counteracted them by guerilla raids launched from the mountains, although the leading Albanian chieftains, including Mois Dibra, were taken. Mehmed II, who since 867/1463 had been intending to march against Iskender (Tursun, p. 122), finally moved in the spring of 871/1467 in the fethiye which he sent to his son Bāyezīd (N. Luqal and A. Erzi, Münzed Memaus, Istanbul 1956, 65-4), he announced that the campaign had been undertaken because of the Albanians' "breach of faith", that he had taken six important "breach of faith", that he had taken six important

letius (Barlezeio), Historia de vita et gestis Scanderbeg Epicrioteran prinicipis, Rome (?) 1510 (for translations see Pétrovitch, op. cit. above; for the character of the work see F. Pall, Marino Barletius uno storico umanista, in Mladene d'histoire générale, ii (Cluj 1958), 135-319). References in the Ottoman chronicles are assiduous, for Ex-
ISLĀH (A.), reform, reformation,
1. THE ARAB WORLD
In modern Arabic, the term *islāh* is used for "reform" (cf.: *RALA*, xxi (1386/1966), 351, no. 15) in the general sense: in contemporary Islamic literature it denotes more specifically orthodox reformism of the type that emerges in the doctrinal teachings of Muḥammad ʿAbdūh, in his *writings of Raḥīl Riḍā*, and in the numerous Muslim authors who are influenced by these two masters and, like them, consider themselves disciples of the Salafiyah (see below). *Islāh* will be examined under the following general headings: A. Historical; B. Fundamental principles; C. The principal doctrinal positions; D. *Islāh* in the contemporary Arab world.

A. HISTORICAL. — Background. — The idea of *islāh*, so widespread in modern Islamic culture, is also very common in the vocabulary of the *Kūrān*, where the radicals *ṣ-l-b* cover a very wide semantic field. Amongst the derivatives of this root employed in the *Kūrān* are: a) The verb *Islāba* and the corresponding infinitive, *islāh*, used sometimes in the sense of "to work towards peace (*ṣālīḥ*)", "to bring about harmony", "to urge people to be reconciled with one another" and "to agree" (cf.: II, 228, IV, 35, 114, XVI, 9), and at others in the sense of "to perform a pious act (*ṭāmal al-ṣālīḥ*)", "to perform a virtuous act (*ṣalāh*)", "to behave like a holy man (*ṣālīḥ*, plur. *ṣālīḥīn-ṣālīḥīd*)" (cf. II, 220, IV, 128, VII, 56, 85, 142, XI, 46, 90); b) The substantive *musāliḥ*, plur. *musāliḥān*: those who perform pious acts, who are saintly in spirit, who preach peace and harmony, who are concerned with the moral perfection of their neighbours, and strive to make men better. It is precisely in this sense that the modern Muslim reformists can be defined, reformists who proudly claim the title of *musāliḥān*, upon which Revelation confers a certain prestige (cf. *Kūrān*, VII, 170, XI, 117, XXVIII, 19).

The adherents of *islāh* consider themselves in the direct line of the reformer-prophets whose lives are quoted as examples in the *Kūrān* (cf. especially *sūras* VII, X, XI, XX); but they claim to be influenced above all by the mission of the Prophet Muḥammad, whom they consider to be the Reformer par excellence (cf. al-Ṣāhīḥ, May 1939, 183: *Muḥammad, al-musāliḥ al-aṣ'ām*). Thus *islāh* is deeply rooted in the basic soil of Islam, and cannot therefore be viewed solely in relation to the intellectual trends that appeared in the Muslim world at the beginning of the modern period.

2. THE HISTORICAL CONTINUITY OF ISLĀH.— In so far as it is on the one hand an individual or collective effort to define Islam solely in relation to its authentic sources (i.e., the *Kūrān* and the *Sunna* [q.v. of the Prophet]) and on the other an attempt to work towards a situation in which the lives of Muslims, in personal and social terms, really would conform to the norms and values of their religion, *islāh* is a permanent feature in the religious and cultural history of Islam. This two-fold approach characterizing *islāh* is quite justified from a *kūrānīc* point of view. For a) Islam is simply that which Revelation contains, as it is transmitted and explained by the Prophet (see below: *The return to first principles*). b) To work for the Good, and aspire to improve (*ajlabah*), is simply to attempt to restore Islamic values in modern Muslim society. From this point of view, *islāh* can be seen as an intellectual, and frequently practical, response to the injunction of "commanding what is good and prohibiting what is evil" (see on this subject the two fundamental references, *Kūrān* III, 104, 110). This canonic obligation (ṣarāṣ, farāṣ) — a major obligation on the head of the Community (imām) — is continuously invoked by the reformers, both as a justification for their action, and as an appeal to the faithful, who are also bound, each according to his social standing and means, to play his part in "commanding the good". (On this important question of Muslim ethics please the classic text of *al-Ghazālī* in *Iṣlāh al-dīn* chap.: *Kitāb al-amr bi 'l-ma'rūf wa 'l-nabīya an al-munkar* trans. L. Bercher, *De l'obligation d'ordonner le Bien et d'interdire le Mal selon al-Ghazālī*, in *ILBA*, 1st and 3rd trim. 1955; the neo-Ḥanbalite doctrine (so illuminating for reformist teaching) in H. Laoust, *Essais sur les doctrines... d'Ibn Taymiyya*, 601-5; the position of Muḥ. ʿAbduh in: *Risālat al-tauhid*, 113 (Fr. trans., 121), and *Tafsir al-Mandār*, ix, 36; and a complete account of the question by Raḥīl Riḍā: *bid. iv*, 25-47 on *sūra* III, 104, and 57-64, on *sūra* III, 110; L. Gardet, *Dieu et la destinée de l'homme*, Paris 1967, 445 ff.).

Like all Muslims who cherish an ideal of the pious and virtuous life (*ṣālīḥ*), the reformists like to refer to the many *kūrānīc* verses which praise "those who do works of *islāh*" (VI, 45, VII, 170, XXVIII, 19) and particularly to XI, 90, which they hold to be the perfect motto of Muslim reformism: "Mon perfide... Mon unique désir est de vous rendre meilleurs" (trans. Savary)—"Je ne veux que réformer" (trans. Blachère)—"I desire only to set things right" (trans. Arberry). These scriptural statements are illustrated by the tradition that the Prophet intimated that Islam would need to be revitalized periodically and that in each century Providence would raise up men capable of accomplishing this necessary mission of moral and religious regeneration. (On this tradition, cf. Wensinck, *Handbook*, 204 b: "At the end... ").

The Community has never lacked men willing to assume precisely this prophetic mission. In its early stages and also in its later developments, *islāh* has been identified with the service of the *Sunna*, which is thought to provide the best model for the Islamic way of life (cf. *Kūrān*, XX, XII, 22), as well as supplying the essential elements which lie at the base of the earliest orthodoxy of Islam. The *Kūrān* is without doubt the most important point of reference for modern *islāh*; yet, in its earliest manifestations, it appears to be above all the expression of a total allegiance to the Prophet's Tradition. This active, sometimes militant, allegiance is best expressed in its defence of the *Sunna* against "blameworthy innovations" (*bidaʿ* [q.v.]) which are judged incompatible with the objective facts of the Book, the unquestionable teachings of the Prophet, and the testimony of the "pious forefathers" (*al-salaf al-ṣālīḥi*). Upholders of strict primitive orthodoxy were particularly aware of the increase of *bidaʿ*: a) at the dogmatic level: cf. the speculation nurtured by the dawning rationalist theology (*ḥalām* [q.v.]); *kūrānīc* excesses of Bāṭrīn tendency: the preachings of extremist Shiʿism; and b) in the sphere of worship: asceticism, excessive piety, paraliturgical practices inspired by Sūfism (*taṣawwuf* [q.v.]), all of which they believed indicated a spirit of exaggeration (*ghulāva*) contrary to the essence of Islamic spirituality. Such innovations were held to be blameworthy because they were looked upon as sources of error and seeds of heresy; they therefore seemed to constitute a serious threat to the confessionally unity and moral and political cohesion of the *Umma*.

The historical development of *islāh* must, it seems,
be related to that new spirit which gave rise to ḏiḏa‘ throughout the cultural evolution of the Community. The following are a few milestones:—1. The political and moral crisis following the battles of Ṣiffin (77/695 [g.v.] and Nahrawan (38/658 [g.v.]) engendered ardent political and religious polemics between the Khawārīdī [g.v.] and the Shī‘a [g.v.] on the one hand and the supporters of the established authority on the other. In this climate of schism the doctrinal tendencies which classical Sunnism deprecated as heretical to a greater or lesser extent began to grow (cf. al-Ṣāhārastānī, Mīlā‘ī, i, 27). The period of the Prophet’s companions was hardly over (ca. 90/708) when the theologico-philosophical speculations which were to disturb the Muslim conscience for many years began to appear.—2. At the end of the 1st/7th century, the general evolution of the Muslim community was sufficiently advanced for the unity of faith and the community’s cohesion to their original purity and cultivated a sort of idealization of the primitive Islamic social organization (cf. his Ẓawā‘il, etc.). Despite its dominant position (at least in theory), official Sunnism was neither dynamic nor homogeneous enough to condition effectively the moral and political behaviour of the new generations. Many factors (especially sociocultural and political ones) gradually weakened the religious and cultural impact of the Sunna, whose sociological base was anyway being diluted among the diverse populations of the vast empire. It is worth noting in this respect the geographical dispersion and gradual extinction of the main tendencies which classical Sunnism denounced as heretical to a greater or lesser extent began to grow (cf. the ḥudūdī: “Islam was born alone, and will become alone again, as at its beginning. Happy the solitary men. Those are they who will come to reform that which will be debased after me” (cf. Wensinck, Handbook, 114 A. “Originated”).—4. Ahmad b. Ṭāmbal (d. 344/955 [g.v.]) represents a strongly entrenched millenarian group of pious forefathers (1ābī‘ūna‘) and in tune with the defenders of the Sunna and its community’s cohesion, that modern Muslim reformers who will come to reform that which will be debased by a combination of internal and external factors; most decisive of these were:

3—islāh in modern Islam—Viewed as part of the historico-cultural process outlined above, the modern reformism of the Salafīyya is an exceptionally fruitful period. In the breadth of its first manifestations, the diversity and stature of the talents it employed, the energy of its apostolate, and the relative speed of its diffusion in the Arab world and even far beyond, modern Muslim personalities living in the second half of the 19th century. It is a result of the cultural movement born of the renaissance ( wnā‘a [g.v.]) which marked the reawakening of the Arab East (along with that of the Muslim world in general) as a consequence of the influence of Western ideas and civilization. This awakening has been interpreted as a direct result of the actions of several forceful Muslim personalities living in the second half of the 19th century. Those most frequently mentioned are Ẓāmīl al-Dīn al-Aḥfānī (1859-97 [g.v.]), Muhammad ʿAbduh (1849-1905 [g.v.]) and Abd al-ʿRāhmān al-Kawākībī (1854?-1902 [g.v.]). However, the awakening of Arabo-Muslim consciousness was preceded by a period of gestation which was encouraged by a combination of internal and external factors; most decisive of these were:

a) The pressure of Wahhābīsm [g.v.], which aimed (initially in Arabia) at restoring Islamic piety and ethics to their original purity and cultivated a sort of idealization of the primitive Islamic social organization, that of the “pious forefathers” al-salaf al-ṣāliḥ (hence the tendency called Salafīyya). Despite their zeal (which sometimes seemed excessive) in defence of their conception of the Sunna, their intransigence and their occasionally intolerant strictness, the Wahhābīs never lost sight of the need for a moral and political renewal of modern Islam. While
appealing to their co-religionists to recognize only the authority of the Qur'an and the Sunna in matters of religion (din), they urged them to abandon superstitions inherited from the Middle Ages and countered the general tendency to fatalistic resignation, reacting against the spirit of tabâhû [q.v.] which predominated at that time (end of the 18th-beginning of the 20th century). Through these efforts and their attempt to modernize the values of primitive Islam, the Wahhâbîs played an important role in the evolution of modern Islam, thus deserving a place among "the first of those who worked together towards the Arab renaissance" (L. Massignon, in RMM, xxxvi (1918-19), 325).

b) The development of the printed word through the press and publishing, principally in the Arabic language. In this respect the remarkable role played by the Egyptian printing house at Būlāk [see مَطْرِبَة] must be stressed. From 1822 onwards, this became one of the most important tools of the Arab intellectual renaissance. The Egyptians and Syro-Lebanese contributed to the growth of a serious and informative press which reflected the political and cultural aspirations of the nationalist and pro-reformist sectors of the population. (Cf. 'Abd al-Lâhī Khâbâw, American interests in Syria 1890-1902, Oxford 1966, 247-53; Ph. K. Hitti, Lebanon in History, New York 1967, 452-64).

c) The influence of Western culture. European penetration into the Arab world was the first important turn of the 19th century soon made itself felt, especially at an intellectual level. Cf. H. Pèrès, Les premières manifestations de la renaissance littéraire arabe en Orient au xixe siècle, in AIEO Algiers (1934-5), 233-56; A. Hourani, Arabic thought (Bibl.); the succinct statement of the problem by Husayn Mu‘nis in La renaissance culturelle arabe, in Orient, nos xlii-xliii (1967), 16-27; J. Heyworth-Dunne, An introd. to the hist. of education in modern Egypt, London 1939, reprinted 1968, 96-287.

d) The liberal evolution of the Ottoman regime. This first occurred under the sultan 'Abd al-Majîd I [q.v.] who inaugurated an era of the evils that the era of reforms (tanṣimat [q.v.] with the Khâfî-i sherîf of Nov. 3 1839 which granted his peoples the first imperial charter guaranteeing civil liberties. Despite the opposition of the traditionalists, these Western-inspired reforms were progressively put into effect, particularly after the Khâfî-i hûmmîyân of Feb. 1 1856, which finally opened the Near East to the ideas and influences of the modern world. Cf. Tâzîmîyat; F. M. Pareja, Islamologie, 339 ff., 583.

e) The structural renovation of the Eastern churches and their awakening to Western spirituality and ideas. Cf., e.g., on the exemplary case of the Uniate churches, the monograph by Joseph Hajjar, Les Chrétiens uniates du Proche-Orient, Paris 1962. As well as the renewal of local Christianity, thanks to a favourable concourse of religious and diplomatic events, the energy of Catholic and (above all) Protestant missions must be taken into account. On these missionary activities on Islamic soil, see the important material in RMM, xvi (1911), A la conquête du monde musulman (1 vol.); Kenneth Scott Latourette, A hist. of the expansion of Christianity, vi: The great century (1800-1914), London 1944, chap. II (Northern Africa and the Near East), 6-64; A. al-Taâbî, American interests in Syria, 316-24.

This missionary activity did not simply provoke a defensive reaction in the Muslim world. In the eyes of many 'ulâmâ, it was exemplary from two points of view: it was a remarkable example of zeal in the service of a faith, and the actual content of its preaching was of value. Thus, in imitation of the Protestants, the reformists attached paramount importance to the Scriptures, though without ever losing sight of cultural needs and working towards an ethical and spiritual renewal of Islam. At the same time they aimed at the social and intellectual emancipation of the Muslim population by tirelessly advancing the popularization of modern knowledge.

These different factors (which must be placed in the general context of the Eastern question) gave rise to the intellectual ferment which led to the nahdâ. After centuries of cultural stagnation, the Arab renaissance provoked a lively intellectual curiosity in the East. From the beginning of the 19th century, the Arab elites began to acquire modern knowledge, some through translations, others by direct contact with European scientific culture and techniques. A decisive role was played by Arab student missions in Europe, by Western schools (religious and secular) in the Near East, and by national institutions organized on the European model. Cf. on this subject: C. Brockelmann, S II, 730 f.; Djurdjî Zaydâyî, Tavâhî idât al-taghfa al-arabiyâ, Cairo 1914, iv 186-217; Jâk Tâdîji, 'Arabat al-târîqat fi misr al-âmm (Cairo 1944); An important study by J. Heyworth-Dunne, An introd. to the hist. of education in modern Egypt; Ph. K. Hitti, Lebanon in History, chap. xxxi.

For Arab writers this intellectual activity was accompanied by a historical and sociological enquiry in an attempt to analyse their social and cultural situation in order to determine the exact causes of their backwardness, naturally with a view to remedying it. This is the dominant theme of articles in al-'Urwa al-wuthîkha (1884), then in Manâr (from 1898 on), especially those by Rashîd Ri’dâ and Muhammad 'Abduh (cf. for instance, the series of articles in vol. v (1902), under the general title: al-Islâm wa l-Nafrâmilyya ma‘a l-Sim wa l-madâmîyya (136 p.). This is also the central topic of Ummat al-târîkh, in which al-Kawâkibî attempts a precise diagnosis of the general indolence (istâdâr) which characterized the Muslim community at the end of the 19th century (cf. the 7th session, 109 ff. passim); on the theme of the "backwardness" of the Muslim peoples, see also two accounts: Mu‘âammad ‘Umar (d. 1337/1918), Ḥâdhîr al-mîsârijyin wa-sirr ta‘ākkurîshim, Cairo 1320/1902; Shāhîd Arslân, Limâmâ al-'akhkharâ l-Muslimân wa-l-imâmât âkâh dâma ghayr al-râkîm (Cairo ed. 1939).

The situation of Islam in the modern world thus became one of the most important themes in reformist writings. After Ernest Renan’s famous lecture on L’Islamisme et la Science (Sorbonne, March 29 1883) and the subsequent controversy between Renan and Djamâl al-Dîn al-Afghâni (cf. on this subject Homa Pakdaman, Dîmâmd-Ed-Dîn, 81 ff.), one of the major preoccupations of reformist authors was to refute the thesis that Islam is contrary to the scientific spirit and can thus be held responsible for the cultural backwardness of the Muslim peoples. “We wore out our pens and our voices”, cries Rashîd Ri’dâ “through writing and repeating that the misfortunes of Muslims cannot be blamed on their religion, but rather on the innovations that they have introduced into it, and on the fact that they ‘wear’ Islam like a fur coat turned inside out” (Mandr. iii (1900), 244). Cf. also the pleas of Muhammad ‘Abduh, al-Islâm wa l-Nafrâmilyya, and Muhammad

Having established their view of the situation, the reformists planned ways to stir up a new spirit in their co-religionists and to arouse in the Community the will to break out of its cultural and social stagnation. For this purpose, they continually referred to the kuru'anic verse: "Allah althereth what is in a people until they alter what is in themselves" (cf. al-iments, no. 371 (Sept. 1884), ed. repr. by Rashid Ridj in his *Tafsir*, x, 46-52; Muwammad 'Abdul, *Risalah al-tawfiq*, 174 (Ar. trans., 121); Rashid Ridj, *Tafsir*, x, 45-5, on sura VIII, 54). From this point of view, reformist thought seems to have crystallized around the idea of improvement (isldkh) of the existing situation. To achieve this goal, the adherents of isldkh advocated a struggle against those religious forces (in particular the brotherhoods) and social groups (conservative and traditionalist forces) which they saw as the incarnation of obscurantism. They also supported the reform of archaic teaching methods and courses and the popularization of scientific disciplines and modern techniques. Since they had no training in these last two fields, the reformists could do no more than stress the usefulness of Western sciences and techniques as essential instruments for the material and intellectual progress of the Muslim peoples. However, they devoted the greatest and most effective part of their efforts to action in the moral and social fields, where they had more ready access to an adequate vocabulary.

Reformist appeals for social and intellectual evolution (*takhaddum, laraqdi*) concentrated on the need to improve, correct, reorganize, renovate and restore: all these infinitives corresponding, grosso modo, to the different meanings of the *madar*, isldkh (cf. Lane, i/4, 1714: *SLH*). From then on isldkh became a sort of leitmotiv in reformist literature. In the texts of Muwammad 'Abdul, for example, we frequently find this term used as the mark of an impelling idea even in his earliest writings; cf. his first articles in the paper *al-Ahrdm* (1st year, 1876) reproduced by Rashid Ridj in *Ta'rikh al-ustawd al-imdm*, ii, 20, 22, 34; his articles in the official paper *al-Wafyf* al-misriyya, 1880-1 (ibid., 175-81). Isldkh also appears at every opportunity and in its different meanings in the review *al-Manar* (whose first no. dates from 22 Shawwal 1315/16 March 1898). We find, for example, the following usages: *al-isldkh al-dni wa l-iddiyma* (*"religious and social reform"*), i (1898), 2; *isldkh huwd al-7im wa-tarbisht al-ta'lim* (*"improvement of textbooks and reform of teaching methods"*), ibid., 11; *isldkh dakhilyiyati al-mamlaka* (*"reform (or reorganization) of the internal affairs of the Empire"*), ibid., 736; *isldkh al-nufus* (*"regeneration of souls"*, ibid., 737); *isldkh al-baqda asas al-isldkh* (*"law reform, as a basis for general reform"*), ibid.; in the editorial of the 40th no. (1898), Rashid Ridj calls for a "renovation from the pulpit eloquence" (*isldkh al-masabha*); in no. 42, p. 828, he proposes: *mukhabara fi isldkh al-Azhar* (*"exchange of views on the reform of al-Azhar"*).

These few references show the variety of uses to which the concept isldkh was put. However, the following areas seem particularly to have attracted the attention of reformist authors: a) *Teaching*. The question of the reorganization of Muslim teaching, especially in institutes of higher education like al-Azhar, occupied an important place in the work of Muwammad 'Abdul and Rashid Ridj (cf. the account of the action carried out in this sphere by *shaykh* 'Abdul in *Ta'rikh al-ustawd al-imdm*, i, 425-507). This problem can be linked to that of the reorganization of the mosques and waqf possessions. Better management of these would supply the educational system with increased means and new buildings. ( Cf. Rashid Ridj, op. cit., i, 630-45; *al-Manar wa l-Azhar, passim*). b) *Law*. The reform of the Muslim legal system was also one of the constant preoccupations of the reformists (see the numerous articles in *Manar* on this subject and the Report made by Muwammad 'Abdul, Mufti of Egypt, *Tabir mufti al-diyyar al-mishriyya fi isldkh al-mahkum al-tarbiyyi*, Cairo 1318/1900; on this subject *Ta'rikh al-ustawd al-imdm*, i, 605-29). c) *The Religious Brotherhoods*. The reformists never ceased to press for the reform (if not for abolition pure and simple) of the brotherhoods, which they accused of maintaining blame-worthy innovations in religious life, of encouraging the people in superstitious beliefs and practices, and of continuing to use a reactionary system of teaching in their educational establishments (cf. the articles in *Manar*, under the heading: *al-Buda* wa'l-khurdfdt; Rashid Ridj, *al-Manar wa l-Azhar, passim*). In their attempt to reform Muslim educational and legal systems and religious practice, the supporters of isldkh were aware that they were attacking the traditional structures of their co-religionists and to arouse in the Community. But their task did not stop there. For the isldkh advocated by Muwammad 'Abdul and his close supporters necessitated a vast movement of renovation which would embrace all sectors of Muslim life. Thus we see them advocating isldkh in purely secular domains (for example, language and literature, the organization of schools, the administration, the military regime, etc.). They believed that the *ulamad* worthy of the name should devote themselves to an overall reform of Muslim social organization, and not just to a limited religious reformism.

These calls for a general isldkh were fairly well received in Arab and Muslim intellectual circles at the end of the 19th and beginning of the 20th century. From the period of al-*Uruwa al-wutthb* (1884) on, the combined efforts of al-Afgani and 'Abdul, and other propagandists of the quality of al-Kawaki, succeeded in definitively integrating the idea of isldkh into modern Muslim thinking. From then on, no intellectual in the Arab world could remain indifferent to the reformist phenomenon (cf. *al-Manar*, i, (1899), 949; *al-isldkh al-isldmi wa l-ta'lim: isldkh* had become one of the principal and most topical subjects in the Arab and Turkish press; *Umm al-kurah*, 3). In literary circles, many profoundly secular writers and poets joined forces with the advocates of isldkh. Their sympathies did not lie with the religious movement, but with the powerful ferment that it then represented for Muslim society and for Arabs in general. For them, isldkh signified an appeal for progress, a breath of renewal and the promise of a better future for the Arab nation. Its fundamental call for religious renovation and moral regeneration was blurred in the eyes of many intellectuals by its social and cultural implications. Gradually isldkh acquired the shape of a sort of myth which attracted all, believers and unbelievers, Muslims or not, who were struggling for the social and cultural emancipation of their people. (The impact of isldkh in non-Muslim circles is apparent in writers like Salama Musd; cf. *Tarbiyat al-Salam Musd*,
For the reformists, consequently, fidelity to Islam concurrently with the religious reformists (the Salafiyya), some concerned secular intellectuals took up the cry for islāh, though with a purely social and cultural connotation. The most typical figure of this secular reformist current is the ʿIrāqī poet Djamal ʿṢādiq al-Zāhāwī (1863-1936 [q.v.]), who advocated a form of islāh devoid of any religious content (his beliefs are expressed in: nasaburī fi ʾl-ʾamāra arāma biš-maṣlaḥah dunyā-humā li ʾl-ʾamāra fi ʾl-dīnī).

The relative receptivity of Arab intellectual circles (more or less influenced by Western culture) was a determining factor in the diffusion of islāh. The reformists found allies, if not true sympathizers, among publicists and men of letters who were exasperated by the conservativism of the “old turban”, the defenders of clerical and university tradition (of al-Azhar, al-Zaytūna, etc.), by the apathy of the masses, and by the sluggishness of the political and administrative machine. Thus in the East as in the Maghrib, the younger progressive intellectuals drew close to the reformists, who in their eyes represented a dynamic party which, in the face of different forms of foreign domination, proclaimed the right of their peoples to education, progress and national dignity.

But islāh also benefited from a measure of support in liberal Sunni circles. Frightened by the prospect of society drifting away from Islam in the more or less distant future, and by the dynamism of Christian missionary work in Muslim lands, they were happy to witness the birth of a movement which was profoundly attached to the Sunna, and firmly committed to the defence of the faith, while at the same time recognizing the need for social evolution and modern scientific and technical development in the Arab world.

Yet, despite the interest that it aroused in the young progressive generation and enlightened Sunnis, islāh encountered some difficulties at the outset. From its inception, the movement was suspect to the powers then ruling the major part of the Arab world (Turkey, England, France), because of its cultural and political orientation (exaltation of Arabism, Pan-Islamism). Its social and political stand brought down on it the hostility of the ruling classes and the administrative authorities of the status quo (university, magistrates, religious hierarchy, brotherhoods). By its declarations of war on every sort of shirk, on magical and religious superstitions, on forms of popular piety, islāh distressed conformist circles. For the same reasons it was mistrusted by ordinary people, who were attached to traditions and rites that they regarded as an integral part of religion.

Inevitably, islāh was strongly attacked on several fronts (cf. for example, the long quarrel between supporters of islāh against the defenders of the educational and doctrinal traditions of al-Azhar, in Ṭashhīd Riḍā, al-Manār wa l-ʾAzhar). After all, it was a movement vowed to political resistance (anti-imperialist, if not anti-Ottoman) and social change (aimed at the traditional framework of Muslim society), and geared to moral and spiritual reform, attacking in particular certain ecclesiastical structures which were held as sacred (notably the brotherhoods and religious orders) and certain aspects of popular religiosity. Lacking a single magistrature amongst the umma and unable to invoke the moral authority of a reforming Church, the Salafiyya were open to the charge that they were changing and destroying the holy Sunni tradition. They had to wage an unceasing struggle for acceptance of the sincerity of their intentions and what they saw as the eminently Islamic character of their attempts at reform. Nevertheless, neither the traditionalist Sunnis nor the members of the brotherhoods were disposed to recognize the legitimacy of their efforts (cf. Mandār, i, 807, 822; Ṭashhīd Riḍā attacked by his adversaries; Ṭashhīd Riḍā, Taʾrīkh al-ʾistāḥah al-īlām, passim: the difficulties Muḥammad ʿAbduh met with when he was Mufti of Egypt; Ẓafir al-Kāsimī, Djamāl al-Dīn al-Kāsimī, 592; the bad reception given to Ṭashhīd Riḍā by the “ulama’” of Damascus, 603-4; the lack of success of the Salafiyya in Syria; A. Merad Le Réformisme musulman . . . Book i: the resistance of Algerian Sunnism and brotherhoods to reformist propaganda). Whether presented as a “road to damnation” (qalāla) in the wake of the Wahhabi “heresy”, or hastily assimilated to the progressive trends that were more or less favourable to the secularization of Muslim society, the Salafiyya movement met with strong opposition in Egypt and Syria, as in Algeria and Tunisia. Its adversaries rejected it in the name of the Sunna, which, in their eyes, could have no other form than that of classical Sunnism. The real meaning of islāh appears when we examine its fundamental principles and its main doctrinal lines.

B.—Fundamental Principles.—In origin, islāh is a religiously inspired movement. Yet an examination of the roots of the movement reveals that the arguments put forward by its proponents sounded a less profoundly moral and spiritual note than a social and cultural one. In the first reformist manifestos—the articles of Muḥammad ʿAbduh (and al-Afghānī) in the paper al-ʿUrwa al-wuthqā (1884)—social, cultural and even political considerations are more important than religious ones. In his Umūm al-kurā and in his Taḥāriʾ al-istibdā, al-Kawākibī made similar efforts. In the early stages of his review al-Manār (1898), Ṭashhīd Riḍā also paid a great deal of attention to social and cultural questions. Like his masters, he wished to persuade Muslims that the improvement of their moral and material condition depended upon a regeneration of Islam; this was to be accomplished by a “return to first principles”, in order to rediscover Islamic teachings and values in all their authenticity and richness. The whole of the later reformist debate hinges on this essential theme.

The Return to First Principles.—The theme of the return (rudjūt) to first principles is omnipresent in reformist literature. This constant reference to the beginnings of Islam is one of the most striking characteristics of islāh, and the reason why the reformists of the Salafiyya have sometimes been accused of “addiction to the past”. The need for a return to first principles is justified, in the doctrine of islāh, by arguments of a canonical and historical nature. The former, drawn from the Kurʾān, can be resumed as follows: Islam in its entirety is one of the most striking characteristics of islāh, and the reason why the reformists of the Salafiyya have sometimes been accused of “addiction to the past”. The need for a return to first principles is justified, in the doctrine of islāh, by arguments of a canonical and historical nature. The former, drawn from the Kurʾān, can be summarized as follows: Islam in its entirety is contained in the Scriptures (Kurʾān, V, 3, VI, 38); the teaching of the Prophet—inspired by God (LI, 3-4)—is the natural complement of revelation. The Religion can be received only from the hands of God and his Messenger (IV, 59), and Muslims must abide by what the Messenger of God has transmitted, in all matters of command and interaction (LI, 7).

For the reformists, consequently, fidelity to Islam...
is essentially defined by faithfulness to the two Sources, Revelation and the Prophet's Sunna.

The canonical argument, supported by an argument borrowed from historical tradition, is in fact a maxim attributed to Mālik b. Anas (d. 179/795 [q.v.]): “The later success of this Community will only ensue through those elements which made for its initial success” (ia yasīla hāzira ḥadīthi ‘l-umma illsa bi-mā salūka bhih awamāhā). Now, we are told, the objective basis of the historical success of the Arabs was Islam (that is the Kur’ān and the Sunna) authentically received and fully accepted (cf. Rashīd Rīḍā, Taṣfīr, x, 437, x, 210 (important) ix, 293; Shīkāh, March 1939, 58). Like their far-distant predecessors (Ṣalāfīyya), Muslims of today could achieve temporal power (ṣiyāṣa) and know the happiness of moral well-being (ṣalāda), provided that they armed themselves with those moral convictions that constituted the strength and grandeur of the Salaf, and that they strove to demonstrate to contemporary Muslim society the values of faith and the general teachings of Islam, in their authentic purity (cf. Rashīd Rīḍā, Taṣfīr, ii, 339-41, x, 210; A. Merad, Le Réformisme musulman, 287 ff.). What exactly is this authenticity? The reformist reply is clear and simple: the whole of Islam is contained in the Scripture and the Sunna, with the addition, solely as a guide and not as a canonical source, of the tradition of the Salaf. This position is not fundamentally different from that of traditional Sunnism. What distinguishes ʿīṣāḥ from the classical doctrine in this respect is the meaning given by the reformists to each of these three basic references.

1. The reference to the Kur’ān. On this point, ʿīṣāḥ has, in principle, the same position as the Salaf. This is true of the nature of the Kur’ān, its status as a canonical source, and the way of approaching its exegesis.

a) ʿĪṣāḥ identifies the Kur’ān with the Word of God, uncreated, intangible, unalterable (Kur’ān, XLI, 42, XV, 9), and affirms the eternity and universality of its message (XXXIV, 25, VI, 90; Mandār, i, 1; Rashīd Rīḍā, Taṣfīr, ii, 163, iii, 289). Holding strictly to the dogma of the “uncreated Kur’ān” it rejects objective basis of the historical success of the Salaf. This does not simply reaffirm the stance of the Salaf (cf. Rashīd Rīḍā, Taṣfīr, ix, 178). This explains why the Salafiyya have never been able to supply the Muslims of their time with an original interpretation of the Kur’ān, despite the return to favour of reason in modern Islam (cf. R. Caspar, Le renouveau du Musulmanisme, in MIDEO, iv (1957), 141 ff.), and despite the historical investigations and psychological analyses made in the light of the Sīra by European orientalists and a few contemporary Muslim authors which have given us a better knowledge of the Prophet’s personality. Their doctrine, immobilized by a desire to remain faithful to the past and to the positions—sometimes negative—of the Salaf, has prevented them from acquiring a deeper knowledge of the historical, sociological and psychological dimensions of this religious source. It has also served as a basis for the revival of the Sīra and of the Nabi, to the detriment of the less familiar aspects of Islamic history (important), vi, 123, vii, 140-1, 191, xi, 264). The Kur’ān is the supreme authority of Islam, and, as such, the problem of its understanding (and consequently of its exegesis) is of capital importance, for the way in which the Revelation is understood governs the manner in which the message is translated into action.

c) The exegesis of the Kur’ān. Linguistically, the content of the Kur’ān is presented in two categories (cf. III, 7). Most of the verses have a self-evident meaning (mukhām) and pose no problems of interpretation. Certain other verses can be the cause of some uncertainty (mutaṣṣābīh) if their apparent sense is adhered to. In this case, the Believer must accept the revealed fact as it is presented (imrdr) in its most literal sense, showing a confident belief in the truth it contains, a truth which transcends the immediately perceptible linguistic message (cf. Taṣfīr, viii, 453, x, 141). God being the only one to know the reality of the mutaṣṣābīh, the Believer must have the wisdom and humility to commend himself to Him (laṣfīd, laslim). In the eyes of Muḥammad ʿAbduh this act of faith acquires the value of a canonical obligation (Taṣfīr, i, 252). This is also the position of Rashīd Rīḍā and Ibn Bādīs (cf. Taṣfīr, iii, 167, iv, 256, vii, 472, viii, 453, ix, 513, x, 141, xii, 358; Shīkāh, Jan. 1934, 6 June 1939, 206).
The reformist doctrine on the subject of Qur'ānic exegesis can be defined in relation to the problems of interpretation, ta'wil [q.v.], and commentary, tafsir [q.v.].

Ishāh severely condeems subjective interpretation (ta'wil), which claims to analyse a "hidden" sense beyond the literal sense, and a more or less gratuitous symbolism beyond the apparent images. On the subject of III, 7, Rashīd Riḍā clearly defines the reformist position (Tafsir, iii, 166 ff.). Ta'wil is a typical example of bida' (ibid., x, 141), since it cannot be justified either by the Sunna or by the tradition of the Salaf, who avoided interpreting uncertain passages (mutashabbiḥ) of the Scripture by relying on their own understanding (see also Muḥammad 'Abdūh, Risālat al-tawqīḥ, 7 [Fr. trans., 8]). The Salafiyya's distrust of ta'wil includes all esoteric and mystical interpretations and those of the supporters of a rational explanation at any cost. Cf. Tafsir, i, 252-3, iii, 172-96: an explanation of the reformist doctrine of the subject of the ta'wil with lengthy quotations from Ibn Taymiyya; criticism of the tendentious exegesis of the "men of bida'" (Dājmīyya, Kadariyya, Khawārīdīj, Bāṭīnīyya, Bābīyya, Bāhā'īyya, etc.), ii, 131-2; the "heretical" exegesis of the Bāṭīnīyya and of excessive Shiism; iv, 191; exegesis which is "orientated" in favour of one source of meaning or another, working on the text as if it had a purely arbitrary sense to the revealed statement. This is tafsīr itself [q.v.], a concept applied in the Kurʾān to the "Possessors of the Scriptures" (ahl al-kitāb) and applied by the modern reformists to stigmatize the use of the Qurʾānic exegesis for partisan ends (cf. Tafsir, i, 430, iv, 97, 282, vii, 506; Shihāb, Sept. 1935, 344-5). Included in the term taafsīr are pseudo-erdute commentaries which embroider the text with "false legends" (khabāb wa-khufrūf), in the style of the isra'ā'īliyyāt [q.v.] so frequently denounced by the reformist authors (Tafsir, i, 8, 18, 347, ii, 455, 471, iv, 466, vi, 332, 355-6, 449, ix, 190, 414, x, 384, xi, 474; Shihāb, July 1939, 254). The same warnings were issued against interpretation of the Qurʾānic passages dealing with the unkownable, ghayb [q.v.] (cf. Tafsir, i, 254, ii, 166 ff., iv, 254 ff. on III, 173, IX, 513; Shihāb, Oct. 1930, 534; Jan. 1934, 3-9). Reformist exegesis tends to banish ta'wil in favour of simple commentary, tafsir, and lays down the principle that, apart from a few verses containing a certain mystery (particularly on the subject of divine attributes, sifāt, and the states of future life, asbāb al-ghāyat), Qurʾānic revelation can be made just as comprehensible to contemporary Muslims as it was to the Salaf. Thus, the function of ta'wil is revitalized. Freed from its historicio-legendary husk and from commentaries of a largely grammatical and rhetorical nature, tafsir becomes a preparation for reading and meditating upon the Kurʾān. Those commentators whose primary interest was in the didactic aspect of tafsir have woven a veritable scripture (ḥijāb) between Muslims and their sacred book (Tafsir, iii, 302). According to the reformists, the essential aim of tafsir is to elucidate the moral values and spiritual "direction" (hady) which nourish religious feeling and guide the piety of the faithful (ibid., i, 25); it must not be seen as a demonstrative discipline capable of establishing scientific and verifiable truths and satisfying the modern mind which is avid for rationality. The reformist commentators (and above all Rashīd Riḍā and Ibn Bādīs) were in no way tempted by scientific exegesis, and, with the odd exception, did not give in to the fashion for compromise which was widespread in their day (cf. the typical case of a Tantawi Diwargar (1862-1940), in MIDEO, v (1958), 115-74). Consequently Rashīd Riḍā criticizes the lack of discernment with which Fājr al-Dīn al-Rāzī [q.v.] appeals to the scientific culture of his time to pad out his important commentary. He deplores an identical tendency amongst "contemporary commentators [...] who display so much seemingly scientific erudition in their tafsīr that they succeed in diverting the reader from the object of the Revelation" (Tafsir, i, 75). Moreover, when speaking of the biblically inspired stories recounted in the Kurʾān, Rashīd Riḍā, quoting Muḥammad 'Abdūh, criticizes those who would like to base the truth of the Book on the veracity of the facts it offers to the meditation of the Believers. "The Kurʾān is no more a historical work (ta'Rīḥ) than a narrative work (ṣaḥāīḥ): it is only a moral guide and a source of edification" (Tafsir, ii, 471). The historicity of the Qurʾānic story is less important than its moral content and its virtue as a source of inspiration. The role of the reformist commentator is above all to bring the Qurʾānic message as close as possible to the minds and hearts of Muslims. In his task, his goal will of course be to establish the meaning of the verses as exactly as human understanding permits. This implies a profound knowledge of all the resources of Arab lexicography and applied philology. It is mostly in the early tafsīr that there are some verses whose message is readily apparent; in some cases, what is revealed can be made more explicit with the help of references and parallels found in the Kurʾān itself (tafsir al-Kurʾān bi 'l-Kurʾān); in other cases it is necessary to employ the exegesis of the Batiniyya and of excessive Sufism; v, 279, 470). Some of the Prophet's teachings, on the inspiration of the Holy Spirit (al-rujūt al-fāyūḍ)
have the same importance as the Kur'ān, but their level of expression does not assume the inimitable nature of the latter (ibid., v, 279, § 3).

The Sunna makes Revelation explicit.—All the reformists agree on this point. The Kur’ān clearly says that the Prophet’s mission is to make manifest to men (li-tubahayya na ‘i-l-nās) the true meaning of the Scriptures (Tafsīr . . ., ii, 30, vi, 159, 472, vii, 139, viii, 355, 309; Şikāh, Oct. 1930, 535; Feb. 1931, 73). The Sunnah makes Revelation explicit to the Book, since it is an explanatory instrument (Tafsīr . . ., iv, 18, on III, 101); the Kur’ān constitutes the totality of the religion, and the Sunnah is an integral part of the latter only in the sense that it explains what was revealed (ibid., ix, 326). Herein lies the status of the Sunnah as the second canonical source.

By Sunnah is meant only the texts of Ḥadīth the authenticity of which has been duly established (cf. Muḥammad ʿAbdūh, Risālāt al-tañāṣīdī, 129 [Fr. transl., 132]), a very limited number of traditions which refer above all to the dogmas of faith and the forms of worship (e.g. prayer, pilgrimage). Beyond these descriptive traditions of holy acts, the remaining traditions about which there is no doubt (e.g. those with a moral content) “do not number more than a dozen” (Risālāt al-tañāṣīdī, ed. Rashīd Rūdā 202 n. 22; Tafsīr. . ., v, 434), and are essentially to be believed just because it is attributed to the Prophet, even if it carries the authority of an eminent traditionist or famous teacher. Rashīd Rūdā cites the example of Ḡazālī, who gave as authentic traditions which were “insignificant or simply invented” (Tafsīr, vi, 31). He was also severely critical of the apocryphal traditions (maßāḥif), attributing their origin to various factors: sandakah [q.v.], sectarianism, flattery towards rulers, human error, and senile forgetfulness. Moreover, rigorism and puritanism encouraged the traditionists to incorporate into Ḥadīth moral maxims which they considered just as edifying as certain traditions called “weak”.

The problem of the authenticity of Ḥadīth is extremely important from the reformist point of view, for the authenticity of the Sunnah as a source of the authority of the Prophet originates from God and must therefore be an article of faith for Believers (Kur’ān, IV, 80: “Whoever obeys the Messenger has obeyed Allāh”). Thus Muslims have every right to reject any normative tradition the authenticity of which is not absolutely beyond doubt, as is the Kur’ān. Hence the necessity of great care in distinguishing between the Sunnah, which carries the same authority as Scripture, and the traditions whose authenticity has not been completely established, even if they are in harmony with the “spirit” of the Salaf. In fact, the Salafīyya only recognize the normative value of a very small number of ḥadīths which are held to be rigorously authentic: ḥadīth muvaṣṣidīra, wa-halkūn mā hī (Manār, iii, 572). By stating that Muslims are obliged to follow “the Kur’ān and the Sunnah, and them alone” (al-Kawākilī, Umm al-kurūd, 73; Rashīd Rūdā, Tafsīr . . ., passim; Ibn Bāḍīs, Şikāh, Feb. 1936, 95), the reformists based their doctrine on the teachings of the Prophet (cf. Wensinck, Handboek, 130 A: “Clinging to Kur’ān and Sunnah alone”); 232 A: “Confining oneself to Kur’ān and Sunnah”). But, bearing in mind their very limited conception of the Sunnah, they maintain in fact that Islam as a religion (din) can essentially be reduced to the Kur’ān.

The doctrine of ḥadīth tends to attach a greater importance to the Kur’ān as a source than to Ṣunna as it has generally been accepted in classical dogmas. This trend is taken to its logical conclusion in the works of recent authors, who reduce the authority of Ṣunna almost out of existence in favour of the Kur’ān and iddīthāt [q.v.] (cf. Maḥmūd Abū Rayyā, a former disciple of Rashīd Rūdā: Aḥūd ala ‘l-sunnah al-muḥammadīyyā, Cairo 1958; and on present positions on the subject of Ḥadīth: REI, 1954, Abstrakta, 117-13; G. H. A. Juynboll, The authenticity of the tradition literature, Leiden 1960).

Logically, Islam could no doubt be defined exclusively in relation to the Kur’ān, a thesis upheld by another disciple of Rashīd Rūdā, Muḥammad Tawfīq Șīdrī, in his work al-Islām huwa ‘l-Kur’ān wadādhu which is a programme in its own right (Manār ix (1906), 515-25, 906-25). For this author, the foundations of Islam are the Book of God and Reason. Any doctrinal element imputed to Islam which satisfies neither the criterion of the given facts of the Kur’ān nor the fundamental demands of reason must be declared unacceptable. Elsewhere, M. T. Șīdrī demands complete freedom in evaluating the Sunnah. It must be limited in so far as it is in disagreement with the objective facts of the Book, but where it puts forward principles of wisdom (ṣikma) there is nothing to prevent the Believer from referring to it, as he might to any (profane) source. The Salafīyya certainly do not go to quite these lengths. The thesis of Muḥammad Tawfīq Șīdrī (presented with some reservations by Rashīd Rūdā) was immediately refuted by a defender of the classical doctrine (cf. ʿĪdāh al-Biṣṣirī, Uṣūl al-Islām: al-Kur’ān, al-Sunnah, al-īdāmāt, al-biṣṣirī, in Manār, ix, 699-711). In the eyes of the Salafīyya Islam cannot be reduced to matters of faith and canonical obligation (ḥadīthāt) which can only be held to be true in so far as they originate from Revelation and the very small number of ḥadīths shown to be authentic (muvaṣṣidī). Islam is also a political and social system, a complex of ethical values, a culture. In matters of usage (ṣādāt) and human relations (muʿāmalāt) determined by a socio-cultural framework which is not ruled by scriptural dispositions, the Sunnah is the basis of its authority as a canonical source. All that is transmitted by the Prophet originates from God and must therefore be an article of faith for Believers (Kur’ān, IV, 80: “Whoever obeys the Messenger has obeyed Allāh”). Thus Muslims have every right to reject any normative tradition the authenticity of which is not absolutely beyond doubt, as is the Kur’ān. Hence the necessity of great care in distinguishing between the Sunnah, which carries the same authority as Scripture, and the traditions whose authenticity has not been completely established, even if they are in harmony with the “spirit” of the Salaf. In fact, the Salafīyya only recognize the normative value of a very small number of ḥadīths which are held to be rigorously authentic: ḥadīth muvaṣṣidīra, wa-halkūn mā hī (Manār, iii, 572). By stating that Muslims are obliged to follow “the Kur’ān and the Sunnah, and them alone” (al-Kawākilī, Umm al-kurūd, 73; Rashīd Rūdā, Tafsīr . . ., passim; Ibn Bāḍīs, Şikāh, Feb. 1936, 95), the reformists based their doctrine on the teachings of the Prophet (cf. Wensinck, Handboek, 130 A: “Clinging to Kur’ān and Sunnah alone”); 232 A: “Confining oneself to Kur’ān and Sunnah”). But, bearing in mind their very limited conception of the Sunnah, they maintain in fact that Islam as a religion (din) can essentially be reduced to the Kur’ān.

1. The problem of the authenticity of Ḥadīth is extremely important from the reformist point of view, for the authenticity of the Sunnah as a source of the authority of the Prophet originates from God and must therefore be an article of faith for Believers (Kur’ān, IV, 80: “Whoever obeys the Messenger has obeyed Allāh”). Thus Muslims have every right to reject any normative tradition the authenticity of which is not absolutely beyond doubt, as is the Kur’ān. Hence the necessity of great care in distinguishing between the Sunnah, which carries the same authority as Scripture, and the traditions whose authenticity has not been completely established, even if they are in harmony with the “spirit” of the Salaf. In fact, the Salafīyya only recognize the normative value of a very small number of ḥadīths which are held to be rigorously authentic: ḥadīth muvaṣṣidīra, wa-halkūn mā hī (Manār, iii, 572). By stating that Muslims are obliged to follow “the Kur’ān and the Sunnah, and them alone” (al-Kawākilī, Umm al-kurūd, 73; Rashīd Rūdā, Tafsīr . . ., passim; Ibn Bāḍīs, Şikāh, Feb. 1936, 95), the reformists based their doctrine on the teachings of the Prophet (cf. Wensinck, Handboek, 130 A: “Clinging to Kur’ān and Sunnah alone”); 232 A: “Confining oneself to Kur’ān and Sunnah”). But, bearing in mind their very limited conception of the Sunnah, they maintain in fact that Islam as a religion (din) can essentially be reduced to the Kur’ān.

3. The tradition of the Salaf.—To a large extent, Ṣīrah appeals to the tradition of the Salaf as an explanatory source for the Sunnah and an important reference point for understanding the general meaning of Islam. The term ṣīrah designates a fact that is both historical and cultural. It implies firstly the idea of anteriority (cf. Kur’ān XLIII, 57), which in classical usage is naturally linked with the idea of authority and exemplariness. The Salaf are precisely the “virtuous forefathers” (al-salāf al-ṣāliḥ), the predecessors whose perfect orthodoxy, piety, holiness, and religious knowledge make them men worthy of being taken as models and guides. But, in the absence of sure and sufficient biographical references, these are difficult to ascertain. It is not so much their personal qualities, however striking, that make for the authority of the Salaf, but rather their historical experience, their contact with the
Prophet in some cases and with his Companions and Successors in others. Among the innumerable witnesses of primitive Islam, the Salaf are exemplary. They represent a certain form of Islamic orthodoxy at a given period of history. Hence the need to sketch the historical context of the Salaf. The chronological points of reference are inexact and often contradictory. By *salaf* was meant, for example:—a. the *Mother of the Believers*, A'isha, and the Patriarchs of the Caliphs, as well as Talha ass Zubayr (Lane, *Tafsir*, ed. Ma'arrif, i, 93);—d. The Companions and their successors (*tabi'in*, on the one hand in relation to the founders of the four *madhabs* (cf. Ahmad b. Hanbal who talks of “our pious forefathers”, *salafuna al-salih*, Wensinck, *Concordances* . . . . ., i, 505 B); and on the other the latter and their immediate disciples in relation to succeeding generations (al-Tahânwâl, *Kashshâf ishlåh al-funûn*, ed. Khayyat, iii, 767-9). In the works of modern reformist authors the definition of the Salaf is just as vague. For Rashîd Riḍâ they are the most eminent representatives of the primitive Islamic community, *al-sadr al-awwal* (*Tafsir*, li, 81, vii, 143, 198), those of the “first epoch”, *al-asr al-awwal* (*ibid.*., vi, 196, iii, 578), which cover the first three generations, *karn* (this term is not to be taken in the modern sense of “century” but in that of a “generation of men” (dhił) who lived during the same period of seventy to eighty years (*ibid.*, xi, 314, xii, 190). In the works of Rashîd Riḍâ and Ibn Bâdis we find the same traditional definition of the three first generations; i.e., that of the Prophet and his Companions (*sahâba*), that of their Followers (*tabi'in*), and that of the Successors of the *sahâba* (*tabi'in*), of which the most complete definition made by the “independent” doctors —independent of the Schools and Parties—who, following the example of the Salaf, were free from all sectarianism and all narrowmindedness, and whose only concern was to safeguard the integrity of the *Sunna* and the unity of the Community. Thus Aًbâ ʿIraq al-Shâfiʿî (d. 790/1388) is highly esteemed by Rashîd Riḍâ (cf. the eulogistic article that he devoted to him in *K. al-Ṭidbîm*, Cairo 1320/1904, i, 1-9; *Tafsir*, vii, 69-70; viii, 48-50), April 1937, 344), generations “which surpass in excellence (khayyârâ) all others, as is witnessed by the Impregnable [i.e., *Mubammad*]” (Ṣḥîbâh, Feb. 1932, 66, allusion to the ḥadîth: “the best of generations is mine, then the following, then which comes after”); cf. Wensinck, *Handbook*, 48A, lg. 40: “the best...”. This is worth comparing with the other ḥadîths quoted by al-Ṣâfî al-Dîn, Ṣalîbî, al-A. M. Shâkîr, 476, no. 1315; the latter and their immediate followers who follow them and those who follow these: after which untruth will appear”, cf. Wensinck, *Handbook* 48B “Mubammad admonishes...”).

A few chronological points of reference will serve as rough definitions of the three groups which make up the Salaf:—a) The *sahâba* (or *asbâḥ*), who date from the first conversions (at Mecca in 610 and Medina in June 622) until the death of Anas b. Mâlik (91/710 or 93/712), considered to be the last survivor of the Prophet's Companions (cf. Ibn ʿAqîl al-ʿAskâlañ, Ḳisâ, i, 138; Ibn Ḥazm, Ḳâbûm, iv, 152);—b) The *tabi'in*: a large number of these were contemporaries of the Prophet's Companions; some might even have been alive during the Prophet's lifetime but without satisfying the conditions which would have permitted them to be classed among the *sahâba*. The last of the *tabi'in* died around 180/796 (e.g.: Ḫusaym b. Ṣūfî al-Ṣalâmî, d. 183/799. He transmitted to Mâlik and Sufyân al- Ṣawârî) among others).—c) The *asbâḥ* al-*talâbîn*: There are no sufficiently precise criteria enabling us to define exactly this group of men; the reformists refer to them less frequently than to the other two, especially on the important question of *ṣârîñ* ascetics (cf. *Tafsir*, iii, 179, 208). In fact, they are essentially the most eminent disciples of the great *tabi'in*, Ḳâbûm, al-*talâbîn* (like al-Ḵâsim b. Mubammad b. Abî Bakr, 101/720; al-Ṣâbî, d. 104/723; al-Ḥasan al-Brânî, d. 110/729). Ibn Sîrîn, d. 110/729). The middle of the 3rd/9th century can be taken as the *terminus ad quem* of this last group of Salaf. Also covered by the term Salaf are “the doctors of the second and third generations” (*Tafsir*, ii, 82), notably the founders of the four Sunni *madhabs* and a certain number of their contemporaries, the strongest religious personalities from the early days of Islam, such as al-Awâlî (d. 757/1354), Sufyân al- Ṣawârî (d. 167/782), al-Ṭawârî b. Sâdî (d. 175/791) and Iṣâk b. Râdhîyân (d. 238/853, cf. *Tafsir*, vii, 552, viii, 453). Ahmad Ibn Ḫanbal (d. 241/855) would appear to be one of the last representatives of the age of the Salaf.

In reformist usage, the Salaf are sometimes mentioned in opposition to the *Khulaf* or “later generations”, under whose influence the message of Islam has been obscured, if not distorted, by innovation, the fanaticism of the Schools, and the mushrooming of sects (cf. *Tafsir*, viii, 265). This conception might appear simplistic, implying that reformists should cut themselves off from the cultural current which has never ceased to refresh the body of the *Umma* throughout the centuries. In fact the position of the Salafiyya is more subtle: outside the period of the Salaf defined above, the modern reformists do not refuse to take into consideration the contributions made by the “independent” doctors —independent of the Schools and Parties—who, following the example of the Salaf, were free from all sectarianism and all narrowmindedness, and whose only concern was to safeguard the integrity of the *Sunna* and the unity of the Community. Thus Abî Ṣâhî al-Ṣâfî al-Ḥâšî (d. 790/1388) is highly esteemed by Rashîd Riḍâ (cf. the eulogistic article that he devoted to him in *K. al-Ṭidbîm*, Cairo 1320/1904, i, 1-9; *Tafsir*, vii, 69-70; viii, 48-50), April 1937, 344), generations “which surpass in excellence (khayyârâ) all others, as is witnessed by the Impregnable [i.e., *Mubammad*]” (Ṣḥîbâh, Feb. 1932, 66, allusion to the ḥadîth: “the best of generations is mine, then the following, then which comes after”); cf. Wensinck, *Handbook*, 48A, lg. 40: “the best...”. This is worth comparing with the other ḥadîths quoted by al-Ṣâfî al-Dîn, Ṣalîbî, al-A. M. Shâkîr, 476, no. 1315; the latter and their immediate followers who follow them and those who follow these; after which untruth will appear”, cf. Wensinck, *Handbook* 48B “Mubammad admonishes...”).

Fidelity to the moral and religious tradition of the Salaf is a fundamental demand of *islâh*. Besides the two sources of this modern reformism this tradition as their only basic point of reference, justifying their attitude by the following arguments:—a) The Salaf received the sacred inheritance from the Prophet (the dogmas of the faith, the form of worship), and transmitted it faithfully, in word and deed, *kawâm wa-ṣâmâl* (*Tafsir*, vi, 277). They are the guarantors of the *umma* (*ibid.*, ii, 30, 82), and their liturgical tradition must be adhered to as an ideal norm, in the sense that it actualizes the spirituality of the Prophet, and to imitate this must be the highest ambition of every Muslim.—b) The Salaf best understood and followed the *kur'ânic* message, as it was handed down to them fresh from the Revelation (*ṣâlîh an kûn kamâ unsîlā*). After the Prophet, they are most qualified to interpret the Scriptures (*Tafsir*, iii, 178, 182, vi, 196; cf. R. Blachère, *Intro. au Coran*, 223 ff). Their reading and their meditations on the Book are indispensable for a modern understanding of the *Kûrân*, which must avoid being both too literal or too subjective—and thus arbitrary—
c) *The Salaf are the best source of information we have about the life of the Prophet and about the way he put the Revelation into practice. On many factual points their unanimous accounts (idjamā') are irreplaceable, rounding off information given by the two sources. The Salaf thus provide the necessary framework for an understanding of the Revelation and the Sunna.*

A complement to the Sunna and a source of inspiration in Islamic life (in spiritual matters as well as in secular acts), the tradition of the Salaf is more than an object of veneration for the modern reformists. The Salafiyya do not wish to be a group frozen in admiration of an ideal image of Islam reflected by the Salaf. They aspire rather to live Islam within modern society, in a simple and true manner, following the example of the Salaf. Moreover, for the theoreticians of *islāh*, this ideal expresses their desire to rebuild the Muslim personality, not by copying foreign values and cultures but by drawing upon the moral and cultural tradition of early Islam. It is this ideal that Ibn Bādīṣ defended in his column in *Shihāb* (already referred to): *Riḍāl al-salaf wa-nisā'ah* (from 1934 on); the lyrical and moralizing verses to the glory of the Patriarchal Caliphs like the *Umariyya* (Feb. 1918, 190 lines) by Ḥāfīz Ibrāhīm (d. 1932) and the *ʿAlawiyya* (Nov. 1919, more than 300 lines) by Muḥammad ʿAbd al-ʿUzzaṣ (d. 1931); Muḥīb al-Dīn al-Ḥāḍirī, *Maʿṣūma ṭ-raft al-awwal*, Cairo, 1378/1958.

The historico-cultural importance of the Salaf in the methodology of *islāh* is considerable. Even though the Salafiyya give priority to the two sources, they put forward the principle that the Revelation and the Sunna inaugurated a new order in human history, and that that order became a complete living reality in and through the acts of the Salaf. Thus the reformist conception of Islam could be summarized in a statement of the following type: "The constituents of Islam are the Qur'ānic revelation, Muhammad's Sunna, and the tradition of the pious forefathers (wa-mā hāna 'alayh al-salaf al-sālih)”, viewing this tradition from the aspect of its moral and dogmatic content (*Tafsīr*, vii, 143, 198, ix, 132, xi, 378; Ibn Bādīṣ, *Shihāb*, Feb. 1934, 99). Because they felt it was the concrete expression of the ideal "way" of Islam, the reformists continually cite the tradition of the Salaf in support of their missionary activity (*da'wah*) and their teaching in matters of Qur'ānic exegesis or social and political ethics. This fidelity to the Salaf governs one of the main doctrinal premises of *islāh*.

C.—THE PRINCIPAL DOCTRINAL POSITIONS.—*

*Islāh* aims at a total reform of Muslim life.

1. *For the reform of worldly matters, *islāh* employed oral teaching (waʿz, *tarāḥ*) in mosques and through cultural circles well-disposed toward the Salafiyya movement. Screened by their educational and scholastic (*al-tarbiya wa 'l-taʿlim*) or charitable (*khayriyya*) works, the Salafiyya, run by Rashīd Rīḍā, or the *Shihāb* in the Maghrib (1924-39), edited by ʿAbd al-ʿUzzaṣ, had a deep and lasting influence.

The general reformist themes propagated among the masses can be summarized as follows: the restora-
tion of worship to its original form (which entailed certain liturgical changes, minor in themselves, but extremely irritating to the mainland Sunnis); preaching against a host of practices which seemed religious but had no foundation either in the Prophet's Sunna or in the tradition of the Salaf (funeral rites such as the public recitation of the Kur'an over the tomb, the celebration of the mawlid [q.v.] etc.); and warning against pious beliefs and practices which the Salafiyya felt bore traces of the sunnism or the manifestation of shirk [q.v.] (cult of the saints, invocation of the dead, etc.). The reformers also exhorted the faithful to unite, to worship in solidarity aside from the diversities of Schools and to overcome the traditional opposition between Sunnism and Shi'ism; and they encouraged the development of a moral censorship designed both to ensure the canonical obligation to obey God and eliminate Evil, and also to cleanse Muslim society of vice, gambling, the use of alcoholic beverages and drugs, etc. The education of Muslim men (and especially women) in elementary hygiene and domestic economy (including the encouragement to save) was important, as was the cultivation of a taste for order and work well done. Other educational aims were the awakening of the Muslims' intellectual curiosity, so that they might study modern science and foreign languages; and the support of projects for youth such as scouting, artistic activities, cultural activity within the many circles (nadda) and associations of Young Muslims (djam'iyya al-ashba' al-muslimin). All this comprised an attempt to hasten the birth of new Muslim men, capable of facing fearlessly—and without the risk of alienation—the problems of the contemporary world.

2.—For theoretical reform. It is important to stress that the principal reformist authors were above all men of action who did not have the time to elaborate well-developed doctrinal works. The main religious ideas of Muhammad 'Abduh are set out in his Risalat al-tawhid, in 133 small pages. The rest of his teachings can be found scattered piecemeal through the bulky Tafsir by Rashid Ridâ, where his work cannot easily be distinguished from his disciples'. Al-Kawakibî, who died prematurely in 1902, printed no more than 1000 pages of itidab and Aumm al-kur'd, which contain only a small proportion of theoretical thought. The Algerian reformer, Ibn Bâdis, who, like 'Abduh, introduced many new ideas throughout his life, left no more than a series of articles of kur'anic commentary (that is, about 500 octavo pages), published in the Shihab (cf. A. Merad, Ibn Bâdis, commentateur du Coran). There remains the considerable work of Rashid Ridâ, in particular his Tafsir (Tafsir al-Mandhâr), which is the most important source for the study of the dogmatic positions of modern istah. The many secondary reformist authors simply developed the ideas of their masters when they were not simply imitating their writings and teaching.

The efforts of the Salafiyya centered particularly on criticism of the fashionable doctrines of their time, both on the ground that they were a rigid form of classical doctrine (that of the Sunna schools) or that they were rash analyses and formulations, the result of a modernism that was dubious in principle and incompatible with the criteria of orthodoxy which istah had set up. At the same time, the reformists attempted to work out "ideal" Islamic positions, bearing in mind the objective facts given in the two sources and the fundamental conceptions of the Salaf; the latter were essentially viewed through the interpretation of Ibn Taymiyya and his pupil Ibn Kayyim al-Djawziyya (d. 751/1350), whom they considered the soundest authorities on the tradition of the Salaf (cf. Tafsir, i, 253; it is thanks to these two that the author adhered so sincerely (ifmamuna kadda) to the doctrines attributed to the Salaf). From the critical works and commentaries of the reformists (cf. Bibliography) we can distinguish the following doctrinal positions:

1.—Methodology.—The dominant Sunnî doctrine based canonical knowledge (usul) on four fundamental sources (usul [q.v.]) and the recitation of the Kur'an (Tafslr, i, 253: it is thanks to these two that the author adhered so sincerely (ifmamuna kadda) to the doctrines attributed to the Salaf). From the critical works and commentaries of the reformists (cf. Bibliography) we can distinguish the following doctrinal positions:

I.—The two Sources (Kur'ânc and Sunna) constitute the basis of the whole legal system in Islam. Their authority frees Muslims from exclusive submission to traditional doctrinal authorities, thus effectively wiping out the diversences (idjimmah) between Schools (madhhab), the secular opposition between Sunnis and Shi'is, and the hatred nurtured in Sunni circles for sects felt to be heretical (particularly all Khâridjism, in its present form of the Ibadîyya [q.v.]). By returning to first principles, Muslims will be able to overcome the divisive effect of the Schools but will still be able to take up all that is best from each of the many contributions (Ibn Bâdis, Shihab, March 1926, 654, Nov. 1928, 230). This would permit, for example, the possibility of an eventual unification of Muslim legislation. By preaching tirelessly for a return to first principles, the reformists were led to voice severe criticism of the orthodox Schools and their teachers, the fakih (cf. al-Kawakibî, Umm al-kur'd, i, 72 f.; Muh. 'Abduh, Risalat al-tawhid, 15, 101, (Fr. trans. 19, 109); Rashid Ridâ, Tafsir, ii, 257, 377; essays: Tabbr' al-shi'id, vi, 145 and following references). In their eyes, the Schools generally identified themselves with trends hostile to reason and science (Tafslr, ii, 91-3); they hindered the research carried out by idjihab and consequently helped to stop the cultural progress of the Community; they in fact gave priority to the study of fikhr over knowledge based on the Kur'anc and on the Prophet's Sunna (ibid., v, 106, 120, ix, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30, x, 129-30). By encouraging the unconditional submission of the masses to their doctors, the Schools ignored kur'anic teaching, which says that Muslims must cling together (djam'iyya) to the one and only rope of salvation, the rope of Allah (rabi Allâh), which is the Kur'ânc (cf. the commentary of Rashid Ridâ on this kur'anic ref. (III, 390). The return to the two sources (and to the tradition of the Salaf) would thus be a unifying and reconciling factor for Muslims. Freed of their fanaticism and mutual prejudices, Muslims could reuni in the fundamental unity of their Umma, rediscovering their original fraternity, and together and above their ethnic and cultural ties. (The theme of the return to first principles was a powerful argument in favour of pan-Islamism, an idea dear to the reformist authors).
Can the return to first principles advocated by the Salafiyya be seen as reactionary? The reformists were not trying to restore to the old symbols (such as sunna, umma, djamâ'ā, imâm, dâr al-islâm, idjâhâd, idjâhâd) the exact same significance they had had at the time of the Salaf. Rather, such a return expresses their desire to take the two sources as an essential (but not exclusive) basis for their reflection, in order to resolve the moral problems that the modern world poses to Muslims. The use to which they put certain symbols found in the Kur'ân or the Sunna sometimes corresponds to preoccupations arising from daily life in the modern world. Behind what appears to be a fundamentalist return to the sources of Islam, the Salafiyya are in fact attempting to work towards a moral and doctrinal renewal by searching for subtle concordances between the Scriptures and present-day realities (see, e.g., the concepts of gharî (Kur'ân, II, 233; III, 159) and of Âlî 'l-amr (Kur'ân, IV, 59) and their respective interpretations by Rashîd Riḍâ, Tafsîr, ii, 414, iv, 199-205, v, 180-190). A logical consequence of the principle of a return to the sources is the rejection of tabâlîd [q.e.v.] and the search for new ways of practising idjâhâd.

2.—Tâblîd. The reformists vigorously criticized the spirit of servile dependence upon traditional doctrinal authorities (notably in the orthodox Schools). The concept of taklîd obviously does not apply either to the pious imitation of the Prophet, which is held to be a canonical obligation (cf. Kur'ân IV, 59, XXXIII, 21), nor to the trusting acceptance of the tradition of the Salaf, whose moral and doctrinal authority is loudly proclaimed by the reformists (see above). In these cases, the word idjâhâd (active fidelity) to the traditions of both the Prophet and the Salaf was used instead of tabâlîd. (Cf. in this respect the distinction made by Rashîd Riḍâ, Tafsîr, v, 238). Such a fidelity regulates and inspires the general mission of idlâh, which offers the imitation of the Prophet as an "ideal of knowledge and action" (H. Laouist, Essai, 226). For Ibn Bâdis, the better the imitation the better is the reformist mission (âlî 'l-amr) accomplished (âlî 'l-amr). It is the attempt to reach authenticity; it is the opposite of the spirit of speculation and innovation (ibdêdâ), which is as reprehensible at a religious level as is the spirit of servile dependance upon traditional doc-

3.—Idjâhâd. Isldâh affirms the necessity and legitimacy of the use of the idjâhâd, which Rashîd Riḍâ sees as "a life-force in religion" (haydî al-dîn, ibid., vi, 399). The fiction of the "closing of the gate" of idjâhâd (from the 4th/10th century on) is thus abandoned and with it the whole heritage of interdictions and myths which weighed heavily on the Muslim conscience for so long. But the reformists did not regard the opening of the mind to idjâhâd as absolute freedom for the critical spirit to call everything into question. Complete liberty of conscience in religious matters would lead to speculation without end (ibid., viii, 317), which was not what the Salafiyya wanted. Conservative Sunnism nevertheless blamed idlâh for encouraging innovation and favouring doctrinal "anarchy" (ibid., ii, 273, xi, 253). The theme of tabâlîd has been a constant source of misunderstanding between the reformists and their traditionalist adversaries. The former argues, on the definition of this principle nor on the extent to which it can be applied. The traditionalists, who thought of religion (in its broadest sense) as a divine work which is perfectly complete (Kur'ân, V, 3), were afraid that modern criticism might use idjâhâd to undermine the essential foundations of Islam. But the reformist conception of idjâhâd also had its limiting conditions. Firstly, idlâh defined an intangible sphere, which included the dogmas of the faith (sâkhâd), fundament-
al worship (‘ibādāt) and canonical prohibitions (talā’il dini), which are all based on the Scriptures, either because of their explicit and formal nature or because of the irrefutable authenticity of their interpretation (ma’uwa bāṭī ‘l-risāya wa ‘l-dalāla: Tafsīr, i, 118 (bis), xi, 268, 265; al-Wahdah al-islāmiyya, 136). In this domain there is no room for idīthād (Tafsīr, v, 211, vii, 217, x, 432, xi, 268), for it would be intolerably presumptuous to attempt to question fundamental religious facts, which form a “divine institution, revealed by God” (ibid., ii, 18, x, 432). Apart from these sacred matters, islāh permits the use of idīthād, while placing it on two distinct planes, each with a particular significance.

a)—As an effort to understand the two sources, idīthād is part of the right—and duty—of every Muslim to seek to understand by himself Revelation and the Sunna (ibid., ii, 390). One of the fundamental ideas of reformist preaching was that Muslims must feel personally concerned with the Word of God and the teaching of the Prophet which illuminates it. Constant meditation on the Scriptures, patient efforts to analyse and understand all the resources that it offers, should permit every Muslim to steep himself in the divine message and draw from it principles of its “politics” (social, economic, foreign, etc.). In accordance with the fundamental commands of the Kur‘ān and the Sunna.

b)—In so much as it is a constructive effort with implications both for the Community and in practical affairs, at a legislative rather than dogmatic level, idīthād comes under the authority of the alā ‘l-amr [q.v.]. These latter are the legitimate holders of authority (Kur‘ān, IV, 59) and because of their responsibilities, their moral worth, and their particular abilities are in charge of “binding and unbinding” (akh al-ball wa ‘l-shudh), that is the right to decide in the name of the Community and in its best interests. (On the definition and role of the alā ‘l-amr, cf. H. Laoust, Essai, 596, and Traité de Droit Public d’Ibn Taymiyya (on the latter’s point of view); al-Kawākibī, Umm al-kurā, 58; Rashīd Ridā, Tafsīr li, 492, iii, 21-12, iv, 199-205 [important], v, 180-1 Muhammad ‘Abduh’s position), 211-2, vii, 140, 298, viii, 102, xi, 164). The acts of the alā ‘l-amr should aim to bring about the moral good (islāh) and material welfare (masālih) of the Community. Their competence extends to affairs that are normally the responsibility of political leaders, but does not include matters of worship and personal status (ibid., v, 211). In these matters, idīthād would constitute a veritable heresy (ibid., xi, 253). Muslims could refuse to recognize this right (polITICAL AND RELIGIOUS CHIEFS) who attempted to use their idīthād in the sacred domain (ibid., viii, 508), which is the “right of God” (şık Allāh) over men (ibid., viii, 288).

Hence those attempts at idīthād suggested by some Arab heads of state in order to reform certain aspects of Muslim personal status which they considered incompatible with the spirit of contemporary civilization were invalid. In all that concerns canonical prescriptions which are authentically founded on the two sources, the role of the alā ‘l-amr is essentially to safeguard orthodoxy, by making sure that the Sunna, as it was formulated by the Salaf, is respected in its entirety (ibid., iii, 11-12). This is a natural corollary of the reformist doctrinal principle maintaining that idīthād is incompatible with certainty (yabīn) emanating from the absolutely evident facts of the Scriptures (ibid., ii, 18, 109). The Salafīyya only allow the use of idīthād in the absence of any explicit scriptural reference (ri’dāt), prophetic tradition (sunna) or general consensus (idīthād)—in this case the consensus of the Prophet’s Companions—that would resolve a given problem (ibid., viii, 210).

Given this important restriction, we can distinguish two types of problems to which the idīthād of the alā ‘l-amr is normally applicable. i)—Purely secular business (administrative organization, scientific and technical questions, military and diplomatic affairs, etc.). In these fields, the alā ‘l-amr are quite free to choose and decide, in so far as their choices are governed by the overriding interests of the Community, in line with the specific goals of Islam. ii)—On the other hand, in business which has some connection with canonical doctrine, the idīthād of the alā ‘l-amr could necessitate the interpretation of kur‘ānic texts whose apparent sense is not certain, nami al-dalīla (Tafsīr ii, 109). In this case, to be acceptable, the interpretation must be in agreement with the two sources in spirit and letter, for it is understood that idīthād can only be used in the context of the two sources and can only refer to the textual sources and different indications (dalā’il, kān’ūn) that they offer. It is a basic principle in islāh that consideration of the best interests of the Umma would never result in solutions incompatible with the spirit, and even more, the objective facts of the Kur‘ān and the Sunna.

In this light, idīthād is not unlike the method of kiyās (q.v.) as it is defined, for example, in the Risāla of al-Shāfi’ī (cf. J. Schacht, Origins, 122 ft.). Islāh denotes the “false idīthād and the bad kiyās” (Tafsīr, iii, 238, v, 203), which would allow the incorporation into religious law (dā‘l) of elements based merely on individual opinion (ra’iyyū) or on more or less arbitrary conclusions (istihsān and istiṣlah). In religious matters ra’iyy is held to be a sort of “calamity” (baliyya), for it only serves to hide dangerous innovations (ibid., viii, 398). While the reformists are very suspicious of kiyās, ra’iyy and istiṣlah according to the technical use of the fakhrā, they nevertheless accept these very modes of reasoning and judgement in certain clearly laid-down conditions (e.g., the ra’iyy of the most eminent religious men among the Companions (‘ulama’ al-salāhī); explanatory ra’iyy on the subject of kur‘ānic exegesis; the ra’iyy of the members of the shāhār (idīthād at al-shāhār), those responsible for the temporal affairs of the Community (ibid., vii, 164). On the different aspects of this question cf. Tafsīr vii, 164 (on the recommended ra’iyy, maḥmūd); vii, 190 (on the acceptable kiyās, saḥīh); vii, 167 ft. (on the evil of rejecting kiyās totally [cf. Ibn Baaz, Ikhām, vii, 53 ft., viii, 2 ft.] or of using it without restriction or intelligence). Throughout this debate, Rashīd Ridā adopts—grosso modo—the neo-Hanbalite point of view, according to Ibn Kāyīm al-Dzāwiyya (‘I‘ām al-Mu‘awwādi‘īn). In short, ra’iyy and kiyās are only particular aspects of idīthād and, like the latter, are only acceptable in matters outside worship (‘ibādāt). When determining rules and legal statutes (azkām), idīthād in all its forms is only to be used when there are no antecedents in either the Kur‘ān or the Sunna nor in the irrefutable
practice of the Patriarchal Caliphs (Tafsir, vii, 164). Beyond the attempt at personal interpretation of the divine Word, and the desire to be open to the grace (kudad) which flows from it, reformist doctrine limits idjhah to the type exercised by the ulam`-i-amr in public affairs of a secular nature. But so that it should not be a source of quarrel and conflict, the idjhah of the ulam`-i-amr must be derived from mutual consultation (shurad) in accordance with the ethical demands of the Kuran (XXI, 30). The Community is not bound by the personal and may be even contradictory opinions of individual mudi-tahids. Its acceptance by the ulam`-i-amr is a condition sine qua non of the validity of their idjhah.

Moreover, from the reformist point of view, this represents the most perfect form of idjm* (cf. Wensinck, Idjm*, iv, 187; xvi, 267). But the reformists do not accept the traditional classification and formulations which arose from it (Tafsir, v, 203-9). For them, classification of the subject is not justified by the two sources, (ibid., v, 213) even though the idea of idjm* is implicitly contained in the Kuran (IV, 115) and the Sunna (cf. Wensinck, Handbook, 48A; Ibn Hazm, Th`ahm, iv, 132 ff.). This methodological principle must not be defined in terms of the concept of “unanimity” (idjm*), but rather in terms of that of “community” (idjm*), the latter: ulam`-i-amr (ul`am` al-a`ma). Any tafa* later than the era of the Companions is without value, particularly if it sets aside the problem of the Caliphate (“that vain fancy”) and suggests the establishment of a Diam`at al-Musul`imin, a sort of permanent legislative institution designed to study specifically Muslim problems in accordance with Islamic principles and the ideals of the Community (cf. H. Laoust, Le Califat dans la doctrine de Rashid Rida, 1938, 21 ff.), but such a notion has meaning only within the perspective of a restoration of the Caliphate. With greater realism, Ibn Bads* sets aside the problem of the Community (cf. A. Merad, Reformisme, 376 ff.; idem, Ibn Bads* Commentat., Chap. IV).

Though they never managed to agree on the practicalities of its establishment, the reformists did tend to see the institutionalization of idjm* as a decisive step in the evolution of the Sunna in accordance with Islamic principles and the ideals of the Community. All who wrote on these lines held in common the idea that the Diam`a would be the organized in the form of “a permanent legislative institution” (Reconstruction, 164). Rashid Rida (1922) considered the idea of using the Diam`a, a consultative body appointed to assist the supreme head (al-imam al-a`lam) of the Community (cf. H. Laoust, Le Califat dans la doctrine de Rashid Rida, 1938, 21 ff.), but such a notion has meaning only within the perspective of a restoration of the Caliphate. With greater realism, Ibn Bads* sets aside the problem of the Community (cf. A. Merad, Reformisme, 376 ff.; idem, Ibn Bads* Commentat., Chap. IV).

Though they never managed to agree on the practicalities of its establishment, the reformists did tend to see the institutionalization of idjm* as a decisive step in the evolution of the Sunna in accordance with Islamic principles and the ideals of the Community. All who wrote on these lines held in common the idea that the Diam`a would be the privileged setting of the Community’s idjm*. It would play two roles: at a religious level, it would effect regulations by stating the orthodox position on matters that gave rise to serious disagreement (idjm*); in secular affairs, it would be the instigator of action, through applying the principle of idjhah in the vast area within its competence. It would thus work towards preventing any confusion between the respective levels of the idjm and the `had`d, and would contribute to encouraging the free enquiry that the Community requires in the spheres of applied science and material progress.

5.—The distinction between the `had`d and the `had`. Following the neo-Hanbalite school (cf. Ahmad b. Hanbal; H. Laoust, Essais, 247-8, 444), modern islah tends to make a clear distinction between the concerns of the `had`d (q.v.) and those of the `had`. Once again they justify their stand by the principle that in matters of worship everything has been completely and definitely decided by God (Kuran) and the Prophet (Sunna); for the rest, that is to say everything concerning with the organization of material life, the ulam`-i-amr are free to come to their own decisions (see above: idjhah).

3a.—The `had`d (ulm`-i-amr). It tends to see the ulm`-i-amr in public affairs of a secular nature as a body of men who are free to come to their own decisions (see above: idjhah). It is the ulm`-i-amr that is the sole criterion of orthodoxy, and the Community requires in the spheres of applied science and material progress.
all acts (including those of worship) and observances (of hadd and ta'dl [q.v.]) which constitute the service of God (‘ibadatu). It is out of the question for anybody to introduce the slightest innovation, either because of an idjihād or out of simple religious zeal. The fact of recognizing the inalterable quality of the ‘ibādāt, the very centre of faith, is itself an act of fidelity in what the Believers hold in certainty from God and his Prophet; it is the sign of a sincere and total belief in the latter’s Sunna. ‘Iddāt (habits, usages) cover a vast field of “earthly affairs” (umār dunyawiyya) “which are individual or communal, particular or general” (Rashīd Rīḍā, Ta’ṣifīr, vii, 140) and above all affairs of a political and legal nature (ibid., iii, 327, vii, 140, 200) which vary according to time and place. It is thus not a matter merely of the traditional legal rules (mu'āmalāt) or matters of “customary right”, as the term ‘idā (q.v.) is understood in the usual classical sense of ḥabīb. In the domain of the ‘iddāt, the reformists counsel tolerance (‘aṣf) and claim for the al-‘i’ām, if not for private individuals, freedom of decision and the free exercise of idjihād (al-Kawākibl, Umūr al-burādī, 67; Manār, iv, 210, vii, 959; Ta’ṣifīr, iii, 327, vii, 140-41, 193).

By virtue of this distinction, the reformists showed a prudent reserve about everything that has not been expressly decided by God or prescribed by the Prophet. For Rashīd Rīḍā that which has not been prohibited by God cannot be prohibited by Man; that which God has made licīt, Man cannot make illicit (Ta’ṣifīr, vii, 169); that which God has passed over in silence must be held to be tolerable, ‘aṣf (ibid., iii, 328, vii, 169). The “wise men” of the religion have no right to make things permitted or forbidden. Their role is simply to put into practice the revealed Law (qur'ānī), in its function only is obedience due to them. As for the kurānīc or prophetic references to certain secular matters (the use of food and remedies, etc.), they cannot be taken as binding; they are simply “suggestions” about what is preferable and not canonical prescriptions, irshād lā taṣhīrī (ibid., vii, 201).

The distinction between the ‘ibādāt and the ‘addāt permitted the Salafiyya to condemn the proliferation of devotional practices propagated throughout the centuries in the name of Sīfism and eventually adopted by popular religion, even though they are not based on the Kurān and the Sunna. It enabled them, moreover, to point to their prunings of classical juridical and moral doctrine (by means of ḥadāth) and the reduction of traditional observance, in support of their claim to be the apostles of a disciplined and discreet religious temper, which they believed to be closer to the spirit of moderation that had characterized authentic Islam (the “gentile religion”, al-ḥanīfiyya al-ṣamāhā), and more in harmony with the modern world. This distinction would also encourage a more tolerant view of local legal and social usage through classifying them as ‘addāt, and permit the toning down of doctrinal differences (ṣikkīnī) between the important currents in that area, it would also weaken the religious quarrels inherited from old schisms. Taken to its logical conclusion, this attitude would make it possible to envisage calmly the coexistence—in the bosom of the ‘Umma—of different political, socio-economic and ideological systems, provided that the fundamental unity of Muslims in faith and worship was safeguarded and their common attachment to the essential content of Islamic law (ṣarī‘a) unimpaired.

However, such a distinction between the ‘ibādāt and ‘addāt has more of an apologetic value than any real practical implication. The fragmentary (and rather vague) notions on this subject put forward by Rashīd Rīḍā and al-Kawākibl do not enable us to make an exact analysis of which aspects of traditional Muslim legislation must be considered fundamental, and thus untouchable, and which can be subsumed under the ‘addāt. The postulated tolerance in matters of ‘addāt is itself ambiguous, because of the restrictive character of the Kurān in which it is put forward by the Salafiyya each time they were obliged to define their political, economic, social or cultural standpoints (although these are, in theory, the field in which ‘addāt can be used). In the reformist perspective, indeed, there are few matters that can be envisaged independently of the moral commands and general principles contained in Revelation and the Sunna; and whatever creative activity is envisaged, its goal must be examined in the light of the ethical and religious criteria of the two sources. Islāh admits of the possibility of adapting Muslim institutions and life to the realities of the modern world, so long as this adaptation does not result in the destruction of the fundamental values contained in the two sources. Thus, on the subject of feminism and the relations between the two sexes, the Salafiyya declare themselves favourable to the emancipation of Muslim women, but not to the extent that the liberalization of their legal status would come into conflict with the legal dispositions established in the Kurān, or the family and sexual ethics of Islam (cf. on this subject, Ta’ṣifīr, xi, 283-87: “Islam confers on women all human, religious and civil rights”); Rashīd Rīḍā, Nidā: li ḍjins al-lātīf, Cairo 1351/1932; A. Merad, Le Réformisme musulman, 315-31 (“Les Réformistes et le Caire”). Although they claim the necessity of distinguishing between profane and religious matters, between man’s relations with God and merely human activities (which are not ruled by scriptural commands), the Salafiyya did not make any decisive contribution to the separation of theology and law. From their point of view, the ambiguity of the relationship din/ṣarī‘a (which they never really attempted to clarify) makes any separation of them particularly difficult, because of the fragmentation of the legal and moral doctrine that attempts to establish a clear-cut distinction between purely religious and social matters extremely difficult and a priori suspect. (It is worth noting the vigorous reaction of the reformists against the attacks made by ‘Alī ‘Abd al-Rāzīk (1888-1968), in his al-Islām wa-asārīl al-buhm, Cairo 1343-44/1925, to dissociate institutional and political problems from moral and theological ones; cf., Kerr, Islamic Reform, 179 ff.). Rashīd Rīḍā notes in passing the respective values of the concepts din and ṣarī‘a, which he considers unjustifiable to confuse (Ta’ṣifīr, vi, 147), but he does not draw any logical conclusion from the distinction. The distinction din/ṣarī‘a (which is no less vital than that between the ‘ibādāt and the ‘addāt) could have had important consequences had it been taken to its extreme; but the search into the possibilities of rigorously limiting the field of application of “religious law”, and thus removing from the “sacred” domain everything that did not have a fundamental link with belief or worship and should therefore come under idjihād. It was left to Modernism (lidadīd [q.v.]) to undertake this research (cf., e.g., the essays of Muhammad Ahmad Ḥusayn al-Ṣayyīd, in particular his al-Kurān wa-muṣḥḥīli ṣayyīdī al-mu‘āṣira (Cairo 1967), in
which he proclaims the legitimacy of "a new interpretation of the fundamental principles of the shari'a, in the light of modern experience" (31)). Incomplete though it be, the distinction between the 'ibdadī and the 'dddt suggests a need for rationality and a desire to be pragmatic, which served the Salafiyya as an argument against the stubborn conservatism of the traditionalists (giasmūd) and in support of the broadmindedness of 'dddt on the subject of progress and the modern world. At the same time it is a reply to those who preach out-and-out modernism, to the detriment of fidelity to authentic Islam (as it was illustrated by the tradition of the Sāafa). The reformists see in this modernism a renunciation of the "spirit of compromise" which their apologetics present as the ideal tendency of Islam.

II—Apologetics.—Alongside criticism of the traditional aspects of Islam as they appear in conservative Sunnism, in the magical and superstitions beliefs of popular religion and in the religious systems of the brotherhoods, apologetics form an important part of the principal reformist works. Though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, though centred on internal problems of Muslim society, and often argued with missionary zeal, through which they seek to demonstrate consequently, the reformists attempted to demonstrate the excellence of Islam, as a "religion", as an ethical system, as a social, legal and political system (shari'a). Reformist apologetics proclaim the excellency, eternal nature and universal character of Islamic law, in opposition to human legislation, which is always imperfect, despite constant revision and correction. The shari'a—whether in those parts that are based on the Revelation—draws its essence from divine wisdom; it is thus the legislation best suited to the needs of mankind (madūn al-muqtahidīn, art. 1900, Cairo 1327/1909 (Fr. trans., Taflat Harb, L'Europe et l'Islam, Cairo 1905); idem, al-Islām wa 'l-Nārāfīyya, art. of 1901, in Manār), or indirectly, in the form of warnings to Muslims against the seductions of Western civilization and ideologies. In both cases, the reformists attempted to demonstrate the excellence of Islam, as a "religion", as an ethical system, as a social, legal and political system (shari'a). Reformist apologetics develop along the following broad lines:

1.—The liberating message of Islam.——a. As a spiritual message. Here the argument is confined essentially to the exaltation of tawbāh [q.v.] as a principle of human liberation. Moral Liberation: the affirmation of divine unity abolishes all worship that is not directed to God (the Unique), and all pretension to infallibility, since the only infallible source is the Revelation and the Prophet, who is inspired by God (this argument refutes tabākī [q.v.], to the extent that the latter supposes submission to an authority which is believed, or pretends to be, infallible). On the other hand, the affirmation of divine transcendence condemns any domination based on the principle of intercession (shujā'ī) [q.v.]. Consequently, tawbāh denies any legitimacy to intermediary structures between man and God (as in institutional Churches), and destroys any need for the belief in the mediating function of certain categories of men (saints, mystics, etc.). Social Liberation: belief in the omnipotence of God is the basis of men's equality, for all men are equally subject to God and all men participate equally in the eminent dignity of their condition (cf. Muhammad ʿAbdūh, Risālat al-tawbāhī, 152-6; Fr. trans., 106; Eng. trans., 125); it emancipates man from all resigned or fortunate (naṣīrī) [q.v.], based on authority (tabākī), or to a status of inferiority or slavery imposed by the "great" (cf. Kurʾān, XXXIII, 67, XXXIV, 31-4; al-imām ʿulūfī). The form of worship itself (common prayer, pilgrimage, etc.) underlines the egalitarian character of Islam.——b. The liberating message of Islam is also illustrated by the ethics of the Kurʾān and the Sunna which accept the fundamental unity of mankind and reject all discrimination based on differences of race or social condition (cf. Muhammad ʿAbdūh, Risālat al-tawbāhī, 172; Fr. trans., 116-7; Eng. trans., 135; Taflīr, 484 ff.; an identical position in Muhammad Ḥṣāli, Reconstruction, 89; Fr. trans., 103).

2.—The universal quality of Islam.——a. As a religion (dīn). Reformist apologetics merely take up the traditional theme of the universality of Muhammad's mission ('umām al-baḥtiyya). For the Prophet was "elected to guide all nations towards Good ( . . . ) and call all men to a belief in the One God" (Muhammad ʿAbdūh, Risālat al-tawbāhī, 139; Fr. trans., 90; Eng. trans., 114; cf. also, Taflīr, vii, 610, on sūra VI, 90). Like many other Muslim thinkers in our own time, reformist authors believe that Islam is the perfect universal religion, since it incorporates what is essential in previous revelations (and especially Judaism and Christianity) and perfects their message (cf. Muhammad ʿAbdūh, Risālat al-tawbāhī, 166 ff.; Fr. trans., 112 (bottom) ff.; Eng. trans., 132 ff.; Taflīr, . . . ., 448-456).——b. As a social, legal and political system (shari'a). The reformists proclaim the excellence, eternal nature and universal character of Islamic law, in opposition to human legislation, which is always imperfect, despite constant revision and correction. The shari'a—at least in those parts that are based on the Revelation—draws its essence from divine wisdom; it is thus the legislation best suited to the needs of mankind (al-muqtahidīn, art. of 1900, Cairo 1327/1909 (Fr. trans., Taflat Harb, L'Europe et l'Islam, Cairo 1905); idem, al-Islām wa 'l-Nārāfīyya, art. of 1901, in Manār), or indirectly, in the form of warnings to Muslims against the seductions of Western civilization and ideologies. In both cases, the reformists attempted to demonstrate the excellence of Islam, as a "religion", as an ethical system, as a social, legal and political system (shari'a). Reformist apologetics develop along the following broad lines:

3.—The liberal spirit of Islam.——Outside matters of faith and the unalterable elements of the shari'a (both of which were expressly laid down in Revelation), Islam assigns no limit to the exercise of reason. This aspect of reformist apologetics, which has been amply dealt with by Muhammad ʿAbdūh
The theme of knowledge and civilization plays an important role in reformist propaganda (cf. J. Jomier, *Le Comment. coran. du Mandr*, chap. IV; A. Merad, *Ibn Bâdis, Commentat. du Coran* chap. IV, II1rd). Thanks to the intelligence with which God has endowed him, man can rise above erroneous belief and superstition, cultivate the sciences and adopt healthy beliefs: using it, he should also be able to increase his power over nature, to profit by the various resources of Creation, in order to achieve material power (‘izz, kwaww) and know a happy moral well-being. Presented in this way by the reformists, Islam appears as a religion which is particularly attentive to the moral and material progress of humanity. It was therefore an effective refutation of arguments of the type put forward by Renan (Islam is incompatible with the scientific spirit) and useful in revealing the inadequacy of Marxist-orientated criticism (Islam is a reactionary doctrine). The reformists deplore the judging of Islam by the behaviour and excesses of some of its followers who distort its image through their innovations, by superstitious beliefs born of ignorance, by the imposture of false “scholars”, and by the immorality of its politicians (cf. the objections enumerated by Muhammad 'Abduh, *Risâlat al-tawhîd*, 195-9; Fr. trans., 132-5; Eng. trans., 131-3). For when traced back to its authentic expression, to the Revelation and the Sunna, Islam is a religion compatible with science and civilization (*Tafsîr*, ..., ix, 23); it encourages progress and science (ibid., iii, 26, 34, 106); and exalts science and freedom of research, which are the conditions of man’s greatness (ibid., v, 258); Islam is capable of regenerating civilization in the East and saving that of the West (ibid., ix, 22). Whatever the case, consists in proclaiming the values of Islam as man’s basis and as a ‘gârî’a, Islam is a progression beyond previous religions (ibid., 208-88: the enumeration of the various domains in which Islam has been beneficial to mankind). Hence the Muslim duty to reveal the truth of Islam: this is part of the canonical obligation to “invite to Good” (Muhammad 'Abduh, *Risâlat al-tawhîd*, 159-9; Fr. trans., 135; *Tafsîr* iv, 26-46; Fr. trans., 116; Eng. trans., 135; *Tafsîr* iv, 26-46, on sûra III, 104) and to “call to God” (Ibn Bâdis, *Shikhâb*, April 1935, 6, ref. to sûras XVI, 125 and XII, 108). To call to God, in this case, consists in proclaiming the values of Islam, refuting, through its “proofs”, the false ideas ascribed to it, and in making known its “beauties”; all this in order to fortify Muslims in their faith and to enlighten non-Muslims, less perhaps in order to convert them than to dissipate their prejudices and fanaticism. However, the notion of missionary work is not foreign to the reformists (cf. J. Jomier, *Le Comment. coran. du Mandr*, chap. X). Nevertheless, Muhammad 'Abduh gives priority to the duty of Islamic tolerance over conversion: “Islam is capable, through its own light, of penetrating the hearts of men” (*Risâlat al-tawhîd*, 172). In practice, the act of inviting to God leads to a certain number of religious, moral and cultural attitudes, towards both Muslims and non-Muslims.
 Calling to God consists above all in leading a life that is in perfect agreement with the general commands of Islam. This is the best way to ensure that the influence of the ideals contained in the Qur’an will grow. On a spiritual as well as a moral level, the Prophet’s example, and that of the “pious forefathers,” must inspire believers: “the more perfect their imitation, the more perfect their accomplishment of the mission of calling to God” (Ibn Badis).—Practical, the truths contained in the Qur’an and thus helping to transmit the revealed message (tabligh al-risāla) is also “calling to God”: since this message has universal implications, each part of it must be made comprehensible to all men. This theme can be related to that of the djihād through the Qur’an (cf. Sāhīb, April 1932, 204 ff.).—For Ibn Badis, this Qur’anic expression seems to justify a militant theology and an energetic conception of religious preaching, both to rouse the masses from their inertia and indifference and to denounce the blindness of “bad religious teachers” (‘ulamā’ al-sā’i) in the face of the spiritual riches of the Revelation and their reluctance to make them manifest to men.—Calling to God also implies the attempt to bring back to the Islamic fold those Muslims who, seduced by secular ideologies or intoxicated with modern scientific knowledge, regard Islam as “a worn-out piece of clothing that a man would be ashamed to be seen wearing”, and deride its dogmas and precepts (Muḥammad ʿAbduh, Risālat al-tauwhīd, 198; Fr. trans., 134–5; Eng. trans., 135).—The idea of calling to God also implies a struggle against the corruption (jāsād) spread in Muslim society in the name of “so-called modernism” (Taṣīr, x, 45) and against atheism like that of Kemāli, the “philosophy of Abū al-ʿAlāʾ al-Mansūrī (ibid., iii, 242–3), warning against excessive individual freedom, which generates all sorts of abuse (ibid., viii, 330–1) and is more or less directly responsible for the “moral crisis of the West”; enlightening people on the dangers inherent in the separation of science and religion, the cult of science per se, and the frantic quest for material goods without any moral goal (ibid., xi, 243).—It is not simply a matter of development of Muslim culture and who wanted to look for a compromise between the fundamental demands of Islam and the necessary adaptation of Muslim life to the realities of the modern world.

The apologetic work of the Salafiyya was not simply episodic, for it demanded that they make an effort to understand their adversaries’ point of view and develop a measure of cultural open-mindedness (often, it is true, timid), and to remind Muslims of those aspects of their theological and moral doctrine which might have seemed too fundamentalist. But at the same time it revealed the diversity of their temperaments and attitudes in the face of practical problems, especially when they had gone beyond discussing the place of absolute fidelity to the two sources in the liturgical and dogmatic spheres, and to the tradition of the Salaf in the general ethics of Islam. Apart from the more or less favourable historical and cultural conjuncture, the success of islāh in the different parts of the Arab world has been linked, to some extent, to the way in which the Salafiyya have been able to cope with the concrete problems facing Muslim society as a result of its progressive entry into the social, economic, technical and cultural norms of the modern world.

At the end of almost a century of development, we can assess the ground covered by the Salafiyya reformist movement from the time of al-ʿUmmā al-wuṭūḥā (1884) to the present day; at this moment the Arab world is the scene of important debates on the methods of interpreting the Qur’an and the authenticity of Hadīth on the one hand, and the function and autonomy of religion on the other. This is particularly true in countries in which research and cultural activity are more or less “orientated” toward—if not “mobilized” in the service of—political
ul and social objectives that are held to be sacred, and in which national energy is often geared primarily toward social reorganization and economic construction in an attempt to overcome underdevelopment. The development of islāh in a changing Arab world can be divided into three important stages:

1. *The heroic stage*, during which Dżamal al-Din al-Afghānī, Muhammad ʿAbdūh and ʿAbd al-Raḥmān al-Kawkābī laid the essential foundations of a total reform of Islam (cf. the programmes defined in ʿUmma al-ḥurra). Reformist action during this period aimed above all at the material and moral improvement of the Community, which had barely emerged from the Middle Ages. The social, political and cultural demands made by the three leaders of modern islāh had more effect than their doctrinal intervention (with the exception of Muḥammad ʿAbdūh’s Risālat al-tauḥīd which is a sort of guide for a basic theology). The reformists’ written and oral propaganda thus contributed to the Community’s growing awareness of notions of evolution, progress and creative effort (iqṭīṣād) on a spiritual and practical plane. It is true that the cultural climate of the period—end of the 19th and beginning of the 20th century—was favourable to the adoption of these ideas in Muslim thought, for this was the era of scientism, the optimism brought about by technical progress, and the growth of the idea that efficiency was an essential element of economic prosperity and social success. Yet the function of the Salafiyya was to confer on these notions—and at first the idea of iqṭīṣād—a legitimacy that would satisfy the ʿUmma, by assimilating them to authentic principles of Islam (seen from an ethical and cultural angle). In its initial form the reformist current of contemporary Islam hastened the birth of Arab-Muslim awareness of the modern world, but also gave rise to aspirations (of a socio-cultural nature etc.) and questions which the succeeding Muslim generation had to face.

2. *The second stage* (approximately 1905 to 1950).—This period saw the emergence of a doctrinal system in which Raḥfūl Rūḍā and ʿUṣūl Ibn Bāḍīs played a vital part. The example of these two strong personalities impressed non-Muhammadan authors whose numerous essays (in reviews like al-Manār, al-Qāhira, Mağalḍa al-ḥubbān al-muslimīn, al-Risāla, al-Muqāllala al-sayyāma) enriched the thought of islāh and consolidated its doctrinal positions. The principal reformist authors during the first half of the 20th century will now be briefly examined.

a) In Syria Dżamal al-Din al-Kāsimī (1866/7-1914) was a faithful disciple of the neo-Ḥanbalī tradition. His compatriot Tāhir al-Dżazzūrī (1851-1919) put his vast erudition at the disposal of islāh (notably in the publishing field).—ʿAbd al-Karīm al-Maghribī (1887-1956), who in his youth was influenced by direct contact with Dżamal al-Din al-Afghānī, made a very fruitful contribution to islāh in Syria. Shāhīb Arslān (1869-1946) a brilliant writer (called ʿamīr al-bayān, “Prince of Eloquence”) and politician, was a firm believer in Arabism (cf. his monthly revue, La Nation Arabe, Geneva 1930-9); a personal acquaintance of the editor of al-Manār, he made a greatly appreciated contribution to that revue.—Muḥammad Kūrd ʿAll (1876-1953), ex-president of the Arab Academy at Damascus (1920-53), although not properly speaking a reformist author, was a firm believer in Muḥammad ʿAbdūh’s ideas and can be counted among the literary and political personalities of the Arab world whose moral support of islāh was greatly valued.

b) In Egypt there were many “spiritual sons” of Muḥammad ʿAbdūh, who were noce or less faithful to the original ideas of their master: Muḥammad Fārid Wajdí (1875-1954), the author of a ʿurūṣī commentary with concordist tendencies, was the energetic editor of the review al-Risāla (founded in 1933) and a fervent propagandist for Islam.—Muḥammad Muṣṭafā al-Maṭāghī (1881-1945) was twice (1928, 1935) principal of al-Azhār, where he contributed to the spread of reformist ideals and struggled to strengthen the links between the orthodox schools; he attempted reforms in the spirit of Muḥammad ʿAbdūh, of whom he was a worthy successor.—Muḥammad ʿAbdūh’s “Prince of Eloquence”) and politician, was a firm believer in Muhammad ʿAbdūh, to guide Muslim thought towards a doctrine that was a sort of neo-Muʿtazilism.

c) In Tunisia the main representatives of ortho-
reformist thought were ʿAlī Shāhī (d. in 1937), the much respected president of Ibn Bāḍīs, the two ʿUṣūl Muḥammad al-Tāhir b. ʿĀshūr (born in 1879) —author of a ʿurūṣī commentary (now being published, i-iii, Tunis 1956-71)—and his son Muḥammad al-Fāḍil b. ʿĀshūr: al-Ḥaraka al-adabiyya wa l-fikriyya fi Tūnis, Cairo 1956.

d) In Algeria, besides Ibn Bāḍīs, notable reformists were Muḥārak al-Mīl (1890-1943), the theologian of the Algerian reformist school (see Būkhārī); ʿUṣūl al-Ukūbī (1888-1962), a supporter of islāh who was greatly influenced by Wahhābī tendencies (he had spent his childhood in the Ḥijāz), and owned a newspaper, al-Islāh (Biskra 1927- ) which appeared irregularly; Muḥammad al-Bāṣhr al-Ibāḥānī (1889-1965) [see al-Ibāḥānī]; Muḥammad Tawfīq al-Madānī (born in 1899), historian and politician, who was very active in the campaign for a national culture in the context of the reformist movement.

e) In Morocco, where the orthodox reformism of the Salafiyya was diffused at a relatively late date, few important names and works emerged (cf. J. Berque, Ça et là dans les débuts du réformisme religieux au Maroc, in Études..., dédiées à la mémoire d’E. Lévi-Provençal, Paris 1962, ii, 471-94).

Amongst the representative personalities of islāh in the Sherifian empire, we might mention: Abū Shūʿayb al-Dūkkālī (d. 1937); Ibn al-Muwaqqīt (1804-1949), who was more interested in censuring public morality than any real renewal of Islam (cf. the art. by A. Faure on Ibn al-Muwaqqīt in Hesprides, 1932, 165-95); Allāl al-Fās (born in 1910), a writer and political leader (Independence Party, ʿSHb al-sīṣāhī) who claims to be a Salafi (cf. his Autobiographie, al-Nahd al-ḥalīlī, Cairo 1949). These various authors would seem to be continuators of the doctrinal and pedagogic work of the first teachers of islāh. It is nevertheless worth noting that numerous writers and poets, such as Hāfīz Ibrāhīm (1872-1932), Muṣṭafā Lutfī al-Manfalūtī (1876-1924), ʿAbābā Maḥmūd al-ʿAjṣāfī (1889-1964), Muḥammad al-ʿĪd (born in 1904) etc., indirectly helped to spread islāh by employing its moral and social themes in their works. Despite its undeniable fertility (which Brockelmann only partially describes in S III, 310-35, 435-6), the
fifty-year-long work of the reformists brought no solutions which satisfied the problems of all social classes within the Community. Their doctrines—social and political as well as theological and moral—seemed to correspond more closely to the aspirations of the newly emergent urban middle class. As a group, it was relatively enlightened, and sometimes combined a minimum Arab-Islamic culture with a gloss of modern culture in one of the European languages. It wished to demonstrate its allegiance to a particular form of tradition—that of the Salaf as defined above—and at the same time to show a certain interest in things modern. The ideals of this class were expressed in terms of moderation and compromise; in the religious sphere they sought "reasonable" positions that excluded popular traditionalism (which they saw as the sign of ignorance or a reactionary spirit), as well as intransigent fundamentalism (represented by certain Muslim Brothers (al-ıslâmî n-işlâyı [q.v.]). They also rejected modernism which they judged excessive (such as the advocacy of a completely secular state). The orthodox reformism of the Salafiyya was thus assured of a fairly wide public which believed in order and prudent evolution, which respected the moral authority of the religious leaders, and was convinced that the Community needed "guiders" to take it along the road of a progress that would be compatible with Islam. But the apparently harmonious development of işlâh was to suffer from the political upheavals and social and moral changes resulting from the Second World War.

3. Recent developments (since the '50s).—The post-war period marked the beginning of a complete change in the religious make-up of the Arab world. The make-up of the reformist camp underwent profound qualitative and quantitative changes. The spokesmen of işlâh were no longer of the calibre of Rashîd Rişâ (d. 1935) or ʿAbd al-Hâmid b. Bâdis (d. 1940), and at the same time the Muslim Brothers movement came to the forefront. It attracted attention by means of political action and through the doctrinal works of several remarkable personalities, like Hasan İsmâ'îl al-Hûşaybî, leading guide and successor of Hasan al-Bannâ [q.v.]; Muhibb al-Dîn al-Khatîb, a publicist of Syrian origin, ex-director of al-Maṭâ bi al-Salaflîyâ (in Cairo); the Syrian Muṣṭafâ al-Sîbâî (d. 1965); Sayyid Kûtîb (executed in 1966), author of a kur'anic commentary, Fi ʾişlâh al-Kur'ân; Muhammad al-Ghâzlî, whose apologetic and doctrinal works amount to more than 7,000 pp. (cf. REI, Abstracta, 1961, 105-6); and Saʿîd Ramadân, founder and still editor of the revue al-Musllîmân (Cairo-Damascus, 1951- ; Geneva, 1961- ).—b. The reformist movement lost that place in society which was its strength between the wars: the supporters of the main current of işlâh (in direct line from Rashîd Rişâ, for example) were quickly regarded as inheritors and supporters of a moral and social order already described as "traditional"—c. Paraadoxically, the historical success of the reformist movement—in Algeria and, up to a point, in Egypt—contributed to its disintegration and fall. Attracted by power (and some actually absorbed into public office), many missionaries of işlâh abandoned their former zeal for the triumph of Islamic values and settled for a prudent opportunism. Forced by events to supply "official" religion with structures and a doctrine, they in their turn became a conformist force. The defence of pure Islam, which had been the aim of işlâh in opposition, was taken up by men who were enemies of any compromise with regimes which they held to be unjust or illegal, the same men whom their opponents happily called fascist or reactionary.

—d. The younger generation, less and less restricted by the ability to speak Arabic only, succeeded in discovering a new vision of social and moral realities around the world (through the cinema, the illustrated press, and foreign literature); new philosophies (cf. the success of Existentialism after the War and the increasing dissemination of Marxism—which followed Communist penetration—in Arab countries); new more alien revolutionary ideologies (anti-colonialism and anti-imperialism, Arab Socialism and utopianism); and a new political ethic inspired by the "Spirit of Bandung" (1955). All these factors made the young generation sceptical about the virtues of işlâh and doubtful of its fundamental principles, principles which had seemed as satisfying to the mind as they were reassuring to the faith of the preceding generation.—e. The rise to power of new social forces in the newly independent countries (Syria-Lebanon: 1946; Libya: 1952; Sudan: 1955; Morocco and Tunisia: 1956; Algeria: 1962), or those whose monarchies were supplanted by republican regimes (Egypt: 1952; 'Irân: 1958; Tunisia: 1957; Libya: 1969), relegated to the background the notables and national bourgeoisie, who had held power in the shadow of the previous regime. In taking over the apparatus of state, the younger generation naturally sought to extend its power to districts controlled by the reformist faith. But the apparently harmonious development of işlâh was to suffer from the political upheavals and social and moral changes resulting from the Second World War.
invoked in support of official ideology, not for the religious values it represented or for its references to Islamic authenticity.

This complex of phenomena which has become apparent throughout the Arab world over the last few decades clearly shows two things: the striking weakening of islah as a "driving force" in Muslim society, and its replacement by politics, which is now becoming the moving spirit on every level of national life. Politics is the most important factor of life today, for, considerably helped by the mass media and propaganda techniques, it seizes public attention, concentrating on it the acts of its rulers; in this way the life of a whole nation hangs on the "historic" speeches and oracular utterances of national leaders, those heroes and demi-gods of modern times. (Thus it is that positions actuelles de Vextense coranique en Egypte .

The role of political language itself has acquired such prominence over other forms of expression (literature, religion, etc.) that it impregnates them with its concepts and its dialectic. (In many cases the religious vocabulary seems to be nothing more than the simple transposition of the political). New powers—the state, the party—have taken over the primary role in the life of the Umma, and have directed its social and cultural orientations. Sometime these powers, armed with totalitarian might, try to force the citizen's duties and beliefs on him. From this moment, religion ceased to be the most important factor in Muslim life and found itself dispossessed of its traditional function as interpreter of symbols and record of the community's conscience.

In this social and cultural context, the voice of islah lost much of its strength and effectiveness. The reformist public itself moved in the direction of modernism and atheism or became reformist groups whose concept of the role of islah in the modern world differed from that held by the Salafiyya. Such tendencies seem to be the logical result of the ideas implicit in the two main strands of reformist thought since the beginning of the 20th century—the liberal trend, which favoured a global realignment of Muslim life to the modern world and a development influenced by a certain liberal spirit—this trend did not gain the sympathy of either the modernists—fervent defenders of social and cultural liberalism and freedom of conscience—nor that of the young who were still attached to Islam, but aware of the social and political changes taking place around them. Fully committed to the "logic of history" and hoping to avoid both the ambiguities of a reformism that was not progressive enough for them and the manifest fundamentalism of the religious movements, which they felt to be reactionary, the young opted for a populist islah, and, taking the part of the mass of the population which previous regimes had for so long ignored, fought for social justice (one of the dominant themes in the politico-religious literature of the post-war years; cf. Sayyid Kutb, Al-t'adla al-iglima*iyya fi 'l-Islăm, Cairo 1952; Eng. trans. J. H. Hardie, Social Justice in Islam, Washington 1953). They pleaded for the socialization of culture (cf. the Egyptian "Cultural Library", aimed at the popularization of science and making it accessible to the common people). They attempted to establish a new Arabo-Islamic humanism, based on a socialist state which would put an end to exploitation and oppression, without itself employing terror (cf. in this respect the principles set down by one of the theorists of Arab Socialism (Ba'th), Salāḥ al-Dīn al-Bayṭār, Al-Siyasa al-'arbāisiyya bayn al-madha* wa 'l-taqbih, Beirut 1960; Fr. trans. by Marcel Colombe, in Orient, xi (1966), 127 ff.). Finally the reformist writers of this avant-garde group refused to adhere not only to social and political forms that they considered to be decisively condemned by History, but also to collective representations and ideas that they felt were the product of a medieval mentality. On the other hand, to the extent that they express, in the language of our day, something that is essential to the kurānic...
message, they attempted to integrate with Muslim thought the leading concepts of contemporary culture (notably in relation to the Third World), even in the case of ideas that are the product of nominally aesthetic ideologies such as socialism (iqtisâriyya [q.v.] and the revolution (thawra [q.v.]).

In conclusion, even though islah no longer appears to be a religious and cultural current with the force, homogeneity and unity of tone that it had in the inter-war period, it continues to evolve differently in different forms, some vehement, others more moderate. Whether we consider the liberal islah of the moderate intellectuals who claimed for Islam tolerance and freedom of investigation, preached the emancipation of peoples through education and instruction, and based their optimistic vision of human evolution of the triumph of Reason and Science; or the militant islah of the Muslim Brothers, with their mystique of solutionism could no longer remain enclosed within the static universe of the Salafiyya. By the very diversity of its current trends islah can escape from the rigid dogmatism which always haunts monolithic movements, and in this way is present at the present-day front where many thinkers and university teachers who feel personally concerned with the future of Islam in the modern world can attempt to give Islamic culture a "new start". This has given rise to a proliferation of essays and critical works, claiming to be inspired by islah, everywhere in the Arab world (Egypt, Lebanon, Tunisia etc.), and even in Pakistan, where the ideas of Muh. I. K. M. A. Merad, for example, continue to be a fertile source of inspiration.

1959: this little work gives a summarized form of all the main themes of reformist propaganda to be developed by R. Riḍā and Ibn Bāḍīs.—d) Ibdm, Ṭabāṭībr al-aṭtābiṣd, Cairo 1318/1900, enlarged re-ed., Aleppo 1957. This essay was to have less impact in reformist circles than the preceding work.

—e) Muḥ. ʿAbdūh, Risālat al-tawḥīd, Cairo, 1315/1897; new ed. (expurgated as far as the question of the “created Qurʿān” is concerned), with notes, by R. Riḍā, Cairo 1326/1908. This ed. was considered, as definitive for more than half a century (17th. reprint 1379/1960). A new ed. by Maḥmūd Abū Rayya uses the text of the original ed. revised and corrected by the author, Cairo, Maʿārif, 1966. Fr. trans. based on the 1st. ed. by B. Michel and Moustapha Abdel Razik, Risālat al-Tawḥīd—Exposé de la religion musulmane, Paris 1925; Eng. trans.: [Ṭabāṭībr] Musaʿād and K. Cragg, The Theology of Unity, London 1966.—f) Ibdm, Ṭabāṭībr ṣaḥḥār al-Dawwānī li ʿl-tabbāt al-ṣaḥḥās, Cairo 1292/1875; re-ed. in Sulaymān Dūnān, Al-ṣayyāh, M. ʿA. bayn al-ṣayyās wa-l-ṣāḥib al-maṣūmīyya, Cairo, 1377/1958, 2 vols. In the Introduction (64 pp.) the ed. situates the thought of M. Ṣ. in relation to the problems of faith and reason, and criticizes the “excessive” rationalism of ʿAbdūh. For the same sort of approach note his discussions on ṭabāṭībr al-ṣaḥḥās (written in 1294/1877), 1st ed., Cairo 1295/1878. According to R. Riḍā the author reconsidered, towards the end of his life, a large part of his youthful work (which deals with kalām, Sufism and the falsafa).

—g) Ibdm, Al-ʾĪslām wa-l-Nasāʾīyya maʿa l-ʾilm wa l-madāniyya, Cairo 1320/1902 (replies and apologetic refutations).—h) Rāḍī, Ṭafṣīr al-Kūrān al-ḥākim al-ṣaḥḥīr bi-Ṭafṣīr al-Maḥānār, in 12 vols., Cairo 1340/1927-34 (this commentary stops at verse 52, sūrah XII, and thus only covers 2/5 of the Qurʿānic text).—i) Ibdm, Taʿrīkh as-suṣṭād al-imām al-Ṣayyib Muḥammad ʿAbdūh (see above, 3. c.).—j) Ibdm, Al-ʾĪshāfīyya al-imām al-ʿĪṣām, Cairo 1341/1922-23 (Fr. trans. H. Laoust, Le califat dans la doctrine de R.R., Beirut 1938).

6. Periodicals which frequently deal with the problems of reformism in an Arab context: LʾAfrique et lʾAsie; Orients dʾOrient Contemporain; IBLA; Islamica; JAOS; MIDEO; Orient; OM; the old Revue du Monde Musulman; the Revue des Etudes Islamiques and its Abstrac, etc. (A. Merad).

ii.—IRAN

Islamic thought and expression bearing a distinctively modern stamp has been of less quantity and importance in Iran than in the Arab lands or the Indo-Pakistan subcontinent. No figure has emerged comparable in influence or literary output to, for example, Sayyid Kutb or Muhammad Ḥiṣnī [eq.]. This may be attributed in part to the relative isolation of Iran from intellectual currents in other parts of the Muslim world by virtue of its profession of Shiʿism, and in part, too, to the very nature of Shiʿism, which, being in its essence an esoterism, is less susceptible to those storms of historical change that have provoked modernist reaction elsewhere. Traditional learning and institutions have, moreover, been unusually well preserved in Iran, and while Islamic modernism in other lands has frequently arisen from “lay” impatience with ʿulamd (which deals with the ʿulamāʾ impatience with the ʿulamāʾ and a desire to expound and implement its dictates) to the faith and a desire to expound and implement its dictates independently of them, the Iranian ʿulamāʾ have, by contrast, maintained a high degree of influence and prestige. There have nonetheless been certain currents of modernist expression in Iran, elicited in large part by the western impact and tending to the presentation of Islam above all in terms of social and political reform and compatibility with modern science and rationality. The beginnings of such expression are to be traced to the reign of Fath ʿAlī Shah (1797-1834), when Abbas Mirza invoked Qurʿānic sanction for the introduction of certain military reforms of western provenance. The depiction of social and
political reform as deriving from religious precept and duty thereafter became a commonplace of reformist thought. It received little systematic exposition, however, and was frequently voiced by persons themselves lacking in substantial religious belief and concerned above all with the forging of a tactical device for gaining ‘ulama’ and mass support for reform and westernization. Most prominent and influential among this class was the Perse-Armenian Mîrzâ Malkum Khan (1834-1908). On the basis of his private statements (particularly to his friend and confidant, Akgünzada), it may be concluded that he was a free-thinker; yet he belongs to the history of Islamic modernism in Iran by virtue of his expedient and influential exposition of the Islamic acceptability, even necessity, of reform. This theme he put forward in a number of treatises, especially Kitâbâ-yi ghâyibi, and above all in the celebrated journal Kâmân, published in London from 1890 to 1898.

In the identification of religious duty with the need to reform, the question of law played a crucial part: whether the law of a regenerated state was to be the şari’a or a code of western inspiration. The problem was solved — if only in the most immediate sense — by the equation of both on the basis of allegedly shared fundamentals: the just and orderly functioning of society for the increase of prosperity. This equation, explicit in the very title of Malkum’s journal, was set forth more clearly (and probably with a greater degree of inward conviction) by Mîrzâ Yusuf Khan Mustâshâr al-Dawla in his treatise entitled Yak Kalima (1870). The “one word” of the title is law, which constitutes the sufficient solution to all of Iran’s problems, and the law in question consists of the French legal codes, which Mîrzâ Yusuf Khan attempts to prove compatible with Islam by means of quotation from the Qur’ân and Hadith. He wrote another work in similar vein, Rûh-i Islâm, in which he stated: “I have found proofs and evidences from the Glorious Qur’ân and reliable traditions for all the means of progress and civilization, so that none shall henceforth say, ‘such and such a matter is against the principles of Islam,’ or, ‘the principles of Islam are an obstacle to progress and civilization’.”

None of the works or tendencies indicated so far emanated from the ‘ulama’, although they may have been influenced by some among them to various degrees. It is not until the years of the constitutional revolution (1905-1911) that we find a coherent and serious statement on questions of political and social reform, inspired by genuine concern and expressed in scholarly terms, issuing from the ulama class. The work in question is a treatise on constitutional government from the viewpoint of Shi’i Islam, entitled Tanbih al-umma wa tanbih al-milá dar asâs wa usul-i maqriziyat (first published 1909, reprinted with an introduction by Sayyid Muhammad Tâlikânî in 1955). The author was Shaykh Muhammed Husayn Nâ’tîn (1860-1936), a mujtahid resident in Nadîf, who had been a pupil of the celebrated Mîrzâ Hasan Shâhriârî, author of the fatwa so effective in the tobacco boycott of 1891-1892, and who enjoyed the close friendship of the great constitutionalist divines, Mullâ Kâzîm Khur-râsânî and Mullâ ‘Abd Allâh Mâzar dârânî. The participation of a large and significant number of the Iranian ‘ulama’ in the constitutional revolution has often been regarded as a result of confusion and circumstantial pressure, as the continuation of traditional ‘ulama’ hostility to the state in a situation the novelty of which they failed to recognize. Nâ’tîn’s book delineates the positive doctrinal reasons for their support of constitutionalism, firmly grounded in the Qur’ân and Sunna. He defines the functions of the state as the establishment of equilibrium within society and its defence from external attack. The power enjoyed by the state should be limited to that necessary for fulfilling these functions; any excess tends inevitably in the direction of tyranny, which in turn tempts the ruler to usurp the divine attribute of sovereignty, and thus to commit the cardinal sin of shirk.
Such perversion can be fully prevented only by the ‘isma of the ruler, his freedom from sin and error, and it was for this reason that legitimate rule belonged to the Imams during their lifetime. After the occultation of the twelfth Imam, legitimacy has withdrawn from the earthly plane, and a degree of usurpatoriness is bound to haunt all existing regimes. It is nonetheless both possible and desirable to reduce that degree to a minimum by limiting the power of the ruler and instituting an assembly (majlis) of representatives which shall implement the consultative principle enunciated in the Kur‘an. Such an assembly may act as a legislature only with regard to matters not already covered by the sharia, or by giving specific implementation to items legislated for in general manner by Kur‘an and Sunna. The functioning of the assembly is to be regulated by a constitution, and objections that the constitution somehow vies with the sharia was as a new, comprehensive code are ill-informed or misconceived. There results from conceding to the assembly a limited legislative power a duality of religious and secular law; but the innocence of secular law will be guaranteed by the presence in the majlis of a number of mujtahids, and in any event, perfect implementation of the sharia, with all aspects of life integrated according to its ordinances, will be possible only with the return of the Imam to the plane of manifestation. Nairn’s statement of the desirability of constitutional rule in Shi‘i terms indicates not only how the ‘ulama’ were able, in later decades, to refer to both the Kur‘an and the constitution as sources of authority for political life, but also how it was possible for them to ally themselves with secular elements in the pursuit of common political objectives.

Modernist thought and expression, in Islamic terms, remained dormant throughout the reign of Ridā Shāh (1926-1941), under whose auspices a nationalist ideolog—secularist and anti-Islamic tendencies was fostered, although not as energetically as in neighbouring Turkey. After his deposition and the succession to the throne of Muhammad Ridā Shāh, a certain freedom of expression came into being of which use was made by various religious circles, and although the possibilities of unlimited expression have since suffered a sharp decline, Islamic modernism in Iran has continually developed in the post-war period. During the last decade in particular, a large body of religious literature has made its appearance, modern in its tone of thought and its preoccupation with socio-economic problems, the interrelations of science and religion, and the task of restating Islam in a manner comprehensible to secularly educated youth.

In the period between the accession of Muhammad Ridā Shāh and the overthrow of prime minister Muhammad Musaddik in July 1953, the resurgence of Islam as a visible factor in public affairs was marked by an extreme degree of political activism, largely unaccompanied by intellectual or literary activity. This observation applies both to the organization of the Fidā‘iyya-i Islam (q.v.), under the leadership of Nawab Sa‘ādat Khan and to the Islām-i ‘Azmi movement. Burūjdī’s death deprived the Shi‘i community of one of its foremost pupils of Mullā Kāzīm Khurshānī in Najaf. In his speeches and correspondence, Khurshānī reflected the thinking of this earlier generation of ‘ulama’, accepting, like Na‘īnī, the Kur‘an and the constitution as dual sources of political authority. His expression of the theme had an abrasive polemical edge that reflected the extreme tensions of the period.

At this time, the dominant figure in the religious life of Iran was not Kāzīm Khurshānī, but Ayāt Allāh Husayn Burūjdī (1871-1942), a figure universally acknowledged to have exceeded Kāzīm Khurshānī in piety and learning, while quietist—and even occasionally loyalist—in his political attitudes. Burūjdī could not, in any important sense, be called a modernist, for he did not concern himself to any remarkable degree with political or social problems. Nonetheless, during the one-and-a-half decades that he functioned as sole majlis-i takhrīr (q.v.) of the Ijā‘īna ‘ashrī Shi‘i community, he initiated a process of renewal and self-criticism within the religious institution which has gathered momentum after his death and largely contributed to the contemporary spate of religious concern and thought in Iran. Burūjdī established a network of communication reaching out from Kum to all regions of the country to regularize the collection of sahm-i ‘imām, a measure that later proved useful for the dissemination of religious guidance and directives. In the field of pure scholarship, he revived the independent study of hadīth and instigated a critical revision of the fundamental Shi‘i manual, Muḥammad b. Kāsan al-Hurr al-‘Ammūlī’s Wasaḥ ‘alā ‘al-sharī‘a ‘al-takhfī al-madhdhib al-islāmiyya, issuing an organ under the title of Risālat al-Islām. This concern of Burūjdī has survived his death, and while the absence of diplomatic relations between Tehran and Cairo for a number of years made it difficult to pursue contacts with the Azhar, with their co-operation, there was established in Cairo, with a branch in Kum, an institution called Dār al-takhfī bay‘al-madhdhib al-islāmiyya, issuing an organ under the title of Risālat al-Islām. Another initiative of Burūjdī which has continued to bear fruit was the dispatch of Shi‘i emissaries to western Europe, both to cater to needs of Iranians abroad and to propagate Shi‘i Islam among interested Europeans.

The death of Burūjdī deprived the Shi‘i community of its sole ‘ard, and the problem of leadership and direction posed itself in an unusually acute manner. It was widely felt that the traditional process whereby one or more of the mujtahids, qualified by piety and pre-eminence in religious learning, had emerged to be sources of guidance, was defective and incapable of answering the true needs of the community. For all the deep respect that Burūjdī had enjoyed, his failure to provide a measure of Ayāt Allāh Abu ‘l-Kāsim Kāshānī, the Fidā‘iyya never evolved a consistent ideology or any serious programme for reshaping the life of state and society in Islamic terms. Their organ, Zilzila, consisted largely of commentaries on questions of the day, with more permanent questions receiving only fragmentary treatment. Kāshānī, although temporarily co-operating with the Fidā‘iyya, represented the tradition of the constitutionalist mujtahids of the early part of the century and had indeed been one of the foremost
A single individual. Some therefore concluded that a collective *mārjā* was desirable. Many of these considerations, together with suggested solutions, were adumbrated in a collective volume entitled *Bahālī dar bārā-yi mārjā*ṣayat wa rāhānīyat*, first published in 1963 and since reprinted with supplementary material. This book, the work of seven authors, including both *ulāmā* and lay writers, was probably the most influential and substantial piece of religious writing to appear in Persian since Nāmī’s discussion of constitutional government. It concluded a brief and clear exposition of certain fundamental concepts such as *tāhliā, idāfiḥā* and *waltāyayat* (treated by Sayyid Muhammad Ḥusayn Ṭabāṭabā’ī and Muṭṭaharī, and of the proper social function of the religious classes in general and the *mārjā* in particular (discussed by Mahdī Bāzargān and Sayyid Muhammad Bihīḥū). Possibly the most important sections were those in which Muṭṭaharī discussed the need to provide an independent financial basis for the religious institution, thus freeing it of subservience to either state or populace, and those in which Bāzargān and Sayyid Muṭṭaharī Dījavāri proposed the replacement of a collective by an individual by a *mārjā* (termed by the latter *gharā-yi jāfūr*).

In addition to such discussion of problems peculiar to Shi’ism in the present age, the postwar religious scene in Iran has also witnessed the translation into Persian of modernist works produced elsewhere in the Islamic world. Some of the authors most frequently translated are Sayyid Ḥutb, Muhammad Ḥutb, Ṣul al-Ḵardāwī and others associated with the Ḥkwān al-Mūslīmīn [q.v.], and Mowlānā Abū ‘l-‘Alā Mawdūdī, leader of the Pakistani Dhamā‘āt-i Islām. Among the more influential of the works translated, special mention may be made of Sayyid Ḥutb’s *Al-‘Adāda al-dinīyya fi-l-‘Ilām*. The translations are occasionally supplied with footnotes to indicate Shi’i divergent opinions when deemed necessary.

The most prolific and influential writer of original modernist literature in Iran today is Mahdī Bāzargān, one of the contributors to the collective volume already mentioned. His work is characterized by the clear influence of certain Sunni modernists, a concern with demonstrating the plausibility of scientific fact with religious truth, and a clear and persuasive style. His first book was *Mūḥāhirāt dar Islām* (1943; later reprinted), a detailed demonstration of the biological and hygienic utility inherent in the Islamic prescriptions for ritual purity. Of his later production, totalling some twenty titles to date, mention may be made of *‘Īshan wa parasūkht* (1963), a work subtitled “the thermodynamics of man”; *Du‘ā‘* (1964), discussing the psychological benefits of prayer; and *Dārs-i Dīnqār* (1965), stressing the continuing need of man and society in the modern world for religion. Bāzargān has also been politically active as one of the moving spirits behind the Niḥṣāt-ī ‘Azādī, a religiously orientated component of the proscribed oppositional National Front. One of his associates in this venture has been Sayyid Ḥusayn Tālīkānī, author of a number of works including the significant treatise *Dīnqār wa Shāh rād* (1965).

Most of the works of Bāzargān and Tālīkānī have been published by a Tehran house known as Shirkāt-i Inqilāb, which continues to put out an ever-increasing volume of modernist religious literature. A few specimens may be cited by way of example: Ṣalāt Ghaflūrī’s *Islām wa ‘ilmāniyya-yi dīnānī-yi kūshk-i bāchā* (1964), aiming to show how Islam has predefined the notion of universal human rights; Muhammad Taḥtī Sharī‘atī’s *Taḥfīz-i μwāt* (1967), a commentary on the last gīʻāt of the Kūr‘ān, marked by rationality in tendency; and Muhammad ʻArifī Ḥabībastī’s *Dīmā‘āt-yi insānī-yi Islām* (1969), a work stressing the universalist and fraternal aspects of Islam.

There are too certain special classes of religious literature worthy of note. One is the popular religious biography, of which the chief exponent is Ṣayyid al-ʿĀlidīn Rahnamā. His immensely successful biography of the Prophet, *Pāyāmbar*, first published in 1937, has gone through more than fifteen editions and been translated into French (Paris 1957). Rahnamā’s work is characterized by skilful narrative technique and a free use of invented dialogue. A two-volume *Zindagānī-yi Ismāʿīl Ḥusayn* (new edition 1966) has enjoyed similar popularity. Also deserving of mention in the same genre is the Persian translation of C. V. Gheorghiu’s French biography of the Prophet under the title of *Muḥammad, paygāmbari ki az nāv bāyd darshā* (1964).

Poetical literature forms another notable division of contemporary religious writing. Numerous works have been written stressing the unique identity of the Shi’i, partly as an adjunct to and partly in contradiction of, moves towards a Sunni-Shi’i rapprochement. Probably the best work in this category is Sayyid Muhammad Ḥusayn Ṭabāṭabā’ī’s *Shīa dar Islām* (1969). The vast work in Arabic on the supposed appointment of ʿAlī as successor to the Prophet at the pool of Khumm, *Shaykh ʿAbd al-Husayn Amlī’s al-Ghadr*, has been partially translated into Persian. A more popular treatment of the same subject is the anonymous and collective work *Hasāṣastīn jurds-i tārīkh-yi dāstān-i ghadr* (1969). Other works are aimed at refuting the attacks made on Shi’i Islam by the radical anti-clerical Aḥmad Kasravī in his frequently reprinted *Shīgarī*. In this category mention may be made of Hūdādī Sirāji Anṣārī’s *Shīa chi migāyad* (third edition, 1960), and Muhammad Taḥtī Sharī‘atī’s *Fā’ida wa lusūm-i din* (1966). Finally, there exists an extensive literature in refutation of Bahā’īsm, chiefly in pamphlet form.

In addition to the printed word, the broadcast lecture on religious subjects has played a part of importance in the diffusion of contemporary Islamic thought, particularly in an era of decreasing mosque attendance. The name of the Andjuman-i Tablīghat-i Islāmī, founded in 1943 by Dr. ʿĀlī Allāh Shīhābūrū with headquarters in Tehran and branches in a number of provincial cities. It published a number of booklets on the fundamentals of the organization, as well as a magazine entitled *Nār-i dānīsh* and a yearbook bearing the same name. The activities of the organization seem to have faded out in the late 1950s.

In 1965 there was established in Kum an institution called the Dār al-Tablīgh al-Islāmī, the fulfillment of the wishes of the late Burūjīrdī and under the auspices of another mujtāḥid, Ayat Allāh Muhammad Kāzim Sharī‘atmadārī. The institution trains students in the religious science, not, like the traditional *madrasas*, for the sake of pure knowledge, but with a view to the effective propagation of religion among the masses. English is among the subjects taught, and it is intended to institute missionary activity abroad. On the occasion of the fourth anniversary
of the institution, a lavish volume entitled Simd-i Islam was published, containing contributions by leading contemporary religious writers. Closely associated with the activities of the Dâr al-Talibîyân is an author by the name of Sayyid Hâdi Khurâsânî, a figure well-known in international Islamic circles and editor of the popular religious magazine Maktab-i Islam (appearing since 1958).

More recently still, there has been founded in Tehran the institution known as Husayniya-yi Traghâd, a centre where well-attended lectures on religious subjects are given by prominent figures both from the 'ulamâ' and the world of learning. It too has publications to its credit, the most notable being a two-volume collection of papers entitled Mu'azzamât, bi-l'amât i pa.webaynân (1969). During the hâdir season, the Husayniya establishes a temporary branch at Minâ, where Iranian pilgrims go to receive guidance and hear lectures on the significance of the pilgrimage.

(Hamid Algar)

iii.-Turkey

Within the Ottoman-Turkish context islâm seldom meant modernism in religion. The word has more often been associated with political reform which, in turn, meant at first (during the 11th/17th and 12th/18th centuries) the restoration of the old political order, and later (approximately after 1800), a reconstitution of the political system on the basis of principles more and more remote from those of sultanate and caliphate. There is no word consistently used to denote the idea of religious modernism, as distinct from the modernization of religious institutions such as the madrasas, where again the term used was islâm. There is no major movement of religious modernism comparable with those found elsewhere in the Islamic world.

The absence of a concept and movement of religious modernism seems to be a result of the characteristic Ottoman fusion of religion and state, symbolized by the frequent use of the term din-i-devlet by Ottoman writers. In an institutional or in a theological sense, very little scope was left for the rise of a religious modernism independent of political reform movements. The Ottoman polity had succeeded more than any other in maintaining Islam and its representatives, the 'ulamâ', within the framework of the state organization. The religious institution, which represented no spiritual or ecclesiastical authority, was merely a segment of the ruling institution, and was organized into an order or odâba [q.v.]. Its role lay mainly in the cultivation of jurisprudence (fîkh), the giving of opinions on legal matters (ifâh), and the execution of the sharî'a law and the hânsûn (hadâ). The madrasa was not primarily a school of theology, but was chiefly a training centre of jurisprudence. Through its judiciary, the state had adopted Sunnî orthodoxy, with an emphasis on Maturîdî theology and the Harâmî school of jurisprudence, and thus limited the possibilities for theological controversies.

However, besides the orthodox religious institution, with its educational and judicial regimentation and hierarchy, scope was also given to another stream of religious institutionalization which came closer to what might be regarded as an autonomous spiritual institution. These were the mystic orders or fârîkâs, of which there was a rich variety as a result of their tendency to split and multiply. Most of them, however, adhered, at least ostensibly to one or other of the main conservative, moderate, and extremist trends in terms of their attitudes toward the world and the state. It was only when a clash took place within the accepted limits of discrepancy between the 'ulamâ' and Şî'î orders that there was the possibility of some kind of religious controversy. Upon such a clash extended to the basic tenets of orthodoxy, the 'ulamâ' tended to view it more in political than religious terms and treated the exponents of such views as heretical. In all such cases the 'ulamâ' easily obtained the support of the political power. The majority of the fârîkâs, however, avoided open antinomianism and maintained their position within the framework of the Ottoman polity. They adopted quietism or indifferentism on theological-political matters and were inclined more and more to ritualism and incantation or to poetry and art. This tendency not only safeguarded their existence, but also added prestige and enhanced their popularity among various classes of society, particularly among the artisans, the military, and the bureaucracy. The fârîkâ thus represented another example of the union between religion and state, attracting the participation not only of the 'ulamâ' but also of high ranking statesmen, often even of the rulers themselves. Furthermore, the Ottoman state succeeded, in the later period, in making the fârîkâ a semi-official pillar of the state by recognizing the mâsh'âyiyyîh alongside the 'ulamâ' in various ceremonial affairs.

After a fairly long period of partnership between the state, the 'ulamâ', and the fârîkâs, religious and spiritual controversies arose when in the 19th century all of them faced the earliest challenges of the modern world. The objects of their controversies, such as coffee-drinking, smoking, intoxication, the use of silk or jewellery, emotional extravagance in daily life or in religious observance, belief in powers above or beyond the state and God may seem unimportant, but they were innovations partly introduced by the material affluence of the ruling class and the monetary and fiscal crises caused by the advent of an inflated economy and the concomitant disruption of the traditional orders of the Ottoman polity, accompanied by the impoverishment of the masses. The confluence of these factors made the problem of innovation (bid'a) the central theme of religious controversies. The 'ulamâ' and the mâsh'âyiyyîh accused each other of such innovations while the state, perhaps the real culprit, took the occasion to tighten its grip upon both.
However, no basic change in the traditional outlook of the 'ulamā' and Şīʿi orders took place before the challenge of the modern world, although one should not conclude that the 'ulamā' always took a negative attitude toward innovations. Because of their vested interest in the maintenance of the Ottoman system, their attitude to change was dictated by their principle of maslahah, political expediency. Only in a few cases did the 'ulamā' openly oppose government policies and attempts at reform. In periods of tension the 'ulamā' turned against the Şīʿis rather than against the state, and under their attacks, the fārikas became more docile. This was an important stage on the road towards their later decline and discredit. The 'ulamā' as a whole stood firmly on the side of the state, although with a relative degree of elasticity, but they survived the first phase of the crisis only with a tangible loss of religious vitality and initiative. Both of these religious institutions were thus in decline, long before 1800. Already in the middle of the 17th century Koçi Beg [q.v.], in his Risāla, had described the corruption of the corps of 'ulamā', and later Hādīdd Khalīfa (Kātib Celi) [q.v.] in his Miṣān al-bafrk fi ikhtiyar al-afyf (English translation by G. L. Lewis, The balance of truth, London 1957) ridiculed the nonsensical controversies raging between the 'ulamā' and the shaykhīs and deplored the depth of ignorance in rational and religious sciences in the madrasas. While the 'ulamā' had become thoroughly worldly, the fārikas tended to become more removed from reality.

The reign of Selîm III (1789-1807), as the first period of serious attempt at comprehensive reforms, found the 'ulamā' more active in worldly affairs than interested in religious reform. Among the reform projects submitted to this ruler the best one was prepared by 'Abd Allâh Molla, a high ranking member of the 'ulamā'. None of his recommendations for the reforming of the religious institution, however, had any effect upon the Shaykh-Isâlîm, the head of the 'ulamā', nor upon his colleagues, and produced nothing tangible which could be called modernism in religion. The fārikas fell into further disrepute and, at least on one of them, the Bektaşhiyya, received a death blow from the 'ulamā', and the Janissaries under Muhammed II in 1826, because of the alleged association between the two. Since then, the fārikas have never recovered, with the exception of two intervals, the first during the reign of 'Abd al-Hamîd II (1876-1909) and the second from the 1940s on.

The earliest sign of a fundamental change in the position of the religious institution only appeared when some of the provisions of the Tanzîmât charter were implemented. At first, the 'ulamā' managed to ignore the implications of the Tanzîmât reforms for religious modernism. While the Tanzîmât proved to be a new step in further involving the religious institution in politics, at the same time it marked the first split between religion and state. For example, while the Shaykh-Isâlîm, as the head of the religious institution, was given a permanent and prominent position in government, half of his clerics were appointed for the new Ministry of Justice, the regulation of all pious foundations was assigned to the jurisdiction of the Ministry of Awâlî, and all newly formed schools were put under the Ministry of Education [see Bâb-1 mashkîyat].

Despite this trend of laicization of the institutions which were traditionally under the control of the religious institution, the Shaykh-Isâlîm, the 'ulamā' and the madrasas continued to play conspicuous roles in worldly affairs. That these activities varied from combating the laicized institutions, or sabotaging the codification of the Medjelle, to backing the state against the interference of the European Powers aimed at further secularizing reforms and participating in secret conspiracies for the deposition of rulers, is an indication of the fact that the 'ulamā' had lost their internal unity, and their association with the state had become tenuous.

During the Tanzîmât, as well as the constitutional movement of the Young Ottomans, the 'ulamā' produced no prominent religious thinker. The only outstanding figure who came from the 'ulamā' class was Ahmed Djewdet Pasha (1822-1895 [q.v.]), but he became prominent only after he left the religious institution and became a secular statesman. Djewdet was perhaps the greatest reformer of the period, but as a legal reformer and not as a religious thinker. He succeeded in curbing the tendency of the Tanzîmât statesmen toward a wholesale adoption of new codes from France on the one hand, and, on the other, recognized the inability of the 'ulamā', as the spokesmen of the şari'a, to fulfil the requirements of a modern legal system. The Medjelle [q.v.] (1870-77) and the Kânûn-û-Èrddî (1858) were the major products of his attempts at the modernization and codification of Islamic law. His enlightened modernism, however, did not extend to constitutionalism. While he received the acclaim of the Young Ottomans as a modernist on matters of fîkh, he sided with 'Abd al-Hamîd II against the constitutionalists, although it was the very same ruler who interrupted Djewdet's work in codification under pressure of the famous reactionary Shaykh-Isâlîm, Hasan Fehmi [q.v.].

The reign of 'Abd al-Hamîd II (1876-1909 [q.v.]) was a period of total eclipse for any type of religious reform. It became instead a period of resurgence for the fârikas, particularly for those which had no historic position in the Ottoman empire but were imported, mostly from North Africa, and which 'Abd al-Hamîd seems to have encouraged in order to renew Ottoman influence in Arab countries. These fârikas became centres of obscurantism, and the attempt to use them for political purposes sealed the fate of these once vigorously supported destructions of the Janissaries under Muhammed II in 1826, because of the alleged association between the two. Since then, the fârikas have never recovered, with the exception of two intervals, the first during the reign of 'Abd al-Hamîd II (1876-1909) and the second from the 1940s on.

Some influence of Muhammad Abuh's modernism was found, on the other hand, in pre-1908 writings of the secular intelligentsia who were at war with 'Abd al-Hamîd. Dr. 'Abd Allâh Djewdet, who is regarded as one of the most extreme atheists among the Young Turks, was the first to give space to Muhammad Abuh's ideas in his review Ezîdhâd, published in exile. After the restoration of the constitutional regime in 1908, the first modernist review, Sirât-û Mû斯塔fîm (later Sebîl-û-Èrreed), appeared as the organ of the younger 'ulamā', who no longer associated themselves with the Old Order. The leading figures of this modernist review, however, were handicapped by the complications created by the impending clash between the Pan-Ottomanism of the Young Turks and the Islamic-Arab nationalism of the Egyptian modernists. The review appeared to be more in the footsteps of Rashîd Rîdî than Muhammad Abuh. In reality, very little space was given to Abuh in Sirâtûs-û Mû斯塔fîm; only two arti-
cles were published about him, both being translations. What was believed to be modernism in Arab countries thus appeared in Turkey to be a religious reaction against the Ottoman caliphate. The secular Westernists also denounced these modernists as reactionaries. A controversy between the two camps, Tewfik Fikret and Mehmet Akif (Ersoy), has remained ever since as the model of the conflicting views of the modernists and the traditionalists.

While the modernists of the Stratič Mustakim steadily turned conservative in Səbıl-ul-Reşad as they were challenged by Westernists and nationalists, the cause of religious modernism was taken up more strongly by the secularist intelligentsia. 'Abd Allah Djewdet [see DİJWEDET] and Kılıçzade Haşki, both writing in İttihat, launched attacks against the traditional 'İlāma as well as the modernists. The most prominent and influential figure, however, appeared from among the ranks of the Turkist nationalists. This was Ziya Gökalp (1876-1924 [see GÖKALP]). Unlike his contemporary Müşə Dîyar 'Allah or Bigief (1875-1949), the theologian and reformer of the Turkish Muslims of the Russian Empire, Gökalp was neither a theologian nor a religious thinker. As a romantic populist and nationalist sociologist he developed a three-principled ideology, in which Islam was significant only within the limitations of westernizing modernism and of the cultural revival of the Turkish nationality. In the scattered writings of Gökalp (ed. and trans. by N. Berkes) we find his views on Islamic modernism inseparable from his ideas of the secular state and national culture.

The religious modernism of Gökalp paved the way for the more radical secularism of the Kemalist era (1923-1930). Kemal Atatürk (1881-1938) was even more remote from the tradition of the "Islamic sciences", the 'İlāma, the madrasas and the jarikas, which he always associated with backwardness, ignorance, superstition and conspiracy, and he saw no place for them in the increasingly laicized political and social institutions. The most spectacular of his revolutionary changes were the abolition of sultanate, caliphate, and Islamic law. The 'İlāma organization, the madrasas, and the jarikas were closed and their properties transferred to the waqf administration, which had already become a department of government.

It would be misleading to regard the Kemalist reforms as a total eradication of Islam in Turkey. What was really eradicated was Islam in its entanglements with the Ottoman pattern of state and religion. To the extent to which Islam had been institutionalized within this historic polity, within which it had always suffered from formalism and sterility, it inevitably suffered from the disestablishment of that polity. Islam was now made dependent upon the voluntary adherence of the believer; the places of worship were kept open and their administration put under a department of religious affairs financed by the state, but deprived of any prerogative of theoretical or doctrinal authority. While the recognized religions (Islam, Christianity, and Judaism) were taken under the protection of the law, any political formation in association with any of these religions was banned, and the establishment of any new sect or jariha was prohibited. The decline, stagnation, and corruption of the old religious institutions, which were nothing but the recognized religions, was mostly favoured by dissatisfied groups of Westernized intelligentsia and a faction of the nationalist youth. The fact that all of these were given a free hand, partly because of the rise of the multi-party system in opposition to single party rule, and partly because of the relative consolidation of democratic freedoms, has led to the development of a religious modernism and those who believed that they are the signs of a reactionary return to the past to attach an exaggerated importance to them as representing a stage going beyond the Kemalist conception of religious reform. That all appear to have class, occupation, region, and party motivations and alignments indicates that the Kemalist reforms succeeded in changing the Ottoman polity into one in which religion can become a point of political conflict as it is in all modern democracies.

Indian Muslims were among the first Muslim peoples to come in contact with Western civilization; but it was only after the establishment of the rule of the British East India Company in the wake of the Battle of Plassey (1757) that the direct impact of Western institutions came to affect their lives and minds. The reform of the civil and criminal, but not the personal branches of the sharia law, which developed in the last decades of the 18th century [see sharia], was the first major injection of reformism affecting the legal and social life of the Indian Muslims. But in the formulation and development of this reformism they played no part.

The direct impact of Europe was felt by some Indo-Muslim travellers during the late 18th and early 19th centuries. These included I'tisham al-Din, Yusuf Khan Kammalpuri, and Mirza Abu Talib Khan. Of these the last [q.v.] was by far the most receptive and analytical. The influence, if any, of these travellers on the formation of opinion among the Indo-Muslim elite was insignificant.

The apologetic formulation of modernism is traced usually to Sayyid Ahmad Khan [q.v.], whose writings are, no doubt, the foundation of its subsequent development; but the actual pattern of this apologetic was formulated a decade or so earlier by Karamat Ali Djawnpuri (d. 1873) in his Ma'adhik al-Islam (Eng. tr. Ubaydi and Amir 'Ali, Calcutta 1967). He presents the later quite familiar apologetic thesis that modern scientific discoveries not merely coincide with, but have actually resulted from the inspiration of the Kur'an, transmitted to Europe through Spain; and that in absorbing the discoveries of modern Western sciences, Muslims would really be reverting to the truth implicit in their own religion.

The towering figure of Sayyid Ahmad Khan dominates the entire edifice of Indo-Muslim modernism. He equates the implied and interpreted truth of Qur'anic revelation with his understanding of two 19th-century criteria of judgement, "reason" and "nature". Revelation is the word of God, and "nature" the work of God; between the two there can be no contradiction. Of the four traditional sources of Islamic law, he rejects ijtihad (consensus) [q.v.]; substitutes hisya (analogy) [q.v.] by ijtihad (use of individual reasoning) [q.v.]; which he considers to be the right of every educated and intelligent Muslim; doubts in his exegesis of the Qur'an, by stressing the attributes of God as the Nourisher, the Provider, the Merciful One and the Beautiful One. Whereas Ikbal had placed man at the centre of the universe as God's viceregent with limited potentialities, Azad again restores God to the supremely authoritative position in the scheme of the universe, and leaves man little choice but to admire, obey, worship and follow Him.

Both Ikbal and Azad influenced the thought of either slavery or polygamy. On the other hand, he justify interest on capital and property, equating the forbidden riba (usury) with compound interest.

Sayyid Ahmad Khan's work was supplemented by that of his associates, of whom Siraj 'Ali, who wrote extensively of the possibilities of reform in a modern Muslim state and on ijtihad [q.v.], was more radical. Mabdi 'Ali Khan Musin al-Mulk, who was also Sayyid Ahmad Khan's successor in implementing his educational and administrative policies, was comparatively more moderate in his religious views. The apologetics of Sayyid Ahmad Khan and his colleagues were only partly accepted by the Indo-Muslim upper middle class elite; they were rejected in various details, but on the whole broadened the horizon and liberalized the concept of religious faith. They were totally repudiated by the 'ulamā'.

Amir 'Ali [q.v.], who wrote exclusively in English, with a mixed Muslim and Western readership in mind, did not belong to Sayyid Ahmad Khan's Aliagar movement, but was very considerably influenced by it, and propagated its apologetic and reformist formulations.

Whereas Sayyid Ahmad Khan was opposed to revivalism as backward-looking, it became a recurrent theme in the drama of modernization with the Mu-suddas and other poems of his associate Hāfī [q.v.]; this element reached its zenith in the pan-Islamic verse of Ikbal [q.v.].

Muhammad 'Iqbal (1877-1938) is the most outstanding figure of 20th-century Indo-Muslim modernism; but compared to Sayyid Ahmad Khan his modernist orientation and analysis is more subtle, vague, less easy to grasp in its totality and at times even contradictory. His appeal is primarily poetic, to some extent intellectual, but not exclusively theological.

The set of values which 'Iqbal more or less arbitrarily selects as necessary for the development of the individual self and the community are not directly derived from the Kur'an, but traced to it apologetically. These values are movement, power and freedom, which form the recurring leitmotifs of his poetic work and of much of his sustained writing. In his religious thought intuition is a basic concept and defined as a higher form of intellect; at certain stages it is equated with prophethood; and it plays an important role in 'Iqbal's Bergsonian view of evolution, which is basically moral despite its reliance on the value of power. In law 'Iqbal also places a great deal of emphasis on idtgihād; but unlike Sayyid Ahmad Khan he accepts the validity and broadens the concept of idqna' equating it with democracy or a parliamentary system of government; at the same time making some concessions to the view that the 'ulamā' have also a role to play in any movement aimed at reformism in order to balance it—a view which to a great extent has influenced the pattern of constitution-making in Pakistan. For Indian Islam he proposes a role of conservativism which may counter-balance the secularism adopted by Turkey.

His contemporary Abu'l-Kalam Azād (1888-1955) is not exactly a modernist; but he liberalizes and humanizes Islamic belief, in his exegesis of the Kur'an, by stressing the attributes of God as the Nourisher, the Provider, the Merciful One and the Beautiful One. Whereas Ikbal had placed man at the centre of the universe as God's viceregent with limitless potentialities, Azād again restores God to the supremely authoritative position in the scheme of the universe, and leaves man little choice but to admire, obey, worship and follow Him.
Ghulam Ahmad Parwiz (Parwez) whose modernism is, on the whole, this-worldly and pragmatic, but based on an untenable extravagant and far-fetched interpretation of the kūrānīc terminology. Because of his exegetical extravagance his influence on the modernist élite has been minimal.

These landmarks of the intellectual history of modern Islam in India had some effect on the social modernization of the Muslim upper classes up to 1947. Only after that date did the great debate between westernization and orthodoxy begin in Pakistan, and it still continues. In terms of social reform the one precocious gain so far made by modernism in Pakistan has been confined to the revision of Muslim family law, which has made polygamy a little more difficult and divorce a little less easy. The élite which created Pakistan and which has been ruling it are synonymous". It is true that to recognize "aslamān" is to say: 'We surrender' and not merely a (general) act of submission and surrender to God, and not merely obedience to God's commandments, but also an affirmation which grants submission, total surrender (to God) — masda of the 1IVth form of the root S I M.

I. Definition and Theories of Meaning.

1. — Kūrānīc references. — The "one who submits to God" is the Muslim, of which the plural Muslimun occurs very often throughout the sūras. Islâm, on the other hand, occurs only eight times there; but the word must be considered in conjunction with the fairly common use of the verb aslama in the two meanings which merge into one another, "surrender to God" (an inner action) and "profession of Islâm", that is to say adherence to the message of the Prophet. The eight occurrences of Islâm are as follows:—

a). Three verses stress its quality of interiority: "Whosoever God desires to guide, He expands his breast to Islâm" (VI, 123); Islâm is a "call" from God, which must prohibit falsehood (LXI, 7) and which places whoever receives it "in a light from his Lord" (XXXIX, 22).

b). Three other texts, constantly quoted throughout the centuries, stress the connection between ṣīla and din (q.v.). It is certainly appropriate in this context to translate din as "religion", though without forgetting the idea of debt owed to God which it connotes. "Today, I have perfected your religion (din) for you; I have completed My blessing upon you; I have approved ṣīla for your religion" (V, 3), and "the religion, in the eyes of God, is ṣīla" (III, 19). The surrender of the Bedouins to God is a "call " from God, which must prohibit falsehood (LXI, 7) and which places whoever receives it "in a light from his Lord" (XXXIX, 22).

c. The action which operates ṣīla supposes a "return" to God, taevā, a conversion. The Kur'ān speaks of "conversion to ṣīla"—to condemn the unbelief (kufr) of those who had nevertheless made a profession of faith (IX, 74). Similarly it condemns the complacency of the Bedouins who boast of their ṣīla "as if it were a favour on their part" (XLIX, 17). In addition: "Say: 'Do not count your ṣīla as a favour to me; nay, but rather God confers a favour upon you, in that He has guided you to belief, if it be that you are truthful" (ibid.). A little earlier, the very important verse XLI, 14 had made a clear distinction between ṣīla and imān: "The Bedouins say: 'we believe'. Say: you do not believe; rather say, 'We surrender' (aslama). Faith has not yet entered into your heart".

It would therefore be an exaggeration to state, with A. J. Weisneick (The Muslim Creed), Cambridge 1922, 22, that "in the Kur'ān the terms ṣīla and imān are synonymous". It is true that to recognize oneself as a Muslim and to be a believer are two existential realities which take possession of a man's whole being to ensure his salvation (ibid.). But the Kur'ān (XLIX, 14 and 17, and still more IX, 74) evokes an explicit profession of ṣīla which is in no way a guarantee against the sin of kufr, and has no saving value unless it is the expression of faith. On comparing these verses with III, 19 and V, 3 (insistence on the idea of din), we see that the kūrānic statements themselves urge men to make ṣīla not merely a (general) act of submission and surrender to God, and not merely obedience to God's commandments, but also an affirmation which grants...
admission to the ummat al-nabi, the “people of the Prophet”, whatever their inner dispositions. These diverse connotations were to recur throughout the ages, as a result of the self-awareness brought about by the umma.

2. — Some hadîths. — In the collections of hadîths the emphasis, in defining islâm, will be placed upon submission to God, expressed by deeds: above all, the prescribed acts of worship, including adoration of the One God, but also the ēshârât, “good works”. Thus, by way of example: in al-Bukhârî, ii, 37 (hadîth of Gabriel), after defining imân by its content (“to believe in God, in His angels, in the future life, in the prophets, in the resurrection”), the Prophet, in reply to the question “What is islâm?”, replies: “islâm is to adore God without associating anything with Him, to observe the ritual prayer (salût), to pay zakât, to fast during the month of Ramadân” (similar text in Muslim). But it is also “to give food (to the hungry) and to give the greeting of peace (salâm) to those one knows, just as to those one does not know” (al-Bukhârî, ii, 5). And the best islâm will be that of the Muslim of whom one has to “fear neither the hand nor the tongue” (ibid., 4).

The Musnad of Ibî Hanbal (iii, 134; cf. A. J. Wensinck, op. cit., 23) states: “islâm is external, faith being to the heart”. — Some scholars, who identify faith and prescribed works, similarly identify faith with islâm: “actions are valid only through the intentions,” says the hadîth (al-Bukhârî, ii, 41). Whoever commits a grave transgression of the prescriptions of the Law loses the status of mu'min and Muslim, and reverts to the status of kufr according to the Khârijîs, to an “intermediate status” (between faith and unbelief) according to the Mu'tazilis.

b). Many Hanâfs (Hanafî-Mâturidis) similarly consider islâm and imân to be synonymous, but define each of them essentially as verbal confession (ibrâr), sometimes linking this with intimate adherence, or at other times, following the Murîdîs, with knowledge of the heart, or both of these. The Hanâfi-Mâturîdî texts of the Fîkh Aḥkâr I (doubtless 2nd/8th century) and of the Wâsyiyat Abî Ḥanîfa (3rd/9th century) ignore the question. Towards the end of the 4th/10th century, however, the Fîkh Aḥkâr II was to draw an at least nominal distinction. It was to state (a. 18) that current language distinguishes between imân and islâm, and that islâm is defined as “total surrender (taslîm) and total obedience (imkîyâd) to the divine commandments”. The text adds: “there is no faith whatever without islâm, and islâm could not exist without faith; the one and the other are like the outside and the inside [back and belly]; in the literal translation of A. J. Wensinck); and religion (dîn) is a name which covers both of them, and all the commandments of the Law”. Here then imân is as it were the inner, hidden reality of islâm, from which it could not be separated.

c). In its definition of faith, the Hanâbis however were to remain faithful to the text of the Musnad cited above, and to the Ābhâda VI of Ibn Hanbal, who affirms the distinction between islâm and imân. Accordingly, in the 4th/10th century, Ibn Baṭṭa returns to the Kurân, XLIX, 14 and affirms: “The term islâm does not have the same meaning as the term imân. Islâm is a word which denotes the community of religion (milâa), and imân is a word which expresses an adherence of faith (tasdîk)” (from the translation of H. Laoust, op. cit., 80/82). The choice of “surrender” by the Hanâbis is characteristic: islâm is “religion”, no longer solely in the sense of a debt due to God, but in the sense of a “religious community” attached and connected to a prophet (cf. below). Thus, in the 4th/10th century, we find the use of islâm to denote the Muslim religion as an organized and differentiated religion. A century later, Ibn 'Aqîl in the same way was to make islâm obedience to the commandments of God. But he who commits a great transgression “does not retain his status of mu'min to become merely Muslim, for islâm forms part of imân” (G. Makdisi, Ibn 'Aqîl et la résurrection de l'Islam traditionniste aux XIe siècle, Damascus 1963, 527).

d). The Ash'âris and the Shâfi'î jurists also made a distinction between islâm and imân. After defining faith as words and deeds, and then by its content according to the “hadîth of Gabriel”, all that remains in the credo of the Makâlid al-Iṣlâmîyyûn (ed. 'Abd al-Hâmîd, Cairo n.d., i, 322, identifies islâm with the two constituent parts of the shahâda, in other words with the verbal testimony which grants admission to the Community of the Prophet, and concludes: “islâm is different from imân”. The credo of the Iba'ma (ed. Cairo 1348, 10), without defining islâm, states that it is “wider than faith” and specifies “that all islâm is not faith”. If we compare these views with the text of the Luma' which above all regards faith as inner adherence (huwa tasdîk bi-lldh'; cf. R. J. McCarthy, The Theology of al-Ash'ârî, Beirut 1953, 75/104), we understand that the later Ash'âris were able to claim that islâm, the observance of the prescriptions ordained by the Law, and above all the explicit profession of the shahâda, can be “practised” without faith, and that faith (inner tasdîk) can exist without islâm (here of milâa, and not dîn, in this text for whom every believer is a Muslim). But islâm without faith is the way of hypocrites (mu'nâfîkin), consigned to God’s chastisement; faith without islâm need not be culpable, in the event of some invincible external obstacle; it would become so if the testimony to islâm was not given through cowardice, weakness or half-heartedness. It would then be a fault not of unbelief (kufr) but of grave prevarication (fiqîk). —

When he summarizes the Shâfi'î theses (which he contrasts with the identification made by the Hanâfs),
al-Dhurrafi says that “islam is the verbal profession of faith without the agreement of the heart, while faith is the agreement of the heart and the tongue” (Iṣrāfīl, ed. Flügel, Leipzig 1845, 23).—This thesis was later to be generally accepted.

Whatever definition of faith might be proposed, it remains true however, for the Hanballs and the Ash'aris alike, that iman and islam, without becoming identical, imply one another. Islam, says H. Laoust in summarizing the philosophy of Ibn Taymiyya (Contribution à une étude de canonique de ..., Ibn Taimiyya, Cairo 1939, 74, n. 3), is the “external and so to speak social application of the Law”, and iman in the “interiorization of islam”. (Thus once again, despite the difference of the conceptions involved, we come across “the outside” and “the inside”, sahr and ba'in, of the Fikh 'Akbār I).—An outline of the most usual teaching is provided in the 19th century by the Ash'ar al-Bādhirī (Ḥādiyya ... ala' Dzawārīl al-tauhid, ed. Cairo 1325/1906, 28-9), who says: “Iman and islam are different in their significance but not in truth, that is to say in the subjects (who profess them). ... But it is a question here of faith which assures salvation, and of islam also, otherwise there would be no reciprocal connection”. The same nuances appear in the 20th century, for example in the Ḥaṣūl Muḥammad of Muḥammad Ḥusayn Ḥāvikāli (Cairo 1325/1906, 500).—It should be noted however that only certain Ash'arīs and Shafī'īs applied the term mu'min, but not Muslim, to the man who has faith in his heart and who dies without having been able to profess islam. In general, it was considered preferable to call him Muslim, not before men but in the eyes of God.

4. — The “world of islam”.—In this way, therefore, islam is “to give oneself unconditionally to God” (G. Maksdisi, op. cit., 224); so much so that, as the Ḥanbalis were to take pleasure in saying, “the religion of all the prophets is islam”. Abraham, Moses and Jesus are true muslimun. But it is the “seal of the prophecy”, manifested in the Kur'an, which was to “perfect the religion”. According to the first part of a much quoted hadīth, “the best of all things is islam; the foundation of islam is the ritual prayer and, with the salāt, all the other obligations (tāfarīd) prescribed by the Law. Now, it is the observance of the Law, its “external and so to speak social application” (H. Laoust), which is the binding force of the Community of the Prophet. And so wherever the ḥurūnic prescriptions are observed communally, there islam will be; such will be “the lands of islam (bilād al-islām), “the world, the house, of islam” (dār al-islām).

Such expressions are traditional. It was in this way that, at the beginning of the 5th/11th century, al-Mawardi examined the various categories into which the bilād al-islām are divided (al-Ḥikam al-sulṭānīyya, beginning of chapt. xiv, ed. Cairo. n.d., 151 ff.). The implication remains that islam, practised in this way, is the testimony, renders socially, to faith in the One God and to free adherence to the prophetic mission of Muḥammad. The Ḥanafī Sibīl Ibn al-Dīwāzī (d. 654/1256) in his Mirāṭ al-'alam mentioned the “purchased” conversions of Jews and Christians, which the Ash'arīs sought to make in Bağdad in the 5th/11th century, and he repeats the protests of the supporters of the sharīf 'Abū Dīnār, a Ḥanball: “This is the islam of gifts, not the islam of conviction” (quoted by G. Maksdisi, op. cit., 356). 'Abū ʿAmin al-Ghazālī was similarly to question the degree of validity of a forced conversion to islam.

“There is no compulsion in religion” (Kūrān, II, 256), and “religion, in the eyes of God, is in truth islam” (II, 19). Even in the writings of those who distinguish most sharply between iman and islam, at no time will this reference to inner conviction be found absent. But the point of first importance, for the jurist who is studying and formulating the statutes and laws of the bilād al-islām, is not so much the degree of individual interiorization of the muqābal of reciprocal relationship islam-imān, as the communal observance of those prescriptions which make islam, those ghāčir al-islām “the blazon of Islam” (L. Massinon), which are symbolized by the banners of the imāms, the guides of the Community.

This is so true that a synonym of dār al-islām was to be dār al-'adī “the world of justice”, in which “the rights of God and of men”, ordained by the Kur'ān are observed and protected. On the other hand there was to be the dār al-kufr “world of unbelief”, which is the dār al-barb “world of war”. The jurists analyse the circumstances in which it can become “obligatory” to abandon the dār al-kufr in order to enter the dār al-islām or at least the dār al-yahūb, which has concluded a treaty of “reconciliation” with the dār al-islām.—Anyone who describes himself as a Muslim means to affirm thereby not so much his care for the practice and personal observances (although certainly not neglecting such matters) as for adherence to a Community of the faith and ofMuḥammad. It is here perhaps, far more than in any “sacral” conception of the political organization, that this specific spiritual-temporal fusion of the Muslim City has its root.

5. — From islam to Islam.—In European languages, it has become customary to speak of Islam to denote the whole body of Muslim peoples, countries, and states, in their socio-cultural or political as well as in their religious sphere. And it is in a similar sense that modern Arabic often uses al-islām. What connection does this very general meaning retain or not retain with the etymological significance of the word, and its evocation of “surrender to God”?

This question, an important one if we wish to avoid misconceptions and misunderstandings, has been discussed recently in a well-documented and apposite manner by Professor Wilfrid Cantwell Smith in The Meaning and End of Religion (New York 1964, chap. iv “The special case of Islam”, 75-108). As the author indicates, it is only recently (19th-20th centuries) that Islam has incontestably become the chosen term to signify both a religion and a politico-social area (fortuitously replacing “Mohammedanism” “Islamism” and other such terms). Religious and cultural history thereby adopts the very name by which the bilād al-islām designate themselves, as a title of honour. And it is merely since the beginning of the 19th century, probably under the influence of Western ideas, that writers in Arabic have employed it in an equivalent way.

W. Cantwell Smith emphasises, by reference to Brockelmann's Geschichte der arabischen Literatur, that this term ʿism, though comparatively rare in the Kur'ān, with the passage of time appears more and more frequently in the titles of works in Arabic. In the classical period (the Western Middle Ages) it was already used more commonly than imān, and often in correlation with niṣām, system, organization; in the 19th century, the relative figures for imān and islam are 7% and 93% respectively. It is this that Prof. Cantwell Smith calls “reification in Islam”. The emphasis thus appears to be placed on Islam as the organization and self-defence of the Community which is its expression, and much less on the inner
personal values which the etymology of the word connotes. It appears however that our present brief examination of the use of *islām* according to Muslim formulations and usage itself may suggests a few remarks here, which do not invalidate, but which limit and qualify the slightly different perspective of Prof. Cantwell Smith.

a). If it strue that *islām* signifies primarily the action and state of the man who surrenders himself totally (to God), nevertheless it would be erroneous to regard it, in the etymological sense, as a kind of synonym for *ta-wakul bi-l-lāh*, the (interiorized) "abandoning" of oneself entirely into the hands of God. As the Kur'ān understands the word, *islām* is indeed, as the Fiṣḥ Ṭabar I I I says, a surrender (tasllm) to the divine Will as expressed by the Kur'ānic teaching, and an obedience (inbiyyād) to His commandments; and, by this very means, admission to the Community, "the best to have arisen among men" (Kur'ān, III, 110). Quite soon, admission to the Community was to be the aspect preferred. If the requisite inner attitude does not correspond to it, there is some grave individual failing (fįşk), there is no abandonment of *islām*.

b). Prof. Cantwell Smith observes that, in the classical age, the diversity of religious beliefs was to express itself by *miṣl* rather than by *adyān*. But we have already noted that the Hunball Ibn Bāṭaṭa, in the 4th century, defined *islām* as a *miṣl*, hence a community, the Community of Muḥammad. The difference between *din* and *miṣl*, al-Djurdjanl says (Tařīfāt, iii), is that "*din* relates to God, and *miṣl* to the Prophet".

c). The Kur'ān however defines *islām* as religion, *din* (III, 19; V, 3); but not as a religion, Prof. Cantwell Smith justly notes. The plural of *din*, *adyān*, he further notes, does not occur in the Kur'ān. But if the religion, *al-din*, which renders to God that which is due to Him, is indeed *islām*, it is, through that very fact, *millat al-nabi* and *ummat al-nabi*. For the Muslim, Islam is not one religion among others, it is the religion, and the other religions (*al-adyān*) are such only in so far as they participate in Islam. Each prophet sent from God has his *miṣl*; but the *din* is unique, accomplished by surrender to God and obedience very definitely in the Korānic teaching, already lived by the prophets that preceded it, and expressed accordingly to all its needs by the "seal" of the revelation, the Kur'ān.

We do not think that these various connotations are absent from the Muslim works of the contemporary period. To take one example only, we find them in the Risāla li-taawkīd of Muḥammad Ṭubăh. "The religion of Islam, or Islam", says Ṭubăh, "is the religion brought by Muḥammad" (Cairo 1353, 152). And the whole final section of the Risāla constantly speaks in this sense of Islam, its principles, its spirit and its extension in the world (ibid., 152-206, French trans., Paris 1925, 104-40). As soon as the *ummat al-nabi* began to expand in space and time in the face of other religious communities, what Prof. Cantwell Smith calls "reification" was found to be inscribed in the original fundamental data. Historically, on the one hand, and the progress of the phenomenology of religions on the other, have not ceased to confront Muslim thought with this twofold fact: the existence of non-Muslim religions, established in their faith and their ritual observances, and, moreover, the uncertain faith and the failure to "practise" by certain men who none the less continue to invoke the help of the *umma*. Hence the anxiety to defend Islam as a religion and a community, while nevertheless the old Hunball and Ash'ari distinction between *imān* and *islām* is repeated and emphasized.

But this distinction, however generally admitted it may be, is in no way intended to justify the proclamation of *islām* by one who denies *imān* or who even does not bother to appreciate the true values of faith. Those who are Muslims simply through having heard the call of Islam, or because they were born of Muslim parents, but who do not have faith in their hearts, then, according to what Muḥammad Ḥusayn Haykal mentions, says (loc. cit.), their *islām* is feeble and sickly. Only those who seek for a sincere faith (*imān sādiq*) hear the call to *Islam* with regard to God alone.

At the present time there are three meanings of the word *islām* says Prof. Cantwell Smith (op. cit., 107): 1) the immediate existential meaning of personal surrender of oneself entirely to God; 2) the empirical reality of the "world of Islam", as it exists sociologically; 3) the ideal Muslim community—"a concrete historical ideal" we would gladly say—as it must tend towards its realization. These three meanings in fact remain closely bound together in Muslim thought, today as in the past, and no study of Islam, no analysis of the Muslim Community or of the world of Islam should separate them.

Bibliography: in the article. (L. GarDET)

ii.—Diffusion of Islam

In our present state of knowledge, the diffusion of Islam can only be studied in broad outline. In the first place, with regard to numbers, we often have to content with approximations; nor should it be forgotten that, with the world population increasing at an accelerated pace, even the most accurate statistics prove to be out of date within a few years. Moreover it sometimes happens that in certain countries Muslims and non-Muslims adopt different sets of figures, particularly when these figures serve as the basis for political claims or considerations of honour. In the second place, such figures do not reflect the qualitative aspect of this diffusion. It is possible for conversions on a massive scale to be produced within the space of a few years (as in the case of the Galla tribe in Ethiopia, to the west of Harar, in about 1930-50). But it must not be forgotten that, for these conversions, the way had sometimes been prepared over a long period, by a whole process of maturing and by favourable circumstances which, in themselves, cannot be statistically expressed.

A. — General Survey. The diffusion of Islam has been the consequence of a certain number of factors which are more or less easily discernable; over and above the particular attraction this religious movement has exerted upon men, the personality of its first leaders and the economic circumstances of Arabia at the time, among other things, there is a further point which requires to be examined—the part played by wars. Even if, in the vast majority of cases, the conquered remained free not to change their religion, the introduction by force of arms of a Muslim régime which took upon itself the administration of their country represented the first stage of a process which was bound to end in their gradual conversion.

The conquest itself was not brought about suddenly. It was often achieved in waves, with ebb and flow, but it was governed by a tide which, save in Europe, proved to be rising ever higher. Thus Damascus, reached as early as 13/634 by reconnoissance units, was attacked and conquered much later; recaptured by the Byzantines, it finally fell into the Arabs' hands.
in 930. Similarly Tunisia, where a first raid in 20/647 was followed by a respite of more than twenty years before the final conquest and the founding of Kayrawân (50/670). So too Transoxiana to which, after an initial invasion in 52-4/672-4, the Arabs returned at the beginning of the following century; or Chinese Turkestan, reached in 93/713, and to which they returned in 133/751. Kâbûl in Afghanistan was reached by the end of the 1st/7th century, without being occupied, and two centuries were to pass before the Muslims came back in strength to stay. Muslim warfare had been a war of movement, a war of wide spaces, steppes or deserts.

The first period of expansion extends from the death of Muhammad to the end of the Umayyad caliphate of Damascus. One century was enough for the Muslims to achieve an extraordinary epic feat. The dynamism of the new community combined with favourable circumstances to allow their success. The weakness of the Persians and the Byzantines after decades of war between them, their exhaustion, which caused them to underestimate the newcomers' strength, the internal conditions within the Roman empire of Byzantium which was then in difficulties, with its territory being engulfed by the barbarian invasions, the resentments of the various peoples ruled by Byzantium, the divisions among the Christians, all these considerations were in favour of the Muslims. But the new fact, as compared with the multiple barbarian invasions of the time, is that the barbarians were assimilated by the countries they conquered, whereas Islam on the contrary imposed itself upon the old civilizations. The most remarkable point about the diffusion of Islam is not so much the fact of the conquests as that of their permanence. When Islam became the religion of a territory, it never thereafter ceased to be so, except in Europe (and even then under armed pressure), and except in the centre and south of India, where many of the Hindu sultanates were revived after the first Muslim conquests.

In this way, we can trace the conquests of Syria-Palestine (13/634-19/640), Egypt 18/639-22/642), the Maghrib (49/669-8/702), Spain and Narbonnese Gaul 92/711-85/705), and, in the east, of Írâk (15/636-20/648), Armenia and then Iran (21/642), as far as Transoxiana and Chinese Turkestan. The river Indus was reached in 91-4/710-3, but these advanced positions were afterwards abandoned.

In the direction of Byzantium, which was besieged without success, the Muslim advance was blocked in Asia Minor where a state of flux for long prevailed.

In East Africa, colonies of Muslim merchants are recorded at a very early date at trading depots on the shores of the Indian Ocean. Under the ʿAbbâsids, these conquests were rounded off with the capture of Mediterranean islands such as the Balearics and Sicily. But, most important, Muslim culture was gradually taking shape, increasing the spread of Islam, and the populations, while left free to retain their faith, little by little adhered to the new religion, the religion of the ruling class and of the new society. In Spain, however, Islam was confronted by the Reconquest, which started early and eventually culminated in the fall of Granada in 1492.

Everywhere else, however, expansion continued, sometimes by force of arms, sometimes by peaceful proselytism. Towards the year 1000, the first stage in the conquest of India began: finally the whole Ganges valley was conquered about 489/1092-606/1209. Various raids during the 8th/14th century succeeded in bringing almost the whole peninsula under the domination of the Muslims. They were however obliged to withdraw from many regions, especially in the centre and south. Islam came to Indonesia by way of a Muslim centre situated in the north-west of Sumatra, at the end of the 7th/13th century; in the 8th/14th century, Java was governed by Muslim rulers.

In sub-Saharan West Africa, it was shortly after the year 1000 that Islam was established. There is no mention of a Muslim prince at the head of the Songhay at Gao on the Niger as early as 400/1009-10. Islamic rulers are found at Kauem (north of Lake Chad) in about 473/1081-90/1097. Little by little, Muslim kingdoms appeared (in particular Mali, in the 7th/13th century); but their Islam was still a religion of the court of the warlike or literate aristocracies, which had no contact with the masses. It was later, with the military activities (especially of the Fulanis) and the activities of the brotherhoods that the islamization of the masses was brought about, during the 18th and 19th centuries. Under colonial rule the process of conversion was extended still further.

In East Africa, Islam began to spread from Zaylāʾ (a port situated opposite Aden) a centre of Islamization even in the 6th/12th century. Climbing up to assail the high Ethiopian plateaus, where they never succeeded in gaining a real foothold, the Muslims established themselves firmly in the less elevated regions to the east and south (especially in Harar).

In the Nile valley, the Christian kingdoms of Nubia held out until the 8th/14th/16th centuries, when they disappeared. The islamization of Nilotic Sudan was followed by that of the minor kingdoms situated between the Nile and Chad. In the 18th century, Islam came to predominance to the south of the Sahara, from the Atlantic to the Red Sea, except only in the Ethiopian Highlands.

Along the Gulf of Guinea, the impenetrable equatorial forest—even when not infested with tsetse flies—for a long time halted the shepherds who were the Muslim conquerors of the territory. But with the modern age the situation has changed. With the conversion of a section of the Yorubas (near Lagos) and penetration into other tribes hitherto reputed to be impossible to convert, with the remodelling of populations characteristic of countries today, this forest no longer forms a boundary, and many Muslims intermingle with the inhabitants of the coastal towns.

The commercial centres on the African coast of the Indian Ocean, which remained isolated in their world of business transactions, gradually became stronger (especially in the 4th/10th century). But it was in the 19th and 20th centuries that they became centres of islamization; the suppression of slavery and the opening of the hinterland had swept away the barriers that confined them to their trading-ports. Consequently there has been a considerable, though recent, advance by Islam in these zones during the last half-century (Kenya, Tanzania and even to the eastern Congo).

In all these conquered lands in Asia or Africa, or in all the sultanates ruled by Muslims, a special world was created, the Muslim world, where life, art and thought were marked by Islam, even though many traces of the past still survived. The simple imposition of a foreign political framework was very quickly followed by the adoption inwardly of Muslim values.

Finally, to conclude this general survey, it should be noted that the attack launched by the Ottoman Turks finally, in 1455, swept away the barrier of...
ISLĀM

Constantinople. Europe was invaded as far as Vienna which was twice besieged, in 1529 and 1683, though without success. The ebb then followed, particularly in the 19th century and at the start of the 20th.

B. — Present characteristics. If we attempt to trace on a modern map the distribution of Muslims throughout the world, it becomes apparent that Islam is a religion which is almost confined to Asia and Africa. The only exceptions to this rule are some millions of Muslims in Turkey in Europe and in the Balkans, migrant and transient workers in western Europe, and immigrants in North and South America.

In the countries where Christian minorities remain, as well as in pagan countries, Islam is making progress, above all because, in order to be truly integrated into Muslim society, it is necessary to be a Muslim. Since this integration alone permits certain marriages, the proportion of the conversions to Islam undertaken on the occasion of marriages is very high. This integration also facilitates the finding of employment and advancement to higher posts. In certain countries, questions of social castes sometimes enter, since conversions take place particularly in certain strata of the population. But however that may be, in view of the simplicity of the Muslim dogma which places man face to face with God the Creator and Providence, and in view too of the aspect of fraternity which Islam presents to the newcomer (especially when he is received into a brotherhood), man’s fundamental religious sense is satisfied. Thus the step to be taken does not deter anyone who is no longer greatly attached to his old religion.

Tolerance for ancient customs has also played a part in many countries, since Islam requires merely a profession of faith for a convert to be able to enter the community. Then, little by little, Islamization has been effected in depth. Moreover, Muslim society, which gave the new member the satisfaction of belonging to a vast community covering the entire world, with its own military, cultural, religious and political renown, has always exerted effective control over him. While leaving those who served it very free, from the moment they made their profession of faith, it has always been at pains to protect its members from other possible pressures and, above all, to prevent them from leaving Islam once they have adopted it. Until recently, the apostate was put to death; even now, proselytism is still strongly disapproved of, and the man who deserts Islam cuts himself off from his own people, save in exceptional cases, even though modern jurists no longer authorize the death penalty for apostasy.

Paradoxically, among the features which have favoured the expansion of Islam during these last decades must be included colonial occupation. In many cases the occupying powers relied on Muslim elements possessing a higher degree of civilization than the pagans, in the countries where these still survived. Alternatively, it placed without discrimination under the same legal system inspired by Islam, both Muslims and those who were neither Muslim nor Christian. In the same way, by destroying the tribal framework of African paganism, colonialism created the great numbers of rootless people who have found in Islam a justification for social existence. All the more since Islam has presented itself as a native religion, not as a colonial importation, while the difference in the standard of living, so obvious in the case of Christians newly arrived from Europe, did not arise between Muslims and pagans, who all sprang from the same soil. Peace too has assisted the movement of preachers or merchants belonging to brotherhoods.

In Black Africa, the Qur’ānic schools have been centres of Muslim expansion, both through the scope they have given for zeal to have effect, and also through the number of future propagators of Islam who have been formed there. The poverty of the material equipment in the great majority of these establishments, like that of the curricula, must not be misinterpreted. Thanks to these, the values which the children have learnt to respect, above all the sense of dedication and pride in belonging to the Muslim community, have profoundly marked whole regions. The story of David and Goliath is repeated in these schools in the triumph of poor resources. At the present time, incidentally, in many Muslim countries the official school has replaced the Qur’ānic school.

The conditions affecting the expansion of Islam are extremely variable, according to the countries concerned, and we should not make any attempt to systematize them. There are large organizations working through pamphlets (like the Ahmadiyya in Pakistan); there is the sending out of teachers and preachers; there is a whole system of instruction by radio. But the Muslim missionary apparatus is infinitely less cumbrous than that of the Christians. It is the natives of the country concerned who open schools, after having been sometimes (though not always) educated at centres abroad. It is the Muslims themselves, especially the merchants, who bear the chief responsibility for the missions. Finally, the brotherhoods have played a very great part in this movement. But whatever the differences, it is striking to observe wherever Islam is established, the same pride in the community, with as a consequence a certain number of common basic attitudes, affecting the manner of life and thought. This pride and its consequences, by favouring a certain impermeability to foreign influences, have been powerful weapons in resistance to colonialism.

For some thirty years, the Muslim world has been evolving very rapidly. Universities have been founded (see *Iskandariyya*). The instability of the world economy has made itself felt everywhere. Travels and contacts have multiplied. Socialism has changed the face of many societies and, above all, Islam has adopted modern methods of communication—pamphlets, radio, television, etc. The number of people who listen on their transistors to sermons in *Ramaḍān* is now vast.

C. — Statistical outline. Basing themselves on the figures for world population valid in about 1960, some good authors privately estimated that there might be 453 million Muslims in the world. At the present time, with the increase in population, they now exceed 500 millions.

The figures which follow will indicate a total based upon the statistics for the populations of individual countries (in 1966), as contained in the *UNESCO Statistical Yearbook* (1967). After that, the article will provide details, so far as it is possible to do so, of the proportion of Muslims within the different countries. Figures given without further details signify the number in thousand. 1. — Africa (perhaps 130 million Muslims out of 318 million inhabitants).

a) Arabic speaking Africa (perhaps 70 million Muslims)
- Morocco 13,451 (Muslims only)
- Mauritania 1,070
- Algeria 12,102 (total population)
- Tunisia 4,458 (id.)
- Libya 1,676 (id.)

b) Other African countries (perhaps 59 million Muslims)
- Senegal 6,272 (id.)
- Somalia 3,661 (id.)
- Ivory Coast 2,884 (id.)
- Mali 2,464 (id.)

2. — Asia (perhaps 290 million Muslims out of 1,810 million inhabitants).

a) Pakistan (perhaps 80 million Muslims out of 83 million inhabitants)
- West Pakistan 67,119 (id.)
- East Pakistan 12,702 (id.)

b) Other Asian countries (perhaps 210 million Muslims)
- Iran 72,551 (id.)
- Afghanistan 11,100 (id.)
- Bangladesh 29,102 (total population)
- Indonesia 25,102 (id.)
- Iraq 6,451 (id.)
- Turkey 11,451 (id.)
- Iran 72,551 (id.)
ISLAM — ISLAMABAD

— E.A.R. (Egypt) 30,083, two million of whom are Christian
— Sudan (Khartoum) 13,940, 70% of whom are Muslim
b) Africa south of the Sahara, excluding the Sudan (perhaps 60 million Muslims)
— Somalia 2,380, of whom 99% are Muslim
— Nigeria 58,600 (7), of whom 43% are Muslim
— Ethiopia 23,000 (7), of whom 40 to 50% are Muslim
— Senegal 3,490, of whom 75% are Muslim
— Niger 3,433, of whom 72% are Muslim
— Mali 4,654, of whom 65% are Muslim
— Guinea 3,608, of whom 62% are Muslim
— Chad 3,361, of whom 55% are Muslim
— Upper Volta 4,955, of whom 26% are Muslim
— Tanzania 10,717, of whom 23% are Muslim
— Ghana 7,945, of whom 20% are Muslim
— Cameroon 5,330, of whom 20% are Muslim
— Kenya 6,643, of whom 10% are Muslim
Smaller numbers of Muslims are found in the following countries, in which they represent respectively the proportion of the population as indicated:
— Sierra Leone 33%, Gambia 73%, Portuguese Guinea 26%, Ivory Coast 25%, Dahomey 15%, Liberia 15%, Mozambique 11%, Malawi 7%, Botswana 5%, Togo 3%. Elsewhere the proportion is still smaller.

N.B. A better knowledge of the countries to the south of the Sahara made it possible, in about 1945, to assert the existence of numerous isolated pagan communities in regions thought to be wholly Islamized (certain zones of Chad, North Cameroons, North Nigeria). Since then, a movement has been started among these pagans for conversion to Islam; in north-western Nigeria, this was vigorously supported by the political authorities, in the years preceding the disturbances of 1965.

For Nigeria, the reader will note a very clearly marked break in the rate of growth of population. As, until 1952, this was following a regular increasing curve, the figures given since that date correspond with an acceleration which requires to be explained before it can be accepted.

For Ethiopia, to which Ertria has since been added, the Annuaire du Monde Musulman, 1954, accepts only half the figure officially given (cf. p. 389).

2. — Asia (perhaps 390 million Muslims out of 1,868 million inhabitants)

a) Arab countries of Asia (perhaps 29 million Muslims), the principal centres being:
— Saudi Arabia 6,870
— Yemen 5,000
— Irak 8,338, of whom 95% are Muslim
— Syria 5,450, of whom 88% are Muslim
— Lebanon 2,400, of whom 50% are Muslim
— Jordan 2,040, of whom 92% are Muslim
b) Islam in the USSR, 30 million (?) Muslims
— Iran 23,781, of whom 98% are Muslim
— Afghanistan 15,960 (almost all Muslim).

c) Islam in the Middle East (perhaps 72 million Muslims), in
— Turkey 31,880, of whom 99% are Muslim
— Iraq 25,781, of whom 86% are Muslim
— Iran 23,781, of whom 98% are Muslim
— Afghanistan 15,960 (almost all Muslim).

d) Islam in Pakistan, India, Ceylon and Burma (perhaps 145 million Muslims), the two major groups being
— Pakistan 105,044, of whom 86% are Muslim
— India 498,680, of whom perhaps 11% are Muslim
e) Islam in China, 15 million (?) Muslims
f) Islam in South East Asia (perhaps 100 million Muslims), chiefly located in
— Indonesia 107,000, of whom 87% are Muslim
— Malaysia and Singapore 10,212, of whom 44% are Muslim
— Philippines 33,477, of whom 5% are Muslim.

3. — Europe.

A little less than 5 million Muslims in the Balkans, to whom must be added the Muslim workers in western Europe, so far as they have not been included in the figures for their respective countries of origin.

To conclude this survey, the figure of 525 million Muslims might be suggested for the year 1966, a year during which the total world population has been estimated at 3,356 million inhabitants. The Muslims would represent about one-sixth of all human beings, or slightly less.

Bibliography: Since the list of books concerning this subject is too long to be given in full, the reader is referred to the bibliographies relating to the different countries dealt with above.

J. JOMIER

ISLAM, ENCYCLOPAEDIAS of [see MAWSNY A.]

ISLAMABAD, the name given by the emperor Awrangzb (1618-1707) to several towns in India, for reasons not precisely known. All these towns were already included in the Mughal territories and were not freshly conquered from the Hindus to provide an excuse for their rechristening. Of these Cittagong [q.v.], now in East Pakistan, at the head of the Bay of Bengal, is still known occasionally in religious circles as Islamábád, the official name remaining the original Cittagong. Mathurá, on the river Yamuná, known for its numerous temples and Hindu shrines, was given the name Islamábád after a serious insurrection by Gokálá Dhá, a leading zamindar of the area, had been suppressed by the imperial forces under Hasan ‘Ali Khán, in 1806-1807. The name never became popular and the town continued to be known as Mathurá, although coins of gold, silver and copper were struck there with the mint name of Islamábád from the time of Awrangzb till the reign of Sháh ‘Álam II (reg. 1757/1759-1788/1789). Amanábád in the Kashmir valley, situated at 33° 44′ N. and 75° 12′ E. above a mile from the Nilaáb (Jhelum), also received the name Islamábád and is still known to the Muslims of the area by this name. Known for its shawls, spas and springs, it is not known when this new name was given to Amanábád or why. The fort of Cákana, near Poona, one of the strongholds of Sívádži, the Maharája chief, was named Islamábád after it had been taken by Awrangzb’s general Sháh ‘Álta Khán in 1753/1762, after bitter fighting.

ISLAMABÁD, the new capital of Pakistan [q.v.], was set up in 1960 on the recommendation of a special commission, headed by General Yáby Khán, then (1971) president of Pakistan. Situated between 33° 19′ and 33° 50′ N. and 72° 34′ and 72° 25′ E.,
some 8 miles from Rawalpindi, the general headquarters of the Pakistan army, the site elected “answers all questions relating to climate, landscape, communication, defence...”. Off the road to Murree, a nearby hill station, and spreading over an area of 351 sq. miles, consisting mostly of natural terraces, rising from 1700 to 2000 ft. above sea level, it is divided into 40 sectors, each measuring 800 acres, reserved for residential purposes. The climate is extreme, the temperature ranging 115°F in summer and dropping down to 27°F in winter. Rainfall is plentiful, but the area around is mostly arid and the town depends on supplies of fruit and vegetables from the plains. Construction work, started in 1961 under the Capital Development Authority, a statutory body, still continues and will take many more years to complete. In early 1970, 8,000 houses of various types had been constructed, accommodating more than 60,000 people, mostly government officials and their families. Schools and colleges, markets and shopping centres, hospitals and dispensaries, post and telegraph offices, cinemas, hotels and restaurants, public parks and other civic amenities have been provided. The Islámábád University, meant for advanced post-graduate studies in science and technology, has started functioning. A grand mosque, designed by a Turkish architect, and the practice began of mentioning the sultan's name before the khan's in the sanctuary roofed by tilted flat slabs, supported on double beams, will accommodate 100,000 persons.

The plan of the town is based on the principle of “dynapolis”, i.e., allowing for growth in scale and size. Practically all the government offices and ministries, including diplomatic missions, are now housed in Islámábád. The president of Pakistan, however, still lives in Rawalpindi.

A fast expanding town, the population is expected to reach the half million mark by 1980. Besides the President’s House and the National Assembly building, two major landmarks, provision has been made for setting up a national library, archaeological and war museums, national archives etc. Over a million trees have been planted all along the 125 miles of roads and boulevards to give colour to the landscape.

ISLÁM GIRÁY, the name of three Khans of the Crimea.

ISLÁM GIRÁY I (938/1532) was the son of Mengli Giráy [q.v.]. As the leader of the party wishing to follow an independent policy, he embarked on a struggle with his brother, the khan Sa’det Giráy, the appointee of the Ottoman sultan, enjoying the support of the Crimean tribal aristocracy, who wished to wage unrelenting war on the Russians. With this following, in 933/1527 he ravaged the region of Riazan and threatened Moscow. In 938/1532, Sa’det Giráy, assisted by the Ottoman governors of Kefe and Azak, brought him to battle but was defeated and fled to Istanbul (May). Islám Giráy did not dare, however, to defy the sultan, and so consented to serve as kälgháy [q.v.] to the new khan sent from Istanbul, Sâhib Giráy. As such, he made overtures of friendship to Moscow. Two months later he rebelled against the khan and withdrew into the steppe region of Or-Kapl. Defeated by Sâhib Giráy, he asked for pardon and was allowed to settle at Or-aghel. Soon afterwards he was killed in a raid by one of the mirázs, Bâşlî Beg.

ISLÁM GIRÁY II (992/1584-996/1588). Having lived as a hostage in Istanbul under Süleymán I and Selim II, he fell from favour upon the accession of Murâd III and withdrew to Konya, where he devoted himself to Mevlevi mysticism, but after the rebellion of Mehméld Giráy he was appointed khan, being escorted to the Crimea by an Ottoman squadron under the Kapudan Pascha. The mirázs acknowledged him as khan, and Mehméld Giráy, while attempting to take refuge with the Nogáys of the steppe, was taken and executed (Lhùl i-Kâtha 997/end of 1584). But Mehméld’s son Sa’det Giráy, with his Nogáy followers, defeated him, and he took refuge, wounded, in Kefe. With Ottoman support he defeated his rival (battle of Andal, 992/1584) and entered Bagh-esaray. A second uprising having failed, Sa’det Giráy finally fled to the Volga region. His brother Murâd, however, had gone to Moscow and returned, with Nogáy and Cossack followers, planning to attack the Crimea. The Ottoman sultan warned the czar against intervening and preparations were made for a campaign against Astrakhan, where Murâd’s force was gathered; but Murâd unexpectedly died. Thenceforward Islám Giráy made repeated raids into Russian territory (Krapînina taken, 995/1587). During Islám Giráy’s reign Ottoman suzerainty over the Crimea was strengthened, and the practice began of mentioning the sultan’s name before the khan’s in the “tribute” of the Khânaate. He died in Safar 997/December 1588, and was buried by the Ulu Dîmâf at Akkermán.

ISLÁM GIRÁY III (1054/1644-1064/1654), the eldest son of Selâmét Giráy, was, as a young man, taken prisoner by the Poles during a raid. Released after seven years, he settled at Yanbolu. In 1045/1635 Bahâdîr Giráy made him kâlhghây; and with this office he helped to preserve the Khânaate’s influence over the Manşûr tribe. When, on the death of Bahâdîr Giráy, Mehméld Giráy was appointed khan, Islám Giráy lost the office of kâlhghây, and was banished, first to Ka’fa-i Sultâniyye and then to Rhodes. Finally, thanks to the backing of Dîndî Khodja, [see Husavn Dîmpâr], he procured the khâluâtate in Rabî’ II 1054/June 1644. He applied himself first to restoring control over the Circassians by eliminating Hakhumaham, the beg of the Zhabun. He came into conflict with the uülgh-âgha (i.e., vizier) Sefer Ghazi, who had helped procure his elevation to the Khânaate, and the mirázs, which wished to engage in a policy of raids into Russian and Polish territory. In the first trial of strength (Radîb 1055/August 1645) they were defeated, but not crushed; and in 1057/1647 they succeeded in procuring Sefer Agha’s re-appointment as uülgh-âgha.

Successful raids made in 1055/6/1646-6 forced the czar to sign a treaty by which he undertook to send the annual “tribute” of uülgh-khâste and bîlebks and to put an end to Cossack raids on Azak and other Ottoman territory (text in V. Velyaminov-Zernov, Matériaux pour servir à l’histoire du Khanat de Crimée, St. Petersburg 1864, no. 104). A raid led by the beg of the Shîrin tribe into Russian territory in 1057/1647 was a failure, and there ensued a long period of peace between Russia and the Crimean Khânaate. As for Poland, a critical situation arose when the Cossacks of Zaporohz under Böghdan Khmelnitsky rebelled against the King of Poland and sought Crimean protection. In spite of protests from the Ottoman authorities, who wished to maintain the state of peace with Poland, Islám Giráy could not let this opportunity slip: he granted Khmelnitsky the rank of khan and put at his disposal a Crimean force of 4000 men under the Ur-beg Tukhâr.
These Cossack and Tatar troops won several victories over the Poles in Rabl on 11 May 1648, and the mediation of the khan enabled the Cossacks to conclude a very favourable treaty with the King of Poland (Treaty of Zborov, 1059/1649). Under pressure from the khan, Lubul, the voysoda of Boghdan (Moldavia) concluded an alliance with Khmelinsky (1606/1650), and in the following year the Ottoman sultan took him overtly under his protection; but in that year Khmelinsky and a Tatar army commanded in person by the khan were defeated by the Poles (there is no justification for attributing the defeat to treachery by the khan: Cambridge History of Poland, Cambridge 1950, 514). The Cossack-Tatar alliance was maintained until the conclusion of peace between Poland and the khanate on 24 Mubarram 1064/15 December 1653: in 1064/1653 Khmelinsky, while negotiating with the Ottoman sultan (who sent him a horsetail and standard, see Na’im, v. 278), was also seeking the protection of the czar.

İslam Giray died in Şahbâb 1064/June 1654.

Bibliography: See, for the dynasty in general, the bibliography to the article İGIRAY, and for details the articles İSLAM-İGIRAY I, II, III, in IA, fasc. 52, pp. 1104-8. (Halil Inalcı)

ISLÂM (See ISTANBUL.)

ISÌ, a river on the Algero-Moroccan borders, a sub-tributary on the left bank of the Tafna. Of little importance in itself, this river was the scene of several battles, since it constitutes an obstacle on the East-West route between Algeria and Morocco. Battles occurred here between the Marinds and the 'Abd al-Wàddids in 668/1270 and 670/1271, and above all there was the battle between the French troops under Maxime Bugeaud and the Moroccan troops commanded by Mawlay Muhammad, the son of Sultan Mawlay 'Abd al-Rahmân.

Bugeaud’s army consisted of some ten thousand men, the Moroccan army of about 30,000, more than two-thirds of whom were tribal cavalry. The vital part of the battle was fought during the morning of 14 August 1844 on the right bank of the river. The tactics and discipline of the French army, or rather of Bugeaud’s troops, were the same as they had been in the battle of the Marinds and the ‘Abd al-Wàddids, a very long way when dealing with an important person or a pejorative sobriquet (e.g., ‘Umar and ‘Amr); a proper name being by its nature definite, the tendency has always been to treat them as diplômes, and in present usage the case-ending tends to be suppressed. Furthermore, the usual indication of the feminine is not necessarily taken as such, and Tajz, for example, or Dîaryya are men’s names. In general only the names of the Prophet (Muhammad, al-Muṣṭafâ etc.) or of some of the figures of the early Islamic period (‘Umar, ‘Ali, ‘Uṯmân, etc.) have survived from among these ancient names, specimens of which will be found in Caskel, Gâmarat an-nasab des ibn Kalbi, Leiden 1664. b) Biblical names in their kûnânic forms: İbrâhîm = Abraham; İsâ = Jesus; Mûsâ = Moses; İsma’il = Ishmael. c) Compound names in two main patterns: i) ‘Abd (slave [of]) followed by Allâh or one of the divine names (see al-‘Abd al-Allâh); ii) the ancient theophorous names made up of ‘Abd and the name of a pagan divinity (‘Abd Manât etc.) have disappeared with Islam. ii. Allâh preceded by a construct substantive (e.g., Hibat Allâh “gift of God”)

d) Persian names drawn from old Iranian history and legend (e.g., Khusrâw, Djamshîd, Rustâm). e) Turkish names (Arslân, Tughrul, Timur). These were common in the period of the first Turkish migration into the Middle East and regularly appear (though much distorted in the orthography) as the names of military commanders in the medieval Arabic chronicles of Syria and Egypt. Thereafter they fell into disuse, but they were revived in modern Turkey under the influence of nationalist movements. They frequently consist of, or comprise, names of predatory animals and birds: Babur, (Bay)bars, (Al)parslan, Layt, Sonkur, (Er)göhrîf. They soon triumphed over the pejorative sobriquets’ wishes: Yeter (“enough”—after a succession of stillborn babies; the same root probably appears in ‘Abd ‘Ali, ‘Abd-Hasan), Satlmlîf (“he has been sold”—by a hitherto barren mother through a vow to a saint). f) Names of diverse origins, especially Berber and birds: Babur, (Bay)bars, (Al)parslan, Layt, Sonkur, (Er)göhrîf. They soon triumphed over the peasants’ wishes: Yeter (“enough”—after a succession of stillborn babies; the same root probably appears in ‘Abd ‘Ali, ‘Abd-Hasan), Satlmlîf (“he has been sold”—by a hitherto barren mother through a vow to a saint). f) Names of diverse origins, especially Berber and birds: Babur, (Bay)bars, (Al)parslan, Layt, Sonkur, (Er)göhrîf. They soon triumphed over the peasants’ wishes: Yeter (“enough”—after a succession of stillborn babies; the same root probably appears in ‘Abd ‘Ali, ‘Abd-Hasan), Satlmlîf (“he has been sold”—by a hitherto barren mother through a vow to a saint).

h) Names based on honorific titles (see labab, below).

3) The nasab or pedigree, a list of ancestors, each name being introduced by the word īm [q.v.], “son of”. The second name of the series is preceded by bînî, “daughter of”, if the first name is that of a woman. Muslim historians quote as many generations as they feel to be necessary and sometimes go back a very long way when dealing with an important person or in order to avoid confusion, but the usual practice is to limit the nasab to one or two ancestors. It is not uncommon for one or more of the ancestors in the list to be mentioned by a name other than his īm (e.g., ‘All b. Abî Tâlib). If, in the genealogical series, two persons bearing the same īm are known in history, the elatives al-‘abbar and al-asghar are sometimes used: Marwàn al-‘asghar b. Abî 9-Djântîb Yâhya b. Marwân al-‘abbar b. Abî Ḥaḍa. Converts whose natural fathers had not embraced Islam were conventionally given, especially in the Ottoman
period, the *nasab* Ibn 'Abd Allâh (or 'Abd and one of the divine names); but such a *nasab*, known to be fictitious, was employed only when custom demanded the use of one, e.g., in a legal attestation or epitaph.

In Persian the word *šbn* is usually omitted and replaced by the genitive particle -i: e.g., Hasan-i Šabbâb. In the Muslim lands generally, with the exception of Arabia and the Maghrib, *šbn* is no longer used, and the name and father's name are simply juxtaposed, Ahmad 'Ali 'Abd al-'Allâh, son of 'All. The Persians, followed by the Turks, often use *sadde* (son) added as a suffix to the father's name, *nisba* or title, which is placed before the *ism*: e.g., Kâdîzâde = "son of the judge"; ŞâhÎrî al-Manâzî-r-zâde = "son of the commentator on al-Manâdûr"; Pîrdîpâzâhîde = "son of Pîr Pasha". The Turkish word *oglu* is also used in the same way, but usually for noble or ruling families, rather than *'ilâmâ*: e.g., Mîkhâloğlu = "son of Mîkhâl". Many of these names in *sadde* and *oglu* have become surnames of a sort, borne by whole families and referring to a common ancestor rather than to an immediate progenitor: e.g., Köprüli-zâde, a name borne by a family claiming descent from the famous Ottoman viziers. In the same way the Arabic *šbn* may sometimes refer to an ancestor rather than a parent, and be used as a kind of a surname: e.g., Ibn Khâdîdîn, Ibn Baṭţîţa, Ibn Snîn, Ibn Āli (also Kemîkîzâde).

4) The *nisba* is an adjectival ending in -i, formed originally from the name of the individual's tribe or clan, then from his place of birth, origin or residence, sometimes from a *magâhab* or sect, and occasionally from a trade or profession. A man may thus have several *nisbas* which are normally given progressing from the general to the particular and in chronological order of residence: e.g., al-Kurayshî al-Hashimî al-Baghdâdî dîsama al-Mawjiî al-Sayrâîl = "of the tribe of Kuraysh, of the clan of Hashim, of the city of Baghdad and then Mosul, the moneychenger".

The speciality is often indicated at the end without the suffix 1: al-Ḫâfî. In Arabic the *nisba* is always preceded by the definite article (al-) which in Persian disappears. Among the Turks the place-*nisba*, with the ending -i (or -Îr), is normally placed at the beginning of a name; e.g., Târîfîl 'Ali Rîzâ, "the Smyriot Ali Riza". The *nisba* may be arbitrarily handed down from father to son, though its original relevance is lost.

These are the elements which normally make up a name. The *labâb* an honorific or descriptive epithet which is usually placed after the *nisba* and sometimes represents a nickname, often a title, might be added. In its original and simplest form it is a descriptive nickname usually referring to a physical characteristic: e.g., al-Ṭawâlî, "the tall", al-'Awar "the one-eyed", al-Aṭrâsh "the deaf". It follows the *ism*. These nicknames are felt to be less pejorative than the sobriquets (nabâz) such as al-Ḫîmrân "the ass" (= Marwân I).

*Labâbs* of a different sort were adopted as regnal names by the 'Abbâsid Caliphs of Baghdad (see B. Lewis, *The regnal titles of the first Abbasid Caliphs, in Dr. Zachir Husain Presentation volume*, New Delhi 1968, 13-22), and after them by most other Muslim rulers: e.g., al-Rashîd "the rightly guided", al-Mudawakkil ʿalî Ḥîlāb "who entrusts himself to God". At a later date Persian and Turkish *labâbs* are encountered, as well as Arabic: e.g., Dâhângîr "world seizer", Yıldırım "thunderbolt".

Independently of the names of the Kings of the Yemen, consisting of Dîhû followed by a substantive [see al-‘Anâwî], early on there appeared in Arabic nicknames composed of Dîhû (fem. Dîhât) and a noun in the dual commemorating a notable trait or deed: e.g., Dîhât al-Nîţâmîyân "the woman with the two waistbands" (= Arâmâ bint Abî Bakr); Dîhû 'l-Hîdârâtayn "the man who has been made the two *hîdrâs*" (= Dîhût-fâr b. Abî Ṭâlîb); Dîhû 'l-Ŷamînîyân "the ambi*ded*" (= Ťâhir b. al-Ŷusûn). Under the 'Abbâsid honorifics of the same type were given to high personages: e.g., Dîhû 'l-Kâmâlamayn "the man of the two pens", Dîhû 'l-Wizâratayn "the man of two victorizes".

From the end of the 3rd/9th century and especially from the 4th/10th *labâbs* of honour were bestowed by the Caliphs upon princes, statesmen, generals or high officers of state. These were usually compounds with *Dawla* ("State"), *Din* ("Faith") or both: e.g., Bâd-âr al-Dîn "full moon of the Faith"; Nâşîr-âl-Dawla "Defender of the State". Similar compounds may be formed with *Mulûk* ("Kingdom") (Nuşám al-Mulûk "Order of the Kingdom"), with *Iståm* (Sayîl al-Iståm ("Sword of Islam") etc. Many persons are known principally by their *labâbs*, e.g., Salâdîn (= Šâlîb al-Dîn).

In the course of time many of these *labâbs* ceased to be titles borne only by ruling princes and their officers, and became little more than personal names. In the Ottoman period the members of the *'ilâmâ* were usually known by a combination of *labâb* and *ism*, with a tendency for each *ism* to be linked with a specific *labâb*: e.g., Sinân al-Dîn Yûsuf, Mûbîy al-Dîn Muḥâmmad (see F. Babinger, in *İsl.,* xi). The carefully graded honorifics employed in Islamic chanceries in addressing members of the "religious" and "secular" institutions and foreign rulers and ambassadors, corresponding to the *inscriptive* of European diplomatic practice, were known by the plural of *labâb*, *alâb* (Turkish *elâb*). These, understandably, became progressively more elaborate, so that manuals drawn up for the guidance of chancery clerks usually contain a section devoted to them (e.g., Ferîldîn, *Munîşâdî al-Sâldîn*, i, 2-13) (see *Diplomatic*).

The use of nicknames of various types was encouraged in the Ottoman Empire by the fact that so many prominent personages—not to speak of the whole corps of Janissaries, etc., for whom payrolls had to be kept—were of non-Muslim origin, so that a dozen men with the same *ism* could not be distinguished, as could the Muslim-born, by their *nasâs.* By Turkish syntax, a nickname usually precedes the *ism*, while a title, arising from the individual's actual rank or employment—*Pasha*, *Agha*, *Miûferifîka*, *Reîs* (for sea-capitains). *Cauwugh*, etc.—usually follows it. The apparent exceptions are Sulûn, which invariably precedes the name of the ruler (but follows the name of a princess or of a few conspicuous saints), and *Shehzâde*, "prince"; but here too the word when preceding may be in origin a nickname and when following a "title of honour".

Nicknames may be *nisâs*, either referring in the strict sense to a town (Filîbelî, Edeznella, etc.) or family (Sokolûa), or vaguely to a race or people (Turks, Čerkes, *Arab* which in Turkish usually means "nègro"); they may refer, sometimes, unusually, to personal characteristics: Uzûn ("tall"), Sarf ("fair"), Tabânt-yassî ("flat-footed"); they may be bestowed posthumously by chroniclers: Maştûl "(the executed)", Khîrîn ("the traitor"), Hezârprâh ("hacked to pieces"); they may refer to the individual's position or employment: Nîshântîlî, Miîmâr, Dâmâd, and frequently (and somewhat confusingly) may survive from a former employment, for example in the
Palace service: Lala ("tutor [to a prince]"), Silibdar ("sword-bearer" [to the sultan, while a page]); they may be a religious appellation Hāddīdī, Aḥbāb, Sūfū, Gāvūr, etc.

Even the sultans are usually distinguished by nicknames rather than regnal number: Fāṭih Mehemmed [II], "Genē" Oṭğmān [II], "Avğlī" Mehemmed [IV]. When the nickname follows the ism, contrary to the rule in Turkish, we probably have a suppressed Persian ḏafet: Mehemmed [-I] Fāṭih, Bāyezīld [-I] Well [II].

In the late 10th/16th century there was a transitory fashion, especially in the chancery, for the adoption of "Iranian" names (zād, above) (thus the famous Ferdlūn is called in his wūfīye "Aḥmed Ağa ... al-Šahīr bi-Ferdūdin Ağa"), and also for the use of just one letter of the personal name, e.g., Dāl Elendi, for Dāl-i Mehemmed, cf. "Ayn-i ʿAllî, Lām-i ʿAllî (U. Heyd. Ottoman documents on Palestine, Oxford 1960, 16 and note).

A Turkish custom is the ǧobek adī, "navel name". This is a name given to a new-born child by the midwife as she cuts the umbilical cord; it is invariably a good "Muslim" name, such as Mehemmed or ʿAllī for boys, Fāṭima or ʿAyyūhe for girls. The explanation for it may be that since it is considered unlucky to choose a name before the birth, this provisional name is given at the very inception of the infant's independent existence in order to ensure that if it does not live it will have died a Muslim. The ǧobek adī is in practice not used, being superseded by the esan (< ad̄lān) adī, the regular ism, which, having been chosen at leisure by the family, is bestowed, with a recitation of the ad̄lān, a few days later (usually after three days, but avoiding the insidious Tuesday). Another Turkish custom is to change a baby's name if it does not thrive or is feeble. In Turkey, and particularly in the country districts, regular Islamic names may take on barely recognizable hypocoristic forms: Muṣṭafā > Mīstık, Fāṭima > Fādīk, Mehemmed > Mem or Memi, Sālum > Sīlū, İbrâhîm > İbīd, etc.

Among other onomastic elements the most important is the ṭakabīl or pen-name adopted by a poet or writer, e.g., Fīrdausī "the Paraisiac".

A person may be mentioned by one or more of these components, or by several of them at the same time; there are no fixed rules, and only usage seems to decide, although there is not always unanimity upon a single appellation. Thus the poet usually called Abū Nuwās is sometimes referred to by the name al-Ḥasan b. Hānī or by the nisba, al-Ḥakamī. In the biographical works the authors class persons according to their ism in order to avoid confusion, and indicate the kumya, the nisba, and the ṭakab after the nasab, specifying at the same time the name most commonly used. Thus the biography of Ibn al-Kāḷānīṣī, the author of the Damascus Chronicle of the Crusades, whose full name is Abū Yaʿlā Hamza b. Abad b. ʿAll b. Muhammad al-Tamāmī al-Dimashkī al-ʿAṣmī ibn al-Kāḷānīṣī (the father of Yaʿlā), Hamza the son of Ṣaad the son of ʿAll the son of Muḥammad, of the tribe of Tamām, of the city of Damascus, the Chief (of the Chancery), the son of the hatter), will be found under Ḥamza b. Abad.

None of these components strictly speaking amounts to a surname, though in practice the ṭakab or nisba or maʃīfā (as in the case of Ibn al-Kāḷānīṣī [see below]) is sometimes so used.

In the contemporary Orient the custom is to use two names the first of which is a sort of personal name, the second being usually the father's name. It may, however, be equally the name of a grandfather or remoter ancestor, or a second personal name adopted by choice or given in the family, at school, in the army, etc., or one of the above mentioned categories. The use of surnames is spreading among the upper classes, and the introduction of compulsory registration in several Islamic countries will accelerate their adoption. In Turkey (1934) and Persia the adoption of a surname was imposed by law. (En.)

ISM (I.), "name", is the technical term used in Arabic grammar to signify the noun. Ism is a biliteral and, as such, belongs to a very ancient linguistic stock (see H. Fleisch, Traité de la philologie arabe, i, § 52 b) it has been given a w as a third radical consonant so that it may be included in the scheme of morphological formations: broken pl. asma', denominative verb: samād, yasmād, more frequently samā, yusamād, "to call, name". Of the Arab grammarians, the Kūfians derive ism from wasm "sign" (/wɑsm/). The Basrans from sumumw "elevation" (/ʃmɑw/) (see their discussions, Ibn al-Anbārī, K. al-Ismāʾ, ed. G. Weil, first question discussed).

Ism is the first term of the great tripartite division: ism, fišl, harf, which begins the ʿiṣbāwīyī or his name (see wa, and in E. I. ism). Sibwayhi gives no definition of ism; he merely gives examples: raṭjul "man", faras "horse", ḏārī "wall". Ibn Fāris (d. 395/1004) records (al-Šāhībī, 82-3, ed. Beirut 1982/1963) the definitions suggested by the masters who followed: al-Ākhfash (disciple of Sibwayhi), al-Kīsā (d. 189/865), al-Farrā (d. 207/822), Hīšām al-Darfīr (d. 209/824), al-Mubarrad (d. 285/904), al-Zājdāḏ (d. 310/922). None satisfies Ibn Fāris. In fact, these masters, except the last, do not give a true definition, but a description of the noun in its grammatical relationships; thus al-Farrā says: "the noun (ism) is that which admits the tanmūn, the ṭidāfā (construct) or alif̄ and lām (the article)". Ibn al-Anbārī also records another definition of al-Mubarrad (op. cit., 2, 1. 20) and the definition of Thaʾlab (d. 291/904) (ibid., 1. 4). As Ibn al-Anbārī himself says (ibid., ii, 10-11), concerning al-Mubarrad, their dicta might serve for an etymology (ṭabīk) but not for a definition. With al-Zājdāḏ (d. 310/922), on the contrary, we find a true definition of the noun, but here it is under the influence of Greek logic.

Aristotle, in the Organon, in the Peri Hermēneias (the De Interpretatione, ed. L. Minio-Paluello, Oxford 1956), gives the two following definitions: for the noun (16a, 19-20): onomā (a noun) esti (is) phōnē (a sound) stēmānikh (with meaning) kata sunthēkēn (by agreement) aneu khrōnou (without time), and he adds: "no part of which has meaning in isolation"; for the verb (16b, 6-9): rhēma (a verb) esti (is) to prossēmēnon (that which indicates also) khrōnon (a time) (i.e.; that which, in addition to its proper meaning, contains the indication of a time), and he adds the same remark as for the noun.

The Aristotelian definition of the noun is found in that of al-Zājdāḏ: sawest mukatā'a mafẖūm dālā ʿalā maʃnā, ghayr dālā ʿalā zamān wa-li mākan: fōnhē, here sawest, is qualified by mukatā'a "cut off [from others]", mafẖūm "understood", dālā ʿalā maʃnā stēmānikh; for aneu khrōnou, the exclusion of place is added to that of time; kata sunthēkēn is omitted; it refers to the large question of the origin of language, whether by institution (tanmūn wa-li yidkēb) or by revelation (wa-la tawddūʿ wa-tawdk̇ih). The Arab definition that, with some variants, subsequently became the general one is given by al-
Strafi (d. 368/978) in the Šahr of the Kitab (Ms Cairo, ii, 134): *kullshay* dalla lafzuh 'alma *nafsih* ghayr mubiar min modiyiy aw ghayrh fa-huwa ism (1st part, 7 end), “everything the expression of which indicates a meaning unconnected with a specific time, past or otherwise, is a noun”.

This definition qualifies the preceding one by indicating a *samdan mubassal* “a specific time”, but that is not enough to satisfy Ibn Faris’s objection, (al-Sâhibî, 84, l. 13-15), that al-Zâdîjâdî’s definition of the noun is equally valid for the *harf*. Al-Zamakhşarî (d. 538/1143) omits the qualification mubassal (Mufassal, ed. J. P. Broch, § 2) [see *rīl*], but adds *fi nafsih “in itself”: *al-isam ma’la *nafsih* fi nafsih dalalâtn modiyar-dabn *‘an al-ıbtîrân. Al-Djurjânî (d. 816/1413) (Ta’rîfî, 15) explains simply what is to be understood by this absence of *bithrân*: *al-isam mà *dalla *alma “nafsih* ghayr mubiar bi-ahad al-asmar al-thalîna.

Remarks: the philosopher al-Fârâbî (d. 390/999), in the Šahr Aristotle’s *fi l-‘ibdra* (the Peri Hermeneias) (ed. W. Kutsch and S. Marrow, Beirut 1960), 29, l. 25-26, prescribes, concerning ane *hronou* (translated: *modiyaradu min al-sâmân “deprived of time”), the addition of *bi-dhdtîh wa-bi-shaklih “by itself and its form” if it is necessary because of the fear of modiyîn al-mughdlitûn, “attacks of the *Sophists*”; if not, it should be omitted. But, in the definition of al-Zamakhşarî, *fi nafsih* was introduced in order to separate *ism* from *harf*.

It is, incidentally, strange to note that grammarians such as Abû ‘Ali al-Fârîst (d. 377/987) and Ibn Djinnt (d. 392/1002), who must have been aware of al-Strafi’s Šahr to the Kitâb, adhered, as far as the noun (and the verb) were concerned, to definitions of the type of those of al-Zâdîjâdî’s predecessors: Abû ‘Ali Idrîs (Ms Cairo, ii, 81), 5: Ibn Djinnt, *Luma* (Ms Berlin 646) 2.

The definitions of the noun and verb that became general in the Arab grammarians appear to derive from Greek logic. It has, besides, been adequately shown under *rīl* how unjustified the tense-system of the type of those of al-Zâdîjâdî’s predecessors: Abû ‘Ali Idrîs (Ms Cairo, ii, 81), 5: Ibn Djinnt, *Luma* (Ms Berlin 646) 2.

Because of the great tripartite division referred to above, Arab grammarians included under the *ism* first the noun proper: *ism al-djîns “common noun”, *ism al-sâlam “proper noun” [see *sâlam*], *ism al-ayn “concrete noun”, *ism al-mawd “abstract noun”, then *ism al-fâl “nomen agentis (active participle)” and *ism al-mak “nomen patientis (passive participle)”*. These two are, strictly speaking, *sîfa* [see *sîfa*]; the adjective (*sîfa* musubbaba) is assigned to the *sîfa*; the *sîfa* and its extensions are called *sîfâ*, in its use as a metaph. Then al-mâdhar “infinitive”, and all the nomino-verbal derivatives: *ism al-sâmân wa-l-mâdhân “noun of time and place”, etc. Then the pronouns: the personal pronouns: *al-mudmarî [see *mudmar*], the demonstrative pronoun: *ism al-isghâra, the relative pronoun: *al-ism al-mawdî*, collectively called *al-mudhârât*. Then the numerals, the noun of number: *ism al-‘adad. All these categories will be found in the Tables of the Mufassal referred to above (212-3), with references to the text and a still further devel-

oped nomenclature in Wright’s *Ar. Gr.* 2 (1, 104-10).

The Arab grammarians found an *ism* in the interrogatives: *kyay* “how?”, *ayna “where?”, *kam “how much?”, *matâ “when?”, in *îdâ *idâh (generally conjunctions), in *haythu “where” (Ibn Fâris, *ibid.*; for *kam, Sbawahî, i, 250, l. 13, ed. Paris; for *matâ, Ibn Hîshâm, Muğmî 1-latholic, s.v.)*. Finally, they included in the *asmâ* al-afâl “verbal nouns” expressions that would seem to us to be interjections or exclamatory locutions, or even onomatopoeia, when they perceived in them some verbal action, particularly an imperative sense, see §§ 182-99 of the Mufassal.

Bibliography in the text; in addition: *Dict. of Tech. Terms*, i, 710, l. 24-715, l. 18; the K. al-âmasîl al-bâlîyya fi l-nâhuw of Abu l-Bâkàî *Abd Allâh al-Ukbarî (d. 616/1220) (Ms Cairo, i, 158) contains a discussion of the definition of *ism* (2nd question) and of the etymology (ishkîbî) of *ism* (4th question); in the latter, like the Bayrans, he derived *ism* from *sumuw*, in the former, he attributes to Ibn al-Sarrajî (d. 316/929), a contemporary of al-Zâdîjâdî (d. 310/922), a definition of *ism* so sophisticated that it appears improbable: *huwa kull lasf dalla *alma* nafsih, ghayr mubiar bi-sâmân mubâssal (93 r, lines 4-5) As a matter of fact, in al-Muâsîrî *fi l-nâhuw*, Beirut 135/1965, 2, Ibn al-Sarrajî states that the definition of *ism* of the type of those of al-Zâdîjâdî’s predecessors. (H. Fleisch)

*ISMA*, as a theological term meaning immunity from error and sin, is attributed by Sunnîs to the prophets and by Shi’is also to the imâms. In early Islamic moral failures and errors of Muhammad were freely mentioned, although there was an inconsistent tendency to minimize them. The definition of imam as the divinely appointed and in particular to deny that he had ever participated in the worship of idols. The term and the concept of *ism* do not occur in the Kur’ân or in canonical Sunnî *Hadîth*. They were first used by the Imâmî Shi’â, who at least since the first half of the 2nd/8th century maintained that the imâm as the divinely appointed and guided leader and teacher of the community must be immune (ma’sum) from error and sin. This doctrine has always been a cardinal dogma of Imâsmism. While the early Imâmî theologian Hîshâm b. al-Hakam (d. 179/795-6) restricted this impecabili-

ty to the imâms, holding that prophets might disobey the commands of God and then would be criticized by a revelation, later Imâmî doctrine always ascribed it equally to prophets and imâms. The extent of the immunity was gradually ex-

The views of the tradicionalist scholars of Kumm, affirmed that prophets and imâms, though fully immune from major (kabrib) and minor (saghdib) sins, were liable to inadvertence (sakw), which God might induce in them in order to demonstrate to mankind that they were merely human. His opinion was refuted by Shaykh al-Mufîd (d. 413/1022), who held that prophets and imâms after their vocation were immune from inadvertence and sin, while admitting that they (except for the Prophet Mu-

hammad) might have committed minor, not disgraceful (ghayr mustubhâfa) sins before their vocation. Al-Mufîd’s disciple al-Shârîf al-Murtagâ (d. 436/1044), who wrote a book on the impecabili-

ty of the prophets and imâms, held that they were fully immune both before and after their vocation. This has become the accepted Imâmî doctrine, later expressly including immunity from inadvertence. It is, however, admitted that imâms may chose the less com-
commendable alternative or neglect commendable super-
erogatory acts. 'isma is commonly defined as a kind-
ness (luff) bestowed by God and, as in Sunni doctrine,
is not a natural quality of prophets and imams. It does
cannot incapacitate to commit acts of disobe-
dience and thus does not invalidate the rights of
prophets and imams to reward.

The Ismālī doctrine of the 'isma of imams and
prophets is shared by the Ismā'īliya. The Zaydiya
do not consider 'isma a qualification of the imām,
though some later Zaydi authorities have attributed
it to 'All, al-Hasan and al-Husayn specifically.

Outside Shi'a the 'isma of the prophets was first
and most consistently upheld by the Mu'tazila. Al-
ready al-Nazzām in the late 2nd/8th century taught
the impeccableability of the prophets, and by the time of
al-Ash'ārī immunity from unbelief and from major
sins both before and after the prophetic mission was
considered the unanimous doctrine of the Mu'tazila.
There was some dispute as to whether prophets might
commit minor sins consciously or not. While al-
Nazzām held that the sins of prophets reported in the
Kūrān could arise only from inadvertence or errone-
ous interpretation (tazil) of God's commands, al-Dījābīs maintained that they have must have been com-
mittled knowingly, since unconscious infraction of the
divine law in his view was not sinful. In the classical
discipline since the two al-Dījābīs the extent of the
immunity was defined as including all major sins and
minor sins "causing aversion" (munāffira). This de-
inition resulted from the premise that prophecy
was an act of kindness incumbent on God for the
guidance of mankind and must be protected by Him
from any impediments to its effectiveness. Abū ʿAll
al-Dījabbī (d. 309/920-6) asserted that even minor
actions, if committed by a prophet, must be consid-
ered as causing aversion and admitted only sins by inadver-
tence or erroneous interpretation. Abū Ḥāṣim (d. 321/
933) and the majority of later scholars held that inten-
tional minor sins were not necessarily "causing aver-
sion". The immunity applied equally to the time be-
fore and after the mission, though Abū ʿAll al-Dījabb-
ī was not quite consistent in rejecting major sins before
the mission.

Ash'ārī doctrine on the 'isma of the prophets varied,
generally moving from a negative attitude toward
wider affirmation. Scholars with traditionalist leanings
were more reserved in affirming the sinlessness
of the prophets, since this conflicted with a
literal acceptance of passages in the Kūrān and
Hadīth. The view later ascribed to al-Ashʿari, that
prophets were immune from error and sin after,
but not before, their mission is probably not authen-
tic. It reflects, however, the later common Ashʿari
doctrine, which restricted the immunity to the time
after the mission, admitting both major and minor
sins, though not unbelief, before it. Concerning the
extent of immunity after the mission the views differ-
ed. Abū ʿIṣāḥ al-Iṣākṣiyhī and the later school doctrine.
Abū ʿIṣāḥ al-Iṣākṣiyhī's denial of a
rational basis of the claim of 'isma of the prophets beyond immunity from inten-
tional lying in the transmission of the divine message,
admitting the possibility of errors by inadvertence
or forgetfulness. The latter admission was rejected
by his contemporary Abū ʿIṣāḥ al-Iṣākṣiyhī and
the later school doctrine. Abū ʿIṣāḥ al-Iṣākṣiyhī's denial of a
rational basis of the claim of immunity from sin was
commonly accepted by later doctrine, though major
sins were excluded on the basis of revealed texts
(samāʿ) or consensus. Ibn Fārak (d. 406/1015) held that
prophets may commit minor sins intentionally, but
not major sins. It is thus evident that 'Abd al-Qāhir
al-Baghdādī (d. 429/1037) expresses his wish rather
than the fact in claiming an Ashʿari consensus af-
firming the immunity of prophets from all sins after
their mission. After him al-Dījāwīn (d. 478/1085)
stated as his personal view that prophets commit
minor sins, and al-Dījāwīn's disciple al-Ghazālī affirmed
that prophets commit sins and are obliged to
ask God for forgiveness. Even Fakhr al-Dīn al-
Rāzī (d. 606/1209), who argued at length for the
isma of prophets on rational grounds, admitted unintentional minor sins after, and major sins
before, their mission. Against the Ashʿari school tradi-
tion, full immunity of the prophets was upheld by
the Kādī Ḥyād (d. 544/1149) and al-Subkī (d. 771/
1370), the former expressly including the time be-
fore the mission.

Māturīdī doctrine generally was more positive in
claiming sinlessness for the prophets. Although some
Māturīdī scholars admitted minor sins in prophets,
others, especially those of Samarkand, strictly denied
all sins including "slips" (mallātī). No difference was
made between the time before and after the mission.
The importance given to the doctrine of 'isma is re-
lected by the fact that it is usually included in
Māturīdī creeds in contrast to Ashʿārī and Hanbal
creeds. Under the Sāljuq the charge of imputing
sins both before and after the prophetic mission was
become the standard doctrine of the Imāmīs, with
the isolation of the Imāmīs from the mainstream
of the school's theology.

Particular views on 'isma were developed in Sūfī
circles in connection with their doctrine of mystical
sainthood. Some Sūfis from al-Dījāwīn (d. 298/920) to
Ibn al-ʿArabī (d. 638/1240) have attributed virtually
complete impeccability, far beyond the common
Sunnī doctrine, to Muhammad as the ideal Sūfī saint.

'isma was also often, against some dissent, attribu-
ted by Sunnī, Muʿtazilī, and Shiʿī theologians to
the angels.

ʿAbd al-Ḥamīd, Cairo 1935, 338 f.; al-Kāt
ISMA'IL, the biblical Ishmael, is already mentioned in four places in the Qur'ān which date from before the Hijrā, in a list of holy men of antiquity: in Sūra XIX, 54 f. it is said of him: "He was one who spoke the promise truly, and was a prophet. He enjoined upon his people the prayer and the almsgiving, and was in his Lord's eyes approved"; in Sūra XXXXVIII, 48 he is connected together with Elisha (al-Yasa') and Dhu 'l-Kifās as "one of the good"; in Sūra XXI, 85 f. together with 1drīs and Dhu 'l-Kifā as "one of the patiently enduring and the righteous, whom God caused to enter into his mercy"; in Sūra VI, 86 it is said of Ismā'īl, Elisha (al-Yasa'), Jonas and Lot, that "God gave each one a preference above the worlds". These references to Ismā'īl and others are, in each case, part of a larger context where the question of who is the true son of Abraham is raised.

As a centre of pilgrimage and make it a place of the pure monotheistic faith (Sūra II, 127-9). In so far as Isaac is also named, Ismā'īl is given precedence as Abraham's son (Sūra XIV, 39; II, 132 f.; II, 136 = III, 84; II, 140; IV, 163). In the interpretation of the relevant passages, chronological difficulties indeed arise. Sūra XIV, 35-41, in which Abraham champions the security of the holy territory of Mecca and (verse 39) prays God for having given him Ismā'īl and Isaac in spite of his great age, is usually attributed to the third Meccan period. And in Sūra XXXXVII, which is even attributed to the second Meccan period, the birth of Isaac is first mentioned in verses 112 f., so that it must be assumed that the preceding verses 100-7, which also deal with a son of Abraham and with his (intended) sacrifice, refer to Ismā'īl. Consequently there would already be evidence for the connexion between Ismā'īl and Abraham from the period before the Hijrā in two passages. Edmund Beck, however, who has critically examined the problem, takes Sūra XIV, 39 to be a Medinan interpolation and he supposes that even in the two verses II, 125 and 127, which are no doubt Medinan, the name of Ismā'īl is a later addition. Thus he concludes that Ismā'īl was first connected with Abraham in the Medinan period (Le Muston, lxv (1952), 80-3). Beck does not commit himself concerning Sūra XXXXVII (see above); Richard Bell, however, does consider the section which deals with the sacrifice of Abraham's son (verses 102-7) as a later Medinan addition, and further concludes that verse 101 ("So we felicitated him with a mild-tempered youth") "probably referred to Isaac, but when Ishmael began to assume importance to Mohammed, it was taken as referring to him, and verses 112 and 113 (Annunciation of Isaac) added". However these explanatory attempts by Beck and Bell may now be regarded, Ismā'īl in any case takes a subordinate part in the kūrānic legend concerning the foundation and purification of the cult of the Ka'bah. It is true that he is numbered among the patriarchs who have been given revelations (Sūra II, 136 = III, 84; IV, 163), but the leading part remains reserved for Abraham; for these matters, therefore, see Ismā'īl. Remarkably enough, there is no further hint in the Qur'ān—nor in the brief hint in Sūra XIV, 37—still no reference to the genealogical role which, according to Genesis XVI and XXV (and later also according to Arabic-Islamic tradition), fell to Ismā'īl as a connecting link between the Israelites (Jews) and the Arabs. He is considered only as the son of Abraham, and in Sūra II, 133 is mentioned together with Abraham and Isaac as one of the "Fathers" of Jacob.

The commentaries on the Qur'ān, the "stories of the prophets" (Kisāʾ al-anbāʾiyyāt), and the universal histories give various details concerning the part played by Ismā'īl in the building of the Ka'bah and the introduction of the pilgrimage ceremonies (here Ismā'īl plays the same subordinate role as in the Qur'ān). The story of the sacrifice of Abraham's son also is further elaborated, whereby the question of whether this son is to be identified with Ismā'īl or Isaac remains open. The many divergent accounts from Ismā'īl's early youth and married life are more detailed. The expulsion of Hagar and her child Ismā'īl is described in accordance with Jewish tradition (which for its part goes back to Genesis XXI). According to Islamic tradition, Abraham does not simply send them both into the desert, but accompanies them himself as far as Mecca. There of course, he leaves them to their fate, since he has to go back to his wife Sarah. Hagar, full of pity for the
thirsty child, runs back and forth between the two hills al-Safa and al-Marwa—the origin of the later pilgrimage ceremony of the Sa'ya [q.v.]. Meanwhile, however, the little Isma'il scratches the sand and thus helps the spring of Zamzam to break through. Thereupon the Arab tribe of Djurhum settles in the neighbourhood with the permission of Hagar, and, in the absence of Isma'il, the latter's second wife, is hospitably welcomed by her, and, leaves behind for his son the request, similarly coded, that he should maintain the marriage with her. On a third visit Abraham calls on Isma'il to help him in the building of the Ka'ba (see above). After his death Isma'il is buried near his mother Hagar in al-Hidrj inside the Haram.

By the post-kur'ânic tradition Isma'il becomes linked with Mecca and the Arab world even more closely than by the Kur'ân. He is said to have learned Arabic (from the Djurhum). In the genealogical trees which the Arab genealogists have drawn up, he is counted as the ancestor of the northern Arab tribes in Rabî' II 1205/De- resistance, stormed Isma'il in Rabî' II i205/De-

**ISMA'IL** (Isma'il), an Ottoman fortress town situated in the Budjak [q.v.] region of Bessarabia, on the left bank of the Kilia river of the Danube. Ewliyã Celebi states that a certain Isma'il lived in this area under Ottoman domination in 889/1484 at the time when Sultan Bâyazid II took Kilia and Ak-Kermân from Moldavia. Evidence dating from 977/1568-9 (cf. Uzançcıgil, IV, 526, note 1) indicates that a small fort (palanka) was built at Isma'il in that year, craftsmen from Wallachia and Moldavia being summoned to share in the work of construction. In 1003/1595, during the long war of 1001/1593-1015/1606 between the Ottoman Empire and Austria, Isma'il fell to a mixed force of Transylvanians, Moldoviots and Wallachians under the command of "Andrea Barzai" (cf. Hurmuzâki, III/ii, 95). A few years later Georgius Dousas was to describe the town as noted for its trade in fish—Smieli uberrima est optimorum piscium captura, atque eo vilitas. Isma'il suffered from Cossack raids in 1010-1011/1620 and in 1033-1034/1624. Ewliyã Celebi, recounting his travels in the year 1067/1657, gives some details of interest about Isma'il. He notes that it had a superintendent of customs (gêmûrik emîni), but no fortress commandant, since there was no fort there (bafe olmâdghîndân dinârî yolûd). The town contained two thousand houses (khânê), with a population of Muslims (located in three distinct areas—ûçîlâm makhâlesîs), Greeks, Armenians and Jews. Tatars inhabited the regions adjacent to the town. Isma'il conducted a flourishing trade in such products as butter, cheese, salt from Wallachia (çîfak ûzv), grain, sugar, salt, coffee, grain, tobacco, wines, silk and lead, etc. A thick thousand waggon loads of fish pickled in brine (balkal sahalamargas) went each year, through Isma'il, to Poland and to the territories of Moscow. State-owned fisheries existed along the banks of the Danube. Isma'il had also a market where white slaves of either sex might be found for sale. A little more than a hundred years later de Tott, passing through the Budjak in 1821-1825, observed that Isma'il was an entrepôt pour la traite des grains par le Danube and also a centre for the manufacture of châgrins de Turquie, i.e., of shagreen. Isma'il, standing at the junction of routes from Galatz, Khotin (Choctzim), Bender and Kilia, became a fortress of importance during the 11th/17th and 12th/18th centuries as a result of the confrontation between Russia and the Ottoman Empire in the lands bordering the Black Sea. Russian troops under Ismail (its fortifications now demolished), was a stronghold designed to function as a base controlling large forces. The Russians, under the command of Suvorov and in the face of a desperate resistance, stormed Isma'il in Rabî' II 1205/Decem...
Ismā'īl was related, through both his mother and his grandmother, to the Ak Koyunlu rulers, the Safavid Ak Koyunlu alliance had broken down during the lifetime of his father Haydar [128], and Ismā'īl, while still an infant, was arrested with his elder brothers ʿAli and Ibrāhīm, and imprisoned for 4½ years in the fortress of Iṣṭaḥḵr in Fārs (end of Rabīʿ II 894/March 1490—end of Shawwāl 898/August 1493). Civil war broke out between rival Ak Koyunlu princes, and one of them, Rustam, made use of Safavid support to defeat one of his rivals (Shawwāl 898/August 1493). In 899/1494 Rustam, realizing that a powerful popular support for the Safawids constituted a threat to his own position, had Ṣalāḥ killed. Ismā'īl fled to Ardabil and thence to Gīlān.

For nearly five years (899/1494-905/1499), Ismā'īl remained in hiding at Lāhīdǰān, where he had been given sanctuary by the local ruler. During this time he maintained close contact with his murīds in Rūm, Kārākūn, ʿAdhārbaḏyān, and elsewhere. Since these murīds, also known as kizilbāš [q.v.], were mainly Turcoman tribesmen, Ismā'īl in order to make the Safavid daʿwa more effective, addressed them simple verses in their own Turkish dialect, using the tokhallas of Khatāʾī [see below]. In 905/1499 Ismā'īl emerged from Gīlān to make his bid for power, and the following year some 7,000 Sūfīs of the Safavid ārbaša assembled at Erīrīndān. After a campaign in Shīrūn in which Ismā'īl avenged the deaths of his father and grandfather (see Ṣawṟūn), he defeated a large Ak Koyunlu army under Alwand at the decisive battle of Sharār. This victory gave Ismā'īl control of ʿAdhārbaḏyān, and in 907/1501 he was crowned at Tabrīz.

Ismā'īl spent the next decade extending the Safavid empire: Fārs and Ṣurkh-čād Ādījam were conquered in 908-9/1503; Māzandarān and Gūrgān, and ʿYāzd, in 909/1504; Dīl, in 911/1507; Bagdād and Ṣurkh-čād ʿArab in 914/1510 (the local rulers of Khūzestān, Luristān and Kurdistān acknowledged his suzerainty); Shīrūn in 915/1509-10. Finally, on 30 Ṣaḥāb 916/December 1510, Ismā'īl routed the Shīrāz Ūzbeks in a great battle at Marv. A few days later, Ismā'īl entered Harāt, and proceeded to consolidate his conquest of Khūzestān.

The following year, 917/1511, Safavid troops penetrated as far as ʿAmār-i Shāhli, and in support of the Timūrid prince Būḥar, who was hoping, with their aid, to recover his Transoxanian dominions. Any idea Ismā'īl may have entertained of annexing Transoxania to the Safavid empire was dashed in 918/1512, when a powerful Ūzbek army swept the Safavid expeditionary force back across the Oxus. This was followed by an uneasy truce with the Ūzbeks which lasted some eight years, but Ismā'īl proved himself unable to arrive at a permanent solution to the problem of the defence of the north-east frontier.

By 916/1510, therefore, the whole of Persia was in Ismā'īl's hands, but the establishment of a militant Shiʿite state on the Ottoman border constituted a challenge which Sultan Selīm could not afford to ignore, and in 920/1514 he invaded Persia and inflicted a crushing, but not decisive, defeat on Ismā'īl at the battle of Cāldīrān [q.v.]. His aura of invincibility dispelled, Ismā'īl never again led his troops in battle. During the last ten years of his life, he took a less and less active part in political affairs, and gave his viziers virtually a free hand in administrative matters.

After his defeat at Cāldīrān, Ismā'īl became more interested in exploring the possibilities of an alliance with European powers, in order to attack the Ottomans on two fronts. In 921-2/1516 he received an
envoy from Louis II, King of Hungary, in the person of a Maronite monk named Fr. Peter, and an ambassador from Charles V of Germany also reached him about the same time. In Şahwâl 920/August-September 1523, Ismâ’îl sent a letter to Charles, expressing his astonishment that the Christian powers, instead of devoting all their energies to fighting the Turks, were squabbling among themselves (details from unpublished material made available to me through the courtesy of Dr. W. Gerd). The Şafawids thus carried on the series of diplomatic exchanges with the West, which had begun in Ak Koyunlu times, and which had as their chimerical objective the organizing of joint military operations against the common foe, the Ottomans.

Ismâ’îl’s achievements have been overshadowed, perhaps unfairly, by those of his illustrious descendant, ‘Abbâs I [q.v.]. Ismâ’îl possessed the charismatic appeal, the powers of leadership, and the personal value, to bring to a successful conclusion more than a century of active revolutionary endeavour. In addition, he displayed a high degree of political acumen and statescraft. On his accession, he was faced by complex problems of great urgency. There was the problem of how to incorporate the Şüfi organization of the Şafawid fârâka, of which Ismâ’îl was the mûrûbi, into the newly established Şafawid state, of which he was the pâdişâh. There was the problem of how to reconcile the “men of the sword”, the Turcoman military élite which had brought him to power, with the “men of the pen”, the Persian bureaucrats on whom he depended for the political control of the religious institution, in order to prevent the ‘ulamâ’ from assuming a dominant position in the state (the undue growth of the power of the mudjâhidûs was later to become one of the principal causes of Şafawid decline). The fact that Ismâ’îl’s policies, original and ingenious though they frequently were, ultimately failed to solve these problems, indicates not so much the inadequacy of his policies as the insobrieties of his death. On his death in 930/1524, Şah Ismâ’îl was buried in the Şafawid family mausolue at Ardâbîl. He had four sons: Tahmâsp [q.v.], who succeeded him; Sâm; Alikâs [q.v.]; and Bahârmâ: and five daughters.

2. His Poetry: The founder of the Şafawid state was also a poet who wrote under the pseudonym (tâkhâlîs) of Khâtâtî. His poems, with few exceptions, are in the Turkish language of Amediyân-, or Khatâbî (a term used in the indigenous sources, as distinct from Çağhatâtî and Rûmî). Khâtâtî’s poetical output consists of: (a) The Dîwân, the oldest and most authentic Ms. of which was completed in 948/1541, eighteen years after Şâh Ismâ’îl’s death. This Dîwân contains 254 bâsida-ghâzâls, three mathnâws, one murâbbâ’ and one musâdas. The first twenty-four religious and didactic poems are, however, not in alphabetical order. Some of the poems of this Ms. contain outspoken utterances such as “I am the absolute Truth”, and “I am God’s eye (or God himself)”, etc. These poems and a number of technically imperfect poems together with a poem in syllabic metre are omitted in the later Mss., which have apparently undergone a process of “expurgation”. The great part of the content of Khâtâtî’s Dîwân consists of the lyrical poems. (b) The Dâh-nâmah, which was composed in 911/1506 in the mathnâwî form, and in the katastî metre. The subject of this poem is the exchange of ten letters between the lover and the beloved, which ultimately leads to their union. It includes a number of ghâzâls in the same metre. This Dâh-nâmâ belongs to a literary genre which was very popular in the Persian and Turkish literatures of the 8th/14th and 9th/15th centuries. (See T. Gandjel; The Genesis and Definition of a literary composition: The Dâh-nâmâ (“Ten love-letters”), in Der Islam, xlvi (1971), 59-66). A collection of poems in syllabic metre, which bear the tâkhâlîs Khâtâtî, and exist, not in the Mss. of the Dîwân, but in various miscellaneous copies, can with confidence be ascribed to the poet of ‘Alawi-Bektâşî circles, in which the royal poet was venerated (see T. Gandjel; Pseudo-Khâtâtî, in Iran and Islam, Edinburgh 1971, 263-266). The songs called xaxtâ = catâ in praise of Şâh Ismâ’îl and Şâh Tahmâsp, which Michele Membre mentions (Relazione di Persia (1542), Naples 1969), 48), were most probably the syllabic poems bearing the pseudonym of Khâtâtî. Khâtâtî was greatly influenced in his poems by the work of the Hurfî poet, Nestîmî [q.v.]. Khâtâtî’s poetry, besides its literary merit, which is far from negligible, is important, in that it contains data concerning the true nature of early Şafawid Shi‘ism. Although the poets who composed Turkish poems in Şafawid Persia were for the most part influenced by Nawa’î and Fudûlî, there is evidence of a certain influence by Khâtâtî on some poets of this period, such as Amârî, Zafar and Sâdîb. But it was in ‘Alawi circles that the poems and the person of Khâtâtî exercised a lasting influence. His poems were recited for centuries in ‘Alawi-Bektâşî circles of Anatolia. In his native Ahammerdîn, the Ahl-i Hak, who incorporated him in the syncretic pantheon of their sect, considered him to be the pîr of Turkestan (i.e., Ahammerdîn and the neighbouring Turkish-speaking lands), in whose person God spoke in Turkish Khâtâtî’s türdî dedi, and finally the adepts of the extremist Shabak sect in Irâk included the poems...
ISMA‘IL I -- ISMA‘IL II

ascribed to Kha^a'I in their sacred book, the Buyruff.

ISMA‘IL II, born 940/1533-4 (this is conjectured from the available evidence; no chronicle gives his date of birth), died 13 Râmân 985/24 November 1576. In 964/1556, he was appointed governor of Khurasan. After only a few months at Harât, Ismaîl was suddenly arrested (Safar 964/December 1556), and taken to the fortress of Kâhkâhî in A’dhârbdjûdân, where he remained a prisoner for nearly twenty years. Various reasons are put forward to account for Tahnâmîs action. Some sources point out that Ismaîl’s arrest followed closely upon the signature of the Treaty of Amasya (962/1555), he was appointed governor of Khorûsân.

After only a few months at Harât, Ismaîl was suddenly arrested (Safar 964/December 1556), and taken to the fortress of Kâhkâhî in A’dhârbdjûdân, where he remained a prisoner for nearly twenty years. Various reasons are put forward to account for Tahnâmîs action. Some sources point out that Ismaîl’s arrest followed closely upon the signature of the Treaty of Amasya (962/1555), he was appointed governor of Khorûsân.

When the unsettled conditions in Khurasan during the years between the fall of the Tâhirîs and the final establishment there of Ismaîl and four other Safawî princes perished in this way. When Ismaîl began to put to death officers whose only crime was that of having held important positions under his father, the kisîlîbâd regretted that they had placed him on the throne, and conspired to assassinate him. Ismaîl is alleged to have been a less than enthusiastic Twelver Shi‘îte. This gave the kisîlîbâd both an added incentive to remove him, and also a plausible excuse for their action. Ismaîl’s addiction to narcotics made it easy for the kisîlîbâd both to carry out the murder and to give it the air of death by misadventure. With the connivance of Ismaîl’s sister, Pârî Kân Kânîn, the conspirators placed poison in an ecutary containing opium, which was consumed by Ismaîl and one of his boon-companions. Ismaîl was succeeded by his elder brother Muhammad Khudâbânda [q.v.].

ISMA‘IL, MAWLÂY [see ‘Alawîs and mawlây Ismaîl].

ISMA‘IL b. ‘ABBÂD [see ibn ‘Abbâd].

ISMA‘IL b. AHMAD, Abû ‘Alîshî, called al-‘Alîr al-‘Addâ or al-‘Addî, the first member of the Sâmânî family effectively to rule all Transoxania and Farghânâ as an independent sovereign. Born in 234/849, he spent 20 years as governor of Bûhkâh on behalf of his brother Naṣr, who himself resided at Samarkand (260/874-279/892). The unsettled conditions in Khorûsân during the years between the fall of the Tâhirîs and the final establishment there of Ismaîl and one of his boon-companions, Ismaîl was succeeded by his elder brother Muhammad Khudâbânda [q.v.].

When Naṣr died in 279/892, Ismaîl became master of all Transoxania, transferring the capital to Bûhkâh, where it was to remain till the end of the dynasty, and securing recognition from the ‘Abbâsî Caliph. In the following year he led an expedition into the Turkish steppes against the camp of the Kârîk Kâghân at Talas (modern Djambul), capturing an immense booty of slaves and beasts and converting the principal church of Talas into a mosque; he also subdued the local transoxanian dynasty of rulers of Sîrjûsunâ in the Syr Darya valley. In view of the claim of the Safârîs (q.v.) to be successors in the east of the Tâhirîs, ‘Amr b. al-Lâyi’s attempt to assert his suzerainty over Kînvarz and Transoxania was predictable. Safârîs might in Persia was such that in 285/898 the caliph al-Ma’tâqîd was forced to issue a decree deposing Ismaîl and awarding an investiture diploma to ‘Amr for Transoxania and Bûhkâh. ‘Amr marched
northwards to take possession of his new territories, and summoned Isma'il, the Abu Da'udids of Tabarištan and the Farighnids of Gūzgān to allegiance. There was considerable fighting south of the Oxus between the Sāmānids and Šafārīds, until in 287/900 'Amr was defeated near Balkh and captured. Although Isma'il was technically in rebellion against the 'Abbasids, the caliph was overjoyed at the removal of so dangerous a rival as 'Amr. Isma'il's victory gave him access to the caliph, to whom he addressed a letter asking, to judge from the notice in the Aḥdant, Isma'il the Abu Da'udids of Tabarištan, and an offensive launched against Tabarištan itself. By 287/902 the Sāmānids held territory as far west as Rayy and Kāzwin, although Isma'il's successors were unable to hold this in face of the resurgence of Daylam peoples. Isma'il died in 295/907. The historical and anecdotal sources unanimously praise him for his moderation and justice; influenced by his victory over the Šafārīds, they commend his faithfulness to the Caliphs and his Sunnī piety. His tomb is still shown in Būkhara (cf. Schroeder in Survey of Persia, iii, 946-9), but the mausoleum seems in fact to belong to the later Sāmānī period.

**Biography:** See the long section on Isma'il in Narshakhlī, tr. R. N. Frye, 77-94, to be supplemented by such historical sources as Tābarī and Ibn al-Athīr; amongst adab works, those of Nīʿām al-Mulk and 'Awfī; Barthold, Turkestan, 222-6; R. N. Frye, Buhkara, the medieval achievement, Norman, Okla., 1965, 39-49.

**ISMA'IL b. BULBUL, Abu'l-Šaqr, vizier of the 'Abbāsīd Caliph al-Mu'tamīd [g.]]. Of Persian or Mesopotamian origin, he was born in 230/844-5 and claimed to belong to the Arab tribe of the Ṣhaybān. Abu'l-Šaqr, who had been a secretary and had been in charge of the diwan of the Royal Domains, appeared on the political scene in 265/878, when the regent al-Muwaffak had appointed him vizier, a post which he had to abandon shortly afterwards only to regain it at the end of the year. But Isma'il played a minor role while the regent had Ṣādib b. Makhład [g.]] as his personal secretary, and it was only from the year 272/885-6 that he really exercised the functions of vizier. Though not responsible for military affairs, he ran the administration and was in charge of the appointments to the various state offices. It was then that he appointed the Banu 'I-Furat brothers to the financial offices. These brothers, whose Shī'a convictions he shared, helped him in his attempt to face the difficulties that beset him at the time. But he came up against the hostility of al-Muwaffak's son, the future al-Mu'tadīd, whom his father had prevented from going off on an expedition against the Tūlūnids and whom Isma'il himself attempted to eliminate from public affairs first during his absence and then during the regent's illness. After the death of the latter, in Ṣafar 278/May 892, al-Mu'tadīd, who had become regent, hastened to arrest Isma'il who died shortly afterwards, a victim of his attachment to the Caliph, but also of the support he had lent the Shī'īs and perhaps of his unorthodox opinions.

**Biography:** D. Sourdel, Viziers, index; S. Boustanly, Ibn ar-Rümî, Beirut, 1967, 157-66. (D. Sourdel)

**ISMA'IL b. AL-KĀSIM [see Abu 'l-Ṭāṭiyah].**

**ISMA'IL b. NŪH, Abu Ibrāhīm al-Muntashir, the last of the Sāmānīds of Ta'usoxania and Khurāsān. When in 389/999 the Karākhānīds' Ilīg Khan Naqr occupied the Sāmānīd capital Būkhārā, Isma'il and other members of the family were carried off to Uzgend. He contrived, however, to escape to Khwarazm, and for the next four years kept up a series of attacks on the Ghaznavids in northern Khurāsān and the Karākhānīds in Būkhārā. In 393/999 he obtained the help of the Oghuz, traditional allies of the Sāmānīds, and according to Gardizi, it was at this point that the leader of the Sādīqūs became a Muslim. Isma'il's attempts to restore his dynasty's power all ended in failure; he took refuge in the Ķara Kūn desert, where he was killed in Rabī'I 391 or Rabī'I 393/Dec.-Jan. 1004-5 or Jan.-Feb. 1005 by a group of Arabs of the Banī ʿIdā. According to 'Awfī, Isma'il was the most gifted of his dynasty in regard to poetry and its transmission, and his short-lived courts at Būkhārā attracted many literary figures.

**ISMA'IL b. SEBÜKTIGIN, Ghaznavīd amīr, third son of the founder of the Ghaznavid empire and last of the family to recognize the suzerainty of the Sāmānīds. When Sebüktigin died in Sha'ban 387/August 997, he left the provinces of Ghazna and Balkh to Isma'il, and command of the army in Khurāsān to his eldest son Māḥmūd; this allocation of Ghazna to Isma'il was probably influenced by the fact that he was Sebüktigin's son by a daughter of Alpītigin [see Alp-Takîn], the original commander of the Turks in Ghazna. Māḥmūd refused to accept these arrangements, and demanded recognition as supreme overlord in the Ghaznavīd dominions. He obtained the help of his brother Naṣr, governor of Bust, and of his uncle Buγhraçuq, governor of Harāt, and in a battle outside Ghazna defeated Isma'il (Rabī'I 388/March 998). Thus after a reign of only seven months, Isma'il was deposed and imprisoned for the rest of his life in Gūzgān.

**ISMA'IL b. YASĀR al-Nisâʾī, Median poet, who died at a very advanced age some years before the end of the Umayyad dynasty (132/750). The descendant of an Āḏharbāyjānī prisoner, he was a mawād of the Taʾym b. Murra of Kurayḥ and it is said that he owed his niṣāb to the fact that his father prepared meals—or sold carpets—for weddings, but this interpretation should be treated with caution. At Medina, where he lived, he had become a supporter of the Zubayrids, but his friendly relations with Urwa b. al-Zubayr [g.]] (in whose company he went to the court of 'Abd al-Malik b. Marwān after the fall of 'Abd allāh b. al-Zubayr (73/692)) gained him access to the caliph, to whom he addressed a panegyric; in spite of his secret hatred of the Marwānids, he later wrote in praise of several Umayyad caliphs and princes, up to al-Walid b. Yazid (135/743). To judge from the notice in the Aḥdant, Isma'il...
b. Yasar's poetical work contained hardly any satires but consisted of panegyrics, *muhahhayat* (notably of his brother Muhammad, and of a son of 'Uwais b. al-Zubayr) and *ghasals*, which were set to music. However, the most striking feature of his poetry seems to be a clearly expressed desire to disparage the Arabs and to glorify the 'Adjam; one verse refers to the *wa'd* of new-born girls, others to the poet's own illustrious origin; it is said that he was even bold enough to recite before Highâm b. 'Abd al-Malik, at al-Rusafa, a poem in which he omitted to praise the caliph but held forth at length on his own glorious ancestors; he was punished for this audacity by being thrown fully-clothed into a pond and then banished to the Hidjaz. In this respect, Isma'il b. Yasar al-Nisa'i may be considered as one of the first *Shu'ubis*; his son Ibrâhim followed him in this, according to the *Agâni*, which however devotes to him only a few lines. His brothers Muhammad and Musâ, known as *Shahawat*, were also poets [see *MUSA SHAHAWAT*].

[Ch. Pellat]

**(ISMA'IL RUSUQ B. AL-DIN ISMA'IL B. ÂHMAD AL- ANKARAWI, (710-15/1613-2), a commentator of the *Mathnawi* of Djâlîl al-Din Rûmi. His date of birth is unknown, but it is known that he was born in Istanbul, received a good education, was active in trade and entered the Khalwatiyya order of dervishes (cf. *Sharh-i Mathnawi*, i, 11, introduction). Having contracted an eye disease, Isma'il went to Konya where he became a follower of the Mawlawî *Shaykh* Bostân Celebi (d. 1400/1630), who named him *Khâlija*. Isma'il then went to Istanbul, where he became *Shaykh* of the Mawlawî-khâne (Mevlevi dervish house) of Galata, a position which he kept until his death. He lies buried in the *turba* in the courtyard of his Mawlawî-khâne.

His main works are:

1. *Fâtih al-abâyî*, a commentary on the first 18 chapters of the *Mathnawi*, and of certain difficult terms.
2. *Diwâni* al-Âdâmi, a commentary on the *kurâ*ic verses, *hadîths* and Arabic verses in the *Mathnawi*.
3. *Sharh-i Mathnawi*, written after the other two preceding works. This commentary, on which Isma'il's fame rests, and which until recent times was the most popular work explaining the *Mathnawi*, is largely inspired by the ideas of Ibn al-'Arabi (d. 638/1240). It dwells on the mystical rather than the grammatical significance of Rûmi's couplets. It was, nonetheless, criticized by the Mawlawîs because it included a commentary on an apocryphal seventh volume of the *Mathnawi* (see A. Gölpinarlı, *Mevlânâ’dan sonra Mevlevih*, Istanbul 1953, 143). Isma'il's seven-volume commentary was printed in Istanbul in 1289/1872-3. It was also translated into Arabic, in a somewhat abridged form, under the title *al-Minchâqi al-kawi sharh al-Mathnawi*, by Djiangî Yusuf Dede of Tripoli (d. 1680), and published in Cairo in 1289/1872-3. Isma'il's work also forms the basis of R. A. Nicholson's *Commentary on the Mathnawi of Jalalîn din Rûmi*, London 1937. It was finally translated into Persian by Dr. 'Isam Sattîr-zâde (Sharh-i Kabir-i Ahlkarawi dar Mathnawi-yi Rûmî, Vol. i, Tehran 1348 solar).

In addition to these commentaries, Isma'il composed independent treatises for full list see M. Tahir and Âydam Hilmi, op. and loc. cit., the best known being:

1. *Mishâd al-balâgâha wa mishâh al-jašâda*, written in Turkish, but based on Arabic and Persian manuals of rhetoric. It was printed in Istanbul in 1284/1867-8.
2. *Minnâdî al-furqâr*, an explanation of *ŠIFI* terminology, based largely on the *Manâsîl al-saârîn* of 'Abd Allâh Anşârî (d. 481/1088-9). It was published in Istanbul in 1286/1869-70.
3. *Hududiyat al-sâmâ*, a brief treatise in defence of the *sâmâ* dance of the Mawlawî Whirling Dervishes. This has been published both separately and also together with the preceding work.

Finally, Isma'il's poetry was collected in a *Dîvân* (see catalogue of *Dîvân*). He himself was the subject of a eulogic *kaşîda* by the poet *Shawaiq* al-Ghâlibi, a proof of the wide respect in which he was held by his religious and mystical knowledge (see Ahmad Hilmi, op. cit., 73-6).

*Biography:* In addition to the works cited, *Sâhib Dede*, *Saifnâ-i Hafîsnâ-i Mawlawiyân*, Cairo, 1283/1666-7, ii, 37-44, which corresponds to *Sharh-i Mathnawi*, i, 1-11, introduction; *Esrâr Dede*, *Tadhkira-i Shu’ârâ-i Mawlawiyân*, Ist. Univ. Lib., TY 80, 125-7; *A‘lî Anwar, Samâhâna-i-Adâb, Istanbul 1309/1891-2, 80-83. (TAHŞIN YAZICI)

**ISMA'IL 'ÂŞIM EFENDI** [see ČELEBÎ-ZADE].

**ISMA'IL GASPRAŃSKI** [see GASPRAŁI].

**ISMA'IL GHA'LIB**, (1846-1895), noted Turkish historian and numismatist. Son of the grand vizier Ibrâhim Edhem Paşa [q.v.], brother of Hamdî Bey [see 'ÛTHMÂN HAMDÎ], director of the Imperial Museum, and of the historian Khâliî Edhem [see EDHEM], he was born in Istanbul, entered government service at an early age, became a member of the Council of State and in 1894 was appointed a special assistant to the governor of Crete. Taken seriously ill there, he returned to Istanbul in 1895 and died the following year. His grave is in the cemetery of the Iskele Dîâmîa in Usküdar. Isma'il Ghâlib's last reputation as a scholar rests on his accomplishments in the field of Islamic numismatics. During and after Hamdî Bey's administration he was responsible for putting in order and expanding the museum's great collection of Islamic coins. His private collection was bought after his death by the Imperial Mint. His main works are:

Bibliography: J. H. Mordtmann in El., s.v. Ghalib (Turkish translation in İ. A., s.v. Gahib); Ibrahim Alsedin Gönül, Seçme Kitâbâlar Adamlar Ansiklopedisi (Istanbul 1933-1935). (G. C. Miles) ISMA'IL HAKKI 'ALİŞAİN (also 'Alisya'n-ı zade Ismail Hakki, in modern Turkish Ismail Hakki Eldem), 1871-1944, Turkish writer and diplomat. Educated in the Imperial School of Political Science (Mülkiye), he joined the Ministry of Foreign Affairs and served as director of Consular Service and as consul in Marseilles, Zurich and Munich. Soon after his retirement in 1923, he joined the staff of 'Abd Allah Djezdet's Litttith and taught at the University of Bursa. He retired from the Ministry in 1927 and worked as a journalist and literary critic. His most important works include a series of biographies of Turkish poets of the 19th century, and a translation of Charles Baudelaire's Les Fleurs du mal, Elem čığıleri (Istanbul 1927), which made Baudelaire's poetry popular in Turkey.

ISMAİL HAKKI, MANASTIRLI [see Supplement].

ISMAİL PASHA, khedive of Egypt, 1863-79, second son of Ibrahim Pasha [q.v.] and grandson of Muhammad 'Ali [q.v.], was born in Cairo on 31 December 1830. He received his early education in the private palace school founded by his grandfather for his family, where he studied Arabic, Persian and Turkish. At fourteen, he spent some time in Vienna, where he was sent for treatment of an eye complaint. Two years later, in 1846, he was sent to Paris to join one of the Egyptian educational missions under the preceptorship of the Armenian Istifân Bey. There he studied French, some of the modern sciences and certain aspects of engineering. He returned to Egypt in 1848.

Upon the death of Ibrahim Pasha in 1848, Ismail's cousin, 'Abbas Hilmi I [q.v.] (son of Tûsûn Pasha) succeeded to the pashalik. After the death of his grandfather, Muhammad 'Ali, the following year, 'Abbas I reportedly distrusts his uncle 'Abd Pasha and his cousins, with all of whom he disputed the disposition of Muhammad 'Ali's inheritance. Consequently, Ismail, along with other princes of the House, went to live for a time in Istanbul and to solicit the assistance of the sultan against 'Abbas I. Sultan 'Abd al-Madjid appointed Ismail a member of the State Judicial Council. A few years later, upon the accession of his uncle 'Abd Pasha to the vice-royalty in 1854, Ismail returned to Egypt, and was appointed president of the State Judicial Council.

The following year (1855), he was entrusted with a mission to the court of Napoleon III in Paris in connection with Sa'id Pasha's policy of seeking greater independence from the Porte, for this purpose taking advantage of Egypt's participation in the Crimean War (1854-6). He also headed another diplomatic mission on behalf of Sa'id Pasha to the Vatican. In 1861, Sa'id appointed him sirdar (commander in chief) of the army in the Cretan uprising of 1866 and Ismail's financial extravagance over the opening of the Suez Canal, as well as his intrigues with foreign powers, led the sultan to issue a firman on 29 November 1869 practically rescinding Ismail's gains from that of 1867. However, Ismail's visit to Istanbul and lavish bribery of Turkish officials secured him two more firmans: one of 10 September 1872, abrogating and superseding that of 1869, restored to him the right to borrow from and raise loans in Europe; another of 8 June 1873 ratified and recognized its conditions.

At home and in Europe Ismail affected the trappings of a modern ruler. The participation of Egypt in the Paris Exhibition of 1867 was followed by the gala opening of the Suez Canal two years later. Despite the fact that the American Civil War (1861-5) had produced a great boom in the export of Egyptian cotton, Ismail's pursuit of an African empire involved expensive military campaigns in the Sudan, Ethiopia and Uganda. In the meantime his expensive extraction of firmans from the sultan coincided with the decline of French influence in Egypt after the fall of Napoleon III in 1871. Ismail began to look towards England for financial and other assistance.

Added to these ventures were the vicissitudes of his domestic policies. Ismail reorganized the army and navy as well as army education. He also built new schools and allowed more Europeans to found their own in the country; subsidized newspapers and journals; expanded and improved the government press at Bulûk [q.v.]. He founded a national library (later, Dar al-Kutub), a geographical society and a museum under the direction of the French archaeologist Mariette Pasha. He signed a convention outlawing the slave trade in his dominions, and organized the first state postal service in Egypt. His organization of the country into fourteen provinces, or districts, became the basis of the administration of Egypt for the next one hundred years.

During Ismail's reign the country's exports doubled complex and hazardous relations with ambitious European powers (Britain and France for example); a risky confrontation with the Ottoman sultan of the country; and a huge—and in the end ruinous—financial outlay. Domestically, this policy of vast, radical and rapid Europeanization involved grave dangers to the ruler, because it sowed the seeds of economic, social and cultural dilocation. This policy, directed against the Ottoman sultan, was dependent on European powers for money and political support and thus led inevitably to foreign intervention in the affairs of Egypt and eventually to its occupation by British forces. These consequences, in turn, aroused the resentment and opposition of the Egyptians to and their own rulers, who were associated with the coming of European control, that is, with the forfeiture of the autonomy Egypt enjoyed before 1875.

In seeking to achieve the first objective of his policy, that of greater independence, Ismail purchased from the sultan the firman of 27 May 1866, by which the order of succession was changed to one of primogeniture in his own line. He also secured the right to increase the size of his army, coin his own money and confer titles. Another firman of 8 June 1867 granted him the title of khedive, autonomy in the conduct of his internal and financial affairs, the authority to conclude treaties with other sovereign states regarding customs, ports, trade transit and the regulation of foreign community affairs. A brief interlude of strained relations with the Porte, arising out of the Egyptian involvement in the Cretan uprising of 1866 and Ismail's financial extravagance over the opening of the Suez Canal, as well as his intrigues with foreign powers, led the sultan to issue a firman on 29 November 1869 practically rescinding Ismail's gains from that of 1867. However, Ismail's visit to Istanbul and lavish bribery of Turkish officials secured him two more firmans: one of 10 September 1872, abrogating and superseding that of 1869, restored to him the right to borrow from and raise loans in Europe; another of 8 June 1873 ratified and recognized its conditions.

By the time Ismail became viceroy of Egypt on 18 January 1863, he had thus had relatively wide experience in the administrative, diplomatic and military affairs of the country. Moreover he had firsthand experience of Europe and of the politics and administration of the Porte in Istanbul.

In contrast to the relatively unimaginative and meagre rule of his two predecessors, 'Abbas Hilmi I (1848-54) and Sa'id Pasha (1854-63), Ismail's reign brought Egypt material prosperity, and economic, social and cultural advancement. But also brought financial bankruptcy and domestic and international difficulties. As ambitious as his illustrious grandfather, the founder of the dynasty, yet operating in changed circumstances and without his grandfather's military resources or force of personality and character, Ismail attempted to accomplish too many things too quickly. His policy, disastrous though it turned out to be for himself and Egypt, had three major objectives. One of these was to secure greater autonomy, and ultimately complete independence, for Egypt from the Ottoman sultan. The second was to accelerate the commercial, military and cultural modernization of the country. The third was to acquire an African empire. All three objectives entailed
in a decade, and the annual revenue of the state rose from £5,000,000 in 1864 to £145,000,000 in 1875. The telegraph and railway networks were extended in Egypt and the Sudan. The town of Isma'iliyya was built, and the new major irrigation canals of Ibbrāhimiyya in Upper Egypt and Isma'iliyya between Suez and Cairo were constructed. Isma'il developed further the sugar refining and textile industries. Moreover, the municipal edification of Cairo and other major towns attracted foreign investment and commerce, while some Egyptian companies and banks were also founded.

By 1870, however, Isma'il was in great financial difficulties. At home, he tried to raise money through the notorious Mūkahala Law of 1871, by which the government invited landowners to pay six times the annual land tax in advance in return for a perpetual reduction of one half of the tax. His borrowing in Europe had raised the Egyptian public debt to nearly £90,000,000. In 1875, he was forced to sell his 176,602 shares in the Suez Canal Company to the British government for an immediate cash payment of £4,000,000.

Isma'il's financial difficulties led to the setting up of a European Control Commission over Egyptian finances, the institution in 1876 of a Caisse de la Dette Publique with representatives from European credit states. The previous Mixed Tribunals, empowered to adjudicate disputes between Egyptians and foreigners, as well as between foreigners resident in Egypt, were established, further diluting Egyptian autonomy and eroding the authority of the khedive and his government.

Inevitably, the financial crisis of the years 1875-9 had repercussions within Egypt, and particularly in the relations between Isma'il and his ministers, landed notables, religious leaders and army officers. Attempts to associate all of these with his policy of independence and Europeanization began with his experiments in representative institutions. A Consultative Assembly of Deputies was instituted in 1866. A dilated and weak form of cabinet government was tried in 1876-9, shortly before Isma'il's deposition, by making the khedive's government responsible to the Assembly. But all of these measures were of no avail in salvaging the deteriorating financial condition of the country, or in saving Isma'il's own position. Instead, sedition in the army was accompanied by mounting pressure from his foreign creditors who suspected his insolvency. His desperate attempts to use a national Egyptian base against the European control of his finances failed. Moreover, his expensive promotion and subvention of an inept native press served to undermine his position further. Nor did his participation in the Russo-Turkish war of 1877 on the side of his Ottoman suzerain prevent the latter from deposing him at the insistence of the European powers on 25 June 1875. The next day, Isma'il left Egypt for Europe. He died in Istanbul on 6 March 1879.

Even though the social and economic changes which occurred during Isma'il's reign came to constitute the foundations of the further development and modernization of the country, the khedive's impatient Europeanization programme was politically a superficial one. Together with the financial problems and their international repercussions, it is fair to suggest that the reign of Isma'il generated complex problems for Egypt, with which its inexperienced leaders and emerging administrators could not adequately cope. These led to the occupation of the country by Britain and the subsequent political difficulties which this event generated for the next seventy-five years.

Nonetheless, by his ambition and financial recklessness, Isma'il forcefully stimulated and induced the emergence of modern Egypt, and outlined its future development. To this extent, he cannot be viewed facilely as the disastrous khedive of Egypt, but as one of the country's creative rulers.

supported by the Dİwān and accepted by the sultan. But the grand vizier’s seal was in the hands of the Shaykh al-İslam Fāṣl Allâh Efendi, who was supporting the rebellions. The rebel leaders were placated by being granted various offices: Fāṣl-Allâh came to the Palace and handed the seal to the sultan; and Ismā‘īl Paşa was finally officially installed. Thereupon all the high-ranking members of the ‘ulûma’ (including the Shaykh al-İslam and the şâdî of Istanbul) were dismissed. The crowds at the Palace approved the new appointees and dispersed, so that on 26 Rabī‘ II 1099/2 March 1688 Ismā‘īl Paşa embarked on office with his authority unquestioned. The rebel leaders and their supporters were apprehended and immediately put to death, and numerous changes were made in Palace posts and in provincial governorates. But these measures led only to new friction between the townsfolk and the Kaplâlî and between the ‘ulûma’ and the grand vizier. Furthermore the loss of various strong points in the Eğrî-Kırka region and the fortress of Kanîn increased the tension at the capital. The grand vizier now made the capital the center of appointing Yeğen ʻOṯmân Paşa, governor of Rumelî and one of the rebels, as Şerâdîr, on the Austrian front with the rank of vizier. ʻOṯmân Paşa rallied to his side some of the insurgents who had managed to escape from Istanbul and the Şâdîlâs and Şehbâns of Rumelî, and demanded the Grand Vizierate, obliging Ismā‘īl Paşa to proclaim a call to arms (nefîr-i ‘âmm [see MÂRÎ]) in Rumelî and Anatolia against his supporters. The hostility which the Shaykh al-İslam Debbâh-zâde Mêhmed Efendi had felt from the first towards Ismâ‘īl Paşa now spread to all the ‘ulûma’. On the ground that they had accepted bribes, Ismâ‘īl Paşa wished to dismiss and the sultan’s friends: ʻArâb-zâde ʻAbd al-Wahhâb Efendi and the Dâr al-Sa’âda Ağâsî Muṣṭâfa Ağâ, who made common cause with the ‘ulûma’ and began making secret complaints to the sultan. The sultan, persuaded by his intimate Muṣṭâfa Ağâ, finally dismissed Ismâ‘īl Paşa on 28 D穿越a II 1099/30 April 1688. Ismâ‘īl Paşa was ordered to stay in seclusion in his yâlî at Arâîdülûlîrdî and then, on 10 Rabâ‘ II 1099/1 May 1688, was removed to Rhodes. Where, during, the Grand Vizierate of Kûrâlû-zâde Fâdvî Muṣṭâfa Paşa, he was executed (Şâbân 1101/May 1690). The main reasons for his death were his differences with Fâdvî Muṣṭâfa and other members of the Kûrâlû family; the complaints of the sons of Zaun al-ʻÂbidîn Paşa, who had allegedly been unjustly executed during his Grand Vizierate; and the allegation that he had extorted money from the heirs of Sîyâvûş Paşa. His head was sent to Istanbul and his body was buried in Rhodes. He is described as a covetous and irritable man, who, though intelligent, often took rash measures than he really meant to.

Mû‘ûn Aktepe

ISMÂ‘ÎL ŞÂBRÎ, an Egyptian poet (1886-1953), distinguished by his kunya of Aμîn Umâyma from another and better known Ismâ‘îl Şâbru. His earliest poetic works date from 1910, and his writings as a whole were collected and published after his death. His “love songs” (Ghâsul-i âghânî, p. 183-258 of the diwa‘n) deserve especial attention for the technique of his prosody and a certain purity of language and style; some of these songs, of remarkable lyric inspiration, have been set to music and are a worthy addition to the legacy of the most romantic and pathetic sentimental songs of the period. While it is of no great importance that, in the writings of his maturity, Ismâ‘îl Şâbru succeeded in redeeming the intellectual inconsistency of some of his youthful ʻâṣâls, it should be emphasised that this author, who possessed a very good knowledge of an admiration for classical Arabic poetry, sometimes yielded to the temptation to insert in his own poems hemi stichs from al-Buṭrûf, al-Mutanabî and other celebrated ‘Arâbîs poets; where this has happened, the editors of the diwa‘n have indicated this indiscrepancy with a note.

The two poems entitled respectively al-ʻNûmîyya al-kubrâ and al-Hamzîyya al-kubrâ (p. 27-75 and 76-98 of the diwa‘n) contain some beautiful and occasional verse, inspired by purely contingent social events, a feature which the author shares with other more celebrated contemporaries such as Aljmad Shawkl and Hafîz al-Mahamzi. In the last section of the diwa‘n, contains little information regarding the author’s life and professional life, is the work of Ahmad Kamâl Zâd, ‘Amîr Muhammad Bubayrî and Muhammad al-‘Aṣâsî; it was published in Cairo (n. d.) by the Ministry of Culture and National Guidance. (U. Rizziatano)

ISMÂ‘ÎL ŞÂBRÎ, an Egyptian poet and statesman, was one of those who contributed
to the awakening of national consciousness in Egypt at the end of the nineteenth century. Born in Cairo on 16 February 1854, Isma'il Şabri benefitted from the influence of two cultures, classical Arabic and French, with which he came into direct contact when he was sent away to Aix-en-Provence in order to complete his legal studies. On his return to Egypt in 1878 after obtaining a degree in law, he turned first to the magistracy, taking a post at al-Mansūrah, then became governor of Alexandria (1886-9) and later under-secretary of state at the Ministry of Justice. He died on 16 March 1923.

Isma'il Şabri's poetic talent manifested itself early in life, as can be seen from the youthful compositions which he published in the review Rawd al-Madāris al-Miṣriyya at the age of sixteen. These admittedly simple exercises in poetry nevertheless already displayed that admiration for classical models of the 'Abbāsid period which the poet was to retain even in his mature years. However, the beneficial contact with modern French poetry as it evolved at that time not only helped to enrich his mind, but especially to make keener his perception in regard both to the contingent social and political problems of his country, and the reflections of a more general nature and meditations on the destiny of humanity. Opposed to the occasional poetry to which many of the writers of his time applied their talents, Isma'il Şabri was a patriot of exemplary rectitude, incapable of lending himself to easy compromises with the two powers who at time controlled the policies of Egypt, Turkey and England. His diwan contains no ḍüstād dedicated to the sultan 'Abd al-Ḥamīd, nor to other dignitaries in his services. Love, death, and the fatherland were the themes of his poetry, the brilliance of which is due to the loftiness of style and profundity of thought expressed in unlaboured imagery. His poetic works are not numerous, especially when compared with the production of his contemporaries, probably because he wrote to please himself, refusing all demands other than those of inspiration.

Bibliography: The Diwan was published fifteen years after the poet's death by Aḥmad al-Zayn, Cairo 1938; the preface to the work by Tāḥā Ḥusayn is interesting from the critical standpoint. Abundant source material can be found in essays and articles published in reviews in the works of Dī. A. Dāğhīr, Maṣādir al-dirāsā al-adabīyya, iii: al-Rāshīd, 1880-1933), Beirut 1936, 534-6, and ʿUmar Rıḍā Ḥaḥbālā, Muṣāḏarāt al-muwaṣṣīfīm, Damascus 1376/1957, 272-3; Ṣub. 'Abd al-Munīm al-Faḍlāl, Ḍawat al-adab fi Miṣr, v, Cairo 1956, 138-7; ʿUmar al-Dāsālī, Fi l-adab al-adhīm, ii, Cairo 1950, 117-25; some differences concerned certain events of his life in Brockelmann, S III, 28-21. It should also be added that Aḥmad al-Shawādī dedicated a long elegy to him (al-Shawādīyā, iii, Cairo 1935, 115-8). (U. Rizzaṭadīn) ISMAİL ŞAFĀ (1867-1901), Turkish poet of the transition period between the Tanzimat and the Therueit-i Fünum schools. Born in Mecca where his father, Meḥmed Behjed, a native of Trabzon and a merchant, he and his two brothers moved to Istanbul. His happy life in Arabia and the desert left a strong impression on his memory which is reflected in many of his early poems. In Mecca his father had taught him Arabic and Persian. In Istanbul he passessed, with his two brothers, the entrance examination, as a boarder, to the Dar al-shaḥaṣa, a well known high school for gifted orphans. On his graduation in 1890 he served for a short time in the Telegraph Office and later taught literature in various secondary schools. He married very young but lost his wife and contracted tuberculosis himself. After a short stay in the island of Midilli (Mytilene), where he went in the hope of a recovery, he returned to Istanbul. Because of his liberal ideas, which he did not care to hide (see below), he was marked down as a suspect by the Hamidian secret police. His house in Gedik Pasha, where he and his progressive friends frequently met, was constantly watched. At the suggestion of Isma'il Kemal (a deputy for Berat in Albania after the 1908 constitution), a group of prominent intellectuals, including Isma'il Şafā and the leading Therueit-i Fünum poet, Tewfik Fikret, went to the British Embassy to congratulate Britain on her victory over the Boers. Unaware of the contradiction with their own professed ideals, they claimed later that they did this as a gesture against the sultan. This was used as a pretext to round them up and to send them into provincial exile. Isma'il Şafā was banished to Sivas where he succumbed to the harsh climate a year later (1901).

Isma'il Şafā published his first poems in Nājdī's Memdji'-a-i Mu'allīm and later in the periodical Mirdād. At the age of twenty he was a well known poet in literary circles. Verses poured from his pen with such ease and spontaneity that Nājdī "the Master" (Muʿallīm), whose influence on these early poems is obvious, gave him the nickname of Ṣabrī 'l-Mādīr ("the born poet"). He soon became leader-writer of the Mirdād until it was closed by the censor. Gradually Nājdī's literary influence was replaced by those of Rızā'-zādā Ekrem, 'Abd ul-Ḥakīm, and particularly Tewfik Fikret with whom he had become close friends and regularly contributed to his Therueit-i Fünum. Critics of both old and new schools were unanimous in recognizing his unusual poetical gift. Owing to his early poems, which are mostly sentimental reminiscences of his childhood, Isma'il Şafā is generally accepted as a fine sensitive poet who wrote, with a spontaneous style, simple melancholic poems of nostalgic, lyric and religious inspiration. This early and incomplete judgment of his work strongly influenced later criticism, but leaves out most of his posthumously published work, which reveals him as a poet with unusual gifts of humour and social and political satire. In particular his poem Taṣāʾalum ("Complaint of injustice"), first published in Ahmed Rıdā's Young Turk organ Mesgāwet in Paris (supplement to No. 9, 1893) and reproduced with minor variants and omissions in 'Abd Allāh Djevdet's Iḏjārā (No. 105, 8 May 1930), is a true forerunner of the political satire of the later Esḥāf and Fikret tradition. "You gathered around you a few vile individuals and tyrannized people on their advice. You gave power to the corrupt, ignorant and unpatriotic, you enabled informing into a profession, you made great men suffer in banishment, you insisted on the execution of a very great man (i.e., Midbat Pasha), tell, o Khalifa, are you any different from an executioner? They informed you of unjust acts, you ignored it; your slaves harmed people, you ignored it; foreigners made profit out of the country, you ignored it; friends warned you about everything, you ignored it. You preferred dependence to guiding sermons... The treasure of the state is in the hands of a few thieves... The country is in ruin, the
people hungry... The day of your fall will be a feast day for the people..." In the circle of close friends Ismā'il Šafā used further to expound his naïve projects of plots to overthrow 'Abd al-Ḥamīd (Ḥalīd Ziya Uṣūkčī, Kirk Yūl, Istanbul 1936, iv, 79).

Another important poem which seems to have passed almost unnoticed is his Tahāmīs of the Dāmmād Muḥammad Pasha's ḍajīda, an ironical eulogy of Ḥasan Pasha, the Minister of the Navy during the Greco-Turkish War of 1897. It is a biting satire, full of pungent wit, inspired by Ziya (Diya) Pasha's famous Zafar-nāme against 'Abd al-Ḥamīd who had kept the Turkish fleet perpetually at anchor in the Golden Horn, during his reign, thus causing its utter decline. Ismā'il Šafā describes, with vivid images, the sorry state of the local population, who, at the instigation of the tribal chieftains, deposed and dispossessed by his uncle Shah Abd al-ʿAziz, rose against the Sayyid. In 1235/1819 he was captured, but was later freed. On being politically influential at Delhi, could not watch with complacency such an open incitement to insurrection and also later allow money and material to be collected within their sphere of influence and sent to the mujāhidīn, as the followers of Sayyid Ahmad later came to be commonly known, in their stronghold in the northern parts of the country. In 1241/1825 he left, along with his leader Sayyid Ahmad, for Yaqūtsan via Sind. Passing through Bahāwulpūr [q.v.], Nayyarābād [q.v.] and Shikāpūr (Sind), this voluntary force, which had considerably swollen on the way, reached Kābul from where the volunteers slipped into Peshāwār. Making it their general headquarters they launched a holy war against the Sikhs, fighting the first battle at Akōrā, near Nowshera, on 20 Dūmādā II 1242/21 December 1826 and defeating the enemy with considerable losses. A number of other engagements followed bringing victory after victory to the mujāhidīn. Furnished with their success they set up their own government in the areas under their occupation with Peshāwār as the seat of administration. Certain reforms introduced by them in the social sphere concerning to the laws of Šarīʿa, for instance the remarriage of widows and the collection of ḫūṣr, resulted in the disaffection of the local population, who, at the instigation of the tribal chiefs, deposed and dispossessed by Sayyid Ahmad, rose against the mujāhidīn and in a secret night-attack killed all the tax-collectors and sub-administrators appointed by the Sayyid. This massacre was a serious set-back to the movement, and practically the whole of the territory around Peshāwār slipped out of the control of the mujāhidīn. The Sikh ruler of the Pāndjāb, Ranjit Singh, a shrewd politician and skilled statesman, took full advantage of the situation and inflicted a series of reverses on the rapidly dwindling forces of the Sayyid, who now also faced financial difficulties, for practically all the routes through which money came had been cut off either by the invading Sikhs or the hostile Pāthan tribes—mainly the Yūsufzāis.

The mujāhidīn, now led by Ismā'il, were driven out of Peshāwār, which they had occupied in 1246/1829 by ousting Sultan Muḥammad Khan, a brother of the amir of Afghanistan, who ruled Peshāwār as the tributary of the Sikh chieftain Ranjit Singh. Considering it a challenge to his sovereignty, Ranjit Singh marched in person and with the help of his European mercenaries, Generals Ventura and Avitabile, re-occupied the city, entrusting subsequent operations to his son Sher Singh. Better equipped, better trained and numerically superior, the forces of Sher Singh inflicted the final defeat on the mujāhidīn at the battle of Bahkot (24 Dūr-i Ḍāla 1246/16 May 1831), in which Ismā'il and his leader Sayyid
Ahmad lost their lives. He was buried on the edge of the battlefield where his tomb still exists. No attention was paid to his grave during the Sikh or the British rule. It has now been renovated and the government of Pakistan has paid due attention to its upkeep and maintenance.

In spite of his pre-occupation with ḍīhād, traveling and delivering sermons, Shah Ismā'īl yet found time for writing books on diverse subjects. His writings include: (1) Tābūyāt al-imān (ed. Cawnpore 1343/1924), deals mainly with the unity of God and deprecates idolatrous practices such as the invocation of saints, angels etc. Its supplement Tazkīr al-Ḥikwān was composed by Muhammad Sultān in 1250/1834; (2) Mansāb-ī imāmāt (in Persian), deals with the concept of imāma in Islam and its various kinds (ed. Karachi 1962, Lahore trans. Lahore 1940); (3) Risāla Usūl al-fikr (in Arabic, ed. Delhi 1311/1893), a short treatise on 36 pp. on the principles of Islamic jurisprudence; (4) Tanwir al-‘aynayn fi tāḥrīt ra‘ī al-yadayn, (in Arabic, ed. Lahore n.d.), an exposition of what he and his followers stood for (for his spiritual guide Sayyid Ahmad and helps understand his teachings and the tenets professed by him; an exposition of what he and his followers stood for (its content see JARS, ii, 316 ff.); (5) Radd al-tāḥrīt al-cālī (in Arabic), Asafiyyah; 666; (6) Iddh al-hakfr al-sanh fi ahkdm al-mayyit wa ‘l-darth (1832), 479 ff.); (9) Radd al-ṣabab al ‘l-adīdd, (Ms.); Muhammad Nu‘mān, Ṣirāt-ī ‘alamīyya wa tāḥkīr al-abrār (Ms.); (10) Judhūl-i Fadl-i Hakk, (Ms.); ‘Āḥīd al-Ḍabārār, Kīṭāb al-‘l-batrā (Ms.); ‘Āṭī Muhammad Ḵān Shikārpaṭī, Rūz-nāma (in Persian, Ms. in the private collection of Husamuddin Rashid, Karachi); Amar Ṣāḥīb, Zafar-nāma-i Randīlī Sīnān (ed. Sītā Rām Kohlī, Lahore 1928; Muhammad Ḍī‘afar Thānāṣārī, Tawwārikh-i ʿagība or Sawānīkh-i Āḥmadī, Sādha warfare 1914; Mirzā Ḥayāt Dihlawī, Ḥayāt-i jāyihā, Lahore, n.d.; Siddīkī Hasan Ḵān, Tīktor ḍīhād al-abrār min tāḥkīr dhunād al-abrār, Bhopal 1293/1878; idem, Tarjim-ūn-i Wāhābīyā, (not seen); idem, Ḥabīb al-nubālā al-mustakīm, Cawnpore 1289/1872, 416; Ghlām Rāsūl Mīhr, Sayyid Ḥabīb Ahmad Shāhīd, Lahore n.d., extensive bibliography and pp. 13-26 for a critical appraisal of the original sources; Abdullah Butt (ed.), Ḥabīb Ahmad Shāhīd, Lahore 1953; W. W. Hunter, The Indian Muslims, Calcutta 1945; Gazetteer of the Hozur District, London 1908; S. M. Ikrām, Rād-i Kauṯārī, Lahore n.d.; al-Furqān (Bareilly, Urdu monthly), Şāh Ismā‘īl number, 1325 A. H. Shaban; JASB, i(1832), 479 ff.; JARS, ii, 316 ff. (A. S. Bazmī Ansārī).

ISMĀ‘ĪL ŚIDKI, the Egyptian politician and statesman, was born in 1875 into a family of Egyptian notables. Both his father and maternal grandfather enjoyed high positions in the official hierarchy of khedivial administration. Like most of his contemporaries who aspired for a political career, he studied law and took part in the anti-British student agitation encouraged by the khedive. Upon completing his studies in 1894, he was appointed a minor official in the Ministry of Justice. He rose quickly, partly through his own effort and initiative, but mainly through the influence of his family had, to be come the permanent under-secretary at the Ministry of Interior in 1908. In 1914 Śidki had his first cabinet appointment in the government of Rūshdī Pasha, from which he resigned soon after.

When the First World War ended in 1918, Śidki joined the Wafd movement and was exiled with Ṣa‘īd Qāżīlī to Malta in 1919, but when the Wafd was allowed to proceed to the Peace Congress he was among its members. In Paris differences arose among the delegates and Śidki, foreseeing the futility of Wafdist demands, left for Cairo. His departure from the Wafd marked a turning point in his career, for he became the moving spirit of the anti-Wafdist element in Egyptian politics. He played a leading role in the drafting and implementation of the Declaration of Independence of 1922 which granted Britain at her pleasure powers of the Suez Canal zone as well as the Constitution of 1923, both documents abhorrent to the Wafdist. Henceforward and until his retirement in 1946, Śidki was tireless in his confrontation with Wafdist policies in the conduct of Egypt's public affairs. He did not hesitate to employ armed force, including the use of British troops, to suppress Wafdist opposition and silence their publications. It was this that earned him the doubtful distinction of being the strong man of Egyptian politics. His reputation as a financial expert, however, was justly deserved.

Ismā‘īl Śidki became prime minister of Egypt twice, in 1930 and 1946, each time in the wake of nationalist ferment and public disturbances caused by the Wafdist failure to reach agreement with Britain on her position in Egypt and the Sudan. In 1932 Śidki amended the Constitution, restricting suffrage, and he formed the People's Party to give him support in Parliament. Śidki's terms of office were unhappy and unpopular. He failed to obtain sufficient concessions from Britain to normalize the relationship between the two countries, and he did not succeed in marshalling the support of Egyptian moderates to contain the extremism of the Wafd. In 1946 an agreement was intialled in London between Śidki and Ernest Bevin, British foreign secretary at the time, but once more Wafdist opposition made ratification impossible. Upon his return from Eng-
land, a sick and broken man, he retired from public life. Isma'il Sidki died in 1948.

History: Pre-Fatimid and Fatimid Times. After the death of Dja'far al-Siddiq's son Isma'il, after whom it is named.

The early Isma'ili missionaries in Western Persia and in Khurásan and Transoxania, in BSOAS, xxxii (1960), 56-90. A convert of al-Nasafi [q.v.], one of the ḏḍ'is of Khurásan and Transoxania, was the first to carry the propaganda to Sijistan, probably in the early decades of the 4th/10th century. Presumably in the first half of the 4th century, the Khurásani movement was converted by ḏḍ'is from Khurásan. In the Yemen two missionaries, 'All b. al-Fadl and Ibn Hawshab, known as Manṣūr al-Yaman [q.v.], in 268/881 established themselves in the area of the Djiabal Maswar and succeeded in gaining strong tribal support. In 270/883 Ibn Hawshab sent his nephew al-Haytham as a missionary to Sind. Later he sent ʿAbd al-Mannūr b. al-Diannābī [q.v.], a follower of Hamdān Kārmaṇ and 'Abdān, founded a Karmatji state in al-Bahrayn, from where he later conquered al-Qatif, Uman and al-Yamama. The whole movement was centrally directed, at first probably from al-Ahwāz and al-Baṣra and later from Salamiyya in Syria. Muḥammad b. IsmaiIll was active as an Imam, who had disappeared and was about to reappear as the Kā'im and to rule the world. The leaders of the movement in the absence of the Imam claimed the rank of ḏudūdas [q.v.].

In the year 286/899, after the succession of the future Fātimid Caliph ʿUbayd Allāh b. Ṭaḥrit, the leadership in Salamiyya, a schism split the movement, provoked by the claim of ʿUbayd Allāh to the imamate for himself and his ancestors. Hamdān Kārmaṇ and 'Abdān, who may have previously drifted slightly away from the doctrine propagated by the leadership, broke off their support. 'Abdān consequently was murdered by a subordinate ḏḍ'ī, Zikrawayh b. Mihrwawayh [q.v.], who at first pretended to be loyal to the leadership. Zikrawayh and his sons organized the "Kārmatji" revolts among Syrian bedouin tribes from the year 289/902 until his capture and execution in 294/907. Doubts concerning Zikrawayh's loyalty, which soon turned out to be justified, induced 'Ubayd Allāh to leave Salamiyya for the journey which ended with his establishment as caliph in Raṣkāda in 297/910.

Though information concerning the attitude of the various Ismai'lli groups following the split of the movement is scanty, the results can be summarized with some degree of probability as follows: The community in the Yemen at first remained faithful to ʿUbayd Allāh. ʿAll b. al-Fadl, however, in 299/913 renounced his allegiance to him and made war on Ibn Hawshab, who remained loyal. After ʿAll's death in 303/915 his party disintegrated rapidly. The ḏḍ'is in the Maghrib and probably in Sind, having been sent by Ibn Hawshab, also remained loyal. There are indications that the ḏḍ'is in Khurāsan generally maintained its allegiance to ʿUbayd Allāh, who was able to appoint some ḏḍ'is there, but there were probably also counter-currents. The communities in ʿIrāk, al-Bahrayn, and western Persia refused to recognize the Fātimid claim to the imamate. Among the Karmatīs of ʿIrāk ʿIssa b. Mūsā, a nephew of ʿAbdān, continued the latter's work propagating the imamate of Muhammad b. Ismai'll, who would return as the Kā'im. After 320/932 he was active in Baghdād. He and other ḏḍ'īs in ʿIrāk ascribed their writings to ʿAbdān, thus stressing the doctrinal continuity. The ḏḍ'īs of al-Rayy were in close contact with those in ʿIrāk and with the Karmatis of al-Bahrayn and like them were expecting the reappearance of the Mahdi-imān for the year 316/928. At least in the twenties of the 4th century (1030-9) they controlled the missions in Mosul and Bagdad. They worked successfully among the Daylamis and won at least the temporary allegiance of Daylami leaders like Asfār, Mardawīdī and later of some rulers of the Mughirūd Dynasty. The Karmatis of al-Bahrayn, led by ʿAbū Ṭāhir al-Diannābī, were predicting the appearance of the Mahdi-imān for the year 316/928. In 319/931 they accepted a Persian prisoner of war as the Expected One, and ʿAbū Ṭāhir turned the rule over to him. The early disastrous end of the affair weakened the ideological vigour of the Karmats of al-Bahrayn and their influence among the ḏḍ'īs in ʿIrāk and Persia, but did not generally lead to an expansion of Fātimid influence. Soon afterwards the great revolt of the Khāridjī Ābū Yazīd [q.v.] under the Fātimid Caliphs al-Kā'im and al-Manṣūr stifled any Fātimid activity among the eastern Ismai'lli communities. Only the fourth Fātimid, al-Muʿizz (341/953-365/975), was in a position to lead an intensive campaign to regain the allegiance of the schismatic Ismai'llis. His efforts were partially successful, but failed in regard to the Karmatis of al-Bahrayn and Hadhramawt, who in eastern hostility erupted after the Fātimid conquest of Egypt in 358/966, in open warfare against the Fātimid armies. After concluding a peace with the Fātimid al-ʿAzīz in 360/973-979, the Mahdi-imān of al-Bahrayn were reduced to a local power unable to exert any ideological influence beyond its boundaries. The movement still supporting the doctrine of the return of Muhammad

The first time of al-Mu'izz a Fātimid vassal state was established in Multān in Sind. The Isma'īllī dā'ī there succeeded before 348/959 in converting a local ruler. Multān became an Isma'īllī stronghold where the khuffa was read in the name of the Fātimid caliph. This success probably strengthened the Fātimid cause also in the neighbouring regions, for in Murlūn the khuffa was also read for the Fātimids about the year 378/988. The dā'ī Abū Ya'qūb al-Sijisti (q.v.), who supported the Fātimid doctrine at least from the time of al-Mu'izz on, probably was active in Sijdhān before his death in the second half of the 4th/10th century. In Dirūfīt in Kirmān a Fātimid dā'ī was residing toward the end of the 4th/10th century. The Isma'īllī state in Multān lasted until 401/1010-1, when Maḥmūd of Ghazna annexed the town, took its ruler prisoner and massacred many Isma'īllīs (see S. M. Stern, *Isma'īllī propaganda and Fātimid rule in Sind*, in DC, xxiii (1949), 298-307).

During the last years of the reign of al-Ḥākim (386/996-411/1021) extremist Isma'īlīs in Cairo began to proclaim the divinity of this Fātimid caliph. Their leadership soon passed to Ḥamza b. 'Ali (q.v.), who became the founder of the Druze religious doctrine. The official Fātimid da'wa organization remained adamantly opposed to this movement, although al-Ḥākim at times showed it favour. After al-Ḥākim's death it was persecuted by the Fātimid government and wiped out in Cairo, but succeeded in solidifying its hold over the mountainous regions in Syria which, with some modifications, became the permanent home of the Druze community. The Druze religion (see DURUZ), though derived from Isma'īl doctrine, transformed its basic ideas to such a degree as to be usually considered as falling outside the range of Isma'īlīs.

In Ḥirḵiyā the Isma'īllī communities were practically exterminated by popular riots after the accession of al-Mu'izz b. Bādis, Zirid vassal of the Fātimids, in 407/1016. The missionary efforts of the Fātimids during their residence in Ḥirḵiyā had achieved the conversion of only small groups of the urban population, while the masses, led by the Maḥṭūlsa, were solidly opposed to Fātimid rule and Shi'ism. Large numbers of Kūtān tribesmen, who traditionally furnished the main body of the Fātimid army, left for Egypt with the Fātimid al-Mu'izz. Most of the leading dā'īs also departed at that time. The Sanḥājī tribe, which supported Zirid rule, now officially adhered to Isma'īlīsm. During the year 407/1016-7 the Isma'īllīs in al-Ḵayrawān, al-Mansūrūlya, al-Mahdıyya, Tun, Tripoli, and other towns were attacked and massacred by the populace with the countenance of the government. Sporadic massacres took place also during the following years. The Isma'īllī communities were thus extinguished long before al-Mu'izz in 440/1049 renounced his allegiance to the Fātimids and recognized 'Abbāsīd sovereignty (see H. R. Idiris, *La Berbérie orientale sous les Zirides*, Paris 1962, 143-9).

During the reign of the Caliph al-Muṣṭaṣir (427/1036-427/1049) the Isma'īllīs achieved new successes in the Yemen and India. In the Yemen the da'wa after the death of Ibn Hawshāb had suffered major setbacks and survived only precariously, though in the period 379/989-387/997 it had gained the allegiance and support of the Ya'furid amir 'Abd Allāh b. Kāftūn, ruler of Schābī and conqueror of Šabīd from the Ziyāyids. In 429/1038 'Allī b. Muḥammad al-Ṣulaybī, Fātimid dā'ī and founder of the Šulaybīd dynasty, rose in Masār in the Ḥarāz region. Through the activity of the Šulaybīds (q.v.) Fātimid sovereignty came to extend over all of Yemen and temporarily over other parts of Arabia like Qumān and al-Bahrain (see H. F. al-Hamdānī, *Al-Šulaybiyyān*, Cairo 1955). The Šulaybīds also furthered renewed efforts at spreading Isma'īlīsm on the Indian subcontinent. Although parts of the Isma'īllī community in Sind evidently had survived the persecution under Maḥmūd of Ghazna and Isma'īlīsm seems to have been espoused by the Sūmra dynasty of local Hindu origin (see A. H. al-Hamdānī, *The Beginnings of the Isma'īllī Da'wa in Northern India*, Cairo 1956), contacts with the Fātimid da'wa faded. The Isma'īllīs in Sind may have drifted partially back to Hindu practices and beliefs. A new Isma'īllī community was now founded by Yemenite da'īs in the area of Cambay, Gudjarāt, which had close commercial ties with the Yemen. According to the traditional account an Arab da'ī, 'Abd Allāh, arrived with two Indian assistants in Gudjarāt in 460/1068, sent by the Yemenite chief da'ī Lamā b. Mālik. Less in the last years of the reign of al-Muṣṭaṣir the Isma'īllī cause in Persia was reinvigorated by the activity of Ḥasan-i Šabbāb (q.v.). After travelling widely and carrying on propaganda in various regions of the country, he seized the fortress of Alamāt (q.v.) in the mountains of Daylam in 483/1090, thus opening a new phase in the Isma'īllī activity in Persia. The clandestine missionary work to which the da'wa in Persia had mostly been restricted was replaced by a policy of open revolt which, in the face of the overwhelming military strength of the Seljuq government, was based on the seizure of impregnable mountain fortresses, thus opening a new phase in the Isma'īllī cause. Another da'ī, Abū 'Hamza, captured two castles near Ararat in the border region between Fārs and Kūhristān. After the death of al-Muṣṭaṣir the...
Tanşir in 487/1094, a major split occurred in the Ismāʿīlī movement concerning the succession to the imamate. Al-Mustansir had originally designated his eldest son, Nizār [q.v.], as his heir. Later his youngest son, Aṣmad, found the support of the vizier al-Aḍal [q.v.], who after the death of al-Mustansir placed him on the throne with the title al-Mustaṣill [q.v.]. Nizār fled to Alexandria, where he rose in revolt, was defeated, seized and immured. Hasan-i ʿAbdallāh and the Persian Ismāʿīlīs upheld the right of Nizār to the succession and refused to recognize al-Mustaṣill. In the absence of the imam, Hasan-i ʿAbdallāh became the supreme chief claiming the rank of ḫudūḏa. After his death the leadership continued with the rulers of Alamūt. Beginning with the fourth ruler, Hasan al-dāʿīʾibārīs ʿI-salām (557/1162-561/1166), they came to be recognized as imāms. Against numerous ʿAlīdūḏ attacks the Nizārīs were able to hold and expand their territories in the Elburz mountains and Kuhištān. The fortress Shāhāḏa near ʾIsfahān, which they seized about the year 494/1100, was lost again in 500/1107. Some time afterwards the Nizārī fortresses near Arradjan were overcome. Among the Ismāʿīlīs in Egypt and Syria there were also partisans of Nizār. In Egypt they were gradually suppressed. In Syria, which fell largely outside the Fāṭimid territory, they were soon organized by emissaries from Alamūt and were seriously rivalled by the supporters of the Fāṭimid caliphate, especially in Damascus and Aleppo. The Dājjal al-Summāḵ and surrounding area north of Ḥamāt soon became a stronghold of the Nizārīs. As in Persia they aimed at acquiring fortresses, but failed in their first attempts, and practised political murder. In 520/1126 Tuḥṭagīn, ruler of Damascus, ceded to them the fortress of Bānīyā on the frontier with the Franks and gave them official recognition in Damascus. His son Būrū in 523/1139 encouraged anti-Ismāʿīlī rioting in Damascus in which the Nizārī community was virtually wiped out. The fortress of Bānīyā was consequently surrendered by the Nizārīs to the Franks. Soon afterwards they achieved lasting success in the Dājjal Baharī ʿa area west of Ḥamāt. In 527/1132-3 they acquired the fortress of Kadmus, and other fortresses came into their possession during the following decade. Maṣṭūf, the most important stronghold, was seized in 535/1140-1. The Ismāʿīlīs in Persia and Syria there were also partisans of Nizār. Later he and all other members of the Fāṭimid family were permanently detained as prisoners by the Ayyūbīd rulers. As a result of a pro-Fāṭimid conspiracy in Cairo in 568/1172-3 many of the supporters of the deposed dynasty were exiled to Upper Egypt, which became a hotbed of pro-Fāṭimid activity. In 572/1176-7 a pretender claiming to be al-Hāfiz al-Qāsimī al-ʿĀṣirī declared himself imām. The Dājjalīs soon became a rare minority.

The post-Fāṭimid period. Hāfizīyya: After the overthrow of the Fāṭimid caliphate in 567/1171 the Hāfizīyya, no longer enjoying official support, gradually disintegrated. Al-ʿAḍīdī, the last Fāṭimid caliph, had appointed his son Dāʾūd as his successor with the title al-Hāfiz. Later his youngest son, Nizār, was proclaimed as his heir. After al-Amīr's death his eldest son, Nizār, was recognized by the Hāfizīs as the imām after al-ʿAḍīdī. He and all other members of the Fāṭimid family were permanently detained as prisoners by the Ayyūbīds. As a result of a pro-Fāṭimid conspiracy in Cairo in 568/1172-3 many of the supporters of the deposed dynasty were exiled to Upper Egypt, which became a hotbed of pro-Fāṭimid activity. In 572/1176-7 a pretender claiming to be al-Hāfiz al-Qāsimī al-ʿĀṣirī declared himself imām. The Dājjalīs soon became a rare minority. al-Hāfiz lost all official backing with the Ayyūbīd conquest. The Tayyībiyya dāʾūds ʿAll b. Muḥammad al-Walīd (d. 612/1215) still composed polemical treatises and poems against the "Madjīdīyya", but they were already becoming a rare minority. Ṭayyībiyya [q.v.]: The insignificant Ṭayyībi communities in Egypt and Syria, known as Amūrīyya, are only rarely mentioned in the sources. Toward the end of the 6th/12th century there is a vague reference...
to the presence of Amiriyya in Egypt. In Syria a community of Amiriyya is still mentioned about the year 972/1564 in the Bakri and Zabad mountains near Sa‘id. These isolated communities probably did not survive much longer. Only in the Yemen and India could the Ta‘yibi da‘wa, under the undisputed leadership of the da‘i muflak, establish itself permanently. After Ibrāhīm al-Hamīdī the position of da‘i muflak remained among his descendants until 603/1209, when it passed to Muhammad b. Muhammad of the Banū ‘l-Walid al-Anf family, which was named after his ancestor Ibrāhīm al-Anf, who was a prominent supporter of the Āl Shāhīs and a descendant of the Umayyad al-Walid b. ‘Utba b. Abī Sufyān. It remained in this family, with only two interruptions in the 7th/13th century, until 946/1539. The traditional stronghold of the Ismā‘īlī da‘wa in the Yemen was in the Harāz [q.v.] mountains, though there were scattered communities in other parts of the country. The da‘ifs generally enjoyed the support, or at least protection, of the Hamādāns [q.v.], who permitted them to reside in Sa‘n‘ā‘ and later, in the 8th/14th century, in the fortress of Dhu Marmar. Their relations with the Ayyūbids and the Rāsīlids were fair, but the Zaydī imāms were mostly hostile. The Zaydī pretender al-Mansūr ʿAli b. ʿAlī al-Dīn expelled them from Dhu Marmar in 929/1524 after a prolonged siege, and they lost their habitation in the Harāz mountains. The Zaydī Imām al-Mu‘thahhar b. ʿAbd al-Dīn in the 10th/16th century relentlessly persecuted the Banū ‘l-Anf and seems to have practically extinguished the family. The relations with the da‘wa in India remained close. The Ta‘yibi community grew mostly undisturbed, though in the first half of the 9th/15th century persecution under the Sultanate of Gudjarat resulted in mass conversions to Sunnism. In 946/1539 the position of da‘i muflak passed to an Indian, and after his death in 947/1540 the headquarters were transferred to Gudjarat in India.

After the death of Da‘ūd b. ʿAqīl b. ʿAbd al-Malik, in 959/1551, the succession was disputed. While in India Da‘ūd Būrān b. Tāhir al-Dīn was established, Da‘ūd b. ʿAbd al-Malik’s representative in the Yemen, Sulaymān b. ʿAbd al-Hasan al-Hindi, claimed to have been designated successor by the deceased da‘i muflak. The dispute was not resolved and led to the permanent schism between the Da‘ūdī and Sulaymānī factions which accepted separate lines of da‘ifs. Among the Sulaymānīs, whose cause had few adherents in India, the position of da‘i muflak in 1050/1640 passed to the Yemenite Ibrāhīm b. Muḥammad b. Faḥd al-Makramī [q.v.] family, in which it has remained since with few interruptions. The Makramī da‘ifs established themselves in Na‘dirān [q.v.], where they were supported by the Banū Yām [q.v.]. Before 1131/1719 they conquered the Harāz region in the Yemen and held it against all attempts of the Zaydī imāms to expel them. The Da‘ūd al-Hasan b. Hībat Allāh (d. 1285/1767) conquered Ḥadramawt and unsuccessfully fought the rise of the Ayyūbī dynasty in Central Arabia. From Harāz the Makramīs were expelled in 1289/1872 by the Ottoman general ʿAbd al-Malik Pasha, who took their fortress ʿAtṭāra and treacherously killed the Da‘ūd al-Hasan b. Ismā‘īl ʿAlī Shībām al-Makramī. The present da‘i muflak of the Sulaymānīs is Da‘ūd al-Dīn ʿAli b. al-Ḥusayn al-Makramī, who succeeded his father in 1930 (see A. A. A. Fyzee, Three Sulaymānī Da‘ifs: 1936-1939, in JBBRAS, xvi (1940), 101-4). Besides the Banū Yām in Nāṣirān, the people of the Dībāl Maḥārib in Harāz are Sulaymānīs. In India the Sulaymānīs da‘ifs are represented by Ṣāfīābīs residing in Baroda. Sulaymānīs live mainly in Bombay, Boroda, and Ḥadīrābād, Deccan.

The Da‘ūdī da‘ifs after the split continued to reside in India, where the great majority of their followers live. The da‘wa generally was able to develop freely, though there was another wave of persecution under Arwaṅgīl (1047/1637-1088/1679). Since 1200/1785 the headquarters of the da‘ifs have been in Surat. The present da‘i muflak is Muhammad b. Muhammad b. Muḥammad b. Muḥammad b. ʿAbd Allāh b. Abī Bakr al-Dīn, who succeeded his father Tāhir Sayf al-Dīn in 1966. Da‘ūdī Ismā‘īlīs live chiefly in Gudjarat, Bombay, and Central India. In Yemen there are Da‘ūdīs in the Harāz region. (For minor secessions from the Da‘ūdīs [see Bohorās].)

Nizārīyya [q.v.]: The imāmate of the Nizārīs remained vested in the lords of Alamūt until the surrender of the fortress to the Mongol conqueror Hūlagū in 654/1256 and the consequent execution of the imām Rukn al-Dīn Khūshbū. Practically nothing is known about the imāms following him. Later lists of the imāms differ widely concerning their names, number, and sequence. The list now considered official in the Aḵā Khānī branch has come to be generally accepted only since the latter half of the 19th century. There are vague indications that the imāms after the fall of Alamūt resided in Aḏharbāyjān. A split occurred in the line of imāms when Muhammad Shams al-Dīn, usually considered the son of Khūshbū, or his son Mu‘min-Shāh, who is omitted in some lists. One line continues with Kāsim-Shāh, the other with Muhammad Shāh. The Kāsim-Shāh imāms in the latter part of the 9th/15th century resided in Aḏjudān, a village near Māḥallāt, where the tombs of some of them are preserved. From this time until the 19th century the imāms were usually affiliated to the Nīṣārī Ālā’ī ʿṢūfī order. After a lapse of nearly one and a half centuries there are further tombs of imāms in Aḏjudān dating from 1043/1631 to 1090/1680. It is unknown where the family lived in the intervening period. Imām Shāh Nizar, who died in 1134/1722 is buried in Kāhāk, a village near Aḏjudān (see W. Ivanow, Tombs of some Persian Ismā‘īlī Imams, in JBBRAS, iv (1938), 49-62). In the time of Nāṣir Shāh ‘Ṣūfī Shāh (r. 1376-1397) Imām Sayyid Hasan Beg moved to Shāb-i Bābak and acquired a winter residence in Kirmān. The imāms now rose from their previous obscurity to involve ment in political life. Imām Abu ‘l-Ḥasan Shāh was governor of Kirmān from 1169/1756 until his death in 1206/1791-2. His son Shāh Khallī Allāh, who enjoyed the favour of the Kāḏār Fāṭḥ ʿAlī Shāh, returned to Kāhāk and later moved to Yadz, where he was killed by a mob in 1232/1817. Khallī Allāh’s son, Hasan ‘Alī Shāh Maḥallātī, was granted by Fāṭḥ ʿAlī Shāh the title Aḵā Khān [q.v.], which has remained hereditary among his successors. After a vain attempt at gaining independent rule of Kirmān, Hasan ‘Alī Shāh moved to India in 1259/1843 (see H. Algar, The Revolt of Aḵā Khān Maḥallātī and the Transference of the Ismā‘īlī Imamate to India, in SI, xxiv (1953), 55-81). Bombay became the permanent seat of the imāmate. The present (1971) Aḵā Khān, Karim Khān, succeeded his grandfather, Sultan Muhammad Shāh, in 1937.

The branch of Muhammad-Shāh apparently was closely associated with the Nīṣārī community in Daylān. In 776/1374-5 Khudawand Muhammad, who may be identical with Muhammad-Shāh, gained possession of the fortress of Alamūt with the support of the local Nīṣārīs. He was consequently expelled and sought refuge with Timūr, who sent him
202

ISMACILIYYA

to confinement in Sultaniyya. The family continued
to live in Sultaniyya until after 894/1489. Members of
it, however, were repeatedly active among the
Nizarls in Daylam until the middle of the gth/isth
century. The most famous imam of the MuhammadShahi line, Shah Tahir Husaynl DakkanI, because of
his religious following aroused the suspicion of the
Safawid Shah Ismacil, was exiled to Kashan and
later forced to leave Persia. In 928/1522 he came to
Alimadnagar in the Dekkan, where he was instrumental in bringing about the proclamation of Shicism
as the official religion by the ruler Burhan Nizam
Shah. Shah Tahir probably died in 956/1549. His
descendants lived in Alimadnagar and later in
Awrangabad (see W. Ivanow, A forgotten branch of the
Ismailis, in JRAS, 1938, 57-79). The last imam of this
branch, so far as is known, was Amir Muhammad
Bakir, whose last contact with his Syrian followers
was in 1210/1796. As well as in Daylam, the Muhammad-Shahl line had supporters in Badakhshan and
the Kabul area in the ioth/i6th and uth/i7th
centuries, though by the beginning of the I3th/i9th
century the Ismacllls there seem to have generally
adhered to the Kasim-Shahl line. The community in
Syria generally recognized the Muhammad-Shahi
line. In a period of troubles contact with the Imam
Muhammad BSkir was lost after the year 1210/1796.
In 1304/1887, after a vain search for descendants of
Mubammad Bakir, a section of the Syrian community
recognized the Agha Khani line. In 1957 about 30,000
Syrian Nizarls, living in Salamiyya and the villages
of al-Khawabi, adhered to the Agha Khani line.
About 15,000, known as Djacfariyya and living in
Kadmus, Masyaf, and some villages near Salamiyya,
continued to adhere to the Muhammad-Shahi line
The Nizarl communities, widely dispersed territorially and partially separated by language barriers,
developed largely independently of each other,
especially after the fall of Alamut. They were led by
local leaders, shaykhs or pirs,, who alone could claim
access to the hidden imams The Syrian Nizarls
during the later Alamut period continued to be
ruled by Persian agents sent by the imams. After the
fall of Alamut they at first preserved their political
independence and joined the Muslim efforts to expel
the Mongol invaders in 658/1260 from Syria, but later
were gradually subdued by the Mamluk Sultan
Baybars I. By the end of the year 671/1273 Baybars
controlled all their fortresses. The Isma'llls remained
subjects of the Mamluks and later of the Ottomans,
paying a special tax. During the late i8th and the
i9th centuries they were frequently involved in
clashes with their neighbours, especially with the
numerically stronger NusayrTs, who repeatedly occupied their fortresses. About the middle of the igth
century the Ismacills restored the town of Salamiyya
[q.v.] and settled the surrounding area east of Hamat,
where now approximately two thirds of the communitv live. The last Nusayri attack and occupation
of Kadmus took place in 1920, causing much damage
to property and manuscripts (see N. N. Lewis, The
Isma^llis of Syria today, in Royal Central Asian
In Persia the Ismaclll communities were decimated by massacres but survived after the surrender
of Alamut and the other fortresses in Daylam and
Kuhistan. Alamut was briefly reoccupied in 674/
1275, but lost again in the next year. In the second
half of the 8th/i4th and the first half of the gth/isth
centuries it was repeatedly, though only for short

spans of time, i'n Nizarl hands. The Nizari community in Daylam was still a force in the local power
struggle in this period, though it was usually on the
defensive, especially against the Zaydi rulers of
Lahidjan. After this time it gradually disappeared. In
Kuhistan small IsmaciK communities have survived
in the area of Ka°in and Birdjand. Other Nizarl communities are found in the area of Nishapur in Khurasan, around Kirman, in Sirdjan and the Djabal
Bariz, and in the area of Mafcallat and Yazd.
The IsmacIHs of the Upper Oxus region seern to
have accepted the Nizarl imamate before the end of
the Alamut period, though the exact date and circumstances are unknown. Local tradition in Shughnan
[q.v.] mentions two ddeis, Sayyid Shah Making and
Shah Khamush, who were sent by the imam and
became the founders of the dynasties of pirs and
mtrs ruling Shughnan. In 913/1507-8 Shah Radiyy alDin, who is perhaps to be identified with the imam of
the Muhammad-Shahi line of that name, the father of
Shah Tahir DakkanI, came from Slstan to Badakhshan and with the support of the local Ismacills
established his rule over large parts of the region. In
consequence of quarrels among his supporters he
was killed in spring 1509. In the uth/i7th century
another imam of the Muhammad-Shahi line, Khudaybakhsh, seems to have taken up residence in
B a d a k h s h a n and died there in 1074/1663-4. The
Ismaclll communities continued to be guided by local
dynasties of pirs. There are Nizarl communities
recognizing the Agha Khans also in the area of
Ghazna, in C h i t r a l , Gilgit, H u n z a , where they
are known as Mawla'is, and in the area of Y ark and
and Kashghar.
The date and circumstances of the introduction of
Nizarl Ismacilism in India are obscure. A continuity
of Ismaclli activity in Sind, especially the Multan
area, ever since the early dacwa there, is attested by
sparse notices in the sources. In the first half of the
7th/i3th century this activity extended to Dihli. It
may at this time well have been inspired by emissaries
of the imams of Alamut; but definite evidence is
lacking. The first pirs mentioned in the religious
literature of the Indian Nizarls cannot be dated with
any degree of certainty. The shrine of the earliest one,
Satgur Nur, is in Nawsari in Gudjarat, where the
religious texts place his activity. The presence of nonTayyibl Ismacllis in Gudjarat is vaguely attested for
the first half of the 7th/i3th century. Pir Shams alDin according to the texts came from Persia to Sind
and became the founder of the dynasty of pirs there.
If the traditional pedigree of pirs is reliable, he may
have lived in the first half of the Sth/i^th century, as
some sources suggest. Other sources date him one or
two centuries earlier. His mausoleum is in Multan.
Pir Sadr al-Dm and Pir Hasan Kablr al-DIn of the
9th/i«th century are buried near Uch, south of
Multan. Sadr al-DIn is traditionally considered the
founder and organizer of the Khodja [q.v.] community,
which consists mostly of converts of the Hindu
Lohana caste. Kablr al-Dm's son Imam-Shah after
about the year 875/1470-1 was active in Gudjarat
where he converted numerous Hindus.
Imam-Shah died in 926/1520 and is buried in
Pirana near Ahmadabad. His son and successor Nar
(Nur) Muhammad-Shah (d.94O/i533-4) repudiated the
recognition of the imam in Persia and claimed the
imamate for himself, thus founding a separate sect
whose adherents are known as Imam-Shahls or Satpanthls. The sect later split further around different
lines of pirs. It has tended to revert toward Hinduism.
Its followers, who are to be found chiefly in Gudjarat


and Khandesh, consider themselves mostly as Imami Shi'is, though they recognize the Isma'ili imams before the split (see W. Ivanow, The sect of Imam Shah in Gujrat, in JBBRAS, xxii (1936), 19-70). Other Nizari in Gujrarat remained faithful to the imams in Persia. The great majority of Nizaris on the Indian subcontinent belong to the Khodja community. There are, however, other Nizari groups, such as the Shamsis, followers of Pir Shams al-Din in Fandjar and others. The Khodjas live chiefly in lower Sind, Cutch, Gujjarat, Bombay, and in diaspora in East and South Africa, Ceylon, and Burma.

Doctrine. Pre-Fatimid and Fatimid times: Nothing definite is known about the doctrine of the early supporters of the imamate of Isma'ili and his son Muhammad. Isma'ili sources maintain that the Khattabiyaa (q.v.), the followers of the extremist Shi'i Abu 'l-Khattab (q.v.), constituted the bulk of the early Isma'iliyya. Later Isma'ili doctrine, however, generally condemns Abu 'l-Khattab and does not appear to be substantially influenced by the heresies ascribed to him and his followers (see W. Ivanow, Ibn al-Qaddab, Bombay 1957). The "Umm al-khidah preserved by the Isma'ilis of Badakhshan, in which Abu 'l-Khattab appears as a saintly disciple of Imam Muhammad al-Bakir and his sons are called the founders of Isma'iliism. The sources written not earlier than the beginning of the 4th/10th century and perhaps as late as the early Alaman period. The ideas of the Shi'i ghulat (q.v.) represented in it are for the most part not specifically Isma'ilis and evidently not derived from Isma'ili sources. The work thus must not be considered "proto-Isma'ili".

The doctrine propagated by the pre-Fatimid Isma'ilis revolutionary movement of the second half of the 3rd/9th century can be derived in its outlines from later Isma'ili works and reports of anti-Isma'ili authors. It embodied already the basic framework of the later Isma'ili religious system, though it was consequently modified in some important respects. Fundamental was the distinction between the dhikir exterior or exoteric, and the ba'tin (see Batinyya), inward or esoteric, aspects of religion. The dhikir consists in the apparent, generally accepted meaning of the revealed scriptures and in the religious law laid down in them. It changes with each prophet. The ba'tin consists in the truths (hadi'ik; hidden) concealed in the scriptures and laws, which are unchangeable and are made apparent from them by the i'tifal (q.v.), interpretation, which is often of a cabalistic nature relying on the mystical significance of letters and numbers.

These truths form a gnostic system comprising a cosmology and a cyclical hierohistory. At the basis of the pre-Fatimid cosmology was a myth, only imperfectly reflected in the later sources, according to which the divine imperative kun, consisting of the letters kaf and nun, through duplication formed the two original principles ka'ni and kaddar. Kaudi was the female and kaddar the male principle. The seven letters kaddar were known as the seven higher letters (al-akhir al-sulayyina) which are the archetypes of the seven messenger prophets and their revealed messages. From the two first principles proceeded three spiritual powers, dżadd, fath, and khayal, identified with the three archangels Dibra'ili, Mikail, and Isra'ili, which mediate between the spiritual world and man in the physical world (on this triad see H. Corbin, Le livre réunissant les deux sagesse, Tehran-Paris 1955, Etude préliminaire, 91-112). The cyclical history progresses through seven eras, each inaugurated by an enunciator (najjib) prophet bringing a revealed message. Each of the first six najjibs, Idaun, Noh, Ibrāhīm, Musa, 'Isa, and Muhammad, was followed by a fundament (asas) or silent one (sāμīt), who revealed the ba'tin of the message, and by seven imams. The seventh imam in each era rises in rank and becomes the najjib of the following era, abrogating the law of the previous najjib and bringing a new one. In the era of Muhammad, 'Ali was the asas and Muhammad b. Isma'il the seventh imam. Muhammad b. Isma'il on his reappearance in the near future will become the seventh najjib, the Kā'im or Mahdi (q.v.), and will abrogate the law of Islam. His message will, however, consist in the full revelation of the ba'tin truths without any dhikir law. He will rule the world and then end the physical world, sitting in judgment over humanity. During his absence he is represented by twelve budis residing in the twelve regions (d'asā'ir) of the earth. The cyclical history was sometimes coupled with astrological speculations, and astrological predictions were made specifically concerning the date of the coming of the Kā'im.

Before the coming of the Kā'im the ba'tin must be kept secret and can be revealed to the neophyte only on swearing an oath of initiation with a vow of secrecy and on payment of a due. The initiation, known as badhaq, was no doubt gradual, but there is no evidence of a strictly fixed sequence of grades generally followed at one time or another.

In the pre-Fatimid era religious sources. The imams in Isma'ili religious texts serve mostly ideal functions and cannot be taken as corresponding closely to the actual organization (see W. Ivanow, The organization of the Fātimid propaganda, in JBBRAS, xv (1939), 1-35).

From about the beginning of the 4th/10th century onwards the early cosmology was superseded and partially replaced by a cosmology of Neoplatonic origin, apparently first propounded by the dā'iq al-Nasafi (q.v.). In this cosmology God is described as absolutely beyond the origin, on which the divine imperative kuni kadar, the plants with the vegetative nāmiya; soul develop from them the animals with the sensitive (hiisiyaa) soul develop, and from the latter, man with the rational (nādhā) soul. Al-Nasafi's cosmology was generally adopted in its essentials, though refined and elaborated by the later authors. Some minor points aroused controversy among them. The principles of the spiritual world in this cosmology were identified with terms of the religious sphere. Thus the Intellect in religious terminology was equated with the Pen (Kalam) and the Throne ('Arsh), and the Soul was identified with the Tablet (La'ah) and the Footstool (Kursi) etc. Much stressed were the analogies between the spiritual, astral, and physical worlds and between man as the
microcosm and the physical world as the macrocosm. The official Fāṭimid da'wa apparently did not accept this cosmology until the time of the Caliph al-Mu'izz.

A somewhat different cosmological system was propounded by the dā'ī Ḥamīd al-Dīn al-Kirmānī (q.v.) (d. about 411/1021). Instead of the duality of the Intellect and the Soul his system comprises ten intellects in the spiritual world. The Soul is replaced by the Second Intellect or First Emanation (al-Munbātīkh al-Awsal), proceeding from the lower relation (al-nisba al-adwān) of the First Intellect. The Third Intellect or Second Emanation and First Potential Being, proceeding from the lower relation (al-nisba al-adwān) of the First Intellect, is equated with matter and form (al-hayāt wa 'l-sūra). From the First and Second Intellects proceed seven further intellects. The tenth one is the Active Intellect (al-'Aql al-Fā'dīl) or demigre going the physical world. The structure of the astral and the physical worlds and of the religious hierarchy were similarly modified by al-Kirmānī in close analogy to the spiritual world. The system of al-Kirmānī was not adopted by the Fāṭimid da'wa. Only among the Ṭāyyībīs in the Yemen did it replace the earlier traditional system.

Fāṭimid doctrine, because of the Fāṭimid claim to the imamate, was forced to modify the early doctrine concerning the role of Muḥammad b. Isāmāl as the first imām and Mahdī and the restriction of the number of imāms to seven. ʿUbayd Allāh al-Mahdī at first radically broke with this earlier doctrine by asserting that the imām after Dīyaʾar al-Sādīq had been his son ʿAbd Allāh rather than Isāmāl and that the imāmate continued to be handed down among his descendants without restriction in number. Soon, however, attempts were made to accommodate the Fāṭimid claim to the imāmate with the earlier theory. Muhammad b. Isāmāl was again recognized as imām and as ancestor of the Fāṭimid. His return as the Kāʾīm was sometimes interpreted spiritually, as being realized in the rise of the Fāṭimids, who would gradually fulfill the predictions concerning the Kāʾīm. A second heptad of imāms, often called the deputies (ḥudūf) of the Kāʾīm, was admitted in the era of Muḥammad as a special privilege of the latter. The eschatological expectations in respect to the Kāʾīm were to be fulfilled after the expiration of the second heptade of imāms. This theory also had to be abandoned as the Fāṭimid caliphate continued, though even then the eschatological events generally were expected in the near future (see W. Madelung, Das Imamat in der frühen ismaʿilitischen Lehre, in Isl., xxxvii (1961), 42-125).

Fāṭimid doctrine, in contrast to the pre-Fāṭimid attitude which tended to depreciate the sākīr, consistently maintained the equal importance of the sākīr and the bāṭīn and made every effort to suppress antinomian trends, which, however, often came to the surface among more radical Ismāʿīlī groups. The Ismāʿīlī sīkhi was closely elaborated chiefly by the Kādī al-Nūmān (q.v.) (d. 369/979), whose work Dāʾīʾīm al-Īslām became the most authoritative exposition of it. Ismāʿīlī law agrees in general with Imāmī law, but does not permit the muʿāa (q.v.) temporary marriage and nullifies bequests to a legal heir except with the consent of the other heirs (see A. A A Fyzee, Compendium of Fatimid Law, Simla 1969). In the ritual, Ismāʿīlī sīkhi also agrees generally with Imāmī doctrine (see R. Strohmann, Recht der Ismaʿiliten, in Isl., xxxi (1954), 131-48). It gives, however, full authority to the imām for determining the beginning of a new month rather than requiring the sight of the new moon. In practice the beginning of the month was fixed by astronomical calculation. Thus it fell often one or two days earlier than for the other Muslims. This often led to friction in particular in respect to the beginning and end of the fast month of Ramadān.

Post-Fāṭimid times. Ṭāyyībī doctrine: The Ṭāyyībī community in the Yemen and India preserved a large part of the Fāṭimid religious literature and retained the interest in the gnostic cosmology and cyclical history of the Fāṭimid age. Ṭāyyībī doctrine, however, from the beginning adopted the cosmological system of al-Kirmānī in place of the traditional Fāṭimid system, and modified it by introducing a mythical "drama in heaven", first described by the second dāʿī muḥāfīd Ibrāhīm al-Ḥāmidī (q.v.), which profoundly shaped the Ṭāyyībī gnosis. According to this myth, the two emanations from the First Intellect, the Second and Third Intellects, were rivals for the second rank after the First Intellect. As the Second Intellect reached this position by his superior efforts, the Third Intellect refused to recognize his superiority in rank. In punishment for this failure he fell from the third rank behind the following seven intellects and, after repenting, became stabilized as the Tenth Intellect and demigre (muḍābdār). The physical world was produced out of the spiritual forms (eṣamār) together with the Tenth Intellect refused to recognize the superiority of the Second Intellect and out of the darkness generated by this sin. The Tenth Intellect, also called the Spiritual Ādām (ʿĀdām al-Rūḥānī), tries to regain his original rank by calling the fallen spiritual forms to repentance. The first representative of his daʿwa on earth was the First and Universal Ādām (ʿĀdām al-Āwāl al-Kullī), owner of the body of the ibdāʾ world (al-dhulākh al-ibdāʾī-ya), who opened the first cycle of manifestation (dawr al-kawr) and is distinguished from the Partial Ādām (ʿĀdām al-Dīyaʾī), who opened the present age of concealment (dawr al-satr). After his passing he rose to the horizon of the Tenth (Intellect) and took his place, while the Tenth rose in rank. Similarly the Kāʾīm of each cycle after his passing rises and takes the place of the Tenth, who thus gradually rises until he will join the Second Intellect. Countless cycles of manifestation and concealment succeed each other until the Great Resurrection (Kiyāmāt al-Kiyāmāt) which consummates the megacycle (al-kawr al-aʿsam), sometimes specified to last 360,000 times 360,000 years.

The soul of each believer on his initiation is joined by a point of light, which grows as he advances in knowledge. On his passing it rises to join the soul of the holder of the rank (ḥadd) above him in the hierarchy. It continues to rise from ḥadd to ḥadd until it is gathered together with the souls of all other believers in the light temple (haykal nārān) in the shape of a human being which constitutes the form of the Kāʾīm (suра Kāʾīmīya) of his cycle, which then rises to the horizon of the Tenth. The souls of the unbelievers remain with their bodies, which are dissolved into inorganic matter which is consequently transformed into various harmful creatures and substances in descending order. Depending on the gravity of their sins they may eventually arise again through the ascending forms of life and as human beings may accept the daʿwa or end up in Sīdījīn in torment lasting as long as the megacycle.

Continuing the Fāṭimid tradition Ṭāyyībī doctrine
maintained the equal validity of the ṣahih and the bājin and repudiated antinomian trends. Kādī al-Nuṣāmī’s Daṣākim al-ʿIlām remained the authoritative work of ʿīsh. 

Nizarī doctrine: Owing to the upheavals in the political history of the Nizarī communities, their wide dispersal, the language barriers between them, and the repeated loss of large parts of their religious literature, Nizarī doctrine is marked by major shifts in time and nearly completely independent local traditions.

Doctrinal discipline: While the preaching (daʿawāʾ ḍajidda), most eloquently formulated, though not originated, by Ḥasan-ʿī Ṣabbāḥ himself. The new preaching entailed an apologetic reformation of the old ʿīshī doctrine of taʿlim, i.e., the authoritative teaching in religion, which could be carried out only by a divinely chosen imām in every age after the Prophet. Ḥasan-ʿī Ṣabbāḥ reaffirmed the need for such a teacher as a dictate of reason and went on to prove that only the Ismāʿillī imām fulfilled this need. In his argumentation he seems to have stressed the autonomous authority of each imām, independent of his predecessors, thus unwittingly authorizing the later shifts of doctrine. The doctrine of taʿlim had a strong impact in the Sunnī world, as is reflected by its elaborate refutation by al-Ghāzālī [g.v.] and others.

A religious revolution took place under the fourth lord of Alamūt, Ḥasan ʿalā dhikriḥi al-ʿilām (557/1162-561/1166), who on 17 Ramaḍān 559/8 Aug. 1164 solemnly proclaimed the resurrection (kiyāma) in the name of the imām, whose ʿududūna or deputy (khālīfā) he declared himself to be. In consonance with the Ismāʿillī expectations concerning the kiyāma he announced the abrogation of the ʿarshīa, which so far had been strictly enforced by the lords of Alamūt. The resurrection was interpreted spiritually as the manifestation of the unveiled Truth in the imām which actualized Paradise for the believers who could grasp it, while it condemned the non-Ismāʿillī opponents to spiritual non-being, i.e., Hell. After the murder of Ḥasan by a brother-in-law opposed to the abolition of the ʿarshīa, the doctrine of the kiyāma was further elaborated by his son and successor Muhammad (561/1166-607/1210). Ḥasan before his death seems to have hinted that he himself was the imām at least spiritually. Muḥammad now maintained that his father had been the imām also by physical descent, apparently alleging that he was the son of a descendant of ʿImām Nīzār who had secretly found refuge in Alamūt. The line of imāms thus continued through Ḥasan and Muḥammad in the lords of Alamūt. Muḥammad put the imām, and specifically the present imām, at the centre of the doctrine of the kiyāma. The resurrection consisted in viewing God in the spiritual reality of the imām. This doctrine entailed the exaltation of the imām over the prophet, which became characteristic of Nīzārī thought. At the same time a new figure, the imām-kaʿīm, was introduced in the cyclical history. The imām-kaʿīm in the various eras was identified as Melchizedek (Malik al-Ṣalām), Dhūʾ ʿl-Karnayn, Khīḍr, Maʿadd, and, in the era of Muḥammad, as ʿAll. He was recognized by the prophets in each era as the locus of the divinity. In the kiyāma the imām-kaʿīm, i.e., the present imām, who is identical with ʿAll, appears openly in his spiritual reality to the believer, who in his spiritual relationship to the imām is identical with Salmān [g.v.]. The ranks of the teaching hierarchy intervening between the imām and the believer have, in agreement with the Ismāʿillī expectations concerning the kiyāma, faded away. There are only three categories of men left: the opponents (aḥl al-taqadda) of the imām who adhere to the ākhari a, the ordinary followers of the imām or people of gradation (aḥl al-tarāttub), who have gone beyond the ākhari a to the bājin and have found partial truth, and the people of union (aḥl al-awāḥda), who see the imām in his true nature discarding all appearances and have reached the realm of full truth. The kiyāma doctrine was clearly influenced by Šūfi terminology and prepared the way for the close relationship between later Nīzārī Ismāʿillīsm and Šūfism.

The kiyāma doctrine was repudiated by Muḥammad's son and successor Djalāl al-Dīn Ḥasan (607/1210-618/1221), who proclaimed his adherence to Sunnī Islam, publicly cursed his predecessors, and imposed the Sunnī ākhari a on his followers, inviting Sunnī scholars to instruct him. As he continued to be considered by them as the imām, his orders were accepted without opposition. There is evidence that at least before his death he acted towards his followers again in the fashion of an Ismāʿillī imām. Under his son ʿAlī (618/1221-653/1255) the enforcement of the ākhari a was relaxed, though it was not officially abolished. The adjusted doctrine which now was developed to explain the new religious situation is expounded in the contemporary Ismāʿillī works of Naṣīr al-Dīn al-Ṭūsī [g.v.]. The reimpersonation of the ākhari a by Djalāl al-Dīn Ḥasan was interpreted as a return to precautionary dissimulation (ṭabiyya) and a new period of concealment (sair), when the truth is hidden in the bājin, in contrast to the preceding period of kiyāma, when the unveiled truth was apparent and available to all. The kiyāma proclaimed by Ḥasan ʿalā dhikriḥi l-ʿilām, coming at about the middle of the millennium of the era of the Prophet Muḥammad, was merely anticipatory of the final kiyāma at the end of it. In the era of Muḥammad periods of sair and kiyāma may alternate according to the decision of each imām, since every imām is a potential imām-kaʿīm. The state of spiritual union (awāḥda) in the time of sair is restricted to the ʿududūna of the imām, who proclaims the doctrine of the kiyāma (tafīyya) and possesses the truth of the imām, with whom he is consubstantial. The aḥl al-tarāttub are divided into the strong (akwiyd) and the weak (dwaṣad) according to their closeness to the truth.

Conditions in the post-Alamūt period favoured the adoption of Šūfī ways of life by the imāms and their followers also externally. Ismāʿillī ideas were often camouflaged in Šūfī forms of expression, especially in poetry. Doctrinal works were written again from the 9th/16th century on, at a time when the victory of Shiʿīsm in Persia permitted the Nīzārīs and their imāms to act somewhat more openly. The doctrine of the late Alamūt period as expressed by Naṣīr al-Dīn al-Ṭūsī was essentially retained. Works of the ʿAṣmāʿīd age, which still influenced al-Ṭūsī, were no longer available. Interest in the Ismāʿillī cosmology and cyclical history diminished in the realm of folk speech as the revealer of the spiritual truth and only access to the essence of the imām, already stressed by al-Ṭūsī, was further elaborated.

A special literary tradition within Nīzārī Ismāʿillīsm in Persian was retained by the community of Badakhshan. Although many works of the Alamūt and post-Alamūt period found their way there, the community remained particularly attached to the works genuine and spurious, of Naṣīr-ʿl-Khansraw.
Fāṭimid doctrine in the adaptation of Naṣir, including the Fāṭimid cosmology, thus maintained their influence. The community of Badalshahīn also transmitted and revered the Umm al-kitāb representing largely non-Iṣmāʿīlī thought.

Syrian Naṣārī literature, written in Arabic, developed independently of the Persian literature, even during the Alamūt period. Persian works were not translated into Arabic or vice-versa. The Syrian communities preserved a substantial selection of Fāṭimid religious literature, partially different from those preserved by the Ṭāyrībīs. Even though theḥiyāma was proclaimed, apparently with some delay, in Syria, theḥiyāma doctrine had practically no impact there. The scholarly doctrine continued mostly in the Fāṭimid tradition. Syrian doctrinal works, while concentrating on the traditional cosmology and cyclical history, virtually ignore the current imam, the central figure in the Persian Alamūt and post-Alamūt doctrine. In religious literature of a popular type Raḥīq al-Dīn Sīrān is extolled as a saintly hero and his cosmic rank is described in terms appropriate to the imām. Much of the Syrian Iṣmāʿīlī literature was destroyed later during the feuds with neighboring communities.

Among the Khodjīs Iṣmāʿīlī literature, both Persian and Arabic, has been virtually unknown. Only a single Persian work, the Pandiyāl-i Qandamardī containing a collection of religious and moral admonitions of the Nizārī Imām al-Mustanṣir (end of the 9th/10th century), was accepted as a sacred book, perhaps a century after his death. The traditional religious literature of the Khodjīs and the Imām Shīrīn is known as Satpanth [q.v.], a genre, i.e., True Path, designating the religion preached in it. It consists of numerous writings in verse form, called gnans, written in, or translated into, several Indian languages. Most of them are ascribed to the medieval pirs, but cannot be dated exactly and probably have undergone changes in the transmission. They contain hymns, moral and religious instruction, legendary histories of the pirs, and descriptions of their miracles, but no formulated creed or theology. Their religious content is a mixture of Islamic anaqa and Hindu, especially popular Tantric, elements. While idol worship is condemned, Hindu mythology is accepted. All is described as the Tenth Avatar or incarnation of the deity, and the imāms are identical with him. The Kurān is considered the last of the Vedas, which are viewed as holy scriptures whose true interpretation is known to the pirs. The religious role of the pir or guru is exalted. Acceptance of the true religion will free the believer from further rebirths and open paradise for him, which is described in Islamic terms, while those failing to recognize the imāms must pass through another cycle of rebirths. The traditional Iṣmāʿīlī cosmology, cyclical history, and hierarchy are unknown (see W. Ivanow, Satpanth, in Collectanea I. The Iṣmāʿīlī Society, Leiden 1948, 1-74).

Iṣmāʿīliyya, a town in Egypt on the western bank of the Suez Canal and on the northern shore of Lake Timsah. The town originated from huts of workers and engineers engaged in excavating the Suez Canal. Its foundations were laid by the Inspector General of the Suez Canal Company on 27 April 1862. After the succession of the Khedive Iṣmāʿīl to the throne on 18 January 1863 it was called Iṣmāʿīliyya. In 1864 a network of streets and squares, a central square (maydān), a government building (sarāy) and a pump for water-supply were established, and in 1868 the town was connected to the Egyptian railway network. When the digging of the Canal was completed, most of the personnel engaged on it moved to Port Saʿīd, and from 1870 onwards the number of Iṣmāʿīliyya inhabitants was in the range of about 3,000 for almost two decades. From the 1890s the town grew steadily to more than 15,000 inhabitants after World War I and more than 50,000 after World War II. From World War I until the final evacuation of British troops in the 1950s, a large British army and air force base was situated near Iṣmāʿīliyya, and many foreign residents dwelt in the town. In 1928 Ḥasan al-Banna [q.v.] founded in Iṣmāʿīliyya the movement of al-Ikhwān al-adilṣ (the Bohorās or Khodjīs) [q.v.]. During the unilateral abrogation of the Anglo-Egyptian treaty of 1936 in October 1951, Iṣmāʿīliyya became the scene of frequent clashes between British troops and Egyptian police, culminating in a six-hour battle on 25 January 1952. This resulted, one day later, in the Cairo riots known as "black Saturday".

Until 1960 Iṣmāʿīliyya formed part of the Canal Governorate, but in that year it became the centre of a separate province (muḥāfaẓa) which included al-Kanṭara to the north and al-Tall al-Kabīr to the west. In 1966 the number of inhabitants of Iṣmāʿīliyya province amounted to 344,789, of whom 162,370 lived in Iṣmāʿīliyya, and many foreign residents dwelt in the town. In 1928 Ḥasan al-Banna [q.v.] founded in Iṣmāʿīliyya the movement of al-Ikhwān al-adilṣ (the Bohorās or Khodjīs) [q.v.]. During the unilateral abrogation of the Anglo-Egyptian treaty of 1936 in October 1951, Iṣmāʿīliyya became the scene of frequent clashes between British troops and Egyptian police, culminating in a six-hour battle on 25 January 1952. This resulted, one day later, in the Cairo riots known as "black Saturday".

ISNA, Arabic name of a town in Upper Egypt (Egyptian Te-snet, Coptic Sne; Greek Latopolis, from the fish Latos worshipped there; in European accounts Esne, Esnè), lying on the left bank of the Suez Canal. Its foundations were laid by the Inspector General of the Suez Canal Company on 27 April 1862. After the succession of the Khedive Iṣmāʿīl to the throne on 18 January 1863 it was called Iṣmāʿīliyya. In 1864 a network of streets and squares, a central square (maydān), a government building (sarāy) and a pump for water-supply were established, and in 1868 the town was connected to the Egyptian railway network. When the digging of the Canal was completed, most of the personnel engaged on it moved to Port Saʿīd, and from 1870 onwards the number of Iṣmāʿīliyya inhabitants was in the range of about 3,000 for almost two decades. From the 1890s the town grew steadily to more than 15,000 inhabitants after World War I and more than 50,000 after World War II. From World War I until the final evacuation of British troops in the 1950s, a large British army and air force base was situated near Iṣmāʿīliyya, and many foreign residents dwelt in the town. In 1928 Ḥasan al-Banna [q.v.] founded in Iṣmāʿīliyya the movement of al-Ikhwān al-adilṣ (the Bohorās or Khodjīs) [q.v.]. During the unilateral abrogation of the Anglo-Egyptian treaty of 1936 in October 1951, Iṣmāʿīliyya became the scene of frequent clashes between British troops and Egyptian police, culminating in a six-hour battle on 25 January 1952. This resulted, one day later, in the Cairo riots known as "black Saturday".

ISNA, Arabic name of a town in Upper Egypt (Egyptian Te-snet, Coptic Sne; Greek Latopolis, from the fish Latos worshipped there; in European accounts Esne, Esnè), lying on the left bank of the Suez Canal.
the Nile halfway between Luxor and Kundu. It was
for a time the capital of a mudiriyya, and is now a
markaz in the mudiriyya of Kafr [q.v.], with over
20,000 inhabitants. It is celebrated for the ruins of
the temple of the god Chnum, which dates from the
Ptolemaic period, in which a number of Roman
emperors are depicted in the garb of the Pharaohs.
In the Muslim period Isna was a flourishing provincial
town. According to Edfuwi quoted by Makrizi the
town had 10,000 houses, and produced annually
40,000 irredd of dates and 10,000 irredd of zabib.
At the present time blue cotton fabric used through-
out Egypt is woven there.

Bibliography: Yāqūt, i, 265 f.; Makrizi, Khīṭaṣa, i, 237; Amelineau, Géographie de l’Égypte, 172; A. Boineq Bey, Dictionnaire géographique de l’Égypte, Cairo 1899, 183. The most detailed
account, which also takes account of economic
conditions, is by Makrizi, in the Mamkonian family (see Hübshmann, 249; Marquart, Ernstlarh, 165-7).

At the time of the Arab invasion of Persia, the
Sāsānīd Spahpah of the East established himself in
the Caspian fastnesses of Tabaristan, where he invi-
eted the fugitive Emperor Yazidīd III to take refuge
(Christensen, 507). We now have the New Persian
form ispahbadh, defined in the Muqtaṣar al-tawāri̇kh, 420, as “Amir” or “Amr-Spahpah.” An Arabic
version of this becomes ispahbaddh (cf. Dīawānī, al-Mubarrad, ed. Sachau, 99; Līsān al-ʿarabī, v, 8; in Tādār al-ʿarās, ii, 569, we have isbahbaddhān, said to occur in a verse of Diyarī, or, more rarely, ispahbaddh (cf. Brünell, al-ʾAblār
al-bākiyya, 101, tr. 109, following Marquart’s correc-
tion of anabaddh, the alleged title of the princes
of Gurgān).

The Isbahbadhs of Gīlān are early mentioned in
the Arabic accounts of the conquests. Thus in 22/643
Suwayd b. Mukarrīn wrote to al-Farrukhān the
“Isbahbadh of Khurāsān over Tabaristan and the
Djīl Dīllān” (Ṭabarī, i, 2659). Later in the century,
the references become more frequent, e.g. in the
story of Kaṭarī b. al-Fudūjī’s revolt (Yā’qūbī, Historiae, ii, 329, years 78-9697-9), and in that of ʿUmar b.
Abī l-ʾSaʿīd’s revolt in Ray ( Ibn al-A ḥlārī, iv, 355-6,
year 83702). Coins of these Isbahbadhs, with Pahlavi
titles, appear shortly after this (see a. D. Mordt-
mann, in ZDMG, xxxiii (1879), 110-12; R. Vasmer, E1, art. Māsāndarān, appendix on coins). These Isb-
haabadhs are those of the Dābbūyid family (401/466-758), a parallel line of which formed the long-
lived Pāhdūṣānīd dynasty of Rūyān and western
Tabaristan (see Dābūya and Bādūsānīds).

Another local line in the mountains of Tabaristan
which used Isbahbadh as the title of its chiefs was
that of the Kārīnwand-ḫūfūdānīyān (572 to 225/
839-40), who latterly recognized the Bawandās (see
below) as overlords. The last ruler of this line was
the celebrated Māzyār b. Kārīn [q.v.], who was exe-
cuted during the caliphate of al-Muʾtasim for plot-
ing a Zoroastrian revolt, and who claimed to be
“Djīl-i Dīllān, Isbahbadh Khurāsān, al-Māzyār, Mu-
ḥammad b. Kārīn, Muwālī (i.e. not Mawla) Anūr al-
Muʾmin” (Yā’qūbī, Buldān, 277, tr. 81, cf. idem, Historiae, ii, 582, and Tabarī, iii, 1295).

Lastly amongst these Caspian dynasties, the Bā-
wāndis of Tabaristan used the title of Isbahbadh.
This family can be traced from the time of the Arab
invasions till well after the Mongol conquests; the
second of the three lines of the dynasty (466/666/
10741210) is specifically known as that of the Isbah-
badhīyān (see Bawand). As well as being thus used
as a regnal title by the Bawāndis of the early 7th/
13th century, we find Isbahbadh used in this region,
as a common noun meaning "local chieftain"; cf. Ibn Isfandiyar, Ta’rikh-i Tabaristan, ed. Ibkhāl, ii, 171, tr. Browne, 255, where Shams al-Mulk Rustam II b. Ardašīr is greeted on his accession in 602/1206 by "the isfahbadin, the Bawandān, the military leaders and the town notables".

However, the title was also known amongst the Daylamids of the south-western corner of the Caspian, as well as in the south-eastern one; in the time of the Ziyārid Waḥammadī (mid-4th/10th century) there was an Ispahbadh of Mīrghān, named as Ḵᵛājā-i Dālā (A. Kasravi, Ṣahābūr-dān-i gūn-nām, i, 57-8). During the first two centuries or so of Islam, the title also persisted to the east of the Caspian, on the northern and eastern marches of Khorāsān. The Ispahbadh of Balkh was amongst the local princes of Bāḏgēš and Țuḵhārāstān who were persuaded by the Ḵawāfīd Ṭehrānī Nizāk (see Ḵayātīl) to throw off allegiance to Ijlūṭayba b. Muslim’s Arabs in 90/709 (Tabarī, ii, 1206, 1218, cf. also 1300); and shortly afterwards, in 917/936, an Ispahbadh of Nāsā, named as Īlghānd (see Justi, Ḥarāmās Namesbuch, 142), acted as commander of the Khākān of the Western Turks’ army against the Arabs (Ṭabarī, ii, 1597-9). An interesting usage of the term is in an inscription on the Kaʿba dating from 200/815-16 in al-Maʿmūn’s Caliphate. This commemorates the for- warding to Mecca from Khurasān of the captured governor of Mecca and held the city for a while of the Seldūqīs: in 487/1094 or 488/1095 the Amir as al-Iṣhāqīnīn (see Justi, Iranisches Namenbuch, 5) was an Ispahbadh of Mughan, named as Ḵᵛājā-i Dālā (Asrākī, Ḵᵛājā-i Dālā Makka, ed. Ẅistenfeld, i, 158; Répertoire, i, 92-3, No. 116); but the usage of this title by the Turkish slave general Sebūkṭūṁīn al-Muʿīzzī by ordering, amongst other things, that he should be addressed as "Ispahsalar"; after this commander’s death, Bāḵtiyr ī in 360/974-5 offered the title to the general Alptūnīn, leader of his rebellious Turkish troops (Miskawayh, in Eclipse of the ‘Abbasid Caliphate, ii, 258, 293, tr. v, 273, 314; Ibrāhīm b. Hīāl al-Sāḥibī, Rûṣūlī, Beirut 1909, 163; see also instances in Rūḥāwārī, in Eclipse, iii, 81, 107, tr. vi, 82, 111). But as disorder grew in the Buyid provinces under ‘Abd al-Dawla’s weaker successors, the title became debased, and as appears from several cita- tions in the sources it came merely to mean "commander" or even just "officer" as distinct from the rank-and-file; cf. Ibn al-Dījwālī, al-Munīqām, viii, 72: ġāmāʾi mā in-šīrāz wa jīb al-ḥavarāsīyya, and on the whole topic of Būyid usage, M. Kabīr, The Buyukid dynasty of Baghdad, Calcutta 1964, 137-9.

Amongst other dynasties of the east, however, the title usually retained its original, more exalted meaning. It is attested in this sense for the Ẓafarīd army of Ḵhalīf b. Aḥmad’s time (reigned 352/963-393/1003), and is distinguished in the sources from the Ḥādīq al-Ḥudjīdāb, al-Ḥudjīdāb al-Kabīr or Ṣāḥib al-Dījvāh for the supreme commander of the Buṭyid army [see Ḥājīb, iii. Eastern dynasties], but Ispahsalar was also used and carried with it an especial honour. Thus in 360/974, ʿĪzāl-Dawla Bāḵtiyr ī conciliated the Turkish slave general Sebūkṭūṁīn al-Muʿīzzī by ordering, amongst other things, that he should be addressed as "Ispahsalar"; after this commander’s death, Bāḵtiyr ī in 364/974-5 offered the title to the general Alptūnīn, leader of his rebellious Turkish troops (Miskawayh, in Eclipse of the ‘Abbasid Caliphate, ii, 258, 293, tr. v, 273, 314; Ibrāhīm b. Hīāl al-Sāḥibī, Rûṣūlī, Beirut 1909, 163; see also instances in Rūḥāwārī, in Eclipse, iii, 81, 107, tr. vi, 82, 111). But as disorder grew in the Buyid provinces under ‘Abd al-Dawla’s weaker successors, the title became debased, and as appears from several cita- tions in the sources it came merely to mean "commander" or even just "officer" as distinct from the rank-and-file; cf. Ibn al-Dījwālī, al-Munīqām, viii, 72: ġāmāʾi mā in-šīrāz wa jīb al-ḥavarāsīyya, and on the whole topic of Būyid usage, M. Kabīr, The Buyukid dynasty of Baghdad, Calcutta 1964, 137-9.

Amongst other dynasties of the east, however, the title usually retained its original, more exalted meaning. It is attested in this sense for the Ẓafarīd army of Ḵhalīf b. Aḥmad’s time (reigned 352/963-393/1003), and is distinguished in the sources from the Ḥādīq al-Ḥudjīdāb, who may have been the com- mander of the slave troops only (C. E. Bosworth, The armies of the Ẓafarīds, in BSOAS, xxxi (1968), 547 n. 52). The Turkish dynasties which established themselves in the eastern and central lands of the Caliphate from the end of the 4th/10th century onwards adopted the existing Arabic and Persian mili- tary terminology just as they adopted much of the existing administrative practice. In Ẓafarīd usage, Ispahsalar alternates with Arabic equivalents for "supreme commander" like Ḥādīq al-Ḥudjīdāb and Ḥādīq al-Ḥudjīdāb al-Kabīr and with the Turkish one Subaši, and these are used, for example, to denote the commander-in-chief of the armies in Khurāsān or India; the simple term sālār or Ḥādīq apparently denoted a step lower, that of "commander" or "general of- ficer": Yet the compound and simple terms are both used for the commanders of special component divi- sions of the army as a whole; we hear of the com- mander of the Indian army of the Ẓafarīds (1021-31) at Lahore, convenient for raiding into India (C. E. Bosworth, Ghaznevid military organisation, in Isl., xxxvi (1960), 44).

Great Seldūq military terminology frequently em- ployed such expressions as Ispahsalar-i Dūrg or Amīr-i Ispahsalar for the commander-in-chief of the
whole Saljiq forces (cf. I. Kafesoglu, Sultan Melikşah derinde buyuk Selçuklu imperatorluğu, Istanbul 1953, 158), or else for the commander of the army in an important region like Khurāsān (cf. Bundarī, Zubdāt al-nusra, 56). These phrases were further used as general terms for "commander, general officer," alternating with such expressions as Amir al-umārah, Amir-i amirān, Amir-sālār, Muḥammad-al-diyās, Sabāqān, etc.; this diversity of nomenclature was handed on to the Sāliqūq of ṫûm in the 7th/13th century (cf. I. H. Uzuncarsılı, Osmancı devleti teşkilâtına medhalı, Istanbul 1945, 59-60). The Amir-i Isfahsālar often appears in official letters and investiture diplomas emanating from both the Great Saljūqs and their eastern neighbours and initial vassals, the Khwārzm-Shāh. This title was usually conferred on a newly-appointed Shībna (q.v.), military governor or commander of the police. One document in Mun- tedab al-Dīn Dīwūyayīn's Atatāb al-kal-āb, ed. Kazwīnī and Ikbāl, Tehran 1329/1950, 74 ff., emanating from Sanjāş's chancery, describes how both the deceased amirs ʿImād al-Dīn Kāmā and his son ʿAllāʾ al-Dīn Abū Bakr were anūrs of Khurāsān with the title of Amir-i Isfahsālar; this designation and the governorship of the Balkh region are now conferred on Abū Bakr's son ʿImād al-Dīn Abū ʿI-Ḥāfīz. Especially interesting is the detailing of the insignia of a Sālār-i Isfahān and Shīb-nāra (i.e. the governor of a strategically-situated frontier province): distinctive official robes, a horse with special saddle and accoutrements; a jewelled collar; a shield and sword-belt; the right to a salute of kettledrums in the military encampments; a standard; a tent of regal dimensions; etc. (see also H. Horst, Die Staatsverwaltung der Grosskungen und Ḥorasmīsāhs (1038-1231), Wiesbaden 1964, 161). A peculiar expression found in the military itetlture of the Khwārzm-Shāh is that of Khār Isfahsālar, apparently meaning "commander of a ṯāḥih or frontier region" (Khār, Turkish "frontier region," roughly synonymous with ʿāra, see Kāshgharī, Divān lughāt al-turk, tr. Atalay, i, 324-5: Khār "uncultivated, vacant turk, kir (cf. Kāshgharī's Marām, ʿāra, azāz- Khār al-Dīn Abu Bakr were amirs of Khurāsān with the title of Amir-i Isfahsālar; this designation and the governorship of the Balkh region are now conferred on Abū Bakr's son ʿImād al-Dīn Abū ʿI-Ḥāfīz. Especially interesting is the detailing of the insignia of a Sālār-i Isfahān and Shīb-nāra (i.e. the governor of a strategically-situated frontier province): distinctive official robes, a horse with special saddle and accoutrements; a jewelled collar; a shield and sword-belt; the right to a salute of kettledrums in the military encampments; a standard; a tent of regal dimensions; etc. (see also H. Horst, Die Staatsverwaltung der Grosskungen und Ḥorasmīsāhs (1038-1231), Wiesbaden 1964, 161). A peculiar expression found in the military itetlture of the Khwārzm-Shāh is that of Khār Isfahsālar, apparently meaning "commander of a ṯāḥih or frontier region" (Khār, Turkish "frontier region," roughly synonymous with ʿāra, see Kāshgharī, Divān lughāt al-turk, tr. Atalay, i, 324-5: Khār "uncultivated, vacant turk, kir (cf. Kāshgharī's Marām, ʿāra, azāz-
further given to the commanders of provincial armies or town garrisons, especially when these were formed of mercenary troops (‘askıryaya). Van Berchem’s examination of Börd inscriptions indicated that the titles al-Amir al-Isfahsalar al-Aqljali al-Sayyid al-Kabir were a set formula in the designation of these Atabegs of Damascus, from Zahir al-Din Tughlign onwards; an interesting point is that though the lesser titles might be borne by subordinate members of the family, e.g. the Atabeg’s wali al-‘adad or heir, the exalted titles al-‘Ablabak and al-Isfahsalar were reserved for the Atabeg himself. As examples of other leading figures of the period using the titles al-Amir al-Isfahsalar, one may cite Aşık Şonkor al-Bursuki of Mosul; Şirkhü when he was in the service of Nūr al-Din al-Zangi; the commander of Şirkhü and Şalha al-Din, Kara Kuş; Şalha al-Din’s commander Karaga; Şalha al-Din himself as addressed in letters from Nūr al-Din; and by al-Malik al-Mu’azzam, Şharafl al-Din Isfahsalar al-Adall when he was governor of Şalha in the Hāvarā, ‘Izz al-Din Aybak (M. van Berchem, Épigraphie des Atabeks de Damas, in Florilegium Melchior de Vogüé, Paris 1909, 32–9; idem, Matériaux pour un Corpus inscriptionum arabicarum, i. Égypte, Paris 1903, 638–42, No. 458; idem, Eine arabisch Inschrift aus dem Ostjordanlande, in ZDPV, xvi (1893), 85–6, corrected in Matériaux, i, 640–1; Ibn al-Kalânaši, ed. Amedroz, 167, 193, 197, 327 and passim; Abū Shama, Kitāb al-Rawaqlaym, Cairo 1287–8/1870–1, i, 161; Hasan al-Bābšā, al-‘Ablabak al-İsmaā‘iyya, Cairo 1957, 150–7).

The title Isfahsaldr and the nisba of al-Isfahsaldr both survived into the 17th/13th century and beyond amongst the Mamluks of Syria and Egypt, the latter term being found as a component in the titles of the great amirs and the second term in their designations on objects d’art and in inscriptions (e.g. the inscription on the madrasa and mausoleum built in 715/1315 by the Amīr Şonkor al-Sa’di, see Matériaux, i, 723, No. 529). According to Ibn Faḍl Allāh al-Umnari, cited in Şuhb al-‘adad, vi, 7–8, the honorific al-isfahsaldrī was specially reserved for the ummari al-fahlakanāh, but he goes on to say that its use had been abandoned in his own time (sc. the last decades of the 8th/14th century), perhaps because of the term’s debasement, the common people were using the term Isbahsaldr for all the guards around the sultan’s circle.

Nevertheless, we still meet İsfahsalar in use as one of the titles of the Amīr Şayf al-Din Yaṣhbak, the Duvādār and commander-in-chief of the Egyptian army, carved on his palace in 880/1475–6 (Matériaux, i, 452, No. 305).

This seems to be the end of its use in the central lands of Islam. Although İsfahsaldr appears as a common noun in Ottoman sources, it was not a title in the Ottoman Empire the usual title of the commander-in-chief was Serdar or Ser‘asker (qq.v.).

(ii. MUSLIM INDIA)

From Ghaznavid usage (see above), the term passed to the Ghurids and thence to the Dihlī sultans in Muslim India. In the 7th/13th and 8th/14th centuries we can discern two or probably three usages of İsfahsaldr. Firstly, it denotes the commander-in-chief of the Ghurid army; in his inscription on the Kuwwat al-İslam mosque in Dihlī (857/1251), Kūth al-Dīn Aybak describes himself as Amīr-ı İsfahsalar-ı Aqljali-ı Kabīr (J. Horovitz, The inscriptions of Muhammad Ibn Sām, in Epigraphia Indo-Moslemica, Calcutta 1911–12, 13). Secondly, in it denotes the 7th/13th century an officer who in theory commanded 100 cavalry, that officer below the rank of amīr (see the description of the decimal chain of command in Barān’s Ta‘rīkh-i Firuzshāhi, ed. Syed Abdul Khān, Calcutta 1862, 145); but in the 8th/14th century under the Tughrīlids, the İsfahsaldr had probably sunk to the command of 10 men only, the equivalent of a sarhaq in the empire of the 12th/18th centuries. Finally, it seems to be a general term denoting “commander of high rank,” “general officer”; the last title refers to his grandfather İz iz al-Dīn İṣsam, who was ‘Arīd or chief of military affairs and Wakīl-i Dar under Balban (later 7th/13th century), as İsfahsaldr (Futuh al-salādīn, ed. A. S. Usha, Madras 1948, 447–8). By a curious coincidence, the maternal grandfather of the historian Baranī also held the office of Wakīl-i Dar [and] Bārbak in the same reign, and is called the İsfahsaldr Humād al-Dīn (Barani, op. cit., 41). The title [Sipah] Salar is given already in the early 8th/14th century to the warrior-saint Mas‘ūd Ghażlān of Bahraṇī, who allegedly flourished in early Ghaznavid times; this title is probably meant in a general sense, unless it is a reminiscence of the Ghaznavid title Salar given to the commander of the Indian ghāzīn (see above, and also gahzi mi‘ās). Under the Lodī sultans of Dihlī in the 15th and early 16th centuries, İsfahsaldr was possibly used in the sense of “general officer” (‘Abd al-‘Āzīz Ḥasan, Ta‘rīkh-i Şer Şahā, ed. S. M. Iqām al-Dīn, Dacca 1964, i, 6).

In Mughal usage, the term İsfahsaldr is sometimes applied to the Khānkāhānīn, being especially applicable when that officer took the field in the absence of his sovereign (see Nizām al-Dīn Ahmad, Ţabakāt-i Akbarī, ed. B. De, Calcutta 1932, ii, 425–6, and Kāṁgār Ḫusayn, Ma‘ālik al-‘aṣrār, B. M. Ms. Or. 171, ff. 117b, 120a). Similarly in the Deccan, the historian Fārsīgha appears to use İsfahsaldr as a synonym for Amīr al-‘umārā (see Ta‘rīkh-i Farigāh, Kāmpūr 1290/1874, 279). In the Sultanate of Bengal during the 9th/15th century, İsfahsaldr was evidently used for “supreme commander”. The Chinese interpreter Mahuan, who visited Bengal with a Chinese embassy in about 811/1408–9, remarks that “they have a standing army; the chief officer in kind, the commander-in-chief of which is called Pa-szu-la-urh” (G. Phillips, Mahuan’s account of the kingdom of Bengal, in JRAS (1895), 532, also in N. K. Bhattacharji, Coinage and chronology of the early independent Sultans of Bengal, Cambridge 1922, 171).

ISPARTA, town in south-west Turkey (Pisidia), situated at an altitude of 1025 m., in a fertile plain between Burdur and Egridir, the Apollonia-Sozopolis of antiquity. The modern name preserves that of the Byzantine fortress Saporda (not Baris Pisidiae, see E. Honigmann in Byzantinon, xiv (1939), 655); in Muslim sources of the 7th/8th/13th–14th centuries it appears as Sabarta. After its capture by the Saltikiks in 600–1/1203–4 it belonged to the Western frontier-province of their dominions. With the break-up of the Saltikik empire, the Hamid-ogullars (q.v.), whose base was Egridir, incorporated the Western frontier-province of their dominions. In 783/1381 the Ottoman Sanjak of Hamid-ili, later becoming its chef-lieu. It was the native town of the
reformer Khalil Hamid Pasha (d. 1785) who erected there several public buildings and a library. As the seat of the Metropolitan of Pisidia (from the middle of the 8th/14th century) Isparta had several churches and a seat of the Metropolitan of Pisidia (from the middle of the 8th/14th century) Isparta had several churches. After the First World War, in earlier days its chief products were textiles and attar of roses; the carpet industry has become increasingly important since the end of the 19th century.

The town, which in later Ottoman times was called Hamidibad, is now the capital of the vilayet of Isparta, which comprises the haseis of Isparta, Egridir, Uluborlu, Yalvaç, Sarki Karaağaç and Sütçüler. The population of the town in 1960 was 35,981.

ISPENDEJEE, Ottoman name of an 'urfî ('urfî) tax levied on adult non-Muslim subjects, and amounting usually to 25 akces a year. Neither of the explanations advanced for its etymology (pendjik [q.v.], Hammer-Purgstall, Staatsverfassung, i, 213; spenah: C. Trubella, in THIM, i, 63) is convincing; in texts of the first half of the 9th/15th century (e.g. H. İnalci, ed.), Sârîs-i Defter-i Sancak-Sîr Arous, Ankara 1954, p. 130) it is spelled ispendjê. The oldest reference to this tax belong to the reign of Bayezid I (Arus, p. 103). According to this register (of 835/ 1431; see its introduction, p. xxxivii), ispendjê of 25 akces was collected from married males, whilst 6 akces, under the name bive resmi, was collected from widows. According to the kâmînamê of Mehmed II (MOG, 28-9) every married non-Muslim was to pay 25 akces to his sipâhi, and if he had an adult son living at home he was to pay ispendjê for him too. The same amount usually is prescribed in kâmînamên of the 10th/16th and 11th/17th centuries (see Ö. L. Barkan, Kânînamân, Istanbul 1943, index); occasionally it is less (20 akces: Kerkiûk) or more (30 akces: Cyprus). A non-Muslim who embraced Islam became liable instead to bina rekim [q.v.].

The Ottomans regarded this tax as a poll-tax paid to the timarlord or as the counterpart of efî-i resmi [q.v.]. It is in origin very probably the same tax paid in the empire of Stefan Dushan and maintained under the Ottomans; the old kâpû-resmi of Hungary was treated as ispendjê by the Ottomans. The ispendjê was introduced in Anatolia only in the 10th/16th century as a characteristic Ottoman tax. Christian troops who ranked as 'askeri (voyukn, doghanâl, efîlû, etc.) were exempt from ispendjê, while peasantry serving miles or guarding passes were either totally exempt or paid 6 or 12 akces. Although usually belonging to the timarlord's revenue, it was occasionally payable to the Imperial Treasury.

ISRA'EE (see MI'RA'EE).

ISRAFIL, the name of an archangel, which is probably to be traced to the Hebrew Sarafîm as is indicated by the variants Sarafîl and Sarafîm (Ta'dîl al- 'Arâş, vi, 275). The change of liquids is not unusual in such endings. His size is astounding; while his feet are under the seventh earth, his head reaches up to the pillars of the divine throne. He has four wings: one in the west, one in the east, one with which he covers his body and one as a protection against the majesty of God. He is covered with hair, mouths and tongues. He is considered to be the angel who reads out the divine decisions from the well-kept Tablet and transmits them to the Archangel to whose department they belong. Three times by day and three times by night he looks down into hell and is convulsed with grief and weeps so violently that the earth might be inundated by his tears.

For three years he was the companion of the Prophet, whom he initiated into the work of a prophet. Gabriel then took over his task and began the communication of the Qur'an.

Alexander is said to have met him before his arrival in the land of darkness; there he stood upon a hill and blew the trumpet, tears in his eyes. If he is called Lord of the Trumpet, it is mainly because he continually holds the trumpet to his mouth in order to be able to blow at once as soon as God gives the order for the blast which is to arouse men from their graves. It is however also said that Isräîl will be the first one aroused on the day of resurrection. He will then take his stand upon the holy rock in Jerusalem and give the signal which will bring the dead back to life.

In Egypt, in Lane's time, it was said that his music would refresh the inhabitants of Paradise.

(A. J. WENSCICK)

ISRA'EL [see BANû ISRA'îL, FILASFIT, YA'ÂQÎB]. ISRA'ILÎYYAT, an Arabic term covering three kinds of narratives, which are found in the commentators on the Kur'an, the mystics, the compilers of edifying histories and writers on various levels.

1. Narratives regarded as historical, which served to complement the often summary information provided by the revealed Book in respect of the personages in the Bible (Tâvorî and İndîlî), particularly the prophets (Kisât al-anbiyay). 2. Edifying narratives placed within the chronological (but entirely undefined) framework of "the period of the (ancient) Israelites" (tak'â Bani Is'rá'îl). 3. Fables belonging to folklore, allegedly (but sometimes actually) borrowed from Jewish sources. The line of demarcation between this class and the preceding one is difficult to establish.

The prophetic legends appeared very early in Muslim literature, although few if any traces still survive which in fact go back, in the form in which we have them, to the first century of the Hijra.

The earliest sources of information were either converted Jews or, perhaps, Arabs who had had contacts, before their conversion to Islam, with the Jews and Christians of the Arabian peninsula and the neighbouring regions. Mention may be made of 'Abîd/ 'Ubayd b. Sharya al-Djurhummi [see İBN SHARYA], whose narrations concerning the ancient history of the kings of the Arabs and Persians and biblical
The practice of introducing folklore themes (such as the motif of the 'three wishes') into narratives set in the time of the Banū Isrā’āl is one which the moralists and men of letters readily adopted.

It was the works of pure imagination of this kind, and also the extravagant flights of fancy of the ṣūṣaṣ in their over-loaded, embellished versions of the histories of the prophets which have caused the Isrā‘īlyāt to be condemned by strict scholars such as Ibn Kāṭīr (cf. H. Laoust, in Ḥabaṣa, ii (1955), 75, where the reference should be Bidāya, i, 6), a condemnation repeated in more specific terms by al-Sakhāwī (I‘lān, trans. apud Fr. Rosenthal, A History of Muslim Historiography, Leiden 1968, 335); however, the feeling of distrust and the warnings sounded on this subject go back to a very much earlier date; they certainly constitute part of the stock of edifying parenesis, at least from the time of Mūwaffak al-Dīn Ḥasan ibn Kudama (K. al-Tawwābīn, ed. G. Makdisi, Damascus 1962).

The oldest of these descriptions we owe to the Chinese writer Hsūn-Chuáng (7th century A.D.); the Chinese name (Ze-Hai = warm sea; the lake never freezes) corresponds exactly to the Turkic Tschul (cf. the text in Barthold, Ta‘rīkh-i Rashidi, 1893; i, 458). The nearest modern equivalent is the Turkic Īsīk-Kul (Turkish 'warm lake'), the most important mountain lake in Turkistan and one of the largest fresh water lakes in the world, situated between 42° 11' and 42° 59' N. Lat. and between 76° 15' and 78° 30' E. Long., 1,605 m. (5,116 feet) above sea level; the length of the lake is about 115 miles, the breadth up to 37 miles, the depth up to 702 m. (1,381 feet), and the area 6,205 sq. km. (2,400 sq. miles). From the two chains of the Thien-Shan, the Kungey-Alatau (in the north) and the Terskey-Alatau (in the south), about 80 large and small mountain streams pour into the Īsīk-Kul, of which the most important, Tüpf and Djergalan, flow into it from the east. Of the others there may be mentioned: on the south bank, the Karakol, Kiali-Su, Djuka (or Zauka), Barskoun and Ton; on the north bank, the two Ak-Su and three Köi-Su. On the origin of the depression Kutemaldi, which now connects the Īsīk-Kul [see vu], views differ. It is said that the Koçekar, now the upper course of the Īsīk, previously flowed into the Īsīk-Kul and the latter had an exit in the Īsīk. At present the Koçekar sends an arm to the Īsīk-Kul through the Kutemaldi only when it is flooded; at other times there are only a few ditches there filled with water, without any definite current. The question is only of importance for geology and physical geography; in the historical period the Īsīk-Kul has, as all accounts show, always been a lake without an exit.

into the valley of the Çu. The most important market on the IsslK-Kul was Barskhan, the name of which is probably identical with the modern name of the river Barskoun. Gardizi gives a legend due to a popular etymology about Alexander the Great and Persians left behind him on the Isslk-Kul; this popular etymology makes certain the reading Barskhan against the form Nushdjan given by Yâkıpt, iv, 823. According to Gardizi, Barskhan could put 6,000 men in the field; according to Kudama, the principal place on the shore of the lake could itself raise 20,000 men (Barskhan, according to Kuolama, consisted of nine towns, four of some size and five small ones; cf. Huddâd al- İslâm, ed. Minorsky, 292 ff.; W. Barthold, Zwölf Vorlesungen, Berlin 1935, 94; Mappae Arabicae ed. K. Miller, Stuttgart 1926-9, Band IV = Arab II, 87, 89, 143, 145, 148 (al-Kâshgharî). Three days journey west of Barskhan lay Tîmk, the name of which obviously corresponds to the name of the river Ton. Between Barskhan and Tînk there were only to be seen tents of the nomad Dîkîl. Twelve farsaks west of Tînk was the town of Yâr, which could raise 3,000 men. In Huddâd al- İslâm, 90, there is further mentioned “a prosperous place, visited by merchants”, the town of Sîkül, on the border between the settlements of two nomad peoples, the Dîkîl and the Khallûkh (Karûk); the town probably bore the name of the river. A town “Ysicoût” on the north shore of the lake of the name is still given in Carta Catalana of the year 1375 A.D. There was said to be an Armenian monastery with relics of the Apostle Matthew (Notices et Extraites, xiv/2, 132 f.).

Of this civilization, which was probably destroyed about the same time (8th/14th century) and under the influence of the same causes as the civilization on the Çu [cf. ii, 66 f.], only a few walls and mounds of brick, and some cemeteries have survived, including a Muslim cemetery on the Küngêy-Asî in inscriptions of the 6th/12th century (Protokoll Turk. Krutka Ljub. arkh. xi, 5 f.) and a Nestorian cemetery discovered in 1907 on the Düka with inscriptions in Syriac and Turkish; one of these inscriptions (of 1303 A.D.) was published by P. Kokovtsov (Bulletin de l’Académie, etc. 1909, 774 f. 788 f.; cf. B. Spuler, Die Morgenländischen Kirchen, Lüden 1964, 155 [37] with note). The Turkish and Mongol nomads liked to use the shores of the Isslk-Kul as a winter resort on account of the favourable weather conditions (the snow here rarely lies to any considerable depth), so that the Isslk-Kul is several times mentioned in the military history of Central Asia. A fortress was built by Timûr “in the middle of the lake”, i.e., on an island, to which, amongst others, the Tâtars deported from Asia Minor were banished. It is probably the same fortress as is called Koî-su by Haydar Mîrzâ [q.v.], Ta’rikh-i Râshîdî, tr. Ross, 78. A Mongol amîr is said to have sent his family there in the 9th/15th century, to put them in safety from the inroads of the Kalmucks. At the present day there are no islands in the lake; the disappearance of the island mentioned, with the fortress upon it was probably caused by an earthquake. Connected with this perhaps is the fact that pieces of bricks and other fragments are frequently washed up on the shores of the Isslk-Kul. On the Isslk-Kul itself it is said that a great town here was overwhelmed by the waves of the lake and its walls and buildings can be seen in clear weather; but this story has so far not been confirmed and is probably based on folklore about sunken cities (which is to be found in the most diverse countries). The catastrophe, if there was one, can only have happened comparatively recently. Haydar Mîrzâ, to whom we owe the latest and fullest account of the Isslk-Kul in Muslim literature (Ta’rikh-i Râshîdî, 366 f.), knows neither of the disappearance of an island nor of rubble being washed up, nor of any sunken town. What Haydar Mîrzâ has to say about the ÎsslK-Kul corresponds in general to the facts, but there are a few peculiar assertions. He says for example that on account of the great proportion of salt in it the water is unsuitable for washing in; in reality the proportion of salt is very slight.

In the 17th and 18th centuries the shores of the lake were under the rule of Buddhist Kalmucks; Tibetan inscriptions in the country south-east of the lake still recall this period. The Mongol name of the ÎsslK-Kul was Temurtu-No, “iron lake”: many of the mountain streams flowing into the ÎsslK-Kul carry ferriferous sand; small knives, etc. are made from this iron by the Kirgiz. Even in the Kalmuck period the Kirgiz [q.v.] had grazing grounds here. The land remained in their possession after conquest of the Kalmuck kingdom by the Chinese; Chinese rule was never firmly established here in spite of several attempts. About the middle of the 19th century the Russians advanced across the Ilt. The ÎsslK-Kul was reached in 1856 by Colonel Khomentovskî. A part of the Kirgiz was forced to submit to Russian rule as early as 1855 and the rest in 1860. The Russians founded the town of Karakol, called Prêval’sk since 1888, so far the only town in the country round the ÎsslK-Kul (according to the census of 1897, 7,987 inhabitants, now about 15,000), and several villages. All these settlements are in the eastern part of the ÎsslK-Kul valley: the western part has been reached by the railway to Rîba’è since May 1948. There is steamer traffic on the lake. The settlements are still, as in the Middle Ages, called after the rivers on which they lie. The official Russian names are rarely used, even by the Russians; even the Russian peasant always says “Tûp” for “Preobraženskaya” and “Kîzlî- su” (which is corrupted to “Koîzeltî”) for “Pokrovskaya”. Thanks to the fertility of the soil, the villages are in a flourishing condition, in spite of the frequent earthquakes.

(W. Barthold - B. Spuler)

ÎSTÂBL and İSTABL (a.; pl. ıstâblâl and rarely ıssâıbîl, according to LA, s.v.), etymologically stable, that is to say the building in which mounts and baggage animals (equidae and camelidae) are kept tethered and, by metonymy, the actual stock of such animals belonging to one single owner. İstabl is the arabization of the low-Greek στάβλος/σταβλο/σταβλο (see Du Cange, Glossarium ad scriptores mediae et infimae graecitatis, Lyons 1688, s.v.), which
in turn derives from the Latin stabulum. This is one of the so-called terms "of civilization" which have been disseminated most widely, since it is to be found with the same meaning in all the western languages; well before Islam, Arabic had adopted it through the medium of the Ghassnids [q.v.] in Syria.

(i) The central Islamic lands: The practice of keeping horses under cover is peculiar to sedentary peoples, that is to say the idea of a stable was unknown to the nomadic Arabs, whose steeds were merely given the shade of a tent or bush to which they tethered them (marba'), incidentally this custom seems to be perpetuated even within the towns, in caravanserais [fanduk, khān [q.v.]] where the shelter of a roof was reserved for men and merchandise, while the animals remained tethered in the vast central courtyard. In the same way, the Muslim cavalry in their encampments extra muros (mu'nakar) provided their horses with nothing more than some sort of light shelter (misalla) made of palm-leaves, while the animals remained tethered in the vast fields. Thus, the term ištāl applied only to permanent constructions of solid materials, such as only rulers and high dignitaries who owned many horses were able to have built near their palaces. Even so, such buildings were rather rare, and the pre-Islamic Arabs had almost no opportunity of seeing them, except at Hira of the Lāḥmids [q.v.] or at Damascus, in the Byzantine period; but the presence of the imposing ruins left from vanished civilizations, both in Mesopotamia and all along the eastern Mediterranean, gave credence to the legend of sumptuous ancient stables as those of King Solomon which, in the light of recent archaeological discoveries, have proved to be merely vast granaries. The same is true, in an instance very much closer to us, of the stables of the sultan of Morocco, Mawlāy Ismā'īl (see below), which seemed to Fr. Busnot "the finest part of the palace, with their two lines of arcades extending for three-quarters of a league and the canal which provided them with water. The horses, tethered by all four legs to two rings by means of a hair cord, were tended by Muslim grooms and Christian stable-boys" (Ch. A. Julien, Histoire de l'Afrique du Nord, Paris 1911, 504; Eng. tr., London 1970, 260). The missionary's account gives a perfect idea of the stables as conceived in Antiquity and as adopted by the Muslim world in the Middle Ages. These cloister-like galleries of arcades (riwāk) housed the stalls (low Latin stallium from stalulum, Ar. shibāk pl. shibkāb), separated from one another by low partitions of wood or netting, and the animals tethered in these by three legs (not four), by means of a flexible halter (shibāl pl. shukhbā) passing through two rings fastened to the wall of a wooden cross-bar in the corner (shikhiyya pl. akhādat, akhāhāy and iry, iriy pl. awārī). Their heads being left free, they were given their feed of barley in nose-bags, while hay (sāfla), mixed with straw, was provided as litter; there seems to have been no knowledge of the fixed manger or the wall-rack, upon which so much stress is laid in the entirely theoretical descriptions of the model stables to be found in various Arabic treatises on hippotaxy and hippology (such as that of Ibn Hudhayl [q.v.], see L. Mercier, Parure, . . . 365-6), which merely repeat the Remarks of the Greeks on the subject (cf. Xenophon, On equitation, chap. iv).

The historians and chroniclers who wrote in Arabic in fact provided only the most scanty information regarding the stable buildings of the caliphs, sultans and high dignitaries of Islam. Among the very scattered and often lacunose particulars that may be gleaned on this subject there is one description of the highest importance, relating to the stables in Bagdad belonging to the 'Abbāsid Caliph al-Muktaḍar bi-llāh, which is contained in the Kitāb al-Dhakāh'ir wal-tuḥla (Kuwayt 1959), attributed to al-Kādī al-Muḥammad b. dc. Al-Muktadir bi-llāh (d. middle of the 5th/11th century), and of which al-Mirāḍī made use for his Kitāb. It deals with the visit of an embassy from the emperor Constantine VII to the caliph, in 959/1017, and the following passage occurs (Arabic, vii/3 (1960), 295, from the translation of M. Hamidullah who discovered and edited the manuscript): "... The envois from the Tāghtiya (the emperor of Byzantium) took horse, with their interpreter Ibn 'Abd al-Bākî, on the Thursday, the sixth day before the end of Muḥarram (that is to say, the 24th of the month) and entered by the corridor of the great public gate (of the palace), to make their way into the building known as the Stables (shīkān al-khayl). The building consisted of colonnades with marble pillars. On one side there were 500 horses, with an equivalent number of saddles (markāb) of silver and gold, of different kinds, and without cloths. On the other side there were 500 horses, all with trappings of patterned silk and veils. Each horse was held by a man of the shākīrīyya class (regular soldiers)".

For the fortified residences which were built on the edge of the desert, on the orders of several Umayyad sovereigns, insufficient archaeological study has as yet been made to determine in what manner the stables were laid out.

When Abl Ḫaḍar al-Maḥṣūr, the second 'Abbāsid
caliph, founded his "Round Town" of Baghdad [q.v.] in 146/763, there was no provision for including stables for the ruler or his dependents, perhaps owing to lack of space, and these had to be erected on the outskirts: "... Another quarter extended from the Khurāsān gate, on the one side as far as the bridge of boats over the Tigris, and on the other to the point opposite the Khudl (palace). It is in the last-mentioned place that the royal stables were situated, and also the parade ground and a palace looking out on the Tigris: Abū Dī'aTar always lived there, and al-Mahdī also, until he moved to his palace of Rusafā, on the east bank of the Tigris" [al-Ya'qūbī/Wiet, Les Pays, 31]. Further to the south, facing the square opposite the Kūfā gate "... was located the concession granted to Ya'sīn, the head of the dromedary staff, the dromedaries' stables being alongside it. On this side of these stables were the freedmen's stables" (ibid., 20).

Once caliph, and having by then settled in Rusafā, al-Mahdī organized a general removal of the administrative departments from the other side of the river: the stables also were transferred, and we then find them established in the Muḥarrim quarter, under the direction of the mawla Nāzī (ibid., 40), and containing horses, dromedaries and elephants. From the last of these the Dār al-fil was to take its name, and it was succeeded by a zoological park (Ikṣyra al-wuḥāq). These State stables remained in the Muḥarrim quarter until, apparently, it fell into ruin; al-Sūlī mentions them in his chronicle (Abūl-Ḥarîrā ar-Rādī, tr. M. Canard, 30 and n. 6) of the caliphate of al-Muttaḍī (332/940-333/944), in connection with the Daylamites' assault on Baghdad, under the leadership of Kūrānḵādī, their aim being to dislodge Ibn Rāālk, and it was in the stables that, in the end, the assailants and their leader were massacred, on 25 Dhu'l-Hidjādja 332/26 September 941. It appears that, in due course, the buildings were demolished in 448/1056 by the Saljuq Tughrī Beg, in order to make way for the rampart surrounding Muḥarrim and the Dār al-fil, one part of which became a cemetery.

When al-Muṭṭaṣīm, an excellent horseman (see Kushādūm, Māṣyād . . . , Baghdad 1954, 5 and trans. F. Vīrė, Art de volerie, in Arabica, ixxii, 2, 199), left Baghdad for Sāmarrā in 1342/1923/24, he was careful to take with him his own stables and those of his household. Thanks to al-Ya'qūbī (op. cit., 52), we know that these were established along the main avenue of Sarāḏa, the diecumanus of the city: "... It was also in this avenue that the stables of the Khurāsān officers were located . . ., that of Hūzām ibn Ṭahlīb. Behind Hūzām's concession were the stables for the caliph's horses, his own private horses and those for the government departments, the management of which was entrusted to Hūzām and his brother Ya'qūbī" (It is appropriate to call attention here to an error in the reading of the manuscript of al-Ya'qūbī, since it is in fact a question of one single personage, named Ḥāšmah, whose functions were continued by his son Ya'qūbī, as will be shown later; the misunderstanding is due to the "knightly" title Akhi [q.v.] and the reference borne by the Turk Ḥāšmah as "costable" (comes stabulis) at the base of the ladder was the stable-boy or lad (ghulūm), whose duty it was to keep the stalls clean and remove the dung; above him was the groom (sā'īs pl. sā'īs, sīyās and rāwī pl. rūwālī), who was responsible for the grooming (hass) of one or more animals; the daily outings to the paddock and to the water were, it seems, the special province of the harnessman (shad-dīd) who in addition prepared the mount when the east bank of the Tigris. In the 11th/12th century, Ibn 'Abīl Ṭālīb (d. 405/1017) left (in Mandkīb Baghdād of Ibn al-Djawf, Baghdad 1932), a description of this wealthy quarter, with its boulevard running from al-Tāb to the banks of the river: "... As for its streets, there is one that closely follows the Tigris. On one of its sides, it has palaces overlooking the river, and disposed in such fashion as to spread all the way from the Bridge to the beginning of the Zāhir Garden . . . On the other side of the street are the mosques of the caliph's servants and the dwellings of their soldiers, in between which they have their stables." (G. Maksidi, The topography of eleventh century Baghdād, in Arabic, vii, 1950, 186). The size of these stables may be judged when he notes specifically (idem, 187): "... and the castle of al-Wālī, whose horses every day consume about a thousand rations of forage". Now, in the same period, the anonymous author of the Kūṭāb al-hāyī, an actual record made for the use of taxation officials, evaluates the monthly consumption for one horse at 40 kāfī [q.v.] of forage (see Cl. Cahen, Problèmes économiques de l'Iraq byzide, in AIEO Alger, x (1952), 337).

In Cairo, the stables of the Fāṭimīd sovereigns were in no way inferior to those of the Baghdād rulers, and an idea of their extent is given in the description which Ibn al-Ṭawār (Nuska al-mubāltayn fi al-dawlatayn . . .), a source common to al-Makdisi (Kūṭāb, i, 416), Ibn Taghribirdī (Nūṣūm, iv, 79) and al-Kalkashandi (Subk, iii, 503), gave of the review of his own private horses held by the caliph, in the courtyards of the palace, on the eve of the procession at the New Year or that at the Ending of the Past (see M. Canard, La procession . . . , in AIEO Alger, x (1952), 376 f.); here too it was a matter of a thousand horses and more, which were made to parade before their sovereign. While we must allow for exaggeration, the fact remains that the stock of horses in these stables was considerable, and the same was true under the Ayyūbid and Sāliḏīkīd régimes. Often there was insufficient space to house so many animals, and the owners did not hesitate to tear down ancient palaces in order to build stables in their place (Kūṭāb apud De Sacy, Christomathie, ii, 14). Besides these great stables in the cities, there were also ʾiṣṭabāl in all the posting-houses (sīkka), which came under the department of Posts and Information (barīd [q.v.]), all along the main routes in the Muslim empire; this department, active under the Umayyads and ʿAbbāsīdīs, suffered a decline under the Ayyūbīdīs, but it was thoroughly reorganized by the Sultan Baybars [q.v.] who rebuilt its stables (see J. Sauvaget, La poste aux chevaux dans l'empire des Mamelouks, Paris 1941). Moreover, all the fortresses or citadels (bišn, ʾaʃaf) marking out the frontiers of Islam, and those in Syria which resisted the inroads of the Crusaders, contained their own stables of war-horses and pack animals (see Usāma b. Munkījīl, Ḥībār, 46, 66).

It will readily be seen that all these establishments called for a numerous personnel divided into a hierarchy based on competence. At the bottom of the ladder was the stable-boy or lad (ghulūm), whose duty it was to keep the stalls clean and remove the dung; above him was the groom (sā'īs pl. sā'īs, sīyās and rāwī pl. rūwālī), who was responsible for the grooming (hass) of one or more animals; the daily outings to the paddock and to the water were, it seems, the special province of the harnessman (shad-dīd) who in addition prepared the mount when the
The general responsibility for the working of this domestic system fell upon the “constable” or master of the stables (sahib al-ī斯塔بلى) and, according to the regions and periods involved, kāyīm-, mudābir-, mutawallī-, ustādā-, musfrī al-ī斯塔بلى), a high office which required its holder to possess a perfect knowledge of the study of the horse in all its aspects, besides skill as an administrator and controller in supervising purchases of provender, in regard to both quality and quantity, and also its correct distribution, since fraud and waste are vices common to all generations. If he was not himself qualified, the master of stables was assisted by a veterinarian (bayādīr [q.v.]) who must have been kept very busy with treating the various ailments from which horses suffer, the urgent surgical operations and the foaling of the mares. Every stable of importance in fact included a study-farm, to ensure the continuance of the line of thorough-breds [see PARAS] and the replenishing of the stock; the Muslim ethic did not permit the gelding of stallions, since the Prophet was formally opposed to purchases of provender, in regard to both quality and quantity, and also its correct distribution, since fraud and waste are vices common to all generations. For the financing of their private stables, their own experience, as in the case of the Khuttals (from the village of Khuttal, near Baghdad). The first of these to hold office, Abu Khazzám b. Ghālibī was constable to al-Mu'taṣīm, and in the same position we later find his son Abū Yusuf Ya'qūbī and then his two grandsons Abū 'Abd Allāh Muhammad and Abīnām, down to the caliphate of al-Mu'taṣīd (279/892-289/902). These members of one single family have left, as collective works, several remarkable treatises on the equestrian art, farriery and the handling of arms on horseback, which have been collected and published (see Brockelmann, I, 243-4 and S I, 432-3), which needs to be amended: L. Mercier, op. cit., 41 and note).

Management of the stables was a delicate and difficult task; for this reason, it could be entrusted only to specialists, some of whom succeeded in allowing their sons to benefit from their own experience, and, according to the regions and periods involved, P. de Alcalá recognized only this last word, pronounced with the Granadine imála [q.v.], riwī, pl. arwaṣa (ed. De Lagarde, 145, 245). In the form rawī and with various plurals (rawīya, rawādī), this word is still employed in present-day Arabic dialects in the Maghrib, from Morocco to Tunisia; in these countries it always denotes a covered place, intended to provide shelter for valuable mounts, whether horses or mules. For Spain under the Umayyads in the 4th/10th and 5th/11th centuries, we possess some details about the royal stables intended for saddle horses and beasts of burden (al-ī斯塔بلى bi'il-sahr wa'l-kird'), Al-Hakam I had two stables built near his palace at Cordoba, each of which housed a thousand war-horses. Their riders were divided into quadrants of a hundred men, each commanded by an officer with the title of sarfī. The cavalry as a whole were under the command of the hā'id al-āhs, known also as the hā'id al-a'īsma. The famous al-Manṣūr, the “mayor of the palace” of the “roi finanças” Higham II, had 12,000 regular cavalrymen under his command.

The general controller of the stables or master of stables was called sahib al-ī斯塔بلى. Another official (sarfī) was responsible for the beasts of burden,
mules and pack-horses (zawdmil, khayl al-humldn).

A different official dealt with camels used for transport.

Stud-farms existed on the grassy islands in the Guadalquivir, above Seville. Horses were also imported from North Africa (khayl 'idwiyya), the famous jinotes which derive their name from that of the Berber tribe of the Zanata (q.v.).

For Granada in the Nasrid period, P. Alcalá (op. cit., 243) gives the title kāyld ar-rwd. On the famous stables built by Mawlay Isma'il for his horses and mules in about 1084/1678 at Meknès, see above.

Until the beginning of the 20th century, in Morocco, the outside staff of the palace included a special corps, known as the mudīn er-rauda "people of the stable," who were responsible for looking after the sovereign's horses and mules. Working with the grooms (sing. rūwwdy) were stable-men whose duty it was to clean out the stables (kennds) or to wash the animals in deep water (awmām). Certain stable-men (sāis or sīyyds) concerned themselves particularly with dressage. Throughout Morocco, the sovereign owned many vast stretches of pastureland, known as 'adhir, where his horses were put out to grass after operations against rebel tribes; some of these lands were used as stud-farms.

With the corps of grooms properly speaking there were combined: 1. the corps of muleteers (ham-mūra, sīc), with responsibility for the transport of baggage; 2. the corps of cameleers (jammdla); 2. the corps of cameleers (jammdla); 3. servants with the special duty of dealing with ceremonial carriages (kōdghī, from the Spanish coche, or 'arabā) and travelling litters (mhāffa), used by the sovereign and the women of the harem who accompanied him.

For the stables at Meknès, Ahmad al-Nasirī, K. I. Istiklāl, Cairo 1312, iv; idem, trans. Funney, 1, 72; Busnot, Histoire du règne de Moulay Ismaïl, Rouen 1714, 56-9; Sources inédites de l'histoire du Maroc, 2° série, France, iv, 189, 689; Windsus, A journey to Mequinez, London, 1725, 174.; — A. Aubin, Le Maroc d'aujourd'hui, 196, 200; Archives Marocaines, v/6, 308; W. Marçais, Textes arabes de Tanger, 314; G. S. Colin, Chrestomathie marocaine, 209.

Staatssurveillance der Grosskönigen und Großmächte (1938-1939), Wiesbaden 1954, 102; K. M. Rohrborn, Provinzen und Zentralgebielt Persiens im 16. und 17. Jahrhunderts, Berlin 1966, 27; Tadhkirat al-mulūk, ed. Minorsky, ch. xiii = tr. 51. The royal stables were further used as a source of mounts for the ruler's personal bodyguard which, of course, normally made up of his own military slaves or ghulāms (q.v.). Finally, a reserve of horses had always to be on hand, for fine horses (and in the case of some eastern Islamic dynasties, elephants) were often amongst the presents forwarded to other potentates or presented to governors, along with robes of honour, a standard, etc., as the insignia of office (see HIBA).

The officer in charge of the sultan's stables under the Ghaznavids (q.v.), the Ābkūr-Sālīr or Amīr-i Ābkūr, was usually a general of the palace ghulāms. Elephants were used extensively for military purposes by the Ghaznavids (see Pā). As beasts of war, and as well as stables for horses, there was at Ghaiza a pil-kāhān with accommodation for 1000 elephants and a staff of Hindus to attend them (Bosworth, The Ghaznavids, their empire in Afghanistan and eastern Iran, 994-1040, 112, 113, 117). Officials from the royal stables were also to be found in the provinces of the empire, where horses were bred or sent out for pasture, for instance, in the horses-rearing regions along the upper Oxus in Khuṭṭal and Tukharistān, cf. Spuler, Iran, 392.

The Great Sālīdūs sultans had such towns as Ray, Isfahān and Marw as fixed centres of government even though the dargāh or court accompanied the sultan in his progresses through the provinces and on his campaigns (cf. Lambton, in Cambridge history of Iran, v. 222-3). Sandjar, and presumably other sultans, seems personally to have had extensive herds of horses (ibid., 326). The royal stables were doubtless located in these centres of government; certainly, Niẓām al-Mulk says that oversight of the stables was one of the duties of the Wahli-i Khās, Intendant of the Royal Household, although he complains that the office had fallen into desuetude in his time (Siyāsat-nāma, ch. xvi = text ed. Darke, 112, tr. 92). The Master of the Royal Horse in Sālīdūs times, usually designated Amīr-i Ābkūr, Ābkūr-Beg, etc., was frequently a ghulām commander of the sultan, e.g., the Ābkūr-Sālīr Kīzīl, Shīḫān or military governor of Baḥdād in 536/1141-2 and a former ghulām of Sultan Mahmūd b. Muḥammad (Ibn al-Athir, xi, 93; Šadīr al-Dīn al-Husaynī, Ābkūr al-dawla al-salīdūsīyya, 117).

It is uncertain whether a Turkish dynasty like the Karağhānsīds of Transoxania (see ILKH-KHANS), whose khāns seem to have led a semi-nomadic existence during the summer months at least, had a permanent royal stable. One khān, Shams al-Mulk Naṣr b. Ibrāhīm Tamghaʾ Khān (460/1068-472/1080), built a palace complex at Shamsābād outside Buḥkārā, and a continuation of Narshakhl mentions that adjacent to this was a walled enclosure (ghurūb, see Radloff, Versuch eines Wörterbuchs der Turk-Dialekte, ii, 358-9) for the royal horses and other beasts (Taʾwīl-i Buḥkārā, tr. Frye, 20). Such royal preserves, ghurūbs of horses (cf. the old Arabian institution of hēr), were established later by the Mongol khāns, and the royal stables as a fixed building probably only re-appears after the Mongol interlude in Persian history.

The institution of the royal stables is certainly well-attested for Safavid times, both by European travellers like Chardin and Kaempfer, and by the late Safavid administrative manual, the Tadhkirat al-
Muḥl. This latter source (chs. xv, xvi, xc, xci = tr. 52, 87, commentary 120-1) distinguishes between two Masters of the Stables, the Mīr-Āhūr-Bāghi-yi Dīlaw and the Mīr-Āhūr-Bāghi-yi Ṣaḥrāḥ, the first official being the higher paid. The Mīr-Āhūr-Bāghi-yi Dīlaw (dīlaw = Mongol "rein, halter," see G. Doerfer, Türkische und Mongolische Elemente im Neupersischen, in Mongolische Elemente im Neupersischen, Wiesbaden 1963, 296-7; hence dīlaw-dār, the groom who rides ahead of his master and holds his bridle) was in charge of the royal stables in the capital. Chardin says that there were three such stables in Isfahan, with a very numerous staff; these comprised the subordinate marshals (māz-āhūr-rādzān), grooms, watercarriers, farriers, saddlers, veterinary specialists, etc. Since the royal stables were an integral part of the court, appointments made by the Mīr-Āhūr-Bāghi-yi Dīlaw had to be confirmed by the Nāṣir Buyūlādih, the Chief Intendant of the Royal Household or Ḳāṣṣā. The second Master of the Horse, the Mīr-Āhūr-Bāghi-yi Ṣaḥrāḥ, was in charge of equestrian establishments out in the countryside, the ṣaḥrā, i.e., the royal stud farms. An important part of his duties was to make an annual inspection, in company with the Nāṣir-Daulāb dānd of the Animals, of the studs (the ṣar-i ṭuḥād), and also to keep an eye on affairs in the royal reservations (ṣar-khass). Also mentioned in tr., chs. xxiii, clx-Cl .10, were the Ṣāḥib Dīns, i.e., the ṣar-i ṭuḥūlāt (departments or workshops, of the royal household) of the saddlers (ṣin-khāna), and one of the stables (iṣṭābāl).

(C. E. Bosworth)

(v) Muslim India: the term ḥāvāli is rather uncommon in Indo-Persian literature but is attested for the royal stables of the Indian Mughals (Abu 'l-Fadl, Aḥn-i Aḥkārī, i, 48-54) and for those of the 9th/15th-century sultans of Mālwa (Farīṣga, Taṛīḵī, Bombay 1832, ii, 474). In India stables are more usually designated by the Persian word pāygyāḏ, which is also used for non-royal establishments: e.g., the stables of a Ḳāḥānāhād where the travellers' horses are lodged (Ṣirhind, Fawd'īd al-fuṣd, ed. M. L. Mālīk, Lahore 1966, 344: cf. Barani, Taṛīḵī-i Fīrūz-shāhī, 212). The nomenclature and organization of royal stables in Muslim India reflect the earlier Persian tradition transmitted through the Ghaznavids [see section (iv) above], though Indo-Muslim stables also inherited a body of veterinary lore and knowledge of certain breeds of horses — e.g., the tangle from the north east of the sub-continent — from the large and diversified stables of earlier Hindu rulers (for those of the 1st/7th century ruler Tulsār Hāna, see Bana, Har- sa-caret, tr. E. B. Cowell and F. W. Thomas, London 1897, 50, 201). The main purposes for which royal stables were maintained were similar to those which prevailed in Persia — to mount the sultan and his dependants, including considerable numbers of royal mudāms or lelaḏ, to supply a service of postal couriers and to provide horses for distribution as largesse or despatch as gifts. The main body of cavalry at all times consisted of troopers who mainly took part in mounted independent of the royal stables (for the sultanate of Dīhil, see Barani, 303, 313; 'Affī, Taṛīḵī-i Fīrūz-shāhī, 220-1, 301; for the Mughal period, W. Irving, The army of the Indian Moghuls, London 1903, 47-51; see also iṣṭābāl).

In the sultanate of Dīhil [q.v.] the pāygyāḏ was an important department of state (kārkahānā: 'Affī, 339-40) presided over by the māz-āhūr (Dūḏžānī, Taba-hāt-i Nāṣīrī, 232, 242), Ṣabāh-nā-i Aḥkār (Dūḏžānī, 252) or aḥkār bēg (Barani, 274, 241, 434, 557): at times this office was divided between aḥkār bēg-i mashāra and an aḥkār bēg-i mayyama (of the left and right wings: Barani, 24, 454). The term pāygyāḏ embraced both the stables and the royal horses and might be said to accompany the sultan when he left the capital (Sīhrīndī, Taṛīḵī-i Mūḥarrākhādhī, 109). 'Ašā' al-Dīn Mūḥammad Shāh Ḳhūlijī (695/1296-715/1316) is said to have had 70,000 horses in his pāygyāḏ (Barani, 262). Circa 1340 A.D. the sāḥib bēg-i akhūr (sc. Mūḥammad b. Tughlūk) is said to have distributed 10,000 Arab horses annually to his retinue and given away countless others (al-'Umārī, Masālīk al-abṣār, ed. K. A. Fārīs, Dehli 1961, 28). Horses were presented by the sultan to visiting Mongol chieftains (Barani, 462) and to foreign potentates: e.g., 100 horses were dispatched by Mūḥammad b. Tughlūk to the emperor of China (Ibn Baṭṭūṭa, Rīḵā, Paris 1853-7, iv, 2); 500 Turki and Tāzdī horses were bestowed by Fīrūz Shāh Tughlūk on Sultan Sīkandar of Bengal in 761/1360 ('Affī, 159). Subject chieftains and provincial officers who were close to import routes despatched horses to the sultan ('Ayn-i Māḥrū, Inshā'-ī Māḥru, ed. S. A. Rāshīd, Lahore 1965, 111). In some cases money was paid from one of the diwāns for horses sent to the pāygyāḏ (Māḥrū, 204, 207). In other instances horses were to be sent as an annual tribute. When in 778/1376 Shams Dāmghānī took over the farming of the revenues of Gudja-rat (Sīhrīndī, 132) he undertook to send 200 horses annually. The Dīams of Thatta, Sind, agreed to provide every 5th year horses worth 100,000 lānakas (Māḥrū, 187).

In the later 8th/14th century the pāygyāḏ was divided into five physically separated establishments. The "large" pāygyāḏ and one other were probably more than 100 miles away from Dīhil in the east Pandjāb. The third pāygyāḏ was within the palace precinct of the capital (pāygyāḏ-i mahāl-i khāṣ); the fourth, with 1,200 horses, was attached to the royal falconry or department of the hunt (pāygyāḏ-i ṣhīkarahānā-yi khāṣ; while the fifth provided mounts for royal slaves and dependants (pāygyāḏ-i bārdīzārdān-i bandāgān-i Ḫāṣ: 'Affī, 318, 340). A modern reference to the breeding of horses in the Dīhil sultanate is found in the Jāsūrī rendition of the Hūrsā, which adapted a Sanskrit work on the subject (see section (v)).
gave an advantage in power struggles on at least two occasions (Mohibbul Hasan, Kashmir under the sultans, Calcutta 1959, 201). The sultanate of Mâlwa provides a possibly unique instance of a Muslim ruler turning horse-dealer. Around 825/1422 Sultan Hûchâng (r. 808/1405-838/1435) led a valuable string of horses across the difficult terrain of central India to trade them for war-elephants with the Rây of Jâlnagar (evidently Bhânnâ-andra IV of the Eastern Gangâ dynasty of Orissa; Nâdâm al-dîn Akbari, iii, 295-6; Farûqî, Ta'rikh, Bombay 1832, i, 466), but there may be mythical elements in this story. When Sultan Hûchâng of Mâlwa was on his deathbed, his son Ghânzîn Khân sent a demand for 50 horses from the istabâl; this was refused by the mir dâkhur and the demand gave offence to his dying father (Farûqî, ii, 474). We have no information regarding the stables of the Sayyid and Lodî sultans of Dîhil and of the sultans of Nâwânpûr and Bângal. Kîlî Lodî, father of Sultan Buhlû Lodî (r. 855/1451-894/1489), first rose to political power as a horse-dealer importing from the hills of the north-west frontier (Mu'âmmâd Khâbr, Fisânâ-yi shâhân-i Hûnd, B. M. Add. Ms. 24, 409, folgs. 7-9).

From the end of the 10th/16th century we possess a detailed description of the regulation of the istabâl of the Mughal emperor Dju'dâli al-dîn Mu'âmmâd Akbarî (Abu l-Fadl 'Alî, Fars.-Lat., i, 175). In 1562/1971, 28-62; W. Kirkpatrick, Select letters of Tîppoo Sultan, London 1881; W. Miles, A history of Hyderabad, 2 vols., London 1879). Bibliography: Given in the article. References to texts, where no date or place of publication is given, are to those in the Bibliotheca Indica series published by the Asiatique Society of Bengal, Calcutta.

ISTABÂL, a town in Pârs. The real name was probably Istâkhûr, as it is written in Fâhâvî; the version with the Attic vowel Ï is based on the Armenian form Sîmâr and the abbreviation S T on the Sânsânî coins point in the same direction. The form with prosthetic vowel is modern Persian; it is usually pronounced Istâkhar or Istâbar, also with inserted vowel Sîtâghâr, Sîtâkhâr, Sîtârâch; cf. Vullers, Lex. Pers.-Lat., i, 94, 97*, ii, 223, and Nödeke in Grundr. der Iran. Philol., ii, 192. The Syriac form is Ištâh (rarely Ištârî), in the Talmud probably Ištâbar (Ištâhâr, Megilla 13*, middle). According to the statements of Persian authors it must have received its name from the lakes or swamps there. Perhaps, however, it is better to be derived with Spiegel (Erdmische Altertumskunde, i, 94, note 1) and Justi (Grundr. der Iran. Philol., ii, 448) from the Avestan stákhrâ "strong, firm"; for the latter word cf. Chr. Bartholomäe, Altiran. Wörterbuch, p. 1591.

Ištâghûr lies in 29° 50' N. Lat. and about 53° E. Long., a short hour's journey north of Persepols, in the narrow valley of the Pulwâr or Murghâb (also called Siwand-Rûd). It may be assumed with certainty that its foundation took place very soon after the decline of the Achaemenid capital Persepols, which was caused by Alexander the Great. The ruins of the latter in any case formed a quarry which was much used for the building of the new town. Ištâghûr was at first merely the chief town of the district of Pârs, the centre of which had probably always been in this neighbourhood. A few decades before the collapse of the Arsakid kingdom, it figures as the residence of local chiefs. The Sânsânîs came from the region of Ištâkhr. Sâsân, grandfather of Ardašîr I, was superintendent of the fire-temple of the goddess Anâhîd in the town of Ištâkhr (Tabart, i, 814), the fire of which is said to have suddenly been ominously extinguished in the night of the birth of Mu'âmmâd. After the foundation of the Sânsânî kingdom this town was also considered its religious centre and
Iṣṭakhr was henceforth considered the official capital of the New Persian monarchy.

The inhabitants of Iṣṭakhr in particular opposed a stubborn resistance to the advance of the Muslims. The first attempt to take the city, undertaken in 28/649 by al-ʿĀlī b. al-Ḥārām, governor of Bahrain, with insufficient forces and against ʿUmar’s express orders, failed completely and it was not till 29/653 that ʿIṣṭakhr had to capitulate to an Arab army commanded by Abū Mūsā al-ʿAṣārī and ʿOthmān b. al-ʿĀs. But its citizens afterwards rebelled and slew the governor set over them. The governor of Bayṣra, ʿAbd Allāh b. ʿĀmir ʿawl, whom the caliph sent against the rebels, was only able to take the town after severe fighting. In the suppression of the revolution many Persians met their death. This second capture of Iṣṭakhr probably took place in 29/649 (cf. on this question J. Wellhausen, Schätze und Vorarbeiten, vi (1899), III f. For other details of the Arab expeditions against Iṣṭakhr see: Bāqlābī (ed. de Goeje), p. 389, f., Tabārī, i, 2546 f., 2549, 2666 f., 2830; Ibn al-ʿAṣḥāb, ii, 420 f., iii, 30 f., 77 f.; Chronique de Tabārī (Pers. vers., by Bel'amī), trans. Zotenberg, iii, 452-3; Well, Gesch. der Chalifen, i, 86-7, 163, and thereon A. D. Mordtmann in ZDMG, vi, 455-6; Caetani, Annali dell’Islam, iv, 151 f., v, 19-27, vi, 190-20, 248-56).

Iṣṭakhr remained a fairly important place during the early centuries of Islam. However it gradually sank to be merely the chief town of a province and was the capital of the kūra bearing its name, the largest of the five districts into which the province of Fārs was divided, comprising its northern and north eastern parts. The heaviest blow suffered by the erstwhile Sāsānian capital was the foundation in 64/668 of Shirāz (a day's journey south of Iṣṭakhr), which soon became the capital of the province of Fārs and attained great prosperity, particularly from the 3rd/9th century. Henceforth Iṣṭakhr declined visibly. From the description of the geographer al-ʿIṣṭakhrī, a native of the town, it was about the middle of the 4th/10th century a town of medium size of the area of an Arab (= Roman) mile; the wall around it was in ruins. Al-Muḵaddasī, writing about thirty years later (985), praises the splendid bridge over the river in Iṣṭakhr and the fine park. Concerning the chief mosque, situated in the bazaars, he mentions the ruin of Iṣṭakhr. In a description of the province of Farās-Nāma, it is described as a modest village with barely a hundred inhabitants. As to the mint of Iṣṭakhr, coins struck here in the Sāsānian period bear the abbreviation ST (S) in Pahlavi characters: this certainly means Iṣṭakhr. Numerous specimens of these coins exist from the reign of Yezdegerd II (from 438 A.D.) to the end of the dynasty. In the Islamic period also the Pahlavi legend with the above abbreviation was retained for a considerable time. Such coins struck in the name of the caliph or of governors are known down to the year 58/679-8, cf. J. Walker, A Catalogue of the Arab-Sasanian coins (A Catalogue of the Muhammadan coins in the British Museum), London 1941, cxxix-cxxx, 116. Coins of post-reform type were struck at Iṣṭakhr during the Umayyad and Abbāsīd periods (see G. C. Miles, Excavation coins from the Persepolis region, Numismatic Notes and Monographs No. 143, New York 1939 and J. Walker, A Catalogue of the Arab-Byzantine and post-reform Umayyad coins, London 1956, 112-4).

The present system of ruins at Iṣṭakhr has been excavated in 1935 and 1937 by a team from the Oriental Institute of the University of Chicago (see: E. F. Schmidt, The Treasury of Persepolis (Oriental Institute Communications, No. 21, Chicago 1939), 105-21; idem, Flights over ancient cities of Iran (Oriental Institute, Chicago 1940), plates 8-10; and G. C. Miles, op. cit.). The remains of the town are mainly recognizable in the mounds of earth of varying height. Here and there parts of the surrounding walls still exist. The most remarkable seems to be a place lying towards the village of Hādīdīt-bādhīl — usually ʿArīm b. Djamāshīd — called Harīm b. Djamāshīd, “Djamāshīd’s Harem” (cf. below) by the travellers J. Morier and Ker Porter — where a column stands erect in the midst of an area covered with fragments of pillars. Its capital, composed of bodies of bulls, at once shows it to have been removed from Persepolis. The most detailed account of the ruins of Iṣṭakhr, aside from that of Schmidt, is that of Flandin and Coste, who spent two months in the neighbourhood about the end of 1840; cf. the pictures in the great volume of plates, Voyage en Perse, ii (Paris, 1843 f.), pl. 58-62, and the archaeological text accompanying it, p. 69-72, and also Flandin’s Relation du Voyage, ii, (1852), 137.

In the vicinity of Iṣṭakhr there are several other sites remarkable for their monuments of history. For example, about 700 yards north of the village of Hādīdīt-bādhīl, there are natural caves, one of which contains an inscription of historical importance of Sapor I (247-272 A.D.); it is usually called Shaykh ʿAll by the Persians, as a pious ascetic of this name is said to have ended his days in it; at the same time one hears it called Zīndān-i Djamāshīd, “Djamāshīd’s prison”. Prominent among the monuments of antiquity are frequently attributed to Djamāshīd, a mythical ruler of ancient Iran whom the Muslim Persians identified with the Solomon of legend.

Another place of historical importance is the Nāḵš-i Ṛastam, the former a short hour's journey south of Iṣṭakhr on the south bank of the Pulwar, the latter on the north bank of this stream about 1½ miles from Iṣṭakhr. The former is a ravine-like split in the wall of rock on the south bank of the Pulwar, which is adorned with three Sāsānian reliefs.

On account of their considerable remains from the ancient and mediaeval Persian periods, the best known sites are Takht-i Djamāshīd and Nāḵš-i Ṛastam, the former a short hour’s journey south of Iṣṭakhr on the south bank of the Pulwar, the latter on the north bank of this stream about 1½ miles from Iṣṭakhr. Takht-i Djamāshīd is the most usual name among Orientals for the complex of Achaemenid palaces at Persepolis. Besides Takht-i Djamāshīd one also hears the older name Chīl, or abbreviated, Čī Minār (also Menār), “the 40 pillars”, which is found as early as the Persian historians of the 14th century. This name is taken from the most noteworthy parts of the whole site, the colonnade of King Xerxes I with its pillars, originally 72, now only 13 in number. The Arab geographers of the Middle Ages from about the 3rd/9th century know the ruins of the Persepolitan
terrace by the name Mal'ab Sulaymān, “Sulaymān’s playing-ground”, with which we may compare the name Kursī Sulaymān, “Solomon’s stool (throne)”, found in the Persian history Mughāmil-i Tawārīḵ (beginning of the 5th/11th century), which in its turn may have been the model for the present synonymous name Taḵt-i Djamshīd.

The “Bench” or “Throne” of Djamshīd (Salomon) is an artificial stone terrace of polygonal, almost rectangular shape, which lies at the foot of a steep, dark grey mountain of rock. The latter, according to the reports of modern travellers, now bears the name Kūh-i Raḥmat, “hill of mercy”, but this is not to be found in literature; it apparently dates only from the post-mediaeval period (first mentioned by Sir Thomas Herbert in the beginning of the 17th century). The name still heard by Ouseley, Shāh Kūh, “royal hill”, might be older; it coincides with the Būdān xvii. of Dioscoros (xvii, 71). At the same time, according to the same authority, the inhabitants also use the name Kūh-i Taḵt, “hill of the throne (of Djamshīd)”. The section of the Kūh-i Raḥmat which forms the back wall of the platform contains three tombs of Achaemenid kings. The people know these by the names of the “mosque”, the “bath” and the “mill of Djamshīd”, according to Stolze (Verhandl. der Gesellsch. f. Erdkunde in Berlin, x, 1885, p. 273).

Iranian tradition varies regarding the founder of Persepolis-Īṣṭakhr; sometimes it is Kayūmarth, the mythical ancestor of the Persians, sometimes the builders or extenders are legendary rulers of the past like Kayūmarth’s descendants Hoshang (Uš-handā), Taihmūrāt, Djamshīd, Ka’i Khusraw. Solomon also is named, for whom the spirits (gīmān) subject to him carried out marvelously productive works. A legendary princess, Humāy, who plays the role of Semiramis as a builder in Iran, is also mentioned. Persian tradition transfers to Persepolis-Īṣṭakhr the residence of the old Iranian kings and makes them be buried there also. According to Firdawsī’s Shāhānūmā, the town was the residence of the reigning dynasty from the time of Kābūr, Muslims writers connect the origin of Persepolis with Solomon; the name given by them to the mountain, which lies at the foot of the above. According to their legend, this king dwelled alternately here and in Syria and was rapidly carried by the gīmān from one place to the other. Separate buildings on the terrace of Taḵt-i Djamshīd bear in Arabic writings the names “mosque” and “bath of Solomon” (cf. with these the above mentioned names of two royal tombs of Kūh-i Raḥmat). Solomon — so the story goes — shut the wind up in a room there; Persian sources of the 13th and 14th centuries still speak of a “prison of the wind” here (Zindān-i Bad) (cf. the reports in Ouseley, op. cit., ii, 381, 387).

Unfortunately the Arab accounts of the monuments of Persepolis are rather defective and moreover in parts distorted into fairy tales; cf. especially the accounts of the geographers al-Īṣṭakhrī, al-Muṣaddasi and al-Kaẓwīnī (see Schwarz, Irān); various not uninteresting information is given by Persian historians of the later Middle Ages, especially Hamd Allah Mustawfī and Hāfiz Abru (see Ouseley, ii, 380 f., 387 f.). According to these two, the pillars of the ruins there were celebrated as a source of zinc oxide (tā-

The caliph al-Manṣūr (754-775) wished to use the ruins of Persepolis, like those of al-Madā’in-Cesphi
don, as a quarry, but was persuaded against it by the advice of his vizier Khālid al-Barnamāli, who said that Persepolis was used as place of prayer by ‘All; see Fragm. Hist. Arab. (ed. de Goeje), p. 256.

Various Muslim rulers have perpetuated their visits to the ruins of Persepolis by having inscriptions incised. Here are to be seen three Arabic inscriptions in Kūfī characters by members of the Bāyād dynas
ties (4th/10th century), three inscriptions, two Persian and one Arabic, of Abu ‘l-Fath Ibrāhīm, a grandson of Tīmūr (9th/15th century), also three inscriptions (2 Arabic and 1 Persian) of ‘All b. Khālid, a grand
son of Uzūn Hasan (9th/13th century). These inscriptions were thoroughly discussed by de Sacy in his Mém. sur diverses antiquités de la Perse (Paris 1793), p. 139 ff.. Some emendations thereon were given by Nīldeke in Stolze, Persepolis, ii, 6. H. Petermanu, Reisen im Orient, ii, 188, also mentions an inscription of the Muẓaffarīd Muẓammād b. al-Muṣaffār b. al-Muẓaffar b. al-Manṣūr (d. 765/1365), see also V. Minorsky, Later Islamic Inscriptions at Persepolis, in BSOS (1939), 177-8. The various verses scratched on the walls show the high respect in which Persepolis has always been held among the Persians; their modern poets often make allusions to the ancient capital of the country.

As to Nakṣh-i Rustam, its primary significance is only the steep south wall of the long, high mass of rock, Ḥusayn Kūh, which has in niches four Achaemenid royal tombs and Sāsānian relics. But the name is often extended to the whole of Ḥusayn Kūh. The name Nakṣh-i Rustam is due to the popular idea that the sculptured figures there represent the Iranian national hero Rustam. Before the wall of the tombs there rises a remarkable towerlike building, now called Ka’ba-i Zardušt, “the Ka’ba of Zoro
arst”. Probably it has something to do with a former fire temple. Two other small buildings are perhaps to be similarly regarded, not far from the Ka’ba-i Zardušt on the summit of a rock called Sang-i Sulaymān, “the stone of Sulaymān”, cf. Ouseley, op. cit., ii, 300. We may also mention that the Sāsānian sculptures of Berme Delek 5 miles E.W. of Shīrāz are called Nakṣh-i Rustam. (But see now... E. F. West, Persepolis III, The Royal Tombs and other monuments (Oriental Institute, Chicago, 1970), 122 ff.; W. B. Henning, The Great Inscription of Sāpūr I, in BSOAS IX (1937-39); M. Sprengeling, Third-Century Iran. Sapor and Kartir (Oriental Institute, Chicago 1953); E. Houligan & A. Mariq, Recherches sur les Religions Divins Saporis (Mémoraries, Acad. Royale de Belgique, xlvii, Brussels 1952).

A stone platform in two layers on the south bank of the Pulwar (about 500 yards W. of Nakṣh-i Raǧīb) is called by the inhabitants of the district, Taḵt-i Rustam, “the throne of Rustam”. The latter, in view of its limited dimension, can only have served as the pedestal of a sepulchral monument or of a fire temple. Cf. Flandin et Coste, Voyage en Perse, ii, 72-73 (and Pl. 63). Instead of Taḵt-i Rustam, the name Taḵt-i Taḵūs, “peacock-throne”, is also used. The name Taḵt-i Rustam is found elsewhere in Iran also: cf. Ouseley, op. cit., ii, 522.

At a somewhat greater distance from Īṣṭakhr, about 3-4 hours journey N.W., on rocky peaks stand three forts within 1/2 to 2 miles of each other. All three, which lie practically in a straight line, are frequently comprised under the name Kālʿa or Kūh-i Īṣṭakhr, “the citadel” or “the mountain of Īṣṭakhr”, also Kūh-i Rāmāndār, from a district of
this name on the left bank of the Kur (into which the above mentioned Pulwar flows), Firdawsl in a distinct speaks of the Sih Diz-i Gumbadin-i Istakhr, "the three fortresses of Istakhr" (cf. Ouseley, op. cit., ii, 356). At the same time the separate castles have each their own names, which have however changed frequently in course of time according to the reports of the older historians and travellers. The most important of the three, the Kaß-i Istakhr in the narrower sense, is also called Miyan Kaß-'a, "the central fort" from its position between the two. Flandin and Coste hea.d it called Kaß-i Sarw, "the cypress castle", from a single cypress tree standing there. For the two other citadels Persian authors, for example, give the names Kaß-i Shikastah, "the broken (ruined) castle", and Askunawan (Sakunawan and similar names).

In the Muslim history of Fars, especially in that of Istakhr, these inaccessible fortresses played an important part. They were regarded as most essential military points d'appui for the holding of the surrounding country. The most prominent is the "citadel of Istakhr" proper, the origin of which Persian legend places in mythical times by assumming it was built by King Djamshid. The old Iranian ruler Gushasp is said to have deposited the Aesxis, written on cow-hides with golden ink, in the castle of Istakhr, after his conversion to the doctrine of Zoroaster; the citadel is therefore also called Diz-i Nibigd (Castle of the writing) or Kûh-i Nibigd (Hill of the writing; so in Ḥamd Allah Mustawfī); cf. Tabari, i, 676; and Ibn al-Athlr, i, 182,9, as well as the Persian reports in Ouseley, op. cit., ii, 344, 364, 370-1, 375, 384. Under the caliphate the governor of the province of Fars very frequently resided in this stronghold, which was easily defended by its natural situation. Thus the governor Ziyād b. Abīhī was able to hold out up here against Mu’āwiya for a considerable time after his death. Cf. Wellhausen, Das arabisch Reich, etc. (Berlin 1902), 76. The Būyids, who not infrequently stayed in the region of Istakhr (cf. the inscriptions dating from their time mentioned above, at Taḵš-i Djamshid; ʿIsmād al-Dawla [q.v.] was buried in Istakhr), paid particular attention to the citadel of Istakhr. ʿAṣūd al-Dawla [q.v.] in the 4th/10th century built on an existing fort, Flan- taking advantage of a natural pond already there, which could provide water for several thousand persons for a whole year and which aroused the admiration of contemporaries and of later generations. In 467/1074 the rebel Faḍlūya, who had seized the governorship of Fars, was besieged by the troops of Nīţām al-Mulk in the sultanate of Malik Shāh in the citadel of Istakhr. An earthquake which suddenly caused the cisterns to overflow forced the besieged to a pre- mature capitulation. Faḍlūya was then kept in a prisoner in the fortress and put to death next year after an unsuccessful attempt to escape. The castle was later much used as a state prison for high officials and princes. About 1590 the citadel was still in good condition and inhabited. Some time afterwards a rebel general of Fars took refuge in it and it was besieged by Shāh ʿAbbās I, stormed and destroyed. Pietro de’Ridola, who stayed here in 1621, therefore found it in ruins.

The citadel of Istakhr has so far been only rarely visited by European travellers, e.g., by Morier, Flandin (and Coste), and Vambėry. According to the account by Flandin and Coste, to whom we also owe drawings and plans of the citadel, it stands on a plateau 300 yards round, about 1300 feet above the plain. Of the old defences there have survived the powerful ramparts solidly built of stone; the great system of cisterns of the Būyids, among which a well hewn deep into the rock is specially remarkable, is still to be seen. All the ruins that survive seem only to date from the Muslim period. Cf. in the castles of Istakhr the accounts from Persian sources in Ouseley, op. cit., ii, 371, 376, 385 f., 380, 392-7, 399, 405-5, 407, 531; Ritter, viii, 863-5, 868, 877; Flandin and Coste, Voyage en Perse, ii, 71-72; Flan- din’s Relation du Voyage, ii, (1852), 140-2; Vambėry, Ñeine Wanderungen und Erlebnisse in Persien, Pest 1867, 250, 251; Huart in Revue sémitique, i, (1893), 250 f. and in Hist. de Bagdad (Paris 1901), 28, 31; G. Le Strange, op. cit., 276; Herzfeld in Sarre and Herzfeld, op. cit., 114-5 (Pl. xvi. and Fig. 45).

M. STRECK [G. C. MILES]

AL-İSTAKHRI, ABU İSMAİL İBRAHİM B. MUHAMMAD AL-FĀRISI AL-KARKHĪ, one of the first and most important representatives of the new trends adopted by Arabo-Muslim geography in the 4th/10th century. His biography is unknown, or almost so. If the various forms of his nisba are to be believed, he was a native of Fars and, more precisely, of İ斯塔khr. Following Yākūt, orientalism has in fact accepted the nisba al-Istakhri, but others, in particular Ibn al-Athlr, his direct continuator, designate him by the nisba al-Fārisi. Al-Mu‘addasī, who does the same, also adds the nisba al-Karkhī (ed. de Goeje, 475; compare with ibid., 5, n. 4), from which it might be supposed that, at some period in his life, the writer settled in Khūzistān or in ʿIrāk, and perhaps, to be more precise, in that of Baghdađ of that name (cf. Yākūt, s.v.).
One certain element at least in the life of al-Istakhri is his meeting with Ibn Hawkal. It is of little positive importance whether this took place in Sind, or in Baghdad, bearing in mind that this would be the most probable place for a meeting between the old master who had retired there and the young geographer who came to stay there (ibid., 336), completed his training and decided to set out on his travels (ibid., 3, 322).

The work of al-Istakhri, the Kitab al-Masalik wal-Mansalik (another work, a Risala, probably on Fars, is recorded in connection with the description of that country: cf. ed. al-‘Uthman, 67), at all events may be placed between that of al-Balkhi, by which it was inspired, and that of Ibn Hawkal, which continues it: as Kramers writes very justly (Analecta, 166), "the manuscripts of al-Istakhri and Ibn Hawkal represent one single standard original text, which was revised and corrected several times." Written towards the end of the first half of the 4th/10th century, the Kitab repeats, while it also develops, the "atlas of Islam" introduced by al-Balkhi. As in al-Balkhi, the isfum (loc. cit.) is no longer the "climate" of Ptolemaic geography but, in the Iranian tradition of the khorrens, is a geographical entity, a "country". As with al-Balkhi, in the Persian "national" spirit prevailing in Samanid Khurasan where the original work made its appearance, Iran holds afavoured position, by length of the passages devoted to it. Lastly, as with al-Balkhi, the spirit and methods of the cartography are very close to Persian models; far closer, in any event, than Ibn Hawkal was to be. This Iranism explains how it is that al-Istakhri's work, unlike that of Ibn Hawkal (and of al-Mukaddasi who represents the last link in the chain) was the subject of Persian translations (and also Turkish: cf. V. Minorsky, A false Jayhâni, in BSOAS, xiii (1949-50), 156-9).

A further relationship exists: so far as one can judge, the cartographical representation, which for al-Balkhi was the essential feature, in the eyes of his successor remained (as it is today) an essential element of the geographical work, even if the commentary on the map was expanded considerably. This fact explains the reservations expressed by al-Mukaddasi who described the Kitab as "a book with very carefully prepared maps, but confused in many places and superficial in its commentaries, and it does not divide the provinces into districts (wa-lâ haqawara 'l-ahdâlim)" (ed. De Goeje, 5, n. 4).

Al-Mukaddasi's severity towards his precursors is well-known. In essence, even if his basic principle is justified, it conceals the degree of progress between al-Balkhi and al-Istakhri. Thanks to the commentary, not only does one pass gradually, as has been suggested, from the atlas to the descriptive atlas; in addition the scientific method is refined by the exercise of a critical judgement and by the desire to preserve the information from oral or written sources, selected by personal observation (fyân). These two principles are so closely interwoven in the work, and the author's modesty is so great in respect of the journeys he had had to undertake, that the map of al-Istakhri's travels is difficult to reconstruct; in the case of Sind, for example, is the validity of the information provided due to the reliability of the informants or to travel notes? In any event, it is almost certain that al-Istakhri visited Arabia (at least as far as Mecca), Iraq, Khorasan, Daylam and Transoxiana.

Al-Istakhri's successors were not deceived as to the value of the work or the originality of his methods. Despite his criticism, al-Mukaddasi did not fail to make use of it, as did the anonymous author of the Huddy il-Qalim and Yafuti. Even more than these writers, however, it is Ibn Hawkal who appears as the privileged successor of al-Istakhri, even as his designated heir: "I have made about al-Istakhri al-Farisi," wrote Ibn Hawkal (trans. Wiet, 322); "this man had drawn this map of Sind; but he had made some mistakes, and he had also drawn Fars, which he had done extremely well. For my part, I had drawn the map of Azharbâyjân, which occurs on the following page and of which he approved, as well as that of Upper Mesopotamia, which he considered excellent. My map of Egypt however he commended as wholly bad, and that of the Maghrib as for the most part inaccurate. He then told me: 'I have made a careful study of your birth and have drawn up your horoscope. I ask you to make corrections in my work wherever you find any mistakes'. I made some alterations in more than one place, and wanted to publish them under his name. But I thought it good to leave my own name only on the edition of this work.'

Ibn Hawkal's decided views, and often his lack of constraint with regard to al-Istakhri, have played in his favour; in reading him, one slightly forgets what the pupil owes to the master. But, whatever the just merits of the work of Ibn Hawkal (loc. cit.), a careful study makes evident, on more than one page and far more than Ibn Hawkal would have us to believe, how much he owes to his precursor (see an example in A. Miquel, Geographie humaine, 367-90). Thus the greatest prudence is called for when one starts to read a work which, in the final analysis, is a collective one, and in which the merits of al-Balkhi, al-Istakhri and Ibn Hawkal cannot be dissociated from one another.

The text of the Kitab al-Masalik wa'il-Mansalik has been edited in part by J. H. Moeller (Liber climatum, Gotha 1839; trans. A. D. Mordtmann, Das Buch der Länder, Hamburg 1845); a partial translation (as regards to A. Maclay) by A. Miquel (1918-1924). Later came the edition of De Goeje (BGA, i, Leiden 1870 and 1927), and then that of M. G. Abd al-‘Al al-Hinl (Cairo 1931/1961).

ISTÂN [see ISTAN]
ISTANBUL, the capital of the Ottoman Empire from 20 Djumada I 857/29 May 1453 to 3 Rabî‘ II 1342/13 October 1923. In strict Ottoman usage the name is confined to the area bounded by the Golden Horn, the Marmara coast and the Wall of Theodosius, the districts of Ghalâta, Üskûdar and Eyyûb being separate towns, each with its own bâdî; occasionally however the name is applied to this whole area.

NAME. In the period of the Saltuk sultans of Anatolia (see Kamâl al-Dîn Âshkârî, Mu‘âzmarî al-âghhâbî, ed. O. Turan, Ankara 1944, index at p. 344) and under the early Ottomans (Die alsom. anon. Chroniken, ed. F. Giese, Breslau 1922, i, 8, 28, 33, etc.) the spelling of “Istînbul”, “Istanbul” or “Istambul” was used; the pronunciation “Istimboli” is attested by J. Schilletter (Pauly-Wissowa, s.v., Istanbul). The spelling “Istînbul” (“S(i)tinbul”, “S(i)stanbul”) occurs in Ottoman poetry (Laâfî [q. v., Evsdf-i Istanbul in Ms.]). Al-Mas’ûdî (Tanbih, 136) mentions, as early as the 4th/10th century, that the Greeks called the city “Bûlin” and “Stanbûli” towards the end of the 10th/16th century F. Moryson (An itinerary . . . ii, 97) notes that the Greek inhabitants called the city “Stimboli”, but the Turks “Stambol”. It is no longer in question that the Turkish forms (Stinbol/Istanbul > Istan(m)bol) derive from the Greek εἶς θν πολίν (for the arguments against the Greek identification see Oberhummer, loc. cit.; D. J. Georgacas, The name of Constantinople, in American Philological Association. Transactions, lxxxviii (1947), 347-67).

The punning name Istanbul (”where Islam abounds”) was, according to a contemporary Armenian source (see Siruni, op. cit., 173), given to the city by its conqueror Mehemed II (for similar “meaningful” names invented by him, cf. Boghaz-Kesen, Elbasan, Boghur-delen); it is found in documents of the 9th/15th century (e.g., Ayasofya Evkaf Defteri, Memoir, no. 15; Tanbih, i, 37); in the 11th/17th century the educated classes regarded it as the “Istâmbol” name of the city (Evliyâ Celebi, i, 55:6; and a firman of 1174/1760 decreed that it should be substituted for the mint name Koştantînîyâ ye on coins (text in A. Reﬂik, Istanbul hayati, 1100-1200, p. 185). In popular usage however the forms Istanbul or Istambul prevailed. The present-day official spelling is Istanbul.

From 130 A.D. onwards, the ofﬁcial name in the Eastern Roman Empire was Constantinopolis (for the various forms, see Oberhummer, loc. cit.). Adopted by the Arabs and the Persians as Ku’nistanîyya in ofﬁcial and literary usage, this name continued to be used in Ottoman educated circles and in the Ottoman chancery, and appears in ﬁrmans and wakﬁyyas and upon coins (cf. too Die alî. anon. Chr., ed. Giese, 28, 74, 78, etc.).

The original name Byzantion, of Thracian origin (Oberhummer, loc. cit.), is occasionally mentioned in Ottoman texts as the former name of the city, in various Arabic and Armenian forms: Byzantia, Byzandia, Buzantie, Puzanta, Buzantis (see Elî, i, 889; Evliyâ Celebi, i, 55; Siruni, op. cit., 164).

The names rumîyya al-kubrâ, Takht-i Rûm (cf. Meγəlsolosν) and Quâdi-l-i Rûm found in Muslim literary works (Evliyâ Celebi, loc. cit.) derive from the early Byzantine names (Novâ) Roma, (Nê) Rûm. In Islamic chancery usage, cities, like human dignitaries, were accorded particular epithets and benedictory formulae (dâva, salutation). They were used for Istanbul by the Ottomans reflect old Iranian and Muslim concepts of centralized authority: Pâytaht-i Saltanat, Takhtgâh-i Saltanat, Ma‘kâr-i Saltanat, Dar-i Saltana, Dar-i Khilâla; also, Dar-i Naṣr, Madinat al-Muwâlîhî dur (Islam-bol). In continuation of the traditional notions that the ruler’s authority and “fortune” are interlinked (cf. in Old Turkish titulature Kû, Kûl or Tûk) and that justice is dispensed at the gate or threshold of the palace, Istanbul is often indicated by such names as Der-i Sa‘âdet (Der-saadet) Âstînâ. The usual benedictory formula Istanbul is al-mâfiyya or al-mâfrûsâ, i.e., “the Well-Protected” (by God, against disaster; and also by the sultan, against injustice). A typical reference to Istanbul in chancery usage is: Dâr al-Khîlafa al-‘âliyya ve ma‘kâr-i Saltanat-i seniyyem olan mahmiyye-i Koştantînîyye“ (A. Reﬂik, op. cit., p. 110).

The kürâ‘ic phrase âıtîyâtî (XXXIV, 14, 15), a chronogram for the date of the Ottoman conquest (857/1453), and the phrase hâtat al-mulâk (Evliyâ Celebi, i, 33, 55) are used for Istanbul only as literary conceits. As in Greek, so in Ottoman usage Istanbul was frequently referred to simply as “The City” (“škhrî”) (see, e.g., Istanbul Vakıflar Tahrir Defteri, no. 727).

The following sections deal only with the Ottoman city. For Muslim attacks on the city before 1453, Muslim travellers’ accounts of Constantinople, etc., see Koştantînîyya. For the Bosphorus, see boγház-i rîc. For the townships closely associated with Istanbul, see Evlyûn (in Supplement), Ghalâta (in Supplement) and Üskûdar.

I. Results of the Conquest; Events up to 861/1457

The future development of the city was determined by the circumstances of the Ottoman conquest. When Mehemed II proclaimed the assault and promised his troops a three-day sack, he announced: “The stones and the land of the city and all its appurtenances belong to me; all other goods and property, prisoners and foodstuffs are booty for the troops” (see H. İnalcık, in Dumbarton Oaks Papers, xxi-xiv (1969-70), 232-5). The result was that the city was denuded of its former inhabitants and the charac- ter which it had possessed in the Byzantine period was radically changed. The Ottoman troops entered the city through the breach opened in the walls at dawn, on 20 Djumâda I 857/29 May 1453, and fought their way towards Hagia Sophia (Aya Soûfa), but some defenders continued to resist (the Cretan sailors in the towers of Alexius held out out until after midday, see Sphrantzes, tr. Ivanka, 80; cf. Braun- Schneider, Bericht, 32) and the fighting ended only towards the middle of the afternoon. Practically all the survivors were made prisoner and taken to the ships or to the Ottoman camp outside the walls (Tursun, 55; Cîrîboudou, tr. Riggs, 76; Tâdîl-Beg-zâde, 21). The sultan, wishing to prevent the further destruction of the city which he intended to be henceforth his capital, proclaimed that afternoon that the fighting was to cease and made a brief tour of the city (Ducas, ed. Grecu, 375; Sphrantzes records that the sack lasted for three days, but it is clear that from 30 May onwards there was no serious plundering or enslavement). On 30 May the sultan made his ceremonial entry (Tâdîl-Beg-zâde, 22); he
toured the city to inspect its buildings and visited
the harbour district. Entering Aya Sofya, he pro-
claimed that it should be the Great Mosque (djmami-i
kebir) (Tâdji-Beg-zade, 23; Tursun, 56-7), and
announced that henceforward Istanbul should be
his capital (labbi) (Inalcik, op. cit., 233). His first
and principal concern was to encourage the repopu-
lation of the city, so that on the third day after the
conquest he proclaimed aman: any fugitive who
returned within a specified time should freely re-occupy
his home and practise his religion, and the Greeks
were invited to elect a Patriarch as religious head
of their community (Sphrantzes, tr. Ivanka, 85; cf.
Zorzo Dolfin, ch. xviii).

Before returning to Edirne on 13 Dümâdâ II/21
June, the sultan appointed Karâşîdân Süleyûnmän
Beg as şubhâ (military prefect) of the city, with a
garrison of 1500 Janissaries, and Khîdr-beg Çelebi as
hâdî, and ordered the repair of the walls, the building
of a citadel (Yedi Kule) by the Golden Gate, and the
construction of a palace for himself at the Forum
Tauri in the centre of the city (later known as Eski Sarâî).
To commence the repopulation of the city, he setelled the fifth of the prisoners falling to him
as ruler, with their families, "along the shores of the
city harbour", i.e., along the Golden Horn. He
gave them houses and "freed them from taxes for a
specified time": immediately after the conquest he
had considered appointing the Megadux Lucas Nota-
ras as city-prefect and entrusting him with the task of
repopulation, but his viziers dissuaded him; Notaras
and the other Byzantine notables were executed (Inal-
cik, op. cit., 240). He permitted enslaved prisoners
who had paid ransom or who undertook to pay ransom
within a specified time to settle in the city, granting
them houses and a temporary exemption from taxa-
tion; he encouraged such slaves to earn their ransoms
by working on building projects (Critoboulos, 83, 93;
Sphrantzes, loc. cit.; N. Barbaro, Eng. tr., New York
1969, 72). Before the siege began, many inhabitants
had fled the city (Sphrantzes, 47); others had
managed to conceal themselves during the sack or
had fled to Ghalaâ. These, with the ransomed pris-
oners, formed the first Greek population of the city;
that they were numerous is shown by the census (tafrîr)
of 860/1455 (for which, see below), which further confirms the tradition that some of
these Greeks embraced Islam. (A great many of the
prisoners had been sold, at Edirne, Bursa and Geli-
bolu.) The aman did not cover any Venetians: the
baîlo Girolamo Minotto and his son were executed;
29 other Venetian nobles were ransomed, but their
male children were drafted into the corps of
sufli, two-storeyed (*ulvi) and "large", the "sumptuous (mkalelek) houses called by the Greeks drapes". Some houses are
noted as being split into three or four, or as inhabited
by more than one family. One- or two-storeyed
CARDAKS are noted, especially in the courtyards of
monasteries (for such habitations within monasteries,
see the plans of Buondelmonte and Vavassore; Ober-
hummer, Konst. unter Sultan Sulaiman, pp. 19, 22;
F. Babinger, Drei Stadtrnsichten . . ., 1959, p. 4).
Of 26 monasteries listed, only one is still occupied
by Greeks; the others are deserted or inhabited by
Muslim immigrants. Names of these Greeks are listed many of
them situated in monasteries. Only two still belong
to the Greeks, but the Greeks of the mahalle of Alt-
Mermer use a big house there as a church. Five
churches are inhabited by Muslim immigrants, one
has been converted to a mosque, most of the others,
having no congregations, are ruinous.

The first Great Mosque of Istanbul was Aya Sofya
and the first stages in the development of Istanbul
as an Ottoman city are revealed by the study of its
wkfs. These include, besides the mosque and medrese
of Aya Sofya, other Byzantine religious buildings now
converted to Muslim use: the Zeyrek Dâmî and its
medrese (Pantocrator) (see S. Eyyice, Istanbul, 57),
the Ghalaâ Dâmî/Arab Dâmî (St. Dominic) (see Schneider and Nomidis, Gatea, Istanbul 1944,
pp. 23, 28), the mosque in the citadel at Silivri, the
Eski Imaret Meşgûdî (St. Saviour Pantepoptes) (see
Eyyice, 68), the Mevlâvi mosque at the Republic Gate
(Schneider, Byzans, 51; Eyyice, 54; under Bâyezid II
it was made a medrese and then a mosque). Mehmed
II's Great Mosque ("Fatih") was completed only in
875/1471. The mosques constructed up to that date
(Rûme-Hisârî; the Yehi Kerbân-saray/Cukhadjî
Khnîî mosque; the Debbâghlar Meşgûdî at Yedi-
Kule; Yehiye Kâle/Andanolu Hisâfî) were all
attached to the wkfs of Aya Sofya.

In 861/1457 Mehmed II made over to the wkfs
of Aya Sofya the Byzantine buildings still standing in
the city; these are noted in the documents as "sultani"
and "mubâa'tîlîlî". In 898/1492 the total of these
mubâa'tîlî houses was 1428 (Aya Sofya Evkai Tahrîr
Dêteri, Maliye 19). (By this time many houses had
collapsed into ruin.) Since a survey of 898/1492 notes 1093 mubâa'tîlî houses in Istanbul and
Ghalâa "apart from the Byzantine houses occupied
by kuls of the Padishâh", these latter must have
numbered 335; it was the practice that mubâa'tî (in
effect "rent") should not be levied on a house held
by a kul, so long as the kul actually resided there.
Similarly, in the reign of Bâyezid II the attempt to
levy mubâa'tî on Byzantine houses granted as mâlîh
("freehold") before the wkfsiya for Aya Sofya was
drawn up (i.e., before 861/1457) was finally abandon-
ed; but under Mehmed II it had been imposed and
removed more than once (Inalcik, op. cit., 241). The 502 such houses in Istanbul itself were located in the mahalles of Aya Sofya, Sultan Hanım (near the Bedestàn), Hadidjî ʿAbdî, Hekmî Yaʾkîb, Şahîn Uskübi (between Üsküdar and Dîbâlî), Edirne-Kapîsî, Ustâd Ayâsî (at Surât-ı Ḫâne), Arslânlu Mahzên, and Top-Yikîhî (Topkapu), a distribution which gives an indication of the pre-Ottoman centres of habitation.

Apart from these Byzantine buildings, Mehemmed II was the continuance of the ancient Middle East tradition by which the city was created around a place of worship and the urban functions were harmonized with the religious obligations. Aya Sofya was the Great Mosque par excellence, where the ruler and the Muslim community met together at an accession and at every Friday prayer, where the ruler received petitions, and where the great religious ceremonies were held. The social and economic institutions and the establishments which fostered the life of the city and the well-being of its inhabitants came into existence first as vakîfs of this Great Mosque (cf. Middle Eastern Cities, ed. I. Lapidus, Berkeley 1969).

This "Islamic" character is demonstrated by the city's toponographic development: its first nahiye is the nahiye of Aya Sofya. The other nahiyes grew up around the mosques (dârs) built later by sultans and viziers, whilst the smaller units, the mahalles, constituting the nahiye each grew up around a local mosque (medresî). From the very first, also, attempts were made to give Istanbul the status of a sacred city of Islam. Immediately after the conquest, the holy region of Eyyub (Eyiîp) received its character with the building of the türbe of the Companion Abû Ayyûb al-Ansârî (M. Canard, Les expéditions des Arabes ... 70; its wahâfyya in Fatih Mehmet II. Vahfîyesîleri, Ankara 1958, 283-340. See also S. Üner, Istanbul-u ve Sakât-i Kaherîleri, Istanbul-Ankara 1953; P. Wittek, Ayvansaray, in Ann. de l'Inst. de Phil. et d'Hist. orientales et slaves, xi (Brussels 1951), 505-26). The profound Ottoman devotion to mystics and to dervish orders was already under Mehemmed II; of the name "Islam-bol" (the city "full of Muslims") in official records (Inalcik, op. cit., 246). Sporadically, under Mehemmed II and later sultans, Muslim fanaticism was aroused and pressure would be brought on the authorities to close the churches and synagogues on the grounds that the city had been taken "by force", so that the Shaykh al-Islâm himself would cast round for "evidence" to protect the şimmi status of the non-Muslim inhabitants (Inalcik, op. cit., p. 233, n. 11). For security reasons, Mehemmed III's policy here, as in other conquered cities, seems to have been to ensure that the Muslims remained in the majority.

The Islamic ideal, as reflected in the tolerant outlook of Ottoman society, was easily reconciled with social and economic reality, so that from the very beginning Muslims and non-Muslims worked side by side in the commercial districts and even (at first) lived intermingled in residential areas; non-Muslims, in commercial dealings among themselves, would resort to the kâddî, and a feeling of "fellow-citizenship" of the cosmopolitan capital transcended distinctions of religion and origin.

The "Ottoman" character of Istanbul sprang not only from the Muslim ideal but also from the traditional Middle Eastern view of state and society, a way of life characterized by the existence of a thriving class of merchants and craftsmen under the governance of a class of military administrators (see II. Inalcik, Capital formation ... in J. Ec. Hist., xxix (1969), 98-140). Thus the same patterns, based on the institution of the vakîf, which had been evident in all the cities of the Middle East began to appear in Istanbul. This tradition demanded the construction for the merchant class of a bezdizîn (Ottoman: bedestân), near which were the caravansarais (khân) where the merchants lodged. The members of the principal crafts were gathered in the shops which constituted the great târîh around the bedestân, each craft being concentrated systematically in one sâk or târîh (as was easily ensured when blocks of shops were built together as vakîfs). Various central "markets" for basic commodities were established to ensure the authorities' control of the importation and distribution of the raw materials needed by the craftsmen and of the foodstuffs to provision the inhabitants, and in order to facilitate the collection of the tolls and taxes due to the state. These "markets" were called kapân (< Ar. kâbâbân, a public balance, a steelyard); the yemish kapân, un kapân, bai kapân, yemish kapân (for oil, flour, honey, fruit), etc., and in Istanbul these were situated in the harbour area (elsewhere, by the city gates). For goods imported by sea, there was in the harbour a customs' post called Gümîrûk-kapân (later called, after the gümîrûk emini, Emnî-öñü), while goods imported overland paid duty at the Kara-Gümûrûk near Edirne-Kapîsî. The tannery and the slaughterhouse were outside the walls, while dye-works, fulling-mills, oil-presses, etc. were built near the appropriate craft centres; all these were set up as vakîfs by members of the "ruling class". Other provisions, usually also set up as vakîf or forming part of elaborate vakîf-complexes (see below), had in view the welfare of the populace in general—water-supply, paving of roads, public security, hospitals, street-cleaning, the shelter and feeding of the poor and of travellers.

The interpretation that Istanbul's development as an oriental city can be viewed as originating from a
single nucleus (Stadtkern), consisting of the market-
area, from which the main streets radiated and with the
mahalles stretching out in concentric circles (R.
Mayer, Byzantion, Konstantinopolis, Istanbul, Vienna
1943, pp. 9, 20, 254) is true of not only the city as a
whole but only of each individual nahiye growing up around
a "foundation". For in the Ottoman period, as in Byzantine
days, the city's development was controlled by the special characteristics of certain dis-
tricts and by its geographical features. The two basic
features of the Ottoman city (as in Bursa, Edirne, etc.) were a Great Mosque and a central market-
district, and these features appear in Istanbul at first
with Aya Sofya and the Bedestan; later however come the
Fâtih complex, with the Sultan Pâzârî and Sarrâddîhanî nearby; and thereafter the city was to develop as a series of such "foundation complexes" created by sultans and by leading statesmen; whilst
less prominent individuals brought into existence smaller complexes of the medîlid with its school
which was to serve as the centre of a new mahalle.
There was thus, as it were, a hierarchical gradation of complexes.

Nevertheless, whilst these complexes tended to
make Istanbul a series of semi-independent commu-
nities, two features preserved its organic unity: (1) the
harbour area on the western side of the city, with the
main thoroughfare, the Divân-yolu, along which
armies and caravans passed; it was along this thor-
oughfare that the principal complexes were built, and the
great commercial buildings and the main market
area were situated between this thoroughfare and the
harbour. It is evident that the location of the principal
complexes did not arise from any plan drawn up in
advance; hence, with the exception of the few main
thoroughfares, the network of streets grew up hapha-
azard, as a jumble of crooked alleys and culs-de-sac
(this confusion was not the result of fires, as is
sometimes suggested, but had existed from the
beginning).

iii. — THE FORMATION OF THE PRINCIPAL
URBAN INSTALLATIONS

Before the building of the Fâtih complex and the
Sultan Pâzârî, the two commercial centres of Istanbul
were (A) the Bedestan and Büyük Çarşı, and (B)
Takhtakale and the harbour area.

(A). As early as 1456 it had been decided that a
bedestan should be built in the mahalle of Câkîr Agha
(a subâz of Istanbul) (Critoboulos, 104). A bedestan,
where valuable imported wares were sold and which
was the centre for financial transactions, was the
centre of a city's economic life as being the place of
business of the leading merchants (termed at this
period kâyâdî). The Büyük Bedestan of Istanbul
(bazâristan, dâr al-baszârisyya; later Djeawhir-Bedestân
or İc-Bedestân) with its 15 domes, constructed with
the strength of a fortress to protect merchants' wares and wealthy citizens' fortunes against theft,
plunder and fire, is a supreme example of a genre of
Ottoman architecture which had flourished since the
building of the bedestan of Bursa at the end of the
8th/14th century (see E. H. Ayverdi, Fatih devri
minarisi, 404-7; S. Eyice in IA, art. Istanbul, p.
1214/114; idem, "Les ‘Bedestens’", in II Con-
gresso Int. di Arte turca, Venice 1963, 35-9). Neither
its design nor the references to it in the sources give
any hint to connect it with a Byzantine construction.

In the Muslim world, as in the Byzantine, such a solid
building for the storing and selling of valuable wares was a normal feature of the city (in the Byzantine
Empire basîlike, see Janin, Const. byz., 97, 99, 157; in
the Arab lands kayâsaryîya, see Lapidus, Muslim ci-
ties, 59-60). In the flourishing period of Constantin-
ople's history, this area, between the Forum Constant-
inii and the Forum Tauri, had been a thriving com-
mercial district with a basilike and the artopoleia of
the bakers' guild; it was the central site of the city,
the meeting place of the roads leading in from the
city gates and the roads leading up from the com-
mercial quays of the harbour (between Neorion/Babbe-
kapi and Pora Droungariou/Zindân-kapi). The main
road leading from here down to the Basilike quay in
Byzantine times (probably the Vasilikî Kapîsî fre-
cently mentioned in Mehemmed II's waâfiyya, later
Zindân kapî), the Markos Embolos Maurianon, was in
the Ottoman period, with the name Uzun Çarşî, to
be the busiest commercial district of the city.

The most detailed information on the Bedestan,
the Kapall Çarşî, and the tradespeople working there is
to be found in the registers of the waâfs of Aya
Sofya. In the Bedestan there were originally 126
sandak (in 893/1488: 140; a sandak is a shop with a
store-room behind it and having a safe for valuables,
cf. C. White, Three years in Constantinople, i, 174:
"strong fire-proof boxes sunk in a wall of masonry
under the floor") and 14 "kôge" shops (the rent for
the first was 20 akçe per month, for the second,
3, 5 or 15 akçe). In 897/1493 ten of the merchants
in the Bedestan were Armenians, five Jews, three
Greeks, and the rest Muslims. (For the Bedestan
in the 10th/16th century, see Ramberti, apud Lybyer,
241; Dernschwam, 93, 113; Schweigcr, 129-10; in
the 11th/17th century, Evliyâ Celebi, i, 613-18;
Mantran, 465-6; an excellent description for 1844 in
White, i, 3-34).

Some time later, but before 858/1453 (Evliyâ, i,
617; the waâfiyya ed. O. Ergin, in Fatih Marmesi,
Istambul 1945, 6), Mehemmed II built, at the south-
east corner of the Büyük Çarşî a "new" bedestan
(dâr al-baszârisyya al-dzâdîda) for silks, later called the
Sandal Bedestan (now the auction hall), which was
to remain the largest bedestan of the Empire;
it contained 124 sandaks and there were 72 shops outside
it, occupied by various craftsmen.

As in Ottoman cities created before the conquest of
Constantinople (see La ville balkanique, in Studia
Balcanaica, iii, Sofia 1970; D. Kuban, Anadolu Türk
şehri, in Vakflar Dergisi, vii (1968), 53-74), on
each side of the four main roads (şehri-kapi) leading away from the four gates of the Bedestan and of the
streets parallel to them, rows of shops were built in
a checker-board pattern for merchants and craftsmen.
In the 641 shops (dükân) there were, according to
the waâfi-register of 894/1489, 33 shoemakers, 33
slipper-makers, 44 cap-makers, 50 workers in felt
and tailors, 76 jewellers and other craftsmen (for
the description of a dükân, see Dernschwam, 93-4;
White, i, 174). Shops of Muslims, Armenians, Jews
and Greeks were not in separate streets but mixed up
together; the majority however, not only of the crafts-
men but of the jewelers and bankers (sarrdf), were
Muslim Turks.

This Çarşî was repeatedly extended, so that
finally it contained about a thousand shops; it was
roofed over, to become the "Kapallı" Çarşî, with
do large and 20 small gates, and since the Bedestan
regulations were enforced here too, it became in
effect an extension of the Bedestan (S. Eyice, in
IA, art. Istanbul, pp. 1214/114-5; S. Tekiner, The
Great Bazar of Istanbul, Türkiye Taring ve Otomobil
Kurumu Belleteni, no. 92).

The second great Çarşî in this region was the
blocked of shops known as Mahmûd Paşa Dükânları,
constructed near the 'Imaret of Mahmûd Paşa and containing, with the shops around and behind it, 265 shops. It was annexed by Mehremmed II to the waqf of Aya Sofya but returned by Bayezid II to the waqf of Mahmûd Paşa's foundation (Aya Sofya register for 894/1489).

Khâns. The khân, which served as a lodging for the merchant engaged in trade between different regions and provided him with safe storage for his goods in the upper rooms or in the store rooms on the ground floor, and where also bulk sales of merchandise were made, was an essential element in Ottoman commercial centres (for khâns, see Mayer, op. cit., 112-17; M. Erksan, İstanbul hanlarlari, Ist. Un. Edebiyat Fak., thesis, 1959). Mehremmed II promoted the construction of four khâns, two in the commercial quarter of Tahtakâlî, two near the Bedestân. The eldest is probably the so-called Bodrum Kerbansarayi near the Bedestân. With two storeys and 32 rooms, it had in its front wall 15 shops and 9 "küför" (i.e., a largish room used as a workshop or lodging (for its situation, see S. Unver, Suyolu hariâs, pl. 3). The annual income from the khân was 15,500 akçe and from the shops and "rooms" 3108 akçe. The dealers engaged in the sale of cotton- and linen-cloths imported into Istanbul used this khân (A. Refik, İstanbul hayatî, 1000-1100, Istanbul 1940, doc. 77).

The Beg Kerbansarây, the building with the Porta Paşa Odalari (after the beşbegleri of Rûmî, Khâlin Sûleyman) became in 894/1489 the Kerbansarây-i ıserât, commonly known as Esir Pazari. It contained 52 rooms on two floors, with an 8-room annex, a bath, and a large stable; it brought in an annual income of 19,500 akçe (about 400 gold ducats) on the Suyolu hariâs. It is marked on Divân-yolu, by the 'Atili 'Alî Paşa mosque; a good description in White, ii, 289.

The Cevâr, called Süleyman Paşa Odalari (after the beşbegleri of Rûmî, Khâlin Sûleyman) were located here in the sale of cotton- and linen-cloths imported into Istanbul and used this khân (A. Refik, İstanbul hayatî, 1000-1100, Istanbul 1940, doc. 77).

The Baghce-kapı, called Cevâr Paşa Odalari (after the beşbegleri of Rûmî, Khâlin Sûleyman) became in 894/1489 the Kerbansarây-i ıserât; commonly known as Esir Pazari. It contained 52 rooms on two floors, with an 8-room annex, a bath, and a large stable; it brought in an annual income of 19,500 akçe (about 400 gold ducats) on the Suyolu hariâs. It is marked on Divân-yolu, by the 'Atili 'Alî Paşa mosque; a good description in White, ii, 289.

The Rüstem Paşa, called Süleyman Paşa Odalari (after the beşbegleri of Rûmî, Khâlin Sûleyman) became in 894/1489 the Kerbansarây-i ıserât; commonly known as Esir Pazari. It contained 52 rooms on two floors, with an 8-room annex, a bath, and a large stable; it brought in an annual income of 19,500 akçe (about 400 gold ducats) on the Suyolu hariâs. It is marked on Divân-yolu, by the 'Atili 'Alî Paşa mosque; a good description in White, ii, 289.

The Rüstem Paşa, called Süleyman Paşa Odalari (after the beşbegleri of Rûmî, Khâlin Sûleyman) became in 894/1489 the Kerbansarây-i ıserât; commonly known as Esir Pazari. It contained 52 rooms on two floors, with an 8-room annex, a bath, and a large stable; it brought in an annual income of 19,500 akçe (about 400 gold ducats) on the Suyolu hariâs. It is marked on Divân-yolu, by the 'Atili 'Alî Paşa mosque; a good description in White, ii, 289.

It is marked on Divân-yolu, by the 'Atili 'Alî Paşa mosque; a good description in White, ii, 289.
flar Um. Męb., p. 34), and build there a mosque, a khan, a bath and a market; he himself, selecting the site for the New Palace on Sarayburnu, also picked the finest area in the middle of the city for building a mosque "which should surpass Aya Sofya". Work on the mosque began only in the winter of 867/1462-3, the area (around the Church of the Holy Apostles) already having a large Muslim population. This construction encouraged the expansion of the city northwards towards the walls and north-east towards the Golden Horn.

(C) The mosque and 'imaret of Fâṭîh and its district (873/1470).

The mosque itself, begun in Diumâd II 867/February 1463, was completed in Radjab 875/January 1471 (inscription over the main door: 'Ayverdi, Fâṭîh dârî mîmârîsî, 143). The ancillary buildings were of two types: (1) Khâyûrât around the mosque (medreses, hospital, 'imaret (hospice), school, library, etc.), and (2) buildings of public utility to provide the income for the upkeep of the foundation. Such complexes had formed the nuclei of all Ottoman cities since Orkhan's foundations at Bursa (see O. Nuri, İmaret sistemî, İstanbul 1939; Ő. L. Barkan, Quelques observations sur l'organisation économique et sociale des villes ottomanes, in Recueil Soc. Jean Bodin, vii (1955), 289-311; Emel Esin sees their origin in Central Asia: IV. Int. Congress of Turkish Art, Aix-en-Provence 1970).

An area of about 100,000 m² is occupied by the following khâyûrât: the mosque, with an extensive outer courtyard entered by eight gates; on two sides of it, 8 large and 8 small medreses (the Themâniyye and the Tetimîne); to the east, in a separate court, a tahâkkâne, a hospice and a hân (later Deve Khânî); and in a further court, a hospital. Between the two front entrances to the mosque-court were two smaller buildings, a children's school (dar al-taHlm] and a book-store (A. S. Ülen and B. Kunter, Fâṭîh camii ve Bizans sarımı, İstanbul 1939; 'Ayverdi, op. cit., 125-71). There were also residences for the 'ulêmdâr employed in the medreses. The buildings of the second category were, principally, a great târîbi (Sultan Pâzarî), the Sarrâddîkhânê, and a bath (Çukur Hâmîn or İrgâtlar Hâmîn) north of the mosque. The Sultan Pâzarî, between the mosque and Sarrâddî Khân, on the site of the İdrîs-âdîîdîlî Church comprised 280 shops (so the register of 88/1493; in the wakîfâyê published by T. Öz: 286), and the Khârî-beg Celebi Odalarî 32 workshops and 4 storerooms. (On Vavassore's plan, the Sultan Pâzarî is shown surrounded by walls; in the registers it is called "bukîa"). Sarrâddîkhânê (also a "bukîa") comprised 110 shops within a wall (S. Unver, Sûluvî hâtûsî, Pl. 1); against its west and south wall were 35 shops and 19 "rooms", referred to as tâlîk dîkhânîlar ve odalar. The register of 88/1493 lists 142 saddlers, all Muslims (some of them Janissaries), working here. The saddlers formerly working near the Bedestân were all brought here, henceforward the sole centre for that trade (berât of 870/1469 publ. by Ç. UlucaYî in Tarîk Darîz sî, III/5-6 (1951-2), 151-2: renewal of 1119/1707 in A. Reñîk, İstanbul hâyiî, 1120-1200, pp. 42). To the north were the horse-market and stables; round about were concentrated ancillary crafts—stirrup-makers, furniers, etc. In time of war this district was thronged with troops equipping their horses. (Schweigner, p. 129, comments that the Turks surpassed all nations in leatherwork.) Only in the 19th century, with the growing importation of European products, did this commercial centre decline (White, iii, 255 ff.).

South of Sarrâddîkhânê, towards Aksaray, Mebem-ned II built new barracks for the Janissaries, the Yeşil Odalar in the Et Meydânî (replacing the Eski Odalar built probably in 864/1460); these, though often rebuilt after fires, remained the Janissary barracks until the destruction of the corps in 1826 (see also I. H. Uzunçarşî, Kapalıcu Ocaârlarî, 241-3).

The following summary, for the Fâṭîh complex, illustrates the financial position of such a foundation (after Barkan, in İht. Fak. Mecm., xxiii, 306-41). The income in 894/1489 and 895/1490 was about 1'1/2 million akçe (30,000 ducats, far exceeding the income of the Aya Sofya wâhîfî), arising from 12 baths in Istanbul and Gâhâlîa, the dîżyâ of these two cities, the tax-income from over fifty villages in Thrace and various rents. The expenses for the khâyûrât were:

- stipends 869,280 akçe
- food for the hospice 461,417
- expenses of the hospital repairs, etc. 72,000

The personnel of the mosque numbered 102 in all, of the medreses 168, of the hospice 45, of the hospital 30. There were further agents and clerks to collect the revenues (21), and builders and workmen (17). Besides these 383 persons, regular payments were made to indigent 'ulêmdâr and their children and to disabled soldiers; these charities amounted to 202, 291 akçe per year. 3300 loaves were distributed at the hospice each day and at least 1111 persons received two meals. Besides being a religious and educational centre, therefore, this complex—drawing some half of its revenue from outside Istanbul—was a nucleus for the economic and social prosperity of this area of the city.

IV. THE FORMATION OF NAHÎYES AND MAHALLES IN THE 19TH/20TH CENTURY

In accordance with Mehmed II's orders issued in 863/1459, the paçhas constructed complexes of their own in the various quarters of the city, each of which served to encourage settlement and prosperity, so that within seventy years of the conquest 13 nahîyes had come into existence and the Ottoman city had taken its shape. The whole city constituted one kadâ; each nahîye comprised a number of mahalles (represented by the imâm of its local mosque). The establishment of a djâmi or a meşîh, with its appurtenances, in a sparsely populated area served to encourage settlement and the creation of a mahalle (the process termed şençelendirmê). The meşîhîs, like the djâmi's, were supported by wâhîfs. The following table (after 'Ayverdi-Barkan, İstanbul wâhîflarîlarî defterî, Istanbul 1970) shows the number of wâhîfs recorded for each nahîye:

<table>

Totals: 219 1594 3180
These registers do not record *mahalles* of non-Muslims: the total was probably between 250 and 300, see below.

The first of these *nahiyes* to be established were presumably nos. 1, 2, 6, 7, 9, and 12. Of the *mahalles* within the walls in the 10th/16th century, some 30% were established under Mejemmed II, some 50% under Bayezid II, and some 15% between 1512 and 1546. This does not imply, however, that the population increase slackened in the 10th/16th century; for *mahalles* founded earlier became more densely populated, as is apparent from 15th and 16th century plans: Vavassore's plan, derived ultimately from a plan of the period of Mejemmed II (see Babinger, *Drei Stadtschichten.* . . .), shows the densest occupation east of a line drawn from the eastern side of the Langa Bostanlar to Unkapani (and along the southern shore of the Golden Horn); and by Ayverdi's map (*Istanbul mahalleleri*, Ankara 1958), the area east of the line contains 92 *mahalles*, and that to the west—twice as extensive—98. But in plans of the 10th/16th and 11th/17th centuries (that of Yevli-djân in the *Hünername*; of Pir Re's, Oberhummer, Tafile XXII), the area within the walls is all inhabited, with the exception of a strip within the land-walls by Yedikule, Bayram Pasha Doreni, the Yefî Baghcea area and the Langa Bostanlar. An increase in population density has to be deduced both from the increase in the number of *wakfs*, as under:

In 1005/1596-7 3180 *wakfs* were in existence (some having been extinguished). The first seventy years after the conquest saw the establishment of 1163 *wakfs*, the next 28 years (927-1005) 2858 (Ayverdi-Barkan, pp. 42-5). The first seventy years (927-1005) 2858 (Ayverdi-Barkan, pp. 42-5). The *mahalles* were all consolidated in a single *wakf*, as is apparent from 15th and 16th century plans, and the establishment of six further *nahiyes* was formed. Ebu 'l-Vefî *Nahiyesi* (V on the plan). Even in early days thickly populated, it was situated between the Eski Saray and Unkapani Caddesi, extending to the Golden Horn. A mosque and *zâyiye* were built by Mejemmed II for Sheykî Abu 'I-Wafâ (d. Ramadân 896/July 1491). It was a residential area, with *mesjidâs* built especially by the *'ulama* of the day (Molla Ahusrev, the first *âkîf* of Istanbul Khalîf Beğ, Molla Gûrânî, etc.), but also by wealthy merchants. Under Bayezid II many members of the *'askeri* class established rich *wakfs* (among them Bayezid's daughter Ayse Sultan and her husband Sinan Pasha).

The reign of Bayezid II saw much economic expansion, and the establishment of six further *nahiyes* (nos. 3, 4, 5, 10, 11 and 13 in the list above). The areas of habitation stretched out from Fatih and Istanbul towards the landwalls, so that several Byzantine churches and monasteries in this region were now converted to mosques (see plan). Sultan Bayezid *Nahiyesi* (V on the plan). The mosque, on the Forum Tauri south of the Eski Saray, was built between 906/1501 and 912/1505; there was also a medrese, a school, and a hospice, together with a *hamam* and a *khân*. The *zâyiye* in the same area (Vavassore's plan shows the area before this building work was undertaken). This complex was the centre of a *nahiye* embracing 23 *mahalles* and extending from the modern Bayezid Meydani to Kum-Kapi on the Marmara (the complex of Nishandji Mehmed Pasha, nearer the sea had previously been a second nucleus in this area) and along Dîvân-yolu from the Büyük Çarşî to Sarrâdîkhâne. In the reign of Mejemmed II, Bayezid Meydani had been surrounded by the *mesjid/mahalle* foundations of Çakr Agâ (mâhiyye dated 864/1459), Dîvânı Âl Beğ (866/1462) and Balaban Agâ (888/1483), while to the south of the modern road to Laleli were the *mahalles* of Emin Beğ (868/1463), Sîgbân-bashî Ya'kûb and Mî'mân Kemâl. Many new *mahalles* were established under Bayezid, mostly by members of the *'askeri* class but some by craftsmen. The Eski Odalar (see above) were in this *nahiye*, as was the shipyard for galleys (Kadîra Tersanesi); the Byzantine port of Sophia was used as a naval base immediately after the conquest (for its use as a galley harbour in the days of the Palaeologues, see Janin, *Const. Byzantina*, 223-4), and between 1459-61 Mejemmed II made a shipyard here (Ciritboulos, 140, 177). The *tabârî* register of 860/1455 shows that the *zâlebs* [*q.v.*] were living between Yeşi-kapî and Kum-kapî, a district originally called *'azebs* [*q.v.*] and between 1459-61 Mejemmed II made a shipyard here (Ciritboulos, 140, 177). The tabârî register of 860/1455 shows that the *zâlebs* [*q.v.*] were living between Yeşi-kapî and Kum-kapî, a district originally called *'azeber* Mahalles. The shipyard, with its great gate, built around the enclosed harbour is clearly shown in the plans of Vavassore and of Veli-djân. Later, probably in the 18th cent., the harbour silted up to become the modern Cümbi Meydani and Kadîra Bostani. A very important building, of the Conqueror's time, in this *nahiye* was the mint [see *Dâr al-Darb*, pp. 117], in the *mahalle* of Sîgbân-bashî Ya'kûb, the principal mint for silver and gold coins (later known as the *Şrîmekât*/*Şrîmekât khânê*); a small *târîf* of 8 shops was built near it.

*All Pasha Nahiyesi* (III on the plan). *Khâdim*
ISTANBUL 231

(Atik) 'Ali Pasha [p.p.], twice Grand Vizier and killed in 927/1521, founded on Divân Yolu in part of the Forum Constantii a mosque (902/1496), a medrese, a school, a hospice and a ḥānakāh, with a bigān and shops. The nābiyye (no. 3 above) contained 5 mahalles (see S. Eyice, in Tarikh Dergisi, xiv/19 (1964), 99-114; R. E. Koçu, in Istanbul Ansiklopedisi, iii, 1281).

The same 'Ali Pasha constructed a mosque (later Zindilli-kuyu Dâümî) near the Edirne Kapî and converted the Khora monastery church into a mosque (Kilise Camii/Kariye Camii) (see S. Eyice, op. cit.). This nābiyye (no. 13 above, VIII on the plan) embraced an extensive and sparsely populated area of 22 mahalles. These khāyraât were supported by a large bigān and a “kirdâr” near his hospice at Čemberli Taş (see S. Eyice, Elçi Hanî, in Tarikh Dergisi, no. 24 (1970), 93-130; in the early 10th/16th century this bigān brought in a revenue of 13,000 akçe per year; a bath at Yeþi-bağhî; 278 shops, 246 “rooms”, one bakehouse and one breadstore in the commercial districts of Istanbul; 44 villages, 7 baths, 7 mills and various shops in Anatolia and Rûmeli; and a bedestân at Yanbolu. The annual revenue (mostly from outside Istanbul) was 471,998 akçe (over 8000 ducats) in 915/1509. Most of the mahalles (13) in this nābiyye were established under Bâyezîd II in the Balat-Edirne Kapi-Bayram Pasa Deresi area.

İbrahim Paşa Nâhiyesi (IV on the plan). Çandrağl Ibrahim Paşa (hâdi‘asker in 890/1485, Grand Vizier for one year from 904/1498) built at Üçün Carshî a mosque (the roofed building shown in Lorichs, Tafel 1X), a medrese and a school, supported by a bath, a slaughterhouse of 14 shops at Eyüpûb, 5 shops, 28 houses and 40 “rooms” (together with 3 villages and 3 mills in Rûmeli and Anatolia, a bedestân at Sereç, etc.). Although the foundation was relatively poor (annual revenue 135,880 akçe), the nābiyye included the busy commercial district between the Büyük Carshî and the harbour, and some of its mahalles had been established by wealthy merchants in the reign of Mehmed II.

Dâvûd Paşa Nâhiyesi (X on the plan). "Kodja" Dâvûd Paşa (Grand Vizier from 887/1482 to 902/1497) built a mosque, a hospice, a medrese, a school and a public fountain (inscription dated 890/1485) near the Forum Arcadî, with an extensive carshî of 108 shops and 11 “rooms” around the mosque. He also brought into occupation the area now named after him on the Marmara coast (west of the former Port of Eleutherios), building there a palace, a bath, a bosako, 11 shops and a landing-stage (Ayverdi-Barkan, p. 345). Six baths, in Istanbul and elsewhere, a bedestân at Manastîr, shops at Usküb and Bursa, and the revenue of 12 villages brought in an annual income of 378,886 akçe (ca. 7,500 ducats). Although some mahalles had existed here before, it was particularly this foundation which promoted the growth of the area, 8 mahalles being set up under Bâyezîd II.

Kodja Muḥtâfâ Paşa Nâhiyesi (XI on the plan). It is evident that towards the end of Bâyezîd I’s reign the Muslim population was increasing in the region towards Sîlîvri Kapî, and here, 895/1489 (inscription), the later Grand Vizier Mustafâ Paşa converted the church of St. Andrew in Kristî into a mosque. According to the wakf-iyya, the complex comprised also a hospice, a medrese, a ḥānakāh, a school, and houses for the imām, etc. (for his ḥāyrat at Eyüpûb and elsewhere, see Ayverdi-Barkan, pp. 366-9), supported by a large kamâmûn (annual income 65,000 akçe) and 81 shops near the complex, by numerous shops and two bigāns in various parts of Istanbul, and by 27 villages in Rûmeli (details in Ayverdi-Barkan, 365-7). The annual income was over half a million akçe. No fewer than 17 mahalles were formed under Bâyezîd II.

The mahalles in the four nābiyyes bounded by the landwalls—Mustafâ Paşa, Dâvûd Paşa and Topkapî—were relatively large but their wakfs were few, an indication that the population was sparse and many of the mesdīds had to be supported from the sultan’s treasury. Most of the new mahalles established under Sûleymân at Edirne-Kapî (mosque, medrese, school and fountain, supported by a bigān and a carshî) promoted the settlement of the area (see below). The establishment of the mosques of Kara Ahmed Paşa at Topkapî (ca. 965/1554) and Khâdîm İbrâhîm Paşa al Sîlîvri Kapî (958/1551) suggest a concentration of settlement near the city gates.

Nearly 90 % of the mahalles were named after the founder of the local mosque. The local people would make new endowments to ensure the repair of the mosque and the support of the mosque officials and teachers, but there are few cases where the local people clubbed together to build a mosque. Among the individuals who founded more than one mesdīd in the years after the conquest are the subaşî Câdkr Ağa, the Khâdîm Mollâ Khûseîv, and some merchants (Eyîn-zâde Khâdîa Sinân, Üskûbî Hâdîdî İbrâhîm, Khâdîa Üveys, Khâdîa Khâlîl). According to the wakf register of 953/1546, 65 % of the founders of mosques belonged to the “ruling” ‘askeri class (palace officials, army officers, ‘ulämä and “bureaucrats”). The distribution is as follows:

<table>

</table>

High-ranking members of the ‘askeri class were, in fact, far richer than merchants and craftsmen, and were more inclined to found wakfs, partly perhaps for reasons of social and political prestige, but also as a means of retaining within the family’s control capital derived originally as income from the Public Treasury (see İnalcık, Capital formation . . . , 133-40).

V. DEVELOPMENTS IN THE 10TH/16TH CENTURY

The 10th/16th century sees a rapid increase in the population dwelling within the walls, so that old mahalles become more densely populated, some mesdīds are replaced by bigāns, new mesdīds are built, and new complexes are erected and new mahalles are created in formerly deserted areas, especially towards the landwalls, along the Bayram Paşa Deresi (the Lycus) and even outside the walls; whilst around Gâlata the inhabited area extends up the Golden Horn and down the slopes to Topkapî, and the new districts of Flndbûl, Dîhângîr and Kâsîm Paşa come into being. The demand for new buildings which this increase in population produced led to a period of great activity by the Palace department of Khâdîa mi‘mârî, already directed by the great
architect Sinan [q.v.]. (In 932/1525 the department had 13 architects, all Muslim; in 1013/1604 there were 23 Muslims and 16 Christians; for its organization see Ş. Turan, in Tarih Araştırmaları Dergisi, i/1 (Ankara 1965), 157-202), so that the finest monuments of Ottoman architecture and art belong to these years. The mosque of Rüstem Paşa [q.v.], twice Grand Vizier, was erected over warehouses and shops on the site of the meşjid-i Hâdiji Khâhil (see A. S. Uğen; Rüstem Paşa kasıeti, in Mimarlık Dergisi, ix (1944), 23-31). Piş Memed Paşa (Grand Vizier 933/1525-937/1529) established an extensive waqf with a mosque and medrese in the Zeyrek district, a mosque at Merdjen, a mosque and a khanăkhâ at Molla Gârun, and a complex of mosque, medrese and hospice at Silîvri, supported by the annual income of 6,000 ducats from a khan near the Bedesten, another khan in Çhalâta and shops at Tahtakaflê and Ballık-Pâzar, while his garden north of the Golden Horn was the origin of the later quarter of Piş Paşa (Evliyâ, i, 411).

In 946/1539 the sultan, Süleyman, built in the name of his wife Khurrem a complex of mosque, medrese, hospital, hospice and shops at Avret-Pâzar (the "women's market") in Aksaray, which was becoming an important market area (for this market, round the Column of Arcadius, and its prosperity at this period, see C. de Villanovo, 306, and cf. Sanderson, 77); a khan, a hammâm, a wood-store, a slaughterhouse, and various shops and warehousesc in different areas of Istanbul brought in an annual income of half a million akçe (8,400 ducats). In memory of his son Mehemed, the sultan built on Divân-yolu, between Vefâ and Sarrâджihâne, a truly imperial (Evliyâ, i, 162) complex (952/1544-955/1548; mosque, medrese, hospice, school, türbe; also a kerbînsaray); whilst for his son Dîhadîr he built at Findikli the mosque and school which gave its name to the Dîhadîrî district (Evliyâ, i, 442).

Finally, exploiting an area cleared by a fire in the centre of the city, Süleyman entrusted to Sinân the construction, on a hill overlooking the harbour, of the most elaborate building-complex of the capital. This, the Süleymanîye (mosque begun Dümâdâ II 957/July 1550 and completed Dhu'l-Hijjâ 964/ October 1557; for the inscription see C. de Villanovo, in Kanunt Armağanı, Ankara 1970, 293), is composed of no fewer than 18 elements (S. Eyice, Istanbul, pp. 49-52, bibliography). Within the court are the mosque, the tombs of Süleyman and of Khurrem Sültân and the house of the türbedar; outside, on two sides of the mosque are four medreses and the dâr al-badîth, the highest institutes of learning of the Empire; the other large buildings are a hospital, a dâr al-dâîفة and a tâbâhhane: smaller buildings are a college for müalims (students preparing to enter a medrese), a library, a pharmacy, and a children's school. The complex is completed by several houses near the mosque for teachers and mosque-servants, a khan, and shops in front of the medreses, which constitute a târîkh. According to Evliyâ Çelebi (i, 157) the Palace of the Aghâ of the Janissaries (later the office of the Sheyhül-Islâm) belonged also to this complex. (For the Süleymanîye and the Aghâ's palace, see M. Lorichs, Tafel X).

The registers of expenses for these constructions are valuable evidence for the procedures followed in such a major enterprise (see O. L. Barkan, "Organisation du travail dans la chantier d'une grande mosquée à Istanbul au XVIIe siècle," in Annales. Économies, sociétés, civilisations, xvii (1962), 1903-1106; for similar registers relating to the Mosque of Ahmed I, see T. Öz, in Vahefsür Dergisi, i (1938), 26; cf. also Taşlık-i Diyanet-i Şerif-i Nür-i Şehârânî, "Iliâve to TOEM, no. 49). Materials and craftsmen were gathered from Istanbul and from other parts of the Empire, the workmen being kept under strict discipline. Of the craftsmen receiving pay over the whole period of 5 years and 7 months, 29 % were from Istanbul, 14 % from Rûmeîli and the Islands, 13 % from Anatolia (with no indication for 44 %), 51 % of the 3,523 craftsmen were Christians, 49 % Muslims. The builders of walls, the ironworkers and the sewermen were mainly Christian, the stonecarvers, carpenters, painters, glassworkers and lead-workers were mainly Muslim. Of the total workforce 55 % were free men receiving a wage, 40 % were "şademi oğlanlar" and 5 % were galley-slaves.

All the waqfs of Süleyman (besides the foundations already mentioned, the medrese of Sultan Selim and the sarâye in the mahalle of Fil-damul) were consolidated in one waqfsîyya (ed. K. E. Kürkcüoğlu, Ankara 1962). According to a taâbir made in the reign of Murâd III (Ayverdi-Barkan, op. cit., xvi, n. 31), the annual income was then 5,277,750 akçe (88,000 ducats); it may be noted that 81 % of this income arose from the taxes of 230 villages in Rûmeîli. The whole complex had a staff of 748, whose stipends amounted to nearly one million akçe a year.

Foundations made during this century near the wall gates and in the Lycus valley testify to an increase of population in these areas. In the region of Edirne-Kaplî, besides the Mihrumân foundation (see above), there were the mosque-complex of Mestî Paşa between this gate and Fatih (inscription: 994/1586; see T. Bozkurt, Mestî Paşa Külliyesi, İst. Ün. Ed. Fac. thesis, 1964), the mosque of the dragoman Yûnus Bog at Balât (948/1541); the mosque of Ferhâ Fethîhâd (970/1562); and the mosque of Kâdi Süâdî.

At Topkapî the Kara Ahmed Paşa complex, the work of Sinân (962/1554: mosque, medrese, dâr-al-kerrû, school, fountain; see Ş. Yaltkaya and Ali Saim Ügen, in Vahefsür Dergisi, ii (1942), 83-97 and 169-71), was an important factor in promoting the district's prosperity. The Arpa Eminî (Deventîr) Moustâfa mosque should also be mentioned. The district of Yeşîû, see C. Uğan, in Kanunt Armağanı, Ankara 1970, 293), is composed of no fewer than 18 elements (S. Eyice, Istanbul, pp. 49-52, bibliography). Within the court are the mosque, the tombs of Süleyman and of Khurrem Sültân and the house of the türbedar; outside, on two sides of the mosque are four medreses and the dâr al-badîth, the highest institutes of learning of the Empire; the other large buildings are a hospital, a dâr al-dâîفة and a tâbâhhane: smaller buildings are a college for müalÎms (students preparing to enter a medrese), a library, a pharmacy, and a children's school. The complex is completed by several houses near the mosque for teachers and mosque-servants, a khan, and shops in front of the medreses, which constitute a târîkh. According to Evliyâ Çelebi (i, 157) the Palace of the Aghâ of the Janissaries (later the office of the Sheyhül-Islâm) belonged also to this complex. (For the Süleymanîye and the Aghâ's palace, see M. Lorichs, Tafel X).

The registers of expenses for these constructions are valuable evidence for the procedures followed in such a major enterprise (see O. L. Barkan, "Organisation du travail dans la chantier d'une grande mosquée à Istanbul au XVIIe siècle," in Annales. Économies, sociétés, civilisations, xvii (1962), 1903-1106; for similar registers relating to the Mosque of Ahmed
works of Sinan (see R. M. Meric, Mimar Sinan, Ankara 1965).

Indeed the period from 947/1540 to 996/1588 may justly be called the "period of Sinan", for he and his subordinates constructed in Istanbul, for the sultans and notables, 43 dömsüs, 52 mesджds, 49 medreses, 7 dâr al-kûrâ, 40 hamмâmas, 28 palaces and kâşks, 3 hospices, 3 hospitals, and 6 hânns. Other important constructions attributed to Sinan in the outlying districts are at Eyyûb, the mosque of Zâl-rahîl Mahbûb Pasha (fountain dated 958/1551), the mosque of Defterdâr Mâhmed Celibi (948/1541) and the mosque of Shâh-Sultan; at Topkâhpâ, the mosque of Kâlle ʿAli Pasha (988/1580), and the mosque of Muhûydîdîn Celibi; at Flindîlpâ, the mosque of Dîshângîr, and the mosque, school and hamмâm of the Kâdîcâser Mîhmed Vušûl (Mollâ Celibi) (973/1565); at Bâşkhatash, the mosque of Sinan Pasha (983/1575), at Sûltûnî, the Cavûş-basîl mosque; at Usküdâr, the mosque of Mîhrûmâh Sultan (954/1548), the mosque of Şemsî Ahmed Pasha (988/1580) and the Eski Vâlide (Nûrûlî) Sultan mosque (901/1593); at Kâşîm Pâhâ, the Kâşîm Pasha complex of mosque and medrese (the value of the wâbû being 2,630,000 akçes in cash and 117,000 akçes in real estate); and towards Omâyâyîn the Piyâle Pâsha complex of mosque, medrese, school, tekke, fountain and hamмâm (wâbîfîyas dated 981/1573).

The quarter of slaughterhouses and tanneries outside Yedikule grew considerably: originally consisting of 27 shops of tanners, 32 of butchers, and 5 of catgut-makers (wâbîfîyas of Mehemmed II and the Aya Sofya register of 988/1485), it was in the middle of the following century, according to Evliyâ Celebi (i, 391), a "fLOURISHING TOWNSHIP" with one dömsû, seven mesджds, 300 tanners' shops, 50 glue shops and 70 catgut-makers. These tanners claimed the right to buy the hides of all animals slaughtered in Istanbul (see O. Nüri, Medîlî-i umûr-i Belediye, i, Istanbul 1922, 830-2; for a list of the Istanbul slaughter-houses in 1610/1667: A. Refik, Istanbul hayatı, 1000-1100, Istanbul 1931, pp. 30-1).

In the second half of the 16th/17th century and the first half of the 17th/18th, the inhabited areas extended outside the landwalls. This area, of 17.2 km.

The most important of such foundations are those of Kösem Vâlide Sultan (mosque, medrese, hospice, bath, kânh; for the wâbîfîya see W. Caskel, in Documenta islamica inedita, Berlin 1952, 251-62) and of Gülûngh Sultan ("Yeni Vâlide", of 1120/1710-1122/1720: mosque, fountain, shops, bakhouse; see O. Nüri, Medîlî-e, i, 1054-5). Another characteristic of this period is the foundation of new complexes, on the model of the old, in sparsely populated areas of the city (e.g., that of Hekim-oghîl ʿAli Pasha in the nahiye of Kodja Mustafa Paha, of 1146/1733-1147/1735) or in newly settled districts at Usküdâr and along the Bosphorus.

By and large, until the 17th century practically all the expansion of Istanbul took place within the walls. This area, of 17.2 km.

The last great mosque-complexes to be constituted in the classical tradition of Ottoman architecture are those of Ahmed I on the Golden Horn and the Vâlide Nişâbûrî (Yeni Nişâbûrî) at Eminönü.

The former, built between 1018/1609 and 1026/1617 at a cost of one million and a half gold pieces, comprised a mosque, a medrese, a hospital, a food-kitchen, a dâr al-dişâfâ, lodgings (miş rifkânî), a school, a public fountain, and an ârâsta-type carşî (see Evliyâ Celebi, i, 270-19; Tahsîn Ür, in Yakûflar Dergisi, i, 25-8; S. Eykice, in IA, art. " İstanbul", p. 1214/59). The ûbûyû of the inhabitants of Ghalata was made over as wâbîfî for this mosque.

The Yehei Nişâbûrî was begun in 1006/1597 by Safiyye Sultan [q.v.], but the work was suspended for many years and completed only in the years 1071/1660-1072/1663 by Türkûn Sultan [q.v.], to comprise the mosque, a dâr al-kûrâ, a school, fountains, the tomb of Türkûn, and a market (mîrâ carşî) and shops (see S. Ulgen in Yakûflar Dergisi, ii, 387, and S. Eykice, p. 1214/59; detailed engraving of the area in Grelot, p. 285).

The 12th/18th century saw the construction of the Nûr-ı Othmânîyye complex beside the Büyük Carşî (1161/1748-1176); mosque, medrese, library, public water-point (sebhî-kânh); (see Tâvi-dî Nişâbûrî-i Nûr-ı Othmânîyye, supplement to TOF.M, Istanbul 1937; Doğan Kuban, Türk Barok Minar里斯i, Istanbul 1954) and of the Lâli complex (1174/1760-1175/1764; mosque, medrese, fountain): these are in a hybrid style influenced by European baroque, and no longer belong to the classical Ottoman tradition.

It is not without significance that in this period of decline hospices and hospitals, requiring a substantial annual expenditure, tend to be replaced as elements of a complex by libraries and fountains. This tendency is evident in the foundations of the Grand Viziers. Three viziers of the Köprülü family built complexes along Divân-Yolu (Mehemmed Paşa: tomb, medrese, library; Kara Mustafa Paşa, 1101/1690: mosque, medrese, school, fountain; 'Amîjâzâ Hüseyn Paşa, 1112/1700: mosque, medrese, library, fountains). Here too were the foundations of Çorlu ʿAli Paşa (1120/1708: mosque, medrese), of Dâmûd İbrahim Paşa (1132/1720: dâr al-hadîth, fountain), and of Seyyid Fâsân Paşa (1158/1745: medrese, school, fountain, shops, bakhouse; see O. Nüri, Medîlî-e, i, 1054-5). Another characteristic of this period is the foundation of new complexes, on the model of the old, in sparsely populated areas of the city (e.g., that of Hekim-oghîl ʿAli Paşa in the nahiye of Kodja Mustafa Paşa, of 1146/1733-1147/1735) or in newly settled districts at Usküdâr and along the Bosphorus.
bayân). So too (note the names) there were wide open spaces at Ağhya-rayrî (between Silivri Kaplû and Yedi-Küle), in the extreme southern corner of the city around Yedi-Küle, at Bostân-yeri on the Mar-\[\ldots\]t to form distinct districts (for clashes between Muslims and Christians in a “mixed” mahalle, see A. Refik, $\ldots$ 1289, in). In 1285/1868 certain mahalles were obliged to pay two or three street-cleaners (firmân of 1111/1718, in Medîelle, i, 965). In 1285/1868 certain mahalles were obliged to maintain fire-fighting equipment and some of the young men of each mahalle were appointed to create a new “type” in the life of Istanbul, the colourfull $\ldots$ 1289, in). The $\ldots$ mahalles in all dealings with the authorities. The sultan’s decrees were passed on to the imâm of the kadî’s court or proclaimed by criers (mûnâddî) in the streets, and the imâm was responsible for seeing that the mahalle fulfilled all its obligations to the government: he could appeal to the authorities, particularly to the kadî, for assistance in dealing with refractory members of the community. The election of a muhâfîr for each mahalle in 1242/1826 was the first step towards the “secularization” of the local authorities.

As time went on, the tendency increased for co-religionists and co-sectarians to settle together in separate mahalles, and for these mahalles to form distinct districts (for clashes between Muslims and Christians in a “mixed” mahalle, see A. Refik, $\ldots$
ISTANBUL

bul hayati, 1000-1100, doc. 100; idem, Istanbul hayati, 1053-1591, 53; for the formation of distinct Greek, Armenian and Jewish districts, see below.) This tendency was encouraged by government action. Thus when the Church of the Pammakaristos was converted into a mosque in 999/1591, attempts were made to create a Muslim mahalle around it, by selling the vacant site in lots, each sufficient for building a house, exclusively to Muslims (A. Refik, Istanbul hayati, 1000-1100, doc. 14; cf. also Stolpe's plan).

The tendency for each district to have its own traditions, occupation, even style of pronunciation, is reflected for the 11th/12th century by EviLyâ Celebi and Eremeyâ Celebi (see Bibli.), and in the 19th century by such novelists as A. Midhat, Mehemmed Tewfik and Huseyân Rahni; see M. Kaplan, in IA, s.v. Istanbul, 1214/157-68.

Vavassore's plan shows quite broad streets leading to each region of the city, but these have disappeared in plans of the next (10th/16th) century (Hüsûrûnâme) (the street plan is shown clearly only in the map by the dragoman Konstantin of 1228/1813: Topkapî Sarayı no. 1858). Indeed in the 19th century, Didân yolu, the most important street of the city, was only 3.5-5.5 metres wide (Medjelle, i, 1067).

The streets of Istanbul were typical of those of a mediaeval Eastern city (Mayer, op. cit., 4-32), twisting and full of blind alleys, so that the delimitation of the mahalles, far from being planned in advance, was a matter of pure chance (Mayer, 9-24, 104, 254). A study of the detailed city map of 1293/1876 (Ayverdi, 19, asırda İstanbul hariçisi, Istanbul 1938) shows that streets still preserve the alignment they had had under Mehemmed II, for the mi'mâr-bâșhi during rebuilding after fires, would try to preserve the old street-plan (Medjelle, i, 1066, 978). Occupants of property on a street, however, persistently attempted to incorporate areas of the highway into their properties and would, by erecting upper storeys projecting far over the street, cut down the light and air at ground-level. These difficulties of communication in the narrow streets meant that goods were usually transported by sea, from the various gates and landing-places on the Golden Horn.

Documents of the 10th/16th century attest that streets were paved (A. Refik, Istanbul hayati, 1553-1591, 67), and EviLyâ Celebi claims (i, 446) that the streets of Istanbul, Eyyûb, Topkâşhâne and Kâşîm Pasha were all completely paved in the middle of the 12th/17th century. The construction and repair of the paving was carried out by contract with the kâthûddâr of the guild of paviours (A. Refik, op. cit., 60), the work being supervised by the şehr-eminî, the mi'mâr-bâşhi or the su-yolu nâşiri. For main roads the cost was met by the government, by side roads by the householders, shop-keepers and mütevellis whose properties benefited (a document of 1087/1676 in Medjelle, i, 1147; A. Refik, Istanbul hayati, 1100-1200, 930).

The cleaning of the principal squares and streets was carried out by the şadârîn orghânlarî and other military units under the authority of the Yeşİîeri ağgaşî, while each property-owner in a side-street was responsible for keeping the area in front of his property clean; street-sweepers (süprîndîjî) were later employed in the mahalles. The removal of rubbish was the responsibility of the çopîshk subaşghâsil (also termed şâhir subaşghâsil), who let out the work on contract to a group known as CAPITAL ("searchers", 500 in number; EviLyâ Celebi, i, 574). These would collect rubbish in baskets and throw it into the sea, after sifting through it for anything worth keeping; the usual area for the disposal of rubbish and rubble was Langa, or, on the TağiItkafe side, at the place near Odun Kapîl known as Bokluk (see Oberhummer, Tafel XXII). Firmans repeatedly forbade the throwing of filth into the streets, the breaking-up of paving and the building of steps or stairways in front of houses (A. Refik, Istanbul hayati, 1000-1100, docs. 25-58).

Except during Râmaşîn, everybody had to be within doors after the bed-time prayer (Derschwan, 70; Medjelle, i, 964). There were no arrangements for lighting the streets, and anyone obliged to be out had to carry a lantern (Medjelle, i, 956; White, iii, 250). The first street to be lit by gas was Beyoghlu Dâjdâsi in 1273/1856, the main streets of Istanbul being lit by gas in 1879 (Medjelle, i, 971).

Inhabitants of Istanbul and foreign observers unite in reporting the neglected and dirty state of the streets in spite of the stringent decrees periodically issued. In 1839, for the first time, various plans were drawn up for modernizing the city by (e.g.) opening up blind-alleys and creating broad interesting streets and squares, but such measures began to be carried out only after the great "Khodja Pasha" fire of 1865 (details in Medjelle, i, 987-991).

(c). Building regulations.

Regulations issued to control building-styles, the streets, and the city's cleanliness had their effect on the appearance and plan of Ottoman Istanbul. Such regulations were issued by the şehr-eminî (e.g.) and his subordinates the kâhîsa mi'mâr-bâşghi and the su-yolu nâşiri, and put into effect through the kâdî and the subaşghi. In 1834 these duties passed to the emîye-i kâhîsa Müdbîllü (Medjelle, i, 981-3).

In the first place, all building was being under the control of the state. Before building could begin, the right to the site had to be acquired by an approach either to the public treasury (mirî) or to the appropriate wâkhf and by the payment of the idjâr-i mütedîjîle. If the freehold was held by a wâkhf, the consent of the state authorities was necessary. The mi'mâr-bâşghi would grant permission for construction of the building according to the current regulations and the permitted dimensions, and check that these were observed (for an example of an istidjâtâ made when a wâkhf was being established, see S. Eyice, Eci Han, TD, no. 24, plate 1 opposite p. 130; Medjelle, i, 1044-8). In 1156/1742 it was decreed that builders who erected buildings for non-Muslims without obtaining a firman of permission should be put to death (Medjelle, loc. cit.).

The government intervened in these matters for various reasons: to regulate land-tenure, to prevent fires, to avert water-shortage, and to protect the walls, mosques, and other public buildings. According to building regulations of 966/1559 (the time of Sinân), houses were not to be more than two storeys high, the upper storey was not to project over the street, and balconies and eaves were not to be made (A. Refik, Istanbul hayati, 1553-1592, 58-9). That these prohibitions had to be repeated so often (A. Refik, op. cit., 66; Medjelle, i, 1052-4) shows clearly that they were not observed. After great fires it was ordered that houses, especially those adjacent to public buildings and kâhîs, should be constructed of stone or brick (A. Refik, Istanbul hayati, 1100-1200, doc. 34) (yet after earthquakes construction in wood was decreed).

Thanks to its cheapness, most of the houses of Istanbul were always built of wood. To limit the danger of fire and to facilitate approach to the city's gates and
landing-stages, orders were issued in 966/1558 to demolish all houses and shops abutting on the walls (an order later re-issued, *Istanbul hayati, 1100-1200*, 67), leaving a clear space of 4 *d coraz* (in 1131/1728, five *d coraz*, i.e. 3.25 m.; see Oberhummer, Tafel XXII). To conserve water, the construction of new palaces and baths needed the sultan’s permission; sometimes indeed the building of baths was forbidden. To prevent overcrowding, the building of ‘bachelors’ quarters’ (*bekdr odalari*) (see below) where newcomers would stay was strictly controlled and sometimes forbidden (*Medjelle*, i, 1052).

These regulations were rarely followed. The increase in population from the second half of the 10th/16th century meant an increased demand for housing, so that palaces with extensive gardens were pulled down to be built over with contiguous wooden houses and shanties (A. Refik, *Istanbul hayati, 1100-1200*, 67-8).

Non-Muslims were subject to severer regulations: they could not build or occupy houses near a Muslim place of worship (*Medjelle*, i, 1072); their houses were not to be more than nine *d coraz* high or built of freestone, and they could not construct baths (*Medjelle*, i, 1056, 1090); it was forbidden to Muslims to sell houses or building-sites to *dhimmis* or to non-Muslim foreign residents (*Medjelle*, i, 1072-4) (but a legal device (*hilti*) could usually be found to circumvent this). By the code of regulations of 1233/1817, the permitted height of houses for non-Muslims was increased to 12 *d coraz*, and for Muslims to 14 (in the 5th and 6th centuries A.D. the maximum height permitted in Constantinople had been about 33 m.: Mayer, 81). The old ban on building more than two ‘storeys’ led to the construction of all sorts of ‘extensions’ upwards—*tardak*, *bialakhane*, *takhlipash*, *dikhanunn*, *cat-tara* (see the views in M. Lorichs). After the Taqılmât, the height limitations were abolished, for Muslims and non-Muslims alike. It is very probable that these building restrictions—together with fear of plague—were the principal cause for the settlement of non-Muslims outside the walls, on the northern side of the Golden Horn and along the Bosphorus: as their houses grew in number, in 1160/1747 it was forbidden that non-Muslims should build on empty sites in these areas (A. Refik, *Istanbul hayati, 1100-1200* 213).

(d). Domestic architecture

The types of houses in Istanbul can be considered under five heads: (1) ‘Rooms’ (*oda, hudjra*). Houses of one room only were built either detached, in rows, around a court (*mushawwaha*), or in the style of a *bham*; they were often built over a shop. Such houses were usually built by a *waqt*, to be rented out, and since they were generally occupied by unwed men who had come to Istanbul in search of employment they were termed *bekdr odalari*. Sometimes ‘bachelors’ quarters’ were not encouraged in a *mahalle*, where only married households were permitted ( firman of 1044/1634 in *Medjelle*, i, 1053). Unmarried workmen frequently used a single room in a *bham* or a caravan-serai both as a workshop and as living-quarters, a *bham* occupied only by such residents being called *muğferderler bhami*. In 950/1543 a ‘room’ brought in an annual rent of about 100 *akles*. In 1083/1672 there were reckoned to be 3,200 *bham odalari* in Istanbul (Hezarfen, *Talkhs*, Paris Ms., f. 13b; for the areas concerned see Evliyâ Celebi, i, 326).

(2). *Mahalles* (mahalle) houses. Poor craftsmen and people in humble circumstances usually occupied primitive one- or two-storeyed houses of wood or mud-bricks (Ramberti, *apud* Lybyer, 239; Dernschwam, 63; Schweigger, 105; Alberi, iii/I, 393: ‘Le case delle cittâ sono per la maggior parte di legno e terra’). In less densely populated areas the typical house, as in the towns of Anatolia, was a small wood and brick building, with a courtyard and garden shut off by a wall from the street (see Mayer, 106-12 and bibliography, 381-4; S. Eldem, *Türk evi planı tipleri*, *Istanbul* 1955); such a house covered about 400 square archin (A. Refik, *Istanbul hayati, 1000-1100*, 14) and in the middle of the 10th/16th century cost about 100 gold pieces (*Istanbul vakiflar tahrir defteri*, no. 1346).

(3). Houses with gardens, walled about. The court of some of such houses was divided into two, an inner and an outer court; the residence comprised one house, or more than one, and also perhaps a ‘room’ or more than one; there might also be a belvedere, a privy, a stable, a bakehouse, a bath, a shed, an arbour, a storehouse, a ‘cool room’ (*serdâbi*), a mill, quarters for servants or slaves, a hen-coop, a pleasure garden, a well, a fountain, and a *tenâgdir* (a fire kept constantly burning); most newcomers would stay was strictly controlled and sometimes forbidden (*Medjelle*, i, 1052).

In 950/1543 a ‘room’ brought in an annual rent of about 100 *akles*. In 1083/1672 there were reckoned to be 3,200 *bham odalari* in Istanbul (Hezarfen, *Talkhs*, Paris Ms., f. 13b; for the areas concerned see Evliyâ Celebi, i, 326).

(4). Palaces and villas (*hars*). The palaces of statesmen and rich merchants consisted of a large mansion in an extensive court with numerous subsidiary buildings; they are therefore merely a grander version of type (3) above. They usually had two courts, the whole site being surrounded by a high wall (Schweigger, 106) (*Sandan Pasha bought up and demolished 300 houses to build his palace; see C. de Villalon, *Viaje de Turquia*, 74). The mansion, divided into *harem* and *şelâmih*, was usually built of wood and contained numerous rooms (there were 300 rooms in the famous palace of Siyavush Pasha, cf. *Ta*rih-i *Ghiâmâni*, 66).

In the courts of such palaces there would be, beside kitchens, bakehouses, baths and stables, also a school for the dignitary’s *çocuklar* (see *qhulam*, p. 1090), workshops for the craftsmen employed to supply the numerous household, and even shops (Evliyâ Celebi, i, 322-4) (for the organization of *Kara Ahmed Paşa’s palace at Topkapı see *Vakiflar Dergisi*, ii, 88). The villas (*bokâh, *hars*) in such a palace’s gardens were monumental specimens of architecture (S. Eldem, *Köşkler*, *Istanbul* 1969; K. Altan, *Siyavuş Paşa Kasrî*, in *Arkeoloji*, v, 268). Palaces built by viziers usually passed on death into the ownership of the sultan, who would present them to princes or to other dignitaries. It was estimated in the middle of the 11th/17th century that the palaces of members of the royal house and of viziers numbered about 120 (*Ta*rih-i *Ghiamâni*, 66, 69) and those of other notables and of merchants about 1000 (Hezarfen, *loc. cit.*; Evliyâ Celebi, i, 322-4).

The greatest and most famous palaces were built under Süleyman in the Ayasofya and Süleymaniye districts (listed in Evliyâ, *loc. cit.*).

(5). The villas and *yâlîs* of sultans and dignitaries, built outside the land walls of Istanbul (at Khalkali, Flovya, Davud Paşa’s on the northern side of the Golden Horn (at Kara aghaçı, Piri Pasha, Kâşm Pasha, Kâğıdîkhâne), along the Bosphorus and at Uçküdar, situated in extensive and well-tended gardens and woods, became very numerous, and later formed the nucleus of select residential *mahalles*. They served for recreation, as hunting-lodges, and as summer residences, and also as alternative accommo-
dation after a fire or during an epidemic (details in the registers of the bostandı-bashi, see R. E. Kocu, in Istanbul Etnisik Dergisi, iv, 39-90; Fatih Libr., Ms Ali Emri 1033; for the royal palaces and gardens, the Köşşa Bagıche Mabûnlâ detterleri in the archives of Topkapı and of the Başvekâlet. See further Evliya Celebi, i, 391-486; Ereyma Celebi, 34-58; P. Inciciyân, Istanbul, tr. H. Andreasen, Istanbul 1956, 95-113; Melling, Voyage pittoresque de C., Paris 1834; von Hammer, in Konstantinopel und der Bosporus, ii, Pest 1822; M. Ra‘if, Mirât-i Istanbul, Istanbul 1314; T. Gokbilgin, in IA, art. “Boğaz-îli”; series of articles by H. Sehsuvaroglu in the newspaper Cemhur yet, 1947-9). In the 12th/18th century, sultans created new mahalles by giving or selling sections of their gardens and woods as building sites (e.g., Muşatâl III, at İshâniyê and Beşlerbeği). (e) Fires

The frequent conflagrations in this thickly populated city, with its narrow streets of houses mostly built of wood, had as great an effect on social and economic life as they did on the physical configuration (for fires in the Byzantine period, see F. W. Unger, Quellen der byzantinische Kunstgeschichte, i, Vienna 1879, 74 ff.; Mayer, op. cit., 102). The number of fires was indeed abnormally high: Ergin calculated that in the 53 years between 1853 and 1906 there were 229 fires, with the destruction of 36,000 houses (Medjelle, i, 1333). The dates of the greatest fires are: Radiâb 977/1569, 27 Şafar 1043/2 September 1633, 16 Dhū ‘l-Ka‘de 1070/24 July 1660, 3 Shawwâl 1104/7 June 1693, 18 Şabân 1130/17 July 1718, 13 Râmâdân 1156/22 August 1782, 27 Dhū ‘l-Hijja 1241/2 September 1826, 14 Rabî‘ II 1249/31 August 1833, 27 Rabî‘ II 1282/19 September 1865 and 1 Râmâdân 1336/10 June 1918. (See A. M. Schneider, Diebedjis, i, Vienna 1879, 74; Mayer, i, Vienna 1879, 74; Melling, i, 349; and the Grand Vizier, the agha of the Janissaries, after a fire in the Misr Carshî alone in the fire of 1102/1690 were worth three million gûru [c. 2 million gold pieces]; after a fire in the Bedestên in 922/1516 many merchants went bankrupt.

Fires caused various political, social and economic crises in the life of Istanbul. Many fires were deliberately started by dissident Janissaries and aş Şefi: given the risk of the rife of the city); two thirds of the city in 1070/1660, 3 Shawwâl 1104/7 June 1693, to Corlu, Edirne, İzmit, etc.; see Cezar, 330, n. 6). Those made homeless would take refuge, with the goods they had managed to save, in mosque-courtyards, medreses, and open spaces such as Langa Bostân, but even here sometimes they could not escape. After a fire there would be shortages both of food and of building materials, with consequent rises in prices, compelling numbers of people to move away to neighbouring towns (e.g., after the fire of 1106/1782, to Çorlu, Edirne, İzmit, etc.; see Cezar, 365). Even buildings of stone, though not destroyed, would be made uninhabitable, involving the government in heavy expenditure and obliging wakfs to draw on their reserve funds. A sultan would often instruct notables and wealthy individuals to undertake the repair of public buildings. In the period of decline, the poor could not be prevented from converting named David, were recognized to be of great value (Rashîd, v, 306; Kuâ-i-6elebi-zade Asîm, 255), and “fire-brigades” were formed: a unit of tulumbâdâs, attached to the Janissaries in 1132/1719, tulumbâdâs for each mahalle in 1285/1666, and a regular fire-brigade in 1290/1873; fire-insurance began only in 1890 (Medjelle, i, 1170-1219).

(f). Earthquakes too had their effect on the city’s general appearance (Mayer, 98-101; Istanbul is one of the cities most subject to earthquake in the world, suffering 66 shocks between 1711 and 1894). Besides the great earthquakes of 1099/1688, 1180/1766 and 1854 (Cezar, 380-92), there was the major disaster beginning on 6 Dümâdâ I 913/22 August 1599, called by the chroniclers “Kütük Râyâmât”, when the shocks continued for weeks. The walls were seriously

In the fires at Tahtakaî‘e and round the Carshî stock and goods of great value were often lost. It was estimated that the goods lost in the Mişr Carshî alone in the fire of 1102/1690 were worth three million gûru [c. 2 million gold pieces]; after a fire in the Bedestên in 922/1516 many merchants went bankrupt.

Fires caused various political, social and economic crises in the life of Istanbul. Many fires were deliberately started by dissident Janissaries and aş Şefi: given the risk of the rife of the city); two thirds of the city in 1070/1660, 3 Shawwâl 1104/7 June 1693, to Corlu, Edirne, İzmit, etc.; see Cezar, 330, n. 6). Those made homeless would take refuge, with the goods they had managed to save, in mosque-courtyards, medreses, and open spaces such as Langa Bostân, but even here sometimes they could not escape. After a fire there would be shortages both of food and of building materials, with consequent rises in prices, compelling numbers of people to move away to neighbouring towns (e.g., after the fire of 1106/1782, to Çorlu, Edirne, İzmit, etc.; see Cezar, 365). Even buildings of stone, though not destroyed, would be made uninhabitable, involving the government in heavy expenditure and obliging wakfs to draw on their reserve funds. A sultan would often instruct notables and wealthy individuals to undertake the repair of public buildings. In the period of decline, the poor could not be prevented from converting named David, were recognized to be of great value (Rashîd, v, 306; Kuâ-i-6elebi-zade Asîm, 255), and “fire-brigades” were formed: a unit of tulumbâdâs, attached to the Janissaries in 1132/1719, tulumbâdâs for each mahalle in 1285/1666, and a regular fire-brigade in 1290/1873; fire-insurance began only in 1890 (Medjelle, i, 1170-1219).

(f). Earthquakes too had their effect on the city’s general appearance (Mayer, 98-101; Istanbul is one of the cities most subject to earthquake in the world, suffering 66 shocks between 1711 and 1894). Besides the great earthquakes of 1099/1688, 1180/1766 and 1854 (Cezar, 380-92), there was the major disaster beginning on 6 Dümâdâ I 913/22 August 1599, called by the chroniclers “Kütük Râyâmât”, when the shocks continued for weeks. The walls were seriously
damaged, all the minarets collapsed, and 109 mosques and 1070 houses were destroyed; estimates of the killed range from 5000 to 13,000. Many Byzantine buildings (e.g., ʾIsā Kaplı) were badly damaged. The authorities took emergency action to carry out the re-building, one person and a qaḍārī [q. 22 akṭe] being levied from each household in Istanbul, and workmen were conscripted from outside (57,000 from Anadolu and 29,000 from Rûmeli), so that the work was quickly completed (Čezar, 38).

vii. — The Inhabitants: Re-population; Religious Minorities; the Military; Epidemics; Population Statistics.

(a) Re-population.
Throughout his reign, one of Mehemmed II’s main preoccupations was to re-populate Istanbul. Various methods were employed, particularly and especially in the early years, the deportation [see SÜNCDX] of households from every part of his dominions; later, the useful elements of newly-conquered cities—the nobility, craftsmen and merchants—were transferred to Istanbul; and, always, immigrants of whatever religion or race were encouraged to come from anywhere in the empire. In 1453, Inalčık, in Dumbarton Oaks Papers, xxii-xxiv, 237-49.

The census of 860/1455 shows that many of the Muslim immigrants brought from Kodia-eli, Sanrūkan, Aydın, Balksesir, etc. had fled en masse, to be replaced (e.g.) in the mahālles of Kir Nikola and Kir Martas by immigrants from Tekirdağ and Çorlu. One of the reasons for this “flight”, besides the general difficulty of making a living in a ruined city, is certainly the sultan’s attempt to levy mukāla’ās on the immigrants’ houses, as related by ʾAşıkpaşazade (H. Inalčık, op. cit., 242-3). In about 860/1455 a numerous group of Jewish deportees from Rûmeli was settled in the city: 42 families from Izdin (Lamia) in houses at Samatya abandoned by Muslims from Balksesir; 38 families from Filibe in houses in the mahālles of Top Yikughl abandoned by immigrants from Faphagnia and Tekirdağ; others came from Edirne, Niğbolu, Trıkalla, etc.

Among the Muslim immigrants there were tradesfolk (tailors, blacksmiths, etc.) and many men of religion, including adherents of dervish-orders. Soldiers (Jauniasries, Doghandis, etc.) often became householders in various mahālles; the ʿaṣrāb of the navy settled together in ʾAtteker mahālles. Groups of immigrants usually settled together in one mahālles or monastery (though occasionally Greeks. Jews and Muslims are found living in the same building; and in 860/1455 there were at Samatya 42 Jewish, 14 Greek, and 13 Muslim families). The register shows that at this date the mahālles which it covers were sparsely populated, with only a few shops, the churches and monasteries deserted, and the houses empty and ruined. Soon afterwards, it seems, the sultan took up permanent residence in the newly-completed palace and began the active promotion of building activity, of economic prosperity, and of new settlement. In 861/1456 he commanded all the Greeks who had left the city before or after the conquest to return (Inalčık, op. cit., 237-8). It was in these years too that, with the aim of making his capital the centre of a world-wide empire, he appointed an Orthodox patriarch (6 January 1454), an Armenian patriarch (865/1464) and a chief rabbi (see below); and in line with old Islamic tradition he encouraged the settlement of craftsmen and merchants.

Enslaved peasants were settled, as the sultan’s serfs (khāṣṣ, kul, ʾostakīs kul), in the villages round about in order to restore their prosperity. In the 16th century, by now being ordinary raʾīḍāʾs, they would form an important element of the population of the so-called khāṣṣ-kūls (for which see Ō. L. Barkan, in Ḫī. Fak. Mecm., 1, 1940, 29 ff.). In 904/1498 of the 163 villages in the Kadaʾ of Eyyûb (which was known as Khâṣṣar Kâdeli), 110 contained about 2000 adult khâṣṣ kuł (the rest of the inhabitants being ordinary raʾīḍāʾs or särgûns). The khâṣṣ kûls covered the area from the Çekmejélis and Bakr-kûy to the Black Sea coast and to the Bosphorus and Beşiktaş (but there were no khâṣṣ kułs actually in Istanbul).

The deportations from conquered cities are shown in the following list (see A. M. Schneider, in Belleten, xvi/61, 41-3; Inalčık, op. cit., 237-8; Jorga, Byzance après Byzance, Bucharest 1972, 48-62):

</table>
This total does not include soldiers, medrese-students, or slaves. Barkan, estimating these to amount to one-fifth of the population and taking five persons to the household, considers the total population to have numbered about 100,000 (JESHO, i/1, 11; Schneider, op. cit., p. 44, estimates 60-70,000; Ayverdi’s estimate, Istanbul mahalleleri, p. 82, is 167,175,000).

Later sultans continued the policy of settling deportees from newly conquered regions. Bayezid II settled 500 households from Akkerman at Silivri Kapsı (Schneider, p. 44; the dziyaa-registers of 594/1489 show the settlers from Akkerman as 670 households, see Barkan, in Belgeler, i/1, 38, table 2). The Ottomans’ readiness to welcome Jews expelled from Spain, Portugal and Southern Italy in 1492 and the following years led to an increase in the Jewish population of the city (estimated at 36,000 by von Harff, p. 244). Selim I brought 200 households of merchants and craftsmen from Tabriz (Lufti Paşa, Ta’ir-iğ, 237) and 500 from Cairo (some of whom were permitted to return by Süleyman). After his capture of Belgrade, Süleyman settled Christians and Jews near Samatya Kapsı (later Belghrad Kapsı) to form the Belghrad mahalleyı (Hammer-Purgstall, iii, 14; Uzuncarsılı, Osm. Türki, ii/4, 317; see also U. Heyd in Oriens, vii, 306). One other immigration deserving notice is that of the Moriscos from Spain after 978/1570 (ref. to in Ottoman records as Endülüsli or Mudejdijel (read mudejdijen); see Dozy, Suppl., s.v. and mudejaresı) Arablar (see A. Hess, The Moriscos, in Amer. Hist. Rev., lxxiv/1); these settled together in Ghalata around the Church of S. Paolo and S. Enduluslil (see A. Hess, in JEH, xx, p. 239). The deportees enjoyed a special status. They were exempt from 'awarid for a certain period, but could not leave the city without the permission of the Subaşlı. For some time after their arrival—either because of their own inclinations or because of their special status — each group was treated as a distinct dğemâ’t, living together and named after their native region. Hence in the various censuses of the city new arrivals are separately listed as dğemâ’ts, not included in the residents of mahallels. Thus the immigrants from Kafra and Karaman are dğemâ’ts in the census of 882/1477, but have been absorbed in the general Christian population by 1489/984; in that year only the immigrants from Akkerman are listed as a dğemâ’t. In the 11th/17th century there are listed besides 292 mahallels, 12 Muslim dğemâ’ts, referred to as “of Tokat, of Ankara, of Bursa”, who are presumably arrivals from those places (M. Aktepe, in Istanbul Enstitüsü Dergisi, xi, 116-24). The dğemâ’t is either absorbed into mahallels of its co-religionists or forms a new mahalle under a different name (usually that of the founder of the mahalle’s mosque). This process of assimilation worked most quickly on the Muslims, and most slowly on the Jews (U. Heyd, in Oriens, vi, 305-14).

In the first half of the 16th century the population increased considerably, mainly for economic reasons. Registers of wabhs show that many merchants and craftsmen immigrated from Edirne, Bursa, Ankara, Konya, Aleppo, Damascus, Cairo and even (though they were not numerous) from Persia; but the chief increase was caused by the immigration of young men or of whole peasant families (termed evginı from the poorer regions of the empire who had left their holdings to work in the city. Coming from central and eastern Anatolia, and from Rımelı (especially Albania), they worked as porters, water-carriers, boatmen, bath-attendants, hawkers and labourers. Some returned home after saving a little money, but the majority stayed on.

In the 16th century the population of Ottoman cities in general increased by 80% (Barkan, op. cit., 25-31), and Istanbul probably showed a still higher percentage. The authorities tended to be aware of the problem of over-population in the middle of the century (yet as late as 938/1532 the laws encouraging immigration and granting exemptions to Christian settlers were still in force; see Barkan, Kansülär, 24). The reasons they found for the movement from the countryside into Istanbul were these (see A. Relik, Istanbul hayati, 1525-1591, 145; idem, Istanbul hayati, 1100-1200, 110, 131, 199; Rıshd, iv, 120; Medjelle, i, 355; M. Aktepe, in TD, ix/13, 1-30 (1) the better facilities for making a living; (2) the absence of ra’siyet taxes [see Çift resmi]; and (3) freedom from exposure to the illegal lehâif-i şâbka and other exactions levied at all periods by soldiers and officials and in later times by a’yan and derebeğis [see Inalcik, A双边nâmeir, in Belgeler, ii/3-4). These peasant immigrants built houses for themselves in the outlying areas of the city (chiefly Kâşım Paşa and Eyyüb; see A. Relik, Istanbul hayati, 1593-94, 140) or lodged within the city in bekâr odaları or bekâr kâşlari (see above). When the provinces were suffering abnormally dearth or disorder, the extent of the movement into Istanbul seriously alarmed the authorities. During the Djeâlâl disturbances of 1005/1596-1610 many thousands of families fled to Istanbul (40,000 (?) families of Armenians alone, see Polanya’s Sime’vun Seyahatnamesi, tr. H. Andrea- syan, Istanbul 1964, p. 4; most or many of these were later sent back to their homes).

Not only was life more secure in Istanbul, no-one need starve. The religious foundations naturally attracted immigrants, and thousands lived on doles of food from a hospice (the hospice of Fâth alone fed a thousand people a day) or on a minute income from a wab else a medrese student or as a “bedesman” in a mosque or at a tomb (see Ramberti, apud Lybyer, 240; Barkan, in IFM, xxii, 281). A foreign visitor observed that if it were not for the hospices the inhabitants would be eating one another (Dernschwam, 67). When in 1026/1617, as a result of the disturbances created by medrese students (sukbi) in Anatolia, it was decreed that medrese education should cease except in a few principal cities and the provincial hospices were closed (C. Ulucay, Saruhanı
The students flocked to Istanbul, where they offered a fertile soil for the incitements of bigoted preachers (the number of these students ranged at different times from 5-8,000). Beggars and dervishes were always a problem: particularly in Ramaḍān thousands of them came to Istanbul to thong the streets (A. Refik, *İstanbul hayatı*, 1553-91, 139); and under Suleyman measures of control were taken at Alexandria and Damietta to prevent Egyptian beggars from travelling to Istanbul (Mühimine Defteri, no. 16, p. 193).

Among the floating population of the city were, for example, qaṣb troops coming from the provinces to serve in the fleet, deportees from various districts come to carry out local business, to lodge complaints about their local authorities or to appeal against taxes, and bodies of workmen brought in to build ships or do construction work for the state (Harun in *Annales*, xvii (1962), 1098, 1105).

The authorities considered that this over-population caused three principal problems: (1) the water-supply was becoming inadequate, it was more difficult to ensure the supply of food, and the cost of living was rising (Selânikî, 4; *Međjelle*, i, 1052); (2) security was breaking down, with an increase in robbery and murder (A. Refik, *İstanbul hayatı*, 1553-91, 145), and frequent fires and lootings; (3) as the number of unemployed vagrants increased in Istanbul, tax revenue from the provinces declined.

From time to time therefore, and especially after the crisis of a riot, a fire or a food-shortage, the authorities would take such measures as these: (1) Since unmarried labourers were the chief cause of the troubles, all those who had come to Istanbul within a prescribed period (five years, ten years) were rounded up and expelled; similarly beggars were occasionally rounded up and set to work in nearby towns (A. Refik, *op. cit.*, 145; *İdem.*, *İstanbul hayatı*, 1100-1200, 110, 131, 194, 199). Since Albanian vagrants had played a main part in the rebellion of Patrona Khâlî in 1143/1730, stringent repressive measures were taken against them (A. Refik, *İstanbul hayatı*, 1100-1200, 110-12). In 1629, during a food-shortage, it was decided to expel unmaried men who had come to the city within the past ten years, and 4000 were removed (Lüfî, li, 63). (2) Anyone proposing to come to Istanbul for a court case had to receive first a certificate of permission from his local kâdi, and deputations were riot to be too numerous. (3) Check points on immigrants, particularly on the ev-göbî, were set up on the roads and at the entrances to the city (A. Refik, *op. cit.*, 80-105). (4) The inhabitants of a mahâle were ordered to stand surety for one another (A. Refik, *op. cit.*, 145) and Đams were instructed to keep strangers out (A. Refik, *op. cit.*, 139-40). (5) No one was admitted to a kâdî or to a bekâr odâsi unless he had a surety. (6) The construction of new "bachelors' quarters" was forbidden.

But it was all in vain, as effective control was impossible; and in later years the defeats and losses of territory in Europe brought new waves of refugees to Istanbul (see A. Refik, *İstanbul hayatı*, 1100-1200, 80-105), the last being the great migration of 1912 during the Balkan Wars.

(b) Non-Muslims.

The non-Muslims of Istanbul were in 1001/1592 classified in six groups: Greeks (*Rûm*), Armenians, Jews, Karamanlı, Franks of Ghašâta and Greeks of Ghašâta (A. Refik, *İstanbul hayatı*, 1000-1100, 4). Only the Orthodox and the Armenian churches and the Jewish rabbinate were officially recognized. The only Roman Catholic group within the walls were those families brought from Kaffa in 880/1475 (numbering, with the Armenians, 267), who were granted the churches of St. Nicholas and St. Mary at Edirne Kapîsl. Over the years they dispersed or moved to Ghašâta, and the churches were converted to mosques, to be called Kefeli Đâmići (in 1038/1629) and Odâlar Đâmići (in 1050/1640) respectively (Belin, *op. cit.*, 112-19). Thereafter Catholic churches were found only in Ghašâta, protected by the Capitulations, and "Franks" were permitted to live only in Ghašâta: when some of them set up in business as doctors and drapers at Baghâne Kapî and on Divâné Yolu in the early 19th century, the sultan ordered their premises to be closed (*Medjelle*, i, 649).

The areas particularly inhabited by Greeks and Armenians were the Marmara coast of the city, the Feurer-Balat district, and the Rûmeli side of the Dôosphorus. Non-Muslims usually formed distinct mahâles, each with its own church or synagogue; Muslims were reluctant to allow non-Muslims to settle among them, finding it repugnant to have to observe their practices (see A. Refik, *İstanbul hayatı*, 1553-1591, 46, 48, 50, 52; 1000-1100, 29; 1100-1200, 10, 88).

Occasionally popular feeling among the Muslim populace would show that it wanted Istanbul to be an exclusively Muslim city, and the sultans were obliged to enforce the various regulations and restrictions imposed on dhimmis (distinctive dress: see Djewdet, vii, 277; *Međjelle*, i, 502; A. Refik, *İstanbul hayatı*, 1593-91, 47, 51; 1000-1100, 20, 53; 1100-1249, 182; not to ride horses or employ slaves: *İdem.*, 1553-91, 43, 50; demolition of churches improperly built: *İdem.*, 1553-91, 44, 45; 1100-1200, 81, 139; not to sell wine: *İdem.*, 900-1000, 49). Mistrust of and hostility to non-Muslims was brought to the surface by various incidents: the question of the occupation of mîrî houses under Mehmedm II (İnalcık, in *Dumbarton Oaks Papers*, 240-9), fear of an attack by a Christian fleet (in 941/1537, 979/1571, 1066/1655), Austrian and Russian attacks after 1094/1683, and the Greek revolt of 1821. Such tensions, together with fires and the building of mosques near non-Muslim mahâles, encouraged non-Muslims to move away and settle in the outlying mahâles along the Marmara Coast and the Golden Horn and near the walls (A. Refik, 1000-1100, 53-4).

On the other hand, Muslims and non-Muslim tradesmen and artisans, whose activities were controlled by the same kiswa regulations, worked side by side in the bazaars; protection of non-Muslims was in the financial interest of the treasury and of the state dignitaries; and above all, the authorities appreciated their obligation to observe the tolerance prescribed by Islam. The government would therefore intervene to prevent attacks on non-Muslims by medresê-students, *adžemi-oghânîları* or the mob (Derschwan, 116; Charrière, iii, 262; A. Refik, *Rafî fidîn*, in *Edeb. Fak. Médj.*, ix/2, doc. 11). The non-Muslims, particularly the Armenians from Anatolia, were strongly influenced by Turkish culture. Although each community used its own language, the common language of Istanbul was Turkish. For motives of political or social prestige non-Muslims would try to live and dress like Turks. Conversely, however, the Turkish of Istanbul and its folklore were influenced by the minorities (see W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929; M. Halit Bayrî, *İstanbul Folklore*, repr. Istanbul 1972; *İdem.*, *Halk âdetleri ve inançları*, Istanbul 1940; R. E. Koç, *İstanbul Antiiklopedisi*, passim).

The Greek Orthodox, the Armenians and the Jews
were regarded as separate millets or tdöves, under the authority of the Greek patriarch, the Armenian patriarch and the chief rabbi respectively, and enjoyed autonomy in their internal affairs [see MILLET; PATRIARCH]. The Greek patriarch and the Rüm milleti ruovesi took precedence over the two other groups of dignitaries (A. Refik, 1100-1200, 28). The three religious leaders were elected by their communities but their authority derived from their berdis (which had to be obtained, by payment of a "pishkesh") granted by the sultan. The community could petition the sultan to dismiss its leader (C. Orhunlu, Telshiler, Istanbul 1970, 161) and the leader could ask the sultan to give effect to his commands (for the Greek patriarchate, see S. Runciman, The Great Church in captivity, Cambridge 1968; Rüm Patrikligi nissamati, in Duklar, i, 902-38).

Until the 12th/18th century there were some 40 Greek churches in Istanbul, only three of which had existed before the conquest (listed in Schneider, Byzanz, 38-49). When the question was raised how it was possible for these churches to exist in a city taken by force, the fiction of a willing surrender was accepted to legalize the situation (see Inalcik, in Dumbarton Oaks Papers, 233; Runciman, 153, 157, 199, 204; for the Jews, see A. Refik, 1100-1200, 13). The patriarchate was obliged to make itself responsible for various civil matters relating to the Greeks of the city, and its duties increased as the treasury resorted more and more to the collection of taxes from the community en bloc (matba}). The patriarchate's bureaucracy therefore became increasingly influential (for the influence of the Logothete, see A. Refik, 1100-1200, 13).

Economically the Greeks were far better off than they had been in the last decades of the Byzantine Empire (Jorga, Byzance aprs Byzance, repr. Bucharest 1971; T. Stoianovich, op. cit.; The Greek Merchant Marine, 1453-1850, ed. S. A. Papadopoulos, Athens 1972; A. E. Vacalopoulos, Origins of the Greek Nation, 1970-72; Inalcik, in Isi., xiii, 153-5), and were satisfied with their lot (Runciman, pp. 180, 394). They held an important share of the islasim contracts, they had supplanted the Italians in maritime trade in the Black Sea and the Aegean, and they controlled a large part of the city's food trade. In Fener, the new seat of the patriarchate, there grew up a genuine Greek aristocracy of eleven families made rich by trade and by islasim-contracts, who claimed descent from the great families of the Byzantine Empire; they increased their power and influence by supplying the sultans with personal physicians and commercial agents and by filling the posts of Chief Interpreter of the Divan and of the Fleet in the 11th/17th century; and from them later the hospodars of Moldavia and Wallachia were chosen (Jorga, op. cit., 226-47; J. Gottwald, Phanariotische Studien, in Leipziger Vierteljahrschr.: Sudosteuropa, v (1941), 1-58). In the census of 1833 the Rüm millet numbered 50,343 males in Greater Istanbul.

A group of Orthodox Christians deported from Kastoria, a Turkish-speaking and ignorant of Greek (Derschwam, 52), were under the authority of the Greek patriarch but preserved the character of a separate djemadist. In the middle of the 10th/16th century they were settled near Yedikule, but a century or more later Eremya Celebi reported them as living at Narlikapi, inside and outside the city wall. They were skilled goldsmiths and embroiderers, and were rich (N. de Nicolay, Navigations ... Anvers 1577, 239).

The Armenians first elected a patriarch, on the sultan's orders, in 1461. He made his residence the Church of Surp Kevork (Salumanastri); F. Babin, Ein Besitzstreit um Salum Manastir, ... , in Festschrift fur Jan Rypha, Prague 1956, 29-37) at Samatya, where the most important Armenian community then dwelt (and where later Eremya Celihi (p. 3) mentions over a thousand Armenian families living alongside Greeks). In the 11th/17th century the Armenians were most numerous at Kunukkap, and in 1571/1641 the seat of the patriarchate was transferred here, to the Church of Surp Asudazdadin (H. Andreasyan, notes to Eremya Celebi, pp. 87-90). The Armenians were concentrated particularly at Yeilikkap, Kumkap, Balat and Topkap. Many of the Armenian families of Galata had been settled there since Genoese times. There were Armenians living among Jews at Beshiktash, Kuruçeşme and Ortaköy (Eremya Celebi, 43-52). In the 11th/17th century the Armenians controlled the silk trade between Persia, Turkey and Italy (see Harir, 214), and many of them made fortunes from islasim-contracts and banking (V. Çark, Türk DEVLETI HISMETINDE ERMANLilar, Istanbul 1953). From the early 19th century they ran the mint and came to control the state finances (see Djewdet, xi, 28: White, iii, 188, 287). Attempts by the banking families to control the patriarchate and the Armenian tradesfolk led to serious dissensions in the community (H. D. P.CH. CHRISTIANITY IN TURKEY, London 1854, 131-2). Earlier, the activity of Catholic missionaries had aroused dissensions, which prompted vigorous action by the Porte after 1696/1108 (A. Refik, Istanbul hayat, 1100-1200, 21, 32, 35, 160; Djewdet, ii, 93; xi, 8, 34); yet later a Catholic (Uniate) community was established composed particularly of the wealthier and educated Armenians: according to the census of 1826 (Lutfi, 275) they numbered about a thousand (L. Arpee, The Armenian awakening ... 1820-1860, Chicago 1909). In the census of 1833 the Armenian millet in Greater Istanbul numbered 48,099 males.

The Jews of Istanbul, numbering 1647 households at the end of the reign of Mehmed II (see above), consisted of the following main groups: those that had survived the conquest; Karaites brought from Edirne and the Sea of Azov area; and from them later the Karaites and Karaite communities later brought, usually by force, from various towns of Anatolia and Rμneli where they had been living, known as Ronaniotics, since Byzantine times (see Ankori, Karaites in Byzanium, New York 1959, 140); the djissya registers for the nahufs of Mehmed II (Başvekâlet Arşivi, Tapu defteri no. 240 and no. 210) give the numbers and original homes of each. It seems that Mehmed II granted aman to the Jews living in Istanbul at the conquest (see Ankori, op. cit., 59-64) and left them in their homes (for an alleged agreement, see Schneider, in Belleten, xvi, 61, 40; Heyd, p. 305; A. Refik, 1100-1200, 11). A djiysya-register (Tapu defteri no. 240, 10) notes them as numbering 116 families. As a result of Rabbi Isaac Sarfati's letter urging the Jews of Europe to settle in Ottoman territory, some families migrated from Germany, Austria and Hungary (H. Graetz, Gesch. der Juden, Leipzig 1881, viii, 214; Heyd, 300), but the register just cited notes the djomāl-the Eshinas-i Alaman as numbering only 26 families. By 894/1489 the number of Jewish households had risen to a total of 2027.

Jews settling in Istanbul were organized in djomāl, each with its own synagogue, as a spiritual and administrative unit (A. Galanleti, i, 75, 99-101). In the middle of the 10th/16th century there were 40-44 synagogues and djomāl (Heyd, 393;
Dernschwam, 107-11 [42 schools, and further important details; total Jewish population, 15,035]). In 959/1552 the Marranos settled in Istanbul under the sultan’s protection, and the Marrano banking family of Mendès acquired a dominant position in the state finances and in commerce with Europe (see Inakik, Capital formation, JEH, xxix, 121-3; S. Schwarzhuchs, Annales, xii, 1957, 112-18). Jews from Spain and Italy brought various new techniques with them (Ramberti, 241; Villalon, 116; Dernschwam, 111).

The Romanioi, Sephardic and Karaites communities retained their separate identities until the 11th/17th century; but as a result of the changes of residence caused by the fires of 1043/1633 and 1071/1660 the communities became mixed (Hediy, 313) and finally there was only a single community; the Sephardim, being economically much the strongest, assumed responsibility first for the Ashkenazim and then for the Romanioi. Already in 990/1582 the three communities made a joint application to the sultan to open a new cemetery at Khaşköy (A. Refik, 53). The Jews of Khaşköy became very numerous (Evliya Celebi, i, 413). In 1044/1634 there were in Istanbul 1255 Jewish sivrâd-khânesi (Aktepe, 110) and at the end of that century 3000 Jews paying ginya (for their makâsîl, see Hediy, 309-12).

When construction of the Valide Dâmiî was begun (925/1519), the Jews of Eminönü (about 100 houses, see Ereneya Celebi, p. 164) were transferred to Khaşköy (Evliya Celebi, i, 413-4). In 1139/1727 Jews living outside the Balk wall pazarı gate near the mosque were ordered to sell their properties to Muslims and move to other Jewish makâsîl (A. Refik, 1100-1200 88-9). Khaşköy became hereafter the main residential centre for the Jews of Istanbul (Galante, 54). In the 19th century the Jews were estimated to number 39,000, in 12,000 households (White, ii, 230; official figures in 1833, 1,413 males; cf. L. A. Frankl, Nach Jerusalem, Leipzig 1858-60, 194-5, whose estimates are supported by the 1927 census figure of 39,199).

Individual conversions to Islam were frequent, new converts being particularly zealous to promote conversion (Villalon, 72; Dernschwam, 111). The Divân suspended funds (4,100,000, or 12,800) to provide the converts with new clothes, and he was parted on horseback through the streets. But the principle of abstaining from forced conversion was carefully observed, and the authorities appear to have taken little interest in promoting conversions. One example of a mass conversion is that of the Armenian gypsies at Topkapî (Ereneya Celebi, 23). Muslim men often married non-Muslim wives (this was regarded as commendable), and this led to much conversion. Slaves usually embraced Islam. Not only were there, as a result of the ghulâm [q.v.] system, numerous slaves in the palace and in the houses of great men; anyone of any means owned one or several slaves for various domestic duties. To own slaves was a profitable investment: slaves or freedmen (âdâliâ, ââli, mu’tâb) were used also as commercial agents or as an industrial work-force, and were often hired out. The principle of muktaâb [q.v.] was common. For the treatment of slaves see esp. Villalon, 56 f.; Dernschwam, 121, 129, 140-2, 161).

(c) The tâskeri class.

Since they paid no taxes, the personnel of the palace and the kapîl-kulu troops do not figure in the various registers providing statistics for the population of Istanbul; but in numbers and in view of their duties, they played an important part in the life of the city.

(Sources: (1) Iacopo de Promontorio-de Campis, ed. Babiner, Munich 1957, 48; (2) Barkan, IMF, xv, 312; (3) Barkan, IMF, xv, 300; (4) Aynil Ali,İstâda, Istanbul 1280, 82-98; (5) Barkan, IMF xvii, 216, 227.)

The above figures show that the number of kapîl-kulu increased in the century after 920/1514 by about five times: this increase was mainly in the members of the Janissaries, and occurred particularly between 1001/1593 and 1015/1606 with the demand for infantrymen (see CH Isl., i, 344-50); only 15,000 Janissaries took part in the campaign of 1006/1597, but there were 37,000 Janissaries by 1018/1609. Some of the Janissaries lived in Istanbul, some were stationed in provincial towns and on the frontiers, of 49,500 Janissaries, 20,468 were in Istanbul in 1076/1665 and 37,094 in 1080/1669 (IMF, xvii, 216). The Köprülus attempted to reduce their number, so that in 1083/1672 the Janissaries numbered only 18,000, and the total kapîl-kulu force only 34,825 (Silâdbâr, l, 499, 580). In the 12th/18th century, the Janissaries numbered 40,000, but it was estimated that throughout the empire 160,000 men were, or claimed to be, Janissaries (the distinction must be borne in mind, for many individuals who entered the corps to obtain its privileges were not effective troops). Conversely, as early as the reign of Mehmed II some Janissaries had been absorbed in the general population as tradesmen and artisans, and the numbers of these increased, for with depreciation a Janissary’s daily pay, never more than eight akçes, became practically worthless, so that more and more of them became esnâf. At the end of the 10th/16th century the authorities had great difficulty in mobilizing these “trading” Janissaries for service (Selaniki, passim; Orhonlu, Teltäsker, docs. 15, 19). In the 11th/17th century, with the open encounter in Istanbul (as elsewhere) many individuals called “Janissary” (râdžî, bekhe or “sipâhi” (djûndî) who are in fact very wealthy and influential. The penetration of Janissaries and other kapîl-kulu into the economic life of the city was to have important effects, especially since they regarded themselves as outside the kısba jurisdiction.

Janissaries were widely used to supply the “police” forces of the city, with the duties of maintaining order and of providing guards in the markets, at the quays and in other public places, and this authority enabled them to impose various illegal exactions and even sometimes attempt to corner a commodity; the lives and property of non-Muslims were in effect at their mercy. During the ever more frequent Janissary mutinies after 1600 the city was in complete anarchy with the populace terrified, the shops shut, and the military mutinies after 1600 the city was in complete anarchy (see Porter, Observations, p. xxviii).

The ademî-ogluânlar [q.v.] also had a significant place in Istanbul social life. Those in the Istanbul barracks numbered at first 3000 (Usuncârphih, Kapîl-kulu ocakları, i, 793), 7000 in 1555 (Dernschwam, 65).
They were an important labour force, employed in public works (Barkan, L’organisation du travail..., Annales, xvii, 1094; A. Belki, in Edib. Fak. Mejdum. v/1, 6-10, 12) and in the sultan’s gardens (Dernschwam, 64-5). Their daily pay was very small (1/2-2 aktal in 1555). Since they enjoyed the immunities of the sultan’s slaves, they were a turbulent element in the population, over-bearing and always ready to make trouble.

Practically the whole palace and kaplhulu establishment accompanied the sultan on campaign. At such a time, the life of the markets was completely disorganized: prices rose, commodities were cornered and shortages appeared (Selanlik, Ms.). Janissaries engaged in trade were obliged to close their businesses; a proportion of the members of various guilds were conscripted to accompany the army as orduidji (Medjelle, i, 619-620); so that a fair proportion of the townsfolk too left the city. This, of course, occurred practically every year until the reign of Selim II; and the consequent disruption was one of the reasons why the statesmen became reluctant that the sultan should campaign in person (cf., for 1570, Hill, iii, 892; for 1596, Selanlik, Ms.).

(d) Epidemics.

Just as fires repeatedly destroyed habitations, so too great numbers of the inhabitants were frequently carried off by epidemics — plague, cholera and smallpox. In the plague of 871/1466, 600 people died each day, and many fled the city for good: “the City was emptied of its inhabitants” (Critoboulos, tr. Riggs, 220-2), and four years later plague again put a halt to trade (W. Heyd, Hist. du commerce du Levant, ii, 341). Later serious epidemics occurred in 917/1511, 922/1526, 969/1561, 992/1584, 994/1586 (see C. de Villal6n, Viaje de Turquia, 1660, 1013), 1063/1653, 1084/1673 (Galland, ii, 178), 1096/1786, 1179/1765 (H. Grenville, Observations, ed. S. Ehrenkreutz, Ann Arbor 1965, 74, 106, 1207/1792 (Djweted, x, 94), 1812 (Andreossy, 178-84), 1817 (Memoire de Mrs. Elisabeth S. Dwight, New York 1840), 1845-7 (M. P. Verrolet, Du cholera-morbus en 1845, 1846 et 1847, Constantinople 1848), and 1865 (H. Leach, Brief notes..., London 1866). These outbreaks lasted for months and sometimes, becoming endemic, for years, giving rise to thousands of deaths:

(Notes: (1) See above, p. 238; (2) Barkan, Belgeler, i, 39; 447 mixed Jewish and Christian khânes are included in the total for Christians; (3) Barkan’s estimate in JESHO, i, 20; (4) Topkapı Sarayı Archives no. 4007, suburbs included; (5) Mantran, Istanbul, 46-7: a further 14,653 persons are exempt; (6) L:lffli, i, 279; (7) L:ffli, ii, 62; (8) Topkapı Sarayı Archives no. 750; (9) Istanbul rehberi, 1934, 163, foreigners excluded; (10) the first census.)
While therefore the increase in the population of Greater Istanbul is proportional to that in the whole country, the increase for Istanbul intra muros is relatively less.

Bibliography: A. Ottoman Documents. (i) Documents relating to waqfs. 1. Wafikyyas. Published: facsimile of the original wafikyya for Eyyub, dated 861/1457, in Fäidh Mehmed II vakfiyesi, publ. by Vakîflar Genel Müdürülüğü, Ankara 1938, 326-40; for Kaledir ankâhine (Church of Akâalepte), in Zwei Stiftungsurkunden des Sultans Mehmet II. Fatih, ed. T. Öz, Istanbul 1935, 1*.-15*. Individual wafikyyas such as these were all combined in a single wafikyya after the completion of the mosque and complex of Mehemmed II. The oldest copy of this, in Arabic, originally preserved in the türbe of Mehemmed II, is now in the Türk-İslâm Eserleri Müzesi (old no. 1872, new no. 667); it belongs to 877/1472 or 878/1473, and has been published in (poor) facsimile in O. N. Ergin, Fâidh Imameti vakfiyesi, Istanbul 1945, 1-68. Later in the reign a new comprehensive wafikyya was drawn up, and an official copy (tugra of Bâyезд II) has survived; facsimile in Zwei Stiftungsurkunden ... pp. 1-149. In the mid 10th/16th century (see Ergin, op. cit., 29-34) this wafikyya was translated into Turkish (with some rearrangement and estimation of the income of the properties that supported a wakf). The oldest known is the Dibât yet register for Ayasofya of 895/1489 (Başvâkî let Arşivi, Mileyîden müdevver no. 19, 56 ff., in Arabic; some of the leaves out of order; drawn up by the hâdis Yusuf b. Qhall); a similar register had existed, drawn up in 874/1469. A similar detailed register was drawn up by Mehmed b. 'Ali al-Feniî, hâdis of Edirne, in 926/1519 (Belediye Libr., Ms Cevdet O 64, 444 ff.). Registers for all the waqfs of Mehemmed II in Istanbul: Başvâkî let Arşivi, Tapu defteri no. 210 (947/1540) and no. 240 (952/1545).

2. Registers of inspection (leftifât) and rents (dâbiyet). These registers, drawn up to record the income of waqfs and to be used by rent-collectors (dâbi), are of great importance as detailing the properties that supported a waqf. The oldest known is the Dibât yet register for Ayasofya of 895/1489 (Başvâkî let Arşivi, Mileyîden müdevver no. 19, 56 ff., in Arabic; some of the leaves out of order; drawn up by the hâdis Yusuf b. Qhall); a similar register had existed, drawn up in 874/1469. A similar detailed register was drawn up by Mehmed b. 'Ali al-Feniî, hâdis of Edirne, in 926/1519 (Belediye Libr., Ms Cevdet O 64, 444 ff.). Registers for all the waqfs of Mehemmed II in Istanbul: Başvâkî let Arşivi, Tapu defteri no. 210 (947/1540) and no. 240 (952/1545). Other similar registers refer to the waqfs of ordinary citizens. The most important of these (Başvâkî let Arşivi, Tapu defteri no. 251) has been published: Istanbul vakîflar Tahrir defteri, 953 (1546) tarihî, ed. Ö. L. Barkan and E. H. Ayverdi, Istanbul 1970. Two similar, unpublished, registers are: Başvâkî let Arşivi, Tapu defteri 670, drawn up by Hasan b. Yusuf between 986/1578 and 988/1580, and Tapu ve Kadastro Umum Müdürlüğü, Ankara, Eski Kayitlar nos. 542 and 543, drawn up after 1005/1596.

Registers of annual accounts also survive. The summary balances (içâmîdî) for the mosques of Fâidh and Ayasofya for the years 894/1491-895/1492 have been published by Ö. L. Barkan (IFM, xxii (1962-3), 342-79; see also, idem, Sûleymânîye Camii ve imareti tâskârînin ait yûslu bir muhasabe bildirînâ, 993/1584, in Vakîflar Dergisi, ix, 109-62.)
are of three main types: 1. regulations, lists of fixed prices; 2. registers of rüşûm-i ihtisâyîye; 3. registers of guildsmen made for various purposes.

talîn Institüt, Ms. 1954). Firmans relating to tîhsâb are preserved in records of daily business (see (iii) below) and price regulations (nârâkî) in kâdisî registers; for examples of the latter, see O. Nûrî Ergin, Meşelî-i Umûr-i Belediyye, Istanbul 1922. 2. These registers list the tradespeople of Istanbul in 15 sectors, giving for each the location of his business, his trade, the owner's name and the amount of tax payable. They give similar information regarding the ships importing provisions are found in later codes (Atîr Ef. Libr., det B 2 (of 1092/1681), B 10 and B 23; Basvekâlet Arşivi, Malîyeyen müdevver nos. 514 and 526. Partial publication of such a document by R. Man-
tran, in Mélanges Louis Massignon, Damascus 1957, iii, 127-49; see also Nihat Göl, 1763 tarihli esnaf tazir defteri göre, Istanbul University, Edebiat Fakültesi, tesi. 701. 3. Register of the watermen (kayıkçılar): Belediye Libr., Ms. Cevdet B 8; of the bakers: Topkapı Arşivi, D 958.

(iii) Numerous documents relating to Istanbul are to be found dispersed in various collections in the Ottoman archives. As examples only, the following may be cited: 1. Mühimme Defterleri. Many documents in this series have been published by Ahmet Refik [Altunay], in the series Hicri Omundu aşrada Istanbul kaydâs, 961-1000, Istanbul 1933 (2nd ed., Istanbul 1953): 1100-1200, Istanbul 1931; 1100-1200, Istanbul 1930: 1200-1225, Istanbul 1932. Many documents from the Mühimme registers are given in Ergin's Meşelî, i.

2. Malîye akhâm defterleri. Nos. 2775 and 9824 in the Malîyeyen müdevver series are especially important for Istanbul.

4. Registers of the kâdisî. Most of the registers of the kâdisî of Istanbul, Ghalata and Uskûdar are lost, but some important examples survive in the archives of the Istanbul Müftûlûgû and of Topkapı Sarayı. Some docs. published by Ergin, in Meşelî, i.

5. Muḥâda'ar registers (recording the income of the State Treasury). For an important example from the reign of Mehmed II, see JESHO, iii (1960), 132. Customs registers: Basvekâlet Arşivi, Malîye no. 312 (of 992/1585), no. 5227 (of 1098/ 
1689), no. 3129 (of 1102/1690), no. 918 (of 1108/ 
1696), no. 5164 (of 1133/1723); no. 2996 (of 1206/ 
1791); also Kâmil Recep tefsir nos. 4241-4368, 5207-66.

The Muḥâdbâ'ar idâmî defterleri (the oldest is Belediye Libr., Ms. Cevdet O 91) record the expenses for official institutions in Istanbul.

The affairs of Istanbul fell within the purview of the Şâhîk-i Sânî Defterdâr, so that documents emanating from his various offices, especially the Istanbul muḥâbah'asî salâmî, are of importance.

The most important assemblage of individual documents is that made by Cevdet, under the heads Belediye, İktisat, Şehriyeye, Saray, Zaptiye and Maarif (see M. Sertoğlu, Mütevâlî bahkamsından Başvekâlet Arşivi, Istanbul 1955, p. 71).

Further sources for the later history of Istanbul are the official yearbooks (sâhinâmî) and various publications of the municipal authorities (Belediyye), e.g., Sâhinâmî series, 1847-1918 (see A.A, art. Sâhinâmî); Istanbul Belediyesi inciyyât-ı meşelî, 1328-1335; i. B. Belediyya's, 1930-7; Istanbul Şehri istatistik yılığı, 1930-34; Belediye yılığı, Ankara 1949 (pp. 341-69 relating to Istanbul).

Sałam Muh. Hārūn, Cairo 1367/1948, iv, 55 [but cf. i, 153]; idem, al-*Hayawan, ed. Hārūn, iii, 58-9; and the saying by 'Attābī (d. beginning of third/ninth cent.) reported in Marzubānī, al-*Mawādakhākh, Cairo 1343/1923, 271). In the sense of “metaphor” it is reported to have been common already with such early philologists as Abū 'Amr b. al-ʿAẓīl (d. around 154/770) (see Hātimī, Ḥūṣayt al-muḥādūhā, Ms Fes, Karawiyyīn, 2934, f. 4b; Bākīlīnī, ʿAṣīrā, ed. ʿAlī, Cairo 1374/1954, 108 [= G.E. von Grundhöfen, A 4th century document ..., Chicago 1950, 77]; Ibn Ṣahlīkhī, al-*Umda, Cairo 1353/1954, i, 239). Hāmmād (d. 155/772 or 156/773), Abū ʿUbayda (d. 209/824-5), and ʿAṣmāʾī (d. 213/828) (see ʿIṣāʾī, 108), but since ʿAṣmāʾī is also said to have used the term mauthal in speaking of the metaphor (see al-Muḥaddasīyāt, 855, l. 13) it may be suggested that the term istīʿārā was substituted in later versions of these reports for some other expression. However that may be, it appears already in what is probably the first systematic treatise on poetics in Arabic, the Kāwūd al-ghīr (ed. Raḍāmān ʿAbd al-Tawwāb, Cairo 1966, 75-60) of Ṣaḥlab (Ṣaḥlab lived from 200/815 till 291/904; there is no date of composition of the treatise is unknown and there is a question about Ṣaḥlab's authorship) and there defined as “to borrow for something the name of something else or [to attribute to it a characteristic that is its own] (as yuṣṭaʿfar ʿl-li-ʿl-shārī ʾīsmu ṣuḥayrīkaw maʾnaṣ al-waṣīdū). The definitions offered by Ibn Kūṭayba (d. 276/890) in his Taʿwīl muḥākī al-ʿUrank (ed. Aḥmad ʿAbū Ṣalāḥ, Cairo 1373/1954, 102) and by Ibn al-Muṭṭazz (wrote 274/887) in his K. al-Baḍāʾ (ed. Kratchkovsky, London 1935, 43) are hardly more precise. In fact the two last authors quote examples which later critics would have qualified as “trope” (maḥāzī), “simile” (taṣḥīḥī), or “metonymy” (kāʿa), though the majority of the examples would also be istīʿārās according to later definitions of the term and are often repeated in later handbooks. The same is true of Kūdāmā b. Dīʿafār (d. after 320/932) who, moreover, in his Naḥd al-ghīr (ed. Bonebakker, Leiden 1956) gives examples of the metaphor under the headings tamṭil (pp. 90-2) and istīʿārā (pp. 104-5) without making sufficiently clear how the two figures are related. He sees the acceptable istīʿārā as a simile and that of the use of a figurative expression (mathal) to convey the idea the poet has in mind (see also the definitions and examples in the Diwāḥīr al-alaẓāf, Cairo 1351/1932, 5-7, attributed to Kūdāmā). The metaphor is originated from the proverb of the poet Iμrūʾiʾ b. ʿAbbād, “shackles upon the legs of wild animals”, for a horse that overtaxes wild animals in chase is quoted (p. 88) in Kūdāmā's chapter on the “metonymy” (irḍāf). The same confusion exists between the chapters on istīʿārā and muḥāṭāla (= tamṭil) in the K. al-Ṣināḍātayn, Cairo 1371/1952, 268-306, 353-6) of Ābū Ḥiliāl al-ʾAṣkārī (d. after 395/1004). Ābū Ḥiliāl, however, offers a more detailed explanation of the mechanism of the metaphor pointing out frequently, especially in examples taken from the ʿUrank, how the metaphor expression is related to the concept the author wishes to put into words and why the metaphor is more effective than the conventional expression. His discussion of ʿUrankic metaphors closely resembles that of his contemporary, Rummānī (d. 384/994), in his K. al-Nuḥat fi ʿaṣīrā al-ʿUrank (ed. Muḥ. Ḥakīf Allāḥ and Muḥ. Zahrālīl Ṣaḥām in Ṣaḥām al-Ṣalām, Cairo n.d. 79-87), though Rummānī's formulations are somewhat more accurate. Both authors also indicate that the metaphor makes it possible to illustrate abstract concepts with concrete analogies and insist that a metaphor is acceptable only if it is more striking than the conventional expression. This last question is also the subject of a discussion by Hātimī (d. 388/998) who in his al-Risālah al-maʿṣūbah fi ḍhīrī sarībāt Abī ʿl-Ṭayyib al-Mutanabbī... (ed. Muḥ. Yūsūf Naḍīm, Beirut 1385/1965, 69-73, 90-4) distinguishes three types of istīʿārā: The first type conforms to the above standard and consists of metaphors that can be justified. He calls this type the “elegant metaphor” (istikārā mustahkāṣa). The second is characterized by the use of terms applicable to animals instead of the corresponding terms in speaking of human beings, e.g., bāḥīr, “hoof”, for “foot”, misḥaf, “candles’ lip” for ʿaṣafī, “lip of a human”, etc. He calls this the “ungainly metaphor” (istikārā mustaghīṣa). The third type which he considers less ugly than the second consists of using terms applicable to human beings instead of terms specifically used for animals (cf. the discussion of terms belonging to the second type in Ibn Kūṭayba, Taʿwīl muḥākī al-ʿUrank, 116-7; the discussion of the term muʿṣāla in Kūdāmā, Naḥd, 103; Ibn Durayd, Dīmākhā, Haydarābahād 1344/1925, iii, 489b-91a; ʿAmīdī, al-Muwaṣṣalāna, i, 43-4: Ābū Ḥiliāl, K. al-Ṣināḍātayn, 301; and ʿAbd al-ʿAẓīf al-Dijrānjī's views on this type of expression below). In what appears to be a fourth category he mentions cases (like “my thoughts stumble [while reflecting] on your glory”) where the metaphor is “obscure and far fetched” (khāṣiya baʿdīa). Probably the first to distinguish carefully between the taṣḥīḥī and the istīʿārā is the latter and to formulate a close definition of the figure is ʿĀlī b. ʿAbd al-ʿAẓīf al-Dijrānjī (d. 392/1001). In a passage in his al-ʿAwāla (Cairo 1320/1951, 41) he makes clear that the line by Abī Nuwāṣ: “Love is a mount and you are its rider; turn its bridle and it will obey you” is not an istīʿārā, but a simile (taṣḥīḥī) or a proverbial saying (darb mauthal). In a proper istīʿārā the borrowed term (al-ism al-mustaʿār) completely replaces the proper term (al-asl). The istīʿārā, according to him, is “based on establishing a close similarity, on the existence of an affinity between the proper and the borrowed expression, on the blending of the [new] term with the concept [to which it is applied]”; etc. (m-mišlakī, ṣakhrābā ʿl-ṣaybakī wa-l-maʿṣūmah li-ʿl-mustāʿār mina wa-miṣṣādā ʿl-lafzi bi-ʿl-maʿnd, etc.; a different reading and interpretation in Ritter's translation of ʿAbd al-ʿAẓīf al-Dijrānjī's Asrār, 429; cf. also al-*Umda, i, 240). He condemns (pp. 429-33) the anthropomorphism in an istīʿārā by Mutanabbī: “Many schemes are found together in the mind, though one of these would be [large enough to] occupy the mind of [this time] and compares this with an istīʿārā by Ibn ʿAbīnā in which the wind is characterized as “having no constancy in its mind” (laysa li-ḥūbīkī ʿl-sābūr). In the second example the istīʿārā is based on the similarity between the wind blowing from different directions and the erratic behaviour of a person of unstable character. In the case of the first example no such similarity suggests itself to the hearer. The only way to make such istīʿārās to some degree acceptable is to think of the frequent occurrence of personalizations of the time or fate, or to assume an ellipse (“this time” for “the people living in this time”), though by expecting his audience to do so the poet goes beyond what is aesthetically or grammatically acceptable (the lacunae in the text should be completed from the quotations in Khsafājī, Sīr, 144 ff.; Khsafājī does not agree with ʿĀlī al-Dijrānjī's qualified acceptance of these and similar examples).
Ibn Rashik (d. 456/1063-4 or 463/1070-1) in his K. al-'Umda (Cairo 1353/1934, i, 239-50) shows himself familiar with the definition of 'All al-Djurđānī, but nevertheless draws no clear distinction between simile and metaphor in his examples, and, like his predecessors, fails to explain the exact relation between this last figure and the tamghī, though he classifies tamghī as a type of isti'dāra (p. 247; cf. however p. 245, l. 4-5, and on pp. 247 bottom and 249, l. 15 his observations on the absence of the comparative particle in both tamghī and isti'dāra). He prefers metaphors that can be easily understood, like “Daybreak carried away the Pleiades in its yellow (or white) cloak” for “Daybreak made the Pleiades fade away” in which, he says, the metaphor is based on a simile (the poet’s comparison of the bright cloak with the light of daybreak), to metaphors that are less easy to understand, like “The reins of the morning had come into the hands of the north wind” for “The north wind held sway over the morning” where the poet gives to the morning and to the north wind each an attribute that cannot be associated with it (mā taysa minhu wa-lā sīyaḥ). He does not accept the view of some “radical” (?) (muṣla'ākhī) theorists who prefer the second type of metaphor (which is based on personification and analogy) and consider the first type inferior because it is based on an (easily understandable) simile. He further illustrates this principle, but fails to analyse it properly, and also points out that the same kind of metaphor may be fitting in one context and ugly in another.

Khāfādji (d. 466/1073-4) in his Sīr al-Fāṣakha ( Cairo 1372/1953, 134-69) bases his discussion of the isti’dāra on Rumānī and ‘All al-Djurđānī. He does not, however, accept as isti’dāras sentences like, “She dropped pearls from narcissi”, etc. which he classifies as tāṣbikh. He does not offer an explanation. What he has in mind is perhaps that because asbalat, “she dropped”, in this context only allows us to take “pears” and “narcissi” as standing for “tears” and “eyes” a simile is forced upon the hearer and it becomes impossible to argue that the two words are not to be understood in their proper sense (but cf. Ibn al-Aṣḥāb, al-Mathal, i, 359). In ‘All the head is abāza and to “fire” (al-mustāṣ’ār lāḥā) is compared to “fire” as the notion from which it is derived (al-mustāṣ’ār minhu), but the fire is not mentioned, only one of its attributes, and there is good reason to qualify “to be ablaze” as a term used in an improper way (Sīr, 134-6). He prefers isti’dāras that are immediately apparent to the hearer to those that cannot be justified as based on intelligible similarities or are derived from expressions that are themselves metaphors. One may speak of “the eye of a flower” since there is an obvious similarity, but not of “the eye of faith that finds consolation”, since there is nothing in faith that could be compared to an eye. The metaphor in “the saddle feeds on (= takes away) the fat of the hump of the camel” is more obvious than that in “the horses and riding animals of passion have become unharnessed”, since the latter example derives from another, more common, metaphor: “He rode his passion and ran on its race track”. As usual the distinction between isti’dāra and tamghī is not clearly defined (see the examples on pp. 166 below and 167 above repeated as tamghī on p. 325).

The most important discussion of the isti’dāra is found in the Aṣrār al-balāgha (ed. H. Ritter, Istanbul 1954; German translation H. Ritter, Die Geheimnisse der Wortkunst des 'Abdalqāhir al-Curūnī, Wiesbaden 1959) of 'Abd al-Kāhār al-Djurđānī (d. 477/1082). In his Dala'il al-Iṣrā'īl (Cairo 1367/1947-8, 331-49) which, according to Ritter (see the Introd. to this ed. of the Aṣrār, 6) was probably written earlier than the Aṣrār, ‘Abd al-Kāhār takes his predecessors to task for defining the isti’dāra as a transfer (nabī) of terms. He argues that the isti’dāra is a claim (iddī‘a) that something is identical to something else. The very effect of the figure depends on this claim and consequently there is a transfer of a concept before there is a transfer of a term. In the Aṣrār, however, he describes the isti’dāra as generally speaking (fi 'l-djumla) the incidental use (nabī ghayr lāsim) of a term in a sense different from its original sense (i.e. the well-known sense supported by literary evidence), so that it appears like a loan ('āriya) (p. 29 = tr. p. 46; cf. p. 379-81 = tr. p. 441-3) and recognizes that his concept of the figure is essentially that of his predecessors among whom he mentions Āmīdī (d. 370/980) and ‘All al-Djurđānī (p. 298 = tr. p. 348, p. 368 = tr. p. 429, p. 370-1 = tr. p. 431-2). They differ from him in that they did not offer a detailed analysis of simile (tāṣbikh), analogy (tamghī), and metaphor (isti’dāra), and were content to offer a few examples of these figures without a proper definition. (p. 26-8 = tr. p. 43-5). For ‘Abd al-Kāhār the isti’dāra is one of various types of trope (istisdrā) inasmuch as there is always an association (mulahāqa) with the normal sense of the term (p. 325-6 = tr. p. 378-80, p. 365 = tr. 425-6). However, in the case of the isti’dāra there must exist some property common to the object to which the term is normally applied and to the object to which it is applied metaphorically. He draws attention to the etymology of the term isti’dāra as derived from 'āriya, “borrowed good”, “loan”. The owner’s claim to his property does not cease to exist, but the borrowed goods perform in the hands of the borrower the same function as in the hands of the owner (p. 372-3 = tr. pp. 434-5; cf. pp. 300-2 = tr. pp. 350-2). If one says: “I see a lion”, meaning a courageous man, what one has in his mind is to attribute to the man the most striking property of the lion, its courage; but if one uses the word yad, “hand”, in the sense of “favour” in “I have a humour” (lāhi 'indī yadun), one has no intention to describe a property of the hand. It becomes possible to argue that “favour” and not “hand” is the original meaning of the word yad, though upon closer examination one finds that there exists a reference to an activity originally involving the hand (cf. also p. 326 ff. = tr. p. 380 ff.). ‘Abd al-Kāhār makes a further distinction by pointing out that the isti’dāra is more striking than the conventional expression (and as such has an aesthetic function): When a poet uses the term ḍhafa, “lip” in speaking of the lip of a horse (gīhal) or the lip of a camel (mīṣṣār) there is only a free use of near synonyms or the use of a general instead of a specific term (p. 30-1 = tr. p. 48-9, p. 373-4 = tr. p. 434-5), but when he uses “horse’s lip” or “camel’s lip” in speaking of a human being one already has a borderline case, since one can easily imagine that what the poet is trying to say is that the man’s lips are thick or that he is as miserable as an animal (p. 34 ff. = tr. p. 52 ff.). ‘Abd al-Kāhār distinguishes three types of metaphors:

(a) metaphors based on a comparison of notions that show a close affinity and in any case belong to the same category: “flying” for “running”.

(b) metaphors based on a comparison of objects that share certain qualities: “sun” for “beautiful face”.

(c) metaphors based on a comparison of notions that share certain qualities: “beauty” for “beauty”. 

Theistārā
(c) metaphors based on a similarity that can only be understood intellectually, the metaphor consisting of (1) things sensually perceived for intellectual concepts: "light" for "convincing argument"); (2) things sensually perceived for other things sensually perceived though the similarity remains a matter of the intellect: “green plants on a dung-hill” for “beautiful women of evil character”, and (3) intellectual concepts for other intellectual concepts: “death” for “ignorance”, “meeting death” for “facing a serious crisis”. For metaphors based on abstract similarity, as well as for the various types of explicit similes that would correspond to them, he uses the term tamthil. The similarity can only be established by analysis (ta'awnun), since the metaphor or simile is not based on a common property (as in the comparison of a rose with a cheek), but on something conditioned by a property (it is as difficult to deny the existence of the sun as to deny the truth of a convincing argument).

In some cases there is “a similarity between two groups of objects in each of which there exists an inner relation between, not only a simple coordination of, various elements, a relation which can only be expressed in the form of a sentence” [or its equivalent (Asrdr, Introd., 14), and the tamthil is therefore closely related to the proverbial sentence (mutaḥal): “There is this in the bow-cutter’s (masūd) hand which has been entrusted to a competent person” (p. 94 = tr. p. 120). According to 'Abd al-Kahir such sentences owe their peculiar effect to the fact that the mind accepts a not so familiar concept more readily if the author can illustrate it with a situation with which it is thoroughly familiar, such as when one uses an old friend to introduce a newcomer (Asrdr, Introd., 15). In such sentences the terms themselves are, of course, used in their proper meaning, and hence it becomes possible to explain apparent anthropomorphisms in the Kur'an like “The whole earth is in the grip of his hand on the Day of Resurrection” (Kur'ān XXXIX, 67) as analogies for intellectual concepts (p. 331-2 = tr. p. 386-7; Introd., 11), though he warns against arbitrary explanations (p. 363-4 = tr. p. 422-4).

'Abd al-Kahir al-Djurđjan also examines the use of metaphors to create fantastic aetiologies such as are common in post-classical Arabic and Persian poetry. In “Be not surprised that his shirt is torn: He buttoned it in moonlight” the poet assumes that the hearer is that he does not accept as metaphors sentences based on the assumption that the hearer has already accepted that the subject of the poem is a special kind of moon, so that the poet can attribute to this moon some unusual qualities (p. 305 ff. = tr. p. 355 ff.; for a more detailed discussion of 'Abd al-

Kahir's theories see Asrdr, Introduction, from which some of the above definitions and translations have been taken).

The compendiums based on 'Abd al-Kahir al-Djurđjan, beginning with the Nihāyāt al-idāţa fi dīrāyat al-īdāţ (Cairo 1317/1899) of Fakhr al-Dīn al-Rāzī (q.v. d. 606/1209) and the Miṣfāh al-Īlām (Cairo 1356/1937) of Sakkālī (q.v. d. 916/1282-9), together with the numerous commentaries on these compendiums, among them completely superseded the Daštāl al-īdāţ and the Asrār al-balāgha. In the Nihāya, which contains a useful summary of Djurđjan's ideas, Fakhr al-Dīn attempts to clarify the two opposing viewpoints expressed by Djurđjan on the character of the istišāra. After offering interesting arguments in favour of the theory outlined in the Daštāl he declares himself in favour of Djurđjan's later theory as presented in the Asrār. By calling a man a "lion" one attributes to him the lion's courage, not his physical qualities, which means that the word asad is used in a more restricted sense (p. 84-5; cf. Asrār, 379-81 = tr. 441-3). Hence the metaphor has to be considered a "trope of the language" (mutādās lughwā; cf. however Djurđjan's observations on the mutādās 'ālī, the "trope of the intellect" in the relation between a verb and its agent in Asrār, 342-5 = tr. 399-402, 4, for "The matter has been entrusted to a competent person") (p. 94 = tr. p. 120). According to 'Abd al-Kahir such sentences owe their peculiar effect to the fact that the mind accepts a not so familiar concept more readily if the author can illustrate it with a situation with which it is thoroughly familiar, such as when one uses an old friend to introduce a newcomer (Asrdr, Introd., 15). In such sentences the terms themselves are, of course, used in their proper meaning, and hence it becomes possible to explain apparent anthropomorphisms in the Kur'an like “The whole earth is in the grip of his hand on the Day of Resurrection” (Kur'ān XXXIX, 67) as analogies for intellectual concepts (p. 331-2 = tr. p. 386-7; Introd., 11), though he warns against arbitrary explanations (p. 363-4 = tr. p. 422-4).

'Abd al-Kahir al-Djurđjan also examines the use of metaphors to create fantastic aetiologies such as are common in post-classical Arabic and Persian poetry. In “Be not surprised that his shirt is torn: He buttoned it in moonlight” the poet assumes that the hearer is that he does not accept as metaphors sentences based on the assumption that the hearer has already accepted that the subject of the poem is a special kind of moon, so that the poet can attribute to this moon some unusual qualities (p. 305 ff. = tr. p. 355 ff.; for a more detailed discussion of 'Abd al-

Kahir's theories see Asrdr, Introduction, from which some of the above definitions and translations have been taken).

The compendiums based on 'Abd al-Kahir al-Djurđjan, beginning with the Nihāyāt al-idāţa fi dīrāyat al-īdāţ (Cairo 1317/1899) of Fakhr al-Dīn al-Rāzī (q.v. d. 606/1209) and the Miṣfāh al-Īlām (Cairo 1356/1937) of Sakkālī (q.v. d. 916/1282-9), together with the numerous commentaries on these compendiums, among them completely superseded the Daštāl al-īdāţ and the Asrār al-balāgha. In the Nihāya, which contains a useful summary of Djurđjan's ideas, Fakhr al-Dīn attempts to clarify the two opposing viewpoints expressed by Djurđjan on the character of the istišāra. After offering interesting arguments in favour of the theory outlined in the Daštāl he declares himself in favour of Djurđjan's later theory as presented in the Asrār. By calling a man a "lion" one attributes to him the lion's courage, not his physical qualities, which means that the word asad is used in a more restricted sense (p. 84-5; cf. Asrār, 379-81 = tr. 441-3). Hence the metaphor has to be considered a "trope of the language" (mutādās lughwā; cf. however Djurđjan's observations on the mutādās 'ālī, the "trope of the intellect" in the relation between a verb and its agent in Asrār, 342-5 = tr. 399-402, 4, for "The matter has been entrusted to a competent person") (p. 94 = tr. p. 120). According to 'Abd al-Kahir such sentences owe their peculiar effect to the fact that the mind accepts a not so familiar concept more readily if the author can illustrate it with a situation with which it is thoroughly familiar, such as when one uses an old friend to introduce a newcomer (Asrdr, Introd., 15). In such sentences the terms themselves are, of course, used in their proper meaning, and hence it becomes possible to explain apparent anthropomorphisms in the Kur'an like “The whole earth is in the grip of his hand on the Day of Resurrection” (Kur'ān XXXIX, 67) as analogies for intellectual concepts (p. 331-2 = tr. p. 386-7; Introd., 11), though he warns against arbitrary explanations (p. 363-4 = tr. p. 422-4).

'Abd al-Kahir al-Djurđjan also examines the use of metaphors to create fantastic aetiologies such as are common in post-classical Arabic and Persian poetry. In “Be not surprised that his shirt is torn: He buttoned it in moonlight” the poet assumes that the hearer is that he does not accept as metaphors sentences based on the assumption that the hearer has already accepted that the subject of the poem is a special kind of moon, so that the poet can attribute to this moon some unusual qualities (p. 305 ff. = tr. p. 355 ff.; for a more detailed discussion of 'Abd al-

Kahir's theories see Asrdr, Introduction, from which some of the above definitions and translations have been taken).
of the "substratum" (dhâl) of the istisâra (Asrâr, 42-7 = tr. 63-3), these authors furthermore distinguish an istisâra takhyîliyya or "fantastic istisâra", as in the famous line by Abû Dhû'ayb al-Hudhâl: "When fate plunges its talons in its prey, you find that no amulet will help", where the attribution of talons to fate suggests that fate is a wild animal. Since "fate" is here still indicated by its proper term, the istisâra is achieved "metonymically" (bi-'l-khindâ; Sâkîk's) a point of view as expressed in the Mi'tlûkh, 178, 1-5 differs from that of Kâzâmî, al-Idhâ, v, 165 ff. and Suyûtî, 'Ukhud al-djumân, [46x570] al-Iddh, v, 165 ff. and Suyûtî, is achieved "metonymically" proper term, the result of the views of some of his predecessors, Ibn al-Athîr's own definitions of the istisâras are obscure and his choice of examples shows inconsistencies. Similar inconsistencies exist in the K. al-Tîrât (Cairo 1332/1914, i, 197-206) of Yâbyâ b. Hamza al-'Alawi (d. 747/1346), though otherwise this book offers a useful summary of the views of some early as well as some later authors (Ibn al-Athîr and the followers of Abû al-Kâhir al-Djurjânî). The author inclines towards considering expressions like sayyud asadun as metaphors, but sayyudîn 'l-asadu, as well as expressions that make use of particles of comparison, as similis (pp. 202-9), a question much debated by Abû al-Kâhir. His substitution of the term istisâra muwâshâhah, "ornamented istisâra", for istisâra murâshâhah is no doubt the result of a misreading. Chapters on the istisâra in later handbooks likewise offer no mean syntheses of earlier definitions and repeat or elaborate the essential elements of the theories of Abû al-Kâhir and his school along with some refinements, such as the observation that in "Those are they who have purchased error" over paternity if she became pregnant later. It is obvious and therefore easily recognizable the "freedom", that is the "emptiness", of the earth wept over them" (Kur'ân XLIV, 28) and the period of sexual abstinence imposed on an unmarried female slave whenever she changed hands or her master set her free or gave her in marriage. Literally, istisâra* means to make sure that the "emptiness", of the womb. In this fact, the period of abstinence was imposed to avoid confusion over paternity since—as there is hardly need to mention—female slaves, especially young ones, were nearly always the concubines of their masters. Nevertheless, the majority of fubâhâ* often lost sight of the point of this institution and imposed istisâra? in hypothetical cases where, by the very nature of things, there was no danger of confusion over paternity.

1) When a female slave passed from the ownership of one person to another, for whatever reason—sale, gift, cancellation of sale, exchange, succession, division of spoils or legacy—she had to observe istisâra?. In theory, all female slaves came under this institution over paternity if she became pregnant later. It is obvious and therefore easily recognizable the "freedom", that is the "emptiness", of the womb. In this fact, the period of abstinence was imposed to avoid confusion over paternity since—as there is hardly need to mention—female slaves, especially young ones, were nearly always the concubines of their masters. Nevertheless, the majority of fubâhâ* often lost sight of the point of this institution and imposed istisâra? in hypothetical cases where, by the very nature of things, there was no danger of confusion over paternity.

2) They sometimes offer copious examples of istisâras in the work of post-classical poets.

from *istibra*° (Ibn Hazm, *Muhallä*, x, 315). A classical example is a good illustration of the irrational demands of *fišk* in this matter. Suppose that a female slave had been sold by a woman or a eunuch (in such cases *istibra*° was “recommended” but not obligatory), the sale having been rescinded by mutual consent (*ikdla*), she returned to the woman or the eunuch. In this case there could be no possible doubt at all about the origin of a possible pregnancy, yet this female slave had to observe *istibra*° after the dissolution of the sale, even though this took place before the buyer had taken possession of her. Only the Hanafis avoided such an absurdity by waiving *istibra*° except when the dissolution of the sale, by common consent, took place after the buyer had taken possession.

2) Every female slave had to observe *istibra*° at the time of her manumission, including an *umma wula\\d\

* C* al of the month of her marriage. Here too the Hanafis deviated from the solution common to the three other schools by demanding in the case of the *umma wula\\d\*

* C* al that the *istibra*° of one menstruation but an *idda* of three inter-menstrual periods, as for a free woman, whether the manumission occurred during the lifetime of the master or was a consequence of his death (al-Zayla\\d, *Tabyin*, iii, 30).

3) Finally, a slave whose master gave her in marriage to a free man or to another slave had to observe *istibra*°, as it is defined below, except in Hanafi law where the position on this point seems, moreover, curious.

In spite of their tendency to insist on *istibra*° on the occasion of any change in the juridical status of a female slave, the *fukahd* avoided carrying their system to absurd lengths. Thus exemption was granted to the slave who had had intercourse with her master and was then freed when he married her after manumission. In this case *istibra*° would in fact have had no purpose. Such a hypothetical case should not be confused with one where a man buys a female slave whom he frees on the spot and seeks to marry without *istibra*°. In this case, and with good reason, the Mālikī, Ṣa\h \d and Ḥanballi schools insist that there must be an *istibra*°. Their scholars explain that if Hanafi law says otherwise this is because Abū Yūsuf was wishing to oblige the new owner to come near her the slave who should observe *istibra*° into the hands of a trustworthy person, preferably a woman, who forbade the new owner to come near her until the period of abstinence had elapsed. This system was known as the *munudda*°, from *wa\d*°, a trust.

Sanctions for default in *istibra*°. The man who acquires a new female slave and has sexual relations with her without respecting the waiting period of *istibra*° commits a grave sin (*idān*); although purely religious, this sanction was somewhat awkward for a man who was a believer but also impatient. For his benefit, Ḥanafi jurisconsults invented a *bi\d*°, or legal expedient, which permitted the law to be evaded but not infringed. This *bi\d*° consisted of marrying the newly acquired slave to a man of straw, often the dealer himself, who repudiated her then and there, that is before consummating the marriage. In this way she was not *istibra*° by the new master, and so she had been married *istibra*° did not apply to her. The schools who condemned *hiyāl* in principle, such as the Ḥanball and Mālikīs, rejected this expedient without hesitation. (Ibn Kudāmā, *Muh\d*°, vii, 513; Khallī, *Muh\d*°sas, ii, 123).

Yet the acquirer who had not respected *istibra*° could suffer indirectly the consequences of his negligence. Supposing, for example, that the slave gave birth to a child less than six months after she had been bought; this was proof that she had been pregnant by her previous master and therefore an *umma wula\\d*

in the case of termination of slavery. In all cases when a female slave changes master, it is incumbent on the man who acquires her (by sale, gift, inheritance etc.) to see that the said slave fulfils her obligation; in other words he must abstain from sexual intercourse with her until the time of *istibra*° has expired. The four schools are unanimous on this point and, apart from a few isolated jurists, only the Zāhirīs imposed this obligation on the vendor (Ibn Hazm, *Muhallā*, x, 315). Mālikī law worked out an ingenious system that enabled all the pertinent regulations of *fišk* to be both effective and easily workable. It entailed giving the slave who should observe *istibra*° into the hands of a trustworthy person, preferably a woman, who forbade the new owner to come near her until the period of abstinence had elapsed. This system was known as the *munudda*°, from *wa\d*°, a trust.

Bibliography: The works on *fišk*, generally in the chapter on *idda*, especially *Marqānī*, *Hīdāya*, Cairo 1936, iv, 65 ff.; Ramli, *Nih\d*° y al-*Muh\d*°dā (Ṣā\\d), Cairo 1938, vii, 154-62; Khallī, *Muh\d*°sas, tr. Boussquet, ii, 123-8; Ibn Kudāmā, *Muh\d*° Cairo 1367, vii, 500 ff. For a comparison between the schools see Dima\dshī, *Ra\dmat al-
umma on the margin of Şahrazur's Mizan, ed. Halabi, ii, 88-9; Santillana, Istituzioni, Rome 1925, i, 252-3. See also 'Abd, 'Isda and 'Umm Walad.

(Y. Linant de Bellefonds)

ISTIBSĀR (kitāb), an anonymous geographical-historical work of which the full title is K. al-Istibsār fi 'ajḍāb al-amṣār. The text does not provide any precise information about the author, who is most probably a Moroccan living in the second half of the 6th/12th century. Indeed it seems likely that the original text is the work of a writer referred to as mu'allif or wa'dīʾ, and that it was subsequently revised and brought up to date by a nāṣīr, who states (p. 226) his intention of writing a history of the Maghrib together with a composition which he had offered to the sovereign in 580/1185-5 (probably Ya'qūb al-Manṣūr, 580/1185-99). Although the author states that he was writing in Rādān's 587/September-October 1191, events occurring after this date are also related, which suggests that the "reviser" restricted his activity to making additions without deleting conflicting facts. The work is dedicated to a certain Abū 'Imrān ibn Abī Yābāy b. Wākūn, who is otherwise unknown.

The K. al-Istibsār is divided into three parts, which contain respectively a detailed description of Mecca and Medina, some more or less legendary information on the history and geography of Egypt, and finally a description of North Africa and of the Bilād al-Sūdān interspersed with historical information; the work is of uneven value, fantastic stories being related side by side with contemporary documents of undeniable interest.

It was the subject of a partial edition by A. von Kremer, Description de l'Afrique par un géographe arabe anonyme du 1er siècle de l'hégire, Vienna 1852; thanks to the Miss. Algiers 1560 and Paris, Bibl. Nat. 2225, E. Fagnan was able to fill in some gaps in the rather incomplete text of von Kremer and to give a French translation of it, L'Afrique septentrionale au XIIe siècle de notre ère, in Recueil de notices et mém. de la Soc. archéol. de Constantine, xxxiii (1899), Constantine 1900; finally, Saad Zaghoul Abdel-Hamid published the complete text, based on the E.M. Bibl. Nat. 2225 and Algiers 1560 and 3216, together with a translation into French of the section relevant to the Holy Places and to Egypt, under the title Kitāb al-Istibsār, etc., Alexandria 1958.

Two manuscripts, identical to those used by von Kremer and Fagnan respectively, are in the Bibl. Gén. of Rabat, nos. 415 and 415 bis. It is probable that the manuscripts so far used still contain gaps, because the one author who quotes from the work, Ibn Abī Zakar (Kiṭāf, 24), reproduces a passage which is not in the text as it has been preserved.

Bibliography: In the article. (Ch. Pellat)

ISTIDJĀ, ECJJA, a town in the centre of Andalusia, to the south-west of Cordova, which today contains 50,000 inhabitants; it is situated on the banks of the river Genil, which was formerly navigable as far as its confluence with the Guadalquivir. Of Iberian origin and colonized by the Greeks, the town was occupied by the Carthaginians, who left no trace of their stay there, and then was fortified and embellished by the Romans who, at the time of Augustus, made it a conventus, the juridical centre of the district. Nothing is known of it under the Visigoths. The town surrendered to the Arabs after the defeat of Don Rodrigo at Lago de la Janda, and the whole surrounding region submitted to the victors without resistance. In the reign of the amīr al-Ḥakam I, a dispute over the succession broke out between the ruler and his two uncles, Sulaymān and 'Abd Allāh, sons of 'Abd al-Rāhamān I; Sulaymān attempted to seize Cordova, and continued to struggle for two years before being defeated in the neighbourhood of Ecija and in the valleys of the Genil and the Guadalquivir; he was finally overcome, captured and put to death, while his brother 'Abd Allāh went to Aix-la-Chapelle to seek support from Charlemagne.

Ecija remained comparatively peaceful until the time when the rebellious amīr al-Mu'āwīyāb, sons of Ibn Ḥāfṣūn invited the inhabitants, who for the most part were Mozarab, to rise against the government of Cordova, an action which caused Ecija to be regarded as a cursed city inhabited solely by enemies of the Umayyad regime. The amīr 'Abd Allāh attacked it, and his successor 'Abd al-Rāhamān III, on coming to the throne and launching his decisive campaigns against Ibn Ḥāfṣūn, sent against Ecija his ḍālīb Badr with an army which dismantled the town and destroyed its bridge (later rebuilt by al-Maṣūr Ibn Abī 'Amr).

On the fall of the caliphate, Ecija was for a time ruled by the Jihāwārīs of Cordova, but it then passed under the domination of the Banū Bīrzāl who had made themselves independent in Carmona; but al-Mu'taṣiḏīd of Seville, who had seized all the small Berber states, from Morón to Ronda, mercilessly attacked the territories subject to the petty ruler of Carmona, and this town, together with Ecija, Osuna and Almodovar, came under the rule of Seville. Later, at the beginning of the siege of Cordova by Hernando III, al-Mutawakkil Ibn Hūd attacked to oppose the besieging army; he took his troops as far as Ecija, but did not dare to engage in battle; he withdrew to Almeria, and the Cordovans, running short of supplies, surrendered on 22 Shawwal 633/29 June 1236. The Muslims who wished to leave did not leave the town until 63/1228, when they were expelled and replaced by Christians. From then onwards, Ecija formed one of the bases from which the reconquest of the kingdom of Granada was organized.

ISTIDĪLĀL (see MANTIK).

ISTIFI'A (see MUSTAFAWĪ).

İSTİFAN B. BASIL (STEPHANOS), the first translator of the Materia medica of Dioscorides. Ibn Abī Uṣaybi‘a speaks of him in two passages in his book: in the first he is cited along with Mūsā b. Khdalīd as one of the experienced scribes (kuttāb naḥārī), skilled in the art of translating, whom the caliph al-Mutawakkil placed at the disposal of Hunayn ibn Iṣḥāk (q.v.), who was responsible for checking (yatasaffah) their work; the second and more important reference to him is derived from information provided by Ibn Dūdūl in his lost book on the Explanation of the names of simples according to the treatise of Dioscorides. The translation of the Materia medica from Greek into Arabic, he says, was made in Baghdad in the time of al-Mutawakkil by İṣṭifan b. Basîl (al-turdūm), under the supervision of Hunayn ibn Iṣḥāk (al-muṭāqīm) who authorized it (adīzāhu). İṣṭifan gave the Arabic equivalents for the Greek names of the drugs with which he was familiar in his day. Those names for which he knew of no Arabic equivalents he left in Greek, "trusting that God would later send someone who would know
them". It should be noted that this first translation was made directly from the Greek, without any intermediate Syriac version.

Steinschneider, Die griechischen Aertze in arabischen Uebersetzungen, in Virchows Archiv, ccix (1891), 480-3; Max Meyerhof, Die Materia medica des Dioskurides bei den Arabern, in Quellen und Studien zur Geschichte der Naturwissenschaft und der Medizin, iii/4 (Berlin 1933). (R. Armanloz)

ISTIFAN AL-DUWAYHl, Maronite cleric and historian, born in Hidn, in the northern Lebanon, in 1629. He studied at the Maronite College in Rome from 1641 until his graduation in 1655, then returned as a priest and missionary to serve his community in Mount Lebanon and Aleppo. In 1668 he was promoted to the rank of bishop and appointed to the diocese of Cyprus; two years later, on 20 May 1670, he was elected to succeed as Maronite patriarch.

As head of the Maronite church, Duwayhl proved an efficient reformer and reorganizer. His administration was notable, among other things, for the establishment of the Maronite order of the Antonines in 1670, he was elected to succeed as Maronite patriarch.

While certainly remembered as a great patriarch, Duwayhl is even better remembered as a historian of the Maronite church and community and of Syria, his three principal historical works being a history of the Maronites (Ta'rikh al-fā'la al-mārūnīyya) which argues for their perpetual orthodoxy (the Maronites are known to have been originally Monothelite), a chronicle of the Maronite patriarchs (Sūsīlat bāfārikat al-fā'la al-mārūnīyya), and a chronicle of the history of Syria from the first Crusade until 999 (Ta'rikh al-asmina) which is valuable particularly for the period following the Ottoman conquest in 1516, and for its references to the history of the Maronites and the northern Lebanon in the earlier centuries.

In general, the historical work of Duwayhl reflects his own exceptional intelligence and his careful Roman training, and even the polesmic in his history of the Maronite church, which clearly stand out for what they are, do not detract from the scholarly quality of his work.

(R. Salibi)

ISTIFHĀM (a.), inf. of the verb istaṭhāma "to interrogate", a technical term in Arabic grammar signifying interrogation.

Interrogation can be indicated simply by the intonation of the sentence, particularly in prose that is close to the spoken language. Arabic generally uses two interrogative particles: a- (negative a-lā, a-mā, a-lam), hal. The second (hal) is more energetic than the first (a-), and is more of restricted use (Reckendorf, Arabische Syntax, 19, 10). Sibawayhi (i, 434, line 19-435, lines 1-2) represents the difference between a- and hal thus: "If you say: hal tadribu Zaydān? "do you hit Zayd?", you are not implying that the act of hitting Zayd is a reality in your mind; you can say: a-tadribu Zaydān?, and then you are implying that the act of hitting is a reality". This amounts to saying: a- for interrogation concerning a reality, hal concerning an act or a possibility, without the implication of any opinion about their realization (cf. Reckendorf, loc. cit., 35 n. 2). W. H. Worrell (in ZA, xxi, 126) sees the essential difference as being one of emphasizing the interrogation in the case of the use of hal, that is to say that an emotional element is introduced. It is then of use to consider the usages of a-, hal and am found by G. Bergsträsser, at least in the Kurān, in Verneinungs- und Fragepartikeln und Verwandtes im Kurān (Leipsiger semitische Studien, vi/4 (1914), §§ 68-9). Besides, a- can be followed by -wa- or -fa-(stronger expressions): a-wa-tadribu?, a-fa-tadribu? a- can be followed by the inversion of the direct object complement: a-Zaydān tadribu? All these constructions are prohibited with hal.

Disjunctive interrogation: the 'arabisyya of the desert used: a...am (called al-multaqša "the joined up"), or aw: a-Zaydān 'indaka am 'Amr? or aw 'Amr? "is it Zayd or 'Amr that is with you?"; a-Zaydān laḥīta am Bishr? or aw Bishr? "did you meet Zayd or Bishr?". "In the course of its development, the language did not preserve this lack of distinction and reserved aw for non-interrogative sentences and am for interrogative sentences" (M. Gaufroy-Demobynnes and R. Blachere, Gr. Ar., 470, lines 1-4). The Arab grammarians make a subtle distinction between aw in interrogative sentences and am: see Sibawayhi, ch. 281; al-Zamakhshari, Muḥāṣṣal, § 542 and Ibn Yaṣīf, 113-4; this doctrine was reported by Wright, Ar. Gr., 308 D and Reckendorf, Ar. Synt., 311, lines 16-1. This distinction is subtly invented a posteriori to bring order to a lack of distinction, as Gaufroy-Demobynnes and Blachere state (loc. cit., 470, n. 1).

On the use of hal...aw or hal...am, more frequently hal am, see Sibawayhi, ch. 280, Wright, ii, § 167, Reckendorf, Ar. Synt., 311; am "but rather" is then called al-munkāštā "the separated" by the Arabic grammarians. This am al-munkāštā is also found in am of: a...am (see Bergsträsser, loc. cit., §§ 73-4).

Remarks: a) For a negative answer to one of the two terms of a disjunctive interrogation, see Reckendorf, Ar. Synt., § 160 c.

b) a-lā is very frequently an exclamatory particle: "well, now! come on! look here!" a-mā is also found in this sense. See examples: Wright, ii, § 168; Reckendorf, Ar. Synt., 39.

c) ḥal (hal = a-lā, less strong than the preceding one), hal-lā, are used as exclamatory particles exhorting someone to do something (with the imperfective), or reproaching someone for not having done something (with the perfective); see Wright, ii, § 169, Reckendorf, Ar. Synt., 39.

d) In dialect ka is found for a-: a-halā for a-mā, and vice-versa: al for hal, alla for ḥallā (Wright, i, 284 C and 288 A).

Bibliography: in the text; in addition, Arab authors: Sibawayhi, i, ch. 28-9, 46 (for indirect interrogation that has no other peculiarity than that of being dependent), 277-81, 283-4, ed. Paris; Zamakhshari, Muḥāṣṣal, §§ 541-2, 581-4, 2 ed. Broch and Sharb of Ibn Yaṣīf, 151-4, 1201-4, ed. G. Jahn; Ibn Hishām al-Ansārī, Mughni 'l-labbih, i, 13-16, ii, 340-53, ed. Muḥyī Ḥ'l-Dīn ʿAbd al-Hamīd; Rādī Ḥ'l-Dīn al-Astārabādī, Šarḥ al-Kāfiyya, ii, 362-2, ed. Istanbul 1275. For a critique of the Arab sources (in particular Mughni 'l-labbih), see: W. H. Worrell, The Interrogative Particle hal in Arabic, according to Native Sources and the Kurān, in ZA, xxi (1908), 116-50. (H. Fleischer)

ISTIHSAN and ISTIẞLAH, two methods of reasoning much discussed in the books on the-
Istihsān and Istislah

Usul al-Fiqh [q.v.] in connection with the doctrine of kiyyās [q.v.]. The two conceptions as a result of their close relationship are sometimes confused (cf. Shāfi‘ī, iv, 116-118; Ibn Taymiyya, v, 22). But no one ever seems to have reached a clear and lucid definition of their mutual relationship.

I. The authorities for istihsān which the following of this method quote from the Kur'ān (XXIX, 18, 55), hadith (ma ra’dūkī ‘l-muslimūn rasa‘atun min hukūmā ‘inda ‘llāh āhadān”) and iṣgām (going to the bath without previous arrangement about payment etc.), are easily deprived of weight by the opposition and therefore need not be further discussed. On the other hand, it is interesting to note that istihsān already leaves its literary impress in ḥadīth, thus going back to the first half of the 8th century A.D. (see Wensinck, The Muslim Creed, 59). For example we already find in Buḥārī (Waṣâyā, bāb 8) the expression istaḥṣānā in the meaning of “to make a decision for a particular interpretation of the law as a result of one’s own deliberation”. Half a century later, Mālik (d. 179/795) uses the expression in connection with legal decisions for which he cannot find authority in tradition (Mudawwana, Cairo 1933, xvi, 217; similarly xiv, 134): “This is a matter on which I have received no instruction from my predecessors. It is rather our custom that we have despised according to opinion” (see-in-namā kunā shay’ān istaḥṣānāt). About the same time Abū Yūsuf (d. 182/798, Hanafī) says: al-kiyyās kāna an . . . iš'ārā annā istaḥṣānā tu. . . (“according to the kiyyās this and that would be prescribed but I have decided according to my opinion” [Kitāb al-Kharājāt, Būlāk 1302, 117]). Iṣgām is thus contrasted even more distinctly with the usual method of deducting legislation (kiyyās). The term, in later centuries also, means a method of finding the law which for any reason is contradictory to the usual kiyyās.

It is noteworthy that Shāfi‘ī (d. 820), the founder of the science of the Usul al-Fiqh, fundamentally rejected istihsān, because he feared that in this way going by beyond the methodically secure and generally recognized principles of legal interpretation a loophole would be made for arbitrary decision. “God has not permitted any man since his Messenger to present views (kawālīf) unless from knowledge that was complete before him” (Risāla, 70). If any one in spite of this uses istihsān he is bungling the work of God, the highest legislator (man istaḥṣānā fa-bad shara‘a‘a‘ [quoted in Ghazālī, i, 274 and pass.]). Ghazālī (d. 504/1111) and Bayādī (681/1282 or later, also a Shāfi‘ī) resumed and developed the discussion initiated by Shāfi‘ī in a more comprehensive and systematic fashion. Iṣgām in their view can only be approved in so far as it can be traced to the principle of takhsīs (the preference of a particular to a general prescription). But as takhsīs is already contained in the doctrine of kiyyās, istihsān has really no special part to play. Later Shāfi‘ī authorities like Subki (d. 1370) and Māhāfīl (864/1451) express similar views.

The supporters of the doctrine of istihsān—they belong for the most part to the Ḥanafī school (Pazdawī [d. 482/1090], Saṣāḥī [d. 483/1090], Nasāfī [709/1310] etc. down to Bahār al-Ulūm [1225/1810])—make every effort to deprive these objections of their force. To the assertion that the arbitrary opinion of the individual legist is given too much scope, they reply by defining and systematizing istihsān more accurately. Their principle of diverging in certain cases from kiyyās and using istihsān is—they say—not decided by personal inclinations or by a lack of methodical thinking but on the contrary by purely material considerations provided for in the law. It is a “concealed kiyyās” (kiyyās hāṣāfī), a divergence from an externally obvious kiyyās to an inner and self-conditioned decision. The reason for the preference of istihsān might be given in the Kur’ān, in the Sunna, in the iṣgām or in the principle of darāra, but in any case it is sanctioned by generally recognized methods of proof. Nor is it true that istihsān can be traced back to the principle of takhsīs and thus be lager within the sphere of kiyyās proper. It really lies outside of this narrow sphere and must therefore be recognized as a special form of deduction. For the rest, if we investigate more carefully, we can assert that the form of istihsān represented by the Ḥanafīs is also used by representatives of other madhāhib. It is in practice the common property of all legists.

If we consider the very minute work of systematization which the later Ḥanafīs (e.g., Ibn al-Humām [d. 861/1457]—Ibn ʿAmīr al-Ḥadīḍī [879/1474] and Bihārī [1120/1708]—Bahār al-Ulūm [1225/1810] have done on istihsān, we may actually agree with this last deduction. This method of reasoning, which originally aroused such misgiving because it was undefined, is given a place in the casuistic stepladder of the ‘ilm usul al-fikhr, and its possibility of application thus limited to a few fairly defined cases. If nevertheless discussion continued on whether it is justified or not this can only be explained by the fact that the followers of the Shāfi‘ī school felt themselves bound from a certain traditional principle not to drop the polemic against istihsān which had long ago been originated by their master—under different conditions and with more justice.

II. Istislah is, as regards its negative side, closely connected with istihsān; here we have again a question of principle by which the otherwise usual method of deduction is to be excluded in the preparation of legal decisions. The difference from istihsān is seen only when we enquire into the guiding idea which forms the positive foundation for this principle which is negative in its effects. We then see that istislah is more limited and more closely defined in content than istihsān in so far as it replaces the, in itself only formal, “finding-good” of the latter by the material principle of maṣlahā. It argues with the demands of human welfare in the widest sense. It might therefore be contrasted with the more comprehensive and more indefinite general conception of istihsān as a more exactly defined or subordinated species, as indeed al-Iṣbālī (Mālikī, d. 546/1151) already pointed out (Shāfi‘ī, p. 117). It is just through this greater definiteness that istislah gains in force compared with istihsān. For it is evident that such a plausible idea as that of anxiety for human welfare carries much more conviction in the derivation of legal decisions and can be more readily established than the formal and empty criterion of istihsān. In this way it is probably to be explained why the principle of istislah was on the whole not so strongly disputed as that of istihsān and why it occasioned much less polemic than the formalists of the usual kiyyās, even questioned the validity of legal principles emanating directly from the Kur’ān, Sunna and iṣgām (see below).

Relying on the ḥadīth ʿāl darāra wa-lā darāra fi ‘l-iṣlām (in Islam there is no injury or malicious damage) and on other testimony from the Kur’ān, Sunna and iṣgām, later representatives of the ‘ilm usul al-fikhr championed the principle that the whole Shāri‘a’s furthers or is intended to further the welfare of man (rī‘āyat al-maṣlahāt). This however does not
yet admit the principle of istislah but only a basis for it. Istislah is not yet found in the normal deduction of the thesis of ri'iyah al-maslaha, but first occurs in the exceptional case only, namely when the legal principles of the Shaf'i afford no direct basis for it. It is therefore called more accurately the principle of al-maslaha al-mursala, i.e., of those cases of the ri'iyah al-maslaha in which the chain of deduction does not run smoothly and free from gaps back to the starting point of legislation (cf. the use of the expression in the science of Tradition). Istislah, like istislahan, is therefore as a kind of biyus ka'fi (see above) always in contrast to the more obvious method of deducing legal decisions. It is intended to eliminate or at least to correct deductions which take no note of the idea of maslaha in the sense of the latter. If for example—to take a frequently quoted example—the enemies of Islam attack the Muslims and to protect themselves drive Muslim prisoners in front of them, the Muslim ought properly not to shoot at them in view of the prohibition to kill innocent co-religionists. If nevertheless it is decided to do so and this latter prohibition is disobeyed, this is done with the support of istislah; it is believed to be more in keeping with the spirit of the law if a few Muslims are sacrificed than if the whole community is handed over to destruction. Encyclopaedia of Islam, IV
without his knowledge or it is a question only of an imaginary, and not a real maslaḥa.

In the foregoing it has already been mentioned that the Mālikis are regarded as the principal champions of istiṣlāḥ. But too much stress should not be laid on this general opinion. It is of course true that Mālikī legal theorists like Ṣāḥibī (d. 590/1194) and Karāfī (684/1285) took up the discussion of masalīḥ mursalā and carried it further. But on the other hand Ibn al-Hājībī who was also a Mālikī, reckoned one of the opponents of the principle (see above). On the contrary, the circle of those who recognise the principle of istiṣlāḥ in practice extends far beyond the limits of the Mālikī school. Karāfī even points out that "if one looks carefully, it is in general use in the madhāhib" (p. 170). Ṣāḥibī’s and Hanafīs—although with certain limitations and in part under other names—have adopted it and developed it further. The most radical upholder of maslāḥa (istislah) is however a certain Nadjm al-Dīn al-Jawfī (d. 716/1316). He is considered a tafsiʿī but in reality (riḍyat al-maslajia) he is in general use in the madhhabs.

In order to strengthen the principle of riḍyat al-maslajia—precisely on account of his attitude to mudjāhid (Tawfi’s) method of aflat—Tawfi quotes evidence from Qur’an, Sunna, and the principles applicable to it. In any case however, the riḍyat al-maslajia represents the highest court of appeal.

In order to strengthen the principle of riḍyat al-maslajia and justify placing it above nasq and ijma’ Tawfi quotes evidence from Kur’ān, Sunna, ijma’ and nasq (reasoning), of course giving first place to the saying attributed to Muhammad: "there is no injury or malicious damage" (īāda wa-lā ādirā). He further points out that the legal texts are of different kinds and contradictory while the idea of maslahā is an integral base, and thus gives a better clue to the solution of legal problems (reference to Kur’ān III, 172: "I hold fast together to the cord of Allah and do not split into parties!"). He takes this opportunity to comb the assertion that the variety of legal interpretation is a special advantage of the Muslim religion (cf. the hadith: ikhtilāf ummās raḥma'īn raḥma'īn). The disadvantages which result are greater than the advantages: simply because there are such different interpretations, it is sometimes possible to find a lax interpretation to suit one’s own wishes and to neglect the more rigorous injunctions. Besides, many non-Muslims, who would readily adopt Islam, are prevented from taking the final step by the multitude of opinions held by jurists and the resulting lack of uniformity in the legal system of Islam.

The author is well aware that his views go beyond the istiṣlāḥ of the Mālikīs (p. 60 f.). He is reproached with abandoning by his thesis the path that has been taken by the bulk of the Muslim community (al-sawād al-‘a’lam) and attention is called to the words of the Prophet: “Follow the majority! He who takes his own way will go his own way to Hell also” (sitābī’u al-sawād al-‘a’lam, fa-‘inna man ghadhha ghadhha fī ‘l-nār”). But this would mean reducing every new view and every new method ad absurdum. The majority which has to be followed according to the words of Muḥammad is rather the path of clear demonstration. And the latter condition is fulfilled in his (Tawfi’s) method of riḍyat al-maslajia.

in the latter, the two latter terms are sometimes used by astronomers in place of istikhāā and idgīmatā. Other astrological aspects are sextile (tasdis), quartile (tarbi) and trine (taṭīgā) at elongations (variably computed) of 60°, 90°, and 120° respectively.

Bibliography: For the astronomical usage see C. A. Nallino, Al-Batānī, ii, 29-32, 205-9, and 306-7. For the astrological usage the most convenient reference is al-Birūnī, Kitāb al-tahfīz, s.vv. cientifico arabo-islámico (DAVID PINGREE)

ISTIKHĀRĀ (A), deriving from a root ḥ-y-r which expresses the idea of option or choice, consists of entrusting God with the choice between two or more possible options, either through piety and submission to His will, or else through inability to decide oneself, on account of not knowing which choice is the most advantageous one. To the first category belong the akhyār or “chosen”, who regulate their lives according to the model inspired by God in the Kurān and the Law; to the second belong the mustakḥīrān, those who seek to escape from indecision with the help of divine inspiration. The divine voice expresses itself either by means of a ru'ya [q.v.] or dream, or else by kūrā [q.v.] or rhapsody. As a result of its affinities with the ancient practice of incubation, used especially in histomy or medical divination and in necromancy, istikhārā is abhorred by Muslim orthodoxy (cf. A. Fischer, in ZDMG, lxxvii (1914), 325), but it is fairly widespread in popular circles, where it is sometimes found in conjunction with the casting of spells and, in effect, the use of ordeals (cf. L. Massignon, in Annuaire du Collège de France, 36th ann., 1940-1, 86). To prevent the return to pagan customs, Islam fixed the rules under which the rite of istikhārā might be practised. A tradition of Diābīr relates that the Prophet taught his disciples istikhārā in all things, as though he were teaching them a sūra of the Kurān. The practice followed by the Prophet consisted in two ra'ās, followed by a prayer, emphasising the omniscience and omnipotence of God and including a reference to the subject of the consultation (cf. al-Shawkānī, Nāṣir al-aʿwāq, quoted by Muhammad al-Abānī, al-Tāhāfī fi 'l-Itstām, Cairo n.d., 180). Neither time nor place is fixed for a consultation of this kind. The inspiration revealing the decision to be taken is immediately perceived, or, if the response is insufficient clear in the consultant’s mind, he has recourse to a drawing of lots from the various possible solutions, written separately on pieces of paper (cf. Doutté, Magie et religion, 143 f.).

This orthodox practice is generally interpreted in a sense which makes it comparable with incubation. After the invocation, the formulae for which are of different kinds and varying in length (cf. al-Buḵārī, Taḥfīz, no. 10, and Daʿwāt, no. 48, ed. Krehl-Juynboll, iv, 202 and 450; al-Tirmidhī, ed. Būlāk 1292, ii, 266; al-Nawāvī, Ḥijyāt al-aṣbār, ed. Cairo 1300, 56), the devotee goes to sleep, and it is in a dream that the revelation is made to him. This procedure is observed universally, especially in North-Africa, although it is considered to go beyond the letter of the Law (cf. Ibn al-Hāḍījī, al-Madhkhal, Cairo 1320, iii, 54).

A further step in the direction of incubation is taken by those who insist that the efficacy of this rite is dependent upon its being performed in a mosque. According to al-Awīl, Lūbāb, i, 210, 1, 12, one goes into the mosque to perform the namāz 'isātīhārā. The practice of sleeping in the sanctuary is sufficiently well attested before Islam, just as in the time of the

This procedure is observed universally, especially in North-Africa, although it is considered to go beyond the letter of the Law (cf. Ibn al-Hāḍījī, al-Madhkhal, Cairo 1320, iii, 54).

A further step in the direction of incubation is taken by those who insist that the efficacy of this rite is dependent upon its being performed in a mosque. According to al-Awīl, Lūbāb, i, 210, 1, 12, one goes into the mosque to perform the namāz 'isātīhārā. The practice of sleeping in the sanctuary is sufficiently well attested before Islam, just as in the time of the
Prophet. It was by the Ka'ba, where he slept that night, that 'Abd al-Mu'ttalib is said to have had the dream concerning Zamzam (cf. Divination, 262 f.); again, it was by the Ka'ba, where Mu'ammad slept, that for the second time (?) there apparently took place the rite for the purification of the heart and entrails (dak' al-batin and fa'ah al-ya'd), performed for him by the two angels (cf. al-Tabari, i, 157); it is even said, on this occasion, that "the Kurayymites were accustomed to sleep beside the Ka'ba" (cf. ibid. and al-Azraqi, A'khbar Makka, ed. Wüstenfeld, 350). The isra? is also said to have taken place when the Prophet slept in the court (bidge) of the Ka'ba (cf. Divination, 338). This custom does not appear to be limited to the Ka'ba (for its permanence, see Snouck Hurgronje, Mecca, ii, 16, n. 3 and 150); the attendant of al-Dja'als, an oracular divinity, slept in the sanctuary (cf. J. Wellhausen, Reste*, 55 ff.; T. Fahd, Le panthéon de l'Arabie centrale à la veille de l'hégire, Paris 1968 (Bibliothèque archéologique et historique, lxxviii, 84-7).

Orthodox is opposed to this practice, apparently out of regard for ritual purity (cf. Ibn al-Hādji, Madžkal, Cairo 1348, ii, 215, 241); but a short work in manuscript of Muhammad al-Shawâl al-Shaf[i] al-kuft(âb (d. 954/1644), entitled Risâlat 'al-lâhây tman mana'a l-na'um fi 'l-masâdîd min al-agâr, which we have consulted in Bursa (Ulucami 3496, fol. r-20), refutes the arguments put forward in support of the prohibition of this custom (cf. details in Divination, 365 ff.).

In North Africa, where istikhâra is very close to the ancient incubation (cf. Doutté, Magie et religion, 414), and more especially in Morocco, people go and sleep in the grottoes, the refuge of the spirits, or beside ancient tombs, or, which is more usual today, in the sanctuary of a marabout, in order to elicit a response to the prayer of istikhâra (ibid., 411 ff.). There even exists magic recipes to ensure the success of this rite (cf. al-Bûnî, Shams al-madrif, ii, 8). One of these, for example, is utilized in the search for a thief; a magic formula is written on one's hand, and one then goes to sleep, with this hand placed under the right cheek; the thief is then revealed in a dream (Doutté, op. cit., 337). But there is also characteristic of that of hâlma? al-tâbî' al-tâmî, mentioned by Ibn Khaldûn, Muhammadi, i, 190, when referring to the Ghâyat al-bakim of the Pseudo-Madjriti (cf. ed. Ritter and Flessner, Leipzig 1933, 187 ff.; German trans. by the same authors, London 1962, 199 f., in which the term hâlma? does not occur), and which is a technique consisting of obtaining, in a dream of "perfect nature", a response to a question posed at the time of lying down to sleep, after purifying one's conscience, concentrating one's intention, pronouncing the following gibberish words: Tamâghis baghdtsawdd, wâzghds, mu'nâmaghadî, and formulating one's wish. During sleep, the answer to the question is given. Ibn Khaldûn states that he had tried this himself and obtained good results (cf. Divination, 364 f.).

The istikhâra procedure seems to have been followed by some mystics, such as Ruzbâhân Bâkî, Ibn 'Arabi and Tîpû, sultân of Mysore. Their progress along the mystical path of perfection is marked by dreams, recording the passage from one stage to the next (cf. L. Massignon, Thèmes archétypiques en onirocôlric musulmane, in Eranos-Jahrbuch, xii (1945), 245). Some authors claim, in their introductions, to have written their works after an istikhâra (e.g., apud al-Nawawî, Tahâhîî, ed. Wüstenfeld, 257). In literary texts, however, the term istikhâra is merely a pious formula for a request to God for aid and advice, with no ritual character (cf. for example Aghâni, xviii, 72, xix, 92).

Bibliography: In addition to the sources named in the text, see: T. Fahd, Divination, 263-7; Doutté, Magie et religion, 410-4. According to Nawawî, Tahâhîî., 744, i, 3, 'Abî 'Abd Allâh al-Zubayrî (F. Segrîn, Geschichte des arabischen Schrifttums, i, 493) is said to have written a K. al-istikhâra wa-l-tahall (cf. Tahâhîî, 237). (T. Fahd)

ISTIKLÂL [see TAWRIYYA]

ISTIKLÂL, an Arabic verbal noun, from the tenth form of the root k-l-l. In Classical and Middle Arabic this form is used with a variety of meanings (see Doxy and other dictionaries), and especially to convey the notion of separate, detached, unrestricted, not shared, or sometimes even arbitrary. It occurs occasionally in a political context—e.g., of a dynasty, a region, a people or a city quarter not effectively subject to some higher authority. Such occurrences are, however, rare, and the word was in no sense a political technical term. In Ottoman official usage, it acquired the meaning of unlimited powers, e.g., in the terms of appointment of a provincial governor or military commander. It seems to have retained something like this meaning in the early 19th century. Then, in the Turkish translation of Bott's Historia Italiae (Italia ta'rikhî, (1878, ed. Wiistenfeld, 306). But the most characteristic is that of wedjî-i serbestî, with free government (ber wedjî-i serbestî), and is commonly linked with rubhî to denote the arbitrary authority of a ruler.

It was in this sense, the independence of the holder of power from restraints by either subjects or suzerain, that istiklâl is commonly used in both Turkish and Arabic in the late 18th and early 19th centuries. During the same period, under the influence of European political thought and practice, it began to acquire the modern meaning of political sovereignty for a country or nation (for examples, see the Turkish texts of the treaty of Kâşık Kaynarja of 1774 concerning the "independence" of the Crimean Tatars (cit. above S.v. HURRIYYA ii) and of the London Protocol of 1830 on the independence of Greece (istiklâl-i hâmî; text and most characteristic of this form are given by A. Eifl, British Interests in Palestine 1800-1901, London 1961, 147-8, citing a British consular despatch of 1858).

The following article deals with political movements for independence in the Arab countries.

ISTIKLÂL. In Arabic istiklâl is a fairly recent addition to the political vocabulary. Despite its use in common parlance, viz., and mustakhîl ("I am independent!", that is, free or un fettered), or sometimes to refer to economic independence, that is, autarky (istiklâl istiklâlî), it is primarily associated with the national independence movements among the Arabs of this century. It is with these movements that this article is concerned.

After World War I, the peace settlement regarding the Ottoman dominions imposed by the Allied Powers in 1919-20 gave Britain and France wider control over the Arab territories in the Fertile Crescent, in addition to the existing arrangements in Egypt, North Africa, South Arabia and the Gulf. Without these developments and the consequences of the Arab Revolt, 1916-18, the term istiklâl might have had only a limited use, or probably remained obscure, for in the period immediately preceding World War I, Arab political agitation against the Ottoman state was centred upon the attainment of autonomy within
the framework of the political arrangement of decentralization, al-tawqahiyah. In fact, istiklāl had no meaning or import in Islamic political thought and vocabulary. It is strictly a modern, imported political notion, which became common and acquired significance with the establishment of European control, or tutelage, over much of the Arab Middle East and North Africa.

Fāyṣal's short-lived Arab Kingdom in Damascus in 1920 marked the appearance of two variants, or strands, of istiklāl in Arab political thinking and agitation. One, which originally centred around the Fāyṣal, or Arab Revolt, establishment and, after 1920, was represented in Syria, Transjordan, Palestine and 'Irāk by the Istiklālists, or Istiklāl party, tended towards a pan-Arab orientation. It deplored the destruction of Fāyṣal's kingdom in Damascus and opposed the mandates in the Fertile Crescent. The other comprised the several, separate independence movements against British or French mandatory and other control in such countries as Egypt, 'Irāk, Syria, Lebanon, Morocco, Tunisia and Algeria, as well as Transjordan and the Sudan, though movements in the latter two areas were less tumultuous. Palestine was a special case. In that country the Palestinian Arab movement for independence failed, and instead Zionism succeeded in founding Israel as the successor state to the British Mandate. After 1922, therefore, istiklāl referred specifically to the aspiration of ending the mandatory or other tutelary relationship between the newly established Arab political territories, or entities, and Britain or France.

Rather differently in the case of Egypt, el-istiẖlāl al-tawqahiyah (complete independence) became the political slogan of at least two parties: the National (Wafā'ī) party and the Wafād. The first objective was attained by the greater independence than had been achieved under the unilateral British Declaration of February 1922 with its Four Reserved Points. It became the slogan of practically every political party and the avowed priority, if not foremost policy, of every government in Egypt. At the outset, it aimed specifically at changing the terms of the particular relationship with Britain. Later it sought to sever that relationship altogether. The first objective was attained by the Wafād with the signing of the Anglo-Egyptian Treaty on 26 August 1936. The second, which became a bitterly contested area of Egyptian politics from 1936 to 1952, was not achieved until the signing of the Evacuation of British Forces from Egypt for assistance towards and recognition of independent status. The outbreak of World War II in 1939 circumscribed by Britain's control of the conduct of 'Irākī foreign relations and retention of her air bases at Shaẖrūayba (Bahra) and Ḥabbānīyya (Baghdād). Efforts at further istiklāl which led to the signing of the Portsmouth Treaty on 15 January 1948 were nullified by violent protests against its terms, which led to its rejection by the 'Irākīs. The accession of Britain to the Baghdad Pact in 1955 led to a rearrangement of the basis of relations between the two countries. However, the secession of 'Irāk from the Pact under President Kāsim may be considered the final act in the severance of the forty-year-old relationship with Britain. Political and psychologically at least, the attainment of istiklāl tawqahiyah.

Syria and Lebanon too in the interwar period sought to move from limited autonomy under French tutelage to independence. Istiklāl became the slogan and political umbrella for the activities of practically all political groups and parties in those two countries. In fact, it became the contentious issue between rival groups. An uncompromising stand for its attainment became the mark of patriotism and political respectability. In any event, both Syria and Lebanon existed as autonomous republics under French Mandate from the mid-1920s. The November 1936 Treaty between Lebanon and France constituted a step towards independence within three years. Earlier in the year, the Syrians had rejected a similar treaty with France. These treaties provided a special relationship with the metropolitan país under which France promised aid and for assistance towards and recognition of independent status. The outbreak of World War II in 1939 intervened, and it was not until 1941 that the Free French declared publicly their intention of granting their two wards independence: thus the Free French General Catroux's proclamations regarding Syria and Lebanon in September and November 1941 respectively. Difficulties and disturbances over the transfer of power continued until 1945. The last French forces departed both countries by the end of
1946, at which time they became fully independent.

As a semi-independent emirate under 'Abd Allah Ibn al-Husayn, after World War I Transjordan remained ultimately under the control of the British High Commissioner in Jerusalem. By an agreement in 1923, Britain recognized it as an autonomous constitutional state under Amir 'Abd Allah with British tutelage. The activities of the Istiklalisists with their Arab nationalist demands for complete freedom from British control indirectly helped 'Abd Allah to secure greater legislative and administrative autonomy for his fledgling state in a treaty concluded with Britain in 1928. In 1934, he was permitted to establish consular representation abroad, and in 1939 his Legislative Council was transformed into a cabinet. The Treaty of London, concluded with Britain on 22 March 1946, recognized the independent Hashimite Kingdom of Jordan and 'Abd Allah was proclaimed its first king. The treaty, which was followed by another in 1948, was modelled on the 1936 Egyptian treaty in the sense that Jordanian independence was circumscribed by a special relationship with Britain. This last vestige of dependence was severed on 13 March 1957.

As far as the decades of the 20s, 30s and 40s are concerned, istikblal belonged to Egypt and the Fertile Crescent. With the waning of British power overseas generally and the consequent withdrawal of its presence or influence, heralded by the voluntary dissolution of the Indian Empire in 1947, istikblal movements erupted elsewhere in the Arab East. Similarly, the winding up of the French Empire after World War II, first in Indochina and later in Africa, undermined the French position in the Maghrib. In the 50s istikblal reached Libya, the Sudan, Tunisia and Morocco. Kuwait in the east and Algeria in the west followed suit in 1961 and 1962 respectively. Unlike all the other Arab countries, Algeria only attained independence after seven years of bitter war against the French armed forces.

Despite the long historical connection between Egypt and the Sudan, after 1924 the latter was governed in practice solely by Britain, thus ending the Anglo-Egyptian condominium devised in 1899. Greater Sudanization of the country's local administration followed. The 1936 Anglo-Egyptian Treaty led to the rapid evolution of Sudanese nationalism and a movement for an independent Sudan, especially after World War II, not without British encouragement. It proved a much stronger current than the Egyptian plan, backed by Egypt's political protégés in Sudan, for an independent united Nile Valley comprising Egypt and the Sudan under the Egyptian crown, or after 1952, under the Egyptian Republic. As part of the Anglo-Egyptian settlement of 1953-4 for the British evacuation of the Canal, the Sudan, after a three-year transition period, became independent on 1 January 1956.

Paradoxically, Libya, the least developed North African country, was the first to attain istikblal on 24 December 1951. Any independence movement during the Italian occupation (1911-42) was no more than the desire of the Sanūsī brotherhood under Idrīs to rid itself of Italian rule. It was also largely a Cyrenaican affair, closely linked in the 30s and 40s with Egypt, where Idrīs, together with his main political lieutenants, had taken refuge. This is not to say that Tripolitians were not involved in the struggle for independence, but they were more oriented towards the Maghrib and, in the Arab East, towards Syria. It was the British, however, who restored Idrīs to power in Libya in 1949-50. As they were abandoning their positions in Egypt and the Fertile Crescent, the British introduced the old pattern of special arrangements with Libya, which they had helped to independence: this time with a bases agreement concluded in 1952-3. Like other Arab states before it, however, by 1964 Libya demanded the removal of foreign (British and American) bases from its territory in the name of istikblal al-lāmm, and in response to pressures generated by inter-Arab state conflict as well as a more radical Arab nationalist movement. An army coup d'état on 1 September 1969 overthrew the Sanūsī monarchy, proclaimed a republic and pressed for the immediate removal of all vestiges and semblances of foreign encumbrances on istikblal: bases, foreign enterprises and other interests, as well as the large Italian community.

Tunisia and Morocco became independent in 1956. Istikblal in Tunisia was led by a combined Western—that is French—educated, secular, bourgeois élite in the Destour party and a more conservative Muslim Arab leadership whose antecedents went back to the constitutional reform movement of Khayr al-Dīn al-Tūnisī (q.v.). There being no specific term for independence in Arabic, the expression istikblal dakhili (internal) was used to describe an intermediate stage which would have provided the substance of independence. Unlike Tunisia, where the Beys of Tunis were not associated with Western modernity and its institutions, in Morocco the Sherifian Alawite sultan Muhammad V was recognized as the leader of the struggle against the French protectorate. Yet the battle for istikblal fought by both Morocco and Tunisia differed from that of Algeria because although France controlled them by earlier protectorate arrangements, they retained a measure of local autonomy. Indigenous Islam and its institutions survived in both countries under French tutelage. Algeria, however, was made an integral part of metropolitan France by legislation, so that the separatist, istikblal movement eventually developed into a bitter and bloody war. While the Alawite monarchy survived after independence in Morocco, the hereditary dynasty of the Bey of Tunis did not. The last Bey, Muhammad al-Amin, was deposed when the Constituent Assembly abolished his office on 25 July 1957 and proclaimed Tunisia a republic.

On the whole, over the past 50 years, the several Arab movements for national-state independence often co-existed and contended with the desire of some to expand the connotation of istikblal to encompass a projected wider entity, that of the Arab nation, cutting across existing state boundaries. The role played by this wider conception of istikblal in the radicalization of inter-Arab politics became apparent under the Ba'th party's central aspiration towards Arab unity in the 1950s. In individual Arab states, political parties wishing to advance a more pan-Arab and anti-Western national policy often adopted the name of istikblal, as for example, the Istikblal party of 'Irāq led by Muhammad Mahdi Kubbā, Šiddīq Šanghalī and Fā'iq al-Sāmarrā'ī, or that of Morocco led by 'Allī al-Fāsī. It is interesting to note that during a particularly intense period of inter-Arab state conflict in the years 1957 to 1967, istikblal acquired further ideological dimensions. In that period, the Arab states were polarized into a revolutionary Arab socialist, or radical nationalist, camp on one side, and a conservative or reactionary one on the other. The first camp, which identified with Nasser's leadership and in other respects with Ba'th ideology, comprised mainly those Arab states in which military coups d'état had over-
thrown previous regimes invariably associated with an earlier link with one or another of the European powers. By the late 50s many of these were veering in their foreign policy orientation towards the Soviet Union. Such was the case of Egypt, Syria, ‘Irak, Algeria and the Yemen after 1962. The second camp comprised mainly the traditional monarchies, some of them oil-rich, such as Saudi Arabia, Morocco, Kuwait and Jordan. The revolutionary camp argued that there was no genuine istiqlal in the adversary or rival Arab camp because the regimes within it were reactionary and still maintained commercial, economic and political links with Western European and/or American powers. In these circumstances they were considered “agents of imperialism and neo-colonialism” and therefore not “truly independent”. Much of this “cold war” between the states in the Arab East and Arab West subsided after the Arab-Israeli war of June 1967. The realization dawned upon most of the Arab states that even with istiqlal the economic, political and strategic facts of their environment and the requirements of their own survival forced them to maintain a client relationship with a foreign power.

ISTIKLÅL — ISTIKSAM

263

Philology, xiii (1885), 278; T. W. Davies, Magic divination and demonology among the Hebrews and their neighbours, London 1899, 44-7.

The second group of meanings was applied everywhere to the whole spectrum of cleromantic methods, understood as the essence of divination, in the sense of the Syriac šam, “to practise divination”, from which šayām, “soothsayer”, was derived (cf. ref. in Semitics, viii (1956), 73, n. 4). Initially, istiqlâm designated belomancy only (istiqlâm bīl-āsām), condemned in the Qurʾān (V, 3) along with maysir (V, 90), another type of belomancy. Because this condemnation was extended to all similar divinatory practices which were based on chance (cf. al-Ṭabarî, Taṣfîr, ii, 201, l. 3 ff.), istiqlām and maysir, roughly representing respectively the religious and profane aspects of belomancy, as I have attempted to establish in Divination (150 ff., 204 ff.), became the symbols of pagan divination.

This article deals with istiqlām in the strict sense of sacred belomancy only, as it was practised in association with certain Arab divinities. For other cleromantic methods, the reader should consult the following articles: dyama (plur. ādām), for lapi-dation, an article which, as far as the divinatory aspect is concerned, should be augmented by the section dealing with this practice in Divination (188-95); āaml for geomancy and lithomancy, originally grouped together under the word taraf (for the time being, reference can be made to Divination, 195-204); maysir for profane divination and games of chance (al-darb bi l-hišāb; cf. ibid., 204-14); kurra for rhapsodomancy (ibid., 214-19); ḍafar, malaḥim, ḥuruf, al-asma’ al-husna (as far as divination is concerned, the latter should be supplemented by Divination, 234-41). (II. 219-45, 221-30.) (P. J. VATIKIOTIS)

ISTIKSAM (A.), 10th form of the root b-s-m which embraces two groups of meanings, the one of a magical nature and the other divinatory. The first is applied to formulae and methods for conjuring up demons, for adjuration and exorcism; this latter is the meaning acquired by the 2nd and 4th forms, kassama and aškama, particularly in the Christian Arab world, clearly influenced by the Hebrew šāmēm (e.g. Deut., xxvii, 23), which has the same meaning. This usage is late, colloquial, and most frequently found among Christian Arabs, who also employ bišām, “adjuration, exorcism formula, priestly ordination”, takšīm, “conjuration”, and ushuf kāṣim, “ordinant bishop” (cf. Dozy, Supp., ii, 345 ff.; Fagnan, Additions aux dictionnaires arabes, 142). Such a usage does not appear in Classical Arabic, or at least is confined to the action of “having someone swear an oath” (istiṣkāsamahu) or “swearing by something” (istiṣkāsa biha) in the sense of aškama (cf. TA, ed. Bālīk, ix, 26; W. R. Smith in Journal of
firmative, the second in the negative, and the third with doubt; al-miyah (water), used to ascertain the presence of water in a specified place (cf. Ibn Hishâm, 97 f.). The people of Mecca consulted the opinion of the darts of Hubal, tossed by the sādīn in the quiver (kīhīn) of the god, in return for a hundred dīkhams or one camel, every time a serious dispute arose among them. The Sira recounts the story of two belomantic consultations made by the Prophet's grandfather, 'Abd al-Muṭṭalib, at two important moments of his life: the first to decide to whom to return the precious finds he had made when clearing out the well of Zamzam (Ibn Hishâm, 94); the second to discover which of his ten sons should be sacrificed at the Ka'ba in fulfilment of a vow he had made to sacrifice one of his sons should their number reach ten (ibid., 97-100).

Pilgrims too could not have refrained from the practice and belomantic consultation must have been one of the many attractions of the great metropolis of Arab paganism. Numerous texts indicate that the practice of consulting the throw of darts was very widespread. Alongside those attached to the sanctuary, there were others, manipulated either by the kāhīns, the elders or the notables (see the examples in Divination, 189 f.). Al-Nuwayrī, Nikāyā, iii, 112 f., supplies a longer and more diversified list of darts that were used outside the sanctuary, tossed in a madārā (a skin stitched into a bucket) by a kāhīn wherever there was one to be found or by any other person who held some rank in the tribe or city. To the na'am, la and muṣlaḥ known to Ibn Iṣḥāq and his abridger, Ibn Hishâm, al-Nuwayrī adds ten darts with the following names: ṣā'īf (dog), ṣā'īf al-dōnīn (don't!), kāhīr (good), khārīr (evil), bāḥī (slow), sarīḥ (fast), ḫādar (presence), safār (journey), and sarīḥ (equivalent to Ibn Hishâm's mīnkuμ). Finally, white darts (kīdād bāyādā') were prepared that could bear more precise and detailed inscriptions or equivalent meanings inscribed by explicit agreement between the kāhīn and the man consulting him. In this way the field of consultation was enlarged and belomancy adapted to the demands of any sphere in which it was practised.

Bibliography: Apart from the sources cited in the article, Azżāk, Aḥḥāb Makka, ed. Wüstenfeld, 73-4; Tabāt, i, 1074-8; Ibn al-Athīr, ii, 2-4; T. Fahl, Une pratique cérémonielle à la Ka'ba préislamique, in Semitic of II, 1958, 54-79: in spite of its many defects of form, this monograph will give the reader the basic information about belomancy. It should be supplemented by T. Fahl, Divination, 180-8. (T. Fahl)

ISTIMMĀR [see ISTIṢQĀ']

ISTIṢQĀ', from ista'na'afa (to recommence, to renew), means in modern Arabic appeal, because the case is examined again from the beginning when brought before the court of appeal. In classical fiḥk the word is used with this sense of recommencement with regard to the isbādāt, the religious duties, especially prayer.

Iṣtiṣwā' (the Mālikis call it isbiṣdā') occurs when the entire prayer, which has been interrupted by the occurrence of a ritual impurity, ḫuṣūd [q.v.], has to be begun again.

In certain circumstances the fuḥāḥā' decided that the continuation (binā') of the prayer from the moment when it was interrupted by a fact independent of the believer's will, and which does not, strictly speaking, constitute a ritual impurity, e.g., a serious nose-bleed, is permissible to complete istiṣwā'. The schools, and scholars within the same school, do not always agree upon the circumstances which give rise to istiṣwā' or, on the contrary, to binā'.

Hālabī, i, 204 ff. See also Ibn Hazm, Mukhālā, Cairo 1347, iii, 202-3 and iv, 153. 177. (Y. LINANT DE BELLEFONDS)

ISTINBAT [see m2 and ṢIVĀṆA']

ISTINDJĀ', purification incumbent upon the Believer after the fulfilment of his natural needs. This practice, which is described in detail, is obligatory (recommended only according to Abū Ḥanīfa) and must be carried out either immediately, or before performing the ṣāliḥ or any other act which requires a state of ritual purity.

Bibliography: All the works of fiḳh, iṣṭiṣlaw, etc. deal with this subject in the chapter on ḥahāra; similarly Ghazzālī, Iḥyā', in the same chapter (iii = 22 of Bousquet's analysis). (Ed.)

ISTINSHĀK, the inhaling of water through the nostrils at the time of the wudu' and qhul. This practice is recommended by the various rites (obligatory according to Ibn Ḥanbal). In practice this is not really important since the Believer always performs it during his ablutions, etc. in the same way.

Bibliography: See ISTINDJĀ'. (Ed.)

ISTINZĀL, a term denoting hydromancy, according to Doutté, Magie et religion dans l'Afrique du Nord (Algiers 1909), 389; but in Ibn Khaldūn, Mukhaddima, iii, 137 ff., istinzial rūḥānīyyāt al-ajlāh is a technique belonging to siyrād [q.e.], natural or phantasmagoric magic (cf. T. Fahl, Divination, 45, n. 1). The Pseudo-Madjriti prefers to use istidādī (cf. Sources Orientales, vii, (1966), 170 ff.). Elsewhere, in al-Būnī and Ibn al-Muwaqqitī, istinzial al-arwād wa-tirhdārūhi fi bawālid al-arshāh denotes the techniques of spiritism, although these are generally denoted by the name 'ilm al-istikhdār.

According to Hādīdī Khallīfa, this art consists in invoking the presence of jinn or angels and making them perceptible to the senses; only the prophets can achieve this result with the celestial angels; with regard to terrestrial angels, the question is in dispute. It is distinguished from 'ilm al-'aṣā'm, the talismanic art, by the fact that the latter calls upon jinn and angels for the performance of some project, without the need for incarnation, whereas their incarnation is the principal aim of istikhdār [see siyrād].

Bibliography: Hādīdī Khallīfa, i, 275 f.: definition with reference to the encyclopedia of the sciences of Tāṣkhpurūzāde, Mīṣāḥ al-taṣāda. Among the works devoted to this art, he mentions K. ḡalā ad-dawādīr wa-l-sawūr, "illustrated book on the invocation of jinn and their subjection (to man), a according to Aṣā'm b. Berekhyā, vizier to Solomon ..., this is no doubt a falsehood" (i, 276, and iii, 324); Iḥām al-Fattāh bi-hikmat insāl al-arwād wa-balāqkhā ḡaf 'l-arshāh of Kamāl al-Dīn al-Mubnām b. All b. al-Wafā', known under the name Ibn al-Muwaqqitī, d. 1165/1748-9 (i, 453; cf. Brockelmann, S II, 982; al-Bustān li-istikhdār arwād al-dīn al-walā-shayānīn fī 'ilm al-sā'āl fārābī al-Kif fī wa-l-'Arab, anonymous (ii, 50); Tansīl al-arwād fī bawālid al-arshāh of Abūd al-Būnī, d. 622/1225 (ii, 440). We have not succeeded in seeing any of these writings, which have not yet come to light among any of the manuscript collections which we have at present been able to consult. The 'ilm al-istikhdār cannot be properly
studied until these specialised writings have been discovered. On magic, pending the... the command of the $dfrib al-Shurfa or Police Commandant of Baghdad, Badr, and used for garrisoning strategic points on.

the vessels; cf. SOURDEL, Zur Heeresverwaltung der

and registration of soldiers; and the keeping of up-to-date registers of the troops' fighting qualities, their weapons and their mounts, could only be ensured through regular reviews. A careful recording of the physical features of soldiers (the $hula al-$rugjâ) and the brands or marks of mounts (simâl) was necessary to prevent intruders or substitutes entering the ranks or good horses being switched round or removed from the stables. Such malpractices led to the $divân being cheated over unmerited pay issues, and there was also a fear lest enemy spies insinuate themselves into the ranks. So it is natural that writers like Kudâma, Hilîl al-$Sâbi', Miskawâyih and Mâwardi should stress the prime importance of these identificatory procedures, cf. W. Hoenenbach,

Zur Heeresverwaltung der $'Abbâsiden: $divân al-$gârî, in IST, xxix (1949-90), 268 ff. These reviews and inspections were also normal occasions for pay issues, when the financial aspect of the $divân was displayed.

Hilîl al-$Sâbi' gives the detailed analysis of a caliphal budget from the reign of al-Mu'tâdîd (probably to be dated to Mubarram 280/March-April 893), and in the course of this he describes the $'ard procedure under that ruler. Al-Mu'tâdîd made the whole army muster before him personally in the "Lesser Square" in Baghdâd, whilst he sat overlooking it from the galleries of the Hasani Palace. Below him were positioned the secretaries responsible for pay arrangements ($uttâb al-$'$âli'). The commanders and their $ghulâms (q.v.) or military slave troops were drawn up prior to the caliph. The review now began, with the individual officers presenting registers of the names and pay entitlements of the men under them. The vizier 'Ubayd Allah b. Sulaymân b. Wahb summoned each man separately, and he was tested for his proficiency at the game of birdîs, in which the contestant had to get his lance-point through a metal ring fixed to the top of a wooden column, thus revealing his skill or otherwise in controlling his horse and aiming his weapon (four or five centuries later, tilting at the $birdîs was a prominent feature of the $furâisiyya (q.v.) exercises and training of the Mamlûk cavalrymen). According to the man's performance, the Mu'tâdîd graded him in the register (djardî) by a $djîm (= $djajyûd, excellent), a $jâ' (= muwatassî, moderate) or a $dâî (= $dâm, inferior). After this part of the $'ard, the secretaries responsible for practical military matters (kuttâb al-$djajyûd) came forward and examined the physical features of the men to check that they corresponded with the details set down in the registers; they were thus able to detect and eject intruders and substitutes (duskhadâ, budîlâ). The registers with the caliph's marks were handed back to the vizier, and the secretaries then prepared a fresh series of registers on the basis of the threefold proficiency grading. The $djajyûd soldiers were formed into the caliph's "Personal Army", 'asâhar al-$bâsâya, with a pay-period (ra'sa) of 90 days. The muwatassî soldiers were placed under the command of the $shâb al-$shurja or Police Commandant of Baghdâd, Badr, and used for garrisoning strategic points on
the routes from Baghdad to Lower Irak and western Persia; these were called the "Army of Service", 'ashar al-abidma, with a pay-period of 120 days. The troops considered as dān were sent out to the provinces to help with the tax-collecting, were employed for horsebreeding and stable duties, or were attached to the police commandants of Baghdad, Wāṣif and Kūfa (Hīlāl, Wuzara', ed. 'Abd al-Sattār Abmad Faraḵī, Cairo 1958, 17-19). As was the case all through the Islamic lands at this time, the office of 'Arid was invariably held by the caliphate generally modelled their administrative institutions on those of the 'Abbasids in Baghdad. Amongst the Fātimids of Egypt and Syria, Kālākhanī speaks of the Dīwān al-Djaysh as one of three divisions of a general Dīwān al-Djaysh 'al-mūtadi. The other divisions of the Dīwān were concerned with keeping the registers of the troops and with the allocation of ikhtā'ī's. The Ṣāhib Dīwān al-Djaysh and his assistant ḥābiq had the duty of holding 'arḍs of the troops, in which the physical features of the troops and the marks of their mounts were scrutinised, and he was kept informed of the state of the military personal by a staff of representatives attached to the army commanders (Ṣāhib al-ṣābah, iii, 492-3).

In the Iranian lands, the designation of 'Arid for the head of the military affairs department gradually supplanted the more general 'Abbasids like Ṣāhib Dīwān al-Djaysh. The Ṣaffārīd brothers Yaḵtbā and 'Amr b. Layth built up a vast if transient empire which stretched from eastern Afghanistan to the fringes of Irāk; and a Dīwān al-'Arḍ must have grown up inevitably to control and pay the Ṣaffārīd forces. The 'Arid's duties comprised the usual functions, for purity of Daylamī or Dhīhl blood, the expulsion of intruders from the ranks was an especial feature of the Buyid 'ard, when experts on tribal genealogies were employed to assist the 'Arid in his work. The 'arḍs were also occasions when the allocation of šāths was reviewed or these grants converted into cash payments, but the amīr had to be able to act from a position of strength. It is not infrequently recorded, amongst the Buyids and amongst other dynasties, that the threat to hold an 'ard (at which financial and territorial privileges would be reviewed and possibly cancelled) provoked a storm for the whole topic of the Buyid 'ard and the 'Arid's functions, Bosworth, Military organisation under the Buyids of Persia and Iraq, in Oriens, xviii-xix (1965-6), 143-67, esp. 162 ff., and also Busse, Chalif und Grosskönig, die Buyiden im Iraq (945-1055), Beirut 1969, 341-5, 340-1. Little is known about the formal constitution of the military department under the Sāmānids of Transoxania and Khurāsān, although a Dīwān Ṣāhib al-Shurā, sc. for the Commandant of the Guard, existed in Bukhārā during the time of Nasr b. Ahmad (early 4th/10th century), cf. Narshaghi, The history of Bukhara, tr. Frye, 26; and Khūrāzimī mentions a special "black register" (al-dījarā al-saṣāna) in which the names and duties of the troops were recorded (Maǧīth al-maṣūm, 56, 64; see DAF'TAR). Hence the institution of the 'Arid very probably existed for the Sāmānid army (on which see Bosworth, An alleged embassy from the Emperor of China to the Amir Nasr b. Ahmad: a contribution to Sāmānid military history, in Yād-nāme-yi Minorshyk, Tehran 1969, 17-29), for the Sāmānid administration was the immediate model for that of their successors, the Ghaznavids, and the administration of the latter certainly included a Dīwān-i 'Arḍ as one of the five great departments of state. The Ghaznavid 'Arid's duties comprised the usual range of financial and military ones, and the office was accounted second only in importance to that of the vizier. 'Ard as the whole army, cavalry, infantry and elephants, were held annually on the plain of the Shābahrā outside Ghazna, and Gardīz states that at the 'Arid of 414/1023 54,000 cavalry and 1,300 elephants were reviewed; on occasions like this, the names of the troops were checked against the muster-roll or dījarā-yi 'ard, the troops received their pay and the whole proceedings often ended in a magnificent feast for all present given by the sultan. Subordinate 'Ārids were attached to each of the Ghaznavid armies stationed in the provinces, and these officials held local reviews of the troops and paid them with funds drawn from the provincial treasuries. As was the case all through the Islamic lands at this time, the office of 'Arid was invariably
held by a member of the civilian bureaucracy, Arab or Persian, and not by one of the Turkish soldiery, administrative expertise rather than prowess in the field being the desideratum. See on all these questions, M. Nāẓim, The life and times of Sultan Maḥmūd of Ghazna, Cambridge 1931, 137 ff.; Bosworth, Ghaznavid military organisation, in Isl., xxxvi (1960), 68 ff.; and idem, The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040, 122 ff.

A particularly interesting account of how an 'ārīd should be conducted is contained in the treatise on kingship and military practice by the 7th/13th century Ghūrid author Fakhr-i Mudābbir Muḥārak-shāh, the ʿAbd al-mušūl wa-kīṣfayt al-mālshūkh or ʿAbd al-barb wāl-shādājāb (bāb 18 of the more complete India Office Ms 647, bāb 12 of the B.M. Ms Rieu, ii, 487-8 = 267-8 of the printed text by A. S. Khwaň-sārī, Tehran 1346/1967). There is clearly some factual basis for this account, however much it has been idealised, and it presumably reflects the institution as it developed on the eastern fringes of the Islamic world under such dynasties as the Ghaznavids and Gūrids, and probably in northern India under the Gūrids' slave commanders. According to Fakhr-i Mudābbir's account, the 'ārīd—described as "the mainstay, the very mother and father of the army, upon whom the strength and reliance of the troops rests"—was accompanied for the 'ārīd by his deputy and by the Naḵb, and they stood on an eminence and inspected the left wing, centre and right wing of the army, in that order. Within this framework of review, the heavy cavalry, the light cavalry, the regularly-salaried infantry and the auxiliary infantry were successively inspected, and the lists given to the Naḵb so that he could arrange these troops on the day of battle. The commanders themselves were all reviewed, and each ordinary cavalryman was written down under his superior officer. The 'ārīd is cautioned not to demand that horses and weapons be produced during a pre-battle 'ārīd, but he should encourage the troops with promises of rewards and promotions, so that they will be stimulated to feats of heroism. At the end of the 'ārīd, the 'ārīd brings the troops' leaders before the ruler and praises their soldiers. The fear of enemy forces; the 'ārīd should, accordingly, make his report to the ruler discreetly, and if cavalrymen already reviewed slip back and mingle with the unreviewed, the spies will become confused and acquire an exaggerated idea of the army's strength. From this passage of the ʿAbd al-mušūlākh, there emerge two vital and practical reasons for holding an 'ārīd: firstly, it provided a check on the condition and composition of the troops to set them out in their battle stations when they reached the field; and, as under the preceding dynasty of the Būyids, it was as much a financial as a military organ of government, with the responsibility, for instance, of overseeing šībās and reallocating them when they fell vacant. Till the death of Malik-Šāh, the ʿĀrīd al-dīwān-i ʿĀrīd-i Dīwān-i ʿĀrīd was usually a civilian official, but thereafter, the office was occasionally held by a Turkish amīr (Lambton, in Cambridge history of Iran, v, 233, 259-60). As well as the central military department, provincial offices doubted less. This last fact may be inferred from the text of an investiture diploma for an ʿĀrīd given in the second part of the collection of Rashīd al-Dīn Watāš's letters, the Wasāš al-rasāši' un-daš'ālī' wa-fādi'ālī' compiled for the Khwārizmshāh Djalāl al-Dīn's brother Ghiyāḥ al-Dīn Pirshāh or Shīrshāh; it thus reflects the common Saljūq and Khwārizmshāh tradition. In it, the appointee is described as ʿĀrīd dar ḍawīyān manšūkh, and his duties characterised as firstly, a care for the correct pay entitlements of the soldiers, and secondly, the proper conduct of 'ārīds, with due inspection of equipment and weapons (H. Horst, Die Staatsverwaltung der Grosselügen und Ilorazmākh (1038-1231), Wiesbaden 1964, 39-41, 109-10). 'Ārīds were held at such usual times as the opening of campaigns (e.g., before the expedition of Alp Arslan to Anatolia which culminated in the victory of Manzikert); but 'ārīds could still give rise to disaffection, for the 7,000 troops whom Malik-Šāh dismissed from his army after an 'ārīd at Ray in 473/1081 joined his brother Tekish in eastern Khurāsān, and the latter used them to rebel (Bosworth, in Cambridge history of Iran, v, 90).

Although the Great Saljūq empire disintegrated, the military traditions associated with the maintenance of a standing professional army lived on beyond the cataclysm of the Mongol invasions and were passed on to the later Saljūqs of Rūm in Anatolia and to the various Mongol and Türkmen dynasties which came to dominate the whole region from Syria to Afghanistan. Under the Il-Khānids, we find the office of ʿĀrīd or Amir-i ʿĀrīd still flourishing; his duties included oversight of the army's eqīdān and, probably, assistance to the khan at army reviews (cf. J. H. Uzunçarşı, Osmanlı devleti teşkilatına medhal, Istanbul 1941, 257). The 'Ārīd-nāma or account of a review written by Djalāl al-Dīn Dawāndī (d. 908/1502) [q.v.] shows the institution of the 'ārīd in common use amongst the Türkmen Kā Koynūlu under their greatest ruler, Uzun Hasan. In this document there is described an 'ārīd held by Uzun Hasan's son Sultan Šaĥīl, governor of Fārs, at Band-i Amir near Persepolis, which lasted three days and, says Šaĥīl, was always attended by the khan at army reviews (cf. M. Nakib). As under the Great Saljūq empire, the troops, comprising the provincial army of Fārs, presented themselves for inspection in the tripartite formation characteristic of Turkish armies, of left wing, right wing and centre. Members of the royal family headed the list; these were followed by the officers, including the elite group of the tawāqūf; and then successive detachments (kōhwān) of the rank-and-file, the nakūrāw, comprising armoured troops and archers, and the servants, the kullağāt (Mutawakkil, A civil and military review in Fārs in 888/1291, in BSOS, x (1940-2), 141-78; Uzunçarşı, op. cit., 301-12).

Amongst the Mamlūks of Egypt and Syria, the traditional occasions for army reviews figure, as one would expect, in the chronicles; thus when in 832/1428-9 Al-Asḥāf Barsbāy prepared his expedition against the Timūrid Shāh Ruhūk, the khalīf (q.v.) was reviewed in the Royal Square (al-hāshiq al-sullānī), and even the very young, the aged and the blind were required to go on the venture (D. Ayalon, Studies on the structure of the Mamlūk army. II, in BSOS, xv (1953), 455). The civilian head of the military department was the Nāṣir al-Dīwān, but the official whose duties corresponded in many ways with those of the earlier 'Ārīd as overseer of reviews was the military official called the Naḵb al-Dīwānā (also found with various other titles like Muḥammad al-Dīwānā, ...
Amir al-Djuyush, Naṣib Nuḥbā’ al-Djuyush and Atābakh al-ʿAsdkir), whose office in Cairo had two branches, one for Egypt and one for Syria. He exercised military police functions, being therefore something like a Provost-Marshall. It was he who announced to the army that it should get ready and parade for inspection before an expedition, and for this he sent round his subordinate officials, the nuḥbā’ adīndā al-balṭa, to Cairo and district, and despatched messengers of the ṭarīd or postal service, [p.6] to other regions of Egypt (cf. M. Guadet-Demombynes, La Syrie à l'époque des Mamelouks d'après les auteurs arabes, Paris 1923, i1xi; Uzuncarsih, Medhal, 383; and Ayalon, in BSOAS, xvi (1954), 64 ff.).

In the early Ottoman empire, many administrative and military traditions stemmed from the Ottomans' predecessors, the Rūm Sağlūqs. The terms ṣard and ard were not generally used, but a similar institution of military reviews existed under the designation of yoklama, the officials charged with organizing these inspections and recording the results being known as yoklamačilar. This institution was certainly flourishing by the time of Selūmān the Magnificent. The yoklama can best be documented from the journals of campaigns, such as those found in Ferdiün Beg's Münše'd-i ardīndū. When a campaign had been set on foot, the muster lists were received from the provinces and were reviewed in the army camp in front of the sultan's tent; the state of the musters was then recorded in special registers or muster-rolls, yoklama defterleri, and these were then presented to the sultan or commander-in-chief. The yoklama was particularly important as a means of checking on absentees from the forces, since absenteeism became an increasing problem as a disincentive from the fighting grew after the 10th/16th century. Documents giving orders for the holding of yoklamas are frequently quoted in minatory language. In one document regarding the Janissary cavalry and sent to the front of the sultan's tent still extant in Delhi called the Bigūy mandal 'viewing area' seems to have been designed as a viewing platform for the ard. The sultans' Diwan-i ard was headed by an official called in the mid-7th/13th century the Rauwati-i ard (rauwi = Hindi "warrior") or the Ardī-šāhak, and there were subordinate officials called nābūš-i ard-i mulūk. One duty of these deputy Ardīs seems to have been that of accompanying military expeditions when there was a chance of plunder, and of then transmitting the sultan's share of the booty back to Delhi. The founder of the Khalidī dynasty, Djālāl al-Dīn Fīrūz (689-95/1290-6) held the office of Ardī-i Mamālik when he seized power (Barani, Ta'rīḫ-i Fīrūzhāhī, 114, 116, 197, 326, 450).

Almost nothing is known of the ard in Muslim India in the immediate post-800/1398 period, although it seems likely that the traditional processes of muster and review were preserved in the Indian sultanates rather than re-introduced de novo by the Mughals. The recording of the hulā ardījāl is said to have been revived by Shih Shāh Sūr of Delhi (955-5/1545-46); a Diwan-i Ard-i Mamālik existed in Mālā in the 9th/15th century; and the functions of the Ardī may have been performed in the Bengal sultanate of the 9th/15th and 10th/16th centuries by the official known as the Wāsir-i Lāshkar or Lāshkar-Wāsir.

In Mughal India, many of the functions inherited from the classical Ard devolved on the Mīr-Bakhsāhī or Bakhsāhī Mamālik (Bakhshī, originally "writer, secretary", a term stemming from Mongol administrative usage), assisted by a number of other Bakhshīs, which grew from one to three between the late 10th/16th century and the 12th/18th century; in addition, a Bakhsāhī-yi Lāshkar was sometimes temporarily appointed to accompany a specific expedition. The chief Bakhshī's duties were broadly those of an Adjutant-General and a Muster-Master; he was concerned with recruitment, keeping lists of the mansabdar or officers, arranging a duty roster for the palace guards, issuing grants of pay (tankhdh), and keeping registers of deserters and absentees from reviews. The Mughal army, like other Islamic forces, suffered from the evils of false musters and absenteeism. The Emperor Akbar revived the practice of the Delhi state of enforcing a system of descriptive rolls for men and horses and of brands for the animals. The soldiers' rolls were called ĉhira, literally "face", because as well as recording the genealogical and ethnic affiliations of the warrior in question, physical details were also noted; the rolls of the horses were likewise called ĉhira-yi aspān. Horses had normally to be branded by the Bakhsāhī's subordinate, the Dārā-ğā (q.v.), the procedure being known as dāggh u tašhīha "branding and verification". Only commanders of 5,000 and above were exempt from the branding requirements, according to a late 12th/17th century administrative manual, one of those with the title Dastūr-ī-amāl (B.M. Ms 6599, second work in the Ms), but they had to parade their horses for inspection when required (it is, however, known from other sources that high officers had their personal brand marks). It thus appears that the general process of tašhīha, requirement of the troops' appearing on parade and the checking of their equipment, is a direct descendant of the classical ard, and that it was carried out in peacetime at regular intervals, the precise period of time depending on the nature and rate of pay. Thus a mansabdar whose men were paid in dāggh or personal grants (see under 앍�) had to parade them for review once a year, whereas those paid in cash had to appear at rather
more frequent intervals. During a military expedition, the Mir-Bakhshi or Bakhshi accompanying the army was expected to lay before the emperor or commander-in-chief a detailed muster-roll on the morning of battle. It was also he who, like the ideal 'Arīd in Fākhr-i Mubaddil's Alāb al-mulūḥ, deployed the troops in the positions which had often been assigned to them before the actual campaign. In the absence of the emperor, the Bakhshi was not infrequently appointed commander of the force, and on many other occasions he commanded a division of it; but even the Mir-Bakhshi might serve beneath an ordinary amir as commander. See W. Irvine, The army of the Indian Moghuls: its organisation and administration, London 1903, 36-56, also in JRAS (1896), 539-55; Ibn Hasaan, The central structure of the Moghul empire, Karachi 1966, 77-9, 125.

Bibliography: Given in the article. There are no special studies devoted to the topic, but see Bosworth, Muster, recruitment and review in mediaeval Islamic armies, in War, technology and society in the Middle East, London, forthcoming. (C. E. Bosworth)

ISTI'RĀD (A), technical term of the Khaawāriḍī [q.v.], used, in a general sense, of religious murder, the putting to death in particular by the Azārla [q.v.] of Muslims and pagans who objected to their still rudimentary doctrine. However this meaning seems to be the result of a semantic evolution (even an innovation), the verb ista'rāda (tenth form) meaning "to ask someone to display his possessions" and, hence, "to give an account of his opinions"; the isti'rād is thus the interrogation to which the enemies of these sectarians were subjected on falling into their hands. There seems also to have occurred an overlapping with the eighth form 'ārada, which seems to mean "to examine one by one, to pass under review", but also "to attack someone" and "to strike in all directions, indiscriminately" (cf. al-Kāli, Amālik, i, 119). In al-Ṭabarī (i, 355, line 2) there is found, concerning Mis'ar b. Fadākī, the phrase abqala yātaridu 'l-nās which Mne. Vescia Vagliori, in AlUON, iv (1952), 63 translates "presero a far subire interrogatori alla gente", perhaps while fighting, since the verb could well have here the meaning of "attack"; another attestation appears more certain: al-Mubarrad (Kāmil, 616; Cairo ed., 1041; cf. Ibn Abi 'l-Iṣlah, ʿAṣrak Nādī al-balāgah, i, 382) says in fact of Nāfī that at al-Ahwāz yātaridu 'l-nās (i.e., he made them undergo an interrogation) and killed the children (ya$kūlūthum); since he adds al-Tabarī does the same. However, when, concerning ʿAlī, the verb might be used for the acquisition of new rights but also to permit the acquisition of new rights. Thus in this school a missing man whose death cannot be established may inherit, which is impossible under Hanāfi law; in the same way, in Shafi'i law a pre-emptor may avail himself of istiṣfrād in order to prove that he is a co-proprietor, which the Hanafs do not allow (al-Kāli, Badh, v, 14). Examples of istiṣfrād which might be used for the acquisition of new rights abound in al-'Isīfī's works. It should be noted that Zufar, among the Hanafs, upheld ideas which were very close to those of the Shafi'īs on this point.

ISTISHRĀK [see MUSTASHRIRŪN]

ISTIKSAK, a rogatory rite still practised at the present day (notably in Jordan and Morocco) and dating back to the earliest Arab times (?Adīte ac-
cording to Ibn al-Athir, i, 61; Abrahamic according to Ibn Sa'd, i/1, 22) which is a supplication for rain during periods of great drought. The rite must have been both astral and magical in nature. Obliged to retain it because of its great popularity, primitive Islam tried to remove these features. A precise ritual was established—as in the case of istiskhâra (q.v.), another custom deriving from pagan cultic practices—so that the faithful would have to submit to the temptation of returning to the ways of the Dâhilyya. With this end in view, istiskhâr was in the pagan manner, that is through the intermediary of the planets (al-istikhsâr bi 'l-kawâkib) is condemned in a hadith, where it features alongside hidjâd, insult by reference to genealogy, which was thought of as an action with magical results, and niyâkha, the use of hired mourners (al-Tabari, iii, 2444; Ibn al-Athir, Usâd, i, 299; T. Fahd, Le panthéon de l'Arabie centrale, xi, n. 2).

Pagan istiskhâr, or rather istimâr, required the use of fire; nár al-istikhdâr was one of the numerous sacred fires of ancient Arabia (cf. Panthéon, 9-18). It consisted of driving, onto a hilltop that was difficult to reach, oven with branches of wild grape (sala') and mudar plant ('ughar) attached to their tails and hocks. When they reached the top, these branches were fired. The bellowing of the beasts and the cries and supplication of the men rose clamorously towards the minbar, vii (1966), 187 f. (Le panthéon de l'Arabie centrale, xi, n. 2).

The magical nature of istiskhâr is also revealed in the manner in which it was practised by Ibn al-Hayyabân, a very pious Persianian Jew who arrived in Yathrib a few years before the advent of Islam. He lived among the Banû Kurayya, who applied to him every time a drought had lasted too long. He demanded that those who came to him place at their doors a pâdak consisting of one measure of dates or two measures of barley, and ask why he delayed (cf. Ibn Sa'd, iii/2, 50). Some of the martyr's of primitive Islam also enjoyed this privilege; because of this, the tomb of Abû Ayyûb, who died at the gates of Constantinople during the rule of Mu'tawiya and was buried in a spot that took his name (Eyyûp, at the base of the Golden Horn, was considered by the Byzantines as a propitious place to pray for rain (according to Ibn Sa'd, iii/1, 20)).

In later folklore the power to make rain fall was conferred on certain wells; an opening in the dome of their tombs symbolised this power. Their prestige among the people was so great that everyone wanted to number a "rainmaker" among his ancestors (cf. ref. apud I. Goldziher, Zauberlemente, 308 ff.). "Umar b. al-Khaṭṭāb himself once officiated at the istiskhâr prayer by holding the hand of al-Abbas, the Prophet's uncle (Ibn Sa'd, iv/1, 19). Some of the martyrs of primitive Islam also enjoyed this privilege; because of this, the tomb of Abû Ayyûb, who died at the gates of Constantinople during the rule of Mu'tawiya and was buried in a spot that took his name (Eyyûp, at the base of the Golden Horn, was considered by the Byzantines as a propitious place to pray for rain (according to Ibn Sa'd, iii/2, 50)).

Still a small boy, Muhammad is said to have played a part in the rogations celebrated at Mecca as a result of a dream that the mother of Mahârama b. Nawfal al-Zuhari had: she had heard a voice announcing the imminent appearance of a prophet and describing to her a man, who, when he arrived, would bring about the rain. 'Abd al-Mu'ttalib convened the members of his family, including his grandson Muhammad, and one representative from each of the families of Mecca. They made their way in procession to Mount Abl Kubays. After a prayer uttered by 'Abd al-Mu'ttalib, rain swelled the streams. Recounting this story, Ibn Sa'd concludes (i/1, 54): "and they were refreshed because of the Messenger of God".

Even after his death the Prophet's is said to have demonstrated his attachment to this custom: he appeared in a dream to a chief of the Muzayna, during a long drought, to command him to go and see the Caliph 'Umar b. al-Khaṭṭâb and ask why he delayed in uttering the istiskhâr prayer. At once 'Umar assembled the people and recited a brief orison and two short prayers. Then he invoked God in these words: 'O God, our watercourses have dried up; our strength is exhausted; our souls are weary! There is no strength nor power but Thine, O God; send us water and revive the creatures and the earth' (al-Tabari, i, 2575-6; cf. Divination, 265; Panthéon, 11 f.).

Among the nomads, the prerogative of istiskhâr was allied to possession of the bayt or Bethel and the hâbâ or sacred tent; in the temples some divinities were famed in this role [see HURAK]. In Mecca the leader of the city held this prerogative, which had been transmitted by 'Abd al-Mu'ttalib to Muḥammad and thence to the caliphs (cf. H. Lammens, Le culte des Bétyles et les processions religieuses chez les Arabes préislamites, in BIFAQ (1919-20), 86). The Prophet's entire family inherited this prerogative (cf. ref. apud I. Goldziher, Zauberlemente, 308 ff.). "Umar b. al-Khaṭṭâb himself once officiated at the istiskhâr prayer by holding the hand of al-Abbas, the Prophet's uncle (Ibn Sa'd, iv/1, 19). Some of the martyrs of primitive Islam also enjoyed this privilege; because of this, the tomb of Abû Ayyûb, who died at the gates of Constantinople during the rule of Mu'tawiya and was buried in a spot that took his name (Eyyûp, at the base of the Golden Horn, was considered by the Byzantines as a propitious place to pray for rain (according to Ibn Sa'd, iii/2, 50)).

In later folklore the power to make rain fall was conferred on certain wells; an opening in the dome of their tombs symbolised this power. Their prestige among the people was so great that everyone wanted to number a "rainmaker" among his ancestors (cf. ref. apud I. Goldziher, loc. cit.). This phenomenon was particularly pronounced in the Maghrib, where, moreover, pagan rites dating from very early times survive among the Berbers (see Bibliography). For the saalat al-istikdhâr, see saalât.

Rain-making ceremonies among the Turks.

The magico-religious practices most generally employed in Turkey to produce rain are (with some regional variations) the following:

(1) Appropriate formulae are recited over a large number of pebbles, which are then put in a bag and sunk in a stream; care must be taken that not a single pebble falls loose in the water, for this would produce a torrential rainfall. When sufficient rain has fallen, the bag is withdrawn from the water.

(2) Collective prayer is offered led by a khodja, preferably by a sacred site upon an eminence. During the prayer, the supplicants turn their clothes inside out and stretch their half-open hands in gestures simulating the fall of rain. In some areas it is the custom to make babies cry and lambs bleat by separating them from their mothers. There exist in manuscript anthologies of popular poetry some ištadâ in Turkish composed to be sung during these collective prayers.

(3) Besides prayers addressed to God, attempts to procure the intervention of a saint and rites of sympathetic magic, there are found also collective meals provided for the poor of the community, with the same object of appeasing the Divine wrath by works of charity (drought being regarded as a punishment from heaven).

(4) Another group of ceremonies is found in the traditions of the children, which similarly belong to the domain of sympathetic magic. These are ceremonies with the character of games, when children go from door to door to collect money, singing appropriate words and carrying a doll usually representing a woman dressed in fantastic style. This doll is called by different names in different areas: Çömge-gelin "ladle-bride", Keşge-haden "strainer-woman", Yağmur-gelini "rain-bride". The children eat, all together, a meal bought with the proceeds of the collection. In some regions (Samsun, Sinop) this ceremony is called Gőde-göde ("frog-frog"); money is collected by children taking from door to door a bucket of water with a frog in it. The common feature of these "children's collections" is that the doll or the children themselves are sprinkled with water by the housewives as they pass in procession in front of the houses.

Some less common ceremonies, such as the immersion in water of a horse's skull, on which prayer is recited, are also found. The common feature of these ceremonies is that they are, especially for Anatolian Turkish practices, an act performed together in the performance of the act. — The Rafidî Shi'î Hisâbân b. al-Hakam enumerates five of these: health and integrity (physical); favourable circumstances; the desired time; instruments; motive (sabab). The act is produced, and it cannot be not produced, when all these elements are present (cf. al-Ash'ârî, Makâlâtı, ed. 'Abd al-Hamil, Cairo n.d., i, 110-2; and W. Montgomery Watt, Free Will and Predestination, London 1948, 116-7). With these tendencies may be linked the opinion of al-Nâjîdîr, already very close to the Ash'ârî line: "the capacity" does not last, it does not exist before the act, it is created by God for the act and at the instant of the act whose accomplishment it governs.

The use of stones which after a magico-religious ceremony acquire the power to induce rainfall is the most widespread method of all, and is probably the Anatolian form taken by the very old Turco-Mongol practice of inducing rain by the "yada-stone". For the data on this subject found in Chinese and Arabic sources, see the communication by Kopruliizade M. Fu'dîn, ed. Nyberg and trans. Nader, Beirut 1954, 62-72. — But for Dirâr, the capacity which precedes the act continues to exist during its performance.

3) The group known as Muğîbîn, to whom al-Ash'ârî, regarding them to some extent as his precursors, was to give the name Ahî al-ištâhâr, defined ištâhâr as the whole body of elements which join together in the performance of the act. — The Rafidî Shi'î Hisâbân b. al-Hakam enumerates five of these: health and integrity (physical); favourable circumstances; the desired time; instruments; motive (sabab). The act is produced, and it cannot be not produced, when all these elements are present (cf. al-Ash'ârî, Makâlât, ed. 'Abd al-Hamil, Cairo n.d., i, 110-2; and W. Montgomery Watt, Free Will and Predestination, London 1948, 116-7). With these tendencies may be linked the opinion of al-Nâjîdîr, already very close to the Ash'ârî line: "the capacity" does not last, it does not exist before the act, it is created by God for the act and at the instant of the act whose accomplishment it governs.

4) Al-Ash'ârî deals with ištâhâr from his own point of view in the Ibâna (ed. Cairo n.d., 53-5), and devotes to it a chapter of the Luma (ed. and English trans. R. McCarthy, Beirut 1953, 54-9, 76-9). The "capacity" is created directly by God "with the act and for the act". It does not pre-exist it, a point of difference from the Mu'azzini thesis. A man who does not have the requisite physical integrity is stroke with powerlessness (istadâ); he would certainly be incapable
of performing the act, but that is not the true conception of istitā'a. If, on the contrary, the power (kudra) to act fails him, and whatever his physical integrity may be, the power to act fails the man, it is because God has not created in him the corresponding "capacity"; in this way He has not attributed to him the kasb or istisāb which permits the subject to "acquire" the act, and which is the source of moral qualification. It is in this sense that one can say that God is "the creator of human acts", of any act whatever, whether good or bad. Must it thereby be concluded that man is "constrained"? On this point copious Ashārī discussions are to be found on the "acquisition" of acts. Al-Bākīllānī for example, who treats at length of istiṣā'ā in his Tamkhdīd (ed. McCarthy Beirut 1957, 286-95), is at great pains to distinguish it from "constraint" (istikdār q.v.), the trembling of the hand of the paralytic man is "constrained"; on the contrary, thanks to istiṣā'ā created by God, man chooses and likes the act which he elicits. One could not therefore call him "constrained"!, mudarr (ibid., 393). In his Irshād, al-Djuwaynī does no more than mention istiṣā'ā (ed. and French trans. Luciani, Paris 1938, 122/196, 125/201) as a quasi-synonym for the "power" which guarantees the kasb. And this power seems indeed to be in accord with the integrity of the means and instruments. The fact remains that, like every accident, it is dictated by God and that, like every accident, it does not "last". Therefore, it does not precede the act, as the Mu'tazīls would have it, but is concomitant with it (ibid., 125/201). Throughout the Ashārī treatises there are repeated affirmations, similar in their basis but with nuances peculiar to each author. Al-Djurđanī condenses these in his Ta'rīfāt (18-19), defining "capacity" as "the accident created by God in animate beings who, thanks to it, perform acts of free choice". He specifies that "real" capacity (hakikīya) is the perfection of the "power" which obligatorily determines the beginning of the act and is concomitant with it. To put it briefly, let us say that the notion of istiṣā'ā is at the very root of the Ashārī notion of kasb, the relationship or linking together of the effect produced and the agent.

6) We find a fairly closely related distinction in Ibn Hazm, but with different presuppositions: a) health and physical integrity, prior to the act; b) an accident directly and instantaneously created by God for the fulfilment of the act; it is, and is no more than, concomitant with this last. This second sense, says Ibn Hazm, is "the perfection of capacity". From this it ensues that the unbeliever has "the capacity to believe" according to the first meaning; but no longer so according to the second (Kitāb al-Fiqāl fi 'l-miśl, ed. Cairo 1347, iii, 21-6, 31).—It may be added that similar theses were maintained by some jurists or theologians whose line of thought was far removed from Zāhirism, for example the Hānafī al-Taḥāwī and the Imām al-Kulaynī. Moreover, a comparison may be made with the thinking of Ibn Taymiyya. It is true that he no longer referred to istiṣā'ā, but spoke rather of a kudra preceding the act, which conditions it without necessitating it, and of a kudra concomitant with the act and rendering it necessary (cf. R. Brunschvig, art. cit., 41).—Doubtless it is to the "antecedent" istiṣā'ā, accepted by al-Māturīdī and Ibn Hazm, that al-Djurđanī refers (Ta'rīfāt, 19) when he adds to the Ashārī definitions quoted above that the capacity is "healthy" if impediments such as sickness and other similar things disappear.

A multiplicity of further references could be given. These would emphasise that the notion of istiṣā'ā as a technical term varies with the different schools, and sometimes with the writers; and that it is always closely dependent upon theses founded on the intrinsic reality or non-reality of human freedom of choice.

Bibliography: In the article. (L. GARDET)

ISTIITHNĀ' (A.), inf. of the verb istathnd to "except"; a technical term in Arabic grammar signifying "exception". This assumes, first of all, a complete sentence; then (when the proposition has been stated) one or more beings are excepted from the functions exercised in the sentence. In English, except is used, e.g.: Everyone came except Zayed. Arabic uses means of expression of various origins (Sibawayhi, i, ch. 185): al-ghayra (a noun signifying "differently" created by God and that, if, like every accident, it does not "last"); see Fleischer, Kleine Schriften, 495); very much more rarely, as a substitute for illā: lā yahūmu, laya, followed by the accusative.

Al-ghayra, al-sūd, al-bāghā, as nouns, are the first term of an annexation and the second goes into the genitive; the English sentence above is rendered: al-ghayra l'kašmu alghayra, or al-sūd or al-bāghā, Zayd*; al-Farrā' and al-Mubarrad also accept the accusative after al-bāghā (see the account of Ibn Ya'qūb, 269, lines 2-9).

Illā, al-ghayra, 'adā, are followed by the accusative: al-ghayra l'kašmu illā, or al-bāghā or 'adā, Zayd*; Ibn Mālik (Alfiyya, verse 320) also accepts the genitive after al-ghayra and 'adā, as did al-Akhfash al-Awsat (for al-ghayra, see also al-Zamakhshari, Mufassal, 31, line 7 and Ibn Ya'qūb, 261, lines 16-20).

Illā is regarded as being added to a complete affirmative sentence; if this sentence is negative (or interrogative with a negative sense) the accusative can be used, or, preferably, the case of the preceding general term (Ibn Mālik, Alfiyya, verses 316-7 and Ibn 'Aqīl, i, 507): mā al-ghayra l'kašmu illā Zayd** (or Zayd***) (see Wright, ii, 336). If the thing excepted is different in kind from that from which it is excepted, the Hiḍjāz uses only the accusative after illā, and the Tamīm the accusative or the case of the preceding general term; thus, following the pattern sentence: mā al-ghayra l'kašmu illā 'alām*** (Hiḍjāz), illā 'alām*** (Tamīm) "the people did not come, only a donkey" (Ibn Ya'qūb, 264, lines 8-17). Nōdēke (Zur Grammatik, § 37) gives still further variations in the construction of illā.

In our opinion, if one wishes to account for the different constructions of illā, one should start with al-ghayra. This was a noun and the important word in the construction: al-ghayra Zayd*, literally: "with the difference of Zayd" (al-ghayra, in the acc., as indicating the state (the kāl) of the subject, or if one wishes, as complement of manner). Illā was a simple particle; by analogy, in view of the similarity of sense, the
construction of ghayra in the accusative was transferred to the noun following it. Thus it is a simple analogical construction. The non-observance of this analogy leaves scope for variations in construction, e.g., ma'dā'ā 'l-ba'amu illsa-Zayd'ī (analogical construction), illsa-Zayd'ī (construction merely ad sensum).

Remarks: a) The Arab grammarians (cf. Sibawayhi, i, 314, line 17; Ibn Ya'qūb, 260, line 17) see in illsa the substantive of the suffix illsa; but ghayra is frequently used, and illsa is not uncommon in the texts; khād, zadā, and particularly illsa are found less often. Detailed investigations by numerical analysis must have occurred in the Arab tribes.

b) Fleischer (Kleinesche Schriften, 734) sees in ghayr "difference" an ancient infinitive of a 1st form verb ghāra (i), now disappeared, which served as the basis of ghāyara "to change". Reckendorf (Die syntaktischen Verhältnisse, 146, Anm. 1) finds the etymology of ghayr obscure. Comparative Semitics gives no satisfactory explanation, so Fleischer may perhaps be right.—For the etymology of illsa, see Fleischer, loc. cit., 735, lines 131.

c) Annexation accounts for the construction of ghayr, illsa, zadā, and particularly illsa are found less often. Detailed investigations by numerical analysis must have occurred in the Arab tribes. For the Basrans, illsa and illsa were merely zarf; for the Kufans, they were illsa and zarf (Ibn al-Anbari, Kidāb al-Inšāf, ed. G. Weil, Discussion 39). In zadā the Kufans saw a verb (ibid., Discussion 37).

Discussion (37).—From the references in the text: W. Wright, Arabic Grammar, ii, 335-43; M. Gaudenz-Demombynes and R. Blachère, Gr. Ar. Classique, §§ 386-7; J.-B. Belot, Gr. Ar., a résumé: 293-5; Lane, Lexicon, the articles on the words concerned; Reckendorf, Arabische Syntax, § 252. Arab authors: Sibawayhi, i, ch. 185-202 (ed. particularly: ch. 185-7, 193, 199, 201-2; Zamakhshari, Muṣafar, 2nd ed. Broch, §§ 88-96, particularly: §§ 88-90; Sīwāl the Kufans saw a verb (ibid., Discussion 37). For the Basrans, illsa and illsa were merely zarf; for the Kufans, they were illsa and zarf (Ibn al-Anbari, Kidāb al-Inšāf, ed. G. Weil, Discussion 39). In zadā the Kufans saw a verb (ibid., Discussion 37).

Encyclopaedia of Islam, IV

The division of the globe into two hemispheres is not the only function of the equator. It also marks the limit of inhabited lands in their furthest longitudinal extent, from East to West, from the extremities of China to the Fortunate or Eternal Islands (al-Dirāt al-khālidāt [q.v.]). Mid-way, according to a conception inherited from India, an island is situated, at the same distance from the North and the South as from the East and the West: this is the dome of the earth (Ari, Usayn, Udīdāy [q.v.]).

Finally, the equator plays an essential part in the division of climates (ākālim, sing. iklim [q.v.]), and, through these, in the distinction between inhabited and uninhabited lands, this time in the North-South direction. Just as in the North, towards Thule, at a latitude of about 60°, life ceases to be possible on account of the intense cold, so in the South, at a latitude generally estimated at approximately 40°, life disappears on account of the excessive heat. On the whole from North to South, life extends merely over a latitude of approximately 80 degrees. Although certain authors attribute to the southern hemisphere seven climates corresponding to those of the northern hemisphere, it remains true that a parallel situation does not hold good in respect of life, which is thus limited to only one quarter of the globe—from 0 to 180 degrees from East to West and from +60 to —60 degrees in the South-North direction. In general, if, in the architecture of the world, it was perceived to be a line of equilibrium, in the description of inhabited lands the equator was always regarded more or less as a limit, with the risks which its crossing imply: reflecting this state of mind and this latent mistrust, the Arab geographical texts, even when describing the countries of the South, have nothing to say on the theme of "crossing the line", so dear to modern explorers.

ISTONI (ISTOJNI) BELGRAD (also Ust-elen, Usten Belgrad)—cf. Serbian: Stožni Belgrad; German: Stuhlweissenburg; Latin: Alba Regia; Hun-
ISTOLNI (ISTRONI) BELGHRAD — ITALIYA

The fortress was difficult to attack. It fell nonetheless to the Ottoman Turks in 950/1543.

The particulars furnished by Arab geographers and travellers in regard to Italy, both the peninsula and the islands, are not all equally complete and trustworthy. It need hardly be emphasised that, in their writings, Sicily (as will be made clear in the article Şİ Kitt,u,VA) was given a place of particular importance, in view of the fact that, for almost two and a half centuries, the island formed part of the Där al-İlām [i.e., among the remarkable output of Arab geographical writings, one work outstanding for the wealth and detail of the information it contains is the Nusihat al-muḳlakāţ, four sections of which are devoted to Italy—three to its mainland territory (3rd section of the 1Vth climate, 2nd and 3rd sections of the Vth) and one to its island territory (2nd section of the 1Vth climate).

Although it should sometimes be treated with reserve, the information furnished by al-İdresī is only rarely the fruit of pure imagination: a typical and perhaps unique example is the fanciful, legendary description of the city of Rome—three to its mainland territory (3rd section of the 1Vth climate, 2nd and 3rd sections of the Vth) and one to its island territory (2nd section of the 1Vth climate).

The fullest, but also the least trustworthy, descriptions of the city of Rome—transcribed as Ruma, Rumiya (which sometimes denotes Calabria alone), one finds the term (strangely transsliterated as al-Ankaburda) extends from Provence to Calabria.

Although it should sometimes be treated with reserve, the information furnished by al-İdresī is only rarely the fruit of pure imagination: a typical and perhaps unique example is the fanciful, legendary description of the city of Rome—three to its mainland territory (3rd section of the 1Vth climate, 2nd and 3rd sections of the Vth) and one to its island territory (2nd section of the 1Vth climate).

Lastly Sawdán, also a Berber, who came to power in 243/857 and, more fortunate than his predecessor, after various mishaps (described by al-Baladhuri who was himself a contemporary), succeeded in securing from Bagdad an official investiture with his fiefl, the end of which came about in Rabî‘ 1 257/February 871.

Another city in Apulia, Taranto, was the scene of Muslim occupation for more than thirty years (approximately 231/846-266/880), but in Ibn al-Athir we find only a brief allusion, repeated by Ibn Khaldûn with some omissions (ibid., 470). The Arab chroniclers give no information about the numerous Saracen exploits in southern Italy, and particularly those which took place in the Garigliano valley, where a fortress, built in 269/883, enabled activities on a formidable scale to be maintained until 302/915; it may be supposed that the Saracen adventurers, operating in this sector as elsewhere, were encouraged by the news of the landing in Calabria in Shawwâl 289/September 902, under the Aghlabid amir Ibrâhîm II b. Abd (261/875-289/902); whereas the renewal of Muslim expansionist activity in southern Italy may be found, particularly in Ibn al-Athîr (in BAS, 242), al-Nuwayrî (ibid., 453), Lîsân al-Dîn b. al-Khâshîb (3rd chapter of Al-mâl al-dîlîm, ed. al-‘Abbâdî and al-Kâttânî, under the title al-Maghrib al-ihrîb fi l-lâr al-musîr); Casablanca 1964, 120). Ibn Khaldûn (BAS, 475-6) and some other sources of less importance.

From the beginning of 298/end of 910 and until 336/948 the Fâtimids, who had at first come up against a legitimist body of opinion, supported principally by the pro-Aghlabîd Ibn Kûrub, succeeded the Aghlabîds in Sicily; for this period the Arab historical sources give prominence not only to the Saracens’ constant offensives in Calabria and Apulia but also to the campaign led by Şâbir, a dîlîm of al-Mahdi’s court, who in 316/928 attacked the Lombard principalities on the Tyrrhenian coast and occupied several fortified places whose identity is not easy to establish on account of uncertain toponymy of the Arab texts (BAS, 170, 368). The Fâtimid imâm al-Kâsim (322/934-334/946) planned the daring invasion of the Ligurian coast, under the leadership of Ya’kûb b. Iâshîh who, in 322/934, made an attack on Genoa, which he conquered in the following year (BAS, 170, 254, 368, 437, 459, 478; Ibn Taghribîrî, ii, 267; in the Al-mâl al-dîlîm (53) we read that the expedition was entrusted to Djawhar [q.v.], the famous freedman of the Fâtimid imâm al-Mu’tazz).

From the middle of the 4th/10th century until the middle of the following century, Sicily was governed by amirs of the dynasty of the Kalbids [q.v.], and no acts of war of any particular importance took place, apart from the usual raids, noted by certain Arab chroniclers, in southern Italy and especially in Apulia and Calabria [see KILLAWRIYA]; for the invasion of Sardinia by Muğalîbî b. ‘Abbâd Allâh in 405/1015 see SARDANIA.

After the conquest of Sicily by the Normans, which began in 453/1061 and ended with the surrender of Palermo in 464/1072, the interest felt in a territory now finally lost to Islam diminished considerably, and the Arab historians restricted their references to Italy to the limited sphere of the relations of that country with the rulers of the Mashrîq and the Maghrib.

ITALIA (ita, apparently a doublet of atâ) literally "gift", a general term met with, especially in pre- and proto-Islamic times, meaning a vague tribute or lump payment madâ', for example, to or by a tribe or other group; later the words des-ignate, sometimes in a denigrating way, a tip or bribe.

Bibliography: F. Lokkegaard, Islamic Taxonomy, index, s.v. (Cl. Cahen)

ITALIA (ita, a district in the south-west of Uttar Pradesh, India, lying between 26° 21' and 27° 2' N., 78° 45' and 79° 1' E.; and also the principal town of the old Dihâl sultanate left the district little disturbed thereafter. In the division of the lower Dôrâb territories between the first Lodî sultan, Bahûl, and Mahâmûd Shâhîrârî in 855/1451, Iâfwa passed to the Dijawnpur. A series of inconclusive disputes followed between Bahûl and the three successive Dijawnpur sultans Mahâmûd, Muhammad and Husayn, the last of whom seems to have made Iâfwa his temporary headquarters ("Bîbî Rââdî") the queen mother died here in 859/1456), and in 893/1487 Huzyayn's attack on Bahûl was repulsed and Iâfwa taken for the Lodî kingdom. It remained in Lodî hands until 1458 when, on Bâbur's invasion of the district, it was surrended to him. After the defeat of Humâyûn in 952/1545 the region passed to Shâh Shâh, who effected the partial pacification of the district by bringing in a force of 12,000 horsemen and by his efforts in opening up the country through a road-building programme. Neither he nor Akbar seems to have found its absorption into the state administration easy, although it retained some prestige when Akbar made the town of Iâfwa the chief town of a pargana; the town is mentioned in the A'in-i Akbari as possessing a brick fort, and some reference is occasionally made to Iâfwa as a banking centre. It seems never to have been settled by Muslims to the same extent as other towns of the Dôrâb, and after the decline of the Muqâil power fell into Marâha or Dôrâb hands, with Awadh sometimes powerful enough to gain control over it. Even after the district became part of the lands ceded by Awadh to the East India Company in 1810, many local chiefs retained a considerable measure of independence; the town had some prominence in the struggles of 1857.

Iâfwa town has an interesting Diwârî masdûd, built out of Hindu temple spoil, the western îwân of which has a massive central propylon-type arch similar to those of the Dijawnpur [i.e.] mosques; it has not been adequately studied, the only account
being C. Horne, Notes on the Jumma Masjid of Etwah, in *JASB*, xxxvi/i (1867), 74-5. The central square of Itawa is called "Humeani", the name commemorating A. O. Hume, the Scots collector of the district who played a prominent part in the foundation of the Indian Congress Party.

**ITBA** [see MUVADJA]

**ITTHABAT**, verbal noun of the fourth form of the root th-b-t, has the general meaning of to witness, to show, to point to, to demonstrate, to prove, to establish, to verify and to establish the truth, to establish (the existence of something).

For the Sufi, *ithbāt* is the opposite of *mahbūt*. This latter word means literally to efface. In the mystical vocabulary, it denotes the effacement of the "qualities of habit" (awādīʿ al-dāda) while *ithbāt* is the fact of performing one's religious obligations. It comprises three ways: to efface the degradation of appearances (dhillat al-zawdhir), to efface the negligences of the conscience, to efface all the deficiencies of the heart (according to al-Tahānawi, 1356, who quotes the commentary of 'Abd al-Lātiʿ on the *Maḥnawī*).

Other definitions are given: *mahbūt* consists of getting rid of the attributes of the carnal soul and *ithbāt* is this strengthening of the attributes of the heart so that he who casts away the bad and replaces them by the good is called *ṣāḥib mahbūt wa-*ithbāt. A further definition is given: *mahbūt* consists in putting aside the "vestiges" (ruṣūm) of actions by looking with an annihilating look at the carnal soul and all its emanations. On the other hand, *mithbāt* consists in maintaining the vestiges but in affirming that it is God who is their source; the Sufi is thus established in his faith, not in himself.

The origin of these two words is Qur'anic: "God effaces (yamīk) and confirms (yuṭḥbi) what He will" (XIII, 39); i.e., according to the Sufi commentary, God effaces from the hearts of the initiated all inattentiveness towards Him and all its mention of deities other than Himself, and He confirms on the lips of the beginners the mention of God. Above *mahbūt*, there is *maḥbūt*: while the first leaves a trace, the second leaves none.

**Bibliography:** Tahānawi, *Kashshaf*, 172 and 1356.

**ITHNA 'ASHARIYYA**, the name of that branch of *Shiʿi* Islam [see *Shiʿa*] that believes in twelve *Imāms* (*ṣīḥa* 'ashar meaning "twelve" in Arabic) beginning with 'Ali and ending with ʿUthmān al-Mahdi.

Within the whole body of Shiʿism the Ithna 'Ashari school is both the most numerous in terms of adherents and theologically the most balanced between the exoteric and esoteric elements of Islam. Other branches like the five-imāmī school of the Zaydis [q.v.] and the seven-imāmī school, known as Ismāʿīliyya [q.v.], are also of significance and continue to have adherents, while those believing in other numbers of *Imāms* or different interpretations of their functions have also existed during Islamic history but have been extremely small in number and have died out within a short period of their birth.

The religious history of Ithna 'ashari Shiʿism can be divided into four periods:

1. The period of the twelve *Imāms*: This period begins from the time of 'Ali to the major occultation [see *GHAYBA*] of the twelfth *Imām* in 329/940. The twelve *Imāms* are as follows:
   1. ʿAll b. ʿAbī Taḥlib (d. 40/660)
   2. al-Ḥasan b. ʿAll (d. 40/660)
   3. al-Ḥusayn b. ʿAll (d. 61/680)
   4. ʿAll b. al-Ḥusayn (Zayn al-ʿAbidin) (d. 95/714)
   5. Muḥammad al-Bākir (d. 115/733)
   6. Djiʿfar al-Ṣādiq (d. 148/765)
   7. Mūsā al-Kāẓim (d. 183/799)
   8. ʿAll al-Riḍā (d. 203/818)
   9. Muḥammad Djiʿwād al-TaḵĪ (d. 220/835)
   10. ʿAll al-Naṣrī (d. 254/868)
   11. al-Ḥasan al-ʿAskarī (d. 260/874)

This period was unique in that it was one in which the *Imāms* lived among their followers and instructed them directly. They left behind not only a large number of disciples but sayings which were collected by their followers and became the basis of later Shiʿi intellectual life. In Shiʿism the *ḥadīth* literature includes the sayings of the *Imāms* in addition to those of the Prophet. Moreover, two major works survive which are ascribed to the *Imāms* themselves, the *Nahdi al-balāgha* to 'Ali and the *Ṣaḥīfa sadīqīyya* to Zayn al-ʿAbidin. The *Nahdi al-balāgha*, compiled from the sermons and orations of 'Ali by Sayyid ʿSharif al-Radī, remains to this day the most venerated book among the Shiʿis after the Kūrān and prophetic *ḥadīth*, while the *Ṣaḥīfa* contains prayers of such beauty that it has been called the "Psalm of the Household of the Prophet" (*Zābār-i al-ʿāl Muḥammad*).

Some of the followers of the *Imāms* like Hījah b. al-Ḥakam [q.v.], the disciple of the sixth *Imām*, and Abū Djiʿfar al-ʿUmārī, friend of the eleventh *Imām*, themselves became famous Shiʿī authorities, while the instruction of the *Imāms* reached even the Sunni segment of the Islamic community especially with *Imām* Djiʿfar, who had many Sunni students. This period terminated with the minor occultation (al-*ghayba al-sughrā*) and the major occultation (al-*ghayba al-kubrā*) of the Mahdi. During the minor occultation the Mahdi spoke to his community through his deputies or "gates" (bāb [q.v.]). The major occultation began when the last "gate" through whom the Mahdi spoke to the community, ʿAll al-Sāmarrī, died.

2. The period extending from the beginning of the major occultation to the Mongol invasion and Khalidīyya *Naṣr al-Dīn al-Ṭāīfī*: This was the period of the compilation of the major collections of Shiʿī *ḥadīth* and the formulation of Shiʿī law. This elaboration of Shiʿism began with Muḥammad ibn Yaʿqūb al-Kulaynī (d. 329/940), author of the monumental *Ṣaḥīfa saḥīfa* compiled to Zayn al-ʿNahdi al-balāgha, to be followed by such figures as Ibn Bābīyūn, also called Shaykh al-Ṣaḥīfī (d. 381/991), Shaykh al-Mufīd (d. 413/1022) and Shaykh al-Ṭāīfī, Muḥammad b. al-Ḥasan al-Ṭāfī (d. 460/1067) with whom the principal doctrinal works of Shiʿī theology and religious sciences became established. This was also the period of other renowned Shiʿī scholars such as Sayyid ʿSharif al-Radī (d. 406/1015), who assembled the sayings of 'Ali, his brother Sayyid Muḥtaḏ al-Ḥamūd (d. 430/1044), Fadī al-Ṭabarī (d. 548/1153 or 554/1159), known for his monumental *kūrānic* commentaries, and finally Naṣr al-Dīn (d. 632/1237), whose *Tadżrid* marks the beginning of systematic Shiʿī theology.

3. The period between *Naṣr al-Dīn* and the *Ṣaḥīfīī* revival. During this rich period Shiʿī theology continued to develop in the hands of such men as Naṣr al-Dīn’s student Allāma Ḥillī (d. 726/1326) while a convergence took place between the Šīʿīsm of Ibn ʿArabi and Shiʿī theology and theosophy producing
such men as Radja b. BursI (d. around 774/1372), §a>in al-Dm b. Turka (d. 830/1427), Ibn Abi Diumhur al-Amulî (d. after 787/1385), author of the monumental Dīāms al-asrār. This period marks also the beginning of that wedding between Avicennan philosophy, the Illuminationist theosophy of Suhrawardî [see Râgha], the Şifîs of Ibn ʿArabî and Şifî theology which gave birth to the great treatises of the philosophical and gnostic figures of the Safavid period.

4.) From the Safavid period to the present. During this period Iran itself witnessed a remarkable revival of intellectual activity especially in the religious and philosophical sciences, while Şifîsm was spreading in the sub-continent and the influence of the Safavid thinkers of the “School of Işfaḥān” was felt ever more deeply among the Indian Muslims and even among some Hindus. This period began with such figures as Mtr Dâmâd (d. 1041/1631) and Mullâ Şadra (d. 1050/ 1640), masters of metaphysics with whom Islamic philosophy reached a new peak, Bahâʾ al-Din al-ʿAmîh, at once a Şifî theologian and a mathematician, and Mullâ Muḥsin Fayḍ Kâşânı and ʿAbd al-Razzâk Lâhzî, foremost among later theologians of Şifîsm. It also produced the two Mağlîlis, the second, Muḥammad Bâşir, being the author of the most voluminous compendium of the Shiʿî sciences, the Bihâr al-anwâr.

During the Kâḏârî period while the usûl and akhâbâr debates—between those who believed in the exercise of reason within the confines of religious scripture and those who relied solely on the Kurʾân and bâdîlah—continued, major contributions were made to the science of the principles of jurisprudence (usûl al-fâh), which in fact reached its perfection in the hands of Wahdî Bibbîhâni (d. 1205/1790-1) and Shaykh Murtâda Anşâri (d. 1281/1864/5). During this period Şifîsm was also witness to the establishment of the Shaykhî movement by Shaykh Ahmad Absârî, which continues to this day, and by the Bâbî movement, which prepared the ground for the Bahâʾî (q.v.) movement.

Religious Practices: Ithnâ ʿashârî religious practice does not differ in any essential way from that of the Sunnis. The fasting and the pilgrimage are the same while in the daily prayers two phrases are added to the call to prayer. There are also minor differences in other parts of the canonical prayers (salâh) but not much more than those between the different Sunni rites. The Şihîs, however, place a great deal of emphasis upon the pilgrimage to the tombs of the Imâms and saints (see İMÂMÎDÂ) so that Nâdja, Kârba, Mahâd, Kûm and other sanctuaries have gained a remarkable prominence in religious life. As for other questions of the Şarîa, the Şıfa differ from the Sunnis in demanding the “one fifth” tax, called khums, in addition to zakât, and in permitting temporary marriage or muṣaʿa (q.v.). They also condone hiding one’s faith (laḥiyâ) (q.v.) when its manifestation would endanger one’s person.

As far as the sources are concerned they are nearly the same as the Sunni, namely, Kurʾân, hadîth, tâjîmâ and biyâs, except that tâjîmâ is connected with the view of the Imâm and more freedom is given to biyâs than in Sunni Islam. In Şifîsm the gate of tâjîh and biyâs is open and in the absence of the Mahdî every Şifî must follow a living muṣtâjîh who in every generation re-interprets the Şarîa in the light of its immutable principles and the situation in which the community finds itself [see MARGA-i-TAクリーム]. The muṣtâjîh thus perform as representa-

tives of the İmâm a task which in reality belongs to the İmâm himself.

 Doctrine: The “principles of religion” (ṣāl al-arîn) as taught in Şifîsm include unity (laḥîhā), justice (ṣâdiq), prophecy (nubuwwa), immortality and resurrection (maʿâd). Unity, prophecy and resurrection are common to Şifîsm and Sunnism. Şifîsm considers the quality of justice as an intrinsic aspect of the divinity rather than an extrinsic one and its perspect isive is based more on intelligence than on will. As for the imamate, it is the cardinal doctrine which separates Şifîsm from Sunnism. According to Şifîsm revelation has an exoteric (zâhir) and an esoteric (bâsin) aspect, both possessed in their fulness by the Prophet, who is at once nabi and wali, the nubuwwa being connected with his exoteric function of bringing a divine law and the waliyya with his esoteric function of revealing the inner meaning of religion.

With the death of the Prophet the “cycle of prophecy” (dâʾîrāt al-nubuwwa) came to an end but the “cycle of initiation” (dâʾîrāt al-waliyya) continues in the person of the İmâm. The word İmâm itself means etymologically he who stands before, therefore, he is a guide and leader. In its specifically Şifî meaning it signifies he who possesses the function of waliyya. According to Şifîsm the İmâm has three functions: to rule over the Islamic community, to explain the religious sciences and the law, and to be a spiritual guide to lead men to an understanding of the inner meaning of things. Because of this triple function he cannot possibly be elected. A spiritual guide can receive his authority only from on high. Therefore, each İmâm is appointed through the designation (nâṣîh) of the previous İmâm by Divine command. Moreover, the İmâm must be inerrant (maṣlîsîm) in order to guarantee the survival and purity of the religious tradition. Seen in this light his function is clearly one that is concerned at once with the daily word of men as well as the spiritual and unmanifested world (ʿâlam al-ghayb). His function is at once human and cosmic.

This view of the İmâm can be seen clearly in the Şifî concept of the hidden İmâm, the Mahdî. He is alive yet not seen by the majority of men. He is like the axis mundi around whom the spheres of existence rotate and he is the guarantee of the preservation and continuation of the Şarîa. Finally he is the supreme spiritual guide (ṣub [q.v.]), literally “pole” and in Şifî Şûf orders the master is inwardly connected to the Mahdî as the supreme pole. Yet, the Mahdî remains hidden from the external eye and will appear to the outside world only in an eschatological event through which the inward will once again dominate over the outward and the outward is prepared for its absorption in the inward. The Hidden İmâm is for the Şifîs the continuation of the personality and baraka of the Prophet and the means whereby the Kurʾân is preserved and its true meaning based upon unity (laḥîhâ) revealed to men. Without the İmâm men would cease to understand the inner levels of meaning of the revelation. Also without him all temporal rule is marked by imperfection and only his reappearance can establish that ideal state based on divine justice which Islam envisages in its teachings.

ITYIBAR KHAN, a Khwâja-sarâ'î (eunuch) who ultimately rose to the high office of a provincial governor under the emperor Dâjângrî (q.v.). Originally in the service of a grandee of Akbar's court, on his death he joined the service of the Great Mogul who appointed him nâzîr (comptroller) of the household of Prince Salâm (later Dâjângrî) on his birth in 977/1569. He served the prince well and soon after his accession to the throne Salâm rewarded him by assigning to him the district of Gwâliyr as his âkîda. In 1031/1622 he was promoted to a high office, appointed as comptroller of the house of the Great Mogul, in recognition of his distinguished services, and the fort and the imperial treasury were placed in his charge. Having faithfully served Dâjângrî, who pays him a generous tribute (cf. Tuzuk, Eng. tr. ii, 285), for a long period of 56 years he died, over 80 years of age, in 1124/1712. His biography is in Ms. i. 351, 372, ii, 94, 231, 257-8; Shahnawâz Khan, Maf'ûthîr al-Imârat, Bib. Ind. i, 133-4; A'ín-i Akbarî, Eng. tr. by Blochmann, 433; Shaykh Farid Bhakhari, Dakhbîr-r al-Khânînîn, still in Ms. ii. (A. S. BAZMEE ANSARI)

I'TIKÂD, the act of adhering firmly to something, hence a firmly established act of faith. In its technical sense, the term denotes firm adherence to the Word of God. It may be translated in European languages by the words "croyance", "belief", "Glauben", with the proviso that this "belief" is not a simple "opinion" or "thinking" (pensée), but is the result of a deep conviction. As the root *â-k-d* indicates, the idea of a "knot", a bond established by contract, persists. The VIIIth verbal form carries with this a greater measure of firmness and coherence. I'tikâd recurs many times in chapters or works which treat of faith (see IMÂN, §1). It may be compared with and distinguished from two other technical words, Tasdîk and *'akida.

At first glance, as D. B. Macdonald has pointed out (EP, s.v. I'tikâd), I'tikâd seems to be synonymous with Tasdîk; both terms denote inner adherence to the fundamentals of faith. It must however be said that I'tikâd is the act of judging and I'tikâd the act of adhering. Tasdîk is then seen as an inner judgment of veridicity which affirms the reality and authenticity of the divine Word, a judgment which cannot fail to resolve itself in adherence. Let us say there could be no authentic I'tikâd without I'tikâd. It will then be understood that these two terms, each with the connotations belonging to itself, are sometimes interchangeable in definitions of Imân, in particular those of the Aṣâfersî school, which make inner adherence the "pillar" of faith. The majority of authors however prefer to explain faith by means of I'tikâd. Al-Djurqâni states specifically (Ta'rifât, ed. Flügel, Leipzig 1845, 41) that faith, Tasdîk of the heart from the lexicographical point of view, becomes the point of view of the Religious Law (şarî) I'tikâd of the heart.

In the Ḥaḍâ', to define faith, al-Ghâzâlî makes use of the term *'âd in the sense of adherence, and in his I'tikâd he uses the term Tasdîk. But in the actual title of the latter work, I'tikâd becomes religious belief in *gâb*, and therefore signifies not only the inner act which adheres but also the content of the faith. This meaning is common, both in Şî'î literature and also in Sunnism.

In this connection, I'tikâd is associated with another word from the same root, Ḥaḍâq (q.v.), pl. *'âd, articles of faith. Credos will be called Ḥaḍâq or *'âd. But the kur'ânic prescriptions which directly involve faith will alone be defined, in the ordinary way, as pertaining to I'tikâd (cf. al-Nasâfî, *Abâ'îd, ed. Cairo 1321, 7). According to the comments of D. B. Macdonald (art. cit.), they will be called "fundamental" (faṣliyya) or again Ḥaḍâ'dîyya; and distinguished from "derived" prescriptions concerning the action (āmâliyya), for example in the later manuals of al-Sanûsî of Tlemcen, al-Badârî, etc. Hence it will follow that the singular noun I'tikâd and the plural I'tikâdî will be used in the sense of Ḥaḍâq and *'âd. Finally, in some cases, I'tikâdî may have the meaning of "convictions rationally acquired". It is used in this way in the work of the Jewish theologian Sa'dâyî Gaon, Kûdâ al-A'mânî wâl-I'tikâdî.

It remains to state that the inner act denoted by I'tikâd connotes above all the idea of firmness in adherence. If some doubt should be felt, this would not be on account of the actual weakness of the act of adherence. It is, rather, that the motives upon which it relies are insufficiently elaborated, or are compounded with lack of knowledge not recognized as such. When on the other hand they are based on science or certain knowledge (i'nîm), they lead to an I'tikâd which can assume the quality of unassailable certainty (šahâbât). Here, on the other hand, the motive of inner adherence, we once more find an equivalent to the problem of the degrees of faith—faith of pure tradition, faith based upon science, faith of certainty (see IMÂN, IV, 2).

I'TIKÂD KHÂN, a Kashmiri of obscure origin, whose name was Muhammad Murâd, was originally in the service of Bahâdur Shân I (reg. 1119/1707-1124/1712), enjoying a rank of 1,000 and the title of Wakâlat Khân. On the accession of the throne of the ill-starred Farrukhshîyâr (q.v.) in 1125/1713 his name was included among those listed for execution but on the intercession of the Bârâha Sayyid brothers, 'Abd Allâh Khân and Husayn 'All Khân, known as king-makers (Bâdshâh-gar), he was spared, promoted to a high office, appointed as baânîn (barbinger) of the army, and given the title of Murâd Khân. Acting as a spy on the leading nobles, he soon won the confidence of the emperor who conferred on him the rank of 7,000 men and 10,000 horse and the grandiloquent title of Rukn al-Dawla Khân Bahâdur Farrukhshâh. Later he became closely involved in the political machinations and intrigues which were going on to depose Farrukhshâyâr. He was responsible for the clash between the emperor and the Sayyid brothers which resulted first in the emperor's being blinded and later in his cold-blooded...
murder in 1131/1719. On his patron, he was disgraced and thrown into prison, his house and property confiscated and his accumulated wealth and jewels seized. Subsequently he was released, his rank restored and he was given a financial grant; but all this fell short of his expectations. He died during the reign of Emperor Muhammad Shah (reg. 1131/1719-1161/1748).

I`TIKĀF, a particularly commended pious practice consisting of a period of retreat in a mosque, the vow for which stipulates a certain number of days in accordance with the believer’s own wish. He will there practise fasting, ritual prayer and recitation of the Qur`ān; with regard to other activities, for example the instruction given in the mosque, the schools are not in agreement. There is a divergence between the functions and his ablutions. He must there practise the vow for which stipulates a certain number of days in accordance with the believer’s own wish. He will there practise fasting, ritual prayer and recitation of the Qur`ān; with regard to other activities, for example the instruction given in the mosque, the schools are not in agreement. There is a divergence between the functions and his ablutions. He must there practise

The books of fiqh and sociological reality in that retreat is very seldom practised. I`tikāf can be undertaken at any time, but in particular during the last ten days of the month of Ramadan, when the Laylat al-Kadr [see ramadān] is presumed to have taken place. According to tradition, it was at that time that Muhammad is said to have engaged in it. It is therefore dealt with in books of fiqh immediately after the ritual fast. Popular traditions have widely exploited the theme of the wonderful occurrences which characterize this mysterious Night of Destiny, but this has no connection with sītkāf; pardon for sins, the bowing down of everything found on the surface of the earth including trees and mountains, the pardon for sins, i’tikāf: the books of fiqh and sītkāf, even though only of a general nature, deal with this question. sis by Bouquet, § 36). (G. H. Bouquet)

ITIL (Etil, Idil), the river Volga, called Ītil by Kāshghārī, l, 30, line 17, and line 6 (= Brockelmann 244), Ītil by the Volga-Bulgars, Īdel by the Volga-Tatars, Rau by the Mordve, Īul by the Čeremiss and Īdel by the Čuvaş. (List of Turkish forms of the name in Ibn Fadlan, ed. Z. V. Togan, § 50 d and in D. M. Dunlop, The History of the Jewish Khazars, Princeton N.J. 1954, 91, n. 8). The largest river in Europe, the Volga is some 3,694 km. long but a descent, in all, of only some 229.5 m.: it rises at the village of Volgino Verkhovoe in the Vadday mountain range and flows into the Caspian Sea 28 m. below sea level; mouth of Astrakhān. The Ītil was called Qoqo or Pāg by the ancient Greeks (cf. Pauly-Wissowa vol. xvii, 1937, col. 1680 f.); Herodotus confused it with the Aras [see Al-Rass] while Ptolemy and Pomponius Mela took the Don and the Ītil for two branches of the same river.

The Volga-Bulgars and the Khazars [q.v.] came to its banks in the course of the Turkish tribal migrations of the 3rd and 4th centuries A.D. Their capital city Ītil or Īl [q.v.] was situated on both sides of the river, at its mouth, the site of the later Astrakhān [q.v.]. In the early Middle Ages, and to some extent up to the present day, Finnish peoples, predominately Mordve (Burtās [q.v.]), lived on the upper reaches of the river; here and there, Slav settlements reached it even then.

The Volga-Bulgars were the first to be touched by (Sunni) Islam in the form of an embassy of 310/922-23, described in detail by Ibn Fadlan. About 349/960, the Ītil is mentioned as the western frontier of the Turks who went over to Islam, at that time, as a result of intensive propaganda from the homelands of the Sāmānids (Ibn al-`Āthīr, ix, 355 ff.). The Byzantine sources, too, mention the river as the Ātīl (`Āṭīl, `Āṭā) cf. G. Moravcsik, Byzantinoturcica, Berlin 1958, ii, 78 ff.

The Muslim geographers thought of the Kama as the upper course of the Ītil and hence increased its length still further (W. Barthold, Zwölf Vorlesungen sur Geschichte Mūsālima, Berlin 1935, 112 ff.; Ibn Hawqal, ii, 387, 389; Ibn Rusta, (B.G.A. vii), 141; Masʿūdī, Tanbih, (B.G.A. viii), 62; Mappae Arabicae, ed. K. Miller, Stuttgart 1926/29, i/3, 79, ii, 153-6, v, 118, 142, 145 (Kāshghārī), vi, Map No. XVI = Pl. 46-8).

Sunni Islam was further strengthened by the advance of the Mongols in the 13th century and the establishment of the Empire of the Golden Horde (Altin Orda [ivii]), whose capital was established at the mouth of the Oka, to be overtaken by Kazan in the course of time, as the central market of the middle-river region.

With the Muslim merchants acting as intermediaries, Kazan remained the centre for trade with central Asia until the 15th century. On the lower Ītil, Astra- khān took over the role of the Khaizar capital of Ītil as the centre for trade. The gradual advance of the rulers of Moscow at the expense of the Tatars brought with it the establishment of Russian fortresses and strongholds in the Volga region. Thus, under Vasilii III (1505-33) Vasil’ipursk was built at the mouth of the Sura for protection from the Tatars.

With the fall of Kazan (1552) and Astrakhān (completed by 1557) into Russian hands, the Slav settlement expanded by force into the Volga basin with the river acting as line of advance. Many of the towns on its banks with Turkish names (Kazan*: Cauldron; Saratov = Sari-Tau: Pale Mountain; Kamyshev: reed bank; Tsaritsyn (now Volgograd); Astrakhān) became Russian towns in which Tatars or other Turks were and still are only a small minority. The Russians took over many villages deserted by the Tatars and drove the Tatars completely away from the fertile river meadows and into the sandy and forested regions far from the water. In addition, new Slav villages and towns were established:

earlier as early as 1555, Sviyazh, later Ceboksar (now the principal town
of the Cuwash lands and called in their language Shupashkar) was founded. The state ... increase in the power of the wazir at the expense of the wakil [q.v.]. Under the Kadjars, the title Imam al-dawla founded in 1586 to protect the area, as later was Tatars, or those who were still pagan, by the Finns encouraged the Slav settlement and gave land over to the Slav peoples and the displacement of the Muslim Tatars, or those who were still pagan, by the Finns and Cuwash who were, at least nominally, Christian. Samara (officially Kuybyshev since 1935) was built in 1586 to protect the area, as later was Ufa to ward off the Nagay [q.v.] particularly. Alongside other smaller settlements, Simbirsk (after 1924 U'yanovsk) was built in 1648, and Sizran' in 1683.

The Muslims of the banks of the Itil were by no means happy with these developments. As early as 1669, a Turkish force from the Crimea tried to hinder the movement and make a way through for the Turkish fleet by means of a canal between the Don and the Volga at the point where there was least distance between them, at Tasirtsyn (Ewlyâ Çelebi, vii, 841 ff.; cf. bibliography for specialist literature). But the project had to be abandoned because of the season and the alliance of the tsar with the shah. Later the Tatars, though Sunni, turned to the Shi'i shah 'Abbâs the Great (1587-1629) for aid. On the Russian side, the first Ukrainian settlements (Slobodi) were founded in the 17th century. At the same time, the Orthodox mission won over part of the Muslim population including the Kreshchane around Kazan', as well as various noble families, so that the strength of the Muslim population on the Itil declined still further. The river became a route for traffic from central Russia to the south; the boatmen (Burlaki) became famous with their songs. The unrest on the Volga in the 17th and 18th centuries was an internal Slav problem, but, in 1667-71, Sten'ka Razin sailed over the Caspian Sea with his fleet and inflicted great damage on the Persian population on its southern shore. The revolt of Emilian Pugačev in 1773-4 found a positive response among the Tatars. The enslavement of the river regions was completed in the 18th and 19th centuries. Thus the attempt of the Muslims of the area between the Volga and the Urals to build up an "Idel-Ural" state in 1917/18 came to nothing. In view of the overwhelming preponderance of the Russo-Ukrainian population in the area by this time, the project found no support among the majority of the inhabitants along the banks of the river. The Itil, as a result of all this, has no longer any special significance for Muslims.

İTILMAD AL-DAWLA, literally: "trusty support of the state", a title of Persian waiz during the Safavid period and subsequently. The title itimâd al-dawla does not occur during the reign of Isma'îl I (907-30/1501-24), and first appears towards the end of the reign of Tahmasp I, ca. 976/1568-9 (see Türkisch-İranî Nasbânameh, B. M. Ms. Add. 23,513, fol. 480a). The introduction of this title reflected the growing importance of the bureaucracy in an increasingly centralized administrative and military structure and the increasing powers of the waiz at the expense of the waizl [q.v.]. Under the Kâdîjârs, the title itimâd al-dawla
was rarely used, that of sadr-i a'zam [q.v.] being preferred. For a discussion of the function and powers of the i'timād al-dawla, see wazir.

Bibliography: V. Minorsky (ed. and trans.), Tadhkirat al-Mulk, London 1943, index, s.v. (K. M. SAVORY)

**I'TIMĀD AL-DAWLA**, title of Mīrza Ḥiyyāth al-Dīn Muhammad Tebrūzī, commonly known as Ḥiyyāth Bāγ, son of Khādża Muhammad Sharīf, one-time minister to the Safawīd Shah Shahmād Khān, father of Nūr Ẓ̄ahān, wife of Ẓ̄ahān [q.v.]. Both his father and an uncle Khādża Ahmad, father of the historian Amlī-i Rāzi, author of Ḥafṣ ICAST, held high offices of state under Ẓ̄ahān. After the death of his father in 984/1576-7 he, for reasons not precisely known, left for India to seek his fortune. It is, however, clear that he was in straitened circumstances when he undertook this way to Akbar's new capital, Fathpur Sikrī, near Āgra, he had to content himself with only two mounts for a party of five persons including two women. His youngest daughter, Mīrza Ḥiyyāth al-Dīn Muhammad Tebrūzī, born during this journey. Of noble birth, he was welcomed by Akbar [q.v.] in whose service he gradually rose to the personal rank of vizier of his empire and conferred upon him the title of i'timād al-dawla with the rank of 1,500 (cf. i'timād). On accession to the throne in 1014/1605 Ẓ̄ahān appointed him joint vizier of his empire and conferred upon him the title of i'timād al-dawla with the rank of 1,500 (cf. i'timād al-dawla, see editor's preface); S. H. Hodiwalā, Studies in Indo-Muslim history, Bombay 1939, 618-9. (A. S. BAZMEE ANSARI)

**ITTAK** [see 'ABB].

**İ'TKNAΜE, İ'tknâmē, also İ'tkâhâmē, an Ottoman term for a certificate of manumission, given to a liberated slave [see İ'tak]. The document normally gives the name and physical description, often also the religion and ethnic origin of the slave, together with the date and circumstances of his manumission, and is dated, signed, witnessed, and registered. The issue of such certificates goes back to early Islamic times (for examples see A. Grohmann, Arabic papyri in the Egyptian library, i, Cairo 1934, 61-4; idem, Arabische Papyri aus dem Staatlichen Museum zu Berlin, in Isf., xxii (1935), 19-30). A collection of 18th-century Ottoman certificates was edited by K. Jahn, Türkische Freilassungsverkündungen aus dem 18. Jahrhunderts (1702-1776), 2 vols., 1963. Other and earlier examples are cited in Jahn's introduction. (K.D.)

**İ'TR** [see 'ANBAR, 'IMSK, etc.].

**İ'TTİHĀD, verbal noun of the VIIIth form of the root w-h-d. The first form wahīda and wahīda means to be alone, unique; the VIIIth ittihāda, means to be united, associated, joined together.**

Muslim theologians understand the word in five different ways; three of these are metaphorical (ālī sabīl al-isti'dāra), the two others are real (ālī sabīl al-ha'kā).
comes another while remaining itself. This is called real because it is the first meaning that comes to mind when the word is used in its absolute sense. This real sense comprises two categories: 1) Where two objects unite together in such a way that it can be said that one is the other and reciprocally. In this case, there are, before their association, two distinct objects and after it only one of the two continues to exist. 2) Where there is one object which, while remaining the same, becomes something other than it was before. In this real sense *ittihad* is considered necessarily impossible. From this comes the principle: *al-ittihad 1a yattahtidan*.

2. — In the second sense, the metaphorical sense, there are three meanings, depending on whether it means: a) that an object changes into another suddenly or gradually. Thus, for example, water becomes air: a substantial form is replaced by another; or black becomes white (in which case one attribute of an object disappears and is replaced by another). b) that an object becomes another by composition so that it gives birth to a third; thus earth joined to water becomes clay. c) when a being becomes another, for example when an angel takes on human form. All three sorts of metaphorical *ittihad* can be found in reality.

In the history of Muslim doctrines, the word *ittihad* evokes two problems above all: that of the Incarnation of the Word in the person of Jesus (ittihad al-lahut bi'l-nafs) and that of the "mystic union" of the soul with God.

Muslim apologists have always vigorously rejected the idea of the Christian incarnation. *Ittihad* and *hulul* are here generally taken as synonymous, and the concept of a "union" of divinity with humanity is rejected as contradictory. (Cf., for example, al-Bakili, who, in his *Tamhid*, enumerates the different Christian opinions concerning what he calls "al-ittihad" without further qualification, *ittihad* considered as *hulul*, or as *ittihad* and *imtazid* or as dwelling in a temple or as the appearance of the image of man in a mirror (ed. McCarthy, 75-103; A. Abel, *Le christianisme dans le "Tamhid" d'al-Bakili*, ed. Flugel, 6; Hujwiri,* Kasaf al-Mahdijab*, tr. Nicholson, 254; Ma&mud Shabistarf, *Gulshan-i Ras*, ed. Whinfield, 1, 452-5; Tholuck,* Sufismus*, 141 ff.; D. B. Macdonald, *Religious attitude and life in Islam*, 258; R. Nicholson, *Studies in Islamic mysticism*, esp. 218-25, cf. also index iii, 279, s.v. *ittihad*.)

(R. Nicholson/G. C. Anawati)

**ITTITAD — ITTIIAD-I MUHAMEDI DJEMIYYETI**

generally translated as the "Muhammadan Union", was a politico-religious organization which acquired notoriety as the instigator of the insurrection in Istanbul on 13 April 1909. Its formation was announced publicly on 5 April 1909 (= 23 Mard 1325, by the Turkish "financial" calendar), though many Muslims sympathized with its stand against the modernizing policies of the Ittihad we Tera&kI DjemIyyeti [q.v.], usually known as the Committee of Union and Progress or (in works in English) C.U.P. Thus the activities of the Muhammadan Union were virtually restricted to the inflammatory articles in Volkan and other opposition papers such as Sadi-yi Millet, Serbetti and the British Embassy financed *Levant Herald*.

The doctrines and programme of action of the Muhammadan Union were explicitly clerical, and therefore hostile to modernization and reform. Its professed aim was non-political, namely to reform public morals and to bring them within the prescriptions of the *Shar'a*. Its members were strictly forbidden to participate in politics. Yet the writings in Volkan seemed to suggest that the Muhammadan Union's only commitment was to the destruction of the C.U.P. This commitment was shared by the Liberal opposition.

The foundation of the Muhammadan Union coincided with a mounting campaign launched by the opposition against the C.U.P. This campaign began immediately after the fall of Grand Vizier Kamil Pa&a [q.v.], on 13 February 1909. On 18 February Volkan announced that it was "the propagator of the views of the Muhammadan Union" (*Ittihad-i Muhammedi FirkaninI muewuwiidi-i efkarI*) (Tunaya, 265) and
Thereafter became the most virulent critic of the C.U.P. It called the constitutional regime the “régime of devils” (şeyhulislam dedesi) (Tunaya, 264), and by exploiting religious prejudice succeeded in mobilizing opinion against the C.U.P.

This propaganda became so alarming that the government decided to take precautionary measures. Press Laws and Laws of Associations were introduced in parliament, and on 6 April the Şeyhülislam issued, in the name of the Committee, a proclamation forbidding his troops to have any dealings with the religious bhodas and sofás. Kâmil Paşa’s exposition of C.U.P. politics, published on 6 and 4 April, and the murder and funeral of Hasan Fehmi [q.v.], editor of Serbest, on 7 and 8 April, inflamed passions and prepared the ground for the insurrection which broke out on the night of 12-13 April 1909. It was crushed by the Third Army from Salonika (Harçet Ordusu [q.v.]), and the İttihat-i Muhammedi was proscribed, while some of its adherents, including Dervîş Wahdeti, were arrested and hanged. On account of the religious overtones of the insurrection, the Muhammadan Union has been held mainly responsible for it; but closer scrutiny of this organization as well as of events suggests that many other forces were at work. This group only provided a religious cover for the activities of all those elements which were determined to destroy the Committee of Union and Progress.

The Committee had its immediate origins in a group responsible for the destinies of the Ottoman Empire (“Othmdnli called the “Ottoman Freedom Society” later known in Europe as the Committee of Union and Progress (C.U.P.), was the political movement founded in Salonika in August-September 1906. Spiritually, however, its antecedents went back to the conspiratorial activities of the Young Ottomans and their successors, both inside and outside the Ottoman Empire. (See T. Z. Tunaya, Türkiye’de siyasi partiler 1859-1952, Istanbul 1952; E. E. Rasmussen, The Young Turks: prelude to the revolution of 1908, Princeton 1957; and Bernard Lewis, The emergence of modern Turkey, revised ed., London 1968). The Ottoman Freedom Society began as a group of ten, numbered one to ten according to age: the eldest member, Bursali Tahir, being designated number one. A central committee (heyet-i lictediye, later merkez-i umûmi) of four—Meşmed Tağat, Rabmi [Evranos], Miḥdat Şükûr [Bleda], and İsmâ’il Djañbulât—was chosen from amongst the ten. (See Ziya Şakir, “İlhihât ve Terakki nasîl doğdu? nasîl ya§adi? nasîl âdetsi?”, in Son Posta, 8 and 9 February 1933 and passim). Seven of the ten had some connexion with the military though in the central committee only İsmâ’il Djañbulât was a soldier. While it is true that initially soldiers were numerically dominant in the C.U.P., the civilians were aware of the political threat this posed and therefore always tried to keep it under control. In the constitutional period the military-civilian rivalry became a constant political theme. In the organizational phase soldiers, and to a lesser extent administrators, played a vital role. It has been held mainly responsible for it; but closer scrutiny of this organization as well as of events suggests that many other forces were at work. This group only provided a religious cover for the activities of all those elements which were determined to destroy the Committee of Union and Progress.

Bibliography: T. Z. Tunaya, Türkiye’de Siyasi Partiler 1859-1952, Istanbul 1952; F. R. Unat, Ankara 1960; Meşmed Şadiik, Eyyüb Sabri and Djanbăl [q.v.], to mention but a few, were instrumental in founding the two groups, and since they alone were mobile and had communications with virtually every part of the empire. It is not surprising, therefore, that when the Rumelian branches of the Ottoman Freedom Society were set up in Monastir, Ohri, Kiracova, Vodina, Işkodra, Serez, Dram and Edirne, junior officers like Enver [q.v.], Meşmed Şadiik, Eyyüb Sabri and Djanbăl [q.v.], to mention but a few, were instrumental in founding the two groups. In 1907 the Salonika group made contact with exiled Young Turks in Europe. Later in the year Dr. Nâzım, a prominent member of Ahmed Rıdâ’s group in Paris, returned to Salonika and in September the two groups agreed to merge and adopt the older and more established name İttihat ve Terakki (Rasmussen, Young Turks, 121 ff.). This move had no practical significance because both groups remained autonomous and did not collaborate, since the centre of activity had shifted to the Ottoman Empire. However, in the minds of the exiles the merger created the illusion that they had a right to share the political power acquired by the C.U.P. as a result of the 1908 revolution. The Committee had no intention of allowing this and it soon destroyed the illusions of one such exile who returned to Salonika to be told: “Doctor… , this Committee of ours is not the one you worked with abroad. This Committee is the product of Monastir and Salonika. . . .” (Ibrahim Temo, İttihat ve Terakki Cemiyyetinin tâbukâtı ve hidemats vatansiyi ve inhâlâsı milliye dar hâsrâtım, Meclidiye 1939, 215).

If the Committee was unwilling to share power, it was not equipped, in terms of either organization or ideology, to exercise it alone. Its professed aim had been to restore the constitutional régime. Having achieved this in July 1908 the Committee had lost its raison d’être and many who had supported it in the struggle against the Palace were no longer committed to its policies. The extent of its power and organization was uncertain. There were no accepted or recognized leaders. Only the central committee exercised a collective leadership, in theory controlling the entire political machine, arbitrator, recommending and issuing directives, which were binding on all Unionist branches at various levels, from the wildyet to the nahiye. Furthermore, as representa-
tives of the newly emerging middle class, the Unionists lacked the social status to assume power in a traditional society which they were unwilling to overthrow by force. They therefore permitted the bureaucracy of the Sublime Porte to rule while they acted as guardians of the constitutional regime, hoping to subvert their society through established institutions.

The C.U.P. remained a secret organization with its headquarters in Salonika. It exercised its political influence through small deputations of two or three prominent Unionists like Ta'labat, Rahmi, Djawid [q.v.], Dr. Nâfil, Bahâeddin Shakir and Ahmed Rıdâ. These deputations visited the sultan, the grand vizier or foreign embassies and made known to them Unionist policies. This method was impossible to reconcile with the principles of constitutional government. It drew from the opposition the charge that the secret Committee was exercising power without responsibility and creating an imperium in imperio.

At the C.U.P. Congress of 1908 held in secret sessions in Salonika, the Committee did nothing to meet the opposition charges. Decisions relating to the internal organization were kept secret. It was announced that Unionists returned to parliament would work together under the name of the Party of Union and Progress (Ittihat ve Terakki Fırkası). A central committee of eight, elected by the Congress, was to continue to run the affairs of the C.U.P.

The Committee intended to maintain control through its parliamentary majority. But the independent behaviour of the deputies frustrated this scheme. After the parliament's abject surrender to the counter-revolutionaries on 13 April 1909, the Committee decided on active participation in government by having Unionist deputies appointed undersecretaries. When this measure was defeated in the parliament (May 1909) the C.U.P. had two of its members—Djawid and Ta'labat—appointed secretaries of Finance and the Interior respectively. (See F. Ahmad, The Young Turks: the Committee of Union and Progress in Turkish politics, 1908-1914, Oxford 1969, 50-53 and passim.) Internal dissension and conflict with the senior officers who had assumed control after crushing the counter-revolution continued to undermine the Committee's position. The discontents failed to be appeased and organized another opposition (see Hizb, ii and Hürriyet ve İttihat Fırkası). The Unionists responded to the new threat by having the Chamber dissolved (15 January 1912) and in the new elections, which they manipulated unscrupulously, they won an overwhelming victory. The opposition adopted extra-parliamentary methods and a group of officers intervened, bringing about the downfall of the Committee-backed cabinet of Sâ'd Pasha in July 1912. The Unionists made a comeback by staging a successful coup in January 1913 and by June they had suppressed the opposition and consolidated power.

The period from July 1908 to June 1913 was a period of intense political activity. In these five years the Unionists had learned from bitter experience that neither the country nor their Committee could be run along inflexible and centralized lines. At the 1913 Congress the Committee tried to rectify this. The programme of modernizing the entire political, socio-economic and administrative structure of the empire would henceforth be applied to a quasi-federalist, multi-national framework.

New regulations defined the powers and functions of the Committee's hierarchical structure, from the general assembly at the top to the local clubs at the bottom. Once again the Committee declared itself a political party which its headquarters in Istanbul, Sa

The war proved disastrous for Turkey and the C.U.P. By the middle of 1918 Unionists were considering establishing a political party not tarred with their brush, which could negotiate a peace treaty with the Entente Powers. The situation developed too rapidly for such calculated action. The 1918 Congress, scheduled to meet on October 1, was postponed on account of the new situation created by the Bulgarian armistice (Tanın, 30 September 1918). The Congress opened on November 1, after the signing of the Armistice of Mudros. Talât Pasha presided over the morning session and during the afternoon session he and the central committee withdrew from the Congress, escaping to Europe soon after. İsmâ'il Dânumlû, one of the founder members of the Ottoman Freedom Society, was left formally to dismantle the Ittihat ve Terakki Djemiyyeti and to reconstitute it under a new name, the Teşkilât Fırkası (Renewal Party).

Bibliography: Works by Tunaya, Ramsaur, Lewis and Ahmad cited in the text give extensive bibliographies. For the constitutional period it is essential to consult the contemporary press, especially newspapers like Tanin, Şehr-i Umret, İhdâm, Şabah, Taşvîr-i Efkar and Ahi to mention only a few. See also, Ahmed Nişâz, Ekfrâni-ı Nişâz, Istanbul 1932, Leskovikli Muhammed Ra'ûf, İttihat ve Terakki we idî?, Istanbul 1937; Albert Fua, Le comite d'union et progres contre la
ITTIHÄD WE TERAKKI DJEM'IYYETI — IWAD WADJÎH

FEROZ AHMAD

ITTIHÄD [see ITTIHÄD].

IWAD, exchange value, compensation, that which is given in exchange for something. In a very broad and generally accepted sense, the word is used in works of fîkâh to denote the counterpart of the obligation of each of the contracting parties in onerous contracts which are called "commutative" (mu*â'addâl), from the same root as imâd; that is, contracts which necessarily give rise to obligations incumbent upon both parties. Thus in a sale, the price (thaman) and the thing sold are each the compensation which is given in exchange for something. In a sale, the price (mua'dâl) is also used which is given to compensate someone for services rendered, for labour performed or for something that is exchangeable. In theory the donee is under no obligation whatsoever to give any. Two examples of this kind of contract are : to receive more than he has given.

stein of the other. Understood in this sense, commutative (mu*â'addâl, from the same root as imâd) contracts which necessarily give rise to obligations incumbent upon both parties. Thus in a sale, the price (thaman) and the thing sold are each the compensation which is given in exchange for something. In a sale, the price (mua'dâl) is also used which is given to compensate someone for services rendered, for labour performed or for something that is exchangeable. In theory the donee is under no obligation whatsoever to give any. Two examples of this kind of contract are :

In unilateral contracts, the word 'iwad (badal and tha*âb) are also used) is employed in a more restricted sense; it is applied to the compensation offered by one of the two parties who is not absolutely obliged to give any. Two examples of this kind of 'iwad are the oneros compensation and the definition. A husband has the right to repudiate his wife unilaterally and, of course, without defining the price or anything else. If he makes the statement of repudiation dependent on payment of an 'iwad, the compensation paid by the woman, the repudiation becomes khulî, but the 'iwad that the woman agrees to pay can have no more than an absurdly low value and be undetermined both in its total amount and even in its existence, all of which is quite impossible when the 'iwad constitutes an obligation corresponding to another obligation in a mu*â'addâl contract.

(Y. LINANT DE BELLEFONDS)

IWAD WADJÎH, a leading scholar and theologian, originally from Akhsîkat near Samarqand (19th century), was considered a genius in his day in both rational and traditional sciences. He received his education at Balkh in the "darî" of his namesake Mr Îwâd Tâshkhenti. After completing his education he returned to his native village where he began teaching. Later he moved to Balkh and was still teaching when that town fell to the Mughal army under AWRANGZÎB. He came to India in 1056/1646; he entered the imperial service and was appointed mu*âtîf of the army. In 1065/1656, soon after his accession to the throne, AWRANGZÎB appointed him censor of the imperial troops, with an annual salary of 15,000 rupees paid against the rank of 1,000 men and 100 horse. He could not, however, hold this office for long and by his over-strictness earned the displeasure of the emperor who, while returning from a visit to Ka*shnîr, replaced him by Khâ*âja Kâdir (on whom see extract from Mr Îwâd al-Tur изд. Muhammad Shiafi, Lahore 1953, 75), in 1073/1662 at Lahore. A year later he succeeded in regaining the favour of the Emperor, though not his office. He was appointed tutor to prince Mu*âmâb A*â'âm and his rank was restored. On the termination of this assignment he was appointed a teacher at the royal madrasa in Delhi, which post he held till his death. Held in high esteem, he was asked to act as a witness at the marriage of Prince Muhammad Sultan, AWRANGZÎB's son, to Dustdâr Bânû Begum in 1082/1672 along with Chief Kâdí 'Abd al-Wâhîb. He again seems to have lost his rank, for the Ma*â*'âhî-i 'Alamgîrî (cf. Eng. tr. 92) speaks of its restoration in 1086/1676 while he was living as a hermit. He spent the greater part of his life in teaching, "being highly honoured by the nobility".

A fanatical Sunni, he was against any execution of one Muhammad Tâhir, a Kâhirî who had slandered the first three orthodox caliphs, in 1082/1672. The criticism which his action aroused and the memory of his fall from grace twice during his life perhaps made him adopt the life of a hermit. No other work by him is known to exist except a glosso on ABA'Hî-Dî Nasafi which was preserved in the Berlin Library (cf. Brockelmann, G.L.S I, 760). Brockelmann incidentally transliterates the second part of his name as al-Wadîb which indicates that it most likely was his sobriquet. This assumption is strengthened by the fact that 'Alamgîr-nâmâ, the official history of the first ten years of AWRANGZÎB's reign, at places describes him as "Mullâ 'Iwâd" only. Farhâl al-Nâzîrîn, a Persian history of the times of AWRANGZÎB (only partially published; see bibliography), follows this practice.

His younger brother Mu*âmâm Tâhir was also a noted scholar. He was sent on a diplomatic mission to the court of AWRANGZÎB by SUBBÂN KULI KÂN, ruler of Balkh, in 1086/1675 only a year prior to the death of his elder brother. He was well-received at the court and presented with robes of honour, 21,000 rupees, a palîkî, an elephant and a jewelled stick before his return to his native land (cf. Ma*â*'âhî, Eng. tr., 92, 96). He died in 1088/1677 at an advanced age, and was buried in Delhi.

Bibliography: Muhammad Kâzîm, 'Alamgîr-

**IWÂN, also ÎVâN and at times in spoken Arabic** ÎWân, a Persian word adopted by the Turkish and Arabic languages and then by western travellers, archaeologists and art historians to refer to certain characteristic features of Near Eastern and especially Islamic architecture. Since there are notable differences in the meanings given to this term in mediaeval texts and in modern scholarship, the two must be clearly separated.

It has been suggested that the word itself derives from Old Persian *apadana* (E. Herzfeld, *Myths und Geschichten*, in *Archäologische Mitteilungen aus Iran*, vi (1936), 68, n. 1; W. B. Henning in *Handbuch der Orientalistik: Iranistik*, Leiden 1958, 71, n. 6). This derivation, which has often been taken for granted, may not be as secure as has been believed but its investigation is not pertinent to Islamic times.

Four meanings can be given to the term when it appears in mediaeval texts; these meanings are probably all connected historically and typologically in ways which still require study. A first meaning is that of a chamber or of a hall which is open to the outside at one end, either directly or through a portico; it is similar in this sense to one of the meanings of *sufla* and it is curious to note that the architectural units known to art historians as *iwan* (cf. below) are at times called *sufîs* in texts, as in L Hunfarâr, *Gandjîna-i Âfâr ta‘rîkh-i Isfâhân*, Isfâhân 1344, 86 ff.; Lane’s *Lexicon* s.v. *swân*. A second meaning is that of an estrade or of a raised part of a floor; such a higher part could have been singled out because of its formal importance as a place of honour in an architectural composition or because of some purely functional need as in the case of the part of a bath in which one undressed (E. W. Lane, *Manners and Customs of the Modern Egyptians*, Everyman edition, London 1954, 344-5 (note existence of an attendant called a *hândiff*) and 12 for other meanings of the word). A third meaning is that of a palace or at least of some sort of very formal and official building; in this sense it appears to refer to a complete architectural entity rather than to part of a complex as in the instance of the first two meanings of the word. Thus a Mu‘azzafard prince built in Yazd gardens with a pool and an *iwan* with four storeys; Ahmad b. ‘Ali, *Ta‘rîkh gilâdî-i Yazd*, ed. I. Afshar, Tehran 1345, 86 ff. It is probably in this sense of palace that the term should be understood when it was used so commonly to refer to the celebrated Sasanian palace at Ctesiphon; for instance, Tabari, ii, 1056, comments on *iwan bisravã* (E. Herzfeld, *Matériaux pour un Corpus Inscriptionum Arabicarum*: *Alep*, Cairo 1936, 391). In many texts dealing with the Ctesiphon monument it would appear that *iwan* and *fâkh* are synonymous or almost (cf. Max van Berchem, *Notes d’archéologie arabe*, in *JA*, 8th ser., xix (1892), 395 ff.) but in reality they are quite distinct since one refers to a form and the other to a function. *Iwân* in this sense is synonymous with *ḫâsir*, as for instance in the case of the Fâţimid palace in Cairo which could be called either al-ḫâsir al-kabîr or al-iwan al-kabîr. Also in the Shâh-nâma most instances of the word’s use appear to refer to palaces and not to some precise architectural form (N. V. Diakonova and O. I. Smirnova, *K soprosu ob istolkovaniy pendjikentskoy rospisi*, in *Sbornik v čest I. A. Orbelii*, Leningrad 1960). Finally a fourth meaning has been given to the word, mostly in contemporary interpretations of Mamluk descriptions of Cairo or of Damascus (Max van Berchem, *Matériaux pour un Corpus Inscriptionum Arabicarum*: *Le Caire*, Cairo 1903, 95, n. 2). The *iwan* would be any one of the halls in a religious building, a *madrasa* or a mosque, which opens on a courtyard; it would be used most commonly for large units of the type implied by our first definition but by extension could be used also for other architectural forms such as the hypostyle. The *iwan kibî* would be the one such hall which is located in the direction of Mecca. While this particular meaning is (or was) certainly found in colloquial usage, there is some uncertainty as to whether the term is ever correctly used for the columnar wings of a mosque; none of the several meanings which can be given to the word *iwan* in the many instances of its use in texts such as the description of Damascus translated by H. Sauvare appears to apply to a hypostyle building (H. Sauvare, *Description de Damas*, in *JA*, 9th ser., iii-vii (1894-6), index by E. Ouéchék, Damascus 1954, esp. vol. vi, 260 as opposed to vol. v, 301 or 392).

Altogether then the word has clearly two formal meanings and one functional meaning with a second functional meaning somewhat less obviously ascertained. It is possible that the functional meaning of palace was the original one and that, through the Ctesiphon ruins which played such an important role in the formation of mediaeval architectural concepts and terminology, the references to forms developed more slowly, but this question requires a systematic chronological analysis of texts, which has never been done.

Art historians and archaeologists have given the term *iwan* a technically precise meaning, that of a single large vaulted hall walled on three sides and opening directly to the outside on the fourth. The formation of the form has been the subject of many discussions and theories; cf. F. Oelmann, *Ihiland Liwanhaus*, in *Bonner Jahrbücher*, Heft cxxvii (1922); G. Gullini, *Architettura Iranica*, Turin 1964, 326 ff.; J. Sauvageot, *La Mosquée Omeyyade de Me- dicine*, Paris 1947, 163 ff. These discussions and theories are fortunately not pertinent to the Islamic period, for it can easily be established that Sasanian architecture had consistently utilized such a unit of planning and construction as the main feature of its palaces in *Irâk* and in western Iran. Although some nuances may have to be introduced into this statement after further excavations and interpretative studies, this particular hall was the main audience and reception hall of Sasanian princes (as at Ctesiphon). But no evidence exists that it was actually called an *iwan* nor is it certain that an official function
was the only one associated with the form. On a number of occasions a domed room was just behind the iwán and in one instance (Kal'at Duğhtar near Frûzûbdâd), iwán and dome formed the only unit of a royal building.

This secular function of the iwán was carried together with the form into early Islamic secular architecture. It occurs in the Umaysîd palace at Kûfa, was transferred to the western part of the Fertile Crescent and was found at Fatihieh, and does not necessarily mean that this particular form was used—as had automatically been assumed by Creswell and Grabar in the abovementioned parts of the great 'Abbâsid palaces at Ukhâydir and at Sâmarrâ; in this last place it also occurs in simple house architecture; see K. A. C. Creswell, Early Islamic Architecture, 2 vols., Oxford 1932 and 1940; O. Grabar, Al-Mushatta, Baghhdâd, and Wâsîf, in The World of Islam, ed. J. Kritzek and R. B. Winder, London 1959; B. Frânis and Muhammad 'Ali, Jâmi' Abî Dulaf, in Sumet, iii (1947). Even minor modifications which may appear to have been of western origin such as the transformation of the iwán into a tripartite hall through colonnades have a background in the architectural vocabulary of Sasanian Iran. In the often quoted and discussed texts describing the palaces of Wâsîf and Baghhdâd, the use of the word does not necessarily mean that this particular form was used—as had automatically been assumed by Creswell and Grabar in the abovementioned parts of the great 'Abbâsid palaces at Ukhâydir and at Sâmarrâ; it is likely that it was, for the iwán became established quite early as the main form of palace and house architecture from Afghanistan to Egypt. In details of course there were many differences from one part of the Muslim world to another and from one period to another and it is not certain that the function of the form was always the official one of an audience hall. Secular architecture unfortunately has not been sufficiently well preserved or studied to allow for definitive conclusions and, since most of the sources for it are literary, the difficulty of interpreting correctly a mediaeval architectural vocabulary occurs constantly.

The appearance of the iwán in religious architecture is equally problematic, even though it is in religious architecture that the most celebrated examples of the form are found. The situation can be summarized in the following manner. With the exception of the rather peculiar mosque in Nîrh, it is not until the early 6th/12th century that a group of some twelve mosques in western Iran acquire what became the typical shape of a courtyard on which open four iwanâs; for a summary of the history of this form, for a list of examples and for bibliographies see O. Grabar in Cambridge History of Iran, iv (forthcoming) and v (Cambridge 1968). The four-iwanâ mosque became then the standard form for almost all buildings of religious inspiration in Iran until today and the changes which do occur are mostly stylistic, as the form reflected the modifications in taste which occurred over the centuries. The puzzling questions are those of the origins of the plan and of the reasons for its formation. On the first point, evidence exists to show that both 'Irâk and Central Asia used the form of four iwânâs around a courtyard in house and probably monumental architecture before the 6th/12th century (cf. Sumet, iii quoted above) and, among others, G. A. Pugačenkov, Iskusstvo Turkmenistana, Moscow 1967, 102; also A. Godard in Ars Islamica, xvi (1951)). Since the main direction of cultural and artistic influences in the 5th/11th and 6th/12th centuries was an east-west one, a north-eastern Iranian or Central Asian background for the form seems likely. It would then be from the example of the western Iranian mosques of the 6th/12th century that the type spread over the whole of Iran.

As to the reasons for the adoption of the plan, the main existing theory (Godard's, modifying Max van Berchem, but see critique by K. A. C. Creswell, Muslim Architecture of Egypt, ii, Oxford 1959, 132-3) is that it was connected with the spread of the madrasa as an official building from north-eastern Iran westward. The theory is far from being convincing and for a variety of reasons may be rejected either that the question is unresolved or that a form hitherto used primarily for secular purposes was adapted to the mosque as part of the imposition of a new Sâlîdâk taste all over Iran.

West of Iran the iwán, either singly or in a pattern of four, was rarely used for mosques but became the characteristic architectural feature of madrasas, ribâfs, hospitals, and of most of the numerous functions which were either introduced in Zângid and Ayyûbid times or acquired a new monumentality. The earliest use of an iwán in a madrasa seems to occur in the 530/1136 madrasa in Bosra (Creswell, Egypt, ii, 107) but the rather primitive construction and planning of this building makes it a rather doubtful witness. Without searching for an (anyway) accidentally "first" example, it may be simpler to conclude that, while the form was already fairly common in house architecture (as for instance in the private houses of Fustât), its use in monumental official architecture was a result of the general impact of Iran following the Sâlîdâk reconquest. In the Arab Near East, however, it never became the unique architectural feature it was in Iran, although in the monuments of Nûr al-Dîn in Damascus (N. Ellieder, Les Monuments de Nûr al-Dîn, in Bulletin d'Etudes Orientales, xiii (1949-51) or much later in the superb madrasa of Sultan Hasan in Cairo (among others L. Hautecoeur & G. Wiet, Les Mosquées du Caire, Paris 1932, 103 ff.), we have superb examples of the ways in which a form originally developed in lands of brick architecture was turned into stone.

Several attempts have been made in the past, especially by Max van Berchem and by E. Herzfeld (see for instance his Damascus, Studies in Architecture, in Ars Islamica, vols. ix ff. (1942 ff.), to suggest that the spread and development of the iwân-based plan, especially in madrasas, is to be related to precise functional requirements (teaching for instance) and even to symbolic ones as in the Sunnî oecumenism of a building like the Mustansîriyya in Baghhdâd. Suggestive and interesting though they may be, these arguments do not seem to be entirely acceptable and it may be preferable to consider the iwán as one of the several ways in which the mediaeval Muslim world sought solutions to the problem of architectural space without attributing to it concrete or symbolic meanings permanently attached to the form itself. Like the domed hall or the tower it was a form which could be used for a variety of purposes determined by the needs and tastes of society at any one time; cf. as an example of unique use of known forms, L. Golombek, The Timurid Shrine at Gâsur Gâh, Toronto 1969.

One last aspect of the iwán as it appears to the art historian may deserve attention. It is that, regardless of the functions which were given to it, it has a very precise aesthetic value. It is a strong, dominating feature which serves as the main axis of an architectural composition both in plan and in elevation. As a result it is generally the shape and the proportions of the iwán which determined the rhythm
and the relations between parts found in most later Iranian facades and in most interior decorations. While not as exuberant as the Islamic dome, the iwān served as a major vehicle for the growth and development of one of the world's most impressive vaulting traditions and its walls were covered with all the various types of decorative techniques and ornamental designs known in the Muslim world.

**Bibliography:** Most of the immediately appropriate bibliography will be found in standard books on Islamic and especially Iranian and Central Asian architecture. For textual information on the uses of the iwān, see D. Sourdel, *Questions de Cérémonial Abbaside*, in *REI*, 1960. For the development of the religious building with four iwāns in Iran recent investigations and discoveries have made the traditional interpretation far less certain; see, for instance, O. Grabar, *Notes on the Great Mosque of Isfahan*, in *Bulletin of the Asia Institute in Memory of A. U. Pope* (Shiraz, 1972).

(O. GRABAR)

**IYĀD**, an ancient Arab tribe whose ancestor Iyād is according to the genealogists the son of Nizar b. Ma‘add and the brother of Rabl b. Ma‘add. The Banū Iyād b. Sud were a clan of the Azad. **Bibliography:** In the article; see also al-Bakri, *Mu‘jam (Wüstenfeld)*, 44-51 and passim; ibn Kutayba, *Dhāt*, 977; ibn Durayd, *Ihkitab Aswād*, 104 f.; al-Hamdi (Wüstenfeld), 44-51 and passim (for a list of their settlements); see further the indices to Tabarī, Ya‘qūbī, Mubarrad, Sibawayh, Abū al-‘Azm and also W. 507/1115, to perfect his knowledge, not to the East—which he never visited, not even for the pilgrim-age—but to Spain. In the Shifa of Ibn Bashkuwā, (i, 446, no. 972, reproduced by al-Nawawī, Simil Ms. B. N. Tunis no. 11,936, p. 10), the expression bi'll-Magrib, which occurs in connection with the studies he made under the direction of Abū 'All al-Šaḍafī, denotes the east of Spain and not the Orient, as is made clear in the Mu‘ājam which Ibn al-Abbār had dedicated to the disciple of the last-mentioned master. The traditional travelling for study (riḥa) lasted about one year: in all ʿIyāḍ had about a hundred masters, to whom he dedicated his Qawām (still in ms.). These include Ibn Ḥamdīn (430/1042-508/1115), who had met al-Ghazālī in the East and probably introduced his Ḥiyā’ to Morocco and Spain in 493/1100; and also the celebrated traditionist Abū 'All al-Šaḍafī (d. 514/1120-2).

On returning to Ceuta, ʿIyāḍ was raised to the rank of qāʿa [q.v.] and then, in 515/1121-2, to that of kāf of the city of his ancestors. On 1 Ṣafār 531/29 Oct. 1136, he was entrusted with the office of kāf of Granada. He was already a great personage, and his new place of residence gave him a triumphal wel- come. The triumph was ephemeral. Being regarded as too censorious, ʿIyāḍ was discharged after some months at the request of Tāshfin, then governor of the city. Tāshfin’s death (26 Ramaḍān 539/23 March 1145) won back for him the favour of the now tottering Almoravids. Towards the end of 539/1145, he was again nominated by the short-lived Ḥibrānīn b. Tāshfin as kāf of Ceuta, where he was to play a political role of the first importance, in regard to which his biographers, unlike the historians, prefer to remain very reticent.

A convinced and militant Mālikī, ʿIyāḍ in effect constituted the centre of resistance to the Almohads in Ceuta. After the final triumph of the latter, he was at first exiled to Tadla, among the nomadic tribes, and then, together with other notables from the suspect city, was sent to forced residence in Marrākūsh where, deserted, dejected and exhausted, he died (29 Djamād al-Awwal 554/13 Oct. 1149). Legend, echoing the hostility which he incurred under the Almohads, attributes his sudden death while in the baths (hammām) to the incovocations of al-Ǧazālī, or else, with the accusation of secretly practising Judaism, allegations that he was put to death by the Mahdī Ibn Tūmārt.

ʿIyāḍ was not without literary talent, but he was pre-eminently a traditionist and faḥīk. He was a truly typical faḥīk of the Almoravid period, strictly orthodox, and for whom there existed only one single unique truth, that which had been taught by Mālik and his school. He wrote more than twenty works, not all of which have survived. His best-known published works are: al-Šāfī bi-ta’dīr ḥabīb al-Muṣafah, which enjoyed an enormous success and which still continues to play an important part in popular piety; Māṣārī ḥaḍīr ʿallā ṣīḥā mā ḥaḍār; Tawīl al-maddīr wa-taḥrīr al-maddīk bi-ma’rūfat al-ʿālam māḏḥab Mālik, which constitutes the best defence for and illustration of the Mālikī school.

ʿIYĀFA (א'ף), as opposed to faʿl [q.v.] which denotes human omens (cledonism), is applied in a general sense to animal omens (zoomancy) and, in the strict sense, to ornithomancy, that is to say the art of divining omens in the names of birds, their cries, their flight and their posture (TA, vi, 207, l. 24 ff.). With certain names of birds a fatal quality is associated, though why this is so is not always known; in general, black and greenish plumage and down constitute the only justification. This is the case with the crow, the roller, the jack, and with any animal or bird with a coat or plumage of dark colour interspersed with white, such as a she-camel, a she-wolf or a dove (for animals regarded by the Arabs as a subject of divination, cf. Divination, 498-519).

Even more than with regard to the nature of birds (that is to say, their consecration to some particular divinity of either a propitious or an ill-fated character) and their categories (that is to say, those whose flight and cries are the basis for divination), the rich ornithomantic and zoomantic documentation gathered from ancient Arab literature makes it possible to give a precise statement of the principles and rules of mantic interpretation of the flight and cries of birds, as well as of their posture, and of the movements of certain quadrupeds.

For the flight of birds, two techniques originally existed: lira and saḏīr. Lira is the observation and mantic interpretation of the spontaneous flight of birds. This was progressively extended, particularly with sedentization, to include all kinds of manifestations of animate or inanimate beings, and especially to domestic divinations which a man based upon the gestures and utterances of his wife, the inhabitants of the house, the utensils, or the animals in his service. Originally, it included divination of both good and ill; but Islam condemned it as a pagan practice, consigning favourable omens to faʿl, which is permitted, whilst it prohibited lira as an act of faith in the blind forces and the gods who represented these forces.

Saḏīr too lost its primitive meaning in assuming a wider significance, in the same way as lira, with which it is generally confused. Originally, saḏīr consisted in causing a bird to take flight by throwing a stone in order that its flight might be interpreted; if the bird flew to the saḏīr’s right, it constituted a good omen for him, if to the left it was a bad omen (cf. Divination, 438). But Ibn Khaldūn, Muḥammad, i, 195, already defined it as though it were a question only of lira. This also is a consequence of the change from nomadic to sedentary conditions.

Lira and saḏīr, the two techniques of ʿiyāfa, consist essentially in the interpretation of the direction of birds’ flights and their cries. The technical terminology used in this field derives from hunting and is applied to all zoomantic divination. It is not possible here to expatiate on these terms, which have been studied in Divination, 440-6; it will suffice to mention the two most commonly used terms, namely al-sānīḥ, “that which comes from your right, proceeding towards your left”, and al-bārīḥ, which is its antonym. These are not exact meanings, but they are sometimes found in the reverse sense, according to whether they are used in connection with ornitho-
mancy or hunting (cf. details in Divination, 440 ff.). In general, al-sdnih is favourable and al-bdrih is unfavourable; but here also there are numerous divergencies. According to Ibn Barril (quoted in TA, ii, 170, 24 f.), this depends upon local customs: "The inhabitants of Nadjd," he says, "regard al-sdnih as favourable, but it can happen that a Nadjdi may use the vocabulary of the Hujjazi". We believe, on the contrary, that these divergencies bear witness to a very ancient state of affairs, where the right side did not necessarily signify "favourable" and the left "unfavourable", as was the case in Assyro-Babylonian divination.

The interpretation of the cries of birds is widely attested in respect of the crow (cf. texts and translations in Arabica, viii (1961), 34 ff. and 49 f.); but the Arab also deduced omens from the cooing of pigeons, from the call of a bird, from the crowing of the cock, from the braying of donkeys, from the bleating of sheep, from the cry of the camel, from the barking of a dog, etc. (cf. details in Divination, 446-9).

For the Arab, the posture and behaviour of a bird provided material for divination. That a crow croaked on a withered tree, on a leafy tree or on a recently constructed wall would modify the meaning of the divination. That the bird shook itself, stretched its wings, pecked the ground, grubbed in the soil, wiped its beak—all these things are taken into consideration in the interpretation of the divination (cf. Divination, 449 ff., and Arabica, loc. cit.).

For the relations between fa‘il, tira and sa‘ir, see f.a.

1TYAR [see sirkah].

IYALA [see eyâlet].

IYALA B. MU‘AWIYA B. KUBRA AL-MUZANAH, Abū Wathila, was appointed kādī of Bayṣa during the caliphate of ‘Umar b. ‘Abd al-‘Azīz in 99/718 (the date 95/714 given by Waki‘ is incorrect, for ‘Umar did not succeed to the caliphate until 99, and also it was ‘Adī b. Artāt, governor of the town from 99-101, who chose Iyās for the post on the caliph’s orders); he did not accept this post very enthusiastically (see especially a anecdote related by Ibn Kutayba, Uyūn, i, 62, which shows incidentally that parallel jurisdictions were still in existence), and in fact gave it up in 101 or 102/720-1; he died in 121/739 or the following year, aged 76.

Iyās, who is considered to be one of the leading lights of Mūdjar (for his genealogy see Ibn Kalbī-Caskel, Djamhara, tab. 88), became proverbial for his perspicacity, to such an extent that one said 'Abū hilm of al-Abnā‘ī [q.v.].

Adab literature presents him as a kind of Solomon, and he is the hero of a large number of anectodes, probably originally borrowed from al-Madā‘inī, who had composed a Kitāb Al-fitūs (Fītūst, Cairo ed., 1592). However, he is criticized for his tendency to gossip, his pride and the confidence he placed in dubious traditions.

IZMAL [see ismā‘īl].

IZMID [see Supplement].

IZMR [see Supplement].

IZNIK, the ancient and Byzantine Nicaea (Νικεία in Ibn Khuradā‘ibih and al-Idrīsī), was besieged in vain by the Arabs in their first campaigns against Byzantium in 99-101 and 107 (Theophanes, ed. de Boor, i, 397 and 405 ff.) and fell at the beginning of 1018 (middle of 473) into the hands of the Seljuq Sulaymān, son of Kutlumush, who made his residence there. The first Crusaders under Walter Sans-Avoir were severely defeated before Nicaea in 1096 by Alp Arslān, son and successor of Sulaymān; next year, however, the town could not withstand the onslaught of the Crusaders, led by Godfrey de Bouillon, and surrendered on 5 June 1097 to the Byzantines in alliance with the Crusaders, in whose possession it remained till the Ottoman invasion. Sultan Oḥāmān I is said to have attacked Nicaea, but it was not till the time of Oṛghān that it was taken after a prolonged siege in 1947; the town was taken and devastated by a raiding body of Timur’s troops (Ducas, 72; Sharaf al-Dīn, Ṣafarnāma, i, 454), but it soon recovered from this blow, and it is described as flourishing and prosperous at the time of the rebellion of Prince Muṣṭafā (Leunclavius, Hist., 195; cf. Nicephorus Gregoras, iii, 508 f.). In 804/1402 the town was taken and devastated by a raiding body of Timur’s troops (Ducas, 72; Sharaf al-Dīn, Ṣafarnāma, i, 454), but it soon recovered from this blow, and it is described as flourishing and prosperous at the time of the rebellion of Prince Muṣṭafā (Leunclavius, Hist., 542, i, 469). Bayzīd II is said to have intended after the death of his father Muḥammad II, to renounce the throne and retire to Nicaea.

The decline of the town began about the middle of the 11th/17th century; the population, then estimated at 10,000 (Gretot), had sunk to about 1,500 by the end of the 19th century; in 1960 it was 6,590. Administratively Iznik is now the centre of an ilçe belonging to the il (velayet) of Bursa. The present town occupies a relatively small part of the area enclosed within the ancient city walls. The best preserved of the ancient buildings are the Roman and Byzantine walls consisting of a double rampart (best described by Prokesch and Texier; cf. thereon Köhte, Mitt. des Deutsch. Arch. Instituts, Athens xxiv, 398-409) with their monumental gateways and 238 towers (Texier). The Byzantine part of these defences dates from the time of Leo III the Isaurian, who had them built after the Arab invasion of 726 (Corp. Inscr. Graec., n° 8864); Michael III in 858, and later Theodore Lascaris (Corp. Inschr. Graec., nos. 8745-8747) completed and improved them.

The town is very rich in Islamic monuments, some of which date from early Ottoman times. Sultan Oṛghān, soon after the conquest of Iznik converted the Aya Sofya church into a mosque. It was redecorated in the early 11th/17th century, when its kibīl wall was covered with tiles for his tendency to gossip, his pride and the confidence he placed in dubious traditions.
to this mosque, which was the first medrese in the
Ottoman Empire (Dorn, op. cit., p. 10). Another
building erected by Orkhan is a small mosque, bear-
ing his name, outside the city walls some 400 m.
from the Yenişehir Gate. Previously it was believed
that it dated from before the occupation of the town,
but excavations there in 1963 and 1964 revealed an
inscription giving its date as 733/1334 (Oktay Aslanapa,
Iznil: Sultan Orhan Imeret Camii Kasrasi, . . .,
1956; also Aptullah Kuran, The Mosque in early
Ottoman architecture, 78-9, figs. 77-78). Another
mosque dating from the reign of Sultan Orkhan is the
Hâdişidê Ûbarg Dîjamî (also known as the Cârshî
Mesdijî). This is the earliest Ottoman mosque
where the original dating inscription has been
preserved, giving the date of construction as 734/1333.
(Otto-Dorn, 15-18, abb. 5-6, Tables 4-5; Kuran, 34-5,
figs. 6-8). The mosque and türbe complex of
Hâdişidê Hanza Beg were erected in 746/1345 and
750/1349 respectively (Otto-Dorn, 18-20, abb. 6,
Tables 5/3, 6/1-2). It is interesting to note that none
of these early mosques had minarets. Later mosques,
like the Yeşil Dîjamî (780/1378-794/1391), the Kütb
al-Dîn Dîjamî (c. 821/1418), the Mahmûd Celebi
Dîjamî (846/1442) and the Eşrefzade-i Rûmilî Dîjamî
(874/1469) have minarets built in the Seljuk style,
but excavations have shown that the faience tile decoration inside and on the minaret,
the most significant. The mihrâb is built of marble
and is richly carved, the earliest of its kind in
Ottoman mosque architecture (Otto-Dorn, 20-33, abb.
7-11, Tables, 6/3-17; Kuran, 61-33, figs. 52-7). It was
erected by Kâzîrân (see ûqar). The dating
inscription gives the name of the architect as a certain
Hâdişidê Müsa. The Kütb al-Dîn Dîjamî has no
date, but Otto-Dorn reckons it dates to 821/1418,
the year when Kütb al-Dîn died (Otto-Dorn, 33-5,
abb. 12, Tables 19-20). The Mahmûd Celebi Dîjamî
is well preserved and its minaret has glazed blue
and green faience tiles (Otto-Dorn, 35-9, abb.
13-15, Tables 21-2). The Eşrefzade-i Rûmilî Dîjamî is actually
part of a complex, which included a türbe and a
tekke (monastery). It was erected for Eşrefzade,
a holy man who lived for 120 years (779/1377-
899/1493). It is very much ruined and only its mina-
ret stands, giving the date of construction as 735/1334 (Oktay Aslana-
pa, op. cit., p. 103). Excavations revealed that the so-called
"Miletus ware", produced and manufactured in Iznik
by the so-called "Iznik potters", reached the town. It is not
known whether the Miletus potters also had a
brick factory, although this is often assumed.
Iznik pottery was exported to and consumed in many parts
of the Ottoman Empire (Dorn, op. cit., p. 10). Another
building erected by Orkhan is a small mosque, bear-
ing his name, outside the city walls some 400 m.
from the Yenişehir Gate. Previously it was believed
that it dated from before the occupation of the town,
but excavations there in 1963 and 1964 revealed an
inscription giving its date as 733/1334 (Oktay Aslanapa,
Iznil: Sultan Orhan Imeret Camii Kasrasi, . . .,
1956; also Aptullah Kuran, The Mosque in early
Ottoman architecture, 78-9, figs. 77-78). Another
mosque dating from the reign of Sultan Orkhan is the
Hâdişidê Ûbarg Dîjamî (also known as the Cârshî
Mesdijî). This is the earliest Ottoman mosque
where the original dating inscription has been
preserved, giving the date of construction as 734/1333.
(Otto-Dorn, 15-18, abb. 5-6, Tables 4-5; Kuran, 34-5,
figs. 6-8). The mosque and türbe complex of
Hâdişidê Hanza Beg were erected in 746/1345 and
750/1349 respectively (Otto-Dorn, 18-20, abb. 6,
Tables 5/3, 6/1-2). It is interesting to note that none
of these early mosques had minarets. Later mosques,
like the Yeşil Dîjamî (780/1378-794/1391), the Kütb
al-Dîn Dîjamî (c. 821/1418), the Mahmûd Celebi
Dîjamî (846/1442) and the Eşrefzade-i Rûmilî Dîjamî
(874/1469) have minarets built in the Seljuk style,
but excavation there between 1963 and 1966 have estab-
lished that the so-called "Miletus ware" was manu-
factured in Iznik. This ware had a red clay body and
the designs were painted in blue, turquoise-green and
white-bodied faience which resembled porcelain.
In colour). This red ware was suddenly replaced,
as a result of the influence of Italian Renaissance art
on them (third group). The Iznîk excavations
revealed shards, kiln-wasters and pottery kilns as
well, attesting that all these groups were manufac-
tured locally (Oktay Aslanapa, Pottery and kilns
from the Iznîk excavations, 140-6). Manufacture of
tiles and pottery still continued at Iznîk in 1736
(Otter, Voyage en Turquie, iii, 44), but it soon came
to an end and was forgotten. It seems that potters
moved to Kütahya, where they tried to revive the
old Iznîk traditions in pottery making.

IISRÎ'IL (in European literature one also finds 'Azrâ'il), the name of the angel of death, one of
the four archangels (next to Djibrîl, Mîghânîl, Is-
râîl). Like Isrâîl, whose office of trumpet-blower at the last judgment is sometimes given to him, he is
of cosmic magnitude; if the water of all the seas and
rivers were poured on his head, not a drop would
reach the earth. He has a seat (sarîr) of light in the
fourth or seventh heaven, on which one of his feet
rests; the other stands on the bridge between paradise
and hell. He is however also said to have 70,000 feet.
The description of his appearance agrees almost
exactly with that in Jewish literature: he has 4,000
wings and his whole body consists of eyes and tongues,
the number of which corresponds with that of the
living. He, however, is also said to have four faces.
At first he was an angel like the others. When Allâh
wanted to create man, he ordered Djibrîl to snatch
from the earth for this purpose a handful of its main
constituents. The earth, however, stirred up by
Iblis, offered resistance, so that neither Djibrîl, nor
Mîghânîl nor Isrâîl could carry out the commission.
But Isrâîl managed to do it. Because of his pitiful
lessness (billat al-ratima) Allâh then appointed him
angel of death.
Because of his strength he is also master of death. When Allāh had created Death, he summoned the angels to look at him. When they saw his astonishing strength, they fell down unconscious and remained lying for a thousand years. Then they awakened and said “Death is the most powerful of creatures”. But Allāh said: “I have appointed ‘Izra’īl to be lord over him”.

Several angels of death are mentioned, as in Jewish literature; and it is said that ‘Izra’īl deals with the souls of the prophets while the souls of ordinary men are under his khālifa. Special stress is laid on the beginning of Sūra LXXIX, as authority for a number of angels of death: “By those who tear forth and by those who draw forth” etc. The former are said to be those angels who drag the souls of the unbelievers by force from their bodies, while by the latter are meant who have to separate the souls of the believers from their bodies. The explanation of the verse however is not certain. In Sūra XXXII, 11 mention is made of the angel of death (in the singular).

‘Izra’īl keeps a roll of mankind. But he does not know the date of death of the individuals. Whether one belongs to the blessed or the damned he sees from the fact that the names in the first category are supported by a bright and those in the second by a dark circle.

When the day of a man’s death approaches, Allāh causes to fall from the tree below His throne the basmala [g.v.]. ‘Izra’īl reads the name and has to separate the person’s soul from his body after 40 days. But there are some people who strive against the separation, and object that the angel of death is acting arbitrarily. The latter then goes back to Allāh and tells him his experience. Allāh then gives him as a credential an apple from paradise on which the basmala [g.v.] is written; when the man sees this, he yields.

Man also has other means of making it difficult for the angel of death to carry out his task. If the latter wants to creep into his throat to fetch out his spirit, he may recite a dhikr [q.v.] and thus prevents the entrance. The angel then returns to Allāh, who advises him to try to take the dying man’s hand. If the latter however is just making a sadaka [g.v.] the angel’s entrance is again impossible. Finally, however, ‘Izra’īl writes the name of God on the man’s hand. Then the bitter feeling of separation disappears and the angel can enter to fetch the spirit. It is also said that he pierces men with a poisoned lance. Another account is as follows: When a believer is on his deathbed, the angel of death stands at his head and draws his soul out as gently as water runs out of a leaf on which the man’s name is written. ‘Izra’īl then covers his hand on a cow, as many years are to be granted him as his hand covers hairs”. “And then?” asked Moses. “Death”, said Allāh. It is also related that the angel of death came to Moses with an apple from paradise; when he had smelled this, he died.

On an experience of Solomon’s with the angel of death, see al-Baydgawi on Sūra XXI, 34; on his visit to ‘Idrīs, see that article.

‘IZZ AL-DAWLA, an honorary title (lakab [g.v.], pl. alkāb) of the kind which came into being at the beginning of the 4th/10th century, conferred by caliphs and later also by other sovereigns. The first person to receive an honorary title composed with dawla was the vizier of the caliph al-Muktāfī (902-8), al-Kāsim; in 289/902 he was entitled Wall al-Dawla (Friend of the Dynasty). Originally dawla [g.v.] signified: turn, reversal (especially in battle), then it became the designation of the old Mahdī propaganda, and from the middle of the 3rd/9th century attainted the meaning still in force today: “dynasty, state”. With this meaning dawla became an element of those honorary titles which began to be granted shortly before the middle of the 4th/10th century, became customary at the time of the Buyids [g.v.] and are a marked characteristic of this period.

According to their meanings, concepts and words (muḏḏāfāt) linked with dawla can be divided into six groups: 1) verbal forms which describe an activity of the bearer in connection with the dynasty, e.g., Mu‘īn (helper) al-Dawla, Nāṣir, Mu‘izz, Muḥsharrīf, etc.; 2) metaphors, mostly weapons or parts of the body, e.g., Sayf, Ḥusām, ‘Aṣūd (and developed from these: Yāmīn, ‘Ayn) etc.; 3) concepts from the cosmos, e.g., Nūr, Diyā, Bahā, and Shams al-Dawla, Ẓāwīl al-Dawla (borne in this sequence by father and son, so that the development and intensification becomes especially clear); 4) concepts from architecture, e.g., ‘Amlī, ʿImād, Rūkn, Sanad, ʿUmda, Kawām, etc.; 5) insignia and titles of sovereigns, e.g., Ṭāqī (crown), and Sultan (a title which until then belonged only to the caliph), also Ẓā‘īm; 6) the concepts fame, glory, honour: Fāhûr, Ẓālīl, Maḥdi, Sharaf, ʿAlā, ‘Izīz.

In 348/959-60, while still crown prince, Bakhtiyār [g.v.], the son of the Buyid chief amīr Mu‘izz al-Dawla, was granted the title ‘Izz al-Dawla, clearly as a modification of the lakab of his father. This tradition was continued when Bakhtiyār named his son al-Murzūbān, governor of Baṣra, as his successor, and the caliph bestowed upon him the honorary title of ‘Izz al-Dawla. When ‘Adī‘īb al-Dawla appeared in Baghdad, decisively wiped out the Buyids of Baghdad in 977 and Bakhtiyār met with an inglorious end,
the tradition of the dawla title derived from 'izz and others also came to an end, at least among the Büyids. The later Büyids in Shīrāz and Baghdād, without exception descendants of 'Adud al-Dawla, chose other alkhāb from the six groups listed above.

Besides the Büyids, almost all contemporary rulers who acknowledged the 'Abbāsīd caliphate were recipients of alkhāb in the form discussed here: the Mawānīds, Mazyādīds, Mirdāsīds, Ghaznawīds etc. In addition, the Sāmānīds, who for a time did not acknowledge the caliph of Baghdād appointed by the Büyids, adopted the practice, bestowing such alkhāb on their own authority upon the governors of Ḵūrāsān in order to bind them closer to themselves. In Fāṭimid Egypt, on the other hand, alkhāb were chosen on a different principle. In North Africa and Spain dawla titles appear only occasionally. There, clearly by deliberate intent, only rare resort was made to this 'Abbāsīd practice.

The honorary title 'izz al-Dawla was evidently so compromised by the inglorious memory of the Büyid Bakhtiyārī that it reappeared only later, and indeed principally in Persia. In particular the following holders of the title can be taken as examples: 1) the Ghaznawī 'Abd al-Rashīd (1050-3); 2) the Baduspašā b. Nāmār (470/1080-1117 in Māzanbārān) and Rūk b. Shāh Ghaרצī (750/1350-801/1401); 3) the Sūfī and fākīh, Shams al-Dīn Makānī (496/1103), the Artūkīs from 538/1144, the Zengīs of Aleppo, the Dānishmendīs in Anatolīa, the Salghūrīs in Fārs, the Ghūrīs in east Iran and India, the Shāhs of Ḥwārizm, and the Ḥūdūls of Persia from 564/1170.

Later alkhāb with dawla are still found, though only occasionally; from Saldjuk times they were displaced by alkhāb with dīn as an element. In the time of the Ṣafawīs the dawla title was revived to some extent in Persia. The grand vizier took ex officio the title I'timād al-Dawla [p. 294]. Under the Kāḏjārs the title was deliberately continued the Büyid and Ṣafawī traditions, and again made frequent use of alkhāb in the form outlined here. All the compounds classified in groups 1) to 6) can be found, with the addition of several new forms. However, the title 'izz al-Dawla is infrequent. Under the Kāḏjārs princes only 'Abd al-Ṣamād Mīrāz, a son of Muhammad Shāh (1250/1834-1264/1848), held this title. It seems that the eulogizing irżāa wa-dawla (only used in association with dawla) was an expression of vanity, which expressed their view of themselves as rulers who were first converted to Islam with Ghazān Khan (694/1295-703/1304), the Mughuls in east Iran and India, the Shāhs of Ḥwārizm, and the Ḥūdūls of Persia from 564/1170.

The alkhāb 'izz al-Dīn, amongst others, appeared several times under the Zengīs of Aleppo and the Rūm Sulṭāns of east Iran and India. But the title as a phenomenon of the 12th/13th century, however, the alkhāb lost its status as an honour granted by the caliph or a local prince, and became simply a name which a man assumed himself or which was attributed to deserving people by contemporaries without any official procedure. Ibn al-Fūwāṭi (d. 723/1323-4) enumerates in his work Magīmī' l-dād bī muḍğām al-akhbā (ed. Muṣṭafā Dīwād, Damascus 1962) more than five hundred bearers of the alkhāb 'izz al-Dīn, covering almost all areas of the population: the sultan and the courtiers, officials in the capital, in the provinces and in the administration, holders of religious offices (judges, witnesses, professors at madrasas), theologians and jurists without official positions, and members of secular professions (poets, druzgists, doctors, merchants, etc.). The earliest datable bearers of the title belong to the first years of the 6th/12th century (e.g., a ḥabīl, no. 231). By the end of the Ṣalṭūn period, at the latest after the arrival of the Mongols, who were first converted to Islam with Ghāzān Khan (694/1295-703/1304), the alkhāb must have lost the character of an officially bestowed honour. Kalkashandī (d. 821/1418) in the Ẓub b l-A'zāb, vi, 38 ff., mentions in the list of alkhāb under 'izz only the alkhāb 'izz al-Islām as the title "of some mulābā." Like the dawla titles, the dīn titles remained confined to the eastern Islamic world. In the East Būrānī had already criticized the alkhāb, but on political and practical grounds: they were a sign of the decadence of the caliphate, an expression of vanity, and moreover too long for practical use. The Egyptian Ibn Taghribirdī mocked the Persians, amongst whom all things were connected with dīn. The Maḥqīb 'All b. Maymūn (c. 900/1495) designated the alkhāb simply as "diabolical innovation" (ḥidāya shaybāntīyya).

After Ibn al-Fūwāṭi and al-Kalkashandī, from the
beginning of the 10th/16th century at the latest, *din*
titles were no longer considered as *alkâb* in the true
sense, being reduced to mere proper names. In the
Ottoman empire, there developed a predilection for
double names composed of a *lakab* with *din* and a
proper name, as F. Babinger has noted. Quite apart
from absurd combinations which go as far as *'Umar
al-Dîn* (see J. H. Kramers), in more recent times a
downward trend in the choice of names with *din* may
be observed; in the biographical dictionary by Tuerk
*Meyhûnün*, 1'izzeddin appears only rarely. In Egypt
names originally ending in *din* are habitually short-
ened to the *mudâfa*, Kamâl, Djamal, etc. The Turkish
name Izzet may perhaps have arisen in the same
way (but cf. Hikmet, Fikret etc.; see also ISM).

**1'IZZ AL-DÎN KAYKÂWOS II** [see KAYKÂWOS].

**1'ABAR 1'IZZET** [see Supplement].

**IZZET MOLLA.** Kâgızi-zaide (1200/1785-
1245/1829) Turkish poet, born in Istanbul, the
son of the kâbîs'seker Mehmendîlî. His family origi-
nated from Konya and took their surname from
Süleyman Efendi, the *imâm* of the Toprak Sokak
mosque who made his living as a felt-maker (*keçidi*).
His son Muştafa (d. 1181/1767) went to Istanbul for
his education and became a kâdi and trained his son
Mehmed Sâlih (the poet's father) for the same pro-
fession. 1'izzet was only fourteen when Sâlih Efendi
died and his two brothers-in-law, the kâbîs'seker
Hâmîd and the poet Es'ad, took care of his up-
bringing, and trained him for the *ûlema* profession.
But under the influence of the latter's too free and
easy life, 1'izzet soon took to drink, squandering
what little he had left by his father, and his
eenemies got his name struck off the register of the
profession. This ignominy, coupled with being in
straitened circumstances, brought him to the
verge of despair and he decided to commit suicide.
The strange circumstances in which this act was
being carried out and how he was dissuaded from it
and was eventually introduced to Hâlet Efendi
(*q.v.*), the powerful confidant of Maḥmûd II, are
told in detail in a biographical article by Reşâd Fuâ'd,
a great-grandson of his and with some variants by
İbnülemîn Mahmud Kemal (İnal) (see bibliogra-
phy).

Hâlet Efendi presented him with a house, secured
his livelihood and introduced him to the sultan (for
a discussion of this relationship see: A. H. Tanpinar,
*XIX. Asr Türk Edebiyatı Taribi*, Istanbul 1956,
p. 56, n. 1). Again thanks to Hâlet, he was ap-
pointed kâdi of Galata in 1230/1820. When Hâlet
fell into disgrace and was banished to Konya and
later executed there (1238/1822), 1'izzet, his favourite
confidant, was the only one of his entourage who
escaped the purge. But he did not resist the temp-
tation of praising his benefactor and denouncing his
enemies in private conversation. An indelent couplet,
(reproduced in Djezewd, *Tâ'rikh*, xii, 67), composed
to this effect, seems to have been the last straw. He
soon found himself banished to Keshan near Tekirdâg
(Rodosto) in Thrace, where he stayed about a year
(1238-9/1823-4) and where he wrote his masterpiece,
*Meyhûnün 1'izâr*. It was the new grand-vizier, Şâhîd
Paşâ, who, although he was a former confidant of
1'izzet, obtained his pardon from the sultan when
1'izzet sent to him a *kaşida* in submission. 1'izzet had
no difficulty in regaining the favours of Maḥmûd II.
He was successively appointed kâdi of Mecca (1244/
1825) then of Istanbul (1245/1826) and Inspector of
the Haramayn (Mecca and Medina). But his
prosperity did not last long. In a War Council,
which met in the spring of 1243/1828 in the
office of the Şâyîkh al-Islâm, to decide whether or
not to declare war on Russia, which had invaded
Turkey, following the destruction of the Turkish fleet
at Navarino a few months earlier, 1'izzet joined, half-
heartedly and reluctantly, the majority which fa-
voured war. But immediately afterwards, he com-
posed, together with Şâri Śâhîm Efendi, the treasurer of the Defterdâr, a memorial (*lâyiha*)
which he submitted through the Sultan to the
Silâhdâr Ağa. In it 1'izzet expressed in detail
what he did not dare to say publicly: he enumerated
the reasons why it was not advisable to wage war.
Maḥmûd II, who was highly angered, had his
memorial rejected by a countermemorial (*reddîye*)
and ordered that 1'izzet be banished to Cyprus
and ordered that 1'izzet's place of exile was
changed to Rhodes; 1'izzet's place of exile was
changed to Sivas. Nine months later, upon the
disastrous outcome of the Russian campaign of 1243/
1828, 1'izzet, who proved to be right, was pardoned,
but the ailing poet died a few hours before the sul-
tan's *fermân* reached Sivas. It was attached to his
breast at the burial (Safar 1245/August 1829). He
was forty-four years old. In 1916 his remains were
brought to Istanbul and buried in the family tomb.

1'izzet Molla married Hibet Allâh Kâhîmd, the
daughter of Isma'll Mâfâ BBC and sister of Muş-
taфа Paşâ as asserted by Fevziye Abdullah in *I A
s.v.*, a descendant of Kara Muştafa Paşa (executed
in 1905/1883). The eldest of his four sons was the
famous 19th-century statesman Fuâ'd Paşâ (*q.v.*).

1'izzet Molla is the last great representative of
*Dîwân* poetry. During the closing stages of the old
school, when many of his contemporaries repeated
themselves with interminable *cleshe* and hackneyed
similes, he showed comparative originality thanks to
his strong sense of humour, his penchant for satire
and hackneyed

**IZZ AL-DÎN — 1'IZZET MOLLA 295**

Except for the short biography of his father, where
he gives an example of the lofty ornate style (*inizâb*),
his prose, particularly his memorial on reforms
(*insha*), is simple, fluent and to the point. 1'izzet is
the author of the following works: (1) *Dîwân*
I, compiled in 1242/1825 under the title of *Bâhâr-i
E bánh*, contains most of his verse outside his 
*mahmas* (Bülâk 1255). His many chronograms have
unusual documentary value; (2) *Dîwân* II, compiled
under the title of *Khashâni-ı Ârûb*, contains his few
later poems (Istanbul 1257); (3) *Gülshen-i Ashb*,
completed in 1227, a short allegorical *mahmass* on
mystic love, on the lines of Şâhîd Dede's *Hüsân
u Ashb* and, like it, inspired by Djalâl al-Dîn.
IZZET MOLLA — IZZET PASHA

Rumi's Sufi theories. Izzet, who was a member of the Mevlâna order, appears himself as the leading character in the work. For a synopsis see Gibb, HOP, iv, 306-308 (lithograph ed. Istanbul 1265); (4) Mihran-Keshan ("The Sufferers") with a pun on Keshan, as the title could also be read Mihran-i Keshan ("The Suffering at Keshan"), his most important work, which immediately secured his reputation and which distinguishes him from many contemporary dervish poets. It is a narrative poem in mutahârib and in mâthnawi form of about seven thousand couplets, interspersed with many hasâdas, qashâls, murâba'ab and chronograms, which relate in great detail and with pungent humor mixed with vital realism, the circumstances of his arrest in a public bath, this adventurous journey to Keshán, the colourful life in this little provincial township, the many local characters he meets and all his experiences there. Many reminiscences of his earlier life and people he knew in Istanbul are added with the same joyful humour to this lively and very spontaneous narrative, which make it a unique documentary work for the last period of Ottoman society before the great reforms of the 19th century. Izzet wrote most of the Mihran-Keshan in Keshán and completed it on his return to Istanbul in Dümâda 1 1259/February 1842. It was submitted to Selim III, written in a flowery style of the best inşâd tradition, published in 1916 (TOEM, No. 41, December 1332); (6) Lâyîba, a remembrance on the line of many lâyîbas submitted to Selim I, written in 1287 by order of Mahmud II. It has not been edited (two Mss. are in the libraries of the Turkish Historical Society and of the University of Istanbul, İbnülemim Collection). The text of his other lâyîba, the famous anti-war memorial which he composed with Omer Râsim Efendi and their "rejection" (reddiyye) prepared by Akif and Pertev Efendis (later pashas), are given in ʿĀṭā, ʿarâ'ī, iii, 267-275.

Izzet helped to establish order within the capital as captain (1887), colonel (1918). In 1913 he was made the sultan's aide-de-camp (sâver-i ekrem) for life; from 1912 onward he was also a member of the senate (a'yan).

Upon graduation from the Hârbiye, Izzet stayed as instructor in military geography and aide to Col- mar Barûn von der Goltz-Pasha, inspector-general of Ottoman military schools. After advanced training in Germany (1893-94) and a brief assignment at al-Lāţihipiyyâ in Syria, he became military aide in the Ottoman high commission in Sofia (1895-96). When a court favourite became the next commissioner, he asked for a transfer. With the outbreak of the Greek-Turkish War, Izzet was appointed to the general staff of the army mobilized on the Thessalian front and to the office of war operations. His energetic stand against corruption and inefficiency led to his interroga- tion at the palace and, eventually, a punitive trans- fer to the reserve division at Damascüs (1897). There he proved his military and diplomatic talents in paci- fying the rebellious Djabal Durûk (1902), and his ad- ministrative skills in supervising work on the Bigâjûz railway near ʿAkbâ. From 1906-08 he served in Yemen, first as chief of staff to ʿAli Pasha, the later grand vizier, whose forces were dispatched against the rising of the Zaydû sect under Imâm Yahûy, then as commander of the division in Hûday- da (1907). The Young Turk Revolution interrupted his summer leave in Lebanon, and Izzet returned to Istanbul.

Izzet’s reputation as one of von der Goltz’s star disciples, his field experience in Yemen, and his rare courage in standing up against the Hamidian regime led to his appointment, following the 1908 revolution, as chief of the Ottoman general staff. For two and a half years he worked, often in conjunction with von der Goltz and Mahmûd Shewket Pasha, to reform the system of training for officers and non-commissioned officers, to create a reserve officer corps, to introduce new model regiments, to arrange manoeuvres and transport, and administrative and mobilization schemes for the defence of the European parts of the empire. During the April 1909 Counter- Revolution, Izzet helped to establish order within the capital as the Harchet Ordusu approached Istanbul. Differences with Mahmûd Pasha, the minister of war, and his old teacher von der Goltz contributed to Izzet’s desire for assignment. Izzet disagreed with Shewket’s method of handling unrest in Albania, and resented what he thought to be encroachment by the minister of war in matters of manoeuvres and personnel management. Meanwhile, Imâm Yahûy had resumed his revolt and laid siege to the Yemeni capital of Šaḥr. Upon the death of ʿAbd Allâh Pasha, commander-in-chief in Yemen, Izzet was dis- patched to take his place (February 1911-December 1912), while officially on leave from his post as chief of staff. He succeeded in relieving the besieged Yemeni capital of Šanân and in concluding a compromise peace at Daʾān whereby Imâm Yahûy was recognized as temporal and spiritual head of the Zaydû sect, with the prerogative of appointing local officials on the sultan’s behalf. In return, Yahûy acknowledged the sultan’s suzerainty and joined an alliance with Ottoman forces against the rebellious Sayyid ʾIdris to the north.

While in Yemen, Izzet was dismayed to learn that upon the outbreak of the First Balkan War, the new war minister, Nâzım Pasha, had acted in com-
plete disregard of Izzet's careful strategic plans by proceeding to the offensive before preparations were complete. Because of transportation difficulties, Izzet managed to return only as Turkish forces were withdrawing to Cataluğa, outside the gates of the capital. When members of the Committee of Union and Progress seized power in the coup d'état of 23 January 1913, Izzet was offered the post of generalissimo under the new cabinet of Mahmûd Şekvet. At first he declined, having opposed the Unionist plot and being profoundly shocked at the death of Naşım Paşa, who was shot during the coup. He subsequently reconsidered in view of the danger of renewed war on the Balkans and of the prospect that Enver [q.v.], whom Izzet considered impetuous, political, and less than competent, might obtain the post. Accordingly, Izzet on 30 January 1913 was named to the post of deputy commander-in-chief (baskhumandan wekili—the sultan himself being the nominal baskhumandan) and, following Mahmûd Şekvet's assassination by anti-Unionist conspirators in June, that of minister of war in the cabinet of Sa'id Hallîm Paşa. As generalissimo Izzet was in charge of the campaign resulting in the recapture of Edirne in the Second Balkan War (July 1913). Since he gave priority to his post as supreme commander, the minister, Mahmûd Paşa, frequently acted as interim minister of war, e.g., in concluding the agreement in the autumn of 1913 by which the German military mission under General Otto Liman von Sanders was brought to Turkey.

Izzet had some reservations about the far-reaching powers of that mission which, he believed, threatened the integrity of the Ottoman command structure. Subsequently, the purge of the incompetent officers after the Balkan Wars proved, for Izzet's taste, too sweeping in scope and too political in the details of its implementation, and these differences with the dominant Unionist party led him to resign his post of minister of war and deputy commander-in-chief around the end of 1913. He was succeeded in both posts by Enver Paşa.

According to Izzet's own account (Inal, 1979; Klinghardt, 231 f.), the Ottoman government about this time favoured making Izzet prince of Albania. Although the plan received some backing among Albanian leaders both in Istanbul and in Albania itself, Izzet rejected it out of fear that "Albania might suffer harm on my account" (yılümüzden Arnavutluğa fønîk gelisliği). Izzet spent two years in semi-retirement, but early in 1916 took command of the front against Russia with headquarters at Diyarbakr. The disastrous defeat at Sarıkamış, under Enver's personal command, had all but destroyed the Eastern front the year before. The best 'Izzet could do with his decimated and ill-supplied troops was to slow down the Russian advance through the Armenian and Kurdish mountains. When the revolution of February 1917 led to the collapse of the Russian armies, 'Izzet asked to be relieved of what was no longer an actual front command. He subsequently served as Ottoman military delegate to the peace conferences at Brest Litovsk, with Russia, and at Bucharest, with Roumania (December 1917-May 1918).

Following the collapse of the Palestinian-Syrian front, the resignation of the Ta'yfat-Enver cabinet, and Ahmed Tewfîk Paşa's fruitless attempt to form a government, the task was assigned to Izzet Paşa. He served as grand vizier (sadr a'şam), from 14 October to 11 November 1918, at the head of a government that included a few moderate Unionists, notably Dâjud [q.v.] at the Ministry of Finance; the parliamentary leader of the Unionist anti-war faction that had formed early in 1918, 'Ali Fethî [Okyar]; and various non-political figures, such as the naval hero Hüseyin Ra'ûf [Orbey] and the imperial historiographer 'Abd al-Rahmân Sheref. The most urgent task was the conclusion of an armistice, and Izzet tried to make contact with the Allied powers through a variety of channels. The successful one proved to be the dispatch of the British General Charles Townshend, captured at Kut in 1916, to the headquarters of Vice-Admiral Sir Somerset Arthur Gough-Calthorpe in the harbour of Mudros on the Aegean island of Lemnos. The Ottoman delegation that went to Mudros soon after was headed by Hüseyin Ra'ûf and Reşad Hikmet, under-secretary of foreign affairs. On the grand vizier's instructions, the delegates insisted on obtaining safe-conduct for the German and Austrian military personnel stationed in Turkey; but they yielded on such points as the Allies' right to occupy key cities, harbours, and railway junctions throughout what remained of the Ottoman Empire. Determined not to jeopardize relations with the Allies through disputes over the interpretation of the armistice, 'Izzet ordered that no resistance be offered by the Allied forces. As Curukulu Mahmûd Paşa, frequently acted as interim minister of war, e.g., in concluding the agreement in the autumn of 1913 by which the German military mission under General Otto Liman von Sanders was brought to Turkey.

When it became known that Enver, Ta'yfat, Dżemal, and other leading Unionists had fled Istanbul on 2 November 1918, thereby evading any criminal or political responsibility for their war policies, 'Izzet's political authority was seriously undermined. He had had no advance knowledge of the escape and indeed tried to get German and Austrian authorities to return the fugitives from Odessa (the co-operation he received probably being less than sincere). In view of the political pressures against him, 'Izzet resigned on November 8, and three days later the sultan replaced his middle-of-the-road government with a clearly anti-Unionist one under Ahmed Tewfîk.

In May 1919 Izzet briefly entered the second Dâmad Ferîd [q.v.] government as minister without portfolio as part of a show of national unity in view of the Greek landings at İzmir. In July he refused to enter Ferîd's next cabinet which undertook to mount a military campaign against the Kemâlist "rebels". In October 1920 he accepted the ministry of the interior in a cabinet under Ahmed Tewfîk that took a more conciliatory line. 'Izzet and Şâlih Khu'lî [Kerâk] Paşa were dispatched to Bileğik (midway to Ankara) in December to negotiate some arrangement with Muşafa Kemâl Paşa and his Grand National Assembly. But Kemâl refused to recognize the delegation as representing any kind of government in Istanbul or to let his guests return to their capital. Instead Kemâl detained them in Ankara, hoping that Kemâlist successes against irregular forces (under Çerkeş Edhem [q.v.]) and against the Greek armies would sufficiently impress them to join his side. Upon their steadfast refusal, 'Izzet and his colleagues were at last allowed to return to Istanbul, in March 1921, on promise of resigning their government offices there. When in June Izzet Paşa re-entered the next cabinet under Ahmed Tewfîk Paşa as foreign minister, he
reached a reproachful telegram from Mustafa Kemal; in reply he did not repudiate his earlier promise as having been extorted but rather pleaded patriotic duty and his manifest lack of personal ambition. He continued in his post until the dissolution of the sultan's government in November 1922.

Izzet Pasha was a soldier of outstanding talent and high-minded patriotism. Pomiankowski (p. 58), as other qualified military observers, considers him one of the most reliable observers of the late Ottoman military and political scene, refers to him on the occasion of his resignation in early 1914 as "in the best years of his many powers, an enlightened and experienced soldier, at various junctures, but he retained a lifelong long-distaste for factionalism and political maneuvering. It was his misfortune to have risen to the top of the military profession at a time when military and political questions were inextricably intertwined, both through domestic instability and through the empire's decline and eventual collapse under foreign pressure. His devotion to duty rarely allowed him to refuse a responsible assignment; his probity rarely allowed him to keep it for long. Thus he repeatedly saw others dissipate the fruits of his labors—only to find himself called back to retrieve or liquidate their mistakes. His political moderation and lack of party ambition typically kept him in the middle—between Unionists and anti-Unionists, or Kemalists and anti-Kemalists. A loyal servant of the Ottoman Empire until the very end, he lived under the Turkish Republic in quiet retirement in his home in Istanbul until his death.

stable differences were to be noted, affecting above all the intonation of phrases, occasionally the production of vocalic variants or the frequency of certain adaptations of adjacent phonemes. Insofar as the few clear data at our disposal permit us to gain a comprehensive idea of this phenomenon, it appears that in the greater part of the Arab East (Arabian peninsula, northern 'Irāk, Syria, Lebanon, Palestine, Jordan), the facts may be compared to the situation in Jerusalem; but different circumstances prevailed in southern 'Irāk on the one hand and the Maghrib on the other.

As far as the East is concerned, it is in Baghdād where the speech patterns of the various communities diverged most clearly. That of the Jews (J) before their emigration presented certain analogies with the dialect used by the Christians and on the other hand differed from that of the Muslims (M) in various essential points. On the plane of phonology the following correspondences between the speech of the Muslims (M), that of the Jews (J), and classical Arabic (C) may be observed: (C) kāf: (M) g: (J) k; (C) kāf: (M) š (in certain defined situations); (J) k; (C, M) r: (J) š (for a large number of people); to (C) l there often corresponds in (J) t, where the vowel is present (M) / but (J) l. (C) ū and ū merge in (J) ū: M keeps a distinction between the two sounds but with a distribution different from that of (C): (M) occasionally equals ū or ū to (C, J) a; more often than (M), (J) has -ā corresponding to (C) -ā; equally, (J) demonstrates the īmāla [q.v.] of ā that is unknown in (M); some differences in syllabic structure and accentuation may be illustrated by the following forms: (M) ẓabbī “my friend, ābī “my room”: (J) ẓābī, kubbī. On the plane of morphology, the most outstanding items concerned conjugation. For the perfect the suffixes were: (M) sing. i. -t, 3.ī; plur. 2.ī, -t, at; 3.ī: (J) -t, -tu, -tum, -u; for the unattached pronouns, compare (M) sing. 1. ānī, 3.ī: hūwā, plur. 1. nūn, 2. nīn, 3. humma: (J) ānī, hūwā, nūnā, nīnī, hummī; suffix pronouns: (M) sing. 1. -ī-ta, 2. m. -ī-t, 3. m. -ī-ta, 1. f. -ī-ba, 2. m. -ī-fa: (J) -ī-ta, -kā, -nī, -nī-t, -tūm. The feminine ending was (M) -āt but, frequently, (J)-i; to obtain the ānātina suffix the suffix -āt was added in Baghdād (M), -īnī in Baghdād (J). Lastly we must note the difference in value of the verbal prefix da- which constituted the mark of the jussive and the progressive present for (M), but only the jussive for (J), (M) utilised for the present the verbal prefix bād(ā), (M) had also, less frequently, a form gād for this purpose). On the lexical plane the following are particularly noteworthy: (M) batshīr “tomorrow”; (J) khādī; (M) ḥūway “much”; (J) kīf(ū); (M) ẖnā “here”; (J) hōnī.

In the Maghrib, although the phenomenon is not universal, Jewish speech forms which differ markedly from those of neighbouring Muslims were frequently encountered. At Fez for example, distinguishing features were numerous and important. The following, in particular, are noteworthy: the pronunciation of kāf (M k), t, ā (; ū in association with an “em-
phatic") of גים and גיו respectively; the form of the 3rd pers. fem. sing. of the imperfect in CCVC-t (קֶבֶל) identical to the 1st and 2nd pers. (M CVCCVt הקֶבֶל), the conjugation of an "unvoiced" verb in the perfect without the element -ו before the flexional ending (M בָּבִית, J בָּבִית); the perfect -CVCC- of the imperfect (יסָכִי "he is entering"); for the personal pronouns, the forms of the 1st pers. youna (after a vowel) and the alternating forms in -ן for the 3rd pers.: וָנוֹה and בָּינוֹ, נָהוְיָ and יָהוּ, נומָה and יומָה; the running together, in the form הנין, of the 2nd pers. sing. masc. and fem. pronouns; as far as lexicography is concerned, the use of דָּו "to see" (M שֵׁה). It must be added that the Jewish speech form used, in current speech, derived verbal patterns with the prefix או- to express the passive, and acknowledged a form with the prefix ה- with lengthening of the theme vowel: שִׁמַעְתִי.

Information about the speech forms of Jews in other Moroccan cities is rare, but one might note at Marrakesh the same assimilation of the prepalatal fricatives to the corresponding sibilants, i.e., כ for גים, ש for גיו, and the same treatment of the sibilants and palatal fricatives to the corresponding sibilants, but this time, as in some Tunisian areas, one noted once more the assimilation of sibilants and palatal fricatives to the corresponding sibilants, except in conjunction with "emphatics" which corresponded, accordingly to k, s, כ and ש, when articulated phonemes. To M שֵׁה it corresponded, according to context, either a lengthening of the adjacent phoneme. The voicing of J had reduced the former כ to כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ כ 짾
their linguistic influence had operated with much greater force on the Muslims than on the Jews. The clearest example is that of 'Irāk, where Muslim speech is of the Bedouin type, closely related to that of the nomads in lower 'Irāk, whereas Jewish speech was clearly allied to that of the ancient cities of upper 'Irāk, free from Bedouin characteristics. In some Maghribi towns also, the unvoiced articulation of $kh$ distinguished the speech of Jews from that of the Muslims who pronounce it like the nomads. This is so in Tripoli, Oran, Sidi Bel Abbes, etc.
b) Developments particular to Jewish speech forms may, on the other hand, have been provoked or precipitated by cultural contacts alien to or less intense for the Muslims. Doubtless there are particular contacts, maintained with more or less facility according to the period, between Arabic-speaking Jewish communities of nearby or relatively distant regions: the links between the Jews of Algiers and Tlemcen can perhaps explain the use by Jews from Algiers of the form $dābā "now", a western form not used by the Algiers Muslims. But the most decisive contacts, in known cases, seem to have been with non-Arabic speaking groups. Thus in the Maghrib the influence of Spanish-speaking immigrants operated, more strongly in the west than in the east, and was responsible notably for the introduction of a number of elements which in the few cases which it has been possible to study, seems to have been noticed in the speech of Maghribi Jews, Berber speakers, incidentally, as well as Arabic speakers. This deterioration is not everywhere, as is frequently stated, a lisp, the reduction of palatal to alveolar fricatives. Certainly this is the case in the speech of Fez or Marrakesh, and a tendency in this direction had been noted at Algiers. But it is the opposition, be it perhaps also at least partially for certain phonetic phenomena such as the treatment of sibilants.

Furthermore the influence of foreign colonies in Arab countries has often been more decisive for the Jewish community. Thus in North Africa French, which moreover finally supplanted Arabic almost entirely in some strata of the Jewish population, to a greater or lesser extent according to the time, had contributed in numerous instances to the changing of the Jewish speech forms, not only by the addition of a large new vocabulary, but also by the model it provided for new syntax patterns. On the phonetic plane, for example, a weakening of the "emphatics" or even their replacement by the corresponding simple consonants, as well as the back pronunciation of $r$, was common amongst the Moroccan Jews (Toghda) or those of certain Tunisian cities. The various ethnic groups, often taking up residence at different periods, may come from separate regions with linguistic habits already differentiated. An obvious example is that of the Christian population of Baghda'd which seems to have been made up largely of relatively recent immigrants from Mosul. This fact is reflected in their speech pattern which is of the sedentary type, similar to but not identical with that of the Jews whose arrival in Baghda'd took place at a very much earlier date, but very analogously precise to that of Mosul. (As has been pointed out above the speech of the Muslims is of the "Bedouin" type.) In this regard, the case of Tunisian speech patterns is also striking. All those of the Jews of the period of assimilation of the interdentals to their corresponding dentals, whereas the distinction is maintained in all speech patterns of Muslims, except at Mahdia. This last type doubtless represented the old koine of Kayrawān. Now it certainly appears that the Kayrawān area was the centre from which numerous colonies of Jews were dispersed to the Tunisian cities. It is interesting to note also from this same point of view, that the speech of the Jews of Tlemcen and Oran seems to have been of the same type as that of the Msirda and Trara hill Muslims, whereas that of the old sedentary Muslims of Tlemcen belongs to a different type.

These linguistic particularities of certain groups of Arabic-speaking Jews have, in general, no common underlying features, except that of being speech patterns related to old urban dialects in contact with dialects which have occasionally been "Bedouinised", and which have evolved in relatively autonomous forms. The traits which were most commonly cited as being characteristic, at least for the Maghrib: change from $h$ to $kh$ or velarized $k$, palatalization of $h$ ($k>tkh$) apart from the fact that they are sporadic in no way specifically Jewish; they arose from phenomena spread over vast areas, where they concerned Muslims equally. (See art. 'Arabiyya: the Maghribi dialects). In the same way the pronunciation $gh$ of $r$ and the weakness of $h$ are frequent amongst the oldest settled peoples. More characteristic, however, is the deterioration of the sibilants which has often been noticed in the speech of Maghribi Jews, Berber speakers, incidentally, as well as Arabic speakers. This deterioration is not everywhere, as is frequently stated, a lisp, the reduction of palatal to alveolar fricatives. Certainly this is the case in the speech of Fez or Marrakesh, and a tendency in this direction had been noted at Algiers. But it is the opposition, be it perhaps also at least partially for certain phonetic phenomena such as the treatment of sibilants, which has been ascertained among other Moroccan Jews (Toghda) or those of certain Tunisian cities (Tunis or Sousse for example). What is in question, therefore, is the tendency to assimilation of the two series which is produced according to different patterns in the various speech forms concerned. It is possible that there may be a characteristic of a particular group of Jews which was dispersed across the Maghrib. It seems, however, more realistic to see a sort of Spanishness which the Spanish-speaking immigrants introduced, as people with prestige, in the course of their Arabization.

Private language. A form of slang used by Jewish traders and artisans was spread across the whole area. It was normally called $īdašānī from the Hebrew word meaning "tongue, language". It is sometimes called from $yāzārānī which in the Bible is applied to the people of Israel. This slang was based on the utilisation of a basically Hebrew vocabulary in accordance with completely Arabic morphology and syntax.

Written language. The majority of the Arabic-speaking Jewish communities used Arabic as a written language (by means of Hebrew characters provided where necessary with diacritical marks). This use, which often depended upon a linguistic level superior to that of the spoken language, is not to be confused with the variety of Middle Arabic called Judeo-Arabic (see below under ii). At least in the few cases which it has been possible to study, in the absence of a more complete record, it was a question of using the local dialects, often purified of what was most strictly characteristic of them, taking as a general norm the Muslim processions of large cities. For instance, in the Maghrib the confusions between $sin, sād$ on the one hand, and $dāim, āsim$ on the other, and again between $bād$ and $hamza$, were avoided because these confusions are particular to certain forms of speech and, moreover, felt to be more or less ridiculous changes for the worse. In the same way an effort to restore $h$ could be noted everywhere, leading at times to hyper-correction. On the other hand the dental $n$ was rarely distinguished from the interdentals, since few urban speech forms, Jewish or Muslim, had retained this distinc-
tion. Often these kinds of koine had their own characteristics, absent from all or most Jewish speech patterns, and appeared as archaisms; thus to take as an example a koine current at least throughout the eastern Maghrib, one could see in it the distinction, relatively rare in the Jewish speech forms of this region, between the second persons masculine and feminine singular of the perfect, the formation of feminine plurals for adjectives in -at, the use of the relative 'id (read as 'adi), of the adverb 'aha, "thus, like that", of the conjunction 'an (read as an), at times 'an (read as sn), "ill", of the preposition mil (mat), "as", etc.

ii. Mediaeval Judaeo-Arabic.

Judaeo-Arabic (= JA) as used by mediaeval Arabic-speaking Jews in their writings, mainly in those written by Jews for Jews, especially in the first half of the second millennium A.D. is one of the main branches of Middle Arabic (= MA; see 'ARA-BIYYA (3)). Since Jews, like Christians, were less inclined to use the Classical language in their writings than their Muslim contemporaries, their writings are especially apt for the study of MA. Like MA texts in general, JA writings are not written in genuine MA vernacular, but in what may be styled "MA Literary Standard", exhibiting a whole range of styles with infinitely varied mixtures of classical and MA elements. Accordingly, the phenomena characteristic of (MA in general and) JA (in particular) have to be collected from deviations from classical features. Yet even among these deviations one has to distinguish carefully between genuine MA and pseudo-correct (including hyper-correct) features. The latter are original MA forms which were "corrected" because of the author's desire to write classical Arabic. As a result of these "corrections", however, non-existent forms came into being; these corrected forms were, as a matter of fact, neither classical (because the author, lacking sufficient knowledge of classical Arabic, did not succeed in forming the intended classical feature) nor living vernacular (because the author had "corrected" them).

As to the linguistic character of (MA in general and) JA (in particular), it already clearly exhibits all the structural peculiarities that characterize modern Arabic dialects. Perhaps the most important event in the field of phonetics was the change in the nature of the vowels, partly, at least, caused by the accent becoming strongly centralized: they became more rounded. This was again liable to change and elimination. Final short vowels have disappeared (this being one, but not the only, reason for the disappearance of cases and moods). In the sphere of the consonants the most conspicuous change is the weakening and disappearance of the glottal stop. As to the linguistic structure, so far as such different and intricate features may be reduced to a common denominator, the most conspicuous deviation from classical Arabic was that MA detached itself from the syntactic type of MA and instead approached the analytic type, which generally indicates one concept by one word. The most striking outward sign of this phenomenon is the disappearance of the mood and case endings. The status constructus has been somewhat reduced. The dual is often replaced by the plural, and the relative pronoun allāhu has become invariable (in many cases apparently being a classical spelling for vernacular 'allāh, which is very rare in MA texts). The differences between relative clauses after determinate and inde
terminate antecedents, strictly maintained in classical Arabic, are blurred. Asyndetic clauses occur in every syntactic environment, both in coordination, especially after verbs indicating movement, and in subordination, particularly in object clauses. Indirect questions often take the form of conditional clauses. The most frequent negation is mā. The feminine plural is widely replaced by the masculine, and the passive, formed in classical Arabic by internal vowel change, by reflexive verbal forms. The most far-reaching changes have affected the numerals. Moreover, the fixed and accurate style of classical Arabic is largely replaced by an inconsistent and careless language.

Despite the basic linguistic similarity of JA and other branches of MA, there were important differences between them, though mostly not linguistic distinctions proper: Jews, as a rule, wrote Arabic in Hebrew characters, dealt almost exclusively with Jewish topics and made use of Hebrew (and aramaic) phrases, thus making their literature virtually unintelligible to gentiles. One has the feeling that Jews themselves regarded JA as distinct from other forms of MA, as one may infer from special literary traditions in JA literature.

Bibliography: The general background of JA and its main linguistic trends are dealt with in
The written language used by the Arabic-speaking Jews during the first centuries of their incorporation into Muslim civilization is that designated "Middle Arabic". [ Cf. 'ARABIYYA, and JUDAEO-ARABIC (LANGUAGE)]; at its various stylistic levels, this idiom does not constitute a deliberate and systematic break with the rules of "Classical" Arabic; free recourse to the dialectal is very rarely encountered among the Judaeo-Arabic writers of the Middle Ages. However, the rift between the Jewish minority and Muslim culture, which was accentuated from the 9th/15th century onwards, resulted, especially in the Maghrib, in the loss of the ability to understand the oldest texts in written Judaeo-Arabic. Some continuity of the literary tradition is barely affirmed only in the Yemen, a Muslim environment with a geographical area more impervious to external influences than the rest of the dār al-islām, and where there was never any sizeable settlement by Jews expelled from Spain. This continuity was no doubt due to the relatively small divergence between "Middle Arabic" and the spoken language and the conservatism and integration of the group concerned, bearing in mind the limits set by the irreducible differences of belief and the social repercussions resulting from them.

The rift between the Islamic literary tradition and the Arabic-speaking Jewish minorities did not put an end to the latter's use of Arabic as a means of literary expression. However, the literary output in Judaeo-Arabic in the course of the last five centuries differs, except to some extent in the Yemen for the reasons indicated above, from that of the early period (4th/10th-9th/15th centuries) in two respects, giving it a radically new character in relation to the former situation. On the one hand, the language used has a dialectal base, although it is too conventional to reflect faithfully the living speech in use in the many different areas of Arabic-speaking Jewish diaspora. On the other hand, this literature was produced solely in answer to the needs of the less educated strata of the population, whether the work in question is liturgical or paraliturgical poetry (epithalamia, balads etc.), religious instruction, edification, or, more recently, entertainment and general information (in the case of poetry there is a need for study of its formal relationship with vernacular poetry by Arabic-speaking Muslims; nothing significant has been done in this field). Henceforward the culture of the scholars was entirely in Hebrew; in this respect, it can be said that Judaeo-Arabic dialectal literature is essentially "popular", even in the case of a version, based on a mediaeval Hebrew translation, of a "classical" work, originally written in Arabic, such as the "Duties of the Heart" by Babya Ibn Pakūd. In short, despite its relative poverty and insignificance, this Judaeo-Arabic "popular literature" reveals some characteristics in common with the Judaeo-Spanish and Judaeo-German literatures, richer, more abundant and of a cultural importance far above that of their poor relation though they are. The whole spectrum of Judaeo-Arabic writing of the earlier period, however, though of greater cultural range, but most of the time lacking in aesthetic preoccupations, cannot be classified as literature in the strict sense of "belles lettres".

Given these conditions it is difficult to speak of "the history of Judaeo-Arabic literature". Therefore the present summary will be limited to recording succinctly, albeit with many omissions, the works composed in the Judaeo-Arabic literary language, mainly theological and philosophical, as well as devoting some space to the other disciplines: exegesis...
and biblical philology, ritual legislation and casuistry. The most important editions of texts will be indicated. References to works dealing with the popular literature in dialect will be included in the selected bibliography. For convenience and very schematically, even at times arbitrarily, the writings mentioned will be grouped under four headings: theology and philosophy; Hebrew philology and biblical exegesis; law and rites; miscellaneous. On the subject of the authors, and the works cited in general reference should be made to the paragraphs of M. Stein'schneider's old, but still fundamental and indispensable repertory, *Die arabische Literatur der Juden (ALJ)*, Frankfurt 1902 (republished Hildesheim 1964); to lighten the bibliography, reference will rarely be made (with the exception of the publication of texts) to information given in this work and in G. Vajda's *Jüdische Philosophie (Bibliographische Einführungen in das Studium der Philosophie, 19)* Berlin 1950 (*JP*, the figures referring to the corresponding issues).

The zenith of philosophical and theological activity among Arab-speaking Jewry was the work of Moses Maimonides (1135-1204), who was born and brought up in Andalusia: *Dašāt al-ḥaḍrīrīn*, "Guide of the Perplexed", ed. S. Munk, Paris 1856-1886, and with some additions, I. Joel, Jerusalem 1931; an edition transcribed and, when necessary, translated into Arabic by Hūsayn Atay is in the press in Ankara (1972); the complete text of his short treatise on logic, *Makābik fi sinā'a al-maḥmūk* (greatly influenced, as is all his philosophical thought, by al-Fārābī), which was discovered a short time ago by Mūḥābah Tūrke-Kūre, has recently been re-edited by J. Efros in *Proceedings of the American Academy for Jewish Research*, xxxiv (1966); corrections by L. V. Berman, in *JAOS*, lxxviii (1968), 340-2; see also the same author, *ibid.*, lxxix (1969), 106-11; a fragmentary, and probably apocryphal, treatise, ed. H. S. Davidowitz and D. H. Baneth, *De Beatitudine Capita Duo R.* Mori b. Maimon adscripta, Jerusalem 1939; cf. the article IN MAYMŪN, supra; G. Vajda, *La pensée religieuse de Moïse Maimonide*: uniditi ou dualité ?, in *Cahiers de Civilisation Médicale*, ix (1966), 29-49. His contemporary, Yosèf Ibn Ḥāqīn, who almost certainly never left the Maghīb (he should not be confused with Joseph Judah, a disciple of Maimonides, cf. D. Z. Baneth, *Tesoros de los Judíos Sefardies*, viii (1964), 11-20, also left important works, still not fully investigated: *ALJ*, § 170; on his ethical treatise *Ṭibb al-nafṣ*, see A. S. Halkin, *Classical and Arabic Material in Ibn ʿAqnīn's Hygiene of the Soul*,...
in Proceedings...., xiv (1944), 17-76; idem, in Harry A. Wolfson Jubilee Volume III, 93-111 (in Hebrew), and B. below. The Judaeo-Arabic work of Abraham (1327), the son of Moses Maimonides, is also considerable: AJL § 159: the remnants of his work which is at the same time both ritual and theological-spiritual (in sympathy with Sufism), Kifayat al-Salihin, have been edited by S. Rosenblatt, The High Watermark of Compatibility, AJL, New York 1927 and Baltimore 1938; cf. B and C and S. D. Goitein, Abraham Maimonides and his Pietist Circle, in Jewish Medieval and Renaissance Studies, 143-64; Gerson D. Cohen, The Soteriology of R. Abraham Maimuni, in Proceedings...., xxxv (1967), 79-88 and xxxvi (1968), 33-56. On a short treatise on spirituality composed by "Obadayah, son of Abraham" (AJL § 161), see G. Vajda, The Mystical Doctrine of Rabbi "Obadayah, Grandson of Moses Maimonides", in Journal of Jewish Studies, vi (1955), 213-25. Dwelling no further on other texts, little known and studied, of more or less Stoic and Neoplatonic inspiration (cf. F. Rosenthal, A Judaeo-Arabic Work under Sufic Influence, in Hebrew Union College Annual, xv (1940), 433-84), we will mention only three authors from Spain, and, for the second half of the 7th/13th and the first two-thirds of the 8th/14th century: Moses ben Joseph Halevi, cf. G. Vajda, Un champion de l'aviennisme, in Revue Thomiste, 1948, 480-508; Moses Ibn Crispin: AJL § 127, and G. Vajda, A propos de l'avrovokisme juif, in Sefarad, xii (1952), 3-21; Joseph ben Abraham Ibn Wajār of Toledo, an important treatise on the harmony of philosophy, astrology and the Kabbalah: AJL § 130 and G. Vajda, Recherches sur la philosophie et la Kabbale dans la pensée juive du moyen âge, Paris 1962, 116-297; Judah ben Nissim Ibn Malka, a Moroccan who expounded his ideas in the form of commentaries on the "Book of Creation" and the "Midrash of Rabbi Eliezer", which was believed to be very ancient: AJL § 134; G. Vajda, Judah ben Nissim Ibn Malka, Paris 1954 (cf. idem, in Homenaje a Millas Vallicrosa, ii, Barcelona 1956, 483-500). The philosopher Ibn Kammūna [q.v.], although he remained a Jew, belongs more to the history of Islamic philosophy.

The Karaite branch of Judaism in its turn produced theological treatises in Arabic in which the influence of Mu'azzazite halām [q.v.] prevails. The principal author is Yōšīf (Yūsuf) ben Abraham al-Baṣtīr (first third of the 5th/11th century): AJL § 50; P.J. 7. 15, 21, 22, 25; Z. Anorki, Ibn al-Ḥāṭem and the Chronology of Joseph al-Ṣāliḥ the Karaite, in Journal of Jewish Studies, viii (1957), 71-81; G. Vajda, La démonstration de l'unité divine d'après Yūsuf al-Ṣāliḥ, in Studies in Mysticism and Religion presented to Gershon D. Cohen, Jerusalem 1960, 285-345; idem, L'unité divine de la loi divine dans la pensée juive, in REJ, 1963, 152-201. Of the work of his disciple, Joshua ben Judah, little has been preserved in Arabic (these fragments, moreover, pose unresolved questions of authenticity); the bulk of it has come down only in a Hebrew version: AJL § 51; P.J. 7. 22. Cf. also B and C.

B. Philology and Biblical Exegesis. The all too brief outline given here may be amplified from H. Hirschfeld's concise manual, Hebrew Grammarians and Lexicographers, Oxford 1926 and above all with the help of the introductions to the scholarly editions cited below. One of the first of the Judaeo-Arabic authors who wrote on these disciplines is Judah Ibn Kuraysh of Tahert, around 900; his Rīsāla to the Jews of Fes, in which he compares Hebrew, Aramaic and Arabic, has been edited by J. I. L. Bargets and D. B. Goldberg, Paris 1857: AJL § 75; G. Vajda, La Chronologie de Juda Ibn Quraysh, in Sefarad, xiv (1954), 385-7. Sa'dyā (supra, A) produced an immense oeuvre, which has been published in part only and even more incompletely studied, in his translations of the Hebrew Bible (his versions influenced those of the New Christians and Samaritans) and commentaries on it, and as the founder of the systematic grammar and lexiology of Hebrew; for the bibliography prior to 1920 consult H. Malter, Saadia Gaon, His Life and Works, Philadelphia, 1921 (repr. 1969); an important step in research is marked by M. Zucker's work in Hebrew, with a summary in English, Rau Saadyy Gaon's Translation of the Torah, New York 1959. A complete if not critical edition of his annotated translation of the Psalms was produced by Yosef Kāfīb, Jerusalem 1966. As Sa'dyā's contributions to the grammar and lexicography of Hebrew were eclipsed by the work of the Judaeo-Arabic philologists in Spain, they were only fragmentarily preserved; this aspect of his work has been principally studied for about forty years by S. L. Skoss (d. 1953) and N. Allony; here we will cite only S. L. Skoss, Saadia Gaon, The Earliest Hebrew Grammarians, in Proceedings...., xxi (1952), 75-100 and xxii (1953), 65-90; N. Allony, Ha'Evron, Kitāb usūl al-dhīl al-ibra'īn, Jerusalem 1969. Samuel ben Hofni (d. 1304), head of the academy in Bagdad, wrote a commentary on the Pentateuch: AJL § 65.15.

The contribution of the 4th/10th century Karaites [q.v.] to Hebrew Lexicography and biblical exegesis occupies an important place in the scholarly output in Judaeo-Arabic. In lexicography, the Diʾāmāt al-alfāz, compiled by David ben Abraham al-Fāṣ (who seems to have lived mainly in Palestine), has been edited in exemplary fashion (unfortunately not in its most extensive reduction) by S. L. Skoss, 2 vols., New Haven 1936 and 1945. Strongly marked by polemics against all doctrinal adversaries of the Karaite sect, the exegetic work of Salmōn ben Yerūḥam and Yefet ben ʿElī (second and last third of the 4th/10th century respectively, but they had some precursors, both identifiable and anonymous, which lack of space makes it impossible to mention here) embraced a large part if not the whole of the Hebrew Bible; the edited texts and, with greater reason, the parts satisfactorily studied, cover only a small portion of the fairly plentiful material which has been preserved: AJL § 40, 44, which may be extended by the notes in G. Vajda, Deus Commentariorum Karaitarum Sur l'Ecclesiastique, Leiden 1970. Of the Arabic-speaking Karaite exegetes of later centuries, we will mention only ʿElī Ibn Sulaymān (10th/12th century), who does little more than abridge his precursor's commentary. His most extensive redaction was edited by S. L. Skoss, Philadelphia 1928.

The application to Hebrew grammar of the theory of trilitral roots, borrowed from Arabic grammarians, opened up a new period in the history of Hebrew philology; the Arabic-speaking authors who brought renown to the discipline between the end of the 4th/10th and the middle of the 6th/12th century were almost all Jews from Spain; most important are: Judah ben David (Abh Zakariyya Yaḥyā); AJL § 75; Jonah (Abu ʿI-Walīd Marwān) Ibn Danān [q.v.]: AJL § 81; Isaac Ibn Bārūn, AJL § 97; P. Wechter, Ibn Bārūn's Arabic Works on Hebrew Grammar and Lexicography, Philadelphia 1964; Saʾdīyā Ibn Danān (d. Granada 1485) one of the last
to write in Judaeo-Arabic in the West, also made a contribution to lexicography: *ALJ*, § 139.

What remains of the exegetic works of the brilliant Arab school in Spain is quantitatively of less importance. Here we will mention Isaac b. Judah Ibn Ghiyath (Ghayyath), whose commentary on Ecclesiastes, published under the name of Sa'adya by Y. Kafid (Nissof Megiloth, Jerusalem 1962, 161-196), is above all philosophical in character: *ALJ*, § 90.

Abraham Maimonides wrote a full commentary, for the most part preserved, on Genesis and Exodus, edited by E. Wiesenberg, Letchworth 1959. Finally let us mention the exegetic and lexicographic work of Tanbūm ben Yūsif ha-Yerushalmi (second half of the 7th/13th century): *ALJ*, § 174; the first part of his *al-Murghid al-Käfi*, a dictionary of the Mishnah and of Moses Maimonides’ Hebrew "code", was published by B. Toledano, Tel Aviv 1961, an edition continued by H. Shy (Shay), *Lëdonenu,* xxxiii (1968/9), 196-207, 280-6.

C. Laws and Ritual. — The need to give Arabic-speaking Jews access to the rules and instructions concerning the observances prescribed by religion and the conduct of everyday life, including the rules of law applicable by the courts of scholars within the limits of internal autonomy allowed to the ahl al-dhimma, frequently led spiritual leaders, Rabbanite and Karaitc alike, to employ Judaeo-Arabic in a field which is exclusively Jewish, liturgical directives, commentaries on the Talmud, more or less elementary manuals concerning the various aspects of Jewish law, contractual, matrimonial and successional rights, rituals for celebrating the feasts, food regulations, and finally the “consultations” (*She’ivot u-seghivot*, “Responsa”; cf. the *fatawa* in Islam). We shall mention only a small number of these texts (in addition to *ALJ* there are fuller notes, already no longer entirely up to date). In S. W. Baron’s *A Social and Religious History of the Jews*, vi (1958), 355-61.

Sa‘adya found it expedient to accompany his recension of the Jewish liturgy with instructions in Arabic (Siddah, ed. I. Davidson S. Assaf and I. Joel, Jerusalem 1941); what remains of his treatise on the laws of inheritance, *K. al-Mawdih*, has been published by J. Müller, *Oeuvres complètes*, vol. IX. Kétib ben Yassilah, a native of Kayrawân, it seems, compiled his *Kitab al-Sharh to the* *Kinh Sattah*, an account of the penitential precepts, towards the end of the 4th/9th century: *ALJ*, § 62, edition of the fragments preserved by B. Halper, *Book of Precepts*, Philadelphia 1915; an important complement in the paper of M. Zucker, *Proceedings...* xxix (1960/61), Hebrew section, 1-68.

Arabic fragments of works on casuistry and the Talmud by Nissim of Kayrawân (mid 5th/11th century: *ALJ*, § 59) are published and studied in the Hebrew work of Sh. Abramson, R. Nissim Gaon, *Libelli quinque*, Jerusalem 1965. The preserved fragment of a commentary, probably from the 6th/12th century, by a Morooccian rabbi on the talmudic “précis” by Isaac Ibn al-Fāṣi (d. 1203) is very little remaining in the original text of what al-Fāṣi himself wrote in Arabic: *ALJ*, § 95, has been published in facsimile by J. Leveen, *Zekaryah b. Judah al-Agmati, A Digest of Commentaries on the... Babylonian Talmud, London 1961*. The most comprehensive and probably the most important work in this field is that of Moses Maimonides, who also composed a "Book of Precepts" (ed. M. Bloch, Paris 1880), a commentary on the *Mishnah* (published in complete form by Yosēf Kafid, Jerusalem 1963-68), just as he drafted his letters and responses in Arabic when they were destined for Arabic-speaking correspondents; the most complete and recent edition of the responsa is that of Y. Blau, *R. Moses b. Maimon Responsa, Jerusalem 1957-61*; the response of his son Abraham, also for the most part drafted in Arabic (in the East, Abraham b. Moses ha-Nakna, perhaps, drafted the first part earlier by A. H. Freimann and S. D. Goitein, *Abraham Maimuni, Responsa, Jerusalem 1937*).

From the corresponding and highly developed Karaitc branch of this genre, most noteworthy is the great code of Abû Ya‘qûb Yûsuf al-Kirjissânî (mid-4th/10th century), which is also an outstanding theological treatise entitled *K. al-Anwar wa-l-marâkıb*, it has been largely preserved, and edited by L. Nemoy, *New York 1939-43: ALJ*, § 43: P. J. 7, 12-14 (add. G. Vajda, in *REJ, cxx* (1961), 211-57 and cxci (1963), 7-74). The ritual code of Yûsuf al-Baṣrî (K. al-Istibâr), as well as his *Masâ‘û, of which sizeable portions are extant, have remained unpublished and unstudied. A small part only of a much more recent treatise has been published: al-Murghid by Samuel ben Moses al-Maghribi, completed in Cairo in 1434: *ALJ*, § 199; F. Kaufmann, *Traktat über die Neulichtbeobachtung...*, Leipzig 1903.

D. Miscellaneous. — As was observed at the beginning of this outline, the Arabic-speaking Jews made little use of their “vernacular”, which to a greater or lesser degree was in line with the written language, for those genres which are covered by the term “literature” in the narrow sense, poetry, and philosophy; moreover, they hardly ever used it in compiling historical works, a genre with little popularity which was relatively neglected by the Jews of the Middle Ages. The exceptions are few and without much difficulty can be attributed to theological preoccupations, even if those are blurred or to some extent have been lost sight of. Thus it was with a view to reaffirming belief in divine justice as much as to divert the Jewish public from reading Muslim books that Nissim b. Jacob of Kayrawân (said to be Ibn Shāhtn, cf. supra C) composed a treatise on consolations, made up of edifying narratives, probably in imitation of Arabic works on the theme of al-faradî ba‘d al-shidda, but composed of material borrowed from the Jewish Aggada and from universal folklore. As well as a language which deviates appreciably from the norms of the literary idiom, this composition presents difficult problems: in the absence of more detailed research, Sh. Abramson’s discovery of versions that differ from a manuscript long considered to be unique has confused rather than clarified these. The Leningrad manuscript forms the subject matter of a valuable if not definitive edition by J. Obermann.

Moses Ibn Ezra, one of the most brilliant Hebrew poets of Spain (around 1070-1140), composed two works in Arabic: al-Muḥādara wa 'l-mudhakara, in type a book of adaab but with Hebrew poetry as its subject, and al-Ḥadda fi ma'na 'l-muqadda wa 'l-muḥādara, which is reminiscent of ʿilm al-bayān; it is likely that the author's aim in these works was to enable biblical exegesis and national poetry in Hebrew to benefit from the attainments of Arab rhetoric and poetics as much if not more than to amuse the reader while instructing him; neither of these works has yet been published in entirety, although they have been the subject of several scholarly studies: ALJ, § 101; A. Diez Macho, Mols Ibn 'Ezra como poeta y preceptista, Madrid-Barcelona 1953.

The exhortation to study written by Mūṣā Ibn Tūbī of Seville (first half of the 8th/14th century ?) in highly popular language, is a rhymed composition of 70 lines, hence the title al-Sab'īniyya; in spite of its acceptista, Madrid-Barcelona 1953. An outline of the whole, Judaeo-Arabic Literature, was written by A. S. Halkin for the collective work: The Jews, their History, Culture, and Religion, by Elisha S. Finkelstein, New York 1960, 112-47. The collection of pieces in the original language, H. Hirschfeld, Arabic Chrestomathy in Hebrew Characters, must be used with care because of its many inexactitudes. References may also be made to the encyclopedia articles (especially J.E and Encyclopaedia Judaica) concerning the authors mentioned above. Of the fairly numerous scholarly works touching more or less on the early Judaeo-Arabic literature, we shall cite here only S. Poznanski, The Karaite Literary Opponents of Saadia Gaon, London 1908 (extract from JQR 18-20, 1905-8, repr. Karaite Studies, New York 1971, 131-223); J. Mann, Texts and Studies in Jewish History and Literature, 1, Cincinnati 1931, ii, Philadelphia 1935, repr. 1972. For popular literature in the various Judaeo-Arabic forms of speech, we shall limit ourselves to some references only: W. Bacher, Die hebräischen und arabischen Poesie der Juden Jemens, Budapest 1910; idem, Zur neuesten arabischen Literatur der Juden, in Zeitschrift für hebräische Bibliographie, years 1903, 1908, 1911; S. D. Goitein, Jewernica, Leipzig 1934; idem, Travels in Yemen (ed. of the account written in Judaeo-Arabic of the journey of Joseph Halevy to the Yemen, by his guide Hayyim Habgha[h], Jerusalem 1941; the bibliographic essay in Hebrew by Y. Ratzaby, "The literature of the Jews in Yemen", in Kirjat Sepher, xxviii (1952/3), 255-78, 394-409, and cf. ibid., xxxiii (1957/8), 111-7, xxxiv (1958/9), 109-16; Eus. Vassel, La littérature populaire des Israélites tunisiens, Paris 1904-7; R. Attal, Aperçu sur la littérature populaire à ce jour: ALJ, § 131; Tunisians, in Ben-Zvi Institute Studies and Reports, iii, Jerusalem 1960, 50-4; David Cohen, Le parler arabe des Juifs de Tunis, Paris 1964; L. Brunot—E. Malik, Textes judéo-arabes de Fès, Paris 1939; H. Zafrani, Pédagogie juive en terre d'Islam, Paris 1969; finally, there is a fair amount of bibliographic data in Abstracta Islamica (appendix to REJ) under the heading Judaeo-Arabica from 1936 onwards.

JUDAEO-BERBER. The Berber-speaking Jews of the Şheikh and Tamasghit regions had their own living dialects, and a folklore that was in no way inferior to that of their Muslim neighbours [see Berbers], as well as an oral traditional and religious literature of which unfortunately only a few vestiges remain. These have been collected recently by the author of the present article. Living in the valleys of the Atlas, in the Sous and on the borders of the Sahara (and in all likelihood in certain parts of Algeria and Tunisia), they formed small communities grouped in melahs and had been established there for centuries, or even one or two millennia. Today there is scarcely a trace of them. After Moroccan independence they emigrated to Israel en bloc. Setting aside the problem of the origin of these communities and the very controversial hypothesis concerning the "Judaizaten of the Berbers" (H. Z. Hirschberg, History of the Jews of North Africa, Jerusalem, 1965, two volumes in Hebrew, reviewed in the Journal of African History, viii/3 (1966)), it is important to note that until recent years Berber was one of the vernacular languages of the Jewish communities living in the mountains of Morocco and the south of the country. Most of these communities were bilingual (Berber and Arabic speaking); others seem to have been strictly Berber speaking, as at Tīfūn; of the latter category several isolated individuals, who had emigrated to Israel, have been discovered in Askhelon (on the geographic distribution of the Jewish communities in Morocco, notably in the Atlas and the Moroccan south, and on the internal migrations of their populations, see H. Zafrani, Vie intellectuelle juive au Maroc, Pensée juridique et Droit appliqué dans leurs rapports avec les structures socio-économiques et la vie religieuse, doctoral thesis, typed, 210-14; on the Jews of the Dadès and the other Berber speaking communities, see ibid., 177 ff., and by the same author, Pédagogie juive en Terre d'Islam, Paris 1969, 33-38). In the valley of the Todhâ (Tinghir), in the regions of Tiznit (Wijian, Asaka), of Warzaat (Imini), at Ufran in the Anti-Atlas, at Illīgh and elsewhere, Berber was used by the Jews not only as a means of communication in the family, social and economic milieus and in contacts with the other ethnic and religious communities, but it also constituted, alongside Hebrew, the language of culture and traditional instruction used in the elucidation and translation of sacred texts, as had been the case of Judaeo-Arabic or old Castilian in Arabic-speaking Jewish communities or those of Spanish origin. Certain prayers, benedictions of the Torah among others, were said solely in Berber; this usage, as we shall see below, is attested in the Passover liturgy. Written and oral documentation has been collected of the folklore and the intellectual life of these Berber-speaking communities: some biblical texts in their Hebrew and Berber versions, liturgical cantos, festive songs which mark the peaks of Jewish life (circumcision, bar-mitzvah, marriage, etc.) and especially the Passover Haggada, the most important and precious piece in the collection. The latter is the subject of the greatest interest, for the unique importance of the linguistic and cultural traditions of a world that was too little explored when there was still time, a world belonging to a diaspora which had long been ignored and has now disappeared. (A
list of these documents was published by H. Zafrani,
Compte-rendu d'enquête, in JA, ccilijit (1964); others
were collected later in Israel itself. This Haggadah
is the integral Berber version of the liturgical com-
position which the Jews recite on the eve of Passover,
the basic theme of which is the story of the exodus
from Egypt, accompanied by the hallel (a group of
Psalms from CXIII to CXVIII) which are a part
of the liturgy for the high holy days and some other fest-
vaks). Like those in Judaeo-Arabic or old Castilian,
it is a traditional translation of the Hebrew text,
but it presents nevertheless some variants and nuances
of interpretation. The text was transcribed
recently (around 1959) in vocalized square Hebrew
characters at Tinghir in the valley of the Todgha
(where there is no other known manuscript of a Berber
script in Hebrew characters). Some morpho-syntactic
ambiguities and oddities which sometimes make understanding difficult are conse-
quences of the usual procedure of literal translation, being Berber calques
of the Hebrew text; the Berber recitation coincides
with the Hebrew original and follows the same
rhythm and melody. The language of this Haggadah is akin to Tama
tazagh, a group of Berber vernaculars
(here we should note the connection which South
Moroccan Jews make between Berber and “the
language of the Philistines”: the Hebrew
syllabification of the biblical texts is always rendered as brabar
in Moroccan Judaeo-Arabic translations; see H.
Zafrani, Pédagogie juive en Terre d’Islam, 153, n. 31); it is nevertheless characterized by composite traits
which make it difficult to assign it a specified
location; it presupposes the existence of a literary
language which is not the speech of a given group
or a specific period (see P. Galand-Pernet and H.
Zafrani, Une version berbere de la Haggadah de
Pesah, Texte de Tinghir du Todgha (Maroc), Paris
1970, Supplément au tome XII des Comptes Rendus

Bibliographie: Apart from the references

JUDAEO-PERSIAN, New-Persian written in
Hebrew characters.

i. — Literature

If we define as Judaeo-Persian literature strictly
"literary" works composed by Jews in the Persian
language but in Hebrew characters, then the first
fruits of such literary endeavours could have emerged
only when the Persian language had penetrated deeply
enough into the life of Persian Jews to become a
vehicle for their literary expression. This condition
for the birth and growth of a genuine Judaeo-Persian
literature seemed to have been fulfilled only during
the rule of the Il-khan dynasty over Persia, from
the end of the 13th/13th century on.

1. Early Judaic-Persian Documents.

Long before this period, however, evidence of the
infiltration and penetration of the Persian language
—always in Hebrew characters—among Persi-
speaking Jews is available. There have come to light
in widely scattered regions of the Eastern lands of
the Caliphate inscriptive sources, business letters,
and tombstone inscriptions such as the three stones
from Tang-i Azao about 200 kilometers east of Herat
with Judaeo-Persian inscriptions, incised in the year
A.D. 752-3; (according to Henning, though Rapp
disagrees); a fragment of a Persian business letter
of the eighth century found by Sir Aurel Stein at
Dandân-Üyîlk, near Khotan, in Chinese Turkestan
(Sin-Kiang), containing thirty-seven lines in Persian,
written in Hebrew characters by a Jewish merchant;
and those four signatures in Persian with Hebrew
characters by Jewish witnesses on a copper plate
referring to a grant for a Christian church on the
coast of Malabar, in the early ninth century, known
as the Quilon Copper Plate. A further proof of the
use of Judaeo-Persian as a vehicle of correspondence
is supplied by a Judaic-Persian Law report found
near Hormshir, the modern Avâz in Khūzestân,
written in the year 1020-21 as well as a Judaeo-
Persian document dealing with the sale of some
land, found in the region of Khotan, ascribed to
the year 1107. There is also a fragment of apologetics
in the British Museum (Ms. Or. 8659) going back
to the same period.

To the category of early Judaeo-Persian inscrip-
tions belong also those fifty-four Judaeo-Persian
tombstone inscriptions, accidentally discovered in
the mountainous region of Ghūrāstân, east of Herást
near the former capital of Fīrūzkūh. Those Judaeo-
Persian inscriptions with texts ranging from one
to eight and covering the period from about
1189 A.D. to 1216 A.D. contain, along with Hebrew
and Aramaic, many Persian names and terms. Frag-
ments of Persian letters in Hebrew characters sent
by the heads (Geonim) of the Jewish academies in
Baghdād in the 12th century to scholars in Hamadān,
then the seat of a rabbinical college, testify to the
ever-increasing use of the Persian language in Jewish
circles.

All these inscriptions and other literary records
can, however, hardly be classified as literature. It
was only from the 13th century on that Jews began
to create Jewish literary values through the medium
of the Persian language—after the fall of the Il-khan
—of the Persian language in their own Hebrew script.

This Judaeo-Persian literature, which was devel-
oped in many Jewish communities in the Persian
diaspora, encompassed three major fields: the
translation of the Hebrew Bible into Judaic-
Persian and lexicographical treatises connected with
it; the composition of original Judaeo-Persian poetry;
and the transliteration of classical Persian poetry into
Hebrew characters.

There can be no doubt that Persian Jews were
steadily engaged in the study and interpretation of
the Hebrew Bible. Fragments of biblical books written
or copied as early as the ninth century in Hebrew
—not in Judaeo-Persian—among them a manuscript
of the later prophets in Hebrew with Massoretic notes
from Yezid, and a commentary on Ezekiel pres-
erved in Leningrad with a Middle-Persian form of a
passive and a Judaeo-Persian Daniel text attest
to this.

The first Judaeo-Persian translation of the Penta-
teach in Hebrew characters became known as late
as 1556 and is attributed to Jacob b. Joseph Tavus,
a Jewish scholar from Persia, who apparently func-
tioned as a teacher at the Jewish Academy in Istan-
bul, established by Moses Hamon ([q.v.], 1450-1556). It
was published in Istanbul as part of the Jewish Poly-
glot Bible by Solomon b. Moses Mazal Tov, together
with the Hebrew original, the Targum and the Arabic
Tafsīr of Saʿādīyā Gaon.

This Judaeo-Persian product, the first printed
book in modern Persian of any sort, remained rela-
tively unnoticed at the time and failed to attract
the attention of scholarly circles. Only when, over
a century later, in 1657, the Tavus Pentateuch version
was transliterated from its Hebrew characters into
Persian characters by Thomas Hyde and incorporated
into the famous London Polyglot Bible of Bishop
Bryan Walton was an interest aroused in this new branch of Jewish-Persian literature. It was long believed that until then this Judaeo-Persian Pentateuch translation was not only the oldest, but also the sole literary achievement produced by Persian Jews. It became evident, however, that this Tavus Pentateuch translation actually represents the culmination of Judaeo-Persian Bible studies which had been going on for many centuries long before Tavus completed his own translation.

This assumption has been corroborated by early Judaeo-Persian Bible manuscripts, the oldest of which is a Pentateuch version of 1319 A.D., now in the British Museum, and by the systematic collection of Jewish-Persian Bible manuscripts at the beginning of the 17th century by the Florentine scholar Giambattista Vecchietti. The manuscripts he had recovered in the Jewish communities of Hamadan, Isfahan, Shiraz, Lâr and Yazd represented Judaeo-Persian versions of the Pentateuch and the Psalms and of all other biblical books, as well as books of the Apocrypha, all belonging to the early 14th century.

Despite the different origins of these Judaeo-Persian translations, they show a certain uniformity in style which leads to the assumption that they were the work of the same school of translators who flourished in the 14th and 15th centuries.

The authors of Judaeo-Persian Bible translations and lexicographical treatises such as Sefer ha-Me'ila or Agon and dictionaries show an astounding degree of familiarity with leading biblical and rabbinical authorities of the West, and, following faithfully the traditional method of Bible interpretation, utilized not only Targum Onkelos, Talmud, Midrash, Sa'adyâ, Gaon and Hai Gaon, but also Western commentators such as Rashi, Redak, Abraham b. Ezra and others.

The literary abilities of the Persian Jews found their most characteristic manifestation in the field of original Judaeo-Persian poetry. This new branch was opened up by the 14th century Jewish poet Mawlānâ Shahîn Shirazi, who dedicated his talents to the writing of Bible-centred poetry and who can be regarded as the first Judaeo-Persian poet. Under the influence of classical Persian poetry, inspired by a keen desire to promote a deeper knowledge of the Jewish past and imbued with a profound Jewish consciousness and loyal adherence to his religious heritage, Shahîn began to make the biblical narrative the topic of his writings.

His life work represents a poetical paraphrase, a reinterpretation of the Pentateuch, using the traditional epic style of the classical Persian poets. It is known as Sefer Shâhîn al ha-Torah, written in Persian with Hebrew characters.

Four distinct works of Shâhîn can be discerned: a Moses-nâma, a commentary to Exodus, Leviticus, Numbers and Deuteronomy (completed about 1327); an Aarschâ-nâma (completed about 1332), consisting of the story of Esther and Mordecai and the story of Shero and Mahzad, a typical Iranian love story; an Ezra-nâma, dealing mainly with the ascension and rule of King Cyrus the Great and the building of the Temple of Jerusalem; and a Genesis-nâma (completed about 1358), which includes the story of Yûsuf and Zulaykha.

In his poetical writings, Shâhîn has taken over the typical features of the Persian poetic art and applied the patterns, forms, technique, metre and language of Persian classical poetry, particularly that of Firdawsi and Nîzâmî, to his presentation of Israel’s religious heroes and events as told in the biblical narrative.

By selecting Jewish themes as the subject of his poetry and by celebrating the heroes of the Bible in a way typical of Persian classical poetry, Shâhîn has indeed produced the most typical literary monument of the centuries-long association of Jews with Iran. In the memory of Persian-speaking Jews all over the Eastern diaspora, Shâhîn is admired as “the Master Shâhîn of Shîrâz” (Mawlânâ Shâhîn Shîrâzî), and hailed as the founder of Judaeo-Persian poetry.

By writing his poetry in the Hebrew script, however, Shâhîn prevented his work from becoming known in Muslim-Persian literary circles and thus never gained admittance to the annals of Persian literature.

Two centuries later another Judaeo-Persian poet appeared in Shiraz, the birthplace of Shâhîn, in the person of ‘Imrânî. Inspired by Shâhîn’s poetical epic of the Jewish past, ‘Imrânî made the post-Mosaic period, the historical books of the Bible including Joshua, Judges, Samuel and Kings up to the time of David and Solomon, the subject of his poetical presentation. His major work, Fath-nâma (The Book of the Conquest), was composed around 1523; followed by Gandj-nâma (The Book of the Treasures), a free poetical paraphrase and commentary of the first four chapters of the Mishna treatise Pirâk ‘Abûdî (Sayings of the Fathers).

That type of Judaeo-Persian poetry was continued by Yahuda Lârî, of the city of Lâr; only a small part of his verses has been preserved, including Makkîn al-Pand (The Treasure House of Exhortation).

Persian Jews, far from living in a cultural vacuum in isolation, took also a keen interest in the literary and poetical works of their Muslim neighbours and shared with them the admiration for the classical Persian poetry of a Firdawsi, a Nizâmî, Rûmî, Sa’dî, Hâfiz, Dîmâf and others. In order to introduce selections of these literary products into the Jewish community they transliterated the Persian texts into the Hebrew script while retaining the language, metre and rhyme of the original Persian poetry. Through this remarkable process a new branch of Judaeo-Persian literature came into being.

Among the various types of Persian classical poetry, the romantic, the lyrical and the didactic, there have been preserved: Rûsraw and Shâhîn and Hajî Paykar (The Seven Images) by Nîzâmî (d. 1211); some poems of the Mathnawî by Dîlall al-Dîn Rûmî (d. 1273); some parts of the Gulistan by Sa’dî (d. 1291); the Divân of Hâfiz (d. 1390); Yûsuf and Zulaykha of Dîmâf (d. 1474); portions of the Divân of Sa’dîb of Isfahân (d. 1670) [etc.] and some others, all of which were made accessible in Hebrew translation and are preserved in various libraries in Europe, America and in Jerusalem.

Persian Jews evinced a lively interest also in the pictorial art and miniatures of their neighbours. In some of the Shâhîn and ‘Imrânî manuscripts and in those of the classical poetry in Hebrew translation, large coloured miniatures and illuminations of exceptional beauty have been incorporated. They could well be regarded as typical Persian pictorial art were it not for the Hebrew lines on each miniature, which lends it a distinct Jewish character. Whether this pictorial art was cultivated by Jewish artists, or whether the Hebrew written explanations alone were the work of Jews, cannot be established. Nor can it
yet be ascertained whether and if so where there existed a school of such Jewish artists.

In the 17th and 18th centuries, under the impact of the persecution of the Jews and the policies of the Safavid rulers, the literary productivity of Persian Jews was of a different genre. The literary output of that period mirrors the tragedy of Jewish existence. The torch of literary activity was carried on by a certain Bâbâ’ h. Lutf of Kâhkhâm and Bâbâ’ h. Farhâd, who wrote Kitâb-i Anâsî: The Book of the Events of the Forced Conversions of Persian Jewry to Islam, a chronicle composed in Persian but written in Hebrew characters, which deals in poetic form with the martyrdom of the Jews in the time of Șâh ʿAbbâs I and Șâh ʿAbbâs II and his successors.

5. Literary Activities of the Jews of Bûkhurâ.

In Bûkhurâ, where the Jews were not subjected to the persecution their brethren endured in Sařavîd Persia, there appeared Jewish poets and translators who began to create Jewish literature and poetry in their own Tadjîkî dialect. The most outstanding was Yûsuf Yahîdî (d. 1755), an exponent of biblical narrative. He wrote Muhâmmâs, an ode in praise and glory of Moses; Haft Birâderîn (The Seven Brothers), based on the Midrash of the martyrdom of the seven brothers and their mother; and bilingual and trilingual hymns honouring biblical heroes. He wrote also a commentary (tafsîr) to Megillat Antîkochus and translated many of the Zemîrât of Israel Najârâ into the dialect of Bûkhurî Jews, incorporated into the Judaeo-Persian song-books used until today.

Inspired by him, a school of Jewish poets in Bûkhurâ emerged, among them Benîmîn b. Mishâl, known also as Aminâ, who published Megillat Esther in Judaeo-Persian translation, in metric form and translated some poems of Ibn Gabîrûl [q.v.], such as Ashtarôk and Yîgadal, into Judaeo-Persian.

One of the finest poetical products in the Bûkhurî Jewish dialect of the end of the 18th century we owe to the Jewish poet Mollâ Ibrâhîm b. Abu’l Khayr. In his Khodåddâ he narrated the tragic story of a Jewish merchant by the name of Nathanîel (Kho- dâyddâ) who, refusing to become a Muslim despite all the promises and temptations of the ruler and his neighbours, died a martyr. In making this event the subject of his poem, the author gives an interesting picture of the religious and political conditions in which the Jews of Bûkhurâ lived in the second part of the 18th century under the rule of Emîr Ma’sûm (1785). This poetical work furnished at the same time a most authentic documentation of the linguistic peculiarities of Bûkhurî Jews.

Judaeo-Persian literature experienced an unforeseen development in the second half of the 19th century, not in Persia but in Jerusalem. This was precipitated by a wave of immigration into Palestine of Persian speaking Jews from Bûkhurâ, Turkestan, Afghanistan and Persia, who initiated the establishment in Jerusalem of a publishing centre, a printing press for Judaeo-Persian literature, intended to meet the literary and liturgical needs of the Persian Jews in Jerusalem and in the Diaspora. Though Jerusalem was not the first place of Judaeo-Persian printing activities, and some Judaeo-Persian books had been previously published by European scholars as well as by Bûkhurî Jews (particularly in Vienna and Vilnâ by the latter)—not to mention the first Judaeo-Persian print of any time in Istanbul in 1843—Jerusalem became the exclusive centre of Judaeo-Persian printing activities. From then on, all the liturgical and literary needs of Persian-speaking Jews were satisfied from Jerusalem and its Judaeo-Persian press.

It can hardly be attempted, nor is it intended here, even to enumerate the results of these printing and publishing activities in Jerusalem; their extent and quantity would preclude such a survey. Almost everything that was thought fit to strengthen the religious and literary interests of Persian-speaking Jews was printed and published. Every field of Jewish literature—Bible commentaries, prayer books for every occasion, rabbinical writings, Mishna and Zohar, religious philosophy, medieval Jewish poetry, Pîyyûmîm, Sîlîlûthî, Pîsmûnîm, Mîdrasha, historical narratives, anthologies of songs and stories—all these were translated into Judaeo-Persian, printed and distributed. Even secular literature from other than Jewish sources, such as parts of the Arabian Nights, and a part of Shakespeare’s Comedy of Errors, which appealed greatly to the imagination of the Oriental Jew, found its way to the translators and printers. It is of great significance that these Judaeo-Persian publishing activities represented a collective effort, a co-operative endeavour of all the various groups of Persian-speaking Jewry; Jews of Bûkhurâ joined hands with the Jews of Persia and Afghanistan and participated in the greatest common cultural enterprise in the history of Oriental Jewry.

Amîr-îgî the many outstanding figures who participated in this collective enterprise, mention ought to be made of Solomon Baboğlu b. Pinchas of Samarqand, an editor, author, translator and publisher, and of Simon Hâkhâm of Bûkhurâ.

One of the most outstanding Bûkhurî Jewish scholars in the last centuries who can be credited with a major share in the promotion of Judaeo-Persian literature was Simon Hâkhâm, who, born in Bûkhurâ in 1843, moved in 1890 to Jerusalem, joining the rapidly-increasing colony of Bûkhurî Jews, and it was there that he began his activities as author, translator, editor, and publisher of Judaeo-Persian works. The crown and glory of his many impressive literary accomplishments was his translation of the Bible into the Judaeo-Persian dialect of the Bûkhurî Jews, into Tadjîkî.

The interest in Judaeo-Persian literature led in the early decades of this century to the establishment of a Hebrew printing press also in Tehran, which produced many Judaeo-Persian works aiming at a revival of the religious and cultural life of Persian Jews.

7. The European investigation of Judaeo-Persian literature.

The ever-increasing number of Judaeo-Persian manuscripts which in the last century had reached European libraries (Parma, the Vatican, Paris, London, Oxford, Copenhagen, Jerusalem, St. Petersburg, Moscow, Berlin and others) aroused the interest of Western scholars and led to important publications and investigations. An unexpected development in the field of Judaeo-Persian studies took place when Elkan N. Adler, brought back from his journeys to Bûkhurâ and Persia in 1896-7 hitherto unknown Judaeo-Persian manuscripts which
opened up entirely new vistas. The more than one-hundred Judaeo-Persian manuscripts which he recovered changed fundamentally the prevailing conceptions as to the genre, scope and quality of the literary productivity of Persian-speaking Jews. While most of the manuscripts in European libraries were translations of books of the Bible or of the Apocrypha, creating thus the impression that their works were mostly religious, Adler's collection revealed an all-embracing literature, not only translations, but also original works, not only religious literature, but literature of a secular character, poetry and prose, stories and philosophy. This collection showed that no sphere of literary endeavour had been neglected by Persian Jews in their own language. In 1923 Elkan Adler's manuscript collection was acquired by the Jewish Theological Seminary in New York.

The most decisive contribution to the investigation of Judaeo-Persian literature was made by the Hungarian scholar, Wilhelm Bacher (d. 1913) who, stimulated by the literary treasures long dormant in the European libraries and above all E. N. Adler's collection, turned his attention to this field; and through a continuous flow of studies and monographs he became the undisputed author.

In the early 20th century, Teheran emerged as a centre of Judaeo-Persian printing activities, supplementing the Judaeo-Persian publications issued in Jerusalem. It is a sign of the cultural assimilation of the Persian-speaking Jews to their surroundings that they began to express their literary compositions no longer through the Hebrew script but through Persian characters, thus terminating, probably forever, the once flourishing Judaeo-Persian creativity.

The importance of Judaeo-Persian literature has most recently been summed up by J. Rypka (History of Iranian literature, 1968, p. 740), in these words: "Judaeo-Persian literature may be regarded as lying near the periphery yet within the circumference of Persian literature. Nevertheless it is of extreme importance in its national and religious aspects for the Jewish communities in the regions concerned, and linguistically for Iranian studies as a whole. The larger the collections of Judaeo-Persian manuscripts become, and the more minutely they are subjected to expert investigation, the greater will be their value for Iranian scholars. A great deal has already been achieved in both these aspects, but it is still far too little. It is quite possible that the ancient Judaeo-Persian translations will prove valuable in the preparation of critical editions of many a Persian text."

Spiechander, A descriptive list of Judaeo-Persian Manuscripts at the Klau Library of the Hebrew Union College in Cincinnati, in Studies in Jewish Bibliography and Booklore, Cincinnati 1968, 114-36.

Judaico-Persian

6. On J. P. Bible translations:

- Salomon Munk, "Die Psalmen in hebrdischem Text mit persischer Uebersetzung," in The Indian Antiquary, viii, 1897, 89-95.

A number of Judaeo-Persian writings display linguistic characteristics which are not found in Persian texts in Arabic script. Amongst these one must distinguish between on the one hand stylistic peculiarities common to the translation of Scripture (word for word rendering of the Semitic text, use of certain rare or archaic forms), and on the other dialectal traits which reflect local varieties of spoken Persian. In all probability, these local dialects of New Persian were not peculiar to the Jews, but they have left scarcely any trace in literature written in Arabic script, where the classical language predominates to the virtual exclusion of other forms; however a considerable proportion of the Judaeo-Persian writings, notably all the earliest ones, are written in a language close to that of everyday speech. They are therefore of great interest for the light they throw on the historical dialectology of Persian.

Judaeo-Persian literature is not linguistically homogeneous. Several dialectical variations may be perceived, and with systematic exploration still others will probably be discovered.

1) The Dandān-Uyllk letter is noteworthy for certain archaisms (use of the īdāfā particle to denote the relative (as in Middle-Persian), paucity of Arabic words) and by the presence of some Sogdian words.

2) In spite of differences of detail, the fragment in the British Museum, the commentary on Ezekiel, and the Story of Daniel, mentioned above, a translation of the Pentateuch preserved in the Vatican, and a few other texts, are a reflection of a single dialectal group, which can probably be situated in the south of Iran (Fars and Khuzistan). In these texts various morphological characteristics (optative particle -kā, preposition -1, the form tūs “thing” = classical dīs) are found, along with a fairly large number of words which are otherwise unknown in Persian but appear in Middle-Persian. Rather than being archaisms peculiar to this form of Judaeo-Persian, these traits must have been characteristic of spoken Persian around the 5th/14th-8th/12th centuries in the south of Iran, which had remained much closer to Middle-Persian than the classical language.

3) Writings which can be classified as literature, especially poetry from the 8th/14th-12th/18th centuries, are generally free from dialectical characteristics. Imitations of the great classical works, they appear in a written language during the Soviet period. All these dialects could be designated “Judaeo-Iranian”.

A curious language reported in 1924 among the Jews at Herat appears to be merely a jargon based on Persian.

JUDGE (see ḲĀṬĪ).

JUDGMENT (see ṬUKM).

savannah. The land on the river banks often produces two harvests. The main crops are millet, maize, rice, peanuts, cotton and indigo. In the villages gardens are cultivated around the wells. Stock-farming is relatively well developed. The districts of Kaarta are Dafunu (Tambaraka) and Diomboko (Konjakari), Guidioum (Niognem) to the north of Dafunu; Tomora (Dida), Baghe and Kaarta Biné to the north of Faladugu; Dianghar to the east, and Baye des Nioro (Nioro). The main crops are the Bambara and the Soninke, but the population also includes Khasasonke, Fulani and Maures. The Bambara Massassi have a secret religious association known as the Bouri. Missionary activity for Islam is considerable.

Kaarta was visited by the British explorers Houghton and Mungo Park in 1795 and described by Duranton in 1828, Raffanel in 1864, Mage and Quintin in 1883 and Lenz in 1890.

Previously part of the empire of Ghana [4.6], and then that of Mali, Kaarta was divided between a number of principalities after the Mali uprising. At the end of the 17th century, a Bambara chief, Niangolo, settled in Sunsana, near Murdia, and created the ported Namiankoro, but the latter was defeated by the Banu Kaarta (in 18th century European sources Chaur). Arab authors and genealogists do not speak of them in detail but usually list them under Kaarta. They are said to belong to Kays (Aylān), a major central and eastern Arabian tribe. They do not seem to have emigrated from there to southern 'Irak and south western Iran before the 17th century. By the time of the Danish traveller Niebuhr (1765), they seem to have gained some notoriety among the inhabitants of the region. The Turks, the Persians and the British were among their victims, and each of these powers failed to subdue Shaykh Salmān, the Kaarta chief, during the second half of the 18th century. Kubbān, Dawrā and Fallābīyya are mentioned among their fortified towns. Their second prominent ruler after Salmān was his great grandson Thāmir (1837-40).

Like other Arab tribes in the British Empire, they mingled with the non-Arab population and are slowly losing their Arab identity. The main divisions of the tribe are: the Drīs, the Mūkaddām, the Kḥānāfīra and the Ḥazīb.

The Banū Ka'āb cannot be described as completely settled, nor on the other hand is any considerable portion of them truly Bedouin. The bulk of the tribe is now semi-nomadic. At the zenith of their power, shortly after 1750, the jurisdiction of their chief seems to have extended from the neighbourhood of Basra to the confines of Bihbānān; but their influence declined as that of the Mubayis of Muhammad rose, and the chiefs of the Banū Ka'āb, stripped of political power, sank into undistinguished vassals of the Shaykh of Muhammad, who early in the 20th century became, in turn, a vassal of the Iranian monarchs.

KA'B B. AL-ASHRAF, opponent of Muham-
mad at Medina, reckoned to belong to his mother's
clan al-Nadir, though his father was an Arab of the
Nabhan section of Tayyi'. He presumably followed
the Jewish custom of taking his religion from
his mother, but it is doubtful if he was a scholar,
as the words in a poem sayyd al-akhib (Ibn Higham,
659, 12) would imply, if the poets were genuine.
Aroused by the deaths of many leading Meccans at
Badr, and a poem attributed to al-Akhbaj (gen
632) which inspired him to write some poems, in partic-
ular a verse which Muhammad considered worthy of
attack the Ansar. On the basis of certain variants
which are to be found in the reply made by Ka'b
and al-Baladhuri (An-
Sàb, xi, 212) is correct, he lived long enough to
write a panegyric of 'Abd al-Malik b. Marwan (65/685-
68/690), the lines which he quotes appear however in

that he had been killed. Some reports say that it was he who was charged with collecting the ṣadaka from the tribes of Aslam and Ḥijārā. For a reason which is not clear he remained in Medina during the expedition to Tabūk in autumn 9/630, and afterwards, with two others, was "sent to Coventry" until reprieved by the revelation of Sūra IX, 117/18 f. He seems to have had some links with Ḥassān, and this may have something to do with his avoidance of the expedition. With the Emigrants first came to Medina, Tabīha b. Ubayd Allāh was assigned to him as "brother", and some association continued between the two. He was later known as a partisan of ʿUṯmān ("Uṯmānīn), supporting him as caliph and composing an elegy after his death. In accordance with this attitude he refused to pay homage to ʿAli. He later became blind and died in 50/670 or 53/673.

Many members of his family were noted for poetical gifts. Muhammad realised the importance of poets in forming public opinion, and, following Sūra XXVI, 227 (see al-Tabari, Tafsīr), regarded Ka'ab as one of his poets along with Hassān b. Ṭḥābit [q.v.] and ʿAbd Allāh b. Rawāha [q.v.]. Much of Ka'ab's poetry is found in the Sīra of Ibn Ḥishām. Its authenticity has been disputed but most appears to be genuine. The sentiments are nobler than those of Ṣūḍr and there is greater enthusiasm for Islam. The poems deal with Badr, Ubūd, Bilād Ṭa'īma, Banū Ṭ-NA/dir, the Khandaq, Khaybayr, Mu'ta and other expeditions. Stories about Ka'ab seem to have been preserved in his family, and his sons ʿAbd Allāh and ʿAbd al-Raḥmān and other descendants are mentioned as sources by Ibn Ḥishām and al-Wākidī.

KĀ'B b. ZUHAYR, an Arab poet and contemporary of the Prophet. A son of Zubayr b. Abī Sulmā [q.v.], he seems to have given proof of his poetic talent at an early age; although belonging to the Muzayna, he lived with the Dhubya and was involved in the wars of the tribe against the ʿAṣyā', the Kurayḥ and the Ḥazārṣ. His brother Buqayr was converted shortly before year 7 of the Hidjra, but he refused vehemently to follow suit and wrote some satirical verses attacking Muhammad. The latter officially sanctioned his murder. From that day, "the earth became too confined" for Ka'ab, who resolved to make his submission. He presented himself without warning, in the year 9, in a mosque in Medina where Muhammad was present and recited to him his famous piece known by the name of Bānaṯ Su'ūd (Su'ūd) which was published by T. Kowalski (Cracow 1971). The Bānaṯ Su'ūd has none of the characteristics of a religious poem; it takes its inspiration from the sentiments of pagan poetry, and it begins with a commonplace observation so frequently employed that Hammād al-Rawīya [q.v.] boasted of knowing 700 other poems with the same opening. Nevertheless it is the most authentic example in existence of the eulogistic poetry of the period: "the extended themes, the repeated cliches, the style and the vocabulary can serve for comparison with the traditional writings; in this work, the essential elements of the laudatory genre are defined for the first quarter of the 1st/7th century" (R. Blachere). It has frequently been reproduced, in the form of taqṣīr and ṭaḥwīs. Commentators on it are numerous: the most celebrated are Ṭabaṭaba, Ibn Durayd, al-Tibrizī (ed. F. Krenkow, in DZMG, ixx, 241-79), Ibn Ḥishām (ed. Guidi, Leipzig 1871), Ibn Ḥiddīja, al-Suṣūfī, and al-Bāḏjrī (v. Brockelmann, i, 38-9, S I, 68-9). It was published for the first time by Lette (Leiden 1748), and was later produced in several editions, in particular by G. Freytag (with Latin translation, 1823) and T. Noldeke (Delectus, Berlin 1890, 110-4).

R. Basset brought out (Algiers 1910) an edition accompanied by a French translation and two unpublished commentaries. Finally, it appears in the Duwām of Ka'ab published by T. Kowalski (Cracow 1950), containing 33 poems and fragments.

The date of Ka'ab's death is not known, but he appears to have lived to a ripe old age.

Bibliography: R. Basset, Le Bānaṯ Su'ūd, 14-82, and the authors mentioned 9-13; R. Blachere, HLA, ii, 270-1 and bibl. (R. Basset)

KĀ'B al-ʾAHBA'R, Abū ʾĪsā b. Māṭī b. Ḥaysu'ī/Hayyū, a Yemenite Jew who became a convert to Islam, probably in 17/638 (al-Tabarī, i, 2514), and is considered the oldest authority on Judeo-Islamic traditions. Ḥibbāḥar, from the Hebrew kibbār, the scholarly title immediately below rabīb current among Babylonian Jewish scribes. Subsequently, it is presumed to be equivalent to the Arabic ʿālim (al-Ḵawārizmī, Maḥfīṭ, 35); in Ka'ab al-'Abbār the plural is a determinative complement, while in the less frequent Ka'ab al-'Abhar the latter element is in apposition to Ka'ab.

Lidzbarski (De propheticis... legendis arabicis, Leipzig 1863, 34-5) assumes that Ka'ab was originally called 'Akbār or 'Awaṣ, but very little is known of this man who, according to tradition, came to Medina during the caliphate of 'Umar b. al-Ḵhaṭṭāb, accompanied the latter to Jerusalem in 15/636 (al-Tabarī, i, 2408) and after his conversion was on intimate terms with the caliph, whose death he predicted three days before it took place (al-Tabarī, i, 2722). He was a vigorous champion of ʿUṯmānīn, which led on one occasion to his corporal chastisement by the pious Abū Ḏahr (al-Tabarī, i, 2946-7). Subsequently, Muṣawīya tried to attract him to Damascus to become his counsellor, but it seems most likely that he withdrew to Himy, where he died in 23/652-3, in 34 (al-Tabarī, iii, 2474-5) or in 35 (Ibn al-ʿImād, Shadhārī, i, 40). According to al-Harawī (Yazdr̔āl, 9/20) his burial place and maqām are in this town, but Yākūt (ii, 595) and Ibn Baṭṭūta (i, 222) state that his grave is in Damascus (where a grave-stone bearing his name is still extant; Gibb, loc. cit.). Ibn Djubayr (55) and al-Makrīzī (ed. Wiet, iv, 6) consider that it is situated in al-Djiza in Egypt, while al-Harawī (14/35) reports that some people believe him to be buried in Medina and states (39/94) that the tomb of one of his sons is at Dīrāz.

Though his true figure is difficult to discern, so wrapped is he in legendary trappings, Ka'ab is considered to have possessed a profound knowledge of the Bible and southern Arabian tradition, as well as a personal wisdom attested by the numerous state-
ments attributed to him without argument because he inspired so much confidence (al-Nawawi, Tahdhib, 523); he is also the originator of traditions concerning 'Umar b. al-Kaṭāb which are considered authentic; al-Dhahabi (Hayawan, iv, 202-3) believes him to be trustworthy and would appear to be coming to his defence by implying that, in discussing the external data of the Pentateuch, Ka'b did not say, "It is written in the Torah" but "We find it in the books of the prophets". Sometimes he is accused of introducing Jewish elements into Islam, e.g. in a story, preserved by Ṭabarî (i, 2408-9), in which 'Umar charges Ka'b with Judaizing when he treats the temple mount in Jerusalem as a holy place. See further ISRA'ILYYAT.

Posterity sought to add lustre to his name by crediting him with a great variety of traditions, particularly those relating to the prophets, such as the Ḥadīth Dhī-'l-Kifl printed at Būkāb in 1283 (Brockelmann, S I, 101) or the legend of Joseph [see YŪSUF] in Aljamiado [see AJAVA], edited in a Latin translation by F. Guileen (Legendes de José hijo de Jacob y de Alejandro Magno, Saragossa 1888) and studied by M. Schmidt (Über das altspanische Poema de José, in Roman. Forschungen, xi (1901), 321), which is in fact a borrowing from al-Ṭablābī's Kiṣāʾ al-ṣanāfīs of his story Joseph, and he is also mentioned as an authority in Firdawsi's Yūsuf u-Zalikha (ed. H.ETHÉ in Anecdota Osmensia, Aryan Series, vi, Oxford 1908, 258, verse 2599).

Bibliography: Apart from references within the text: Ibn Sa'd, vii/2, 156; Ṭabarî, index; Ibn Khuyyayba, Maʿārif, index; Fikrist, 32; Ibn al-Aṣwār, iii, 121; Ibn Ḥadījā, Isbāb, no. 7496; idem, Tahdhib al-Tahdhib, vii, 438-40; Al-Qāhira, ii, 50; Hamdānī, Ḥiḥl, viii, index; Well, Bibliische Legenden der Musulmānner, 10; M. Grünbaum in ZDMG, xlvi, 458, 477; Lidzbarski, 31-40; H. Hirschfeld in Jewish Encycl., i, Cairo 1925). Each year, when the curtains are replaced, the Banū Shayba divide the old ones into small pieces which are distributed and sold as relics.

The four walls of the Ka'ba are covered with a curtain (kiswa), which in Egypt is called al-burku (the veil). In front of the door is a special curtain, embroidered in gold and silver, with numerous inscriptions. Since Mamluk times (mid 7th/i3th century) this kiswa has been traditionally provided by Egypt except during periods of political tension (e.g., 1926-36 and after 1962). At one period the black kiswa was replaced by a white one between the 25th (or 28th) Dhū 'l-Ḥadīd and the end of the pilgrimage (cf. al-Batanūnī). Witnesses affirm that this practice has been discontinued. The curtains are occasionally fixed to the ground by rings and cords, or the base is raised by cords placed out of reach of human hands. The kiswa is usually of black brocade, with the shahada outlined in the weave of the fabric. About two-thirds of the way up runs a gold embroidered border (hisam) covered with kur'ānic texts. (Numerous photographs can be found in Ibrāhīm Rifʿat, Mirʿāt al-Ḥaram, i, Cairo 1925). Each year, when the curtains are replaced, the Banū Shayba divide the old ones into small pieces which are distributed and sold as relics.

The north-east wall, about 7 feet from the ground, is the door, parts of which have mountings of silver-gilt. When the Ka'ba is opened, a wooden staircase (darāj, madāraj) running on wheels is pushed up to the door; when not in use, it is kept between the Zamzam and the Gate of the Banū Shayba (see Snouck Hurgronje, Bilderatlas zu Mekka, no. ii; for a picture of the staircase, see Ali Bey, Travels, ii, 80).

In the interior of the Ka'ba are three wooden pillars, which support the roof, to which a ladder leads up. The only furnishings are the numerous hanging golden and silver lamps. On the inner walls there are many building inscriptions. The floor is covered with slabs of marble.

On the outside of the Ka'ba, in the eastern corner, about 5 feet above ground, not far from the door, the Black Stone is built into the wall; formerly broken into three pieces and several small fragments, it is now held together by a ring of stones mounted in a silver band. The stone is sometimes described as lava and sometimes as basalt; its real nature is difficult to determine, because its visible surface is worn smooth by hand touching and kissing. The surface is hollowed out irregularly, as can be seen in sketches and photographs. Its diameter is around 12 inches. The colour is reddish black with red and yellow particles.
The part of the wall between the Black Stone and the door is called al-multazam, because the visitors press their breasts against it while praying fervently.

In the east corner too, about five feet above the ground, another stone (al-ṣadqar al-ṣadq, the "lucky"), is built into wall. It is only touched and not kissed during the perambulation.

Outside the building there is still to be mentioned the gill water-spout (mizāb), which juts out below the top of the north-west wall, and has an appendage which is called the "beard of the mizāb". The spout is called mizāb al-rāmah, "spout of mercy" (on it cf. Ben Chérif, *Au Making Saintes de l'Islam*, p. 75); the part between it and the west corner is the exact kibla [q.v.]. The rain-water falls through the spout on to the pavement below, which here is inlaid with designs in mosaic. The ground all round the Ka'ba is covered with marble slabs.

Opposite the north-west wall, but not connected with it, is a semi-circular wall (al-khim) of white marble. It is three feet high and about five feet thick; its ends are almost six feet from the north and west corners of the Ka'ba. The semi-circular space between the kha'm and the Ka'ba enjoys an especial consideration, because for a time it belonged to the Ka'ba; in the perambulation therefore it is not entered; the faṭafaff goes along the outer side of the kha'm. The space bears the name al-ḥijr or ḥijr Ismā'ilī. Here are said to be the graves of the patriarch and his mother Hagar. The pavement on which the faṭafaff is performed is called maṭafī; a depression in it just opposite the door has still to be mentioned; it is called al-mi'ḍān "the trough"; according to legend, Ibrahim and Isma'il [q.v.], were mixed the mortar used in building the Ka'ba.

The maṭafī and the buildings around it have not always remained the same throughout the ages. Only the arch-shaped gate, the Banū Shayba (once also called al-bū al-Salām), still marks the traditional entrance to the maṭafī. Between this archway and the façade (N.E.) is a little building with a small dome, the maṣām Ibrāhīm. In it is kept a stone bearing the prints of two human feet. The patriarch Ibrāhīm, father of Ismā'il, is said to have stood on this stone when building the Ka'ba and the marks of his feet were miraculously preserved. Beside the maṣām Ibrāhīm, slightly to the north, is the pulpit (minbar); at the beginning of this century it was made of white marble in the classical minbar shape. The dimensions of the maṣām Ibrāhīm were considerably reduced during the recent reconstruction. The relic is now closely surrounded by glass and bars set into a polygonal base, the whole structure, capped by a much narrower kind of "helmet", being about three yards above ground level.

The pavement which is used for the faṭafaff was relaid during the important work on the mosque which began in 1956. On old photographs the slender columns which surrounded the maṭafī, clearly demarcating it, can be seen. They were used to hold the lamps which lighted pilgrims at night. Today a new electric lighting system has been installed. On Ali Bey's plan of the mosque there were two further buildings, at the edge of the outer pavement and to the north east of the Zamzam building; these were called al-kubbaṣatayn; by Snouck Hurgronje's day they had disappeared. For many years the Zamzam well was covered by a building or kubba. A description of this well can be found in the *Rapport quatorzentraine* of 1905 by Dr. Soliman Bey (p. 13; published in Egypt; a résumé of the text is given by J. Jomier in *Le Mahmal et la caravane égyptienne des pèlerins de la Mekke*, Cairo 1953, 154-6), but the situation nowadays is completely different. There are no buildings on the surface and pilgrims can take advantage of this extra space. A staircase leads to a sort of underground hall divided into two sections, one for men and one for women, with water distributed by means of a system of taps.

The three little buildings previously situated on the exterior of the maṭafī also vanished during the course of the recent works, not only to provide some open space but also because, to an increasing extent, the diversification of rules has become of secondary importance to many Muslims. Such buildings housed the imāms of the four main schools during the prayers. The largest building (maṣām or maṣumāl ḫanafī) was north west of the Ka'ba in front of the ḥijr; the Hanbalīs was to the south east and the Mālikī to the south west. The Shī'īs used the Zamzam well building.

Finally we must mention the work begun in 1956 which has transformed the promenade from Safā to Marwa into a spacious covered passage with a lofty ceiling. A group of huge galleries, with a floor overlooking the courtyard of the mosque, has been built on the outside of the old arcades of the izwān, which have been allowed to stand as a relic of the past.

II. The history of the Ka'ba.

Aside from Muslim traditions, practically nothing is known of the history of the Ka'ba. The sole reason for presuming that the Ka'ba was already in existence in the 2nd century A.D. is the mention of Mecca, under the name of Macoraba, by the geographer Ptolemy (*Geography*, vi, 7). Glaser (*Skizze der Gesch. u. Geogr. Arabiens*, Berlin 1890, ii, 235) believes that this name may have signified the same as the south Arabian or Ethiopian miṣrāb, i.e., a temple. The accounts of the campaign of Abraha [q.v.], which have been elaborated with legendary features, also suggest the existence and worship of the Ka'ba in the sixth century but tell us nothing of its appearance or equipment. The Tūbba' Aṣ'ād Aḥū Karīb al-Hunayri, who came to Mecca, is said to have for the first time provided the building with a kīwān and with a door with a lock. The information available regarding the distribution of the offices [see below ii.] among the sons of Kuṣayy shows that the worship of the sanctuary had developed into a carefully regulated cult several generations before Muhammad.

In matters pertaining to the history of the building of the Ka'ba, modern Muslims tend to hold fast to the letter of the Kur'ān and discount, to an increasing extent, other accounts. It is in fact in the Kur'ān, and in the Medinan sūras, that Ibrāhīm and Ismā'il are said to have laid the foundations of the Ka'ba (Kur'ān, II, 121/127). The maṣām Ibrāhīm is indicated as a suitable place for the salād (II, 119/125).

At God's command, Ibrāhīm ordained the pilgrimage (XXII, 28/29). The Ka'ba was the first sanctuary to be established on earth, and was now named the sacred house (V, 98/99), the ancient house (XXII, 30, 34, 32/33). We can only speculate about the milieu in which these tales circulated in pre-Islamic times. Were these stories similar to the Coptic traditions concerning the Holy Family's flight to Egypt which the Judaized milieu of Arabia transposed to Abraham's journeys to Mecca? We will never know.

For Muslims, these accounts are grounded on the authority of the Kur'ān and the Kur'ān alone. Whether or not in pre-Islamic days Kuṣayy demolished and rebuilt the edifice, as historians say, is impossible to determine.
The historical references only begin with Muhammad. When Muhammad had reached man's estate, the fire of a woman ceased. The Ka'ba is said to have burned from the 6th-7th to the 20th century and was included in the building and two doors were made on the level of the ground. In the jahid the four corners were kissed.

These alterations lasted only a short period. In 74/693 al-Hadidjādi b. Yusuf conquered Mecca and killed 'Abd Allāh al-Zubayr. In agreement with the caliph 'Abd al-Malik he again separated the ḥāḏir from the Ka'ba and walled up the west door. The building, in keeping with the wish of the Umayyads, thus practically received its pre-Islamic form again and this form has survived to the present day. The piety of the populace has always resisted any considerable innovations. Only to an unimportant degree have the authorities now and then made improvements. As was the case in the pagan period, floods have continued to be a danger to the building. When in 1611 it threatened to collapse, a girdle of copper was used to avert the disaster. But a new sayl made this support also insufficient, so that in 1650 renovations were decided upon. But the old stones were used as much as possible for the rebuilding.

The Ka'ba successfully withstood the Karmatian invasion of 317/929; only the Black Stone was carried off. After an absence of some twenty years it was sent back to Mecca (cf. de Goeje, Mém. sur les Carathes, 104-111, 145-8).

The custom of covering the Ka'ba is said to have been introduced by the Tuba'. The annual re-covering of the Ka'ba only became an established custom in modern times; for the oldest Muslim period, the 'Ashūrā day is mentioned as the day of covering, but in Rādiq also and in other months the building has changed its covering. The kiswa consisted sometimes of Yemeni and sometimes of Egyptian or other cloth; during Umar's caliphate the building threatened to collapse on account of the many coverings hung on it. All sorts of colours are mentioned also. The Wahhabis even covered the Ka'ba with a red kiswa.

The makams around the Ka'ba are mentioned as early as the 'Abbāsid period, sometimes under the name sula ('a shade'). The present buildings are said to date from 1074/1663. A dome over the Zam zam well is mentioned at an equally early period; the present one was built in 1072.

The Ka'ba had offerings dedicated to it in the pagan as well as the Muslim period. Al-Azraki devotes a detailed chapter to this subject (155-6).

Many a worldly ruler has used these treasures for political purposes. Tradition reports that 'Umar said: "I will leave neither gold nor silver in the Ka'ba but distribute its treasures". To this, however, 'Ali is said to have raised vigorous objections so that 'Umar desisted from his plan.

III. The Ka'ba and Islam.

Every man living in Mecca in the 6th-7th century A.D. must of necessity have had some relationship with the Ka'ba. On Muhammad in his Meccan period the Kur'an is silent in this respect. All that is known is that the early community in Medina turned to Jerusalem in prayer. This was in the early days when it was still reasonable to hope that the Medina Jews would be won over. Subsequently, about a year and a half after the Hijra, the community turned to Mecca in prayer and in Mecca itself faced the Ka'ba.

"Turn thee that face towards the sacred mosque and wherever ye be turn your faces towards that part" (Kur'an, II, 139/144).

At this same period the Kur'an began to lay
stress on the religion of Ibrâhîm, presenting Islam as a return to the purity of the primitive religion of Ibrâhîm which, obscured by Judaism and Christianity, shone forth in its original brightness in the Kûrâ. Guarded support for this interpretation is advanced by Sprenger and followed by Snouck Hurgronje in his *Het Meknaansche Feest* (cf. E1, appendix to article IBRAHIM; for a contrary opinion see Théodore Moubarac, *Abraham dans le Coran*, Paris 1958).

It is incontrovertible that an entire pre-Islamic ritual, previously steeped in paganism, was adopted by Islam after it had been purified and given a strictly monotheistic orientation. The pilgrimages to the Ka'ba and ritual progressions around the building were continued, but now for the glorification of the One God. The abrahamic vision of the Ka'ba created a means of discerning an orthodox origin buried in the midst of pagan malpractices to which the first Muslims pointed the way.

In 6/627 a prospect of taking part in the Meccan cult was held out to the Muslims by the pact of al-Hûdâbiyya [q.v.]; in connection with it, the "Umar al-Kadâ" took place in the year 7. Muhammad's political endeavours culminated in the conquest of Mecca in 8/629.

All the pagan trappings which had adhered to the Ka'ba were now thrust aside. 360 idols are said to have stood around the building. When touched with the Prophet's rod they all fell to the ground. The statue of Hubal which 'Amr b. Luhây is said to have erected over the pit inside the Ka'ba is said to have been shattered by Muhammad when he washed the building. The opening takes place on definite beginning and the end of the holy rites.

Two special ceremonies concerning the Ka'ba may here be mentioned, the opening and the washing of the building. The opening takes place on definite days and men are first admitted, then the women. On this occasion the above-mentioned staircase is pushed up to the building. The days in question change at the will of the Meccan authorities—but some usually fall in the month of the pilgrimage and one on the roth Mubarram ('Ašhûrâ day). It is considered particularly meritorious to perform the salât in the Ka'ba.

The procedure for the washing of the inside of the Ka'ba was as follows at the beginning of the 20th century. After the *Haddâ* is completed, at the end of the month Dhu 'l-Hijdâja, the Ka'ba is washed, a ceremony in which the Grand Sharif, the governor and other authorities, as well as a number of pilgrims, take part. The first to enter is the Sharif, who after a salât of two rakās washes the ground with Zamzam water which flows away through a hole in the threshold. The walls are washed as well as the floor of the Ka'ba *sidâna* and *biâdâ*. His descendants:

- Abd Manâf
- Abd al-Dâr
- Hashim
- Uthmân
- Abd al-Mutta'âlib
- Abd al-Uzza
- Abbâs
- Abû Tâlib
- Abû Talib
- Abû Allâh

administered the offices after his death, 'Abd Manâf and his descendants getting the *rifda* and *sîbâa* etc., while 'Abd al-Dâr and his descendants saw to the *sidâna* and *biâdâ* etc.

When Muhammad conquered Mecca his uncle 'Abâs or, according to another tradition, 'All asked for the administration of these offices. But Muhammad said he had abolished all of them except the *sîbâa* and the guardianship of the Ka'ba. The former remained in the hands of 'Abbâs; the latter he gave to 'Uthmân b. Talib who allowed his cousin Shayba b. Abî Talib to act as his deputy. The Banû Shayba are the doorkeepers at the Ka'ba to this day. The *rifda*, which was in the hands of Abû Tâlib, was taken over by Abû Bakr in 9/630; after his death the caliphs looked after the feeding of the pilgrims.

Muhammad's control over Mecca and the Meccan cult was first clearly marked at the *Haddâ* of the year 9. As plenipotentiary of the Prophet, who did not participate in the pilgrimage, Abû Bakr announced to the assembled pilgrims the latest arrangements, which were put in the form of a revelation. They are contained in Sûra IX, which from them is often called the Sûra of Immunity (*barâ'a*) (v. 1-12, 28, 36-7).

According to it, idolaters are henceforth forbidden to participate in the Meccan festival as they are impure (*nâdja*). Moreover, they are declared outlaws. A period of four months is given them during which they can go freely about the country; but after that "kill them wherever ye find them'. Excepted are those with whom an alliance has been made in so far as they have punctiliously observed its terms and helped no one against the Muslims.

In 10/631 Muhammâd himself led the pilgrimage, at which therefore according to the tradition that a single idolator was present: the Ka'ba had become an exclusively Muslim sanctuary. At every salât Muslims throughout the world turn towards Mecca and at the ceremonies of the pilgrimage the Ka'ba forms the beginning and the end of the holy rites.
under the water-pipe is described as particularly efficacious: "Anyone who performs the salât under the mā'atāb becomes as pure as on the day when his mother bore him'" (al-Aţrâkî, 224). The Zamzam water, which the pilgrim has poured over him again and again, is useful for every purpose for which it is drunk (ma'? Zamzam li-md ǧibrīla lahu, Kūf al-Dīn, 34).

There is abundant testimony in Muslim as well as European literature to the intensification of devotional feeling which the sight of the Ka'ba produces in the pilgrims. We may here quote al-Batanuni's (md* Zamzam li-ma shuriba lahu, Kutb al-isdrū, i. 367):

"The whole assembly stood there in the greatest reverence before this highest majesty and most powerful inspirer of awe before which the greatest souls become so little as to be almost nothing. And if we had not been witness of the movements of the body during the salât and the raising of the hands during the prayers, and the murmuring of the expressions of humility and if we had not heard the beating of the hearts before this immeasurable grandeur we would have thought ourselves transferred to another life. And truly we were at that hour in another world: we were in the house of God and in God's immediate presence, and with us were only the lowered heads and the voices raised in prayer and weeping eyes and the fearful heart and pure thoughts of intercession" (cf. Macdonald, The Religious Attitude and Life in Islam, Chicago, 1909, 216-7; Ben Cherif, Aux villes sacrées de l'Islam, ii-i, 45-6, 68).

Even the Shī'is and the Wahhābīs have left the Ka'ba its place in Islam. Only the Karmathians form an obvious exception.

Many moderns lay stress on the fact that Mecca was chosen by God as the place of revelation; they emphasise that the Ka'ba is a symbol of the unity of the Muslim world, the place of God's grace, His worship, and the proclamation of His glory.

As to the mystics, their attitude to the Ka'ba depends on their position regarding the law. For the, so to speak, nomic mystics like al-Ša'zālī, the Ka'ba, it is true, is only a building which one has to go round in the āwāf. The āwāf and its object however only receive their value for men when they give them an inducement to rise to a higher spiritual level. Ibn al-ʿArabī goes a step further when he says that the true Ka'ba is nothing other than our own being (al-Futūḥa al-Makkhiyya, i. 733); the Ka'ba however also plays a part in his mystic experiences. Hūjūrī however quotes some sayings of mystics, who no longer require the Ka'ba as an inducement to rise, and even despise it. Muhammad b. al-Fadl says: "I wonder at those who seek His temple in this world: why do they not seek contemplation of Him in their hearts? The temple they sometimes attain and sometimes miss, but contemplation they might enjoy always. If they are bound to visit a stone, which is looked at only once a year, surely they are more bound to visit the temple of the heart, where He may be seen three hundred and sixty times in a day and night. But the mystic's every step is a symbol of the journey to Mecca, and when he reaches the sanctuary he wins a robe of honour for every step". Abū Yazīd al-Bīṣāmī also says: "On my first pilgrimage I saw only the temple; the second time, I saw both the temple and the bāb of the temple; and the third time I saw the Lord alone. In short, where mortification is, there is no sanctuary: the sanctuary is where contemplation is. Unless the whole universe is a man's trysting-place where he comes high unto God and a retired chamber where he enjoys intimacy with God, he is still a stranger to Divine love; but when he has vision the whole universe is his sanctuary. The darkest thing in the world is the Beloved's house without the Beloved. Accordingly, what is truly valuable is not the Ka'ba, but contemplation and annihilation in the abode of friendship, of which the sight of the Ka'ba is indirectly a cause" (al-Hūjurī, tr. Nicholson, 327).

IV. The Ka'ba in Legend and Superstition.

In the article ka'ba in EI1 there is an account of a whole series of legends concerning the origins of the Ka'ba; we will not go into these here. It is common knowledge that when protesting against his coreligionists' imaginative excesses Muḥammad 'Abduh even cited certain current legends about the Ka'ba (Taftūr al-Manār, i, 466-7). Well known too is the fact that after the Sa'udi conquest of Ḥijāţ (1924-6), a number of popular cultic places, such as the tomb of Eve in Ḏuqrda, were suppressed. Among the legends relating to the Ka'ba are those describing its creation at the beginning of the world, what happened to it during the flood, how Abraham was guided to make his way to Arabia, details of his conduct during the construction of the Ka'ba, how Gabriel brought the Black Stone which had been preserved since the flood in Abū Kubays [g.v.]. Originally white, the stone had taken on its present colour after contact with the sins of the pagan era. There are also legends about the Zamzam well, especially concerning the role of 'Abd al-Muţsāib and the two golden gazelles he discovered. These had been concealed by the Djurhum, along with swords and armour. All this was deposited at the Ka'ba or used to decorate the buildings.

From analogous theories developed earlier with relation to Jerusalem, Mecca was considered the navel of the world (cf. the account of these theories in the article ka'ba in EI1).

Mecca is also a burial ground. Not only Ismā'īl and his mother but a whole series of prophets, numbering hundreds, is said to have been buried round the Ka'ba.

V. Religious history before Islam.

From the fact that Ptolemy calls Mecca "Ma-crobα" (i.e. miūrāb, temple) we may conclude that in his day the Ka'ba was regarded as a sanctuary dedicated to one or more deities. According to a statement of Epiphanius (Haereses, v, following the text in Philologus, 1860, 355), Dhu 'I-Shāra had in Petra his ɣazzūd, a word which is probably the same as Ka'ba. It is not clear from Epiphanius, however, whether the temple in Petra was meant, or the quadrangular black stone which represented Dhu 'l-Shārah. Al-Bakrī (Mu'jam, ed. Wüstefeld, 46) relates that the tribe of Bakr b. Wā'il [g.v.], as well as the main body of the Iydk tribe, had their centre of worship in Sinjād in the region of Kūfā and that their holy tent (or temple, basil) there was called Dkhāt al-Ka'abāt (but cf. al-Hamdānī, Sīf al Dīnārat al-ʿArab, 172, l. 14, 17, 230, l. 12). What was the relationship between the sanctity of the Ka'ba and the Black Stone? We can do no more than offer hypotheses, like Wellhausen's.

No tradition suggests that the Black Stone was connected with any particular god. In the Ka'ba was the statue of the god Hubal, who might be called the god of Mecca and of the Ka'ba. Caetani gives prominence to the connection between the Ka'ba and Hubal. Besides him, however, al-Lāt, al-'Uzza, and

Encyclopaedia of Islam IV 21
al-Manāt were worshipped and are mentioned in the Kūrān; Hubal is never mentioned there. What position Allāh held beside these in pagan times is not exactly known.

Many other idols are mentioned in the Ka'ba and the vicinity, among them the 360 statues.

The Ka'ba possessed in a high degree the usual qualities of a Semitic sanctuary. First of all it mark ed the whole surrounding ground. Around the town lies the sacred zone (ka-ram) marked by stones, which imposes certain restrictions on each one who enters it [see haram]. Moreover, the sanctity of the area is seen in the following points. In the haram the truce of Allah reigns. When the Arab tribes made a pilgrimage to the Ka'ba, all feuds were dormant. It was forbidden to carry arms. Next, the haram—and the Ka'ba especially—is a place of refuge. Here the unintentional slayer was safe just as in the Jewish cities of refuge. On the Ka'ba there was a kind of arrangement which recalls the purport of the haram. Blood was not allowed to flow in the haram. It is therefore reported that those condemned to death were led outside the haram to execution.

The idea of peace extended even to the flora and fauna. Animals—except a few injurious or dangerous sorts—are not to be scared away; hence the many tame doves in the mosque. Trees and bushes were not cut down except the idhkhir shrub, which was used for building houses and in goldsmiths' work. These regulations were confirmed by Islam and are in force to this day.

As to the rites, it is said that in the heathen period animals were sacrificed at the Ka'ba. Among the ancient Arabs the idol of stone replaced the al-ilāh; it was certainly syncretistic, conforming to the usual symbolism. Golden suns and moons are repeatedly mentioned among the votive gifts (al-Azraf, 155 ff.).

It is a question whether and how far the Ka'ba was connected with the hajjī in the pre-Islamic period. On the one hand, the hajjī was an integral part of the ceremonies carried out outside Mecca, not at 'Arafat: the hajjī is the peak of the pilgrimage. On the other hand, the Kūrān (III, 91-97) uses the formula hajjī al-bayt to refer to the Ka'ba. It is therefore most probable that in pre-Islamic times there was a fusion of two groups of ceremonies which, in a fashion still followed by the Arabs, united two adjacent holy places in the same celebration. It cannot be denied that the cult of the Ka'ba in the pagan era reveals traces of an astral symbolism. Golden suns and moons are repeatedly mentioned among the votive gifts (al-Azraf, 155 ff.). According to al-Mas'ūdī (Muruḍā, i, 47, ed. and tr. Pellat, § 1373), certain people have regarded the Ka'ba as a temple devoted to the sun, the moon and the five planets. The 360 idols placed round the Ka'ba also point in this direction.

There has been such a view cannot be safely propounded as foremost. In the pagan era the cult of the Ka'ba was certainly syncretistic, conforming to the usual features of Arab paganism. It is impossible to discern to what extent North Semitic cults were represented in Mecca.

On III: C. Snouck Hurgronje, Het Mekkaansche Fesel, Leiden 1880; the Eastern and Western biographies of Muḥammad; commentaries on the Kūrān on the passages mentioned.

A. J. Wensinck-[J. Jomier]
1. North-eastern façade. In the foreground, to the left, are the Makâm Ibrahim, the Bâb Bani Shayba, the Minbar and the Zamzam well; the building (habba) of the latter is obscured from view.

2. North-western wall with the mizâb; to the left are the Zamzam building and the Makâm Hanâfî.
3. South-western corner before the recent works. Opposite the north-western wall is part of al-ḥaḍir with al-ḥijr: to the right lie the Maḥām Ḫanafī, the Bāb Bānī Shāyba and the ẓubba. a. Maḥām Ḫanafī; b. Maḥām Mālikī.

4. South-western corner; to the left is the Maḥām Ḫanafī, to the right the Maḥām Ibrāhīm.
the reform movement which was followed under Selim III.

(E. Kuran)

**Kâbâla** (Ar.), "guarantee," a juridical term used mainly in connection with fiscal practice, in a manner which is still very difficult to define precisely.

The particular field with which this discussion is concerned is a double one—that of the levying of the land-tax, kharâdî (q.v.), and that of special taxes, mukâs. As was already the case before the Arab conquest both in the Byzantine Empire and under the Sasanids, local communities were held jointly responsible by the Treasury for the payment at the required time of the full amount of land-tax demanded. Nevertheless, it frequently occurred that many individuals had difficulty in finding the necessary ready money immediately. In these conditions, as a result of an agreement between the inhabitants and the administration, application was made to a notable, often but not necessarily a man of the locality, to advance the sum required, for which he had to ensure that he would be reimbursed later. The matter having generally been agreed in advance, this notable in effect acted as a guarantor for the debt of the locality in question. This procedure constitutes the contract of kâbâla, the offer being called kâbbî and the person named muâkkabî. In this form, 'Abû Yusuf does not disapprove of kâbâla. But in practice it appears that matters often happened otherwise, that is to say that not only the principle of the guarantee but also of the amount were known in advance; here, jurists and traditionists, such as 'Abû Yusuf and 'Abû 'Ubâyî, disapproved—traditionists, more particularly when, as the harvest could not be estimated in advance, the tax to be levied on it was likewise not calculable if it consisted of a percentage; and jurists, because the total sum envisaged, being necessarily less or greater than the eventual proceeds of the tax, was bound to be injurious either to the tax-payers or to the Treasury. But it is precisely on account of the anticipated profit that the military leaders began to seek out kâbâlî. At the start, they had been allotted emphyteutic concessions (kâbâlî; pl. of kâfî [see 197]) on the State lands (sawafî). But as these were practically hereditary, it was not possible to find new ones, and they therefore turned their attention to the private kharâdî lands, so that they might succeed either in retaining the kharâdî for themselves while only paying the tenth (see Arabic, i, 1954, 358), or, a less serious offence, contract an advantageous kâbâla. However, the kâbâla disappeared quite rapidly in face of the development of the new type of ikhâ, although definitions of it are still to be found occasionally in the later lexicographers, such as al-Zamakhshari. Clearly it possessed some of the characteristics of tax-farming, and the texts sometimes confuse kâbâla and ikhâ; nevertheless, kâbâla usually denotes merely the operation at the basic level of the whole local community, whereas ikhâ also applied throughout the whole course of Muslim history, to the far wider concession of the right to organize and levy taxes, for some years, from a vast district, in return for the payment—more or less in advance—of a sum which is guaranteed, but markedly smaller than the scheduled revenue. Sometimes the texts also compare the kâbâla with the mukâsîa which, in the case of a small estate, in effect probably differs only in the matter of duration, but which also applies to vast semi-autonomous districts or provinces in whose entire internal administration the State definitively renounces all interest, in return for the settlement of a guarantee.

What has just been said appears to be applicable in some measure to Muslim Asia in general. In the Maghrib and in Spain, where the kâbâla is to be found in regard to mukâs, it is not certain if the term occurs in connection with kharâdî; occasionally it denotes the fixed dues owed by the administrator of a waqf. But it is above all with reference to Egypt, always distinctive in agricultural and fiscal matters, that some particularly delicate questions arise.

In Egypt, indeed, it seems that no kâbâla was distributed, although State lands and private lands possessing some degree of autonomy existed there before the conquest. And here the term was retained afterwards. But no doubt both because the Arab population of Egypt was originally limited to the garrison towns, and because control of the Nile and the resultant agricultural organization created, throughout all the irrigated territories, a unified administration which deprived each of them of part of its own effective autonomy, the very term kâbâla in this sense seems unknown (although in the plural kâbâ'ît it denotes the Tulûmîd quarter of Fustâṭ created on the model of Samarrâ). Kâbâlî, however, do exist, often in the hands of persons whom the papyri call mâzû, 'alâ or 'alâ'ir. Then in the 2nd/8th century, Arab tribal groups settled in Egypt and, as it was not possible to give them kâbâla', they were granted lands for which they assumed the kâbâla, under conditions which guaranteed an income for the State but which also left them with a substantial profit for themselves. It appears that this was brought about by distribution by auction, held in Fustâṭ for four years, with a revision of the basic tax survey every thirty years. Despite reforms in the methods employed (particularly under al-Afdal and al-Ma'mûn al-Batâbî, in the second century of Fâtîmid rule), it seems that the system was maintained in certain respects until the Ayyûbid conquest introduced into Egypt a new system more or less inspired by the eastern ikhâ. In short, the old system differed from similar systems in the Near East only in its systematic and durable character, and by its adaptation to the specific agricultural organization of Egypt.

However, this does not solve all of the problems. Papyri, and later the fiscal treatises from the Fâtîmid and subsequent periods, reveal that there was a distinction between lands lying outside the kâbâla, which were subjected to permanent survey (sawafî), and the kâbâla, deciding each year the areas to be flooded and the different types of cultivation to be employed on them.
and lands of kabdlāt, which were themselves bišā misāba, and for which therefore it was sufficient to have a contract drawn up independently of the annual verification of the surface area and type of cultivation. In the fiscal treatises of al-Makhzūmī, Ibn Mammūt al-Nabulusī, the first system is called the mujfādana, imposition by faddān, or simply sirāʿ, and the second kabāla, but also, at least in certain cases, munādīsaya, settlement after dispute, sometimes mukūs, an equal division ( Ibn Hawkalī, i, 133; distinguishes between maḍud and mukūs). On the other hand custom tended increasingly to give kabāla the sense of arq al-kabāla, land subjected to the system of kabāla, and if one or two papyri give the impression that a kabāla can include several small properties of another sort, as in the Asiatic system, others on the contrary suggest relatively small pieces of land, and the later fiscal treatises reveal a situation where the tax agents controlled the entire body of lands consisting both of divisions of land in mujfādana and of others in kabāla, and had the right to transfer certain of these from one category to the other, according to the types of cultivation dependent upon the condition of the land after inundation: this suggests that now that the distinction between the Arabs and the converted native inhabitants is blurred, the difference between the two categories of lands is connected with a difference of agricultural utilization, the kabāla being applicable only to those lands used for the cultivation of cereals and leguminous plants, to the exclusion of orchards and economic crops (flax, sugar, etc.). We do not know if this was already the situation at the time of the earliest adjudications.

Finally, if we come down to the Mamlūk period, we see that this evolution continues. There remain some lands for which the "rent" (idgārā) is fixed at a sum determined in advance by lanādījūs = munādīsaya, but what is now called kabāla is no more than the agricultural unit of land generally subjected to misāba, and within it a distinction is made between the different types of land imposed on the faddān according to the type of cultivation: in other words, integration with the complete system is completed without adjudication or tax-farming or any other "guarantee" save that of paying what is due. This is a normal conclusion since frequently these dues now go not to the Treasury but to the mkūsī, the true heir to the profits of the former mukakabī. In the Ottoman period, if there are mukakāsī and iṣlaṣṣātī (the meaning of which is etymologically related to damān, but in fact corresponding rather to ṭahāṭ) the word kabāla disappears from the vocabulary of land taxation; and, with Bonaparte's scholars, munādīsaya was explained as signifying merely poor lands.

Alongside its use with regard to taxation on land, as described above, the word kabāla, as well as damān in this context, occurs in a more permanent sense to signify the farming of special revenues, generally of mukūs, especially in towns, such as the sale of salt, or the management of baths or even of a local customs office. It is most often in this sense that we must interpret those passages which show rulers abolishing or condoning kabālā, like mukūs elsewhere; and it is in reference to such kabālā, which are perhaps more often designated in this way in the West than in the East, that Europeans have understood the word and adopted it (Spanish alcabalas attested in 1201, Italian gabelle current in ports and among the Normans in Sicily in the 12th century, from which the French gabelle, which however has so far not been found before the beginning of the 14th century; Provençal gabel). (It should be noted however that, in the account of Ramon Muntaner of the Catalan expedition to the East, at the beginning of the 14th century, gabella denotes the Turkish tribes, and therefore derives from kabāla and not from kabāla.) For these taxes, see provisionally barīb above, but no study has been devoted to the methods employed for levying them.

(C. CAHEN)

KABARDS, a Muslim people of the Caucasus. In Russian they are called Kabardints, in Turkish Kabartaylar; other designation, Kasag. The name of the Kabards was first mentioned as Chechernei by Barbaro, who visited the Caucasus in 1436. Its etymology remains uncertain.

The Kabard language belongs to the eastern branch of the Adighe (Cerkes) linguistic group, which is also referred to as "high Adighe". According to the 1926 Soviet census, there were 139,925 Kabards ethnically and 138,925 linguistically. The census of 1939 records 164,000 Kabards.

The Kabards live in the basin of Upper Terek and some of its tributaries and are divided into two groups: one, forming the tribes of the Great Kabard, lives between the rivers Malka and Terek to the west of the Terek; the other, forming the tribes of the Little Kabarda, lives between the Sunja and the Terek, to the east of the Terek.
The Kabards arrived in their habitat in the 13th century from their original homeland further to the west, after the Alans had been weakened by Mongol invasions, and after the collapse of the Golden Horde they began to play a leading role in the history of the Caucasus. In the 16th century Kabard princes maintained friendly relations with the rulers of Moscow. The second wife of Ivan IV was a Kabard princess, Marie, daughter of Tatkak. In the 17th century the Kabards led the coalition of Caucasian peoples against the Kalmyks. Because of the dominating role they played in the Central Caucasus and their location near the Daryal pass, they were the first to come under Russian control in the 19th century, accepting it without any strong resistance. At the time of the Russian conquest a number of Kabards settled between the upper Kuban and the Zelenchuk and were called Fugitive Kabards. After 1864, some Kabards, mostly of the fugitive group, emigrated into the Ottoman Empire.

Sunni Islam of the Hanafi madhab was introduced in the second half of the 16th century by the Crimean Tatars, in competition with Christianity. They were completely islamanized by the end of the 17th century. The traditional Kabard economy consisted of horse-breeding, agriculture, and home industry. Traditional Kabard society had a complex structure which consisted of eleven classes grouped in two main divisions: the noblemen, or the free group, and the pshrtfa, or the non-free group. At the head of society were the princes (pshrt), among whom the wali was the chief of the Kabard people. They were followed by the nobles (work, or workkü). These in turn were subdivided into four classes according to the rights and obligations which bound them to the princes. The nobles were followed by the free peasants (fokhkol). The non-free group consisted of the asat (freed peasants who were bound by some servitude to their former masters); og (serfs); loganapci (between og and slaves); sanati (slaves).

In the 16th century attempts were made by K. Atažukin to create a literary language, and in 1685 he published a Kabard alphabet based on the Cyrillic script. However, Kabard did not attain the status of a literary language until 1924. The speech of the Great Kabarda was used as the basis of the literary language, and this language is used officially in the Kabardo-Balkar A.S.S.R. and the Karaçay-Cherkes A.R. The first newspaper in the Kabard language was published in 1924 under the title Kara Kakılı. According to the Letopis periodicheskikh svedenii S.S.S.R., there were in 1960 two Kabard newspapers and two magazines.

The Kabards were first organized into the Kabard Autonomous Region on 1 September 1921. On 16 January 1922 they were joined with the national district of Balkar, which on 5 December 1936 became the Kabardo-Balkar Autonomous Region. In 1944 the Kabard Autonomous Soviet Socialist Republic was announced, which further changed into the Kabardo-Balkar Autonomous Soviet Socialist Republic on 9 February 1957. The territory of the Republic occupies 12,400 sq. km. In 1959 there were 420,115 people in the A.S.S.R. Of these 45 % were Kabards, 8.1 % were Balkars, 38.7 % Russians, and the rest other groups of Caucasians.

AL-KABBĀB, ABDU MUNIM MUBÂH AL-ĀLĪ. HUSAYN AL-TAMGRŪT! AL-DAR, derived from Abû 'l-Kasîm, in Ramadan 983/Dec.-Jan. 1575-76, and settled there until his death on Friday 12 Dümâdâ II 1045/23 Nov. 1635. He was buried in the place since called râysat al-ašâyûth, on the Sidijumâsa road. His fame had attracted many disciples, whom he initiated into the dhâr al-ḥâlîd and who acquired some fame, such as the aforementioned Abû 'l-Kasîm, the two brothers Mûsâmâ and Husayn Ibn Nâsîr al-Dârî. The teaching of the pshrt, which he had received from Abû 'l-Abbâs Abâmâd b. 'Ali al-Ḥadîdîjâl al-Dârî, derived from Abû 'l-Abbâs Abâmâd Zarrûk, whose teaching was transmitted by Abû 'l-Kâsim al-Ḥâzîl, 'Abî b. Abû Allāh al-Sîdîlmâd and 'Abbâs b. Yûsuf al-Râghîdi. Bibliography: E. Levi-Provençal, Chorfa, 315 and n. 4; Irânî, Ṣafrica, 70; Kâdîrî, Naĝîrî, i, 169; idem, tâbâdî, fol. 14v; idem, al-Nâṣir al-kâbir, i, fol. 56v; Naṣîrî, Tašâvat al-μunâwarat, i, 128-36 and passim; Makkîtî Naṣîrî, Dûrur (after al-Ḥâṣhtûkî, Inârat al-baṣārîr ve Tašâvat al-daṣâ); Husayn Ibn Nâṣir al-Dârî, Fahrasa; Vâstit, Mûhâdarât, in fine. (M. LAKHDAR)

KABBÂN [see Misân]

KABD (A.), verbal noun meaning "seizure", "grasping", "contraction", "abstention", etc., and used in the special vocabulary of various disciplines, i.e. In fikk the word signifies taking possession of, handing over. In Mâlikî law ḥiyâsa is more frequently used. Tasallum is also employed to mean the act of handing over. Taking possession is accomplished by the material transfer of the thing when movable goods are involved; by occupation when it is a question of real estate, but also symbolically by the handing over of the keys or title deeds of the property. Kaḥd only has a subsidiary role to play in the sale, since fikk, from the very beginning and in all its versions, recognized that the ownership of the thing which has been sold, when a definite object is involved, is transferred immediately by the agreement of the parties, before any formal transfer. The part played by the kaḥd in the matter of gifts (kibta), Joan (kaḥd), commodate (warâṣya) and security (raha), is a subject of dispute amongst the legal schools. The Mālikîs excepted, most authors teach that the agreement of the parties on which these contracts are founded does not carry with it any legal obligation on the part of the one who gave the undertaking, nor any absolute right on the part of the beneficiary. The former cannot be forced to hand over the thing he has promised, nor can the latter demand its transfer, kaḥd. These contracts are "efficacious", therefore only on the basis of the kaḥd, freely agreed. The formal authors, according to which kaḥd is useful for the completion (tamâm, lusûm) of these contracts, is
not sufficiently significant. Properly speaking, these contracts only become juridically valid through the operation of the *kabd*. Only the Mālikī school holds that immediately after the agreement of the parties relative to a gift, loan, commodity or security the beneficiary may constrain the man who made the contract to hand over the object (Darādī, al-Shārī al-Saghir, ii, 344 for the gift; ii, 226-9 for the commodity; ii, 121 for the security).

However the *kabd* becomes a condition of the validity of the agreement itself (ṣarīf al-sīka) as regards two contracts which become invalid if the material transfer does not take place at the time of the agreement: these are the *salām*, or forward sale (the price to be paid at the time of the contract) and the *ṣarf*, contract of exchange (exchanged currencies must be transferred there and then).

*Kabd amāna* and *kabd damān*. In regard to contracts which involve the temporary transfer of something from one contracting party to the other, in particular hiring, commodity, safe custody and mandate, there arises the question as to whether this taking possession is a *kabd amāna*, in which case the trustee is only held responsible if he has been at fault or in transgression (*la'addī*) of the rules of the contract or of the customary dealings in such matters. If it is a case of a *kabd damān*, which holds the trustee responsible for any loss arising in respect of the object, even through chance or circumstances over which he has no control. The Hanafīs are of the opinion that in all these contracts, without exception, *kabd amāna* is the only possibility. The Shāfi‘īs and the Hanbals make a distinction according to whether the contract is concluded in the interests of the trustee (commodate, hiring), in which case the *kabd* is *damān*, or whether the contract is profitable chiefly to the owner of the thing (safe custody, mandate), and in this case it is *kabd amāna*. As for the Mālikīs, they adopt another criterion. According to whether the thing held in trust in accordance with one of the contracts outlined above can be concealed easily (*mū yuqddābu al-ṣalayhi*) or with difficulty, in the first case they enforce the consequences of *kabd damān*, and in the second case of *kabd amāna*.

For Mālikī law: Darādī, al-Shārī al-Saghir (with the commentary of Shābi, Bulāk 1289, ii, 226-7 (commodity), ii, 344 (gift), ii, 121 (security); D. Santillana, Istuzones di diritto musulmano malichita, Rome 1938, i, 316, ii, 379, 477 and passim; Chafik Chehata, Les concept de qabd damān et de qabd amāna en droit musulman hanafite, in St. Isl., xxiii (1970), 8f. (Y. Linton de Bellaffenon).

ii.—In Sufism, a technical term used to denote a spiritual state of "contraction" as opposed to "expansion", *baṣd* [q.v.]. According to al-Kūshārī [q.v.]: "just as *kabd* is above the degree of *khamaf* (lean) and *baṣd* above that of *rajdā* (hope), so *khāyba* (reverential awe) is above *kabd* and *uns* (intimate ease) is above *baṣd* [q.v.]. The explanation of this hierarchy is clearly that *kabd* and *baṣd* denote the pure objectivity of the *ṣarīf* (*gnostic*) untainted with any individual subjective reaction such as fear and hope, while on the other hand *khāyba* and *uns* denote a greater degree of unveiling on the part of the Divinity. The end of the path is when Divine Subjectivity obliterates the objective experience of *kabd* and *baṣd* in a transcendent synthesis of the two. The terms themselves, as used by the Sūfis, spring from the Divine Names [see al-ʾasmāʾ al-ḥusnāʾ] as *al-ʾkabd* (He who causes contraction) which is an *ism djamālī* (Name of Majesty) and *al-ʾbaṣd* (He who causes expansion), which is an *ism djamālī* (Name of Beauty); and the Sūfis frequently use *djamālī* and *djamāl* as synonyms of *kabd* and *baṣd* when referring to the divinely subjective experiences of the *ṣarīf* (*gnostic*). Ahmad al-ʿAllawi [see Ibn ʿAllawi] quotes his Shaykh as saying, in moments of *kabd*: "My Majesty is One with My Beauty"; and he comments: "Since the gnostic is with Him who contracts, not with the contraction itself, and with Him who expands, not with the expansion itself, he is active rather than passive and has thus become as if nothing had happened to him... Let your attribute be kamāl (perfection) which is beatitude in both *djamālī* and *djamāl*.

**Bibliography:** Kughayr, Risāla; Ibn al-ʿArabī, Risālat al-Kuds (for examples of *kabd*); Ibn ʿAllawi, al-Minaḥ al-Kūddasiyya, 283-5. (M. Lings)

iii.—In prosody *kabd* means "contraction". To the exposition in the article *ṣarīf*, 671-2 and in G. Well, Grundriss und System der altarabischen Metern, Wiesbaden 1958, 27, 30, the following may be added (on some of the rules governing the *kabd* there is no agreement and a complete survey cannot be given):

The *kabd* is a suppression of the fifth quiescent letter in the feet *faʾālun* and *māfālun* which occur in the metres *jawīl* [q.v.], *ḥadad*, *muḍrīs* [q.v.], and *muṭāhārīb* [q.v.], so that these feet are reduced to *faʾālun* and *māfālun* respectively. A foot suffering this alteration is called māḥābūd (this last term occurs already in a discussion of poetry in the Šera of Ibn Isḥāk [q.v.], but its meaning is uncertain, see R. Blachère, Deuxième contribution, in Arabica, vi (1959), 133, 141).

The shortening of *māfālun* to *māfālun* is obligatory in the last foot of the first hemistich (ʾarād) of all varieties of the *jawīl*, so that this foot can never appear in its "primitive" form, except in case the first hemistich rhymes with the second (ṣaprī, see ṣāvra). The same shortening of the last foot of the second hemistich (darb) of the second variety (which would imply that the *kabd* belongs not only to the zihīfāl, but also to the ṣīlāl, see Mūhammad b. ʿAll al-Ṣabbān, al-Kāfiyya al-shāfiyya ft ʿilmay ar-ʾarūd wa-l-kāfiyya, Cairo 1321, 10). The *kabd* is also recommended (according to some it is obligatory) in the penultimate foot of the third variety of the *jawīl*. In this variety the last foot of the second hemistich is reduced to *faʾālun*, and the penultimate foot, which is also *faʾālun*, should become *faʾalun*. This rule also applies to the first hemistich in case of ṣaprī. On the other hand the *kabd* may not occur in the metre muṭāhārib when the penultimate foot of either hemistich has been reduced to a single closed syllable (*faʾāl or faʾāl*, but cf. Darstellung, 283), and in all cases where the foot muṭāhārib has already been reduced to *māfālun* (*baṣd*). Finally it should be noted that in the metre muḍrīs the foot *māfālun* appears never in its primitive form, but is always changed into *māfālun* or *māfālun* (cf., however, ʿSabbān, al-Kāfiyya, 32, l. 7-8).

KABD — KABID 327

(Moh. Ben Chirb[S. A. Bonebarker])

KABID (according to lexicographers the only correct form) or KABD, "the liver".

1. Names for the liver and their semantic field. The Muslims peoples, like all others, recognised the internal organs of the human body and identified them with the analogous organs of animals. They also attributed to them one or another physiological and psychosomatic function based on observations which they interpreted according to mental structures that are only partially clear to us.

Language itself testifies to these early identifications. As E. Bargheer says, "these are significant characteristics which very often endow an organ with a pre-eminent place in the conceptual world of the people; in the case of the heart it is its beating or rhythmic movement, of the lungs breath, and of the liver its central position, its exceptional size in relation to the other organs, its variable shape and edible nature" (Handwörterbuch des deutschen Älterglaubens, hrsg. von E. Hoffman-Krayer, Berlin 1937-42, v, col. 975, s.v. Leber).

In Arabic the classical name of the liver is kabid, but the frequent dialectal forms, habd and kibd, are also encountered at a very early date (cf. Wörterbuch der klassischen Arabischen Sprache, i, Wiesbaden 1970, 18). As in other Semitic languages, it is the great weight in the liver that attracted attention. The noun for liver, common to all Semitic tongues, comes from the root k-b-d or k-b-l where the Western Semitic d seems to derive from an assimilation (k-b) of the Accadian t (habatu later kabatu, poetically kabatu), which is thought to be the original form (Brockelmann, Grundriss der vergleichenden Grammatik d. semit., Sprachen, Berlin 1908-13, i, 152). But we also find in Accadian gabidu, kabidu, probably borrowed from Western Semitic. It seems clear that this is a metaphorical derivation from the adjective "heavy" (Acc. habd, fem. habatu, habi; kibd, kibd; Ugar. dhd; Gaaz kbd etc.) and the corresponding verb (cf. Arab. habada, "to endure, to support"; cf. H. Holma, Die Namen der Körperteile im Assyrisch-Babylonischen, Leipzig 1911, 78; P. Fronzaroli, Studi sul lessico comune semitico, Rend. Linc., series 8, vol. 19, fasc. 5-6, 1964, 32 f., 47, 54). The use of this metaphor to denote the liver ("the heaviest and thickest of vessels", Galen, De usu partium, vi, 17 = iii, 495, ed. C. G. Kühn; i, 360, l. 19 f. ed. G. Helmreich) is a Semitic innovation in comparison with Hamito-Semitic, which has a number of very different words for it. It is questionable whether, as A. Cuny avers, it is to be found in Indo-European (Recherches sur le vocalisme ... en "nostralique", Paris 1943, 68 f.). The word most frequently found in Indo-European (from an etymology "*yekh-" (p) is perhaps linked to the idea of lump, swelling tumour (J. Pokorny, Indogermanisches Etymologisches Wörterbuch, i, Berne-Munich 1948-9, 504). In our field it is represented chiefly by the Persian dagar (Lat. sicur, Gr. καθαρός, etc.), which was borrowed by Ottoman Turkish (and Serbo-Croat for the liver of animals).

The Turkish word, in its most current form bag trách (attested as early as the runiform inscriptions of the Yenisei, cf. V. G. Egorov, EtymologischesIslav*, Twułskiego, Cheboksary 1964, 155, who also gives all the forms of the word in Turkish languages), is perhaps associated with the idea of a tie, a bundle, a sack or a pocket (cf. the Ottoman Turkish noun bag and the verb baglamak, but L. Bazin notes that the relationship presents some phonetic difficulties).

It should be said that the words cited above were stabilized at a very early date as corresponding to a "normal" or "central" meaning (L. Bloomfield, Language, London 1935, 149) which is the organ "liver". But they also correspond, from no doubt as early a period, to a semantic field comprising "marginal" or "metaphoric" values, the result of "transfers".

Through contiguity of meaning, some of these "transfers" (cf. S. Ullmann, The principles of semantics, Glasgow 1951, 231 ff.) led the words in question to be used to designate the parts of the body in the vicinity of the liver. Thus in classical Arabic kabid can denote the surfaces of the body more or less close to the liver as well as the chest and even the belly: a woman is described as having kabidun maladu, "a sleek stomach" (Aşghā, Divān, ed. R. Geyer, London 1928, 77: 158 = Tašrara, Divān in W. Ahlwardt, The divans of the six ancient Arabic poets, London 1870, 11: 64) and so on (references in Wörterbuch der klassischen Arabischen Sprache, i, Wiesbaden 1970, 18-20). Similarly Uyygur has baghär hasmag, "clasp to the breast or heart", hasmag pakhan, "a hero (or athlete) with a mighty chest" (E. N. Nadzip, Uyурсbo-russkii slovar, Moscow 1968, 226) and likewise in Azeri baghina hasmag means "to embrace, seize in one's arms, clasp to one's bosom" (H. A. Azizbekov, Azerbaydžanskoy-russkii slovar, Baku 1965, 47).

In Persian, the composite daggar-band, "the liver complex" (attested for example in Sa'di and Shams-i Tabrizi) denotes the place of the liver as well as the chest as a whole: lungs, heart, liver. The Turkish languages had already borrowed the word dagar in the sense of "liver" in the Turkish translation of the Gülüssân prepared in Egypt by Sayf of Saray (1391; cf. E. Fazylow, Starouzbekskiy yazyk, Tashkent 1966, 71, i, 370). But the existence of another word (bag deterministic (for the word if have, etc.) for the same concept in the same languages, and probably the use of daggar-band in the sense indicated above as well, led to the extension of daggar itself to another organ of the thoracic cavity, the lung, despite the existence of a properly Turkish word to designate this (okt), "spleen, etc., with the anciently recorded metaphorical sense of "anger, grief, dissatisfaction, affliction" (cf. Egorov, Etim. slovar, 280 f.), which remains the only meaning in current Ottoman for the word if have, etc., alongside the dialectic term ogyan, "lung"). Consequently it was necessary to use an adjective to distinguish between the "black liver" (Azeri gara diyyar, Ottoman hara diyyar, Lat. orthog. if have, that is the liver itself—and the "white liver" (Azeri ağa diyyar, Ottoman āk diyyar, Lat. orthog. ak ciğer), that is the lungs. Other languages within the sphere of the Ottoman Empire borrowed this same distinction, for example Bulgarian where (the distinction was applied to the Slav word drob rather than to the loanword diyyar, "lungs and liver", cf. 8izgariški etimologologen rečnik, v, Sofia 1966, 362) and Serbo-Croat (forms orna dierysara, "liver", 8ijela dierysara, "lung", cf. Abdullah Škaljic, Turcismi u serpskoherstom jeziku, Sarajevo 1965, 240 f. While the Indo-European word if have is strictly specialized in an anatomical sense). The expression "white liver" (hkbid bbd) was also used in Arabic, at least occasionally, probably for the lungs (Ibn Džizla, Minhādī al-baydân, s.v. habid, Ms. Paris, Bib. Nat., Ar. 1949, fol. 159 v., etc.).
The process of transfer of meaning by contiguity extended the semantic field covered by the word “liver” not only to the organs of the thoracic cavity but also to all the internal organs of the trunk. Moreover these organs as a whole are described, in a more or less vaguely limited fashion, by the plural of the word “liver”. Thus in the Persian translation of al-Ṭabarî (4th/10th cent.), ḍāğrān denotes the entrails (G. Lazard, La langue des anciens monumens de la prose persane, Paris 1963, 195). But in Turkish baghır as such (or with a suffix baghırnak and variants) means “belly, paunch” and also “entrails” (cf. refs. in Drevnetverskii slovar’, Leningrad 1969, 77, 78). From this is derived the Uyghur baghırismâk, for example, which means “to grovel, to drag oneself along on the belly”. In the modern languages of Ethiopia too the Proto-Ethiopic word corresponding to the Go’a’k habād, “liver”, has acquired the meaning of “belly, heart, interior, intestines, paunch” (Tigré ḥabd, Tigriña ḥabdā), and this has become the only meaning of ḥod in Amharic (from habād, cf. Brockelmann, Grundrisse, i, 204), which therefore has had to use another word to designorate liver (gubāda).

Such shifts in meaning explain the use of these terms generally to cover the middle, centre, interior (vom oder gesagt heart) and say heart) and finally, alongside the heart, of desire (cf. E. Dhomme, L’emploi métaphorique des noms de parties du corps en hébreu et en araméen, Paris 1923, 128 ff.; Merx, Le rôle du foie, 436 ff., 439 ff.). For the Arabs the liver is wounded by the sorrows which we attribute to the heart, the pangs of love. The liver of the bashful lover or one who suffers in like fashion is “rent” (radicals ẓ-‘, f-l-k, f-l-ḥ), broken (habād marūdā, Hartir, Mahāmāt, ed. Silvestre de Sacy, 2nd ed. Paris 1847-53, 52f.), wasting away, thirsty, weighed down, burnt up. It is said of someone that “the pangs of love are consuming his liver”. A slender, delicate liver is the mark of a tender spirit, a sensitive heart. A saintly man has a black body but a white liver (Ibn Dībabay, 240f.), that is a pure soul (a very widespread metaphor found as far as the Ndembu of Zambia; cf. V. W. Turner, The Drums of Affliction, Chicago 1967, 283; cf. Bargheer, Leber, 979; id., Eingeweide, 95 ff.). To eat or strike the liver is to inflict great sorrow. As a result, the liver is regarded as a particularly precious part of the body and beloved persons are located in or assimilated to pieces of liver. A child is “the deep-seated blood” (muḥḍa) of the liver; a dear friend or a venerated man is placed “between the liver and its membrane” (khādīb). More generally, people dear to one are “pieces (bi‘ā) of liver”. (Ref. in Wörterbuch ... 19 f. and A. Merx, Le rôle du foie ... 429-33). This last expression is still current in, for example, the Tunisian village of Takrûnâ (W. Marçais, Textes arabes de Tabrouna, i, Paris 1925, 80-1, 272, 292, n. 42, with information from old texts, including a 6th/12th-century Mozarab deed between Christians) where the word “liver” simply means a cherished person, especially a child: ya khābīd, “my precious” (W. Marçais, ibid., ii, bk. vii, Paris 1960, 3354-6). In the region of Constantine children are described as khādā, “livers” of their parents (M. S. Belguedji, La médecine traditionnelle dans le Constantinois, Strasbourg 1966, 121).

Exactly similar expressions are found in Persian literature, where Merx believes to be direct transpositions from Arabic. (See, for example, the expressions in Merx, Le rôle du foie ..., 434-5 and in Farhangi saboni tijāki, Moscow 1969, 779f., as
well as those in the various dictionaries). To take only two examples: to a father his son is like the blood of his liver, *καριν-διεγαρ* already in Firdawsi (*Shahnama*, i, 256, ed. Mohl) and *διεγαρ-παρη*, “a piece of liver” (or *διεγαρ-γυθέ*, “lobe of the liver”) is a current expression for a dearly loved child.

Similar expressions are also found in Turkish languages; in these cases it is not easy to distinguish between those influenced by Persian and Arabic and those which could be original. A ruthless man is said to have a liver of stone or to be “liver-less” (*bağhkrsta* in Kutadgu Bilig (5th/11th cent.; ref. in *Drews*), *diegar-gushe*, “piece of liver” (or *diegar-gushe*, “lobe of the liver”) already in Firdawsi, *Shahnama*, i, 256, ed. Mohl) and *diegar-gushe*.

Between those influenced by Persian and Arabic and languages; in these cases it is not easy to distinguish 

Nouns of metaphysical and moral speculation on the soul were pushed to greater or lesser lengths among the various bodily organs and locate, for example, passion (*shahwda*), among other things, in the liver (ed. Cairo, *Bedeutung der Leber in der Antike*, iv, col. 1431 f.; in most cases it is the lung, cf. above).

In the pneumatic doctrine, both in antiquity and in its literature in Turkestan during the 8th/14th century there are numerous texts which speak of love in terms of the liver being broken in two, torn apart, burnt up, used as a target, eaten on skewers (these are often translations from Persian); a good choice of these has been collected by E. Faizylov in *Siarousbekshi yastik*, i, Tashkent 1966, 201-2. Elsewhere the liver is occasionally described as the seat of anger (some unconvincing references in Radioti, *Versuch*, iv, col. 1431 f.; in most cases it is the lung, cf. above).

Muslim psycho-physiological ideas, as noted above, is apparent in ex-

As far as the anatomy of the liver was concerned, Muslim writers fall into the categories of anatomical descriptions of the organ, its psycho-physiological role—of interest to philosophers as well as anatomists and physicians—its pathology and therapeutic.

The association of the liver with love for children, as noted above, is apparent in ex-

3. Scientific knowledge and scholarly theories. Rational study of the liver conducted by Muslim writers falls into the categories of anatomical descriptions of the organ, its psycho-physiological role—of interest to philosophers as well as anatomists and physicians—its pathology, its use in animal liver in pharmacology.

All the great treatises on medicine include extensive statements on the liver, in view of its central role in the Galenic physiology adopted by Muslim science. Monographs on the liver and its pathology, along the lines of Greek monographs like those by Rufus of Ephesus and Philagrius, were compiled by Kustâ b. Lûkâ and Muhammad b. Zakariyyâ al-Râzî (F. Seznin, *Geschichte des arabischen Schrifttums*, iii, Leiden 1970, 68, 156, 273, 292), although these may be chapters only of general works.

As far as the anatomy of the liver was concerned, Muslim writers, who, like the Greeks for the most part, were forbidden to make dissections, made do with copying Galen’s descriptions of the organ; Galen himself had followed Herophilos of Chalcodon (3rd cent. B.C.), who had dissected corpses in Alexandria and made studies of the liver, but had apparently allied observations of unhealthy human livers and the livers of animals to his study of the normal liver.

Galen’s faith in Herophilos on this point was con-

387), is attested in the

Hagiography, *Leber*, 984; idem, *Eingeweide*, 387), attested in the

Muslim science. Monographs on the liver and its pathology, along the lines of Greek monographs like those by Rufus of Ephesus and Philagrius, were compiled by Kustâ b. Lûkâ and Muhammad b. Zakariyyâ al-Râzî (F. Seznin, *Geschichte des arabischen Schrifttums*, iii, Leiden 1970, 68, 156, 273, 292), although these may be chapters only of general works.

As far as the anatomy of the liver was concerned, Muslim writers, who, like the Greeks for the most part, were forbidden to make dissections, made do with copying Galen’s descriptions of the organ; Galen himself had followed Herophilos of Chalcodon (3rd cent. B.C.), who had dissected corpses in Alexandria and made studies of the liver, but had apparently allied observations of unhealthy human livers and the livers of animals to his study of the normal liver.

Galen’s faith in Herophilos on this point was confirmed by dissections of monkeys (cf. Ch. Daremberg, *Oeuvres anatomiques, physiologiques et médicales de Galien*, Paris 1854-56, i, 293, n. 1; Max Simon, *Sieben Bücher Anatomie des Galen*, Leipzig 1906, ii, xxxiv, xxxvii f.). Muslim physicians followed him in teaching that the human liver had sometimes two or three lobes (*afrâf*) or extensions (*sawâ'id*), but
most commonly four or five, surrounding the stomach. Descriptions of the liver of this type are to be found in the Ms'ar of Muhammad b. Zakariyya al-Razi and the Malakhi of Ali b. Abbâs in an edition with French translation opposite by P. de Koning (Trois Traités d'anatomie arabes . . ., Leiden 1903, 68-71, 374-9), as well as a French translation of the relevant chapter of Book iii of Ibn Sînâ's Kânân, fann 14, chap. 2 (ibid., 706-15; ed. Rome 1593, 455-6; Lat. tr. Venice 1564, 740-2) with the parallel texts of Greek authors.

The ideas of Arab physicians on the psycho-physiological role of the liver derive first from the physiological system of humours that Galen had codified from earlier teachings, a system that was generally accepted in the countries conquered by the Arabs and in the Christian West (cf. the excellent recent account of the matter by Luis Garcia Ballester, "Galeno" in P. Lain Entralgo, Historia Universal de la Medicina, ii, Barcelona, 1972, 209-268; idem, Galeno en la sociedad y en la ciencia de su tiempo, Madrid 1972; simplified summary by G. Sarton, Galen of Pergamon, Lawrence, Kansas, 1954; diagram of blood formation and distribution in Historia Universal, 244 and in A. C. Crombie, Augustine to Galileo, A.D. 400-1650, London 1952, i, 254). In this system the liver plays a role of prime importance linking the four "faculties" (cf. Mani, ii, 21). The nutritive faculty spread out from the heart towards the liver (Ibn Sînâ, Shifd*, 1349/1930, 107). Another preliminary digestive process ("coction") could have taken place in the mesenteric veins (membranous, märsaraykh or mâsaraykh, Lat. mesaricae) which, participating in the nature of the liver, partially transform the chyle into blood (Ibn Sînâ, Kânân, iii, fann 14, mäshâla 1; beginning; for Galen's doubts on this point see Mani, i, 68, which gave rise to disputes in the Middle Ages and the Renaissance). The gastric "coction" had already taken place under the prime influence of the liver, the source of heat, whose lobes were thought to surround the stomach like fingers. The chyle, already transformed to some extent, reaches the liver by the vena portae (mâshâla, mäshâla, tr. as al-târîkh al-istifrâdî, Simon, Stéfen Bücker . . ., i, 346, then as al-tâbî) into which pour the mesenteric veins. There it is transformed into blood proper, fitted for the nourishment of the body (the adage sanguificatio est chylis in sanguinem mutatio was dogma until the 19th century, Mani, i, 59). A part of this blood becomes the substance of the liver, which can be regarded as coagulated blood (Ibn Sînâ, Kânân, i, fann 1, ta'îlm 3, fasl 2; ibid., iii, fann 14, mabûla 1), that it acts independently" (Ibn Sînâ, Shifd*).

Theories establishing a connection between the elements of the cosmos on various planes place the yellow bile along with the igneous element which predominates there and the "temperament" (kathis, misâdâ) which makes manifest its dominance, in a special relationship with the liver. But one variant links this organ rather with the blood, in which air predominates and, naturally, the sanguine temperament (see the diagram in M. Ullmann, Die Medizin im Islam, Leiden-Cologne 1970, 99 and that of R. Herrlinger, with colours showing the development since the Hippocratic corpus, at the end of E. Schöner, Das Viererschema in der antiken Humoralpathologie, Wiesbaden 1964; the common modern form taken from popular manuals can be found in T. Canaan, Aberglaube und Volksmedizin im Lande der Bibel, Hamburg 1914, 33).

Muslim physicians naturally also followed Galen in his linking of the principles of pneumatic teaching to the theory of humours, the inspiration for which we saw above. Some "spirits" (nâsîfâta, arwaâd), subtle vapours, animate the body and are thought to explain the performance of the vital functions. One of them, the natural or physical spirit (nâsîfa, râh jâbî or jâbîîyâ), has its seat in the liver according to Muslim medicine, which follows not so much Galen, who had doubts and vacillated on this point, as the Alexandrians and the Syrians, who systematized his ideas in a simplified fashion. This "spirit" is put on the same plane as the vital or animal spirit and the psychic spirit, which have their seat in the heart and in the brain respectively (classic treatment by Hunayn b. Ishbâk, al-mudthâhir fi'l-tibb, cf. O. Temkin, "On Galen's Pharmacology", Gesnerus [Aarau], viii (1951), 180-189). It is distributed with the blood by the veins.

Every one of these spirits, still according to Galenism, corresponds with a chief "faculty" or a group of "faculties" (bu'dâs, kawd, Lat. virtus) and physiological and psychological phenomena are attributed to the actions of these. Thus the physicians claim that the "natural" faculty or faculties are subdivided into one type whose function (fâlî) is to conserve and make up the individual, which preserves over nourishment and is situated in the liver, and a second type which conserves the species and is situated in the sexual organs. Taking their cue from Aristotle, Ibn Sînâ and many others differ from this theory to some extent and place the heart as the first substratum and mainspring of the faculties (cf. Mani, ii, 21). The nutritive faculty spread out from the heart towards the liver (Ibn Sînâ, Shifd*).
4 Developments in magic, religion and fable. Alongside a popular psycho-physiology which, like its scientific counterpart, considers the role of the liver in the body, in conjunction with scientific pathology, dietetics and pharmacopoeia from which (as a rule) cures for infection are derived, as well as an estimate of the value of animal liver as food or remedy, there exist the rudiments of basically symbolic and magical doctrines which were also developed for practical use. These sometimes appear in scientific treatises and are occasionally supplemented there.

Following Galen, Ibn Sinā reports, though with some doubt, that the size of an animal’s liver is in proportion to its greed and timidity (cf. P. de Koning, op. cit., 708, 711). Employing the magical principle of like to like, it was thought that eating sheep’s liver strengthened the liver of man (Dâwūd al-Anṭākī, Taḏdīḥra, Cairo 1356/1357, i, 207).

The scholarly conception of the liver as being formed (ontogenically, it could be said) from coagulated blood is understood literally or linked to a popular conception to give rise to a ḥadīth excepting the liver and the spleen from the general prohibition of blood: “two bloods have been permitted us” (liver and spleen: Ibn Mādîja, xxix, 31; Ahmad b. Hanbal, ii, 97).

Talisman is used in cases of hepatic disorders. Thus the Ḥaḍīḥra al-Iskandar, a Philosophic collection purporting to be of Greek origin, contains a descriptions of a talisman consisting of a liver-shaped red stone with an ibex and an enigmatic inscription painted on it. This is a useful remedy for liver pains (J. Ruska, Tabula Smaragdina, Heidelberg 1926, 98 f.). Books of practical medicine contain many prescriptions which contain a mixture of magical observation, magical deductions (the use of wolf liver pulverized in oil), pure charlatanism (camel urine), and the use of washed talismans etc. (cf. for example, Pseudo-Djalāl al-Dīn al-Suyūṭī (Muh. al-Šanawbari, d. 815/1412), Al-Raḥma fi ʾl-tibb wa ʾl-hikma, Cairo 1357, 106 f. ch. 102). In Morocco pieces of prickly pear cut into the shape of a liver are attached to the outside walls of a Marabout sanctuary; they are thought to cure the sick as they dry (E. Westermarck, Ritual and belief in Morocco, London 1926, i, 202). Another Mooroccan practice consists of drying on a terrace the liver and kidney of a sheep skinned to a piece of prickly pear cut into the shape of the sole of the sick man’s shoe and stabbed repeatedly with a knife (A.-R. de Lens, Pratiques des harems marocains, Paris 1925, 12).

The Bedouin of central Arabia eat for breakfast cinnamon, known moreover as d’ruf or-detbād (ḥara al-kubdāb), “skins of liver”, as a cure for liver complaints (J.-J. Hess, Von den Beduinen des Innern Arabiens, Zürich and Leipzig 1938, 148 f.).

Divination by means of the liver (hepatoscopy), which was so important in ancient Mesopotamia and Etruria but already renounced by the Arab queen Zenobia in the 3rd century (Zosimus, i, 59), was not practised by the Arabs (cf. T. Fahd, La divination arabe, Leiden 1966, 397, 527) although it is mentioned by Ibn Khaldūn in a general list of methods of divination (Mukaddima, i, 193, 194, ed. Quatremère; i, 369, 371 ed. Wäff) and referred to by a Rabbi Levi of uncertain date who compares the king of Babel's
practice of hepatoscopy in Ezekiel xxi, 26, with "some Arab who slaughters a sheep and studies its liver" (Midrash Rabba to Eccles. xii, 7, etc. in Monuments Talmudicae, v, Geschichte, Vienna and Leipzig 1914, 48, § 84).

The liver plays a minor role in folklore, mostly as a curative. In Turkish tales the liver of a prince is the sole cure for a mad princess (W. Eberhard and P. N. Boratav, Türkischen Volksmärchen, Wiesbaden 1953, 302), a young girl sells an ass's liver for a kiss (ibid., 224), and there is a cannibal who eats human liver (ibid., 172). One version of the universal theme of the cure of a hero of magic (A. Aarne and S. Thompson, The Types of the Folk-tale, Helsinki 1964, 208, type 567) has the liver in the place of the heart; this is sometimes replaced by the kidneys, the crop, or the heart once again (Eberhard and Boratav, Types, 196-6). A story from Adayale tells of a miser who eats liver as an economy, an indication that the tale is a recent one (ibid., 88; cf. below).

The theme of a magical cure effected by a bodily organ (cf. Bargheer, Eingeweide, 139 ff., 235 ff.) combined with that of the extraordinary powers of marvellous beings is at the root of the Ṣahādna's account of the cure of Kay-Kawus and the Iranians blinded through spells cast by the White diw and the invasion of Mazandaran (cf. s.v. D!W above, ii, 323). Blood drawn from the liver of the white diw, which Rustam wrenched from its breast when he defeated it, gave them back their sight (ed. J. Mohl, Paris 1838-76, Kay-Kawus, verse 652 ff.; ed. E. E. Bertels et al., ii, Moscow 1962, 109, Mazandaran, verse 613 ff.; tr. J. Mohl, i, Paris 1876, 428 ff.). The efficacy of the liver against blindness on this occasion came close to a principle of Taoist magical biology (J. C. Coyajee, Journal and Proceedings of the Asiatic Society of Bengal, n.s., xxiv, 1928, 187 f.).

But, as we have seen above, the use of goat's liver for eye infections appears in Avicennian scientific medicine, and in the Book of Tobit the liver, heart and gall of a fish help cast out demons (Tobit, vi, 5; vii, 2) and the gall gives sight to a blind man (vii, 3 ff.). The use of the liver against blindness on this occasion has doubt the frequent use of the liver in European popular etymology (Bargheer, Eingeweide, 284 ff.).

The prime importance of the liver in the body no doubt explains, by magical deduction, a group of practices. To chew or to eat at least nibble the liver of an enemy seems to mean annihilation or the highest curse. This gesture, Hind's nibbling Hamza's liver (Wusla, 1928, 140), a gesture which denounces cooks who sell fried liver tabd*ikh, which is made from pounded giblets and spurious musk (Sakati, Un manuel hispanique de hisba, ed. G.-S. Colin and E. LeVi-Provencal, i, Paris 1931, 45; tr. P. Chalmeta-Gendron, El-'Išāb fi ḏadā ḫiba', Madrid 1968, 126 = al-Andalus, 33, 1968, 193) and Spanish and Moroccan baldia (a sort of pâté made from meat and offal) was also built upon the liver that had gone bad, a great deal of bread, spices, etc. (ibid., text p. 39, l. 13; cf. cited p. 130).

The type of rich cooking shown in mediaeval cookery books makes little use of liver. Of the many oriental treaties of this type only the Wusla has recipes for liver, one in which boiled liver is roasted on skewers in a cauld (in the fashion of the kurdîyya, which is made from pounded giblets and includes liver), and one for liver boiled and stuffed with whole or chopped spices (Wusla, Ms. A, fol. 59 r.-v.; cf. Rodinson, Recherches, 135). Apart from that, liver is mentioned, cooked with the fat tail of a sheep (alisa) in the "artificial brain" (Wusla; cf. Rodinson, ibid., 158) and fried black in sesame oil along with poultry giblets or pieces of lamb to make a sort of sauce utilized in various dishes (Bargheer, cf. Rodinson, ibid., 133, n. 4, 156). There is no real recipe for liver in the Baghdadī cookery book sacrefice chez les Arabes, Paris 1955, 113 f.; J. Jouin, Hesperiis, xlii (1957), 320; A.-M. Goichon, La vie féminine au Maʿlab, Paris 1927, 264).

Among some tribes in Morocco, the bridegroom makes the gift of a bull to his bachelor friends: the liver, which must be eaten first, conveys the baraka and must be distributed among all the men present, but not the women (E. Westermarck, Marriage Ceremonies in Morocco, London 1914, 126).

5. Animal liver as food. Liver, often classed with offal and tripe, was dispensed and left to the destitute. Thus in southern Libya a proverb says that impoverished men grab at something mül en-nawār 'al-kabd, "like gypsies after a piece of liver" (F. J. Abela, Proverbes populaires, adages et locutions proverbiales du Liban-Sud (in the press)). Yet in other regions liver and heart are regarded as choice morsels, as in Hadramawt (F. Stark, The Southern Gates of Arabia, Harmondsworth 1945, 78). In Aden today offal is imported from Somaliland, where it is not eaten (information given by Yusuf Ṭālib). Raw liver is sometimes looked upon as a delicacy, as in the Lebanon and Jordan (A. Jaussen, Coutumes des Arabes au pays de Moab, Paris 1908, 65). In the Sahara, an animal killed in the hunt is speedily disembowelled. Liver, heart and lungs are tossed onto live charcoal and covered with sand, then eaten immediately or on the following day (M. Gast, Alimentation des populations de l'Ahaggar, Paris 1968, 136).

In the Middle Ages, Arab markets always had their kubūdās, "liver vendors", who sold liver cooked with onions or roasted on skewers to people who ate on the streets or did no cooking. Manuals on hisba forbid the mixing of goat or cattle liver with that of sheep. They describe in minute detail the type and quantity of ingredients which must be added ("Ibn al-Ukhuwwa", The Mas'ūlim al-burba, ... ed. R. Levy, London 1938, 95 ff. of the Arabic text). Such food was often adulterated. A treatise entitled Kīmiyyāt al-'tablīk, which denounces cooks who sell fried liver that contains no liver, is already attributed to the philosopher Ya'qūb al-Kindī (9th century) (Shaykh, Nikhāyāt al-ruthva, apud Ibn al-Ukhuwwa, i, 107, n. 8 and Ibn Bassām, Nikhāyāt al-ruthva, in Maghrib, 10, 1907, 1081). On the other hand scrapings of dried or pounded and roasted liver were used as spurious musk (Ṣaḥṣaṭ, Un manuel hispanique de hisba, ed. G.-S. Colin and E. Lévi-Provençal, i, Paris 1931, 46; tr. P. Chalmeta-Gendron, El-'Išāb fi ḏadā ḫiba', Madrid 1968, 126 = al-Andalus, 33, 1968, 193) and Spanish and Moroccan baldia (a sort of pâté made from meat and offal) was also built upon the liver that had gone bad, a great deal of bread, spices, etc. (ibid., text p. 39, l. 13; cf. cited p. 130).

The type of rich cooking shown in mediaeval cookery books makes little use of liver. Of the many oriental treaties of this type only the Wusla has recipes for liver, one in which boiled liver is roasted on skewers in a cauld (in the fashion of the kurdîyya, which is made from pounded giblets and includes liver), and one for liver boiled and stuffed with whole or chopped spices (Wusla, Ms. A, fol. 59 r.-v.; cf. Rodinson, Recherches, 135).
of the 7th/13th century of Shams al-Din Mutamad ibn al-Hasan al-Baghdadi nor in the Hispano-Maghribi culinary treatise of the same era edited and translated by A. Huici Miranda.

In present-day Lebanon recipes are found for mutton or beef liver which is usually grilled on skewers. These are calledワラク, strictly speaking “pluck, the viscera of the thorax” (M. K. Khayat and M. C. Keating, Food from the Arab World, Beirut 1961, 32 f.; P. Bazantay, Enquete sur l’artisanat à Antiochie, Beirut 1936, 47; a Lebanese recipe for liver fried in vinegar in Claudia Roden, A Book of Middle Eastern Food, London 1968, 180). Small pieces of liver, lightly fried and served hot or cold, are used as مكسيه, hors d’oeuvres served with an aperitif (Roden, 33). In the Maghrib, brochettes of liver and heart, formerly the food of the poor, have recently become a smart dish. Since the pieces are wrapped in caul they are called مسالف (M. Beaussiez, Dictionnaire pratique arabe-français3, Algiers 1931, 904 b; M. Gast, Alimentation des populations de l’Asie, Paris 1968, 134, 135, n. 2), and in Morocco با لف (L. Brunot, Tesles arabes de Rabat, ii, Paris 1952, 744; Z. Guineudeau, Fés vu par sa cuisine, Rabat 1957, 39). When pieces of liver are alternated with chunks of mutton fat the dish is called كعبا (the name for tripe, pluck, etc.) in Morocco (Z. Guineudeau, Ibid., 41; cf. H. Mercier, Dictionnaire arabe-français, Rabat 1951, 101). The specialist chef of the grill is called كعبا (ibid.).

In Egypt, various kinds of poultry are often eaten stuffed with a mixture made from chopped liver and gizzards mixed with crushed raw wheat or minced meat (C. Wissa Wassef, Pratiques rituelles et alimentaires des Copts, Cairo 1971, 581).

In Iran offal of sheep or chicken is used in a number of dishes, but liver is only mentioned in a comprehensive cookery book, probably compiled by the shah’s cook and edited in 1301/1884, in kebabs grilled on skewers or in a kind of stew called لخافت al-mulūkh, “the sigh” or “desire of kings” (“All Akbar b. Mehdi Kāshāi, Sofre-ye افههه, Ms. collection P. Ikovski, ed. and tr. M. Ghavam-Sattari, unpublished thesis, Paris 1967, 26, 27; the first recipe is found at a slightly later date in the books by Josephine Richard, alias Neshāt al-dawlā, تابعه-ی نشیه, Tehran n.d., 22, and Badr al-mulūk-i Bāmdād, رگمن-ی افکه (ibid.), Tehran n.d., 36).

Until recently liver was not eaten in Turkey and the butchers threw it to cats or dogs. However, consumption of liver and lungs (called نسخ, “the whole”) and of pluck and tripe has recently gathered a little ground, being the speciality of itinerant Albanian merchants (called سبکه، “tripe-sellers”), information given by P. Boratav; cf. W. Eberhard and P. N. Boratav, Typen turkischer Volksmdrerchen, Wiesbaden 1953, 88). Recipes for pilau using liver are found in present-day cookery books (کویپی, I. Orga, Turkish Cooking, London 1958, 125; تپان, with goose or chicken liver, C. Roden, op. cit., 248), and found in Bursa by a Turkish ethnographical survey (H. Z. Kosay and A. Utkućan, Anadolu yemekleri ve турш мустафи, Ankara 1961, 101). Cf. also the brochettes of liver rolled in yoghurt in I. Orga, Cooking with yoghurt, London 1956, 40.

In Uzbekistan also liver is cooked en brochette (دیگر kabob) and sometimes, as in Soviet Ethiopia, with pieces of fat-tail of sheep alternating with morsels of liver (دیگر kabob); liver is also grilled then stuffed (کوریگی دیگر) (K. Mahmudov, Uzbekskie bijuda, Tashkent 1962, 98, 102; N. K. Alhazov et al., Azerbaidzhan skaya kulinarika, Baku 1963, 43).

KABILA [A.] denotes a large agnatic group, the members of which claim to be descended from one common ancestor; this word is generally understood in the sense of tribe. It derives from the Arabic root *k-b-l,* of which the form *kabala* signifies to meet, which is thereby reduced to a very limited size. In reality, such examples are valid only when a type of group, while the latter names the Bakr. In the Antsur, the Band divisions and sub-groups. Al-BayclawI would in that case include a considerable number of the ancient tribal organization. When seen from outside, the desert Arabs, who use the two words indiscriminately to denote the clan, while the tribe is sometimes called *kabila,* sometimes *saff.* In the face of such uncertainty, some ethnologists eventually gave up using a vocabulary which appears to be unsuitable for translating the social reality which nevertheless it claims to express (R. Montagne, La civilisation du désert, Paris 1947, 50).

We are scarcely better informed in regard to the ancient tribal organization. When seen from outside, no social group appears to be as homogeneous and unified as the *kabila.* The traditional conception regards it as a large patriarchal family whose members, all closely linked, bear the same name. According to this etymology: "the *kabila* was so named because its component parts are placed face to face and in equal numbers*. Its structure seems indeed to be connected with that of the skull, in which the four bones, also denoted by the word *kabila,* are placed opposite to one another (LA, root *k-b-l*).

This term is often found in pre-Islamic Arabic poetry. Curiously enough, it is there employed almost exclusively in the plural, standing in the sense of tribe. It derives from the Arabic root *k-b-l,* of which the form *kabala* signifies to meet, which is thereby reduced to a very limited size. In reality, such examples are valid only when a type of group, while the latter names the Bakr. In the Antsur, the Band divisions and sub-groups. Al-BayclawI would in that case include a considerable number of the ancient tribal organization. When seen from outside, the desert Arabs, who use the two words indiscriminately to denote the clan, while the tribe is sometimes called *kabila,* sometimes *saff.* In the face of such uncertainty, some ethnologists eventually gave up using a vocabulary which appears to be unsuitable for translating the social reality which nevertheless it claims to express (R. Montagne, *La civilisation du désert,* Paris 1947, 50).

We are scarcely better informed in regard to the ancient tribal organization. When seen from outside, no social group appears to be as homogeneous and unified as the *kabila.* The traditional conception regards it as a large patriarchal family whose members, all closely linked, bear the same name. According to this etymology: "the *kabila* was so named because its component parts are placed face to face and in equal numbers*. Its structure seems indeed to be connected with that of the skull, in which the four bones, also denoted by the word *kabila,* are placed opposite to one another (LA, root *k-b-l*).
to ethnological research in order to define each of these aspects. For this purpose, then, instead of citing examples from the ancient authors, let us consider the tribe as it exists today among the Bedouin. The *kabila* appears as an independent political group, varying in size from a thousand to two thousand persons, and even larger when the process of sedentarization has started. It is generally composed of two or three interlocking aggregates, related by ties of kinship and in principle interdependent upon each other. Its members claim to be descended from a common ancestor, whose name they generally bear, along with those of their own section and of the clan, they jointly own an area of grazing-land, and they are ruled by one single ruler, formerly the sayyid, today the sayyid, old man, elder, a title also borne by the head of the clan.

Despite its monolithic appearance, the *kabila* falls into as many small, practically autonomous groups as it contains different lines of descent. The genealogists who have dealt so insistently upon the unity of the Arab tribe have almost entirely lost sight of its heterogeneity. Now, the division of Bedouin society into interlocking groups has resulted from a fundamental dualism, which is the predominant feature of the social structure. In each tribe, divisions exist which seemingly are symmetrical and of evidently equal strength. Each one of them seems to have its twin, the other at all levels of the social structure: *'Adnän*/*Kabîlân*, *Râbî'â/Mudârar, Hîmâyâ/Kâhlân, Bakr/Taghîlib, Aws/Kházârâtî, 'Abs/Zûbyân, Hîshâm/Umâyya*, etc. Bedouin society has in fact been subjected to a progressive process of segmentation. At each stage, two blocks of apparently equal strength confront each other, and attract or repel one another in accordance with the interests of the moment. At the family level, the division should cease to operate and should be replaced by absolute solidarity, for any conflict between the members of this group would be tantamount to an act of suicide. In fact, the duality pursues its way inexorably. The division begins even within the patriarchal family, where each male is a contestant for power. To restrict ourselves to an examination of the tribe, we may state that it is often divided into two large subdivisions which strive against each other for supremacy and even make war. The Banû Sakhr, for example, are divided into the *Tuwaga* and the *Kâhlân*; for a long time the leadership belonged to the latter, and then it passed into the hands of their rivals. Indeed, the tribe may be composed of several divisions, but it seems that a pluralism tends to be reduced to a duality; an entire little world gravitates, like satellites, around the two principal leaders. When the *kabila* consists of three subdivisions, it often happens that the most recent of these, if not the least important, endeavours to preserve the balance between the other two. Thus the Huwayyât are divided into three large groups, two of whom show no liking for each other (Ibn *Dâlî* and Abd *Tâyîh*), while the third (Ibn *Ndâlî*) observes a positive neutrality, trying to make the best possible use of this ambiguous situation. Even within the subdivision, the relations of the clans with each other are not free from duality. Each one of them seems to have its twin, the other half of the cell, for whom it is both rival and supporter, and with whom it avoids contracting marriages.

In the light of these ethnographical data, the definition of *dualism* which sets them against each other is seen in a new aspect. Its component parts are indeed symmetrical and of evidently equal strength.

Al-Hamdânî confirms the existence of this type of organization. The author of the *Iklî*, who is not particularly careful in his use of the terms of relationship, does nevertheless give most useful information on the organization of the *Naṣîh*, a branch of the *Bâlî*; they were divided into two factions (*bâsîn*), the *Yumûqî* and the *Dhû *'Abîrâb, and lived in the lower part of the *Djâf* in Rawhîn. The two groups had their own areas—over against one another and separated by the width of the valley. Each tribe (*kabila*) had about one square kilometre of territory. Inter-clan war devastated the two *hayyâs* (*Iklî*, ed. *Khatîb*, Cairo 1359, *x*, 123 f.).

Is the structure of the *kabila* then of a dualist type? It would appear rather to be a matter of a particular kind of dualism, since the different sections in question, far from intermarrying, practise strict endogamy. This hypothesis seems all the more probable in that, when the tribe becomes settled, it projects the image of its divisions onto the soil itself. On the eve of the *hidîra*, Mecca was divided into two concentric, rival and complementary halves: in the centre were the *Kuraysh al-Bîthâb*, on the periphery the *Kuraysh al-Zawâhîr*. A similar situation was observed in Medina where the two sister tribes were rivals for power. The *Khažârdî* had taken possession of the principal port of the city, while the *Awâs* were relegated to the outskirts. This same type of structure is found today in many small Jordanian towns inhabited by former Bedouins, particularly in *Mašân* and *Karak*.

hills of Sidi-Boulbaba—the site of the sanctuary of the patron saint of the town, alleged to be a companion of the Prophet—and the Manâra, a superb view-point where, in the Middle Ages, a lighthouse stood, and where, since 1962, a working-class district has been constructed to house those made homeless by the recent floods.

According to A. Bechraoui, who has devoted a very recent study to the subject, the oasis of Kabis contains a stock of 1,400,000 trees, of which 650,000, that is 47 per cent of the total, are rather mediocre date palms. Next in order of importance come the pomegranate trees, 107,000 in number and of excellent quality, which are the second most important crop produced in Tunisia; then come peach trees, vines and apricot trees. Olive trees succeed only in the Kettana-Teboulbou-Outouf-Metouia region. Banana trees produce ripe fruits, but they are rather sparse. Cultivated land is devoted to the production of cereals in small quantities, fodder (especially lucerne), tobacco, henna and also market-gardening, asparagus being a recent introduction. Live-stock are few in number; animal rearing is mainly carried out on a domestic basis and is regarded as a means of making a little extra money. The coastal waters, which are shallow and contain an abundance of fish, have been left almost unexploited. Without the help of irrigation, the oasis has been extended as far as possible. Some 60 borings having been made between 1890 and the present day, the over-exploited underground water-supply is in fact on the verge of becoming exhausted. Kabis has recently been selected as a development centre for southern Tunisia: equipment has been provided for a port carrying vessels of 50,000 tons; Industries Chimiques Maghrébines (I.C.M.), a company specializing in the manufacture of nitrate fertilizers, has been set up; and a gas pipe-line connecting the town with the El-Borma fields, providing fuel for brick-kilns and the power station, has been installed. Craft-work and tourism provide additional employment and can be developed still further.

History.—Kabis is the Arabic form of the name of the city known in antiquity as Tacape, Tacapas, with the elision of the Libyan Berber prefix ta. The site of Kabis has certainly been inhabited since the neolithic period, as is shown by many remains. Later, the Phoenicians were probably the first to establish an emporium specializing in trade with Numidia and across the Sahara. The emporium became a Carthaginian port, before being transformed into a Roman colony; after this date, specific information regarding the town is to be found.

From the reign of Tiberius (14-37 A.D.) the systematic development of the region began, as attested by the comitia centuriae. Tacapas was connected with Carthage by the main coastal road. In the year 14 a strategic route was opened, connecting it with Capsa (Kafsa) with the help of an aqueduct (Hâdâra) where the 3rd Legion (Augusta) was stationed. As a result of the Carthaginians' efforts in an earlier period, and as a result also of this network of roads which stimulated the port's activity, as well as of the abundant waters of the Oued-Gabès and of the Pax Romana, the town, the centre of which was certainly located upon the eminence where the sanctuary of Sidi Boulbaba now stands, was extensively developed. With such an extent of this development, however, there is some disagreement—and during the Christian period it became the seat of a bishopric. However, it was fortified only at a comparatively late date. "Until the middle of the 6th century Gabès at least still possessed no ramparts", wrote Ch. Diehl (L'Afrique byzantine, i, 229). It was defended only by a castellium barring the invasion route, that is to say the isthmus between the coast and the Chott El-Fedjedj, linking Byzacena with Libya. It was there that, in 547, the Byzantine forces suffered a disastrous defeat at the hands of the Astit tribes. No doubt it was after this disaster that a wall was erected round Tacapas which survived at least until the 16th century. Today, no monuments from its ancient past remain in Kabis though, to be strictly accurate, there are traces of the "Roman dam" across the Oued-Gabès, several pillars and capitâls that have been incorporated in the mosque of Sidi Idris or in the sanctuary of Sidi Boulbaba, and also some other fragments of lesser value which have been used in buildings in the old quarters.

The circumstances under which Kabis came to Islam remain obscure. It is however certain, despite assertions made later by al-Wazîr al-Sarrâjî (Hulal, i, 344), that ʻAbd Allâh b. Sa'd[q.v.] did not besiege the town during his invasion of Byzacena in 278/694-7. It was only later that it was captured, probably during the campaigns directed by Mu'amir b. Hudaydî or his successor ʻUkba b. Nâfî', between the years 34/654 and 50/670. It was later evacuated, after the defeat and death of ʻUkba in Tahûda, in about 64/684. The victor, KusayylÎ, established himself in Kayrawân and from there, according to Ibn ʻAbd al-Ḥâkâm (Fudîk, 70-1), he extended his rule over the neighbouring regions, including the "Gate of Kabis". It was through this gate that, in about 74/693-4, in the middle of the Byzantine occupation, the nitrate fertilizer production of al-Kabîna [q.v.] expelled Hassân b. al-Nûmân[q.v.] from the country he had come to recover. Some years later, however, the same gate once more served as his route.

From this time, Kabis was finally acquired by Islam and became intimately involved in its existence. In particular, Kabis was not spared the violent Khârijî storm which racked the whole of Idrîkîya from 122/740 to 155/772. The Zanâtî Uqasha b. Zu'ayd al-Nafusî, deposed by the Kharîjîs al-Wâdî b. Ayyûb al-Fazâ'irî, of Suffite persuasion, captured it in 123/741 and threatened Kayrawân, before being defeated and killed (125/743). Some years later, under the rule of ʻAbd al-Rahmân b. Ḥabîb, it once again fell into the hands of the Khârijîs, this time those of Ibaḍî tendencies. Again, it was recovered and the rebel leader Ima'mî b. Ziyâd al-Nafusî was defeated and killed in about 131/748-9. The assassina-
tion of ʻAbd al-Rahmân b. Ḥabîb (132/755) was the signal for new disturbances and a new Khârijî outbreak, during which the town passed from one to another of the opposing factions. The Ibaḍî Abu ʻl-Khâtîb captured it at the beginning of 141/middle of 758. It was liberated by Ibn al-Ash'ath in 144/761, only to be lost once more. Finally Yazîd b. Ḥâtim al-Muhallabî, the founder of the Muhallabî dynasty, entered the town on 20 Djamâd I 155/25 April 772 and for a quarter of a century brought an end to the bloodshed that had tormented the region for several decades.

In the Aghlabî period, Kabis became the chief town of the district and the seat of a governor. From the testimony of al-Shamâmkhî (Siyar, 203), who mentions an ʻâmîl of the imâm ʻAbd al-Wahhâb (168/944-208/823), it might be thought that the town formed part of the Rustamid kingdom. In fact, this ʻâmîl was merely a tax-collector who in a somewhat clandestine manner was organizing the sadakât.
the history of Kabis was one of constant turmoil, at home through a whole series of intrigues and fruitless struggles in the attempt to seize power, and in external affairs through the expansionist policy of the Normans of Sicily, who were trying to establish control over the coast of Ifriqiya. Despite various sieges (in 474/1082-3, 479/1086-7, 486/1093-4 and in about 511/1117-8) which finally failed, the town was only recovered for brief periods (in 489/1099-6 and 542/1147) by the successors of al-Mu'izz. In order to oppose these successors, the town in its turn adopted a frankly aggressive policy, welcoming their enemies and sending its troops, either alone or with allies, to assault their capital (in 476/1083-4, 493/1099-1100, and in about 511/1117-8). Against them, it made alliances not only with the Hilâls but also with the Normans of Roger II, who sent the usurer, at his own request, a diploma of investiture in fair and correct form as well as certain Christian decorations, and then provided a successor, Muhammad b. Rushayd, after the occupation of Mahdiyya (543/1148) and the whole of the Sahel. Despite all these conflicts, the town does not appear to have suffered immoderately. It was even embellished with a fine palace, that of al-Árdasayn, begun probably by Ibn Walmiya and completed by Râfi, who took the credit for it. It should incidentally be noted that Rushayd struck coins in his own name, a gesture affirming his independence.

The coming of the Almohads put an end to the independence which Kabis had already practically lost since 541/1146-7 by passing under the domination (tolerant, admittedly, but effective) of the Normans. The town, which had risen against the Normans in 555/1160-1, was captured by Abû Muhammad 'Abd Allah, the son of 'Abd al-Mu'min b. 'Ali [q.v.], in 554/1160. The period of peace it then enjoyed lasted only for a few decades. Soon Kabis became in fact a subject of contention between the Almohads and two adversaries who at certain times were allies, at other times hostile to one another, Kârâkûsh [q.v.], already master of Tripoli, and the Banû Ghâniya [q.v.]. Al-Mansûr (596/1199-609/1213) had to intervene personally in Ifriqiya since he was in danger of losing it and, by his victory at al-Hâmma (583/1187-8), he succeeded in recovering the town, which Kârâkûsh, in alliance with 'Ali b. Ghâniya, had turned into a fortified base. Kârâkûsh soon established himself there once again, but then, having fallen out with his former ally, he lost the town again to the Almohads, who had taken advantage of the situation. Yahya b. Ghâniya had meanwhile succeeded 'Ali, and after crushing Kârâkûsh and taking Tripoli from him, he laid siege to Kabis in 591/1195; to force it to surrender, he laid waste the oasis where, on its end. Abu Zakariyya Yahya b. Zakariyya (625/1228-647/1249), the founder of the Hafsid dynasty, was the ruler of Kabis when he was nominated by the caliph al-Ma'mun (624/1227-629/1232) as governor of the whole of Ifriqiya. Supported by 'Abd al-Malik b. Makki, the most influential land-owner in the city,
he succeeded in capturing Tunis from his brother, who was dismissed from office. This date marks the rise to fortune of the Banū Makki, who, from 681/1282 to 796/1394, constituted what was truly a small, local and largely autonomous dynasty in Kābīs—and, in fact, independent. The two most powerful members of this dynasty were `Abd al-Malik b. Makki and his brother Aḥmād; the latter was ruler of Ḍjerba, in particular, and from there for a time he expanded in extended his authority as far as to Tripoli. The two brothers were of Lūwātā origin; they were cultured—they liked to affect the style of a faḥīk—and also clever, and they often succeeded in influencing Ḥafṣīd policy, in which they took an active part, to their own advantage.

In Ṣa‘īd 683/October 1282, `Abd al-Malik opened the gates of Kābīs to the usurper Ibn ʿAbī ʿUmarā (1282-4) and helped him to ascend the throne. In his gratitude, he is said to have presented `Abd al-Malik “with all the young slaves who were in the palace of the late sultan” (R. Brunschvig, Ḥafṣīdīs, ii, 106) and to have appointed him as his vizier, with particularly wide financial powers. But the reign of Ibn ʿAbī ʿUmarā did not last long, and `Abd al-Malik returned to his fief of Kābīs. In 1286, the town was besieged by the amīr Abū Zakariyyāʾ and its palm grove was laid waste. During the disturbances that followed, `Abd al-Malik did not remain inactive. In 1287-8 he gave his support (this time without success, however) to the pretender Ibn ʿAbī Dabbās against Abū Haṣf (683/1284-692/1293); then, in 693/1294, he rejected the suzerainty of Tunis in order to lay claim to the pretender Ibn Abl Dabbus against that of Bougie where a grandson of Abū Zakariyyāʾ, the man who had besieged Kābīs in 1286, was seeking to obtain his ancestor’s inheritance. In 733/1332 a new pretender, Abū ʿAbd Allāh al-Liyānī, also received his support against Abū Bakr (734/1332-747/1346). The years that followed saw the apogee of the Banū Makki. From 751/1350, while hostile to the powerful and crafty chamberlain Ibn Tafrāṣīn, they succeeded in enlarging their territory and in making their authority more firmly based. Their prestige was such that, in about 1355, Venice concluded an advantageous treaty with them separately. Consistently hostile to Tunis, they gave their support to the second Marolid invasion (725/1325-757/1357), led by Abū ʿInān (qv.).

But some decades later, the reign of Abu 'l-'Abbās (772/1371-795/1374) marked the end of independence for all the cities in the south. The conquest of Kābīs was not easy, however. In Ḏhu Ḳa‘d 783/February-March 1380, the town was taken and a Ḥafṣīd governor, Yūnūs b. al-Abbār, was installed there. But in the following year `Abd al-Waḥḥāb, a grandson of `Abd al-Malik b. Makki, made himself master of the town and put the governor to death. Abu 'l-'Abbās had to lay siege to it in person in 793/1392 and, to force it to surrender, he had its date-palms cut down, a step which gave it a somewhat healthier climate, according to Ibn Khaldūn. `Abd al-Waḥḥāb thereupon decided to extend his authority over one of his sons to the Ḥafṣīd sovereign as a hostage, and paid a substantial indemnity. But `Abd al-Waḥḥāb was assassinated in 792/1390 by his uncle Yaḥyā b. `Abd al-Malik b. Makki, who proclaimed his independence. In 796/1394 a successful plot delivered him into the hands of the Ḥafṣīd sovereign, Abū Haṣf, who had him put to death. This was the end of the Banū Makki and of the independence of Kābīs.

From then onwards, little was heard of the town. Like the rest of the south, it again broke away from the authority of the last Ḥafṣīds, who were under Spanish protection, before coming under Turkish domination along with the whole of Tunisia, which was organized as a ḍāghālīk (1574). Uğman Dāy (1590-1610), who made great efforts to restore peace in the country, established in Ḏi’ārī a colony of kūl-oghūs, that is to say those of mixed breed, the progeny of Turks and native women. With its population of citizens, and with its situation on the edge of the Sahara, Kābīs suffered more than many other towns from the depredations which preceded the French occupation. It was under two-fold pressure, both from the nomads, who used to vanish into the desert or take refuge beyond the Libyan frontiers on the approach of regular troops, and from the beylical authorities. Thus, without being at the centre of the storm, Kābīs was not spared in the insurrection of ‘Abī b. Ḥadīthāhum (1864). In 1870, it was actually plundered by the khānsādīr.

At the time the Protectorate was set up, a split developed between the two rival groups over the attitude to be adopted—Ḏi’ārī opted for acceptance, Manzil for resistance. The occupation of the latter place was thus relatively difficult: it began on 24 July 1881, but was not completed until the end of November, after the fortifications had been entirely destroyed.

During the Second World War a defence line was constructed to the south of Kābīs, at Marxth, as a result of which the town was bombarded violently and severely devastated, but it did not escape occupation by the German army (19 Nov. 1942). It was recaptured by British and French forces on 29 March 1943. Historical Geography—Kābīs has been well defined as “a maritime oasis”. At all periods, its prosperity has been bound up with the richness of its luxuriant vegetation and the activity of its ports, which falls into three categories—date-palms; then olives, figs, pomegranates and vines; and lastly cereals and market-gardening.

No further precise geographical particulars relating to Kābīs, which in the meanwhile had become Muslim, are recorded until the 3rd/9th century. Ibn Khuradadhbih (d. 272/885-6) refers to it, without further comment, as “the town of the foreign Afārīkā” (madīnat al-Afārīkā al-aḍḍiim), Masalik, 6-7; this expression suggests that in his time the Afārīkā, that is to say the descendants of the Graeco-Romans and the latinized Berbers, mostly Christian, still constituted the major part of the population. It is certainly these Afārīkā who are designated by the term Afārīm in al-Ya‘qūbī (d. about 282-9/895-905), who adds that the “very mixed” population was composed of Arabs and Berbers alike. Al-Ya‘qūbī also notes that Kābīs was “an important and prosperous town, where trees and fruit are abundant”. In the middle of the 4th/10th century, Ibn Hawkal tells us that it was inhabited predominantly by Berbers and that for the first time records a community of Jews, who were subject to a special tax. He remarks that its inhabitants “are not over-endowed by nature in matters of beauty and cleanliness and are somewhat simple” (Ṣawāt al-ʿArḍ, 72; trans. Kramer-Wiet, 66). He notes that it was surrounded by a wall and a ditch, and that outside the walls there
was a suburb—here recorded for the first time—where the markets were held. Of its varied and abundant produce he makes particular mention of oil, wool, great quantities of silk of excellent quality, and very good leather, soft to the touch and perfumed, which was exported to all parts of the Maghrib. Alas! the hinterland was inhabited by thieving Kharidjites who had sacked and burnt the suburbs, bearing a particular grudge against the possessions of merchants and Dhimmis.

At the end of the 4th/10th century, al-Mukaddasi depicts it as a town "smaller than Tripoli", "built of stone and brick, rich in date-palms, grapes and apples" (Ahsan al-tabāsim, 12-13). Its "hinterland was inhabited by Berbers" and its walls "pierced by three gates".

The description given by al-Bakri and often repeated by later geographers is the most detailed and goes back to the middle of the 5th/11th century, the time when the town was ruled by Ibn Walmiya under the protection of the Hīlālī chief Muḥnis b. Yahyā. The town was then still contained within its ancient wall, constructed of hewn stone, the wall being reinforced with a ditch which could be flooded in time of danger. Since the time of Ibn Hawkal, however, it had seen great developments. In particular it was surrounded, not by one but by several suburbs to the south and east, and by and large, this was a sign of intense commercial activity. It was embellished with a rich mosque and possessed numerous hammāms.

The only shadow in this picture was that the climate had become unhealthy—this had not been so earlier—as a result of the destruction of a talisman which had come to light during the search for some treasure. This legend of the talisman certainly refers to the demolition of the ancient buildings situated within the walls on the heights of Sidi Boubaha, where the air is always very healthy, to allow for the construction, from the middle of the 4th/10th century, of the suburbs in the unhealthy basin enclosed by the oued. At the end of the 5th/11th century the suburb furthest away from the ancient walls, on the site of the present quarter of Djiāra, was already fully urbanized, as is shown by the mosques of Sidi Idris, Sidi al-Hādī, Sidi Umar and Sidi Nikāl, the latter attributed to the Banū Dāmilī (Architecture, 77-7) and which are all concentrated in this quarter. It was noted earlier that some fragments from buildings of antiquity have been re-used in these and also in other old buildings. Thus, from the middle of the 5th/11th century, the ancient city had begun to be deserted and eventually disappeared entirely, being replaced by the suburbs, an operation that intensified the unhealthy situation condemned by all the geographers from al-Bakrī onwards, whereas there had been no question of this beforehand.

Among the inhabitants, according to al-Bakrī, a distinction was still made between Arabs and Afārībē, which indicates that the ethnic fusion was still incomplete. The populace was the subject of various distinctions, "a true earthly paradise, in short a Damascus on a smaller scale". However, an important transformation was in progress. It is true that the ancient walls were still standing, but the centre of activity had moved out to "the suburbs, which were extensive and included most of the markets" (Rihla, 86-7). In the heart of the old town, the minaret of the Great Mosque had lost its equilibrium and was leaning dangerously; the Kasaba and the palace of the Banū Dāmilī, "the Kaṣr al-Āmedūn, a marvel unparalleled in the world", were nothing more than ruins (Rihla, 94-5). The air was unhealthier than ever, the inhabitants' faces were pale and epidemics frequent, on account of the oleanders (al-difdīl), al-Tīdānī explains, for they polluted the water, apart from two springs, "Ayn al-Amūr and "Ayn Ṣalmān.

We then have to wait until the beginning of the 16th century—that is to say, for the account of Leo Africanus, who visited Tunis in 1557 (Description, II, 398)—for further details of the development of
Kabis. It was, it seems, still "a very large town", and the old city was still surrounded by its "high ancient walls". But the fact that "it has been sacked by the Arabs" has brought about its decline. Its inhabitants were scattered about in the oasis. "Their skins are black. They farm or they fish, in poverty, and under constant pressure from the Arabs and from the king of Tunis" (Description, ii, 398). In short, the town's ruin was complete; there was no longer any reference to its abundance of fruit, to its industries, its exports in all directions. Not one word of the activity of its port, or of its markets: insecurity killed its trade, including the trans-Saharan trade which had left such a strong mark, doubtless through interbreeding with black slaves, upon the complexion of the inhabitants, who finally became of one single type in their poverty.

In the middle of the 19th century, V. Guérin was unable to discover any traces of the ancient walls. Nothing survived except for old hoard in Manzil and Dijara which, according to F. Laffite and J. Servonnet, scarcely deserved to be called houses. Manzil then had 3,500 inhabitants and Dijara 4,000, out of a total of 13,000. The rainbows which, according to F. Laffite and J. Servonnet, had gilt, Dijara, are the result of interbreeding with black slaves, and the old city was still surrounded by its "high ancient walls". The first two are dedicated to Sayf al-Dawla. We also have a poem describing the rainbow which Ibn Khallikan (Wafiydt al-Abd al-Maghrib al-arabi, Cairo 1653, index; G. Orgels, "Les traditions orientales, Paris 1965, index; B. Orgels, L'ossis de Gabes, in Correspondance d'Orient, 1968.

(1) KABIS, 'ABD AL-'AZIZ B. 'UThMAN B. 'Ali, Abu 'l-Sahr, astrologer, came from one of two towns called Kabiṣa (Yakut, 'Uthman al-buldun, iv, 308 of the Beirut ed.), the other near Sāmarrā', is in the environs of Kabis.

Al-Kabiṣi's principal surviving work, al-Māḏhgal islā sinā'at aḥkām al-nuḏūm (Hadīdīji Khallifa, v, 473 and 476) in five fuṣūl, is dedicated to Sayf al-Dawla, the Hamāndī ruler of Aleppo from 333/944-5 to 356/966-7. In its 4th he uses, in the year 317 Yazdîjîrd (A.D. 948-9). This book, as its title indicates, is an introductory exposition of some of the fundamental principles of horoscopy; its present usefulness lies primarily in its quotations from al-Andaraghar, al-Kindī, al-Hind, Ptolemy, Dorotheus, Māḥṣa' al-lāh, Hermas, and Valens. But it was highly valued in the Middle Ages; there are many Arabic manuscripts (including some in Hebrew script), though no commentaries. A Latin version was made by Ioannes Hispalensis in 1144, a French translation (presumably from the Latin) by Pèrein de Pousse in 1362; Ioannes' Latin translation was commented on by Ioannes de Saxonie at Paris in 1331 and by V. Nabod in 1560, and probably was also the text commented on by Francesco degli Stabili (Cecco d'Ascoli) (1269-1327).

In the preface to al-Māḏhgal al-Kabiṣi mentions his (now lost) Kitâb fi ẓabāt sinā'at aḥkām al-nuḏūm, which answers the equally non-extant Risālā fi 'Isa ibn 'Ali fi ẓabāt aḥkām al-nuḍūm (see also al-Bayhaqi, Taṣimma, 85). 'Istābīn 'All may be the well-known Harranian astronomer who made observations at Baghdād and Damascus in 214/829-30 and 217/832-3. A manuscript in Istanbul (AS 438) contains three short treatises written by al-Kabiṣi: Risālā fi annā wa-l-ālādā wa-fārābīn min al-ālādā mimīdum dijama'ahā min muqaddiṣātāt akhīn bi-ḥāqah al-sinā'at, a Risālā fi 'l-ālādā wa-l-āḏrām, and a Mā sharāḥahā min Kitāb al-fuṣūl li-ż-Fārābīn. The first two are dedicated to Sayf al-Dawla. We also have a poem describing the rainbow which Ibn Khallīkān (Wafiydt
al-a'yân, iii, 79 of the Cairo ed.) says some (including al-Thâbaṭî in his Kitâb yatîmad al-daâr; not located therein) attribute to Sayf al-Dawla, others to al-Kâbîš. There also exists, in a Latin translation by Ioannes Hispalensis and with a commentary by Ioannes de Saxonia, a De planetarum coniunctionibus attributed to Alchabitius; it was translated into French by Oronce Finé (1551). It is not, as Steinschneider suggested, part of al-Maârif, and perhaps it is not by al-Kâbîš at all; it was not known either to al-Bayhaḵ or to Hâdîḏī Khâlîfâ.

**Bibliography:** There are short references to al-Kâbîš in the several Arabic sources cited above. In modern times he has been noticed by M. Steinschneider, *Die hebräischen Übersetzungen*, 561-2, and *Die europäischen Übersetzungen*, repr. Graz 1955, 45-6; Suter, 60-1; C. A. Nallino, *Al-Battâsî*, i, 246 and 309, and *Raccolta di scritti*, v, 338; and Brockelmann, i, 254 and S I, 195.

Manuscripts and editions of the Latin translations of his *Isagoge* and *De planetarum coniunctionibus* are listed in a most confused and unreliable fashion by F. J. Carmody, *Arabic Astronomical and Astrological Sciences in Latin Translation*, Berkeley-Los Angeles 1956, 144-50. I list here the editions and manuscripts actually extant, in the Bibliothèque Nationale, and at Harvard. 1) *Isagoge*: Ed. Matheus Moretus de Brixia, Bologna 1473. Publ. E. Retoldt, Venice 1482. Ed. Bartholomaeus de Alten de Nusia (with the comm. of Ioannes de Saxonia), E. Retoldt, Venice 1485; I. and G. de Forlîvîc, Venice 1491; I. and G. de Gregorii, Venice 1502 and 1503; and M. Sessa, Venice 1512. Ed. Guilielmus Huyon (with the comm. of Ioannes de Saxonia and the notes of Petrus Turrellus), B. Trot, Leiden [1520?]. Ed. Antonius de Fantis Tarusinsius (with the *De planetarum coniunctionibus* and the comm. of Ioannes de Saxonia), M. Sessa and P. de Ravanis, Venice 1521; and P. Liechtenstein, Venice 1521. And publ. (with the comm. of Ioannes de Saxonia), Paris 1521. V. Nabod's comm. was published as *Enarratio elementorum astronomicorum*, Paris 1600; Cocco d'Ascoli's *Commento all' Alcubus* was edited by P. G. Boffitto, Firenze 1905. 2) *De planetarum coniunctionibus*: Ed. Bartholomaeus de Altem (with the comm. of Ioannes de Saxonia), E. Retoldt, Venice 1485; and I. and G. de Forlîvîc, Venice 1491. See also the editions of the *Isagoge* by Antonius de Fantis. The French translation by Oronce Finé was published as an appendix to his *Les canons et documents très amples touchant l'usage et pratique des communs almanachs*, Paris 1551 and 1557.

**AL-KÂBİLİ** (or IBN AL-KÂBISI), ABU 'L-HASAN 'ALI b. MUHAMMAD b. KHALAF AL-MAÂ'RIFI (324/935-405/1012), one of the principal representatives of the Mâlikî school of Kâyrawân, of which he was the leader after the death of Ibn Abî Zayd (d. 386/996). His father, a native of al-Maârifîyyîn in the neighbourhood of Gabès, had married a woman from Kâyrawân. An oral tradition affirms that al-Kâbîš, Ibn Abî Zayd and Siddîq Mahtre (Mubrîz b. Khalaf) were first cousins, since their fathers had married three sisters. His principal teachers in Hîrkiyya were Abu l-'Abbâs al-Ibyanî, a Tunisian with Shi‘î inclinations, Ibn Masûr al-Dabûbâkh and Dârâs al-Fâsî who possessed many Exact sciences; he was influenced by two devoutly religious men of Kâyrawân, al-Sâbi‘ and al-Djabarîyânî. His riḥla in the East lasted from 352/963 until 357/968; he was accompanied by Dârâs al-Fâsî and the Sînârîd al-Âṣîl. Since he was blind, his companions acted as his secretaries. Before devoting himself to fîh, he taught kûrānic "reading". An Usûl of Ashâ’îr tendencies, he had a predilection for the work of Ibn al-Mawwâz, but above all he was a traditionist of high repute and spread in the Maghrib the Sabîk of al-Buthârî, a riwâya of which, attributed to al-Kâbîši, is known to us. Of his works, we may mention a collection of hadîth of the Musawwa, highly esteemed particularly in Spain and Andalusia; a collection of hadîth extant in manuscript; a treatise on the rules of conduct of schoolmasters, largely inspired by the work of Muhammad b. Sâbînî, which has been published; a voluminous but incomplete compilation of traditions, classified according to the headings of fîhî; various epistles on kûrânic exegesis, practices of worship, articles of faith, the rites of the hadîth, the enclosures of riḥla, sadâsa and objection to witnesses, fear of Allah, repentance, etc.; one on al-Ashâ’î and another in which he refutes the "Bakrîtes". Particularly after the death of Ibn Abî Zayd and Ibn Shîbînî, he became a jurisconsult of very high authority. His role as spokesman for and slayhî of the jurists of Kâyrawân was clearly revealed in the affair of the nephew of Bâdsî. He had countless disciples. At the end of his life he was still teaching some 80 Kâyrawâns, Andalusians and Maghribis. Abû Bakr Ibn Abû al-Rahmân and Abû 'Imrân al-Âl-Sîsi were his principal continuators, bringing to its completion a work which was crowned by the breach between the Zîrîds and the Fâtîmids, the consecration of the definitive triumph of Mâlikism in Hîrkiyya.

Idris). 2) *AL-KÂBKB*, DJABAL AL-KÂBK (the most common rendering), al-Kâbk (e.g. Masâfîd) or al-Kabîj (e.g. Tabarî, Yâkûtî), Turkish Kavkaz, the name given by the Muslims to the Caucasus Mountains. The form kabk may derive from Middle Persian kafk-kh (the "mountain of Kaf", Armenian hâpĥk); in Firdawsi we find the Caucasus called kâk-î khâ (Hübschmann, *Armenische Grammatik*, i, 45, cf. Marquart, *Erânilah*, 94). A village called Kâbk is also mentioned by Ibn Rusta, 173, tr. Wiêt, 201, as being the first stage on the road from Harât to Isifîzâr and Sîstân.

1. Topography and ethnology.

The Caucasus became known to the Muslims from the time of the Orthodox caliphs, when the first raids northwards were launched through Akhchâr Djân to Arrân and beyond. Early Muslim geographers, apparently following Iranian concepts which may go back to Babylonian cosmological ideas, regarded the Caucasus mountain chain as part of the Kaf mountain range which forms a girdle round the earth, to the south of which lie the lands of civilization, but to the north of which lies the Land of Darkness. Thus Ibn Hâwî, al-Masâdî b. Ishâk, connects the Caucasus with the Carpathians, Alps and Pyrenees as a mountain chain dividing Europe (ed. Kramer, i, 192: 193 (= map), 194, tr. Kramer and Wiêt, i, 189-9 and Map 8; see also B. Munkácsy, *Der Kaukasus und*
Ural as 'Gurtel der Erde', in Keleti Szemle, i (1900), 236 ff., and KAP. Because of this identification with the mountains of Kaf, Muslim exegetes and antiquarians located in the Caucasus and Caspian Sea region the rock, sea and town mentioned in the story of Moses and al-Khidr in Kur‘an, XVIII, 59 ff.; thus Ibn Khurraadadhbih, 124, and Ibn al-Fakih, 287, say that “the rock is the rock of Sharwan, the sea is the sea of Djilân (sc. the Caspian) and the town is the town of Badjarwa”. In his section on the conquest of Armenia (Futuh, 197), Baladhuri states that the emperor

probably drew to a considerable extent on the Abu[Saddayn, the Christian kingdom of Iberia (sc. Georgia, see Kurdf), and to the east of Iberia, the region of Albania, which was only called in the period immediately before Islam, the little information which we have relates mainly to events in Transcaucasia; Ciscaucasia was at this time exposed to barbarian onslaughts, and little is known about it. But to the south of the Caspian casus range, the Christian kingdom of Iberia (sc. Georgia, see Kurdf), and to the east of Iberia, the region of Albania, which was only called in the period immediately before Islam, the little information which we have relates mainly to events in Transcaucasia; Ciscaucasia was at this time exposed to barbarian onslaughts, and little is known about it. But to the south of the Caspian casus range, the Christian kingdom of Iberia (sc. Georgia, see Kurdf), and to the east of Iberia, the region of Albania, which was only called in the period immediately before Islam, the little information which we have relates mainly to events in Transcaucasia; Ciscaucasia was at this time exposed to barbarian onslaughts, and little is known about it. But to the south of the Caspian casus range, the Christian kingdom of Iberia (sc. Georgia, see Kurdf), and to the east of Iberia, the region of Albania, which was only called in the period immediately before Islam, the little information which we have relates mainly to events in Transcaucasia; Ciscaucasia was at this time exposed to barbarian onslaughts, and little is known about it. But to the south of the Caspian contents an octagonal building, the court of the sultan, with a central basin, surrounded by columns and arcades, and a series of smaller buildings, including a mosque, a caravanserai, and a hospital. The mosque is of particular interest, as it is one of the few examples of Islamic architecture in the region that survived the Turkish conquest. The court is surrounded by a wall with a series of arched entrances, and is accessible only by a narrow path. The whole complex is surrounded by a moat, and is approached by a single entrance, which is guarded by a tower. The complex is well preserved, and is a fine example of Islamic architecture in the region.
conferred princely power (ghāsibya) on (1) the Khākān al-Dībār or Sāhib al-Sarīf who is called *Wahrazān-Shāh; (2) the ruler of Fīlān, called Fīlān-Shāh; (3) the Tabarsarān-Shāh; (4) the ruler of Lakz, called *Khurshād-Shāh; (5) the ruler of Maskāt, "whose principality has now disappeared"; (6) the ruler of Lāyān, called Lāyān-Shāh; (7) the ruler of Shārwān, the Shārwān-Shāh; (8) the ruler of Bālkh, and (9) the ruler of Zīrīkan. Most of these names can be identified and their principacies are traceable into Islamic times. The Sāhib al-Sarīf or "Master of the Throne" eventually gave his name to the geographical district of Sarīf, the middle Köy-Su valley in southern Dāḡhīstān. His other title, *Wahrazān-Shāh, may possibly relate to the undoubted identity of the ruler of Zīrīkan. Most of these names can be identified and their principacies are traceable into Islamic times. The Sāhib al-Sarīf or "Master of the Throne" eventually gave his name to the geographical district of Sarīf, the middle Köy-Su valley in southern Dāḡhīstān. His other title, *Wahrazān-Shāh, may possibly relate to the undoubted identity of the ruler of Zīrīkan. Most of these names can be identified and their principacies are traceable into Islamic times.

As mentioned above, the Arabs were in Darbānd before the close of Umar's Caliphate. At this time, and during Uthmān's reign, Muslim warriors from Kūfā were raiding across the Araxes and into the Kur valley, i.e., into Arrān. Habīb b. Maslama penetrated to Tiflis, and from Bardi'a's, the administrative centre of Arrān, places on the southern slopes of the Caucasus like Baylāgān, Kabala and Shamārd were reduced by Salmān b. Rabī'ā's Bāihilī's forces, and the local ruler of Shārwān agreed to become tributary (Baladhuri, Futūh, 201-4). It was probably here that groups of Khazars were first encountered, for the disintegration of the Sasanid empire had drawn the Khazars into the eastern Caucasian power vacuum (cf. Baladhuri, 197). However, the first full-scale clash with the Khazars took place north of the Caucasus and is well-documented by Tabārī. In 39/652-3 Abd al-Raḥmān b. Rabī'ā's Bāihilī, emboldened by what had been only token resistance on previous probes, went against the expressed wishes of Uthmān and advanced to the important Khazar centre of Balandjar (q.v.); it was probably located in the Köy-Su basin in Dāḡhīstān, to the north of Darbānd. But there, 'Abd al-Raḥmān was heavily defeated, with the slaughter of 4,000 Kūfān (Tabārī, i, 289-94, 2896-7; Ibn al-Aḥṭār, Beirut, iii, 131-9).

The eruption of Šāmhān or internecine strife within the Caliphate for a time deflected Arab energies from conquests in hazardous and less-rewarding highland zones like the Caucasus and Central Asia. Yet Khazar counter-raids meant that, once the Umayyads were firmly established on the throne, the Caucasian frontiers could not be neglected. Moreover, the raids into the Caucasus and Khazaria must have had an economic importance as a source of slave captives. In 'Abbāsid times, the nišab of "al-Khazari" is quite common amongst military slaves and others; this may well have been a blanket designation for Caucasian peoples as well as for Khazar proper and Turks. The Arabic sources for this warfare in the Caucasus are much less detailed than those for the conquests in the Iranian east, and the picture which has to be constructed from such sources as Baladhuri, Ibn al-Aṯīm al-Kūfī, Tabārī and Ibn al-Aḥṭār is somewhat skeletal. Dunlop has observed (The history of the Jewish Khazars, 58) that the antipathy of historians in the 'Abbāsid period towards the Umayyads and all their works has prevented a just appraisal of the exploits of the Caliph 'Abd al-Malīk's son by a slave mother, Maslama [q.v.], and of Highām's cousin and eventually the last caliph of the Umayyad line, Marwān b. Muḥammad.

According to Armenian sources, cited in Marquart, Strefstein, 443, the Khazars raided into Georgia, Arrān and Armenia during Yazīd b. Mu'āwiyā's Caliphate and again in the opening years of 'Abd al-
Malik’s, on this second occasion killing the Mami-konian prince of Armenia. It seems that the Khazars recaptured and temporarily garrisoned Darband soon after this, and it is probable that control of this strategic point oscillated between the Khazars and Arabs for a time. At a critical juncture after a Khazar invasion of Armenia, al-Djarrâb b. ‘Abd Allâh al-Ḫakami al-Madhîjî was in 104/722-3 appointed governor of the northwestern provinces of the Caliphate, with its attendant responsibility for the defence of the Caucasus frontier. From Bardha hea, he appeared in southern Dâghîstân and attacked the people of Gûmûk, that Caucasian people known later as the Ghaįl- or Kâšt-Kûmûk or Lak [q.v.], who lived as the Ghazi- or Kazî-Kumuk or Lak, a stronghold allegedly built in the first place by the Persian hero Isfandiyar to hold back the Alans. But not even Maslama’s skill could contain the violence of the Khazars. In 112/730 they poured down through the Alan Gate, defeated and killed al-Djarrâb, overran Adharbaydžan and Armenia, and penetrated as far south as Dîyâr Bakr and al-Djazira before the invasion was stemmed and Maslama carried the war back into the Khazar lands. Maslama is said now to have received the submission of various “kings of the mountains”, including the rulers of Shharwân, Lâyzan, Tabarsarân, Fillân, Khursân and Maşkât. Whether acceptance of Islam was required as a condition of submission is unclear. At all events, the impact of Muslim religion must have been very superficial at this time. The general picture in Arran and the Caucasus region resembled that in Armenia: the Arabs made no attempt at imposing direct political control, but were content to leave local rulers in power as their tributaries.

Some years after the great Khazar invasion of 112/730, the new governor Marwân b. Muḥammad campaigned against rebels in Armenia and then against the Alans, occupying the Dâral Pass and three fortresses there before returning through Georgi-a (118/736). In the next year, he penetrated into Khażaria, reportedly reaching the Khazar capital and converting the Khazar king to Islam. (Minorsky suggested the possibility that Marwân’s expedition was aimed at the lower Volga region, since large numbers of Sâkâliba, i.e., Slavs, were taken captive, some of whom, according to Baladhûrî, 207-8, were settled in Kakhêti; see A new book on the Khazars, in Oriens, xi (1958), 127-8.) The shortlivedness of Maslama’s agreements with the various native princes of the Caucasus is shown by the fact that Marwân had to re-impose them, exacting tribute in the form of slave boys and slave girls and of grain for the upkeep of the Darband garrison. Amongst the rebels whom Marwân subjugated were the Dûdâniyya (read *Dûdâniyya, according to Minorsky, the modern Didos of central Daghistân [q.v.]); but it was very long before Islam made much impression there, and a part of the Didos was still pagan in the 12th/18th century. See Baladhûrî, 197-209; Yaŷkûbî, Ta’rîkh, ii, 381, 395; Tabâri, ii, 1506, 1526, 1530-1, 1560, 1573, 1635; Ibn al-Athîr, Beirut, v, 145, 159-62, 173-4, 177-9, 198, 215, 240; F. Gabrieli, Il califfato di Hishâm. Studi di storia omayyade, in Mem. de la Société d’Archéologie d’Alexandrie, viii (1935), 75-81; idem, L’eroe omayyade Maslama ibn ‘Abd al-Malik, in Rend. Lin., Ser. 8, Vol. v (1950), 30-1; Dunlop, The history of the Jewish Khazars, 67-87; Minorsky, Studies in Caucasian history, London 1953, 28-9; Czegtedy, Khazar raids in Transcaucasia in 762-764 A.D., 77-8.

The advent of the Ḩâbbâsid brought no improvement in the generally weak pattern of Arab control over the Caucasus region, a control that could case only have practical significance on those infrequent occasions when Muslim armies entered the mountains to enforce the terms of agreements. The military and political influence of the Arabs was, if anything, diminished by the disorders in the Caliphate consequent on the progress of the Ḩâbbâsid da’iya. The Turkish and Khazar menace remained, and there were no commanders now of the calibre of the great Umayyad generals.

Al-Manṣûr’s governor of Armenia, Yaŷd b. Usayd al-Sulami, took over Shârwân in eastern Transcaucasia (see Barthold in EI, sârwân), including its naphtha wells (malădîf), and the caliph attempted to neutralise his northern enemies c. 142/759 through a marriage alliance between Yaŷd b. Usayd and the daughter of the Turkish Khâkân or of the Khazar king; this plan, however, came to naught. Relations worsened, and in 145/762 there was a major Turkish and Khazar invasion via Darband as far as Armenia. This was followed by an even more devastating one two years later, affecting Arrân, Kakhêti, Georgia and Armenia, under a commander whom Czegledy identifies as a leader of the Dâghîstân Avars or Huns, one Râs (or Âs) Târkhân. See Baladhûrî, 309-10; Yaŷkûbî, ii, 446-7; Tabâri, iii, 316, 647, 648 (under years 182 and 183 A. H.); Ibn al-Athîr, Beirut, v, 572, 577; Dunlop, op. cit., 179-81; and Czegledy, op. cit., 76-88. In the closing years of the 8th century A.D., the Ḩâbbâsids were beset by rebellion in Armenia; in general, the Turks and Khazars did not take advantage of these embarrassments, although in 185/999 the Khazars did answer an appeal by the discontented local nobility of Darband and invade Arrân (Tabâri, iii, 648; Ibn al-Athîr, Beirut, vi, 163; Dunlop, op. cit., 183-5).

The revolt of the Khurramî heresiarch Bâbak [q.v.], the epicentre of which was at Badhdh, just south of the Araxes, had some repercussions in Transcaucasia. It was the Armenian prince of Shâkî, Shâh-i Sumbi-tan, who captured Bâbak and handed him over to the Ḩâbbâsids in 222/837, and this prince came to dominate Arrân and the adjacent parts of Armenia and Georgia till Bugha’s drive against the local rulers there, described below (see Minorsky, Caucasica IV, 1, Shâh ibn Sunbâd of Shâkî and Arrân, in BSOAS,
In al-Mutawakkil's Caliphate, the Turkish general Bugha the Elder [see BUOHA AL-], xlv (1953), 504-14). In al-Mutawakkil's Caliphate, the Turkish general Bugha the Elder [see BUOHA AL-]

In the opening of the 4th/10th century, we reach an age during which the Caucasus region, in so far as the Caliphal representatives had had any influence there at all, becomes wholly abstracted from the direct control of Baghdađ; this is merely one aspect of the general efeńeelement of the ʿAbbasid Caliphate at this time. In particular, the Causcasus and Transcaucasia begin to be affected by the dynam-

In particular, the Causcasus and Transcaucasia begin to be affected by the dynam-

foolishness. The al-Mutawakkil of the 9th/15th century appointed governor of Ağdarbâyjan and Armenia in 237/851-2, and over the next few years he conducted operations in the course of which he sacked Tiflis and deposed and killed its Arab amir, Iṣbāk b. Iṣmāʿīl. This line of Arab amirs was either of Kūrghaš origin or was descended from a client of the last Umayyad Caliph Marwân b. Muḥammad; the andirate had long been a focus of Arab power in the Caucasus, and Masʿuddi, Murūḏ, ii, 66, dated the decline of Arab power and influence in the Caucasus from this senseless act of destruction. Bugha also reduced to obedience various Christian and non-

and the Mongol campaigns, BSOAS, xv (1951), 232-8). On the southern slopes of the Caucasus lay several Christian, or partly Christian, partly Muslim, partly pagan, principalities, like those of Georgia, ʿṢanār, Ṣhakht and the adjacent Kabala, etc. Finally, we have some information on the Cerk sat the northwestern Caucasus, named as the Kašqak or Kasak (= the Kašak of the old Russian chronicles, see below) and already praised by Masʿuddi for their handsome men and beautiful women, their features that were to make them so highly-prized as slaves by the Mamluks and Chiernei Tatars. Masʿuddi describes them as magāsī or fire-worshippers, but by this time Christianity must have had at least a foothold in the indigenous paganism [see further Cerkes].

eastern Transcaucasia into his orbit. The greatest achievement here was the incorporation of Sharwan within the Daylam sphere of influence as a result of two Musafirid invasions, the first by Marzuban b. Muhammad at some time between 334/945 and 337/948, and the second by his son Ibrahim c. 357/968. On the first of these occasions, the Sharwan-Shah (apparently Abu Tahir Yazid b. Muhammad, see Minorsky, A history of Sharwan and Darband, § 9) was compelled to pay tribute of a million dirhams. Amongst other rulers who came to terms with the Daylamis at this time were the local Shahkht, who is given the Armenian-sounding name of *Ishkhani (text, Ishdhanki); the lord of *Di-r-z, which Minorsky tentatively restored as Khazar, referring to Kabala between Shahkht and Sharwan, where Khazars had long been settled (see above); and one Abu 'l-Kasim Dji-y.dhun. Minorsky thought that this last name might conceivably be read as *Khayzani, referring to the Khayzans on the Caspian coast north-west of Baku, rather than *Khayubkhi, referring to the Daghistan district of Khaydak or Khaydhak mentioned by Mas 'ud, see above. Miskawayh in Eclipse of the 'Abbasid Caliphate, ii, 161, tr. v, 172, refers to Marzuban as successfully quelling in 344/955 a people who had rebelled against him in the region of Darband, but it seems improbable that Musafirid suzerainty could have been effectively extended into the northwest corner of the Caucasus.

The Musafirid empire in eastern Transcaucasia was only a transient achievement, and under pressure from the Kuridicised Arab family of the Rawwadids ([...], the Musafirids had lost even Adharbaydjan by c. 564/971), duwal; it stems, according to the compiler, from the duwal; thus in 416/1025 the History of Sharwan, § 38, records the marriage of the amir of Darband Mansur b. Maymun to a daughter of the ruler of Sarir Bukht-Yishu, whose religion is clearly shown by his Syriac Christian name. It is in the 4th/10th century that the Rûs (probably now mixed bands of Scandinavians and Slavs; see §80) impinge on the history of the Caucasus and of the steppe region to the north of the mountain zone. A notable event in Islamic history, from the alarm and terror which it caused, was the Rûs descent on Barlah'sa in Arrân in 332/943-4, when these adventurers sailed the Volga, and occupied it for several months [see BAKH]. It was the Khazars who bore the brunt of the Rûs raids down the Volga basin, and these attacks seem to have destroyed the Khazar state as it had existed in its heyday, or at least, left it seriously enfeebled and thrown back on the southerly Khazar lands, the Kuban steppe region. According to the Russian Primary Chronicle, Sviatoslav of Kiev in 965 defeated the Khazar Khan and took the Khazar town of Biela Vjez or “White tent or tower”, usually identified with Sarkil on the lower Don, the Greek Aspron Hestios and the depression of these mountain peoples; thus in 360/971 there was a violent battle outside Darband with the people of Sarir, in which the Muslims lost 1,000 of the Darband garrison and ghûris from outside (ibid., § 35).

The Muslims in turn retaliated by punitive expeditons into the interior, which served as outlets for the bellicose piety of volunteer fighters for the faith (gharib, streifzuge), and found excellent economic return in the form of the prized Caucasian slaves. The Sharwan-Shah Ahmad’s son Muhammad marched into the interior of the Caucasus in 371/981-2 and captured the town of Kabala from its ruler ‘Abd al-Barr b. ‘Anasba, presumably the ‘Anasba al-A’war mentioned in Mas’ud, Muradî, ii, 68, and described as “the shelterer of thieves, brigands and malefactors”. A further clash took place in 389/999, when the Sharwan-Shah Yazid b. Ahmad defeated Ibn ‘Anasba again and captured the fortress of Gursul on the Gök-cay river, a stronghold which was still in the shah’s hands a quarter of a century later and which constituted a strategically-valuable salient into the southern slopes of the Caucasian massif (A history of Sharwan, §§ 23, 14).

However, there were throughout the whole Caucasian and Transcaucasian region frequent shifts of alliances and groupings, in which religious affiliations were seldom decisive. An amir of Darband could recruit a guard of pagan Rûs (see below). In Tiffis, Muslims and Christians lived side-by-side, and in the three-cornered struggle in the second quarter of the 5th/11th century for control of the city between Bagrat IV of Georgia, his powerful vassal Liparit and the Muslim incumbent ruler of Tiffis, Dja’far b. ‘All, Bagrat and Dja’far could at times be found ranged against Liparit; Dja’far had also joined a coalition of Georgian and Armenian magnates against the Shaddadid Faql or Faqlun b. Muhammad b. Shaddad in c. 417/1026-7 (see Minorsky, Studies in Caucasian history, 43-4, 56-7). As in similar frontier regions, such as Anatolia and the Iberian peninsula, interconfessional marriages were quite common. Thus in 416/1025 the History of Sharwan, § 38, records the marriage of the amir of Darband Mansur b. Maymun to a daughter of the ruler of Sarir Bukht-Yishu, whose religion is clearly shown by his Syriac Christian name.

It is in the 4th/10th century that the Rûs (probably now mixed bands of Scandinavians and Slavs; see §80) impinge on the history of the Caucasus and of the steppe region to the north of the mountain zone. A notable event in Islamic history, from the alarm and terror which it caused, was the Rûs descent on Barlah’sa in Arrân in 332/943-4, when these adventurers sailed the Volga, and occupied it for several months [see BAKH]. It was the Khazars who bore the brunt of the Rûs raids down the Volga basin, and these attacks seem to have destroyed the Khazar state as it had existed in its heyday, or at least, left it seriously enfeebled and thrown back on the southerly Khazar lands, the Kaban steppe region. According to the Russian Primary Chronicle, Sviatoslav of Kiev in 965 defeated the Khazar Khan and took the Khazar town of Biela Vjez or “White tent or tower”, usually identified with Sarkil on the lower Don, the Greek Aspron Hospitall (Chronicle, § 32, tr. S. H. Cross, in Harvard Studies and Notes in Philology and Literature, xii (Cambridge, Mass., 1930), 172; Dunlop, The history of the Jewish Khazars, 240-1; cf. Marquart, Streifzuge, 2-3, 479). Ibn Hawkal, i, 15, tr. i, 14-15, states that in 358/969 the Rûs utterly destroyed Bulghar and “Kazhazan, Samandar [on the Caucasian coast, south of the Volga mouth?] and Atin” (Dunlop, op. cit., 241 ff.). The Russian Primary Chronicle further relates that after taking Biela Vjez, Sviatoslav subdued the Yas (sc. the As or Alans) and the Kasog (sc. the Kaghak or Cerkes), implying that their raids reached to the northwestern and central parts of the Caucasus. After the Rûs raids of 965, the Khazar chiefs seem to have sought and received help from the Sharwan-Shah Muhammad b. Ahmad (or possibly...
this may be Ibn Hawkal’s mistake for this shah’s father, Ahmad b. Muhammad, who reigned in Sharwan till 370/980-1 to enable him to return to Attil and Khazar (Ibn Hawkal, ii, 397-8, tr. ii, 388; Dunlop, op. cit., 246, and Attil).

There were certainly Rus’ ships operating along the western shores of the Caspian around this time. The amir of Darband, Maymün b. Ahmad, endeavoured in 930/1525 to employ some of the Rus who had arrived there in 28 mercenary ships as mercenary troops (ghilmān), even though they were still pagan. The understandable unpopularity of these Rus contributed to popular disturbances in Darband against Maymün in 379/989-90, leading to his temporary deposition (A history of Sharvdān, §§ 13, 36). The inability of the remnants of the Khazars to keep the lower Volga course closed to Rus’ raiders must have allowed the Rus frequent access to the Caspian. In 421/1030, 38 Rus’ ships appeared off the coast of Sharwan and defeated the Shāh Ma‘nūš b. Yazid at Bākū. They apparently repeated the pattern of events of 90 years previously by sailing up the Kur, and entered the service of one of the contending parties in a dynastic dispute of the Shaddādids of Gandjā (ibid., §§ 15, 36). They eventually passed on to the western Caucasus and the Black Sea, making a circuit of the mountain region. It is possible that they then turned northwards to the Taman peninsula, where the Kievan prince Mstislav had in 988 founded the Rus principality of Tmutorokan (Russian Primary Chronicle, § 43, tr. 207, cf. § 52, tr. 223). This Rus’ foothold south of the Azov Sea enabled them to exert pressure on the Curkes and other peoples of the western Caucasus. In 1022 the Chronicle records that Mstislav attacked the Kasog under their ruler Redyva, and in the next year he was using Kasog and Khazar troops (Khazars of the Taman peninsula region?) in a dynastic dispute with his brother Yaroslav (§ 52, tr. 223). Later in the century, in 1066, Mstislav’s son Rostislav received tribute in Tmutorokan from the Kasog and other peoples, and the Khazars of the region are mentioned as late as 1083 (tr. 234, 258).

It seems that the Rus’ raiders were no longer exclusively water-borne. Two years after the attack of 421/1030 on Sharwan, there is mentioned a punitive expedition of ghādis led by the amir of Darband Ma‘nūš b. Maymün which harassed plunder-laden Rus returning from Sharwan through the Caucasus. In reprisal, a coalition of Rus and Alans tried to crush the little principality of Karakhan, which was a frontier region to the west of Darband and whose ruler bore the title of Marzōbān, according to Ma‘ụdī, Murādī, ii, 40; but the Rus and Alans were decisively defeated by the warriors of Karakhan, themselves converted to Islam only a generation previously (A history of Sharvdān, §§ 15, 36, 38).

4. The Saldjūq period.

The appearance of the Oghuz Turcomans in northern Iran and Armenia, once the Ghaznavid defences in Kjurask have been overcome, seems to have injected a new factor into Caucasian affairs, for both the Christian principalities of western Transcaucasia and the Muslim ones of the east generally felt the effects of disturbances in Ardjarbījān, Armenia and the Byzantine frontier sooner or later. Already in 436/1044-5 or 437/1045-6 the Shāh Šāh Kühbūb b. Yarib, who had arrived in 306/918, saw A history of Sharvdān, § 9) with a strong stone wall and iron gates for fear of the Oghuz (ibid., § 17).

The Christian kingdoms of western Georgia or Abkhāz and eastern Georgia or Kakhetia, under the Bagratids and the family of Bagrīk respectively, had felt the Turcoman threat on their southern flanks before this. Certain sources, and especially the Syriac and Armenian Christian ones, mention a long-distance incursion of Turcomans under Ḥāφṣ b. Dāvūd, brother of the later Saljuq Sultan Ṭughrīl, into Ardjarbījān and Araran in 412/1021, although other sources place the raid several years later (cf. Bosworth, The Ghaznavids, their empire in Afghanistan and eastern Iran, Edinburgh 1963, 223-4). If the raid took place at one of the earlier dates, it may have been a contributory factor in the abandonment by the last Ardīrudun, Senek Şerim or Sanhārīb, of the exposed province of Vaspurakan to the Byzantines in exchange for lands in Anatolia (1021), although the sources mention other factors; see E. Honigmann, Die Ostgrenze des byzantinischen Reiches von 363 bis 1071, Brussels 1935, 168 ff. For the moment, the threat to Georgia and the surviving Armenian principalities came more from the vigorous policies of the Byzantine Emperor Basil II Bulgarocionus, but after his death in 1025, the Georgian ruler Bagrat IV, the ruler of Kakhetia Kiurike III and other Georgian and Armenian nobles pursued a confused but generally expansionist policy against the Shaddādids of Arran and the amir of Tiflis, Dī‘ārī b. ‘All, this latter city coming sporadically under Georgian control after Dī‘ārī’s death c. 438/1046-7 (see Minorsky in EP, tiflis, and idem, Caucasian in the history of Mayyīfīsūrīn, in BSOAS, xiii (1949-50), 29, 31; the line of Amir Dī‘ārī in Tiflis went back, according to Ibn al-Azrāk, to c. 315/927).

The Shaddādids suffered further from other marauders from Dāghistān and the mountain regions. After the death in 414/1024-9 of the amir Lāshkhārī ‘All b. Mūsā, the leading men of the state abandoned several outlying fortresses constructed against the men of Shakklī, the Dādīdīyā (Dīdīs?), the Abkhāz or Georgians, and the Rum or Byzantines, hoping thereby to discourage their incursions (Studies in Caucasian history, § 13, cf. pp. 27-9). Hence when the roving bands of Oghuz, and later, the Saldjūq and their amirs, appeared in Transcaucasia, they found plenty of troubled waters in which to fish.

The Oghuz had harassed Arrān during the reign of Lāshkhārī ‘All (425-41/1034 to 1049-50) (Studies in Caucasian history, § 121), but when Tughrīl came to Ardjarbījān and Arrān in 446/1054-5, the Shaddādīd Abu ’l-Aswār Shāwūr, his Rawwadīd rival Wahsūdān b. Muhammad, and other potentates of the region, all submitted to the Saldjūq and made the khūba for him (Ibn al-Aḥīr, Beirut, ix, 598-9, cf. Studies in Caucasian history, 54). The Shaddādīd continued to feel Georgian pressure, and it was doubtless Georgian incitement which stimulated a large-scale invasion of Arrān in 454/1062 by the Georgan’s Alan allies, compelling Abu ’l-Aswār Shāwūr to fortify Gandjā (ibid., § 15, cf. pp. 74-5).

Ṭughrīl’s successor Alp Arslān followed a similar policy of deflecting Turcoman and ghādis elements from Persia to the western frontier zones, and in 456/1064 himself campaigned in Armenia, capturing Ani from the Byzantines and Armenians (Ibn al-Aḥīr, Beirut, ii, 37-41). Eventually the town was granted to a branch of the Shaddādīds, see KI and Studies in Caucasian history, 79 ff.). Two campaigns were made into Georgia against Bagrat IV, and Alp Arslān consolidated his influence there by marrying one of the king’s nieces; see W. E. D. Allen, A history...
of the Georgian people, London 1932, 91-2. Alp Arslan's second Caucasian campaign of 460/1068 seems to have been connected with a second incursion through the Darial Pass into Arrān by the Alans, who were joined by infidels from Shākkt; the invaders shut the terror-striken Shaddādīd forces up within Gangja, penetrated to the Araxes and took back with them an immense booty (A history of Shirvān, § 40; Studies in Caucasian history, § 16). Nevertheless, Abū ʿl-Aswār was at other times himself able to pursue an aggressive policy against Shirwān, invading it on four separate occasions, and making the Shāh Farrāburz b. Sallār his tributary. In turn, Farrāburz intervened in a dynastic dispute at Darband during 457/1065, imposing his son Afrīdūn there as ruler in 458/1066 (A history of Shirvān, §§ 19, 41).

Darband was, indeed, racked by internal strife between members of the ruling family and between the Hāshimī amirs and the local notables, exposing it on various occasions to fresh attacks from the Avars of Sarir and the Gumbakī of Northern Daghistān, see ibid., § 40. Possibly the raids of the pagan Gumbakī were lessened by their reported conversion to Islam at some time in the last decades of the 5th/11th century and their adhesion to the Shirwānī Shāh Farrāburz's cause when he was attacking them. From the shah's chancery, a description how, through the intermediacy of the Muslim Laks of Kuvā or Fuwā (to be connected with modern Kubba, north of Bākū?), the Gumbakī agreed to accept Islam, and how the Shāh sent to them his son 'Adud plus an imām and a khālib to teach the rudiments of Islam (Minorsky and Cahen, Le recueil transcascaie de Masrād b. Nāmādār, 139-41, 138-47).

Farīburz began to suffer from Turkman marauders towards the end of Toghrll's reign. During the second attack of the Oghuz leader Kārātīgīn in 459/1066-7, Yazdīyān and Bākū were attacked; so that in the next year Farrāburz agreed to pay a tribute to keep them away. Later in the same year Sultān Alp Arslan appeared in person and received the submission of both the Shaddādīdīs of Gāndjā and the Shirwānī Shāh Farrāburz tried to pull Turkish dāvis who claimed to have been granted Shirwān as an ʿamīr of the Two 'Irākīs Sawtīgīn, who had been granted all the Caucasian marches as his ʿamīr. Shirwān was now definitely reduced to the status of a Saljūq vassal-state and tributary. Sawtīgīn's appearance also meant the deposition of Faḍlūn b. Faḍī b. Abī ʿl-Aswār Shāwūr and the end of the main branch of the Shaddādīdīs in Gāndjā, and in Darband there was a third Shaddādīd occupation (Studies in Caucasian history, §§ 18-19: A history of Shirwān, §§ 20-42, 42-46).

With the end of the narrative of the Taʿrīkh Bāb al-Abwādī in 468/1075-6, our detailed information on eastern Transcaucasia and the Caucasus tails off. It seems, however, that lines of the Shirwānī-Shāhs and the amirs of Darband re-emerged as the Great Saljūq empire passed its apogee under Malik-Shāh and the earlier Hashimī amirs and the local notables, exposing it on various occasions to fresh attacks from the Avars of Sarir and the Gumbakī of Northern Daghistān, see ibid., §§ 19, 41. Minorsky also notes here how the engagement of Ibn al-Azraḥ and the astronomer-poet Falaki Sharwānī (see J. Rypka et alii, History of Iranian literature, Dordrecht 1968, 202-4, 208-9).

The Shirwānī-Shāhs continued to assert their hegemony over Darband, but during this period was to a considerable extent under the protectorate of Georgia, whose kings themselves took the title Shirwānī-Shāh. The shahs proper further acknowledged themselves as nominal vassals, at least, of the Great Saljūqs of 'Irāk and western Persia, and this acknowledgment appears on coins minted in Shirwān down to the death of the last Saldjūk, Toghrll b. Arslān, in 590/1194. The shahs made alliances with the Georgians aimed at recovering Darband, and marriage links were frequent; the Shāh Aḥsāṭān b. Manūẓīr b. Afrīdūn was the son-in-law of a Georgian prince.

This century was, of course, of the Persian monarch's great period of expansion, under such rulers as Dmitri I (1125-36), Giorgi III (1156-84) and Queen Thamar (1184-1222), when the southern frontiers were held against the Ildjīzīdīs of Ādharbāyjān and Arrān [q.v.] and Georgian arms frequently penetrated to the Caspian shores. Already in 1124 David II 'the Restorer' had led an army to Darband in support of his son-in-law, the Shirwānī-Shāh's claims there. Dmitri I was operating in Osetia and as far as Darband and Lāyzān in Shirwān in 548/1153-4, just after the historian of Mayyafterikīn, Ibn al-Azraḥ, entered his service as the royal secretary (Minorsky, Cauçasia in the history of Mayyafterikīn, 31, 33, 35; Minorsky also notes here how the engagement of Ibn al-Azraḥ was a sign of the growing influence of Arabic culture in the capital Titfīlīs and other parts of Georgia, Arabic now becoming a diplomatic language).

Giorgi III repelled an invasion of Shirwān by the amir of Darband Beg-Bars b. Muzaffar in 560/1167-8 or 571/1175-6, and one of Khākmī's odes describes how the vanquished Darband forces included Alans, Avars of Sarir, Rūs and Khażarār (these last being, in the plausible surmise of Minorsky, Khilīcār or Polovtsi rather than remnants of the historic Khażarārs). This Darband expedition was apparently a combined land and sea one, probably with the Rūs supplying the naval forces; Khākmī, whose patron was at this time Aḥsāṣātān b. Manūẓīr of Shirwān, claims that 73 Rūs ships were destroyed and that operations took place near the mouth of the Kur and also well upstream of that river (see Minorsky, Khākmī and Andronicus Comnenus, in BSOS, xi (1943-4), 557 ff., also in Iranica, twenty articles, Tehran 1964, 127 ff.).

In general, the Saldjūq and Mongol periods saw the beginning and development of a gradual process of Turkicisation in many parts of the Caucasus and Transcaucasia, especially in the lower-lying areas. The Turcoman begs brought with them their followers, and many parts of Arrān and Ādharbāyjān proved suitable for their flocks. In these provinces, too, the establishment of the Ildjīzīzīs, with a powerful military machine of Turcomans and Khilīcārs, favoured an increase in the Turkish ethnic elements there. The indigenous princes of the Caucasus were quick to...
discern that the Turks could be used as mercenaries in their internal quarrels. In the 6th/12th century, Darband, under pressure from the Sharwan-Sháhs and their Georgian allies, tended to look towards the Saldjúqs for help, although geographical distance inhibited much direct assistance. Great Saldjúq influence in the Caucasus was, at least in the earlier part of the century, more successfully exercised in Georgia and the southern Georgian fringes, symbolised in King Dmitri's acknowledgement of the names of the 'Abbásid caliphs and the Saldjúq sultans of 'Irák on his coins.

The Georgian monarchs were often in military alliance with the Christian Alans, and there were frequent marriage alliances between the two princely families, as also between the Alans and the Byzantine emperors (see Studies in Caucasian history, 74-5). Alan troops were used in the Georgian armies, and David the Restorer specially constructed fortresses to keep open the route to the Alan Gates and Ossetia; in 1189 Queen Thamar took as her second husband the Alan prince David Soslan (Allen, A history of the Georgian people, 104). C. 1128, David formed a special guard of 5,000 Klîpčak military slaves, converted to Christianity, and raised the military element in the Georgian state to times influential; militarily, it was used with effect on such occasions as in 599/1203, when the Ildégizid Nusrat al-Din Abû Bakr was repulsed from Arrán by an army of Georgians and Klîpčak, allowing Shâmkhâr, Gandja and Dvin to fall to the Georgian hands (Allen, op. cit. A. Z. V. Togan, Umumi türk tarihine giris, Istanbul 1946, 190-1).

5. The Mongol and Timurid periods.

The period of the Khwârzâmsháns and Mongol invasions brought devastation and upheaval to the Caucasus, and, for one thing, broke up the unity of Georgia and destroyed the Bagratids' ambitions for a greater Georgia dominating Transcaucasia. After pursuing to his death the Khwârzâmsháh 'Allâ al-Din Muhammad, Çingiz Khân's generals Djebei and Sübyetey in 617/1220 passed through western Persia to Adharbayjâd, receiving the submission of the Ildégizids, and then entered Arrán. They passed via Baylakân into Sharwan, devastated Shâmkhâr and went on to Darband. By means of a stratagem, they got into the Shâmkhâr court, thus through the Caspian Gate. The Alans were humbled, and the Mongols then entered into the South Russian steppes, defeated an army of Russians and Klîpčak and rejoined Çingiz in Central Asia (cf. Djuwaynî-Boyle, i, 148-9).

The new Khwârzâmsháh Djalâl al-Din appeared in Adharbayjâd in 622/1225; he defeated the Georgians at Garni in the same year, and in the following year 623/1226 occupied Tiflis, massacring all the Georgians and Armenians there (see Minorsky, in EI 1, tiflis). In Sharwan, Djalâl al-Din claimed to exercise the suzerainty rights of the Great Saldjúqs, and imposed on the Sharwan-Sháh Fariburz b. Gârgâsp the same tribute as had been paid in Malik-Shâh's time, till the shah protested that his dominions had considerably shrunk in the intervening centuries, and eventually the tribute was assessed at 30,000 dinars only. Transcaucasia remained open to the pillagings of the undisciplined Khwârzâmsháns, and in 625/1228 the Khwârzâmsháh returned. At Mîndor near Lërê he encountered a confederacy of Caucasian peoples under the Georgian commander-in-chief Iwâne Mkhardzâli. The allies are described as comprising Georgians, Alans, Armenians, Avars of Sarîk, Lakî, Klîpčak, Suvamînî (i.e., the Svan, the mountain people of northern Georgia), Abkhâz, Canit (i.e., Çanetî, the Georgian name for the Laz, corresponding to the Greek Sannoi or Tsamo), Syrians and Rûmîs or Anatolians; but they failed to stand up to the Hârsu al-Dîn and were defeated (Djuwaynî-Boyle, ii, 438).

Although Djalâl al-Din left the region soon afterwards, Transcaucasia continued to be disturbed, till a further catastrophe took place in the shape of the Mongol invasion of 633/1236. In the previous year, the Mongol general Çermaghun had raided Sharwan and eastern Caucasus as far as Darband, and now he entered Georgia via Gandja. The political unity of Georgia was now shattered. Hostages were taken from the Georgian nobles, and the kings forced to attend the Mongol kurultays. Georgians were pressed into the Mongol armies, and there were Georgian contingents present at the fall of Baghdad in 656/1258 and at 'Ayn Djalût in 658/1260. Only the internal divisions which arose within the Mongol royal house, and, in particular, the disputes between the Il-Khánids of Persia and 'Irák and Klîpčak families, prevented the Mongols from penetrating through the Transcaucasian and the Il-Khánids took place in Arrân and eastern Transcaucasia. Hülegi's forces reached as far as the Terek river before being defeated in 661/1265 by Berke's troops. Three years later, Berke returned to the Caucasus, occupying Gandja and sacking Tiflis, where he died in 665/1267 (Spuler, Die Goldene Horde 1, 47-4, 49-51). Only after the reign of the Il-Khánid Öljœtî was the Georgian king Giorgi V (1316-46) able to drive out the Mongols and bring much of Transcaucasia, including Sharwan and Arrân, under Georgian rule.

Sharwan was thus frequently a battlefield for the Il-Khánids and Bâtu'ids, and the constriction of the indigenous dynasty's authority is shown by the fact that during the Il-Khánid period, the Sharwan-Sháhs do not seem to have minted any coins. Despite its inaccessibility, Ossetia suffered from the attentions of the Mongols, and the Alan capital, *Magas, was destroyed in 636/1239 after a long siege, see Minorsky, Caucasian III. The Alan capital Magas and the Mongol campaigns. The period of the Mongol invasions nevertheless allowed the Christian Alans to break out of their mountain fastnesses and play a rôle on the wider stage of European and Inner Asian history. Papal missions reached them, and in turn, Alan missions are mentioned at the court of the Christian Great Khan Gûyûk (Djuwaynî-Boyle, i, 259). Alan colonies were planted in centres of the Golden Horde such as Saray on the Volga and Kertch in the Crimea (Spuler, op. cit., 237, 239, 284, 314). According to Ibn Baţţûta, ii, 448, tr. Gibb, ii, 516, the Alans in Saray had a special quarter and had become Muslim. Moreover, Alan troops found their way as far east as the borders of China.

Further havoc was wrought in the southern parts of the Caucasus region by Timûr. Timûr first appeared in the winter of 678/1280-1, and undertook a campaign, described as a djihâd or holy war, against the Christian Georgians. In defence of Transcaucasia, the Georgians were joined by the Muslim governor of Şakîkî, Sidi 'Allî of the Alurat tribe of the Çağhatayîd ulus, but this alliance brought forth further
Timurid invasions, culminating in the campaign of 805-6/1403-4, when Tiflis was again devastated and all the lands from Arrān to Trebizond given to the Timurid prince Ḵhallī Mīrzā. The 9th/15th century was a confused one in Georgian history, with attacks from the Turkmen Kara Ḵoyunlu amirs and internal weaknesses, so that towards the end of the century, the kingdom became divided into three parts (see Al-Ḵānī, history of the Georgian people, 131 ff.).

The Ṣarvān-Ṣāḥih Shāykh Isḥāḥīm (784-820/1382-1417) had to submit to Timūr and accompany him during his campaign against the Khān of the Golden Horde. Toktandūsh in 797/1395, but he did manage to retain his throne. In the post-Timurid period, Šarvān enjoyed considerable prosperity, with a flourishing cultural life and with many fine buildings erected in Bāḵū and Šāmāḵhī. The shahs were latterly allied with the Ak Ḵoyunlu amirs, in particular with Uzūn Ḥasan, but Ṣāḥih Farrūḵ-Ṣāḥār b. Ḵhallī Allāh was eventually killed in 906/1500 near Šāmāḵhī by Ismāʿīl Ṣafawī, and Šarvān was in 945/1539-8 incorporated into Persia. As for the adjoining district of Shākki, Šī Ḵālī’s son Šīd Aḥmad was re-established there c. 801/1398-9. The mention of Ḵabab by Don Juan of Persia shows that it was still of importance in the later 14th century, when Shākki, after falling to the Ṣafawīds in 958/1551, eventually became an Ottoman sandjak (984/1576); see Allen, Notes on Don Juan of Persia’s account of Georgia, in BSOS, vi (1930-2), 187, Minorsky in EI1, s.v. SHAKKI.

The northern parts of the Caucasus fell within the lands of the Golden Horde. Dāḡistān was conquered by Timūr in 797-8/1395-6, but it is about this time that the three main powers in Dāḡistān, the Ḵaytāḵ, the Ghišt-Ḵūmūx and the Māšūm princes of Šābārāxān, emerge (see DĀḠISTĀN). The western part of the Caucasus, sc. Circassia, played an important rôle in Golden Horde affairs and also in Islamic military history. The Čerkes were still mainly Christian, and Ibn Ṭaḇṭūţa, ii, 448, tr. Gibb, ii, 516, mentions that the Christian Čerkes and Kipčak had their own quarters in Saray, just like the Alans (see above). From the inauguration of the Mamluk Sultanate in Egypt and Syria in the middle of the 7th/13th century, Čerkes military slaves, carried from Circassia by the Genoese of Kaffa and other merchants, were a notable element in the state, and after 784/1382 provided most of the Mamlūk Sultans themselves.

The general process of Turkification in the Caucasian region must ultimately have favoured the spread of Islam. The steppe lands to the north of the Caucasus must have been Islamised fairly early after the decline of the Khazars there. Ibn Ṭaḇṭūţa visited Māḏar on the Kuma river (to be identified with Burgomadzāry). He found it a fine Turkish city. It was a flourishing trade centre of the Golden Horde Tatars, with a kaysārīyya (chief bazaar), and a famous Šīd Shāykh of the Ribāṭīyya order, Muhammad al-Ṭaḇṭūţa, had his kā營ī there (Rīḵūn, ii, 375-9, tr. Gibb, ii, 479-81). But the spread of Islam was a slow process, and the mountainous heartland long resisted Islamisation. The Laz of Mingrelia on the Black Sea coast, a people of Georgian stock and Christian since the beginning of the 6th century, maintained their faith through their close political and cultural connections with the adjacent Byzantine principality of Trebizond. Only after the Ottomans, Sultan Mehmed II in 865/1461 were the Laz gradually converted to Islam and the Šāḥīf ‘madḫ̱hab (see Minorsky in EI1, s.v. LÄZ).

The rise of the Ottomans, together with pressure from the Muslim powers in Arrān and Adharbayjān, also brought about the end—in very obscure circumstances, but probably towards the end of the 9th/15th century—of Christianity in Dāḡistān. As part of the Roman Church’s attempts in the Mongol period to unite the Eastern Christian churches and then win over all the oriental peoples for Christianity, Dominicans had been installed in Tiflis in the 7th/13th century. A Roman Catholic archbishopric was set up at Mərtəğa or Azov in the succeeding century, and a vigorous missionary campaign undertaken into Dāḡistān (in Chaydakenski patria, sc. the land of the Kaytāḵ or Kháyādīk). Helped by Genoese trading enterprises aimed at opening up a route to the east via the Caspian, this Christian church flourished till the onset of the Genoese from the Black Sea and the establishment of Ottoman supremacy there (see J. Richard, Les missionnaires latins chez les Kaitakh du Daghestan (XIV-XV* siècles), in Trudy XXV Kongressa Vostokovedov 1960, iii (Moscow 1963), 606-11). However, by 872/1466, when the Russian merchant Afanasii Nikitin was travelling across the Caspian, the ruler of the Kaytāḵ was a Muslim, one Allī (Ḵhallī?) Beg, brother-in-law of the Šarvān-Ṣāḥih Farrūḵ-Ṣāḥār.

Bibliography: An extensive bibliography of the older geographical and travel literature was given by C. van Arendonck in his EI1 article. For the classical period, see the article Kaukasos in Pauly-Wissowa, Real Encyclopädie der classische Altertumswissenschaft, xi, 1, 59-63. An important addition to the Islamic geographical literature is the anonymous Ḫudūd al-ʿAlam, tr. Minorsky, GMS, London 1937. A geographical survey of the Caucasus is given in A. Sanders, Caucasian Nummularia, Munich 1944, and there is much useful information in the article Kaukas in BSE, xix, 248-63.

The historical literature proper has been mentioned in the course of the article. Amongst all this, the works of V. Minorsky are outstanding, especially his Studies in Caucasian history, London 1953, his A history of Shārwan and Darband, Cambridge 1958, and his five articles in BSOS, xii-xv (1948-53); see also his article Transcaucasia, in JA, ccxxvii (1930), 41-111 (deals mainly with topographical and historical-geographical problems). Some of the many obscurities of Caucasian history have been illuminated by numismatic researches, in which the Bāḵū orientalist E. A. Pakhomov was a pioneer. The results of Russian and Armenian research have recently been utilised in the Ph.D. thesis of Dickran Kouymjian, The numismatic history of Southeastern Caucasus and Adharbayjan based on the Islamic coinage from the 5th/11th to the 7th/13th centuries, Columbia University, New York, 1969 (unpublished).

(C. E. Bosworth)

LANGUAGES.

The indigenous languages of the Caucasus form a family with three distinct branches. It is to the languages of this family still or formerly spoken in the area that the name Caucasian languages is applied. In the course of time, however, speakers of languages belonging to the Indo-European and Turkic families have also penetrated the region and these languages have in turn been influenced by those of the Caucasian family, according to the length and closeness of their contact. The most significant of these languages is Armenian, a separate branch of the Indo-European family, which has a literary tradition, both Christian and secular, going back to the
fifth century of our era. The modern Eastern dialect is spoken by over two million people in the Armenian S.S.R. and in urban communities throughout the Caucasus. There are a number of representatives of the Iranian branch of the Indo-European family, the oldest established being Ossetic. This Eastern Iranian language, spoken by the remnant of the Alans living in the Central Caucasus and south thereof in Georgia, has two main dialects: Iron, used as a literary vehicle, and the more archaic Digorun, the latter spoken by a partly Muslim population. Ossetic is unique among modern Iranian languages in being little affected either by Islam, i.e. by Arabic loans, or by Persian culture. Other Iranian languages, all of the Western branch, are Northern Kurdish, Tadjik, and Tadj. Kurds are scattered throughout Armenia and the Adharbajdzjan. S. S. R. Tadjik is spoken in a region along the Caspian coast astride the Irano-Soviet border and Tadj on both slopes of the eastern end of the Caucasus chain and on the Apsheron peninsula. Almost half of the Tadj speakers are Jews; the remainder, and all the Tadjashi, are Muslims. About a quarter of the Kurds are Yazidis, the rest Muslims. Other Indo-European languages represented are Greek, and the German, Russian, and Ukrainian introduced by comparatively recent settlers.

Among Turkic languages the most widely spoken, by well over two million people in Soviet territory, is Azeri, which has been a literary language since the 8th/14th century. To the north-east of the Caucasian languages of the Kh¤§ group are found, namely Kumuk, Karadhay, Balkar, and Noghay. All these Turkophone peoples are Muslims. Kalmuk, a Western Mongolian language, is spoken in North Caucasus. The only Semitic language found in the Caucasus is the Neo-Syriac spoken by the scattered communities of so-called "Assyrians".

The Caucasian languages proper are divided geographically into Southern, North-Western and North-Eastern branches. The Southern, or Kartvelian, branch comprises four languages: Georgian, Svanetian, Laz and Mingrelian, the last two together forming the Zan group. Georgian alone is a literary language, the oldest texts dating from the fifth century of our era. The Laz and two groups of Georgian speakers, the A§ari and some Ingilo, are Muslims. There are three languages of the North-Western branch, Abkhaz, Circassian, and Udi, but the last is no longer spoken in the Caucasus, being kept alive only by a diminishing number of refugees in Turkey. The Circassians (Cerkes, or Askhe) have two main dialects, Kabardian and Kiakhh, both having a modern literature. The Abkhaz living south of the Caucasus have three related dialects; those living north of the Caucasus among the Circassians, known as Abaza, speak two different dialects. The great majority of Circassians and Abkhaz are Muslims.

The North-Eastern branch of the Caucasian family comprises a large number of languages and dialects, spoken for the most part in Dagestan by an almost entirely Muslim population. They fall into six groups: I. the so-called Veinakh ("we people") group, consisting of Cechen, Ingush, and Bats (the latter a small Christian community); II. the Avaro-Andi group, comprising Avar, Andi and its fellows (numbering eight in all), Dido (four languages) and Ardi; III. the Lakh-Dargwa group, i.e. five dialects of Lakh and three of Dargwa; IV. the Samurian group, comprising Lazi, Rutul, Tsakhur, Tabasaran (Tabarsarãn), Aghul, Budug, and Diosk; V. Kinhulag and VI. Udi, the language of a Christian people thought to be the remnant of the Caucasian Albanians. Cechen, Ingush, Avar, Lak, Dargwa, Lezgian, and Tabasaran are written languages, a status Udi formerly enjoyed. Avar is especially widely used as a lingua franca.
